In Ottoman Turkish, as well as the usual meanings in Arabic and Persian, *risāla* also denoted "a piece of cloth fixed to the front of a dervish's *tād̲j̲* or cap" and, by the 19th century, "a booklet or a weekly or monthly journal" (this last often called a *risāla-yi mawḳūta*) (see Redhouse, *Dictionary*, and Pakalın, s.v.).

Given such a strong Persian cultural influence on the Sald̲j̲ūḳs of Rūm and their successors in Anatolia, it is not surprising that the first manuals for secretaries and collections of model letters written in Anatolia were in Persian, and it was not till the beginning of the 9th/15th century that such works began to appear in Turkish; see H.R. Roemer, *Staatsschreiben der Timuridenzeit*, Wiesbaden 1952, 2-7, and Yaḥyā b. Meḥmed ül-Kātib, *Menāhicü 'l-inşā*, ed. Şinasi Tekin, in *Sources of Oriental languages and literatures* 2, Cambridge, Mass. 1971, 9-11.

The constituent departments of the Ottoman chancery and their staff are examined in the articles dīwān-i hümāyūn and reʾīs ül-küttāb, whilst the official literature emanating from these offices is examined in ins̲h̲āʾ. It is sufficient to note further here that a chancery style in Persian developed amongst the Sald̲j̲ūḳs of Rūm at their court in Konya, from which we have examples of compilations of documents (see O. Turan, *Türkiye Selçukları hakkında resmi vesikalar*, Ankara 1958), and in the other *beyliks* of Anatolia during the 6th/12th and 7th/13th centuries. Ḥasan b. ʿAbd al-Muʾmin K̲h̲ūyī composed in Persian for his patron the Čoban-og̲h̲lu ruler of Ḳastamonu, Muẓaffar al-Dīn Yuluḳ Arslan, and his son Maḥmūd two short works, the *G̲h̲unyat al-kātib* and the *Rusūm al-rasāʾil* (see Turan, *op. cit.*; A.S. Erzi, *Selçukîler devrine âid inşâ eserleri. 1a. Ḥasān b. ʿAbdi 'l-Müʾmin el-Ḫōyī*, Ankara 1963). Hence by the time of the early Ottomans, there was a secretarial class at work for the sultans in their chanceries (see H. İnalcık, *İA*, art. Reîsülküttâb, at 672), and surviving documents seem to indicate that the Ottoman chancery had reached its developed form by the time of Murād II (d. 855/1451).

The secretaries working in the Ottoman chancery (*dīwān ḳalemi*) had to have a thorough education in all branches of literary composition for correspondence, including the correct forms of address for different ranks of persons, and in such skills as calligraphy, all these being part of what were termed the *fünūn-i kitābet we terassul*. Hence for such secretaries, various manuals of secretaryship were composed (for details, see İnalcık, *art. cit.*), including what might be called "quick reference works". These comprised works on epistolographic theory, with model or abstract examples of letters; collections of actual letters and administrative documents; and works which combined both a theoretical section with actual examples. The first type exists only in the Persian used amongst the Rūm Sald̲j̲ūḳs (see Şinasi Tekin, *op. cit.*, 10), but the remaining two comprise various works written in Turkish.

We know of two chancery manuals in Turkish from the opening decades of the 9th/15th century, the court poet Aḥmed-i Dāʿī's *Terassul* (see İ.H. Ertaylan, *Ahmed-i Da'i hayat ve eserleri*, Istanbul 1952, 157-60, with facsimile text 325-8; edition, tr. and annotation by W. Björkman, *Die Anfänge der türkische Briefsammlungen*, in *Orientalia Suecana*, v [1956, publ. 1957]) and Yaḥyā b. Meḥmed ül-Kātib's *Menāhid̲j̲ ül-ins̲h̲āʾ*, the oldest surviving copy of which (B.N. suppl. turc 660) dates from 883/1478 (ed. from this ms. by Tekin, *op. cit.*). Others follow in the early 10th/16th century, such as the *Gülsh̲an-i ins̲h̲āʾ* of Maḥmūd b. Adham Amasyawī, composed during the reign of Selīm I (see Bursalı̇ Meḥmed Ṭāhir, *ʿOt̲h̲mānlı müʾellifleri*, i, 170; M. Ergin, *Bursa kitaplıklarındaki türkce yazmalar arasında*, in *Türk Dili ve Edebiyatı Dergisi*, iv/1-2 [1950], 107-32; Şinasi Tekin, *op. cit.*, 12), and the *Gül-i ṣad berg* by the poet Mesīḥī (d. 918/1512 [*q.v.*]), of which several mss. exist. According to İnalcık, Mesīḥī's collection forms the basis of the *Müns̲h̲eʾāt* of Ferīdūn Beg (see below) (see İnalcık, *art. cit.*, at 678).

Collections of diplomatic and official documents, form the *ins̲h̲āʾ* or *müns̲h̲eʾāt* collections, and these also include official and diplomatic *resāʾil* proper, i.e. letters to governors, rulers, etc., which may be in Arabic, Persian or Turkish. The oldest of this mixed type is a *Med̲j̲mūʿa-yi müns̲h̲eʾāt* of Persian and Turkish letters belonging to the periods of Meḥemmed the Conqueror and Bāyezīd II (publ. by N. Lugal and A.S. Erzi, Istanbul 1956; see also Şinasi Tekin, *op. cit.*, 11-12). The celebrated *Müns̲h̲eʾāt-i selāṭīn* of Ferīdūn Beg (d. 991/1583 [*q.v.*]) was early published (Istanbul 1274-5/1857-9), and an unknown contemporary of his further compiled a similar collection of Arabic, Persian and Ottoman Turkish documents ranging from the time of the Conqueror to that of Murād III, the latest document stemming from 986/1578 (see H. İlaydın and A.S. Erzi, *XVI. asra âid bir münşeât mecmuası*, in *Belleten*, xx, no. 82 [1957], 221-52). The genre continues in the 11th/17th century with the two collections of *müns̲h̲eʿāt* by the famous *reʾīs ül-küttāb* Sarī ʿAbd Allāh (d. 1070/1660) and even goes up to the 19th century, when Ḥayret Efendi (d. 1241/1826) composed his *Ins̲h̲āʾ-i Ḥayret*, containing letters and petitions to sultans, grand viziers, *s̲h̲eyk̲h̲ ül-Islāms*, etc. (printed Būlāḳ 1242/1826-7).

Finally, one may mention that the literary form of the *risāle* was also used by Ottoman writers in a more general fashion; one of the most famous of these is the *Risāle* of Ḳoči Beg [*q.v.*], written for sultan Murād IV in 1040/1630.

Bibliography: Given in the article.

(Gönül Alpay Tekin, shortened by the Editors)

RIWĀḲ (a.) or *ruwāḳ*, an Arabic architectural term with a great many meanings. The lexicographers derive it from the root *r-w-ḳ* which has two basic meanings (Ibn Fāris, *Muʿd̲j̲am maḳāyīs al-lug̲h̲a*, Cairo 1947-52, i, 460-1). The first one carries the idea of refinement or beauty and the second signifies the part that comes first in something, such as the bull's horns or youth, or the advanced battalion in an army (*rawḳ al-d̲j̲ays̲h̲*), or the anterior section in a space (*rawḳ* or *riwāḳ al-bayt*); according to Ibn Fāris, this last definition of the term was the original one from which the other functions developed. This may indicate that *riwāḳ* initially had a spatial connotation, an observation that is further confirmed by the multiple uses of the word to designate either the space located forward in a tent or a room or a building, or the space above the first level, also called *samāwa* (which may have been derived from the word for sky, *samāʾ*, though it was argued that it was not; cf. Ibn

Sīduh, *al-Mukhaṣṣaṣ*, Beirut, n.d., vi, 4), or, sometimes, an entire tent of a certain type similar to a *fusṭāṭ*, where the only support is a central post (*LA*, xi, 424-5; A. Dessus-Lamare, *Étude sur* Rawq, Riwāq, *et* Ruwāq *et leurs équivalents termes de construction, JA*, ccxxxviii [1950], 338-9). Despite the dicta of the Arabic lexicographers, the term is almost certainly Persian in origin.

Architecturally, the term was mainly applied to that part of a structure that forms its front. Depending on the type of structure, a *riwāḳ* could be a gallery, an ambulatory, a portico, a colonnade, a porch, or a balcony (ʿAbd al-Raḥīm Ghālib, *Mawsūʿat al-ʿimāra al-islāmiyya*, Beirut 1988, 207; H. Crane, *Risale-i-Miʿmariyye, an early seventeenth century Ottoman treatise on architecture*, Leiden 1987, 86). The word was also used to indicate a pre-Islamic architectural form, the Greek stoa, such as the stoa attributed to Aristotle in Alexandria (al-Maḳrīzī, *al-Mawāʿiẓ wa 'l-iʿtibār*, Būlāḳ 1856, i, 159-60). From this last usage was derived the Arabic term for the Stoics, *al-Riwāḳiyyūn* (Buṭrus al-Bustānī, *Muḥīṭ al-muḥīṭ*, Beirut 1867, 840; Dozy, *Suppl.*, i, 572). Dessus-Lamare (340) notes that one of the earliest appearances of *riwāḳ*, in the plural form *arwiḳa*, is in Ibn al-Faḳīh's description of the porticoes in the peristyle houses of Palmyra in the Syrian desert which date to the middle Roman period. A similar use of *riwāḳ* obtained in Islamic palaces and houses, where it also designated the arcades around the courtyard, as well as the specific portico with three doors fronting the T-shaped reception hall, known as *madjlis ḥīrī* after the city of al-Ḥīra [*q.v.*], which was common in ʿAbbāsid residences from Sāmarrā to Egypt (al-Maḳrīzī, *Khiṭaṭ*, i, 386-7; Ḥāzem Sayed, *The development of the Cairene Qāʿa: some considerations*, in *AI*, xxiii [1987], 32-9).

The word *riwāḳ* was also appropriated in religious architecture, especially in the Mashriḳ. The first mosque, the Mosque of the Prophet in Medina, founded in 1/622, originally had an empty courtyard and a simple, covered prayer hall, called *ẓulla*. Subsequent enlargements and alterations, beginning in the reigns of ʿUmar and ʿUthmān, resulted ultimately in surrounding the courtyard with arcades or colonnades, called *arwiḳa*, on all four sides. This development was probably inspired by the peristyle courts in the conquered lands [see MASDJID. I. D. 1]. Eventually, *riwāḳ* became the term most commonly used to designate all arcades in mosques, whether they constitute the porticoes around the courtyard or whether they form the transversal or longitudinal aisles inside the hypostyle prayer halls, such as in al-Muḳaddasī's description of the Umayyad Mosque in Damascus (157-8), and in al-Maḳrīzī's description of al-Azhar Mosque in Cairo (*Khiṭaṭ*, ii, 273-5). The word was also used to designate the entire covered area on one side of a mosque's courtyard, and, at the same time, one row of columns or pillars that carry the arches and make up one component of the covered area (Dessus-Lamare, 342-6). Moreover, a *riwāḳ* need not mean a straight arcade; it could be circular or octagonal in layout, such as the two ambulatories around the *Ḳubbat al-Ṣakhra* [*q.v.*] in Jerusalem, also called *arwiḳa* (al-Muḳaddasī, 169). In the Maghrib, however, *riwāḳ* in the sense of an arcade in a mosque was replaced by at least two other terms, *balāṭa* (pl. *balāṭ* or *balāṭāt*) and *saḳīfa* (pl. *saḳāʾif*) (Ibn Djubayr, *Riḥla*, Beirut 1964, 236-9; Dessus-Lamare, 352-60).

In the Mamlūk period in Egypt and Syria (648-922/1250-1517), *riwāḳ* maintained its meaning in religious architecture, but in residential architecture it gained a new spatial and formal significance (Van Berchem, *CIA, Egypt*, i, 43, n. 1; Laila Ibrāhīm and M.M. Amīn, *Architectural terms in Mamluk documents*, Cairo 1990, 57-8). The new application probably developed from one of the term's original definitions, as something akin to *samāwa*, or the upper part of a tent, but it acquired a specific contextual application to one of the particularities of Mamluk residential and palatial architecture. Thus in *waḳf* [*q.v.*] documents, *riwāḳ* was equated with a *ḳāʿa muʿallaḳa* or a raised hall, that is, a living unit located on the second floor (cf. Aḥmad Darrāg, *L'acte de waqf de Barsbay*, Cairo 1963, 16, 19, 35, 37). The plan of a *riwāḳ* was similar to that of a typical Mamlūk *ḳāʿa*, and was composed either of two opposing *īwāns* [*q.v.*] and a space in the middle called *durḳāʿa*, or of one *īwān* and a *durḳāʿa*, with or without dependencies, such as a latrine, cupboards and alcoves for sleeping (ʿAbd al-Laṭīf Ibrāhīm ʿAlī, *Wathīkat al-Amīr Akhūr Kabīr Karāḳudja al-Ḥasanī*, in *Madjallat Kulliyyat al-Ādāb* [Journal of the Faculty of Literature] xviii/2 [Dec., 1956], 231-2, n. 41; Mona Zakarya, *Deux palais du Caire médiéval, waqfs et architecture*, Marseilles 1983, 146). This residential application of the term survived into the Ottoman period (Nelly Hanna, *Habiter au Caire aux XVIIe et XVIIIe siècles*, Cairo 1991, 40, 44, 122), although new architectural elements appeared which had the same location and function but different names, such as the Turkish *oda* "room, chamber". Furthermore, another Mamlūk application of the term, which extended its meaning to encompass an entire structure, is still in use today. This is *riwāḳ* as residence hall, one usually reserved either for the members of a Ṣūfī order (al-Maḳrīzī, *Khiṭaṭ*, ii, 428; Dozy, *Suppl.*, i, 572), or for an ethnic or regional group of students, such as in al-Azhar Mosque where numerous *arwiḳa* were built at different times by various sponsors (lists in *EI*[1], Azhar. II and VI). Aside from that, the word is today confined to the domain of religious architecture and is equivalent to the English word gallery, with all its synonyms.

(NASSER RABBAT)

RIWĀYA (A.), verbal noun of *rawā*, which originally means "to bear, to convey water" and hence signifies "to transmit, relate"; in classical Arabic the noun *riwāya* mostly applies to the technical meaning of transmission of poems, narratives, *ḥadīth*s, and also applies to the authorised transmission of books (see below). *Riwāya* may sometimes appear synonymous with *ḥikāya* [*q.v.*], and is used in classical Persian in the sense of a *ḥadīth*; in modern Arabic usage it has become an equivalent of "story, novel, play".

The active participle *rāwin*, having the general meaning of relater, is of particular significance for the poetry of pre-Islamic and early Islamic times, when the *rāwī* [*q.v.*], as a pupil and assistant of the poet, had to retain, recite and even arrange the verses of his master. This may have served as a model for the later activity and role of transmitters in other fields as well. The intensive form *rāwiya*, closely associated with the name of Ḥammād (d. 155/772) [*q.v.*], and others, such as Khalaf al-Aḥmar (d. *ca.* 180/796 [*q.v.*]), was reserved for the experts in collecting poetry and narrative traditions, who gathered their material from many different informants.

Riwāya generally means transmission through the spoken word, including purely oral retelling as well as recitation from notes and books. With the use of writing for the preservation of knowledge, *riwāya* came to mean, in practice, the transmission of a written text through oral expression. It is this function of

riwāya, based on the great value attached to oral testimony, which is hard to understand for outsiders and which is most characteristic of Islamic scholarship.

Riwāya in Islamic scholarship. The development of *ʿulūm al-ḥadīth* fostered the methodology of the study of Tradition, describing a number of recognised methods by which traditions could be received (see ḤADĪTH. IV.). The very heart of these methods is the concept of an authorised transmission, as expressed by *idjāza* [*q.v.*], which was meant to guarantee the correctness of the text and its attribution. The *isnād* [*q.v.*] identifies the succession of real or supposed transmitters in the *riwāya* and thus supports the authority of a tradition or any text treated according to these rules. Manuscripts sometimes preserve, under the heading of *riwāya*, and with the confirmation of the *isnād* at the beginning of the text, the names of those who were responsible for the transmission of the whole text from generation to generation.

The reading of a text to a *shaykh* (*ḳirāʾa ʿalā*) was one of the most recommended ways to control the accuracy of a copy (*ʿarḍ*), and to obtain, by attending the session and listening to the reading, the authorisation for further transmission. This highly-formalised practice was widespread in medieval Islam and is documented on many manuscripts in the form of certificates of reading or hearing (*ḳirāʾa, samāʿ*; for a bibliography, see G. Vajda, *Transmission orale*). Few testimonies of this kind are preserved from the 4th/10th century (e.g. M. Muranyi, *Musnad ḥadīt*, 134-5; Y.M. al-Sawwās, *Fihris al-ʿUmariyya*, 691), but internal evidence, *isnāds* and traditions on *ʿilm*—as collected by al-Bukhārī and others—indicate that this method was an established practice even a century before. In any case, simple recitation, from memory or from notes, with the purpose of transmission, goes back to the beginning of the study of Tradition.

Formal transmission by *ḳirāʾa* was, although closely related to the study of Tradition, applied to other genres of literature as well and can be found in all those texts that were treated in academic sessions (*ḥalaḳāt, madjālis*) designed for that purpose. Among these we find, to give but a few examples, editions of and commentaries on the *dīwāns* of poets, such as Thaʿlab's (d. 291/904) *Sharḥ Dīwān Zuhayr b. Abī Sulmā* (Cairo 1363/1944) and Ibn al-Kalbī's (d. 204/819) *Dīwān Shiʿr Ḥātim al-Ṭāʾī wa-akhbāruhu* (ed. ʿĀdil Sulaymān Djamāl, Cairo 1411/1990), works on grammar, such as Sībawayhi's (d. *ca.* 180/796) *Kitāb* (ed. ʿAbd al-Salām M. Hārūn), and philology, such as al-Mubarrad's (d. 286/900) *al-Kāmil fī 'l-adab*, as well as works of *adab* literature, such as al-Muʿāfā b. Zakariyyāʾs (d. 390/1000) *al-Djalīs al-ṣāliḥ* (vol. i ed. Muḥammad Mursī al-Khūlī, Beirut 1981, 147-51).

Riwāya in the light of modern research. Principally, two sorts of inquiry, both indispensable for the study of early Arabic literature, deal with *riwāya*. A common procedure is to reconstruct hypothetically the sources of a work from the study of its *isnāds*, which include, among the *ruwāt* mentioned, earlier authors' names. This approach is to be complemented with the critical study of *riwāyāt* in the sense of transmissions of a work, given in manuscripts and by quotations in later collection-works. This implies the evaluation of variant readings that can be traced to particular transmitters, in contrast to variants produced by copyists. The analysis of *riwāyāt* is thus a principal tool for the study of the textual history of a text-unit or a book, and is equally important for the identification of the origin of a text from the peculiar forms of editing prevalent in early Arabic literature.

At a time when transmission was not yet generally based on complete written versions, that is to say, before 250/864, the "transmitter" could indeed be the writer of a book, editing the material that he had received from his teacher. This is demonstrated, for example, for *al-Kāmil* of al-Mubarrad [*q.v.*] the *Mufaḍḍaliyyāt* [*q.v.*], and several classical books on proverbs [see MATHAL, iii-iii, 5]. In this sense, *riwāya* implies redaction or recension. Closest to original authorship is the teacher's dictation (*imlāʾ*; J. Pedersen, *Book*, 23 ff.), next come the student's notes of the teachings (e.g. M. Muranyi, *Siyar*, 71, 77); a more independent operation is the quest for material apart from personal notes or memory, and even more of redactional work is implied, when the notes of the author are edited (S. Leder, *al-Haiṯām ibn ʿAdī*, 9, 12).

These procedures, and the fact that the methods of transmission were not yet firmly established or consistently practised, furthered the occurrence of divergency among the *riwāyāt* of a text. In so far as they concerned traditions, Islamic scholarship was eager to collect variants, as was done, for example, by Muslim b. al-Ḥadjdjādj in his *Ṣaḥīḥ*. In contrast, the study of variants in various transmissions of a work is an integral part of modern scholarship.

Divergence in *riwāyāt* is quite frequent for old, and even for not so very old texts (from the 3rd/9th century) of different genres (cf. R. Sellheim, *al-Qālī*, 366 f., 371 f.), and appears when a text rendered in quotations is compared to the *riwāya* of the original work (e.g. W. Werkmeister, *Quellenuntersuchungen*, 57-101, 130-1). Variant readings are, in part, due to retelling from memory, but they cannot be understood generally as indicators of oral transmission. As G. Schoeler has explained in detail, notes and notebooks played an important role in early Arabic literature. Books published by their authors in this way, or edited by transmitters on the basis of notes, have to be distinguished from works which were edited by the authors themselves in a completed form.

Variant *riwāyāt* may sometimes owe their existence to different versions given by the author himself during repeated lessons (e.g. Schoeler, *Frage*, 210-12), but in many cases the redactional interference of the editor-transmitters have to be taken into account (for details, see Leder, *op. cit.*, 10 f., ch. 3, 4, 6). Particularly in the case of collections of *isnād*-supported text-units, variants were also produced during the ongoing transmission, even after a work had been edited in a firmly-established form (idem, *Authorship*).

The study of *riwāyāt* may confirm their coherence or uncover divergency. In the latter case, and in particular when divergency is significant, we may become aware that we do not have an "original", but only several *riwāyāt* of a work, as in the case of the *Sīra* by Ibn Isḥāḳ (M. Muranyi, *Ibn Isḥāq's k. al-Maghāzī*). In this sense, *riwāyāt*, and not the authored works purported to be their origin, are the topics for textual criticism.

Werkmeister, *Quellenuntersuchungen zum Kitāb al-ʿIqd al-farīd des Andalusiers Ibn ʿAbdrabbih (246/860-328/940). Ein Beitrag zur arabischen Literaturgeschichte*, Berlin 1983 (Islamkundliche Untersuchungen 70).

For classical Arabic titles on the technical aspects of *riwāyā*, see ḤADĪTH, IV. In addition may be mentioned al-Rāmahurmuzī's (d. 360/971) *al-Muḥaddith al-fāṣil bayna 'l-rāwī wa 'l-wāʿī* ed. Muḥammad ʿAdjdjādj al-Khaṭīb, Beirut 1391/1971 and Ibn al-Ṣalāḥ's (d. 643/1245) *al-Muḳaddima*, ed. ʿĀʾisha ʿAbd al-Raḥmān Bint al-Shāṭiʾ, Cairo 1974, as well as the titles of al-Khaṭīb al-Baghdādī (d. 463/1071), *al-Kifāya fī ʿilm al-riwāya*, Ḥaydarābād 1357, and *Taḳyīd al-ʿilm*, ed. Youssef Eche, Damascus 1949. Further material concerning *riwāyāt* in Sellheim, *Materialien zur arabischen Literaturgeschichte*, 2 vols., Wiesbaden 1976-87, *Indices* vol. ii, 417; the beginnings of writing for the use of transmission are discussed by Schoeler also in his *Mündliche Thora und Ḥadīṯ, Überlieferung, Schreibverbot, Redaktion*, in *Isl.*, lxvi (1989), 213-51; the different functions of the *ruwāt* named in the *isnāds* are examined by S. Günther, *Quellenuntersuchungen zu den "Maqātil aṭ-Ṭālibiyyīn" des Abū l-Farağ al-Iṣfahānī (gest. 356/967)*, Hildesheim-Zürich-New York 1991 (Arabistische Texte und Studien Bd. 4); for *riwāya* in Ḳurʾān commentaries, see F. Leemhuis, *Origins and early development of the tafsīr tradition*, in A. Rippin (ed.), *Approaches to the history of the interpretation of the Qurʾān*, Oxford 1988, 13-30. (S. LEDER)

RIYĀʾ (A.), or RIʾĀʾ according to Ḳurʾānic orthography (thrice in the expression *riʾāʾ al-nās*, II, 264; IV, 38; VIII, 47), *maṣdar* or verbal noun of form III of *raʾā* "to see", with the meaning of ostentation or hypocrisy.

The concept of *riyāʾ* is made explicit and developed in Tradition; in Wensinck's *Concordance*, i/2, 202-3, there are to be found under *rāʾā* 23 distinct *ḥadīths*. But the most complete source comes in the *Shuʿab al-īmān* of al-Bayhaḳī, in ch. 45, which deals with pious works devoted to God and the avoidance of ostentation (ed. Zaghlūl, 9 vols., Beirut 1990, v, 325-69, nos. 6805-6988). Al-Bayhaḳī cites other traditions than those listed in Wensinck; in addition, he mentions *logia* relative to *riyāʾ* pronounced by some fifty ascetics and spiritual masters, such as al-Ḥasan al-Baṣrī, Sufyān al-Thawrī, Fuḍayl b. ʿIyāḍ, Dhu 'l-Nūn al-Miṣrī (mentioned thirteen times in this chapter), Sarī al-Saḳaṭī, Sahl al-Tustarī, al-Djunayd, etc. One of the most frequently-used traditions is that *riyāʾ* is part of *shirk*, "associating other things with God", at times qualified as being *aṣghar*, minor, and at others as being *khafī*, hidden. *Riyāʾ* is contrasted with *ikhlāṣ*, which is purity of intention (*niyya*) and whole-hearted sincerity.

The first detailed analysis of *riyāʾ* is by al-Ḥārith b. Asad, better known under his by-name of al-Muḥāsibī (d. 243/857-8 [*q.v.*]), one of al-Djunayd's most senior masters. He devoted a whole book to it, bearing this title, published in *al-Riʿāya li-ḥuḳūḳ Allāh*, ed. ʿAbd al-Ḥalīm Maḥmūd and Ṭāhā ʿAbd al-Baḳī Surūr. This study by al-Muḥāsibī is divided into 43 chapters, supported by 79 traditions; it was to be taken over in complete form by al-Ghazālī (d. 505/1111 [*q.v.*]), but using a different order and adopting a clearer and more useable arrangement, in his *Iḥyāʾ*, in book xxviii, which deals with the reprehensibleness of honours (*djāh*) and ostentation (book viii, especially the second part, divided into 11 *bayāns*, new ed. Beirut in 5 vols., iii, 310-53). Al-Ghazālī cites al-Muḥāsibī here, iii, 325, explicitly, in regard to the controversial question, is a pious work voided when thoughts of ostentation become mixed with the initial purity of intention? (cf. al-Muḥāsibī, *K. al-Riyāʾ*, 193-4). He also cites him at iii, 332-3, on the various responses concerning the appropriate attitude towards the Devil in order to fend him off (cf. *K. al-Riyāʾ*, 160-3).

Al-Muḥāsibī (147-50) and al-Ghazālī (iii, 314-16) group under five categories the "objects of ostentation" (*al-murāʾā bihi*), which they list in the following order: the body; external appearance and dress; speech; action; and the company kept. Both of them being acute psychologists, they stigmatise fiercely the various manifestations of false piety. Some examples may be cited. Through emaciation and pallor, one may give the impression of being devoted to works of mortification and to spending the nights in vigil. One can lead people to believe that one is following Tradition and the example of holy men devoted to God by appearing with dishevelled hair, shorn-off moustache, bowed head when walking, slow and deliberate gestures, with marks of prostrations on the face, wearing coarse clothing such as woollen ones, hitching up one's garments to the calves, shortening the sleeves, wearing dirty and torn clothes and thus trying to pass as a Ṣūfī. Various pieces of hypocritical cant are also noted by them (cf. al-Muḥāsibī, 180-1, and al-Ghazālī, iii, 321), and they describe for us those who assume the appearance of mystics, full of humility, handing out words of wisdom, delivering sermons and exhorting their neighbours, in order to obtain the guilty favours of a woman or a young man (*wa-innamā ḳaṣduhu al-taḥabbub ilā marʾa aw ghulām li-adjl al-fudjūr*).

One should finally note that, if one of the possible senses of *riyāʾ* is seeking the exaggerated consideration of others, and if it can be combatted above all by the ecstatic mystics, the Ṣūfīs, the *ahl al-malāma* or "those incurring blame", attached the same importance to an exaggerated opinion of oneself (*ruʾyat al-nafs*), as al-Sulamī [*q.v.*] showed in his *Risālat al-Malāmatiyya* (tr. Deladrière as *La Lucidité implacable*, Paris 1991).

Bibliography: Given in the article.

(R. DELADRIÈRE)

AL-**RIYĀḌ** (A., pl. of *rawḍa* "garden"), the capital of Saudi Arabia (estimated population, 1993: 1.5 million).

1. *Natural setting*. Al-Riyāḍ is situated in the centre of the Arabian peninsula, in the region of Nadjd [*q.v.*], at 453 km/280 miles from Baḥrayn on the Gulf coast and 1,061 km/660 miles from Djudda [*q.v.*] on the Red Sea coast. The actual site is on a plateau with an average height of 600 m/1,968 ft. made up of sedimentary deposits, mainly calcareous, and of the Jurassic period. This plateau is intersected by valleys with scarped edges, notably that of the Wādī Ḥanīfa to the west, which forms a natural boundary to the region as a whole. A shallower valley, that of the Wādī Baṭḥa, running north-south, has determined the communications layout of the city centre before being covered over and transformed into a main road. To the east, the topography becomes more broken and

rocky hillocks hinder the growth of urbanisation. Like all Nadjd, al-Riyāḍ suffers from a hot desert climate: irregular rainfall, but less than 100 m per annum, average temperatures of 35° C in summer and 11° in winter, very low atmospheric humidity and a liability to violent winds raising sand storms which pose serious problems for traffic and the upkeep of public spaces.

2. *History*. The existence of underground water channels in the alluvial subsoil of the Wādīs Ḥanīfa and Baṭha allowed, well before the coming of Islam, the development of small human settlements, associated with date palm groves. The most notable seems to have been Hadjar, an oasis and market mentioned by Ibn Baṭṭūṭa *ca.* 732/1332 as a place of gardens and vegetation.

But it was only in the 12th/18th century that the name of al-Riyāḍ appears in history with the decline of Hadjar, ruined by local conflicts. The town of al-Dirʿiyya [*q.v.*] was seized by the Āl Suʿūd in 1187/1773 and chosen by them as their capital, as also once again after a period of eclipse in *ca.* 1238/1823 by Turkī b. ʿAbd Allāh Ibn Suʿūd, the restorer of Saudi power, who incorporated the Khardj [*q.v.*] in the newly-reconstituted state. The Āl Suʿūd were thus able after this to resist incursions launched against them from the Ḥidjāz by the Egyptians, at the instigation of the Ottomans, in the 1840s. The dissensions after the death of Fayṣal b. Turkī in 1282/1865 ended in the conquest of al-Riyāḍ by the Āl Rashīd of Ḥāʾil [*q.vv.*]. The ensuing period of instability, characterised by revalries and conflicts between the "Turks" (in fact, the Egyptians), the Wahhābīs and the tribes, finally resulted in the recovery of al-Riyāḍ from its Rashīdī governor by ʿAbd al-ʿAzīz b. Suʿūd b. Fayṣal in 1319/1902. After the submission of the Āl Rashīd and the reconquest of al-Ḥasā in 1331/1913, but above all with ʿAbd al-ʿAzīz's entry into Mecca on 6 Djumādā I 1343/13 December 1924, the Saudi state as then constituted comprised three-quarters of the peninsula. From then onwards, the evolution of al-Riyāḍ has been indissolubly linked with the political decision-making of the reigning dynasty and the decisions made to maximise the prodigious subterranean resources of the kingdom.

3. *Contemporary developments*. With a population of less than 30,000 in 1929, even in 1949 al-Riyāḍ was only a modest-sized town within fortified walls. In this year, the walls were demolished and the town grew to 83,000 people spread over 5 km². A continuous pattern of growth, strengthened by strong immigration currents, made the population pass the million point during the 1970s, to reach 1.5 million by 1993. At the same time, the surface extension of the agglomeration has reached around 600 km² today, whilst the development plan envisages an area of 1,781 km² including, at the present time, vast land reserves. This exceptional growth has taken place in parallel with the creation of a diversified base of various functions, generating numerous jobs. The industrial sector represents 20% of those employed, and the main zones of activity, whether public or private, lie on the eastern and southern peripheries of the city. But al-Riyāḍ has become above all a city of service enterprises, which has progressively concentrated, to the detriment of Djudda, all the centres of decision making, whether political or economic and financial, at the same time as it has been acquiring hospitals, as well as financial and university institutions, destined to exert an influence over the Arabic and Islamic world.

4. *Urban planning*. After a period of uncontrolled urbanisation, the Saudi authorities have opted for a highly-planned development of their metropolis. This is based on the Doxiadis Plan of 1968, actually put into practice in 1978 by SCET Inter, and contains all the main options for development to be realised in the following decades. These include: an extensive network of expressways which will complete a beltway around the city in order to assist traffic circulation, vital for a highly motorised population (600,000 private cars) which lives mainly in individual habitations. Furthermore, a general application of zoning has brought about the building of university complexes around the periphery, including an Islamic University and the King Saʿūd University, as also a diplomatic quarter which includes all the diplomatic representatives and the royal and governmental quarter or KCOMMAS. On the southeastern periphery is likewise situated the extensive housing development of ʿUraydja.

In distinction from other Arab capital cities, al-Riyāḍ has no historic centre and only a few preserved buildings bear witness to the former architectural traditions of Nadjd.

5. *The urban structure*. The administration of al-Riyāḍ is under the shared responsibility of the state and of a municipal administration, set up in 1936, whose powers were much increased in 1977. In 1951, al-Riyāḍ was linked to Dammām by a railway, but air travel remains the most used method of communications; the airport opened in 1952 to the north of the city, now judged inadequate, has been replaced since the 1980s by the King Khālid Airport which covers an area of 225 km². But the main preoccupation of the administration is the permanent challenge of a desert environment, against which it is setting up a double response: the systematic provision of green spaces for the whole agglomeration and an abundant provision of water. In order to satisfy a daily consumption of around 400 litres per head, the underground water levels of the region have been tapped and these resources are supplemented by the bringing in of desalinated water, whilst a growing proportion of the water used is being recycled for watering the numerous parks and gardens.

RIYĀḌĪ, an Ottoman biographer of poets. Mollā Meḥmed, known as Riyāḍī, was the son of a certain Muṣṭafā Efendi of Birge (to the south-east of İzmir) and was born in 980/1572. He was first of all employed as a *müderris*, later became *ḳāḍī* of Ḥaleb (Aleppo) and died on 9 Ṣafar 1054/17 April 1644 in Cairo. He was known as *al-Aṣamm*.

His chief work, *Riyaḍ al-shuʿarāʾ*, is a biographical dictionary of poets. It is known to have been written by 1018/1609. According to F. Babinger and Niki Gamm, his *Tedhkire* contains 384 names, 8 Ottoman sultans as royal poets and 376 names of non-royal poets in 20 extant manuscripts (see Gamm, *Riyāżī's*

Teẕkire as a source of information on Ottoman poets, in *JAOS*, xcix [1979], 643-44). But Namık Açıkgöz gives the number as 424, including royal poets and non-royal poets in 26 extant manuscripts (see his *Riyazü'ş-Su'ara*, AÜDTCF graduate/master's thesis Ankara 1982 unpubl.; idem, *Riyâzî divanı'ndan seçmeler*, Ankara 1990, 28-9; on the differences of the number of the poets in the *Tedhkire*, see Gönül Alpay [Tekin], art. *Riyâzi*, in *İA*, 2nd ed., 1970, 752.

As a *tedhkire* writer, Riyāḍī belongs to a group of writers who tried to cover the entire field of Ottoman poetry. Like them, he also selected such poets whose poetic abilities he valued as good, and he tried to justify his judgements, selecting appropriate examples from their work. From the information at the end of the *Tedhkire*, we understand that Riyāḍī completed his work and presented it to Sulṭan Aḥmed I in 1018/1609. Following the Introduction, which ends with a *ḳiṭʿa* and a *duʿā* (prayer) addressing Aḥmed I, it is divided into two sections (*rawḍas*). The first section contains information about the Ottoman sultan-poets Meḥemmed Fātiḥ, Bāyezīd II, Selīm I, Süleymān I, Selīm II, Murād III, Meḥemmed III and Aḥmed I. In this section, he gives basic information about the lives of the sultans, such as their father's name, their date of accession, their pen-names and their praisworthy deeds, and he quotes some verses both from their own poems and from those of other poets written about them.

In the second section, the biographical entries are given in alphabetical order by pen-name, and each poet is dealt with in a much more detailed way than in the first section. Here, he mentions the poet's birthplace, if known, and his date of birth and death; his full name; and information about his family, his education, his teachers, his profession; and whether he was a judge or a teacher, or whether he held a high official rank in the government. Occasionally, he refers to poets coming from the ranks of the army. Often he dwells on the unusual characteristics or witty nature of the poets, providing witty and sarcastic hints and anecdotes about their life. Then he makes an evaluation of the poet's poetical ability, giving some quotations from his poetry in order to prove the correctness of his judgement. Finally, he concludes by giving the poet's death date and place, and his burial ground. Sometimes he adds to this information a chronogram commemorating the death. He usually follows this pattern of information (*taʾrīkh*) as far as possible, and if he makes omissions, this stems from a lack of information.

Besides his *Tedhkire*, he compiled a *murattab Dīwān* consisting of 25 *ḳaṣīdas*, the *sāḳī-nāma*, 652 *ghazels*, 17 incomplete *ghazels*, 9 *ḳiṭʿas* (of which one is in Persian), 171 *rubāʿīs*, 89 *maṭlaʿs* and 11 *miyāna* couplets. *Ḳaṣīdas* are dedicated to *inter aliad* ʿOthmān II, Murād IV, the Grand Viziers ʿAlī Pasha and Ḥāfiẓ Aḥmed Pasha, and the Sheykh al-Islām Yaḥyā Efendī.

Riyāḍī's *Dīwān* is known in 30 extant mss., in scattered libraries all over the world. The *Sāḳī-nāma*, his other well-known work, was probably composed between 1011/1603 and 1012/1609, and was written in *mathnawī* form, consisting of 1054 couplets. Having embellished this *Sāḳī-nāma* with scattered *rubāʿīs* in appropriate places, Riyāḍī tries here to describe a drinking party which took place one night, and gives very lively descriptions of the tavern-keeper, the musicians and musical instruments, the wine-cups, the cupbearer, and the psychology of the drunkards. In addition to these, he describes very lively scenes taken from the real life of his time, sc. the beginning of the 11th/17th century.

His third work, the *Dustūr al-ʿamal*, is a Persian-Turkish encyclopaedic dictionary which was probably written *ca.* 1016/1607 and consists of 1050 phrases, expressions and some special usages of Persian phrases, with explanations of the grammatical issues. He also quotes Persian couplets in order to explain how these special usages and grammatical forms were used. Later, the author of the *Farhang-i Shuʿūrī*, Ḥasan Shuʿūrī, wrote an addendum to this work called the *Ḍurūb-i amthāl wa iṣṭilāḥāt* (*Topkapı Sarayı türkçe yazmalar kataloğu*, ii, 48).

Riyāḍī's *Lexicon* has not yet been published, but is accessible in a number of mss., a list of which is given by Babinger, *GOW*, no. 178; another one is in Süleymaniye, Lala İsmail no. 314. On a German translation of an extract from it by V. von Rosenzweig-Schwannau, see *ZDMG*, xx (1866), 439, no. 3.

Besides the above-mentioned works, there are other religious, historical and literary works of his recorded in the bibliographical works and in some historical sources, including 1. *Siyar*; 2. an abbreviated Turkish translation of Ibn Khallikān's *Wafayāt al-aʿyān*; 3. *Ṣaḥāʾif al-laṭāʾif fī anwāʿ al-ʿulūm wa 'l-maʿārif*; 4. *Kashf al-ḥidjāb ʿan wadjh al-ṣawāb*; and 5. *Risālat fī ʿilm al-bayān*.

Bibliography (in addition to references given in the article): Riḍā, *Tedhkire*, 38-9; Belīgh, *Güldeste-i riyāḍ-i ʿirfān ve wefeyāt-i dānish-warān-i nādirān*, 401; Sheykhī Meḥmed, *Weḳāyiʿ al-fuḍalāʾ*, 133; ʿUshshāḳī-zāde Seyyid İbrāhīm, *Dheyl-i ʿUshshāḳī-zāde*, fol. 48a; *Sidjill-i ʿothmānī*, ii, 425; J. von Hammer, *GOD*, iii, 367; Bursalî Meḥmed Ṭāhir, *ʿOthmānlî müʾellifleri*, ii, 183-4 (with references); Babinger, *GOW*, 177-8; Namık Açıkgöz, *Divan edebiyatında mektup ve XVII. yüzyıl şâirlerinden Riyâzî'nin iki mektubu*, in *Fırat Üniversitesi Sosyal Bilimler Dergisi*, i/2 (Elâzığ 1987), 7-14; idem, *Riyâzî, hayatı, eserleri ve edebî kişiliği*, Ph.D diss., 3 vols., Fırat Üniversitesi, Elâzığ 1986, unpubl.

AL-**RIYĀḌIYYĀT**, AL-RIYĀḌA (A.), mathematics.

Arabic mathematics are those cultivated by scholars of diverse ethnic origins and of diverse religions, over a period of at least seven centuries—from the 3rd/9th to the 10th/16th centuries—but who all wrote in Arabic and belonged to the civilisation of Islam in its widest sense. Other mathematical activities directly linked to these, in other languages, notably Persian, or those via translations of Arabic texts, e.g. in Latin or Hebrew, will not be treated here. Finally, given the limited space available and the vastness of mathematical activities in Arabic during this period, whose diversity and importance has been shown by recent research, not all the mathematical disciplines and the applied sciences can be treated. Also not considered are the important chapters like those on the projective methods (see R. Rashed, *Géométrie et dioptrique au X^e siècle. Ibn Sahl, al-Qūhī et Ibn al-Haytham*, Paris 1993, pp. CIII-CXXV), and fundamental applications in optics and in astronomy *inter alia*.

But, before tracing the history of these mathematical activities, let us look at the origins of its main traits, and, first, let us go back to Baghdād at the beginning of the 3rd/9th century. It was just at this period and in this milieu—that of the "House of Wisdom" [see BAYT AL-ḤIKMA] at Baghdād—that Muḥammad b. Mūsā al-Khwārazmī [*q.v.*] composed a book whose subject and style were new. It was in effect within these pages that, for the first time, algebra came forward as a distinct and independent

mathematical discipline [see AL-DJABR WA 'L-MUKĀBALA]. The event was crucial, and was seen as such by contemporaries, as much for the style of this mathematics as for the ontology of its object and, even more, the richness of the possibilities which it offered for the future. The style was at the same time algorithmic and demonstrative, and at that time and henceforth, with this algebra, the great potentiality which would suffuse mathematics from the 3rd/9th century onwards, may be glimpsed: the application of mathematical disciplines to each other. In other words, if algebra, through its style and the generality of its object, made these applications possible, the latter, by their number and the diversity of their nature, did not cease to modify the shape of mathematics after the 3rd/9th century.

Al-Khʷārazmī's successors progressively undertook the application of arithmetic to algebra, of algebra to arithmetic, from each of these to trigonometry, from algebra to the Euclidian theory of numbers, from algebra to geometry and from geometry to algebra. These applications were always those laying the basic foundations for new disciplines or new chapters. Thus there saw light the algebra of polynomials, combinatorial analysis, numerical analysis, solving of numerical equations, the new elementary theory of numbers and the geometrical construction of equations. Other effects were to result from these multiple applications, such as the separation of the integer Diophantine analysis from rational Diophantine analysis, which became a complete, separate chapter of algebra under the title of "indeterminate analysis".

From the beginning of the 3rd/9th century, the mathematical landscape was no longer the same; it became transformed and its horizons widened. From the outset, we witness an extension of Hellenistic arithmetic and geometry: the theory of conics and that of parallels, projective studies, Archimedean methods for the measurement or curved areas and volumes, isoperimetric problems and geometrical transformations. All these domains became the objects of study for the most famous mathematicians—Thābit b. Ḳurra [*q.v.*] al-Ḳūhī [*q.v.* in Suppl.], Ibn Sahl and Ibn al-Haytham [*q.v.*], amongst others—who managed, through profound researches, to develop them in the same style as their predecessors or modified them when conditions required this. Furthermore, within these Hellenistic mathematical studies themselves, there was a movement towards non-Hellenistic areas.

It is this new landscape which we will now sketch out below in its main traits, without, however, let it be understood, any pretentions to exhaustiveness.

I. Algebra.

1. Al-Khʷārazmī's book, which appeared between 197/813 and 215/830 in Baghdād, was the first book in which the term algebra appeared in a title (this was *K. al-Djabr wa 'l-muḳābala*). The two terms here denoted at the same time both the discipline and its operations. Thus for example

$x^2 + c - bx = d \quad \text{with } c > d$

the algebra consists in transposing the subtractive expressions

$x^2 + c = bx + d$

and *al-muḳābala* in reducing the similar terms

$x^2 + (c - d) = bx.$

In this book, the author's aim is clear and never before envisaged: to elaborate a theory of equations which can be solved by roots, to which can be brought equally arithmetical and geometrical problems, and thus be of use in calculations, commercial operations, successions, mensuration of land, etc. In the first part of his book, the author begins by defining the basic terms of this theory, which, because of the requirement of resolution by radicals and because of his knowledge of the procedure in this domain, could only involve equations of the first two degrees. It is in fact a question of the unknown quantity, denoted indifferently by "root" and "thing", its square, positive rational numbers, the laws of arithmetic of $\pm$, $x/\div$, $\sqrt{}$, and of equality. The main concepts then introduced by al-Khʷārazmī are the equation of the first degree, that of the second degree, associated binomials and trinomials, the normal form, algorithmic solutions and the demonstration of the formula for solutions. The concept of the equation appears in his book to denote an infinite class of problems and not, as with e.g. the Babylonians, in the course of the solution of one or other problem. On the other hand, equations are not presented in the course of the solution of problems to be solved, as amongst the Babylonians and Diophantus, but, from the outset, from the starting-point of primitive terms whose combinations are to yield all the possible forms. Thus, immediately after having given the basic terms, he gives the following six types:

$ax^2 = bx, \quad ax^2 = c, \quad bx = c, \quad ax^2 + bx = c,$

$ax^2 + c = bx, \quad ax^2 = bx + c.$

He then introduces the idea of normal form, and requires the reduction of each of the preceding equations to the normal corresponding form. From this there results, in particular, for the trinomial equations

$x^2 + px = q, \quad x^2 = px + q, \quad x^2 + q = px.$

He then passes to the determination of the algorithmic formulae for solutions.

He demonstrates equally the different formulae for solutions not algebraically but by means of the idea of the equality of areas. He was apparently inspired by a quite recent knowledge of Euclid's *Elements*, translated by his colleague in the "House of Wisdom", al-Ḥadjdjādj b. Maṭar.

Al-Khʷārazmī then undertakes a brief study of some properties of the application of the elementary laws of arithmetic to the most simple algebraic expressions. Thus he studies products of the type

$(a \pm bx)(c \pm dx) \quad \text{with } a, b, c, d \in \mathbb{Q}_+.$

In order to better grasp the idea which he made for himself of the new discipline, as well as its richness, one only needs to compare his book with the ancient mathematical works; it is equally necessary to examine the impact which he had on his contemporaries and his successors. It is only then that one can place him within his true historical dimension. Now, one of the features of his book, essential to our minds, is that he immediately stirred up a current of algebraic research. The bio-bibliographer of the 4th/10th century al-Nadīm [*q.v.*] already provides us with a long list of al-Khʷārazmī's contemporaries and successors who followed his path of research. Amongst others, there figure Ibn Turk, Sind b. ʿAlī, al-Saydanānī, Thābit b. Ḳurra, Abū Kāmil, Sinān b. al-Fatḥ, al-Ḥubūbī and Abu 'l-Wafāʾ al-Būzadjānī [*q.v.*].

In this time and immediately after it, one witnesses essentially an extension of researches already dealt with by al-Khʷārazmī: the theory of quadratic equations, algebraic calculus, the indeterminate analysis and application of algebra to the problems of successions, divisions of inheritances, etc. Research into the theory of equations was itself pursued along many paths. The first was that already blazed by al-Khʷārazmī himself, but this time with an improvement of his proto-geometrical proofs; this is the way pursued by Ibn Turk, who without adding anything new, resumed a discussion of the proof which was

more closely-argued (see Aydin Sayili, *Logical necessities in mixed equations by ʿAbd al-Ḥamīd ibn Turk and the algebra of his time*, Ankara 1962, 145 ff.). More important was the way taken a little later by Th̲ābit b. Ḳurra. This last went back in effect to the *Elements* of Euclid, in order at the same time to establish al-Kh̲ʷārazmī's proofs on more solid geometrical foundations and also to render geometrically the equations of the second degree. Th̲ābit was moreover the first to distinguish clearly between the two methods, algebraic and geometrical, regarding which he tried to show that they both led in the end to the same result, i.e. to the geometrical interpretation of algebraical procedures.

But this geometrical rendering by Th̲ābit of al-Kh̲ʷārazmī's equations shows itself as particularly important, as will be seen, for the development of the theory of algebraic equations. Another rendering, very different, took place at almost the same time, which was also to be fundamental for the development of this same theory: that of the problems of geometry in algebraic terms. Al-Māhānī, who was, in effect, a contemporary of Th̲ābit's, only began by rendering certain biquadratic problems of Book X of the *Elements* into algebraic equations but also a solid problem, that given in Archimedes' *The sphere and the cylinder*, as a cubic equation (see below).

One witnesses, moreover, following al-Kh̲ʷārazmī, the extension of algebraic calculation. This was, perhaps, the main theme of research and the one most shared together by the algebraists following him. Thus one began by extending the very terms of algebra as far as the sixth power of the unknown, as may be seen with Abū Kāmil and Sinān b. al-Fatḥ. The latter defined, furthermore, the powers multiplicatively (see on the powers, in Sinān, Rashed, *Entre arithmétique et algèbre. Recherches sur l'histoire des mathématiques arabes*, Paris 1984, 21 n. 11), thus differing from Abū Kāmil, who gave an additive definition. But it was the latter's work in the field of algebra which marks both the epoch and the history of algebra (in his *K. al-Dj̲abr wa 'l-muḳābala*). As well as the extension of algebraic calculation, he brought within his book a new chapter in algebra, indeterminate analysis or Diophantine rational analysis.

2. One would not be able to understand anything about the history of algebra if one did not underline the contributions of the two currents of research which developed in the period considered above. The first was concerned with the study of irrational quantities, whether on the occasion of a reading of Book X of the *Elements*, or, in some manner, independently. One may mention, amongst many other mathematicians who participated in this work of research, the names of al-Māhānī, Sulaymān b. ʿIṣma, al-Kh̲āzin [*q.v.*], al-Ahwāzī, Yuḥannā b. Yūsuf and al-Hās̲h̲imī.

The second current was stimulated by the translation into Arabic of the *Arithmetics* of Diophantus, and, notably, by the algebraical reading of this latter book. Now this *Arithmetics*, even if it was not a work of algebra in al-Kh̲ʷārazmī's sense, nevertheless contained techniques of algebraic calculation, effective for the time: substitutions, eliminations, changes of variables, etc. It was the object of commentaries by mathematicians like Kusṭā b. Lūḳa [*q.v.*], its translator in the 3rd/9th century, and al-Būzadj̲ānī a century later, but these texts are unfortunately lost.

Whatever may have been the case, this progress in algebraic calculation, whether by its extension to other domains or by the mass of technical results obtained, resulted finally in a renewal of the discipline itself. A century and a half after al-Kh̲ʷārazmī, the Bag̲h̲dād mathematician al-Karadj̲ī [*q.v.*] conceived another project of research: the application of arithmetic to algebra, i.e. the systematic study of the application of the laws of arithmetic and of certain of its algorithms to the algebraic expressions and, in particular, to polynomials. This is exactly this calculation on the algebraic expressions of the form

$$f(x) = \sum_{k=-m}^{n} a_k x^k \qquad m, n \in Z_+$$

which became the main object of algebra. The theory of algebraic equations is certainly always present, but occupies only a modest place amidst the preoccupations of the algebraists. One realises that, from this time onwards, the books about algebra undergo modifications not only in their content but also in their organisation.

Without going over here the history of six centuries of algebra let us illustrate this impact of al-Karadj̲ī's work by turning to another of his successors of the 6th/12th century, al-Samawʾal (d. 569/1174), who integrated within his book on algebra, *al-Bāhir*, the main writings of al-Karadj̲ī. Al-Samawʾal began by defining, quite generally, the idea of algebraic powers (he writes, after having noted in a table on both sides of x^0, the powers, "If the two powers are on one and the other side of the unity from one of them we count in the direction of the unity the number of elements of the table which separate the other power from the unity, and the number is on the same side as the unity. If the two powers are of the same side of the unity, we count in the direction opposite to the unity"; see *Al-Bāhir en algèbre d'al-Samawʾal*, ed., introd. and notes by S. Ahmad and R. Rashed, Damascus 1972), and, thanks to the definition $x^0 = 1$, gives the rule equivalent to $x^m x^n = x^{m+n}$, m, n $\in$ Z. There then follows the study of the arithmetical operations on monomials and polynomials, notably those of the divisibility of polynomials, as also the approximation of the fractions by the elements of the ring of the polynomials. Thus one has, e.g.

$$\frac{f(x)}{g(x)} = \frac{20x^2 + 30x}{6x^2 + 12} \approx \frac{10}{3} + \frac{5}{x} - \frac{20}{3x^2} - \frac{10}{3x^2} + \frac{40}{x^3} + \frac{40}{3x^4} + \frac{20}{x^5} - \frac{80}{3x^6} - \frac{40}{x^7},$$

in which al-Samawʾal obtains a kind of limited development

$h(x) = \frac{f(x)}{g(x)}$, which is only valid for x when it is sufficiently great.

One then finds the extraction of the square root of a polynomial with rational coefficients. But, for all these calculations regarding polynomials, al-Karadj̲ī had devoted a work, at present lost but fortunately cited by al-Samawʾal, in which he exerts himself to establish the formula of the binomial development and the table of coefficients

$$(a+b)^n = \sum_{k=0}^{n} \binom{n}{k} a^{n-k} b^k \qquad n \in N.$$

It is on the occasion of the demonstration of this formula that one witnesses the appearance, in an archaic form, of the complete, finite induction as a procedure of the proof in mathematics. Amongst the means of auxiliary calculation, al-Samawʾal gives, following al-Karadj̲ī, the sum of the different arithmetical progressions, with their proof:

$$\sum_{k=1}^{n} k, \sum_{k=1}^{n} k^2, \left(\sum_{k=1}^{n} k\right)^2, \sum_{k=1}^{n} k\,(k+1), \ldots$$

There then follows the reply to the following question: "How can the multiplication, division, addition, subtraction and extraction of roots be used in regard to irrational quantities?" (see Ahmad and Rashed, *Al-Bāhir en algèbre* ... , 37). The reply to this question led al-Karadjī and his successors to read in an algebraic fashion and in a deliberate manner, Book X of the *Elements*, to extend to infinity the monomials and binomials given in that book and to propose rules for calculation, amongst which one finds explicitly formulated the one of al-Māhānī

$$\left(x^{\frac{1}{n}}\right)^{\frac{1}{m}} = \left(x^{\frac{1}{m}}\right)^{\frac{1}{n}} \quad \text{and} \quad x^{\frac{1}{m}} = (x^n)^{\frac{1}{mn}}$$

with others like the following

$$\left(x^{\frac{1}{m}} \pm y^{\frac{1}{m}}\right)^m = y\left(\left(\frac{x}{y}\right)^{\frac{1}{m}} \pm 1\right)^m .$$

There is also to be found an important chapter on rational diophantine analysis and another one on the resolution of systems of linear equations with several unknowns. Al-Samawʾal gives a system of 210 linear equations with ten unknowns.

Starting from the works of al-Karadjī, one sees a trend of research in algebra taking shape, a recognisable tradition regarding the content and organisation of each of the works.

At the heart of this trend, the chapter on the theory of algebraic equations, properly speaking, without being central had nevertheless made some progress. Al-Karadjī himself considered, like all his predecessors, quadratic equations. Certain of his successors tried, however, to study the solution of cubic equations and equations of the fourth degree. Thus al-Sulamī in the 6th/12th century concentrated on cubic equations in order to find a solution through radicals (*al-Muḳaddima al-kāfiya fī ḥisāb al-djabr wa 'l-muḳābala*, Collection Paul Sbāt, no. 5, ff. 92b-93a). This text of his bears witness to the interest of the mathematicians of his time, brought to bear on the solution by radicals of cubic equations.

3. The algebraists who were also arithmeticians concentrated on the solution by radicals of equations, and sought to justify the algorithm of the solution. One even encounters sometimes, in the same mathematician (e.g. Abū Kāmil), two justifications, one geometrical and the other algebraical. For the cubic equation, they lacked not only solutions by radicals but also the justification of the algorithm of solution, since the solution could not be constructed by means of a ruler and a compass. Recourse to conic sections, explicitly meant to resolve cubic equations, rapidly followed the first algebraic renderings of solid problems. We have mentioned, from the 3rd/9th century, al-Māhānī and Archimedes' lemma (see how al-Khayyām traced in this manner this story in his famous treatise of algebra, in *L'œuvre algébrique d'al-Khayyām*, Aleppo 1981, 11-12); other problems, such as, notably, the trisection of an angle, the two means and the regular heptagon, were very soon rendered in algebraic terms. But, on the other hand, confronted by the difficulty mentioned before, and thus by that in resolving cubic equations by means of radicals, the mathematicians of the 4th/10th century like al-Khāzin, Ibn ʿIrāḳ, Abu 'l-Djūd b. al-Layth and al-Shannī, were led to render this equation in the language of geometry (*op. cit.*, 82-4). They thus found themselves applying to the study of this equation a technique already at that time currently used for the examination of solid problems, i.e. the intersection of conic curves. It is precisely in this that there is found the main reason for the geometricisation of the theory of algebraic equations. This time, contrary to Thābit b. Ḳurra, people did not try to render geometrically algebraic equations in order to find the geometrical equivalent of the algebraic solution already obtained, but tried to determine, with the help of geometry, the positive roots of the equation which people had not been able to achieve otherwise. The attempts of al-Khāzin, al-Ḳūhī, Ibn al-Layth, al-Shannī, al-Bīrūnī, etc., are in this way partial contributions, up to the conception of the project by ʿUmar al-Khayyām (439-526/1048-1131 [*q.v.*]): the elaboration of a geometrical theory of equations of the third degree or less. For each of these types of equations, al-Khayyām found a construction of a positive root through the intersection of two conics. Thus e.g. in order to solve the equation "a cube is equal to a certain number of sides plus a number", i.e.

(*) $x^3 = bx + c \qquad b,c > 0,$

al-Khayyām only considered the positive root. In order to determine it, he proceeded by means of the intersection of a half-parabola and a branch of an equilateral hyperbola.

In order to elaborate upon this new theory, al-Khayyām saw himself as endeavouring the better to conceive and to formulate the new relationships between geometry and algebra. One needs to remember that, in this regard, the fundamental concept introduced by him was that of the unit of measurement which, suitably defined in relation to that of dimension, allowed the application of geometry to algebra. Now this application led al-Khayyām in two directions, which may seem at first view paradoxical: at a time when algebra was then identifying itself with the theory of algebraic equations, this last seemed henceforth, though still timidly, to be transcending the gap between algebra and geometry. The theory of equations was above all a place where algebra and geometry met, and, more and more, ways of reasoning and analytical methods. In his treatise, al-Khayyām arrived at two remarkable results which historians normally attribute to Descartes: a general solution for all equations of the third degree through the intersection of two conics, and, on the other hand, a geometrical calculation made possible by the choice of the unit of length, whilst nevertheless remaining, contrary to Descartes, faithful to the rule of homogenity.

One should note that al-Khayyām did not stop there, but tried to give an approximate numerical solution for the cubic equation. Thus in his work called *On the division of a quadrant of a circle* (*op. cit.*, 80), in which he announced a new project on the theory of equations, he got as far as an approximate numerical solution by means of trigonometrical tables.

4. Up to recently, it was thought that the contribution of the mathematicians of this time to the theory of algebraic equations was limited to al-Khayyām and his work. But in fact, it was nothing like this at all. Not only did al-Khayyām's work inaugurate a complete tradition, but, moreover, it became deeply transformed hardly half-a-century after his death.

Two generations after him, we come across one of the most important works of this current of ideas, Sharaf al-Dīn al-Ṭūsī's treatise *On equations* (see *Sharaf*

al-Dīn al-Ṭūsī. Oeuvres mathématiques. Algèbre et géométrie au XIIe siècle, ed., tr. and comm. R. Rashed, Paris 1986, 2 vols.). This treatise (*ca.* 565/1170) brings forward some very important innovations in regard to the work of al-Khayyām. Contrasted with that of his predecessor, al-Ṭūsī's approach was not global and algebraic but local and analytical. This radical change, particularly important in the history of classical mathematics, was able to construct a bridge between classical algebra and the prehistory of infinitesimal methods (see *op. cit.*).

But al-Ṭūsī's example is sufficient to show that the theory of equations not only became transformed after the time of al-Khayyām, but never stopped getting further and further away from the search for solutions by means of radicals; it thus finished by covering a vast domain, and included sectors which later were to belong to analytical geometry or simply to analysis.

II. Combinatorial analysis.

Combinatorial activity began by revealing itself as such, but in a dispersed manner, amongst the linguists on one side and the algebraists on the other. It was only later that the meeting between the two currents was to take place and that combinatorial analysis was to present itself as a mathematical tool applicable to the most various situation: linguistic, philosophical, mathematical, etc. It is then that one can speak of combinatorial activity in Arabic. Already in the 3th/9th century, this activity can be found amongst the linguists and philosophers who set forth problems connected with language, within three spheres in particular: phonology, lexicography and, finally, cryptography [see MUᶜAMMĀ]. The name of al-Khalīl b. Aḥmad (99-169/718-86 [*q.v.*]) marks the history of these three disciplines. He had explicit recourse, for his founding of Arabic lexicography, to a calculation of arrangements and combinations. For his lexicon, he began by calculating the number of combinations, without repeating, of the letters of the alphabet, taken r to r, with r = 2, ..., 5, and then the number of permutations in each group of r letters. In other terms, he calculated

$$A_n^r = r! \binom{n}{r}$$

n being the number of letters of the alphabet, $1 < r \leq 5$.

Now this theory and method calculation used by al-Khalīl recurs later in the writings of most of the lexicographers. They further were utilised in cryptography, developed from the 3rd/9th century onwards by al-Kindī and then, at the end of that same century and the beginning of the next one, by linguists like Ibn Waḥshiyya [*q.v.*], Ibn Ṭabāṭabā, amongst several others. In the practice of their discipline, the cryptographers had recourse to the phonological analysis of al-Khalīl, calculation of letter frequency in Arabic and that of permutations, substitutions and combinations.

At the same time as this important activity in the field of combination, the algebraists, as we have seen, had put forward and demonstrated, at the end of the 4th/10th century, the rule for the formation of the arithmetical triangle for the calculation of binomial coefficients. Al-Karadjī (Ahmad and Rashed, *al-Bāhir en algèbre d'al-Samawʾal*, 104 ff.) had in effect laid down the rule

$$(*) \quad \binom{n}{r} = \binom{n-1}{r-1} + \binom{n-1}{r}$$

The algebraists applied the new rules in their calculations. E.g. al-Samawʾal (*ibid.*, Ar. text 232, introd. 77 ff.) set forth ten unknowns and searched for a system of linear equations with six unknowns. He then combined these ten figures, considered as symbols of these unknowns—today they would be called indices—six to six, and thus obtained his system of 210 equations. He likewise proceeded by means of these combinations to find the 504 conditions of compatibility within this system. All these combinatorial activities, these rules discovered in the course of linguistic research and algebraical studies, made up the concrete conditions for the emergence of this new chapter in mathematics. It remains, however, to note that the act of this chapter's birth consisted in the explicitly combinatorial interpretation of the arithmetical triangle, and of its law of formation, i.e. the rules given by al-Karadjī as tools of calculation. It would be excessive to think that the algebraists had not seized upon this interpretation fairly quickly. We are, on the contrary, more and more convinced that this interpretation had been noticed by the algebraists but that they had no stimulus for them to give an explicit formulation of it. The combinatorial interpretation is certainly there, very probably before the 7th/13th century, as we are now able to show thanks to a text of the mathematician and philosopher Naṣīr al-Dīn al-Ṭūsī (597-671/1201-73 [*q.v.*]), until the present time unknown. A reading of this text (see Rashed, *Métaphysique et combinatoire*, forthcoming) shows that he knew of this interpretation, that he put it forward in a totally natural fashion as something readily admitted and expressed it in a terminology which is to be found, either wholly or in part, in his successors. In the course of this study, he was led to calculate the number of combinations of n distinct objects taken k to k, with $1 \leq k \leq n$. Thus he calculated for n = 12

$$\sum_{k=1}^{n} \binom{n}{k}, \text{ and used in the course of his calculation}$$

the equality $\binom{n}{k} = \binom{n}{n-k}$.

One should now note that al-Ṭūsī had given in his book on arithmetic (*Djawāmiᶜ al-ḥisāb*, ed. A.S. Saidan, in *al-Abḥāth*, xx/2-3 [1967], 141-6) the arithmetical triangle and its law of formation. He calculated an expression equivalent to

$$\sum_{k=0}^{m} \binom{m}{k}\binom{n}{p-k} \quad \text{with} \quad 1 \leq p \leq 16, n = 12.$$

After al-Ṭūsī at least, and very probably before him, one will continually come across the combinatorial interpretation of the arithmetical triangle and its law of formation, as well as the ensemble of elementary rules of combinatorial analysis. As we have shown, towards the end of this same century and at the beginning of the next, 8th/14th, Kamāl al-Dīn al-Fārisī (d. 719/1319 [*q.v.*]), in a treatise on the theory of numbers, returned to this interpretation and established the use of the arithmetical triangle for the numerical orders, i.e. the result which one normally attributed to Pascal. In effect, in order to form the represented numbers (see Rashed, *Matériaux pour l'histoire des nombres amiables et de l'analyse combinatoire*, in *Jnal. for the Hist. of Arabic Science*, vi [1982], 209-78; idem, *Nombres amiables, parties aliquotes et nombres figurés aux XIIIe et XIVe siècles*, in *Archive for Hist. of Exact Science*, xxviii [1983], 107-49, repr. in *Entre arithmétique*

et algèbre ..., 259-99), al-Fārisī set up a relationship equivalent to

$$F_p^q = \sum_{k=1}^{p} F_k^{q-1} = \binom{p+q-1}{q}$$

with F_q^p the p^{th} represented number of the order q, $F_1^q = 1$.

But at the same time as al-Fārisī was busy with his studies in Persia, Ibn al-Bannāʾ (cf. reference above) (d. 721/1321) was at work in Morocco on combinatorial analysis. In effect he went back to the combinatorial interpretation and took up the rules which were known before his time, notably those of the arrangement of n distinct objects, without repetition, r to r, of permutations and combinations without repetition:

$$(n)_r = n(n-1) \ldots (n-r+1)$$

$$(n)_n = n\,!$$

$$\binom{n}{r} = \frac{(n)_r}{r!},$$

relations which were readily deducible from the expression (*) given by al-Karadjī three centuries before.

Al-Fārisī and Ibn al-Bannāʾ not only followed after al-Ṭūsī but used the greater part of the technical lexicon already adopted by the latter. With these authors, combinatorial analysis no longer had as its domain algebraic or linguistic applications only, but the most varied domains, e.g. metaphysics, i.e. every domain in which scholars were concerned with the partition of a set of objects.

This concept and this chapter were to survive up the present time. Scholars were to continue to treat combinatorial analysis in different works of mathematics, and independent works were also to be devoted to it. Thus later mathematicians like al-Kāshī (d. 840/1436-7 [*q.v.*]) (see his *Miftāḥ al-ḥisāb*, ed. A.S. al-Dimirdāsh and M.Ḥ. al-Ḥifnī, Cairo 1967, 73-4, where he gives the law for the composition of the arithmetical triangle), Ibn al-Malik al-Dimashkī (*al-Isʿāf al-atamm*, ms. Dār al-Kutub, Cairo, Riyāḍa 182; he gives the arithmetical triangle and explains its formation at pp. 46-7; in the triangle, al-Dimashkī places the names given as powers in abbreviation), al-Yazdī (*ʿUyūn al-ḥisāb*, ms. Süleymaniye, Istanbul, Hazine 1993; see the arithmetical triangle at fols. 1 and 20a-b) and Taḳī 'l-Dīn Ibn Maʿrūf, to give only a few names, treat of it.

III. Numerical analysis.

Compared to Hellenistic mathematics, Arab mathematics offered a much more important number of numerical algorithms.

Algebra, in effect, did not just furnish the indispensable theoretic means for this development—even if this were only the study of polynomial expressions and the combinatorial rules—but also a vast domain of the application of these techniques: the methods developed for determining the positive roots of numerical equations. Research in astronomy, from another aspect, led mathematicians to take up the problems of the interpolation of certain trigonometric functions. Some of these methods, as will be seen, were applied in quantitative research in optics. The result, as may be already guessed, was an appreciable quantity of numerical techniques which it is impossible to describe here in a limited number of pages.

Yet more important than the number of numerical algorithms brought to light by the mathematicians was the discovery of new axes of research, such as the mathematical justification for algorithms, the comparison between the different algorithms with the aim of choosing the best one and, to sum it all up, conscious reflection on the nature and limit of approximations.

There remains now the task of going back to the main domains which divided up numerical analysis: the extraction of roots from an integer number and the resolution of numerical equations on one hand, and methods of interpolation on the other.

As far back as one can go in the history of mathematics, one meets algorithms meant for extracting square or cube roots, some of which are of Hellenistic origin, whilst other are probably of Indian origin, and, finally, yet others are owed to the Arab mathematicians themselves.

Thus amongst the formulae which circulated at the opening of the 4th/10th century, two should be particularly noted, each called "the conventional approximation":

$$\sqrt{N} = a + \frac{r}{2a+1} \text{ and } \sqrt[3]{N} = a + \frac{r}{3a^2+3a+1}.$$

At the end of this same century, the mathematicians possessed, according to all the evidence, the so-called Ruffini-Horner method. Kūshiyār b. al-Labān [*q.v.*] applied this algorithm, in all appearance of Indian origin, in his Arithmetic (*Kūshyār ibn Labbān, principles of Hindu reckoning*, tr. M. Levey and M. Petruck, Madison 1965; see the Arabic text established by A. Saidan, in *Rev. de l'Inst. de manuscrits arabes*, Cairo [May 1967], 55-83). We know at present that Ibn al-Haytham (d. after 431/1040) not only knew of this algorithm but endeavoured himself to give a mathematical justification for it. It is his general approach which we will set forth here, but in a different language.

Let the polynomial with integer coefficients f(x) and the equation be

(*) $\quad f(x) = N$

Let s be a positive root of this equation, and let us suppose (s_i) $i \geq 0$ (indice) to be a series of positive integers such that the partial sums are

$$\sum_{i=0}^{k} s_i \leq s;$$

one says that the s_i are parts of s.

It is evident that the equation

$$f_0(x) = f(x + s_0) - f(s_0) = N - f(s_0) = N_0$$

has as its roots those of equation (*) diminished by s_0.

For $i > 0$, let us form by recurrence the equation

$$f_i(x) = f(x + s_0 + \ldots + s_i) - f(s_0 + \ldots + s_i)$$
$$= [N - f(s_0 + \ldots + s_{i-1})] - [f(s_0 + \ldots + s_i) - f(s_0 + \ldots + s_{i-1})]$$
$$= N_i;$$

thus. e.g. for $i = 1$, we have

$$f_1(x) = f(x + s_0 + s_1) - f(s_0 + s_1)$$
$$= [N - f(s_0)] - [f(s_0 + s_1) - f(s_0)]$$
$$= N_0 - [f(s_0 + s_1) - f(s_0)] = N_1.$$

The method used by Ibn al-Haytham and justified by him, which is found in Kūshiyār and is called Ruffini-Horner, furnishes an algorithm which allows us to obtain the coefficients of the i^{st} equation from the starting point of the coefficients of the $(i-1)^{th}$ equation. The principal idea behind this method lies here (see Rashed, *Les mathématiques infinitésimales entre le IXe et le XIe siècle*, ii, London 1994).

The ensemble of methods and of preceeding results, gained at the beginning of the 5th/11th century, then comes up again not only in the contemporaries of these mathematicians but in the majority of the treatises on arithmetic, henceforth very numerous.

Amongst many others, one may mention those of al-Nasawī, successor to Kūs͟hiyār (see H. Suter, *Über das Rechenbuch des Alī ben Ahmed el-Nasawi*, in *Bibl. Mathematica*, 3. Folge, vii [1906-7], 113-19; see also *Nasawī-nāma*, ed. Abu 'l-Ḳāsim G͟hurbānī, Tehran 1973, 65 ff. of the Pers. introd. to the edition, and 8 ff. of the photocopy of the published Arabic text), of Naṣīr al-Dīn al-Ṭūsī (*Ḏj̲awāmiʿ al-ḥisāb, op. cit.*, 144 ff., 266 ff.), of Ibn al-K͟hawwām al-Bag͟hdādī (*al-Fawāʾid al-bahāʾiyya fi 'l-ḳawāʿid al-ḥisābiyya*, ms. B.L. Or. 5615, fols. 7b-8a), of Kamāl al-Dīn al-Fārisī (*Asās al-ḳawāʿid*, ed. M. Mawaldi, diss. Univ. of Paris III, 1989), etc.).

The mathematicians were in possession of the arithmetical triangle and the binomial formula from the end of the 4th/10th century onwards, and were not to meet any major difficulties for the generalisation of the preceeding methods and for the formulation of the algorithm in the case of the root n^{th}. Similar attempts, unfortunately lost, already existed in the 5th/11th century with al-Bīrūnī and al-K͟hayyām. It was in his contribution of 568/1172-3 that al-Samawʾal (see above) not only applied the so-called Ruffini-Horner method for the extraction of the root n^{th} of a sexagesimal integer, but also formulated a clear concept of approximation. By "to approximate", the 6th/12th century mathematician meant: to know a real number by means of a series of known numbers with an approximation which the mathematician could render as small as he wished. It is then a case of measuring the divergence between the irrational n^{th} root and a series of rational numbers. After having defined the concept of approximation, al-Samawʾal began by applying the so-called Ruffini-Horner method for the example

$$f(x) = x^5 - Q = 0,$$

with Q = 0; 0, 0, 2, 33, 43, 36, 48, 8, 16, 52, 30.

Now this method was to survive till the 6th/12th century and was to be found in many other treatises on "Indian arithmetic", as they were called at that time. It was to be met yet later in the predecessors of al-Kās͟hī, in al-Kās͟hī himself and also in his successors. To take only the example of al-Kās͟hī, in his *Key to arithmetic* he resolves

$$f(x) = x^5 - N = 0,$$

with N = 44 240 899 506 197.

If now we come to the extraction of the irrational n^{th} root from an integer, we encounter an analogous situation. In his *Treatise on arithmetic*, al-Samawʾal gives in effect a rule for approximating by means of fractions the not integer part of the irrational root of an integer, and gives expressions equivalent to

$$x^n = N;$$

$$x' = x_0 + \frac{N - x_0^n}{\left[\sum_{k=1}^{n-1} \binom{n}{k} x_0^{n-k}\right] + 1},$$

i.e.

$$x' = x_0 + \frac{N - x_0^n}{(x_0 + 1)^n - x_0^n}.$$

It is thus a case of the generalisation of what mathematicians have called "conventional approximation". We find it later amongst so many mathematicians, such as al-Ṭūsī and al-Kās͟hī. It was, furthermore, with the aim of improving these approximations that there was conceived in an explicit manner the decimal fractions, as the example of al-Samawʾal shows (see above).

It was in the course of the search for the extraction of the n^{th} root and the problems of approximation that the first theory of decimal fractions was elaborated in the 6th/12th century. The first known exposition of these fractions was given by al-Samawʾal in 569/1172-3, and it shows that the algebra of polynomials is essential to the invention of these fractions. These last survive in the work of al-Kās͟hī (*Miftāḥ al-ḥisāb*, 79, 121; P. Luckey, *Die Rechenkunst bei Ǧamšīd b. Masʿūd al-Kāšī*, Wiesbaden 1951, 103. Cf. Rashed, *Entre arithmétique et algèbre*, 132 ff.), and appear again in the works of the mathematician and astronomer of the 10th/16th century Taḳī 'l-Dīn Ibn Maʿrūf (*Bug͟hyat al-ṭullāb*, fol. 131a ff.) and al-Yazdī (in his *ʿUyūn al-ḥisāb* one cannot fail to discern a certain familiarity with decimal fractions, although he preferred to make calculations with sexagesimal fractions and ordinary ones, see e.g. fols. 9b, 49a-b) in the 11th/17th century. Several indications suggest that they were transmitted to the West before the middle of that century, and they are named in a Byzantine manuscript brought to Venice in 1562 as "Turkish" fractions (al-Kās͟hī introduced a vertical stroke which separated the fractional part; this representation is found amongst Western scholars like Rudolff, Apian and Cardan). The mathematician Mīzrahī (b. Constantinople 1455) used the same sign before Rudolff. As for the Byzantine ms., it reads, notably, "The Turks make multiplications and divisions of fractions by means of a special procedure for calculation. They introduced their fractions when they came to rule our land here". The example given by this writer leaves no possible doubt about the fact that he is speaking here of decimal fractions. Cf. H. Hunger and K. Vogel, *Ein byzantinisches Rechenbuch des 15. Jahrhundert*, Vienna 1963, 32 (problem no. 36).

Let us finally note that the methods of interpolation were already, long before this, applied by astronomers. From the 3rd/9th century onwards, they sought out methods for formulating and using astronomical and trigonometrical tables and, on this occasion, came back to methods of interpolation in order to improve them.

The numerousness of methods at the end of the 4th/10th century has set a new problem for research: how is one to compare these different methods amongst themselves, in order to be able to choose the most efficacious for the tabular function being studied? Al-Bīrūnī himself began to take this problem for his own consideration and to place side-by-side different methods for the case of the cotangent function, with its difficulties which are connected with the existence of the poles. In the next century, al-Samawʾal was even more explicitly concerned with this task.

The mathematicians not only pursued their researches on these methods, but equally applied themselves to other disciplines like astronomy. Thus Kamāl al-Dīn al-Fārisī had recourse to one of them—called *ḳaws al-k͟hilāf*, the arc of the difference—in order to establish the table of refractions. But this method called " the arc of the difference", applied by al-Fārisī at the opening of the 8th/14th century, goes back to al-K͟hāzin in the 4th/10th century, and was to be taken up again in the 9th/15th century by al-Kās͟hī in his *Zīḏj̲ K͟hāḳānī*. This last example shows well that, for this chapter, it is a case of stages in an identical tradition.

IV. Indeterminate analysis.

The emergence of indeterminate analysis or, as it is called today, Diophantine analysis, as a distinct chapter of algebra, goes back to al-K͟hʷārazmī's successors, notably Abū Kāmil, in his book written *ca.* 266/880.

Abū Kāmil aimed in his *Algebra* not at lingering any

longer over a diffuse exposition, but at giving a more systematic exposition in which would be highlighted, as well as the problems and algorithms for solution, the methods. He did, it is true, treat in the last part of his book of the 38 Diophantine problems of the second degree and of the systems of these equations, four systems of linear, indeterminate equations, other systems of linear, determinate equations, an ensemble of problems which led to arithmetical progressions and a study of these last (this part occupies fols. 79a-110b). This whole corresponds to the double aim fixed by Abū Kāmil: to resolve indeterminate problems, and on the other hand to resolve by means of algebra the problems treated at that time by arithmeticians. One should note that it is in his *Algebra* that one meets for the first time in history—to the present writer's knowledge—an explicit distinction between determinate problems and indeterminate one. Now the examination of these 38 Diophantine problems does not only reflect this distinction; it further shows that these problems do not follow each other haphazardly but according to an order meticulously indicated by Abū Kāmil. The first 25 thus belong to one and the same group, for which the author gives a necessary and sufficient condition in order to determine rational, positive solutions. Let us take just two examples. The first problem in this group (fols. 79a-b) may be set forth as

$$x^2 + 5 = y^2.$$

Abū Kāmil proposes to give two solutions amongst, as he himself proclaims, an infinity of rational solutions.

Another example of the same group is problem no. 19 (fols. 87a-b), which may be set forth as

$$8x - x^2 + 109 = y^2.$$

Abū Kāmil then considers the general formula

$$(1) \qquad ax - x^2 + b = y^2.$$

He then gives the sufficient condition for determining the rational, positive solutions of the preceding equation. This last may be expressed as

$$y^2 + \left(\frac{a}{2} - x\right)^2 = b + \left(\frac{a}{2}\right)^2;$$

let us now suppose that $x = \frac{a - t}{2}$, and one has

$$(2) \qquad y^2 + \left(\frac{t}{2}\right)^2 = b + \left(\frac{a}{2}\right)^2,$$

and the problem is thereby brought to dividing up a number, the sum of two squares, into two other squares: problem no. 12 of the same group, already resolved by Abū Kāmil. Let us suppose in effect that

$$b + \left(\frac{a}{2}\right)^2 = u^2 + v^2,$$

with u and v rational numbers. Abū Kāmil poses

$$y = u + \tau$$
$$t = 2(k\tau - v);$$

he substitutes in (2) and finds the values of y, t and finally x. Thus he knows that, if one of the variables can be expressed as a rational function of the other, or, in other terms, if one can have a rational parametrage, one has all the solutions; whereas, on the other hand, if the sum brings us to an expression whose root cannot be got round, one does not have any solution. In other terms, unknown to Abū Kāmil, a curve of the second degree of the genus 0 does not have any rational point, or is bi-rationally equivalent to a straight line.

The second group is made up of 13 problems—nos. 26-38—which do not allow a rational parametrage; or, this time again in a language unknown to Abū Kāmil, they define all curves of genus 1. Thus e.g. problem no. 31 (fol. 92b) may be set out as

$$x^2 + x = y^2,$$
$$x^2 + 1 = z^2,$$

which defines a skew quartic, a curve of $\mathbf{A}^3$ of genus 1.

The third group of indeterminate problems is made up of systems of linear equations, as e.g. in no. 39 (fols. 95a-b) which may be set out as

$$x + ay + az + at = u,$$
$$bx + y + bz + bt = u,$$
$$cx + cy + z + ct = u,$$
$$dx + dy + dz + t = u.$$

This interest brought to indeterminate analysis, which led in the end to Abū Kāmil's contribution, gave rise to another occurrence: the translation of Diophantus' *Arithmetic*.

In contrast to Diophantus, al-Karad̲j̲ī does not give well set-out lists of problems and their solutions, but he organises his exposition in his *al-Badī*ʿ around the number of terms which make up algebraic expressions and around the difference between their powers. E.g. he considers in successive paragraphs:

$$ax^{2n} \pm bx^{2n-1} = y^2, \quad -ax^{2n} + bx^{2n-2} = y^2,$$
$$ax^2 + bx + c = y^2.$$

This principle of organisation was to be moreover borrowed by his successors. It is thus clear that al-Karad̲j̲ī had as his aim the giving of a systematic exposition. On the other hand, he carried further the task begun by Abū Kāmil, which consisted in elucidating as far as possible the methods for each class of problems. In his *al-Fak̲h̲rī*, al-Karad̲j̲ī brought forward only the principles of this analysis, indicating that it bore notably upon the equation

$$ax^2 + bx + c = y^2, \qquad a, b, c \in \mathbf{Z},$$

in which the trinomial in x is not a square, in order to pass finally to the different classes of problems, of which the greater part are indeterminate.

Al-Karad̲j̲ī studied many other problems, notably *double equality*. Let us set simply forth the problem

$$(*) \qquad \begin{aligned} x^2 + a &= y^2, \\ x^2 - b &= z^2, \end{aligned}$$

which defines a curve of the genus 1 in $\mathbf{A}^3$.

His successors did not merely comment upon his work, but endeavoured to advance further along the road traced out by him; thus in his *al-Bāhir*, al-Samawʾal commented on *al-Badī*ʿ and studies equations of form:

$$y^3 = ax + b,$$

and considered then the equation

$$y^3 = ax^2 + bx.$$

We cannot here follow the works of al-Karad̲j̲ī's successors on rational Diophantine analysis, but can only note that, in the future, this last was to form part of every algebraic treatise of any importance. Hence, in the first half of the 6th/12th century, al-Zand̲j̲ānī borrowed the greater part of al-Karad̲j̲ī's problems and of the first four books of the Arabic translation of Diophantus. Ibn al-K̲h̲awwām set before himself certain Diophantine equations, including Fermat's equation for n = 3 [$(x^3 + y^3 = z^3)$], as also Kamāl al-Dīn al-Fārisī in his great commentary on the latter's work on algebra. This interest and these works on indeterminate analysis were followed unabatedly up to the 11th/17th century with al-Yazdī and, *contra* what the historians of this chapter say, it was not to end with al-Karad̲j̲ī.

The translation of Diophantus' *Arithmetica* was not just essential to the development of rational Diophantine analysis as a chapter of algebra, but contributed

equally to the development of the integer Diophantine analysis as a chapter, not only of algebra but also of the theory of numbers. In the 4th/10th century, in effect, there took place for the first time the constituting of this chapter, probably thanks to algebra but also in opposition to it. In practice, the study of Diophantine problems was tackled by requiring on one side the obtaining of integer solutions, and on the other side the proceeding by proofs of the type of Euclid in the arithmetical books of the *Elements*. It is this combination, explicit for the first time in history—for the numerical domain, restricted to positive integer numbers interpreted as segments of straight lines, for algebraic techniques and for the requirement of giving a proof in the pure Euclidean style—which allowed the inauguration of this new Diophantine analysis. The translation of Diophantus' *Arithmetica* furnished these mathematicians, it will readily be understood, less with methods than with certain problems in the theory of numbers which were formulated there, which they did not hesitate to systematise and to examine for themselves, contrary to what can be seen in Diophantus. Such are e.g. the problems of the representation of a number as a sum of squares, congruent numbers, etc. In brief, one meets here the beginning of the new Diophantine analysis in the sense in which it was to be discovered and developed later by Bachet de Méziriac and Fermat (see Rashed, *L'analyse diophantienne au X^e siècle*, in *Rev. d'Histoire des Sciences*, xxxii/3 [1979], 193-222, repr. in *Entre arithmétique et algèbre*, 195-225).

Hence in an anonymous text of the 4th/10th century, after having introduced the basic concepts for studying Pythagorean triangles, the author posed questions about the integers which can be the hypotenuses of these triangles, i.e. the integers which one can represent as the sum of two squares. In particular, he announced that every element of the sequence of primitive Pythagorean triplets was such that the hypotenuse is of one or other form: 5 (mod 12) or 1 mod (12). However, he noted—like al-Khāzin after him—that certain numbers of this sequence—e.g. 49 and 77— are not hypotenuses of such triangles. This same author also knew that certain numbers of the form 1 (mod 4) could not be hypotenuses of primitive right-angled triangles.

Al-Khāzin later studied several problems involving numerical right-angled triangles, as well as the problems of congruent numbers, and set forth the following theorem:

if a *is a given natural integer, the following conditions are equivalent*

1. the system (*) admits of a solution;
2. there exist a pair of integers (m, n) such that $m^2 + n^2 = x^2$,
   $2\,mn = a$;

in these conditions, a has the form $2\,uv(u^2 - v^2)$.

It is in this tradition that scholars equally brought to bear the study of the representation of an integer as the sum of squares. Thus al-Khāzin devoted several propositions of his treatise to the study of this.

It was likewise these mathematicians who, as the first persons to do so, posed the question of impossible problems, such as the first case of Fermat's theorem. It has long been known that al-Khudjandī tried to prove that "the sum of two cubic numbers is not a cube". According to al-Khāzin (Rashed, *op. cit.*, 220), al-Khudjandī's proof was defective. A certain Abū Dja'far also tried to prove the same proposition. This is equally defective. Even if one has had to wait till Euler for the establishing of this proof, the problem never ceased, despite everything, to preoccupy the Arab mathematicians who, later, enunciated the impossibility of the case $x^4 + y^4 = z^4$.

Research on the integer Diophantine analysis, and notably, on numerical right-angled triangles, did not stop with its initiators of the first half of the 4th/10th century. Quite the opposite: their successors took it up again and in the same spirit, in the course of the second half of that century and at the beginning of the next one, as the examples of Abu 'l-Djūd Ibn al-Layth, al-Sidjzī and Ibn al-Haytham attest. Later on, others followed, in one manner or another, this line of research, such as Kamāl al-Dīn Ibn Yūnus.

V. The classical theory of numbers.

The contribution of the mathematicians of the time to the theory of numbers was not limited to integer Diophantine analysis. Two other currents of research, starting from two distinct points, led to the extension and renewal of the Hellenistic theory of numbers. The first current had as its source, but also as its model, the three arithmetical books of Euclid's *Elements*, whilst the second came within the line of Neo-Pythagorean arithmetic, as it appears in the *Arithmetical introduction* of Nicomachus of Gerasa. It is in Euclid's books that there is to be found a theory of parity and a theory of the multiplicative properties of integers: divisibility, prime numbers, etc. For Euclid, an integer is however represented by a segment of a line, a representation essential for the proof of the propositions. If the Neo-Pythagoreans shared this concept of the integers and were in a wide sense attached to the study of these same properties, or of properties derived from these last, there remains the fact that, by their methods and their aims, they were to be distinguished from Euclid. Whereas the latter proceeded by proofs, these others had as their only means that of induction. Moreover, for Euclid, arithmetic had no other aim beyond itself, whilst for Nicomachus it had philosophical goals and even psychological ones. This difference in method was clearly perceived by Arab mathematicians like Ibn al-Haytham. For those of the time, it was clearly a question thus of a difference between the methods of proof and not between the aims of arithmetic. From this time, it may be understood that, despite a marked preference for the Euclidean method, mathematicians, even those of Ibn al-Haytham's importance, reached the point of proceeding, in certain cases by induction, in accordance with the problem posed; it is thus that Ibn al-Haytham discusses the "Chinese remainder theorem" and Wilson's theorem. Furthermore, if the mathematicians of the first rank, and in accordance with certain philosophers like Avicenna, neglected the philosophical and psychological goals assigned to arithmetic by Nicomachus, other mathematicians of lower rank, philosophers, physicians, encyclopaedists, etc., interested themselves in this arithmetic. The history of this last is thus based on that of the culture of a scholar within Islamic society over the centuries, and goes well beyond the scope of the present article.

Research into the theory of numbers in the Euclidean and Pythagorean sense began early, before the end of the 3rd/9th century. It was contemporary with the translation of Nicomachus' book by Thābit b. Ḳurra (d. 288/901) and his revision of the translation of Euclid's *Elements*. It was in fact Thābit who set in motion this research into the theory of numbers, whilst elaborating the first theory of amicable numbers. This fact, known to historians since the last century thanks to the work of F. Woepcke (*Notice sur une théorie ajoutée par Thâbit Ben Qorrah à l'arithmétique spéculative des Grecs*, in *JA*, ser. 4, ii [1852], 420-9, in which the author gives a résumé of Thābit's

opusculum), only had its full significance realised very recently, when the existence has been established of a complete tradition, begun by T̲h̲ābit in the most pure of Euclidean styles, to end some centuries later in al-Fārisī (d. 719/1319), thanks to the application of algebra to the study of the first elementary arithmetical functions. This tradition is marked out by many names: al-Karābisī, al-Anṭākī, al-Ḳubaysī, Abu 'l-Wafā' al-Būzad̲j̲ānī, al-Bag̲h̲dādī, Ibn al-Hayt̲h̲am, Ibn Hūd, al-Karad̲j̲ī, etc., to cite only a few of them. Clearly, one cannot in these few pages devoted to the theory, claim to give a detailed description. An attempt will simply be made to sketch this movement just mentioned.

At the end of Book IX of the *Elements*, Euclid gives a theory of perfect numbers and shows that the number $n = 2^p (2^{p+1} - 1)$ is a perfect one, i.e. equal to the sum of its own divisors, if $(2^{p+1} - 1)$ is a prime number. He does not mention the theory of amicable numbers, however. T̲h̲ābit b. Ḳurra then decided to construct this theory. He set forth and proved, in pure Euclidean style, the most important theorem of amicable numbers up to this time, the one which bears his name today.

Let us note $\sigma_0(n)$ as the sum of the aliquot parts of the integer n, and $\sigma(n) = \sigma_0(n) + n$ as the sum of the divisors of n; and let us recall that two integers a and b are called amicable if $\sigma_0(a) = b$ and $\sigma_0(b) = a$.

T̲h̲ābit b. Ḳurra's theorem:

For $n > 1$, let $p_n = 3.2^n - 1$, $q_n = 9.2^{2n-1}-1$; if p_{n-1}, p_n, and q_n are prime numbers, then $a = 2^n p_{n-1} p_n$ and $b = 2^n q_n$ are amicable numbers.

It is with the algebraists, in particular, that the calculation of pairs of amicable numbers other than those given by T̲h̲ābit was undertaken, i.e. (220, 284). Thus one finds in al-Fārisī in the East, in the milieu of Ibn al-Bannā' in the West, and in al-Tanūk̲h̲ī and many other 7th/13th century mathematicians, the pair (17296, 18416), known under the name of Fermat's. Al-Yazdī was to calculate later the pair known as that of Descartes (9363584, 9437056).

The famous physicist and mathematician Kamāl al-Dīn al-Fārisī wrote a work in which he tried deliberately to prove T̲h̲ābit's theorem in an algebraic fashion. This action obliged him to conceive the first arithmetical functions and to bring into being a complete preparation which led him to set forth for the first time the fundamental theorem of arithmetic. Al-Fārisī furthermore developed the combinatorial means required for this study, and thereby, a complete programme of research into figured numbers. In brief, it is a case this time of the elementary theory of numbers, just as one finds it later in the 11th/17th century.

Al-Fārisī examined the procedures of factorisation and the calculation of aliquot parts as functions of the number of prime factors. The most important result on this level was without any doubt the identification between the combinations and the figured numbers. Hence everything was then in place for the study of arithmetical functions. A first group of propositions concerned $\sigma(n)$. Even if al-Fārisī only in fact treated of $\sigma_0(n)$, it must be agreed that he recognised σ as a multiplicative function. Amongst the propositions of this group, one finds in particular:

(1) if $n = p_1 p_2$, with $(p_1, p_2) = 1$, then

$$\sigma_0(n) = p_1\sigma_0(p_2) + p_2\sigma_0(p_1) + \sigma_0(p_1)\sigma_0(p_2),$$

which shows that he knew the expression

(2) if $n = p_1 p_2$, with p_2 a prime number and $(p_1, p_2) = 1$, then

$$\sigma_0(n) = p_2\sigma_0(p_1) + \sigma_0(p_1) + (p_1),$$

(3) if $n = p^r$, p is a prime number, then

$$\sigma_0(n) = \sum_{k=0}^{r-1} p^k.$$

These three propositions have been until now attributed to Descartes.

(4) Finally, he tried, but without succeeding, as one may readily understand, to establish a formula valid for the case where $n = p_1 p_2$, with $(p_1, p_2) \neq 1$.

A second group includes several propositions bearing on the proposition $\tau(n)$: the number of divisors of n.

(5) if $n = p_1 p_2 \dots p_r$, with $p_1, \dots, p_r$ as distinct prime factors, then the number of parts of n denoted $\tau_0(n)$ is equal to

$$1 + \binom{r}{1} + \dots + \binom{r}{r-1},$$

a proposition attributed to the Abbé Deidier.

(6) if $n = p_1^{e_1} p_2^{e_2} \dots p_r^{e_r}$, with $p_1, p_2, \dots p_r$ as distinct prime factors, then

$$\tau(n) = \prod_{i=1}^{r} (e_i + 1)$$

and $\tau_0(n) = \tau(n) - 1$, a proposition attributed to John Keresy and to Montmort.

Al-Fārisī finally proved T̲h̲ābit b. Ḳurra's theorem. He had simply in effect to prove that

$$\sigma(2^n p_{n-1} p_n) = \sigma(2^n q_n) = 2^n[p_{n-1} p_n + q_n]$$
$$= 9.2^{2n-1}(2^{n+1}-1).$$

If, with the works on amicable numbers, the mathematicians sought also to characterise this class of integers, whilst studying perfect numbers, they followed the same goal. We know through al-K̲h̲āzin that in the 4th/10th century people were thinking about the existence of odd perfect numbers—a problem still unsolved (al-K̲h̲āzin wrote "This question is put to those who wonder to themselves [about abundant, deficient and perfect numbers] whether there exists a perfect number amongst the odd numbers or not"; cf. the Arabic text published by A. Anbouba, *Un traité d'Abū Ja'far al-Khāzin sur les triangles rectangles numériques*, in *Jnal. for Hist. of Arabic Science*, iii/1 [1979], 134-78, see 157). At the end of the same century and at the beginning of the next one, al-Bag̲h̲dādī obtained some results concerning these same numbers (see Rashed, *Nombres amiables* ..., 267 of repr.). Thus he gives

if $\sigma_0(2^n) = 2^n - 1$ is a prime number, then $1 + 2 + \dots + (2^n - 1)$ is a perfect number, a rule attributed to the 17th century mathematician J. Broscius. Al-Bag̲h̲dādī's contemporary Ibn al-Hayt̲h̲am (see Rashed, *Ibn al-Haytham et les nombres parfaits*, in *Historia Mathematica*, xvi [1989], 343-52) tried, as the first, to characterise this class of even perfect numbers, by endeavouring to prove the following theorem:

if n is an even number, the following conditions are equivalent:

(1) if $n = 2^p(2^{p+1}-1)$, with $(2^{p+1}-1)$ a prime number then $\sigma_0(n) = n$;

(2) if $\sigma_0(n) = n$, then $n = 2^p(2^{p+1}-1)$, with $(2^{p+1}-1)$ a prime number.

It is known that (1) is none other than IX-36 of Euclid's *Elements*. Ibn al-Hayt̲h̲am then tried further to prove that every even perfect number is of Euclidean form, a theorem which was definitively to be es-

tablished by Euler. It should be noted that Ibn al-Hayt͟ham, no more than T͟hābit b. Ḳurra with regard to amicable numbers, did not try, for perfect numbers, to calculate any other numbers beyond those known and handed down by tradition. This task of calculation was to be that of mathematicians of lower rank, closer to the tradition of Nicomachus of Gerasa, such as Ibn Fallus (d. 637/1240) and Ibn al-Malik al-Dimas͟hḳī (see Rashed, *op. cit.*), amongst many others. Their writings tell us that mathematicians knew at this time the first seven perfect numbers.

One of the axes of research into the theory of numbers was thus the characterisation of numbers: amicable, equivalent (the numbers equivalent to a are the numbers defined by σ_0^{-1} (a)) and perfect. In these conditions, one should not be astonished that mathematicians came back to the prime numbers in order to move on to a similar task. This is exactly what Ibn al-Hayt͟ham did in the course of his solution to the problem called that of "the Chinese remainder" (see Rashed, *Théorie des nombres et analyse combinatoire*, in *Entre arithmétique et algèbre*, 238). He wished in fact to solve the system of linear congruences

$$x \equiv 1 \pmod{m_i}$$
$$x \equiv 0 \pmod{m_p},$$

with p a prime number and $1 < m_i \leq p-1$.

In the course of this study, he gives a criterion for determining prime numbers, the theorem called Wilson's:

if $n > 1$, the two following conditions are equivalent:

(1) n is a prime number

(2) $(n-1)! \equiv -1 \pmod{n}$.

The study of this system of congruences is partially found once more in Ibn al-Hayt͟ham's successors in the 6th/12th century, e.g. al-K͟hilāṭī in Arabic and Fibonacci in Latin (see Rashed, *op. cit.*).

One could add, to these areas of the theory of numbers in Arabic mathematics, a multitude of results which can be classed within the line of Nicomachus' arithmetic, developed by arithmeticians or algebraists, or simply for the needs of other techniques such as the construction of magic squares or arithmetical games. One might note here the sums of powers of natural integers, polygonal numbers, problems of linear congruence, etc. A considerable number of results are involved there, which extend or prove what was known previously, but these cannot be detailed here (one only has to read the arithmetical works of arithmeticians like al-Uḳlīdisī, al-Bag͟hdādī, al-Umawī, etc., of algebraists like Abū Kāmil, al-Būzad͟jānī, al-Karad͟jī and al-Samawʾal, and of philosophers like al-Kindī, Ibn Sīnā, al-D͟jūzd͟jānī, etc., amongst a hundred or so of others).

VI. Infinitesimal determinations.

The study of asymptotic behaviour and infinitesimal objects represents a substantial part of mathematical research in Arabic. From the 3rd/9th century onwards, mathematicians began work in three main domains: the calculation of infinitesimal areas and volumes; the squaring of lunules, areas and volumes extrema at the time of examination of the isoperimetric problem.

At the beginning of this same century, al-Ḥad͟jd͟jād͟j b. Maṭar had translated Euclid's *Elements*. It was in Book X of this work that the mathematicians knew the famous proposition for this calculation, which may be written: Let a and b be two known magnitudes, $a > 0$ and $b > 0$, such that $a<b$; and let $(b_n)_{n \geq 1}$ a sequence such that, for every n, one has

$$b_n > \frac{1}{2}\left(b - \sum_{k=1}^{n-1} b_k\right),$$

then there exists n_0 such as, for $n > n_0$, one has

$$\left(b - \sum_{k=1}^{n} b_k\right) < a.$$

Two works of Archimedes were also translated into Arabic: the measuring of the circle, Κύκλου μέτρησις, and concerning the sphere and the cylinder, Περί σφαίρας καὶ κυλίνδρου. The translation of the first was known to al-Kindī and the Banū Mūsā (*q.v.* and see the art. s.v. in *Dict Scientific Biogr.*, 1970, i, 443-6; also the treatise of the Banū Mūsā cited below), whilst that of the second was revised by their collaborator T͟hābit b. Ḳurra. As for Archimedes' other books, i.e. on the spiral, on conoids and spheroids, on the squaring of a parabola, and on method, there is nothing to show that they were known to the Arab mathematicians. This last remark is especially important since Archimedes introduced into his book *On conoids and spheroids* the idea of lower and higher integral sums, which then completed the method of exhaustion.

The translation of Archimedes' two treatises, as well as of Eutocius' commentary (these texts were twice translated in the course of the 3rd/9th century, see Rashed, *Al-Kindī's Commentary on Archimedes'* The Measurement of the Circle, in *Arabic Science and Philosophy, a Historical Journal*, i, 3 no. 1, [1993], 7-53), and *Archimède dans les mathématiques arabes*, in I. Mueller (ed.), *Essays around the mathematical sciences of the Greeks*, Apeiron 1991), clearly correspond to the demands of al-Kindī, the Banū Mūsā and their school. The Banū Mūsā comprised three brothers, Muḥammad, Aḥmad and al-Ḥasan, who were all concerned with geometry—and notably, with conic sections—as much as with mechanics, music and astronomy. These three wrote at Bag͟hdād in the first half of the century the first Arabic work in this sphere. Their treatise, called *On the measurement of plane and spherical figures*, did not merely launch Arabic research into the determination of areas and volumes but also remained the basic text for Latin science after it was translated in the 12th century by Gerard of Cremona. The treatise in fact falls into three sections. The first concerns the measurement of the circle; the second, the volume of the sphere; whilst the third deals with the classical problems of the two means and the trisection of the angle.

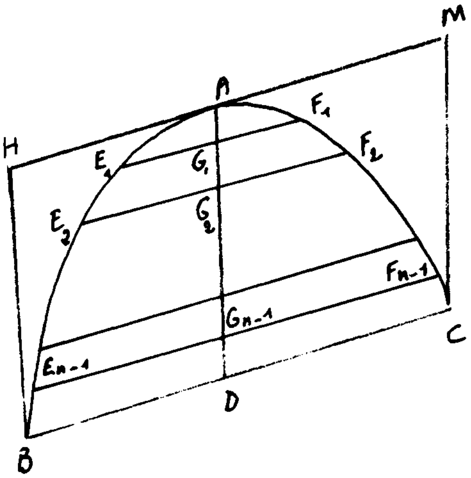
The brothers showed that the area of a circle is equal to $S = r.\ c/2$ (r being the radius and c the circumference). But in this proof, they did not compare S to $S' > S$ and then to $S'' < S$, but supposed that $S = r.\ c/2$ and compared c to a $c' > c$ and to a $c'' < c$, being thus content to compare the lengths.

The brothers then explained Archimedes' method for the approximate calculation of π, and brought out its general significance. They showed in effect that this method goes back to the construction of two adjacent sequences $(a_n)_n \geq 1$ and $(b_n)_n \geq 1$ — $a_n < b_n$ sequences for all n — and which converge towards the same limit $2r\pi$. This involves two sequences which can be set out as:

$$a_n = 2nr \sin \pi/n \qquad b_n = 2nr \operatorname{tg} \pi/n.$$

They remarked that "it is possible with the help of this method to attain any required degree of precision" (see Rashed, *op. cit.*). With a method analogous to that applied in the case of the area of a circle, they determined the area of the lateral surface of a sphere.

The contemporaries and successors of the Banū



Mūsā pursued research in this sphere very actively. Thus al-Māhānī did not only comment upon Archimedes' book *On the sphere and the cylinder*, but began on the determination of the segment of a parabola; this text of his has not, however, survived.

The brothers' collaborator, Thābit b. Ḳurra, contributed to this area of research on a large scale. He composed successively three treatises: one on the area of the segment of a parabola, one on the volume of a revolving paraboloid and one on sections of the cylinder and its lateral area. In the first treatise, on determining the area of a segment of a parabola, Thābit, who did not know of Archimedes' study on this subject, began by proving 21 propositions, 11 of these being arithmetical. Examination of these shows that Thābit knew perfectly and rigorously the concept of the upper limit of a set of square real numbers and the unicity of this upper limit. In effect, he used the following formula for characterising the upper limit:

let ABC be a segment of the parabola, AD its diameter corresponding to BC (Fig.). For all given $\varepsilon > 0$, one can make correspond to it the division A, G_1, G_2, ..., G_{n-1}, D, of the diameter AD, so that

area BAC - area of the polygon $BE_{n-1} \ldots E_2E_1AF_1F_2 \ldots F_{n-1}C < \varepsilon$,

i.e. putting it another way, the area BAC is the upper limit of the area of these polygons.

Thābit showed in quite a rigorous fashion that 2/3 of the area BHMC is the upper limit of the areas of the polygons already mentioned. He finally arrived at his theorem, thus formulated: "A parabola is infinite but the area of any one of its segments is equal to two-thirds of a parallelogram of the same base and the same height as that segment" (Cairo ms., Riyāḍa 40, fol. 180b).

One should note that his squaring, given the definition of a parabola, is equivalent to the calculation of the integral $\int_0^a \sqrt{px}\, dx$.

Thābit's contribution to this chapter did not, however, stop here. He undertook to determine the volume of a revolving paraboloid.

He finally undertook, in his treatise on *The sections of the cylinder and their surfaces*, a study of the different types of plane sections of an upright cylinder and an oblique one; he then determined the area of the ellipse and the area of elliptical segments; he discussed maximal and minimal sections of a cylinder and their axes; and determined the area of a part of the surface delimited by two plane sections.

It is impossible here to set forth the results and proofs of this rich and profound treatise, such as the proof by means of which Thābit showed that "the surface of an ellipse is equal to the surface of a circle whose square of the half-diameter is equal to the product of one of the two axes of this ellipse by the other", i.e. π ab, with a and b the two axes of the ellipse.

His contribution was to be actively followed by his successors, such as his grandson Ibrāhīm b. Sinān. This latter mathematician of genius only lived 38 years, and did not like, according to his own words, "that al-Māhānī should have a study more advanced than that of [my] grandfather, without one of us going on further than him". Hence he wished to provide a proof not only shorter than his grandfather's, which needed 19 lemmata, as we have seen, but also than that of al-Māhānī. The proposition on which Ibrāhīm's proof was based and which he was previously careful to set forth, was: *affine transformation leaves the proportionality of the areas invariable.*

In the 4th/10th century, the mathematician al-ʿAlāʾ b. Sahl (see Rashed, *Géometrie et dioptrique au Xᵉ siècle*) took up the study of the squaring of a parabola, but his treatise has unfortunately not yet come to light. As for his contemporary al-Ḳūhī, by re-examining the determination of the volume of a revolving paraboloid, he rediscovered the method of Archimedes.

The famed mathematician and physician Ibn al-Haytham, successor to Ibn Sahl and al-Ḳūhī, took up the proof of the volume of a revolving paraboloid as well as that of the volume resulting from the rotation of a parabola around its ordinate (see Rashed, *op. cit.*, and *Ibn al-Haytham et la mesure du paraboloïde*, in *Jnal. for the Hist. of Arabic Science*, v [1982], 191-262). Let us rapidly examine this second type, more difficult than the first one. In order to get to the determination of this volume, Ibn al-Haytham began by proving certain arithmetical lemmata: the sums of powers of n successive integers, in order to establish a double inequality, fundamental for his study. On this occasion he obtained results which mark a point in the history of arithmetic, notably the sum of any integer power of n successive first integers

$$\sum_{k=1}^{n} k^i \quad , i = 1, 2, \ldots;$$

he then establishes the following inequality

$$(*) \qquad \sum_{k=1}^{n} [(n+1)^2 - k^2]^2 \le \frac{8}{15}(n+1)(n+1)^4 \le \sum_{k=0}^{n} [(n+1)^2 - k^2]^2 .$$

Let there now be a paraboloid generated by the rotation of the part of the parabola ABC of the equation $x = ky^2$ around the ordinate BC. Let $\sigma_n = (y_i)_{0 \le i \le 2^m}$, with $2^m = n$ a subdivision of the interval [0, b] of the step

$$h = \frac{b}{2^m} = \frac{b}{n}.$$

Let M_i be the points of a parabola of ordinates y_i and of abscissae x_i respectively. Let us posit

$$r_i = c - x_i \qquad (0 \le i \le 2^m = n);$$

there results

$$r_i = k(b^2 - y_i^2) = kh^2(n^2 - i^2).$$

One has

$$I_n = \sum_{i=1}^{n-1} \pi k^2 h^5 (n^2 - i^2)^2$$

and

$$C_n = \sum_{i=0}^{n-1} \pi k^2 h^5 (n^2 - i^2)^2;$$

but, after the inequality (*), one obtains

$$I_n \leq \frac{8}{15} V \leq C_n,$$

where $V = \pi k^2 b^4$. b is the volume of the circumscribed cylinder. By using a different language from that of Ibn al-Hay<u>th</u>am:

As the function $g(y) = ky^2$ is continuous on [0, b], Ibn al-Hay<u>th</u>am's calculation will be equivalent to the volume of the paraboloid

$$v(p) = \lim_{n \to \infty} \sum_{i=1}^{n} \pi k^2 h^5 (n^2 - i^2)^2$$

whence

$$v(p) = \lim_{n \to \infty} \sum_{i=1}^{n} \pi k^2 (b^4 - 2b^2 y_i^2 + y_i^4) h,$$

whence

$$v(p) = \pi \int_0^b k^2 (b^4 - 2b^2y^2 + y^4) \, dy ,$$

whence

$$v(p) = \frac{8}{15} \pi k^2 b^5 = \frac{8}{15} V ,$$

V being the volume of the circumscribed cylinder.

Ibn al-Hay<u>th</u>am did not stop there; he turned afresh towards the small solids of framing in order to study their behaviour when the points of subdivision are increased indefinitely. This time we find ourselves in the presence of a clearly infinitesimalist, and in some ways functional, way of thinking, in so as the crux of the problem is explicitly the asymptotic behaviour of mathematical entities, the determination of whose variation is being sought.

Ibn al-Hay<u>th</u>am applied the same method to the determination of the volume of a sphere. There, equally, one notes that he gave an arithmetically inflected version of the method of exhaustion. In effect, in his researches, the role of explicit arithmetical calculation seems much more important than in the works of his predecessors.

In this study, one can see the development of the means and techniques of this chapter in Arabic mathematics. It has been seen that Ibn al-Hay<u>th</u>am, in his work on the paraboloid, obtained results which the historians have attributed to e.g. Kepler and Cavalieri. However, this chapter stops there, very probably because of the lack of a suitable symbolic means of expression.

VII. The squaring of lunules.

Amongst the problems of the determination of the areas of curved surfaces, the exact squaring of lunules—surfaces bounded by two arcs of circles—is one of the most ancient.

Ibn al-Hay<u>th</u>am's approach went back to the study of lunules bounded by any arcs, whilst seeking for the equivalents of surfaces. He introduced circles in general equivalent to sectors of the given circle in the problem, and expressed by a fraction of the latter. He justified the existence of the circles introduced, which he had to add or to subtract from polygonal surfaces, in order to obtain a surface equivalent to that of a lunule or the sum of two lunules.

Ibn al-Hay<u>th</u>am took back to its foundation the problem of the squaring of lunules, set it down on the plane of trigonometry, and tried to deduce the different cases as so many properties of a trigonometric function, one which would be recognised more precisely much later by Euler.

From the beginning of his treatise, Ibn al-Hay<u>th</u>am explicitly recognised that the calculation of the areas of lunules involved the sums and differences of the areas of sectors of the circle and of triangles, whose comparison in turn required the comparison of the relations of angles and the relations of segments. It was for this reason that he began by establishing four lemmata relating to the triangle ABC, right-angled at B in the first lemma, and with an obtuse angle in the other three, which was in future to show that the essential point of the study was taken back to a study of the function

$$f(x) = \frac{\sin^2 x}{x} \qquad 0 < x \leq \pi.$$

One can thus rewrite these lemmata:

1) If $0 < C < \frac{\pi}{4} < A < \frac{\pi}{2}$,

then $\frac{\sin^2 C}{C} < \frac{2}{\pi} < \frac{\sin^2 A}{A}$;

it is evident that if $C = A = \frac{\pi}{4}$,

then $\frac{\sin^2 C}{C} = \frac{\sin^2 A}{A} = \frac{2}{\pi}$.

2) Let $\pi - B = B_1$,

if $C < \frac{\pi}{4} < B_1 < \frac{\pi}{2}$, then $\frac{\sin^2 C}{C} = \frac{\sin^2 B_1}{B_1}$.

3) If $A \leq \frac{\pi}{4}$, then $\frac{\sin^2 A}{A} < \frac{\sin^2 B_1}{B_1}$.

4) Here Ibn al-Hay<u>th</u>am wished to study the case $A > \frac{\pi}{4}$; but the study is incomplete.

He showed that for a given A, one can find B_0 such that

$$B_1 \geq B_0 \Rightarrow \frac{\sin^2 A}{A} > \frac{\sin^2 B_1}{B_1}.$$

This incomplete study seems to have hidden from Ibn al-Hay<u>th</u>am's view the equality

$$\frac{\sin^2 A}{A} = \frac{\mathrm{Sin}^2 B_1}{B_1}.$$

It may be remarked that these lemmata, since they link the problem of the squaring of lunules with trigonometry, changed its position, and allowed the unifying of the particular cases. But the incompleteness already mentioned masked the possibility of the existence of lunules capable of being squared.

Ibn al-Hay<u>th</u>am pursued his researches whilst solving important propositions which would take too long to set out here. He likewise contributed, following al-<u>Kh</u>āzin, to the study of isoperimetric and isepiphanic problems, which led him to pose important questions

regarding the solid angle (see Rashed, *Les mathématiques infinitésimales entre le IX^e et le XI^e siècle*, ii).

We have just been present at the emergence of new researches into geometry, extensions of the Hellenistic heritage, or new chapters of which the Alexandrians never conceived: algebraic geometry in the sense of that used by al-Khayyām and Sharaf al-Dīn al-Ṭūsī. Other chapters on geometry, all of them important, saw the light, stimulated by the application of geometry to the other mathematical disciplines or to other fields, such as astronomy and optics. Thus the mathematicians developed the study of punctual geometrical transformations, notably in the course of their researches on infinitesimal determinations and in the course of their works on isoperimetric and isepiphanic problems. The analysis of the optical properties of conics developed thanks to catoptric and dioptric researches. The study of geometrical projections—conic and cylindrical—was brought into being through the needs of astronomy. To that may be added a whole tradition of research on the theory of parallels, on geometrical constructions and on practical geometry. Equally evident, for the first time in history, is the fact that trigonometry took shape as a branch of geometry. It is readily understandable that, within such a burgeoning, philosophers and mathematicians became interested in the philosophy of mathematics.

There exist so many other chapters which, for lack of space, we can only cite here but whose titles, added to those which we have already examined, allow us to realise the ramifications of mathematics and to place them within the history of this discipline.

(R. RASHED)

RIYĀFA (A.), from *rīf*, pl. *aryāf*, "cultivated and fertile region", generally designates the lands along a river or the sea and the fertile plains bordering the desert [see further RĪF]. The noun *riyāfa*, a recent formation on the model of *ḳiyāfa* (note that al-Djāḥiẓ, *K. al-Tarbīʿ wa 'l-tadwīr*, ed. Pellat, 91-2, § 176, gives for *ḳiyāfa* [*q.v.*] the sense of the detection of paternity, the whereabouts of water, atmospheric phenomena and the earth), designates the water-diviner's art which estimates the depth of water under the earth through the smell of the earth, its vegetation and the instinctive reactions of certain creatures, in particular, the hoopoe (cf. Ḥādjdjī Khalīfa, iii, 523, who cites, at 1, 444, a *Mukhtaṣar* on this art by Badr al-Dīn Muḥammad al-Karkhī, d. 1006/1597, Brockelmann, II², 493, and who notes that the most important pieces of information on it are to be found in the *K. al-Filāḥa al-nabaṭiyya* (see ed. IFDEA, Damascus 1993, i, 54-111).

In effect, the *Nabataean agriculture* devotes a lengthy treatise to the discovery of water called *Bāb istinbāṭ al-miyāh wa-handasatihā*. This monograph, which can easily be detached from the rest of the work, has several chapters, with the following titles:

(1) Searching for water and the necessary technical knowledge for this; (2) How to dig wells and how to increase the flow of water by various proven devices and techniques; (3) The drilling of wells; (4) devices for increasing the water from wells; (5) How to get the water up from a very deep well; (6) How to increase the amount of water in the well and its sources; (7) How to change and improve the taste of the water; and (8) Concerning the difference in the nature and the effect of the water according to the nearer or further position of it in relation to the ecliptic.

The contents of this treatise on water have been analysed by the present author, classifying these under six headings: (1) Hydrology; (2) The search for wells; (3) The drilling of wells; (4) Increasing the flow of the water of wells; (5) Hydrology, the modifying and improving of the water's taste; (6) The different natures and effects of the waters according to their positions in relation to the ecliptic (see FAHD, *Un traité des eaux dans* al-Filāḥa l-nabaṭiyya: *hydrogéologie, hydraulique agricole, hydrologie*, in *La Persia nel Medioevo*, Accademia dei Lincei, Rome 1971, 277-326).

In the writings on *firāsa* [*q.v.*], the meaning of *riyāfa* has been stretched to that of uncovering the presence of metals underground: "l'accès à ces trésors enfouis procède de la connaissance des signes que recèlent ces montagnes et qui apparaissent aux yeux du connaisseur averti sous forme de veines ou filets dont il lui faut interpréter la nature, la disposition et la couleur" (Fahd, *La divination arabe*, 404). The seeker "doit connaître l'origine astrale du minéral qu'il recherche et savoir sous la domination de quelle planète il se trouve; car chaque métal a la couleur, la nature, les caractéristiques et les propriétés de la planète dont il est censé être issu" (*ibid.*). Amongst the Ḥarrānians, the following correspondences were to be found: Gold-The Sun; Silver-The Moon, (Black) Lead-Saturn; Tin-Jupiter; Copper-Venus; and Iron-Mars (see IBN AL-NADĪM, *Fihrist*, 411-12).

In general, it is a question of a natural gift which "réside dans la connaissance de l'état des lieux sans signes apparents, mais avec des pressentiments fondés sur des propriétés qu'il n'est pas donné à tout le monde de déceler; cela est généralement dû à la perfection des sens et à la force de l'imagination (Fahd, *op. cit.*, 403; Y. Mourad, *La physiognomie arabe et le K. al-Firāsa de Fakhr al-Dīn al-Rāzī*, diss. Paris 1939, 137 n. 21, citing Zayn al-ʿĀbidīn al-ʿĀmirī).

Riyāfa, like *ḳiyāfa* (Fahd, *op. cit.*, 370-8), is classed among the physiognomic procedures since it involves "des déductions relatives à des choses cachées, partant de phénomènes apparents, par analogie avec les prévisions concernant l'aspect moral, basées sur l'aspect physique" (*ibid.*). Further details on these procedures in Mourad, *op. cit.*, 15 (the sciences connected with *firāsa*).

Bibliography: In addition to the work of Mourad, see T. Fahd, *La divination arabe*, Paris 1967, 403-6; Zayn al-ʿĀbidīn al-ʿUmarī al-Shāfiʿī (d. 970/1562), *K. al-Bahdja al-unsiyya fī 'l-firāsa al-insāniyya wa 'l-ḥikamiyya* (mss. in Ankara, Istanbul, Paris and Cairo, cf. Brockelmann, II², 440, S II, 463, who reads for his *nisba* al-Ghumrī).

(T. FAHD)

RIYĀḤ, BANŪ, an Arab tribe, the most powerful of those that, regarding themselves as descended from Hilāl [*q.v.*], left Upper Egypt and invaded Barbary in the middle of the 5th/11th century. Their chief at that time was Muʾnis b. Yaḥyā of the family of Mirdās. The Zīrid *amīr* al-Muʿizz [*q.v.*], who did not foresee the disastrous consequences of the entry of the Arabs into Ifrīḳiya, tried to come to an arrangement with him and to win over the Riyāḥ. The latter were the

first to lay his country waste. But thanks to the protection of the chiefs of the Riyāḥ, to whom he had married his daughters, al-Muʿizz himself succeeded in escaping from Ḳayrawān and reaching al-Mahdiyya [*q.v.*].

At the first partition of Ifrīḳiya which followed the invasion, the Riyāḥ were naturally the best served. They obtained the greater part of the plains, which the Berbers had abandoned to seek shelter among the mountains; they had thrust their relatives, the Athbidj, towards the east. They held Badja, which the Fāṭimid caliph in Cairo had allotted to them in anticipation. The people of Gabès [see ḲĀBIS] took the oath of loyalty to Muʾnis. "It was", says Ibn Khaldūn, "the first real conquest of the Arabs". The Djāmiʿ, a family related to the Riyāḥ, made Gabès a regular little capital, which they adorned with their buildings. Lastly, a chief of the main tribe, Muḥriz b. Ziyād, made himself a fortress in al-Muʿallaḳa (a Roman circus?), among the ruins of Carthage. The powerful lords of al-Muʿallaḳa, however, supported the policy of the Zīrids of al-Mahdiyya, and joined them in their resistance to the Almohads.

This resistance did not long impede the expeditions sent by the Maghribīs against an Ifrīḳiya in anarchy. Defeated by ʿAbd al-Muʾmin in 546/1152, 555/1160 and 583/1187, the Arabs were ordered to supply contingents for the holy war in Spain. ʿAbd al-Muʾmin, leaving a section of the Riyāḥ in Ifrīḳiya under command of ʿAsākir b. Sulṭān, took the others to the Maghrib with their chief, ʿAsākir's brother Masʿūd, known as *al-bulṭ* ("the axe"; cf. Dozy, *Supplément*, i, 111). He settled them in the Moroccan plains to the north of Bū Regreg. This control was little in keeping with the traditions of the Riyāḥ; Masʿūd fled to Ifrīḳiya and there gave his support to the Banū Ghāniya [*q.v.*], who were trying to revive for their own advantage the Almoravid power.

It is known how the trouble stirred up by the Banū Ghāniya led to the Almohad caliph's appointing a governor of Ifrīḳiya invested with very extensive powers, Abū Muḥammad of the Ḥafṣid [*q.v.*] family. This governor naturally attacked the Riyāḥ, and, in order to be rid of them, encouraged the settlement in the country of the Sulaym Arabs [see SULAYM, BANŪ] hitherto quartered in Tripolitania. Under the pressure of the Sulaym, the Riyāḥ, the principal family of whom at this time was the Dawāwīda, migrated to the plains of Constantine where they were henceforth to remain.

In their new home, the position of the Riyāḥ remained a very strong one. They had rights over all the centre of the region of Constantine, approximately from the region of Guelma to that of Bougie. In the Zāb [*q.v.*] they were on terms—which were sometimes friendly but more often hostile— with the Banū Muznī of Biskra, who ruled this Ḥafṣid province. This is how the Banū Muznī had to fight against that curious movement, at once religious and social, stirred up by the Riyāḥid marabout Saʿda. The Dawāwīda, and in particular their most powerful family, the Awlād Muḥammad, held winter pastures and enjoyed revenues paid by the people of the *ḳṣūr* in the Sahara region of the Wādī Rīgh.

During the whole of the 8th/14th century, the two chief branches of the main tribe, the Awlād Muḥammad and the Awlād Sibāʿ, were actively engaged in the politics of the Ḥafṣid princes and the ʿAbd al-Wādids of Tlemcen, in the enterprises of the pretenders who threatened their dynasties. The power of the Riyāḥ of central Barbary lasted till the 15th and 16th centuries. According to Bernardino of Mendoza, they had in 1536 10,000 horsemen and large numbers of foot. The 12th/18th century saw them assisting the Turkish Bey of Constantine, to whom they were connected by marriage and the independent sultans of Tuggurt. In 1844, Carette and Warnier noted that the name Dawāwīda was still synonymous with "noble Arabs".

Another group of the Riyāḥ played a notable part in the history of the Zanāta states. In the western Maghrib, bodies of them transported by the Almohads to the plains of the coast faithfully served this dynasty, by trying to check the advance of the Marīnids [*q.v.*]. Defeated near the Wādī Sbū in 614/1217, the Riyāḥ were mercilessly punished by the victorious Marīnids. Decimated and weakened, and driven northwards, they submitted to the humiliation of paying an annual tribute. Their name no longer figures on the map of modern Morocco except at a place near the road from al-Ḳsār to Tangiers.

Finally, at the other end of Barbary, in their first home, the name survives in the nomenclature of the tribes.

RIYĀL, a name used for coins in a number of Islamic countries, derived from the silver *real* (*de plata*), first issued by Pedro the Cruel of Castile (1350-9), followed by Ferdinand of Portugal (1367-83). In Spain it continued until 1870 and in Portugal until 1910.

The relations of the Spanish and Portuguese currencies to those of the Near East belong to the monetary history of the Ottoman Empire and of Persia. From the early 16th century the eastern gold and silver currencies suffered frequent devaluation and debasement. Western merchants needed more stable monetary standards if they were not to incur loss, and so relied on imported currencies; they could make further profit by exporting them as bullion to India. Austria, Germany, Holland, Poland, Spain and Venice were the principal western sources; the Levant Company, of London, forbidden to export English currency, at first purchased Spanish *reals*, but turned later to Dutch coinage. Spanish and Mexican *reals* were greatly valued for their purity, but, being roughly struck, encouraged clipping; Austrian and Saxon issues became popular because they were minted with a collar, which defied clipping. Thus among Bedouin they have remained popular into the present century.

The term *riyāl* is first recorded in the east in Persia under Shāh ʿAbbās I in 1609. With Fatḥ ʿAlī Shāh's issue of 1797 it became the official name of the silver coinage, and this was retained in Riḍāʾ (Reza) Shāh's

reforms of 1932. It was frequently devalued and debased, and bore no numismatic relationship to the Spanish and Portuguese issues. The earlier Persian term *lārī* [see LARIN] is recorded as the common currency at Mombasa, Kenya, in conjunction with "peeces ⁸/₈", that is, "pieces-of-eight" or Spanish *reals*, by an English visitor in 1617.

In Yemen, while still under Ottoman sovereignty, Imām Yaḥyā b. Muḥammad al-Mutawakkil (1904-48) determined to defy the Ottoman right of *sikka*, that of issuing coinage. H.F. Jacob, then Political Agent for the Bombay Government in Aden, has left an account of how machinery ordered from England for a mint in Ṣanʿāʾ was passed through the Aden Customs manifested as something else. Ottoman troops sent to intercept it were outwitted by an escort of 500 Yemeni tribesmen. This mint operated from 1906-63. The Yemen still uses the term *riyāl* for its currency.

There were sporadic issues of *riyāls* elsewhere, at Ghurfa and two other mints in Ḥaḍramawt at the end of the 19th century, and in Zanzibar by Sultan Barghash b. Saʿīd, of silver in 1881, and of ½ and ¼ copper *riyāls* in 1882 and 1883. A curiosity of the pieces is that the ruler's given name is reversed with his patronymic, as Saʿīd b. Barghash. Slightly earlier, Charles Doughty, travelling down the Pilgrimage Route, found that the Maria Theresa *thaler* was the usual currency but that tribes further east preferred the *riyāl*.

In Saudi Arabia, the *riyāl* was instituted as local currency in 1935, in ʿUmān (Oman) in 1945, in the United Arab Emirates in 1966, and in Dubayy and Ḳaṭar (Qatar) since 1972. They all obtain their supply from the Royal Mint in Wales.

The history of the *riyāl* can only be traced in the works of foreign travellers. Official documentation is not available. F.W. Hasluck has printed extracts from travellers to the Ottoman Empire, and H.L. Rabino de Borgomale cites references to Persia. A detailed report, 1766, *Observations sur l'état actuel de l'Empire Ottoman*, by Henry Grenville, Ambassador to the Porte in 1762-65, and brother of George Grenville, Prime Minister of Great Britain 1763-65, gives an official account of the Ottoman economy and government. The Venetian *sequin* was the most favoured foreign currency, the Austrian *thaler* holding second place.

(G.S.P. FREEMAN-GRENVILLE)

RIYĀLA, RIYĀLE or RIYĀLA BEY, abbreviation of *riyala-yi hümāyūn kapudanî* "captain of the imperial [galley-] royal", from the Italian *riyale* (secondary form from *reale*, abbreviated from *galea reale*, "the royal galley"), a general officer of the Ottoman navy who commanded the galley of the same name, later "rear-admiral". There was also a popular pronunciation *îryāla* with the prosthetic *i* frequent in Turkish in loan-words with an initial *r* (cf. Hindoglou, 113 under "contre-amiral" and 457 under "réale"; the form *iryāla* is found as early as Ewliyā Čelebi, viii, 466, 11). The Italian pronunciation *riyale* is attested in the *Itinéraire de Jérome Maurand d'Antibes à Constantinople* (1544), ed. L. Dorez, Paris 1901 (we also find there exceptionally *rialle, reale* and *realle*). For the pronunciation, we may compare the Turkish *riyāla* with the Turkish *riyāl*, Ar. *riyāl*, for the Spanish *real* (*del plata*), name of a coin [see RIYĀL]; cf. the French "gros royal", Turk. *grush, krush, gurush*, mod. *kuruş* "piastre, formerly écu". Here also we find the prosthetic form *iryāl* (Hindoglou, 200, s.v. "écu"; Aucher gives *riyāl*, under "réal"). In the west, the Turkish word *riyāla* was sometimes transcribed *reala*, no doubt regarded as more correct (Herbette, *Une Ambassade turque sous le Directoire*, Paris 1902, 238).

The rank of *riyāla*, as well as those of *ḳapudana* and *patrona* to be discussed later, was at first known among the Turks only as applied to officers of the navies of Christendom (see e.g. Ewliyā Čelebi and the Ottoman historians like Naʿīmā and others). These ranks came into use among the Turkish sailors, at first unofficially, in the time of Sultan Meḥemmed IV, 1058-99/1648-87 (cf. below in connection with *patrona*). D'Ohsson, undoubtedly by confusion, says that they were used in the time of Meḥemmed II (855-86/1451-81). We do not, however, find these titles of foreign origin in the *Tuḥfet ül-kibār* of Ḥādjdjī Khalīfa (1066/1656) nor in Hezārfenn (d. 1102/1691). It was, it appears, under ʿAbd al-Ḥamīd I (1187-1203/1774-89) that they were officially adopted (Meḥmed Shükrī, *Esfār-î baḥriyye-i ʿothmāniyye*, 1306/1890, i, 145).

We are well informed about the hierarchy of the naval high command at this period, thanks to the *Teshrīfāt-î ḳadīme*, a work of Ṣaḥḥāflar-Sheykhī-zāde Esʿad Meḥmed Efendi (d. 1848). On p. 102 ff. we have a list of the old establishment, which combined the non-sea-going officers, of which a list will be given here, and the sea-going officers, who will be dealt with in more detail because the *riyala* was one of them and bore, like them, a name taken from the Venetians.

a. General officers of the Admiralty (*tersāne-i ʿāmire*).

(All three seem to have had, but perhaps only from the beginning of the 19th century, the right to the title of *pasha*.)

1. The *ḳapudan-pasha* [*q.v.*] having the rank of *wezīr* (*dewletlü*). He was the Capitan del Mar (*ḳapudan-î deryā*) or, as was also said, the *ḳapudan* par excellence. The name *ḳapudan*, from the Venetian *capitan*(*o*) and its modernised form, probably under the influence of English, *ḳaptan*, was further applied to any commander of a ship, small or large, foreign or Turkish. (The vowel *u* in the second syllable is due to the influence of the neighbouring labial *p* and Trévoux's Dictionary gives the intermediate form "capoutan" under *capitan-bacha*; cf. also *Relation des 2 rebellions arrivées à Constantinople en 1730 et 1731*, The Hague 1737, 23.)

2. *Tersāne*(*-i ʿāmire*) *emīni agha* (*seʿādetlü*) "Intendant de l'Arsenal" (d'Ohsson), Germ. "Intendant des Arsenals" (Hammer), Engl. "Intendant of the Marine" (Perry). He took the place of the Grand Admiral in his absence. From 1246/1830 onwards, he was called *müdīr*.

3. *Tersāne*(*-i ʿāmire*) *ketkhüdāsî* (*kaḥyasî*) *agha* "Intendant des galères", "Lieutenant of the Arsenal", "Sachwalter des Arsenals". He was particularly concerned with the police of the Admiralty.

b. Admirals with the title of *bey*.

Except the fourth, these officers were sea-going admirals and took the name, of Venetian origin, of the vessels they commanded. The name might have the addition of *hümāyūn* "imperial" in a Persian construction, whence the official barbarisms *bashtarda-yi hümāyūn*, *kapudana-yi hümāyūn*, etc. The full titles were in theory *bashtarda-yi hümāyūn kapudani*, *kapudana-yi hümāyūn kapudani*, etc.

1. *Bashtarda, bashtarda, basharda-(yi hümāyūn)*—Ital. *bastarda*, Fr. *bastarde* or *bâtardelle*. This was not the largest unit of the fleet. In Turkish as in Venetian usage, the bastarda was a galley larger than the *galea sensile* (Tk. *kadirga* or *čektiri*), but smaller than the galeazza or galliass (Tk. *mauna*) and had a very rounded poop "like a water-melon" (*karpuz kičli*). Among the Turks it contained 26-36 *oturaks* or benches of 5-7 rowers. The one which had the Kapudan Pasha on board was called (*kapudan-*) *pasha bashtardasi* and had 26-36 *oturaks*. It was distinguished by the three lanterns (*fener*) attached to the poop in addition to that on the main mast (*Tuhfa*, fol. 69; *Djewdet Pasha tārīkhi*, 1309, 131). As it flew the flag of the Grand Admiral, it was sometimes (Meninski, *Thesaurus*, i, 663; Barbier de Meynard) called "Captain", but we shall see that among the Turks this name was given to another vessel. Chance has willed it that the first syllable in the word *bashtarda* means in Turkish "head, chief" but it is difficult to say that the Ottomans gave first place to this ship simply as a result of a popular etymology. The disappearance of the ship propelled by oars resulted in the abolition of the *bashtarda*. Officially disused in 1177/1764, according to d'Ohsson, it was still used from time to time on certain ceremonial occasions. The sailing-ship (*kalyun*, "galleon") which became the flagship of the *kapudan pasha*, was commanded by the "Flag Captain" who, according to d'Ohsson, was called in Turkish *süwari kapudani* "captain of the ship commanders" and, according to von Hammer (*Staatsverf.*, ii, 493), *sandjak kapudani*, Germ. "Flaggenkapitän", cf. Eng. "flag captain". Esʿad Mehmed Efendi calls this officer, probably by an archaism, *bashtarda(-yi) hümāyūn-i pasha* "(commander of) the imperial *bashtarda* of the (*kapudan*) *pasha*.

2. *Kapudana bey*. *Kapudana* comes from the Venetian (*galea* or *nave*) *capitana* "galley or ship carrying the leader of a naval expedition, flag-ship" (Jal). In France it was called "la capitaine" or "capitainesse", but these terms disappeared in 1669 with the office of general of the galleys, and in the French navy pride of place was given to the Réale (see below). On the *kapudana* which took part in the naval battle of Česhme (1770), cf. Jaubert, *Grammaire*, appendice, 3. *Kapudana* and *kapudan* have often been confused (von Hammer, *Staatsverf.*, ii, 291; Blochet, *Voyage de Carlier de Pinon*, 128; Douin, *Navarin*, 250, 276, 295, 311). We find the full title of *kapudana-yi hümāyūn kapudani*, e.g. in a letter from Muhammad ʿAlī Pasha [*q.v.*] (of Egypt) to the Grand Vizier of 29 Ramaḍān 1231/1 July 1821 register, no. 4, p. 71.

3. *Patrona bey*. *Patrona* comes from the Venetian (*galea* or *nave*) *patrona* or *padrona*, Fr. *la patronne* "galley carrying the lieutenant-general or the next in command to the chief of the squadron" (Jal). The earliest mention of an officer of this rank known to us is connected with the years 1676-85 (see *Sidjill-i ʿothmānī*, i, 112, below. Patrona Khalīl [*q.v.*], a Janissary, and leader of the rebels who deposed Ahmed III in 1143/1730, owed his epithet to the fact that he had been a *lewend* [*q.v.*] on board the *Patrona* (*Relation des 2 rebellions*, 8; Eng. tr. in Charles Perry, *A view of the Levant*, London 1743, 64). We also find the forms applied, it is true, to Christian ships: *patorna, patorona, batorna*, and even *botrona* (Ewliyā Čelebi, viii, 579, 12; i, 104, 7; viii, 447, below; 446, 10; Hasan Agha, *Djewāhir al-tewārīkh*, ms. Bibl. Paris, S.T. 506, fols. 160b-161). All these pronunciations show that the word was already well known but that it was finding difficulty in being acclimatised in a correct form.

4. *Liman reʾīsi* "captain (admiral) of the port" of Istanbul, Ger. "Kapitän des Hafens". He was also commander of the midshipmen (*mandedji*).

5. *Riyāla bey*. *Riyāla* comes from the Venetian (*galea* or *nave*) *reale* "galley which carried the king or princes" (the same name was often also applied as an epithet to vessels beonging to the king, i.e to the state, in contrast to privately owned ships). For the lexicology of this borrowing from the Italian, see the beginning of the article.

At the battle of Lepanto, Don John of Austria, Captain of the League, sailed in a Reale. A Patrona Reale went astern of the Reale of the Prince and of the Capitana of the "General Capitan dell' Armata" of Venice. Except for these two ships, none of the 202 vessels of the allies was given the name of Reale (Contarini, *Historia delle cose .... della guerra mossa da Selim Ottomano a' Veneziani*, Venice 1572, fols. 36b ff.). In France, the Reale also went in front of the Patrone and was the first ship of the navy, intended to carry the king, princes, the admiral of France or in their absence the general of the galleys (Jal). At the conquest of Cyprus, in 1570, Contarini (Venice 1595) gives for 185 Christian ships 18 *capitana, 7 padrona* and 1 *bastardella* (no Reale); for the 276 Turkish ships 1 *real* (sic) and 29 *capitana* (these terms do not correspond exactly to those of Turkish usage of that time).

It is not explained how the title of Reale came to descend among the Turks until it was applied to the ship of the admiral of lowest rank. We may suppose that they were misled by the second meaning of the word Reale (see above), or that they confused him with the English "rear-admiral".

Marsigli (*Stato Militare...*, 1732, i, 146) mentions the Turkish "commandante nella Reale" as having a higher rank than the *gardyan bashi*, who was in turn superior to the captain of an ordinary galley. According to Esʿad Efendi, the *riyale* came before the *kalyunlar kātibi*.

All the officers here mentioned, from the *kapudan pasha* to the *riyāla*, were *ṣāhib deynek*, i.e. they had the right to carry, in imitation of their Venetian colleagues, a commander's baton or cane, *deynek*, also called *ṣadefkārī ʿaṣā* (Esʿad Efendi, 109, 7) because it was encrusted with mother of pearl of different colours (see below). It was what the Venetians called the *giannetta* or *cana (canna)*; from *canna d'India*, "Indian cane", often taken in the sense of "bamboo", from which we also have the English word "cane". They alone wore small turbans and fur-trimmed robes (cf. d'Ohsson, pl. 228).

When under ʿAbd al-Ḥamīd I, or later under his successor Selīm III [*q.vv.*], the naval hierarchy was organised and to some extent modernised, three grades of admiral were instituted (independent of the *kapudan pasha*, who was the Grand Admiral or "amiralissimo"). They were:

1. The *kapudana bey* "Admiral". Mehmed Shükrī regards his rank as equivalent to the more modern one of *shūrā-yi bahriyye reʾīsi* "president of the Higher Council of the Navy". He had a fixed monthly salary of 4,500 piastres, and in addition received pay for 1,000 men (out of which he was liable to make various grants), but with the obligation to give to the *kapudan pasha* spices or *djāʾize* to the value of 4,000 piastres. He carried a green cane and had the right to have a pen-

non below the flag on the main mast (that of the *ḳapudan-pas͟ha* was above).

2. *Patrona bey* "vice-admiral" (Meḥmed S͟hükrī), modern Turkish *vis amiral* but we also find the French equivalent of "guidon" (Sāmī Bey; Tinghir-Sinapian). Salary: 3,500 piastres. Pay of 800 men. *D̲j̲āʾize* to the *ḳapudan pas͟ha* of 3,000 piastres. Blue cane. Flag on the fore-mast.

3. *Riyāla bey* "rear-admiral" (Meḥmed S͟hükrī). Salary: 3,000 piastres. Pay of 700 men. *D̲j̲āʾize* to the *ḳapudan pas͟ha*: 2,500 piastres. Blue cane. Flag on the mizzen-mast.

It may be noted that, in theory, there was only one officer of each of these ranks at one time.

All three took part in the battle of Navartino in 1827 (Douin, *Navarin*, 250 and *passim*). They were under the command of Ṭāhir Pas͟ha who had the rank of *mīrmīrān*. He was himself *patrona*, but this does not mean duplicating the office of the *patrona* who was subordinate to him, because the commanders-in-chief of the fleet (*ser-asker* or *bas͟h-bog͟h*) were chosen without regard to rank. K͟hiḍīr Ilyās (*Enderūn tārīk͟hi*, 481) mentions a *liman reʾīsi* with the rank of *patrona* in 1826.

The flag-commander of the *ḳapudan pas͟ha* retained his functions, but seems to have occupied a position on the edge of the hierarchy which the presence of the Grand Admiral on board sometimes made unenviable (von Hammer, *Staatsverf.*, ii, 293)

We do not know at what period these ranks were replaced by the more modern terms of *müs͟hīr, ferīḳ* and *liwā*. The equations of rank varied considerably. The *riyala* is regarded as *mīr afay, mīrmīrān, liwā ferīḳ* and even *birind̲j̲i ferīḳ*. It is probable that it was necessary to choose a grade between these. At Sebastopol in 1854, the Turkish fleet was commanded by a *patrona*, Aḥmed Pas͟ha (cf. Aḥmed Rāsim, *Tārīk͟h*, iv, 2015).

In Egypt under the K͟hedives, there was for a time a *riyala pas͟ha* in command of the fleet.

Bibliography: Only d'Ohsson gives definite information about the officers mentioned above, see his *Tableau de Empire Othoman*, vol. vii, bk. viii, 420-38, devoted to the Navy. See also Ubicini, *Lettres sur la Turquie*, 2nd ed., Paris 1853, i, 484 (important); Jouannin, *La Turquie*, 436; Pakalin, iii, s.v.; İ.H. Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâtı*, Ankara 1948, 434-5. See also BAḤRIYYA. iii, and ḲAPUDAN PAS͟HA.

(J. DENY)

RIYĀM, BANŪ, also and perhaps originally Riʾām, a tribal grouping in ʿUmān [*q.v.*].

The tribe would appear to have originated in the coastal area of southern ʿUmān and in the 4th/10th century al-Hamdānī (*Ṣifa*, 52) refers to them as a *baṭn* of al-Ḳamar, which Ibn Manẓūr's *LA* (v, 115) states is a *baṭn* of Mahra b. Ḥaydān, not the main group of Mahra which remained in southern Arabia. Kaḥḥāla (*Muʿd̲j̲am*, ii, 458), relying on the 5th/11th century geographer, al-Bakrī, says Banū Riyām themselves are a *baṭn* of Mahra b. Ḥaydān b. ʿAmr b. al-Ḥāf, that they live in the coastal area of southern ʿUmān and that one of their fortresses is Raysūt (Wilkinson, *Imamate*, 75-6). The latter is the port of Ẓafār [*q.v.*], about 15 km/10 miles across the bay from the settlement. Al-Fīrūzābādī's *Ḳāmūs* (ii, 125) says that Banū Riyām are between Ẓafār and al-S͟hiḥr, the port of Ḥaḍramawt. Despite these early references placing Banū Riyām only in the south, their even earlier settlement pattern seems to have extended from the southern coastal area as far as the plateau of al-D̲j̲abal al-Akhḍar, and their main centre was in D̲j̲aʿlān, the area in the south-eastern corner of the Arabian Peninsula. The political importance of Banū Riyām in central ʿUmān, however, becomes clear at the end of the 3rd/9th century when they began to take over settlements at the foot of al-D̲j̲abal al-Akhḍar on all sides (Wilkinson, *Settlement*, 245-6 and fig. 33). The area of al-D̲j̲abal al-Akhḍar inhabited by Banū Riyām has become renowned for its cultivation of such fruits as pomegranates, grapes, peaches, figs and mulberries, as well as roses for making rose-water and walnuts (*ibid.*, 12-13).

(G.R. SMITH)

RIZE, a town on the northern, Black Sea coast of Asia Minor, in the eastern part of classical Pontus and in the later mediaeval Islamic Lazistān [see LAZ], now in the Turkish Republic (lat. 41° 03′ N., long. 40° 31′ E.).

In Byzantine times, Rhizus/Rhizaion was a place of some importance and was strongly fortified. With the Ottoman annexation of the Comneni empire of Trebizond in 865/1462 [see ṬARABZUN], it became part of the Ottoman empire. A list of Orthodox Church metropolitanates still in existence at the end of the 9th/15th century mentions the town, which formed part of the province of Trabzon, as a separate judicial district (*ḳaḍāʾ*). In the early years of Ḳānūnī Süleymān's reign, the town contained 215 Christian households, two further households recently converted to Islam and 41 men subject to the *bās͟htīna* (landholding) tax. There also existed a monastery transcribed in the Ottoman register as Ayō Rāndōs. The town was protected by two fortresses, one of them guarded by 31 soldiers under the command of a *dizdār* and *ketk͟hudā*. A second *ketk͟hudā* was recorded for the "old fortress", which means that it was still in use. Two inhabitants of the town had been granted the privileges of *köprüd̲j̲üs*, that is, they were exempt from certain taxes while responsible for the construction and upkeep of a local bridge. After the conquest of Trabzon, Meḥemmed the Conquerer had resettled certain personages of the area in Rūmelī (*sürgüns*); this fact was still mentioned in the records of the early 10th/16th century. Among the town's residents there also were a few *sürgüns* from Bosnia and Morea. These were *timār*-holders and followers of a governor, that is, they had probably been people of distinction in their areas of origin.

In the rural district surrounding the town, there were at least 29 villages and 35 *maḥalles* (quarters). This means that the non-nucleated settlement pattern, which is widespread in the area to the present day, existed in the 10th/16th century as well. The tax registers of the early 10th/16th century mention possessions of a Georgian power-holder (*Gürd̲j̲ü kāfir*) in the area, which had been turned into a *timār* after the Ottoman conquest. The total population of the *ḳaḍāʾ* of Rize was recorded as 6,152 households. The majority of the population was still Christian, and many villages bore Greek names.

In the 11th/17th century, Rize, similar to other settlements located on the Black Sea coast, was subject to raids both on the part of the Abaza, who attempted to capture slaves, and on the part of Cossacks from the northern shore of the Black Sea. Guard towers were therefore built in the vicinity, which were still standing when the Mekhitarist monk Minas Biz͟his͟hkian visited them in the early 13th/19th century. He records only a single fortress in Rize, a port and some

shops. At some point in the past, Persian Armenians seem to have settled in the town quarter of Ros̲h̲i and built a church; but it had apparently disappeared by the time of Biz̲h̲is̲h̲kian's visit. That the town went through difficult times in the 11th/17th century is probable; Ewliyā᾽ Čelebi, who wrote a detailed description of Trabzon, merely mentions passing through or near Rize and does not supply any details.

Rize is mentioned in early 13th/19th century sources in connection with the Ṭuzd̲j̲u-og̲h̲ullarî, a local *aʿyān* family which rebelled against Sultan Maḥmūd II in 1229-32/1814-17 and again in 1234-7/1818-21 and 1248-50/1832-4. The Ṭuzd̲j̲u-og̲h̲ullarî had been influential in the area since at least the mid-12th/18th century. They engaged in trade and agriculture—Biz̲h̲is̲h̲kian praised the area's handsome orange and lemon groves, while maize by this date had already replaced millet as the principal food grain. Peasants unable to repay their debts to the Ṭuzd̲j̲u-og̲h̲ullarî had to hand over their land and work it as sharecroppers, a situation which entailed political loyalty toward this landholding *aʿyān* family. The latter paid the area's taxes as a lump sum (*maḳṭūʿ*), and at the height of their power, the central government's tax collectors could not enter the area. A handsome palace in Rize attested the power of the family. However, competition with another power-holder, who had succeeded in obtaining the governship of Trabzon, resulted in an uprising on the part of Memis̲h̲ Ag̲h̲a, the head of the Ṭuzd̲j̲u-og̲h̲ullarî. After recurrent revolts and considerable bloodshed, the principal members of the family surrendered and were banished to Ruse/Rusčuk and Varna.

In 1294-5/1877-8, Rize became part of the newly-established sub-province (*sand̲j̲aḳ*) of Lazistān and was promoted to the rank of provincial capital. *Ca.* 1307-8/1890, in addition to a covered market, the town possessed an administrative building (*ḳonaḳ*) and constituted the seat of a governor (*müteṣarrif*). At this time, the district contained a population of 160,000, of whom 138,820 were Muslims. Apart from agriculture, citrus growing and small-scale boat building, Rize was noted for a fine and high-quality striped linen, which was marketed as far as Bag̲h̲dād and Egypt. This fabric has had a long history; it is mentioned in records of the Comnenian period, and *ca.* 1245/1830, 75,000 pieces were produced every year; *ca.* 1308/1890, 150,000 pieces were being woven. However, Rize weavers were able to expand output only by lowering prices and profit margins, so that textile manufacturing relieved the poverty of the area only to a limited extent. Rize *pes̲h̲temāl* is being manufactured down to the present day.

Overpopulation in the course of the 13th/19th century caused many young men to emigrate. Some of them settled in Istanbul, while others found their way to Odessa. The migrants specialised in various crafts; many were pastry-cooks. After the Russian Revolution of 1917 and the following civil war, most migrants to Russia were obliged to return. The losses of World War I, the Allied occupation of Istanbul and the War of Independence, also made life impossible for many of those who had migrated to the capital. Therefore, the district of Rize lived through a period of acute overpopulation and crisis during the 1920s, particularly since the market for fruits and nuts, the principal export crops of the time, collapsed during the distress of these years.

In an attempt to find a new source of livelihood for the people of the area, state-supported experiments were begun with the cultivation of tea. Until after 1950, local interest remained limited, and the situation only changed when the government guaranteed prices and undertook to process and market the finished product; but given the high production costs, Rize tea has never been competitive with the major tea-growing areas of the outside world. Since the early 1980s, tea cultivation has slowed down, and emigration from the region to the industrial areas of Istanbul and northwestern Anatolia has continued.

Rize is now the chef-lieu of an *il* or province of that name. With a town population of 43,407 in 1980, Rize now possesses such public amenities as secondary schools and hospitals.

(SURAIYA FAROQHI)

RIZḲ (A.), pl. *arzāḳ*, literally, "anything granted by someone to someone else as a benefit", hence "bounty, sustenance, nourishment".

1. As a theological concept.

Rizḳ, and the nominal and verbal forms derived from it, are very frequent in the Ḳur᾽ān, especially in reference to the *rizḳ Allāh*, God's provision and sustenance for mankind from the fruits of the earth and the animals upon it (e.g. II, 20/22, 23/25, 57/60, etc.) (see further, section 2. below). Hence one of God's most beautiful names [see AL-ASMĀ᾽ AL-ḤUSNĀ] is *al-Razzāḳ*, the All-Provider. The ultimate origin of the Arabic word lies, according to Jeffery, *The foreign vocabulary of the Qur᾽ān*, 142-3, in Middle Persian *rōzīg* "daily bread" < *rōč* "day", New Persian *rūz*, borrowed into Arabic at an early date—since it occurs frequently in ancient poetry—via Syriac *rōziḳā*.

The ancient Arabs seem to have regarded a man's *rizḳ*, sc. whether he would go hungry in life or not, as something settled by Fate, an obvious consequence of the harsh desert environment of Arabia, which could not be altered much by individual human effort. Under the new dispensation of Islam, the power to determine a man's sustenance and happiness in life was transferred to the All-Powerful God, as is expressed by Ḳur᾽ān, XI, 8, "There is not a beast in the earth but God is responsible for its sustenance; He knows its lair and its resting-place; everyone is in a clear book" (cf. W. Montgomery Watt, *Free will and predestination in early Islam*, London 1948, 16-17; idem, *Muhammad at Mecca*, Oxford 1953, 24-5, 77; idem, *The formative period of Islamic thought*, Edinburgh 1973, 89,

92). This Ḳurʾānic view was later strengthened by the *ḥadīt̲h̲* which stated that God decrees (*ḳaḍā, ḳaddara*) every term of life, a man's labour and a man's sustenance, for the coming year, a tradition which also echoes the pre-Islamic concepts and which can be found in others of the older Near Eastern religions (see H. Ringgren, *Studies in Arabian fatalism*, Uppsala-Wiesbaden 1955, 13, 117 ff., 163, 176).

In later centuries, some of the Islamic theologians, and especially, the Muʿtazila, questioned whether it was right to say that God decreed things like a man's sustenance beforehand; what if a man were to live off stolen food? Hence the Muʿtazila concluded that God only provides for a man the sustenance to which he is lawfully entitled. On the other hand, orthodox theologians like al-Nad̲j̲d̲j̲ār and al-As̲h̲ʿarī [*q.vv.*], faced with the proposition that God provided unlawful as well as lawful sustenance, made the distinction that, whilst God provides both lawful and unlawful sustenance, it was possible for Him to provide a thing without giving ownership of it (cf. Watt, *Free will and predestination*, 66-7, 146; idem, *The formative period of Islamic thought*, 201, 233). (C.E. Bosworth)

2. In the Ḳurʾān.

In the extensive Ḳurʾānic use of this *maṣdar* (55 occurrences) and its related verbal forms (68 occurrences), God is virtually always the subject or implied agent. XXX, 40, makes maintenance of human life the explicit correlate of God's creation of it. Like creation, the power to sustain belongs to God alone (cf. XVI, 73, XXIX, 17, XXXV, 3, LXVII, 21) and requires no reciprocal human offering (cf. XX, 132, LI, 57). Frequent repetition of the two phrases (and variants) "God provides/will provide for whom he wishes" and "God spreads (*yabsuṭu*) his provision generously for whom He wishes and sparingly [for whom He wishes]", conveys a sense of specific allotment and allowed the commentators to offer *ḥaẓẓ* (portion, lot) as a synonym for *rizḳ*. The believer is promised this divine allocation both in this life and the Hereafter, prompting him to continuous praise of this "Best of Providers" (*k̲h̲ayr al-rāziḳīn*; cf. V, 114, XXII, 58, etc.).

Ḳurʾānic specification of God's sustenance includes such general designators as "good things" (*ṭayyibāt*) and "a good, or generous, provision" (*rizḳ*^{an} *ḥasan*^{an}/*karīm*^{an}), as well as more explicit reference. The mention of fruit (*t̲h̲amarāt, fawākih*) is associated particularly with Abraham's prayer and with the eschatological reward (cf. II, 25, 126, XIV, 37, XXVIII, 57), while livestock (*bahīmatu l-anʿām*) is specified as a provision for the *ḥad̲j̲d̲j̲* rituals (cf. XXII, 28, 34). Miraculous intervention marks the nourishment provided to Moses' people, i.e. manna and quail (cf. II, 67, VII, 160), and that supplied to Mary in her sanctuary (III, 37). Jesus prays for sustenance (V, 114) in the form of a table sent from heaven to be a feast and a sign from God. Occasional Ḳurʾānic designation of *rizḳ* as "lawful and good" (*ḥalāl*^{an} *wa-ṭayyib*^{an} generated an exegetical and legal debate about whether illicitly acquired elements could be reckoned as part of one's allotment (see section 1., above).

Although some Ṣūfī groups insisted that strict *tawakkul* [*q.v.*] precluded all efforts to secure one's livelihood, a more moderate view eventually prevailed. As recipient of God's beneficence, the human being incurs a consequent ethical and legal obligation. The frequent Ḳurʾānic approbation of those who "expend of what We have provided," often found linked with the injunctions to believe in God and to establish the ritual prayer, conveys a fundamental posture of orthopraxis. In one of the few uses of the verb where God is not the direct agent, the imperative (*wa-rzuḳūhum*) in IV, 5, 8, signals this responsibility for relatives and orphans and for the incompetent (*al-sufahāʾ*), while II, 233, mandates the provision of food and clothing for nursing mothers (*rizḳuhunna wa-kiswatuhunna*).

3. In military terminology.

Rizḳ appears here for the regular payments, in cash and in kind, made to those soldiers registered on the *dīwān* of earliest Islamic times and, by the ʿAbbāsid period, on the more elaborate *dīwān al-d̲j̲ays̲h̲*, hence equivalent to *ʿaṭāʾ* [*q.v.*, and also d̲j̲ays̲h̲. 1. and d̲j̲und] or *ṭamaʿ*. Such soldiers, the *murtaziḳa*, those drawing regular allowances, are contrasted with the *mutaṭawwiʿa* [*q.v.*], volunteers who served in the early Islamic armies without regular stipends but who shared in the plunder. A single pay allotment was termed a *razḳa*, pl. *razaḳāt*. A considerable amount of information can be gleaned from the sources on the pay procedures, the intervals between payments, etc., both of the central caliphate and also of its provincial successor dynasties; see, in particular, W. Hoenerbach, *Zur Heeresverwaltung der ʿAbbāsiden. Studie über Abulfarağ*: Dīwān al-ğaiš, in *Isl.*, xxix (1950), 278 ff., and C.E. Bosworth, *Abū ʿAbdallāh al-Khwārazmī on the technical terms of the secretary's art*, in *JESHO*, xii (1969), 144-6. (C.E. Bosworth)

RIẒWĀN BEGOWIĆ [see riḍwān begović].

RODOS, Turkish name (popular pronunciation also Rados) for Rhodes (Greek Rhodos, Latin Rhodus, both fem.), an island and port city near the southwestern corner of Turkey, since 1948 a Greek possession and administrative centre of the *nomos* of Dodekanesos [see on iki ada].

Rhodes stands out for its relatively large size (1,404 km^2; the second largest island of the eastern Aegean after Lesbos (see midilli); maximum length between capes Kumburnu and Praso, 80 km, maximum breadth between capes Lardos and Armenistis, 38 km), regular shape (an extended ellipse with a northeast-southwest axis), position at the southeastern extremity of the Aegean archipelago, and proximity to the Anatolian coast (18 km to the nearest point on Daraçya peninsula; 45 km separate the harbours of Rhodes and Marmaris). The interior is relatively mountainous (Attaviros, 1215 m/3,985 ft. is the highest peak) and has one of the last remaining forests that once covered the Aegean islands. Its warm but never extreme climate, beautiful scenery, and thriving vineyards and orchards, have since Antiquity elicited praise from poets, pilgrims and tourists.

In the past it was the island's strategic location on or near shipping lanes linking the eastern Mediterranean with the Aegean, Adriatic, and Black Seas that made it play a historic role in trade, war, piracy, and

traffic of pilgrims to and from the shrines of the Near East. Aside from the context of war with the Byzantines, the caliph Mu^cāwiya may have foreseen some of these assets when in 52/672 he sent a fleet under D̲j̲unāda b. Abī Umayya al-Azdī to seize Rhodes after a preliminary raid in 33/654 staged by him while still governor of Syria; al-Balād̲h̲urī states that when Yazīd succeeded Muʿāwiya seven years later, he ordered D̲j̲unāda to destroy the fort built after the conquest and return to Syria. Byzantine reports imply, however, that the Arabs occupied the island intermittently until definitive withdrawal in 717-18 caused by their failure to take Constantinople. According to a Byzantine source, the Muslims sold during their brief presence the bronze statue of the Colossus, since 225 BC lying toppled by earthquake in the sea, to a Jewish merchant of Edessa as scrap metal.

The next and most dramatic steps of Rhodos into Islamic history began when the Knights of St. John of Jerusalem (the Hospitallers, after 1530 better known as Knights of Malta [see DĀWIYYA and ISBITĀRIYYA in Suppl.]) acquired it as their new base and headquarters. This military and charitable order, driven out of Acre [see ʿAKKĀ], their last possession in Palestine, in 1291 by the Mamlūks, first moved to Cyprus as guests of the Lusignan dynasty, but by 1309 they established themselves in Rhodes as a complex theocratic, commercial, and naval power until their defeat and expulsion by Süleymān the Magnificent 213 years later. Besides adding various buildings of religious and utilitarian nature, the Knights kept strengthening the fortifications of the city and port to the point where it would take a supreme effort by the Ottoman empire at the peak of its might to conquer it. On the commercial and economic level, the Order, which also possessed several other islands of the Dodecanese as well as the fortress of St. Peter (ancient Halicarnassus; see BODRUM) and the small but important island of Meis (Castellorizo) by the Turkish coast, prospered through trade carried on by a cosmopolitan lay community benefiting from the security assured by the rulers, but also through lucrative piracy cloaked in the mantle of Holy War and practiced both by the Knights themselves and by privateers welcomed under specific conditions. On the charitable level, the Order lived up to its original mission of caring for sick and needy pilgrims, for they built and ran a hospital described with admiration by many travellers; and on the military level, the Order, although initially new to maritime matters, created a small but efficient fleet that became a thorn in the side of the Muslim powers of the eastern Mediterranean, first the Mamlūks and then the Turks. Having originated and functioned in Palestine as a byproduct of the Crusades early in the 12th century, the Hospitallers retained some of this attitude and participated in several later Crusades; thus in 1344 they played a vital role in the league organised by Pope Clement VI that captured Izmir from the *amīrs* of Aydîn [*q.v.*]; placed in charge of the city, they withstood all Turkish attempts to dislodge them until Tīmūr [*q.v.*] stormed the place in 1403. In 1365, the Hospitallers participated in the sack of Alexandria led by the king of Cyprus Peter I. This attack provoked a belated but vigorous response from the Mamlūks, who in 1424-6 reduced Cyprus to vassalage, and who between 1440 and 1444 made three attempts to conquer Rhodes. The second attempt (1443) ended with the seizure of Meis, but only the third attacked Rhodes itself; after a 40 days' long siege, however, counterattacks by the Knights forced the Mamlūks to desist and sail back to Damietta.

Despite the confrontations with the Mamlūks and, increasingly, the Turks, the Hospitallers also had intermittent diplomatic and commercial relations with the Muslims, not unlike those pursued by Venice and other merchant republics, except that their emphasis was on care for Christian pilgrims (consuls in Jerusalem, Ramla and Damietta). The Knights sent envoys with congratulations and presents on the occasion of Meḥemmed II's accession in 1451, and after the sultan's conquest of Constantinople, they proposed a commercial treaty. The new crusade projected by Pope Calixtus III did not materialise, but the plan forced the Knights to change their policy and to resume maritime depredations on Turkish shipping and coasts. As a result, punitive expeditions were sent in the course of the 1450s; none dared to attack the fortified port city itself, but the second under Ḥamza Bey raided Istanköy/Kos, the Knights' other largest and most important island possession, and the fortress of Archangelos on the northeastern coast of Rhodes. The subsequent accommodation stipulating a cessation of the Knights' depredations had limited effect, partly because war with Venice (1463-79) absorbed the Ottomans' naval resources; the *s̲h̲ehzāde* D̲j̲em [*q.v.*], as governor of Ḳaramān [*q.v.*], had the task of dealing with the vexing problem. The return of an envoy sent by him to plead with the Knights coincided with the conclusion of the war, and the sultan turned his main attention to Rhodes. An imperial fleet under Mesīḥ Pas̲h̲a sailed in spring 1480, and the Turks besieged the port city for two months (May-July 1480), but the final assault on 28 July collapsed and they withdrew. The failure may have been partly caused by flaws in the vizier's leadership, but also by the absence of the sultan himself. Moreover, Meḥemmed II did not repeat the attempt the following year but threw the main force of the empire into a campaign that may have had Rome as its ultimate target; his own death in May 1481 caused the Turks to abandon their bridgehead at Otranto, and the subsequent fifteen years witnessed a paralysing contest between D̲j̲em and his brother, Sultan Bāyezīd II [*q.v.*], for the throne. The *s̲h̲ehzade*, defeated by his brother on the mainland, took refuge in Rhodes (July-August 1482), whence the Knights transferred him to the custody of their brethren in France; the threat which the pretender's existence posed to the sultan was held in check by payment of onerous indemnities, first to the Knights and then to the Pope, and it ceased only with D̲j̲em's death in 1495. Even more harmful, however, was the chronic threat posed by the powerful corsair Knights, whose port also functioned as an intelligence centre and a base for other Christian powers and pirates preying on "infidels", and the sultans' protracted neglect to resolve this problem. Ironically, however, the Hospitallers may have unwittingly assisted the birth of Ottoman power in North Africa, and the genesis of the greatest naval epic of the Islamic Mediterranean, when they turned the initially commerce-minded Barbarossa brothers into prodigiously successful Muslim corsairs by temporarily capturing and enslaving K̲h̲iḍîr, the future K̲h̲ayr al-Dīn [*q.v.*].

The overdue conquest of Rhodes was finally achieved by Süleymān the Magnificent after a five months' long siege (July-December 1522) whose magnitude, display of heroism by both sides, as well as mutual courtesy marking the two encounters between the Order's Grand Master Philippe Villiers de l'Isle Adam and the sultan, have secured it a choice place in the annals of Mediterranean history. Both adversaries were long aware of the inevitability of a

final confrontation. Since the siege of 1480, the Knights had perfected the fortifications to the verge of impregnability. The sultan, however, eager to inaugurate his reign by succeeding where his illustrious ancestor had failed (at Belgrade [*q.v.*] and Rhodes), threw the formidable resources of the Ottoman empire against the daunting defences of the island fortress. The besiegers had at their disposal a war and logistical fleet estimated at up to 700 vessels; the sultan, who had come overland, embarked at Marmaris for the island. The operations themselves were revealing for the great strides the art of siege mining had made since the fall of Constantinople; it performed a role against the walls of Rhodes no less crucial than artillery had done against those of the Byzantine capital. The final surrender of the Hospitallers was facilitated by the generous terms which Süleyman the Magnificent accorded them; they included a safe departure of the Order as well as of all others wishing to leave. The Turks entered the fortress on Christmas Eve 1522; churches were turned into mosques on Christmas Day, and on St. Stephens' Day, a Friday, the sultan held a *dīwān*, at the end of which he received the Grand Master. The Order's evacuation, in its own ships, was completed by 1 January 1523, with Villiers de l'Isle Adam leaving on that day. The humaneness displayed by Süleymān at the conclusion of this triumph was marred by the arrest and execution of his uncle Murād, the son of D̲j̲em, who had remained in Rhodes and converted to Christianity, and of his son (his wife and two daughters were sent to Istanbul). Moreover, although the magnanimity of the sultan's treatment of the defeated Knights is indisputable, its wisdom is less certain: Süleymān underestimated the resiliency of the military order, which would become his nemesis at the conclusion of his life by repulsing a similar attempt to dislodge it from the island of Malta (1565), besides again becoming a thorn in the side of Muslim shipping.

After the conquest and for the rest of the Ottoman period (1522-1912), Rhodes lost much of its former prominence and strategic importance; this was due not only to the fact that it itself no longer threatened Turkish coasts and shipping but also because all of the eastern Mediterranean became part of the empire. Nevertheless, the port city could at times perform ancillary roles. Thus it served as a naval base during the conquest of Cyprus in 1571, and then again during that of Crete, 1645-69. Rhodes also began to play a role once Ottoman naval hegemony in the eastern Mediterranean was broken: in 1799, when it was the rallying point for the fleet sent to counter Napoleon's invasion of Egypt; and in 1824, when the Egyptian fleet joined the Ottoman one as part of the campaign launched to quell the uprising in the Morea [see MORA].

Meanwhile, Rhodes also declined as a commercial emporium, and the population of the port city shrank to a fraction of the size it is believed to have had during periods of prosperity from Antiquity to the Middle Ages. Ewliyā Čelebi, who stopped on the island in 1671 on his way to Mecca, describes the port city as containing, within the walls, 4,200 houses or 24 *maḥalles* (neighbourhoods), of which 18 were inhabited by Muslims, 4 by Greeks, and 2 by Jews. Although the city acquired a predominantly Turkish population and a somewhat Ottoman touch, thanks to the minarets adorning its mosques, the countryside remained overwhelmingly Greek; it may also be that not all the dwellings of the Turkish quarters were occupied, as suggested by the figures arrived at by late 19th century censuses (data published by Cuinet, i, 370) which mention the island's population as 29,148 souls, of whom 6,825 were Muslims, 20,250 Greek Orthodox, 1,513 Jews, 546 Catholics, and 14 Armenians; the port city itself was found to harbour 7,800 people, of whom 6,287 were Muslims and 1,513 Jews within the walls, while 150 Muslims, 2,300 Greek Orthodox, 546 Catholics, and 14 Armenians lived outside the walls (the latter two groups were thus limited to the capital's suburbs); in other words, toward the end of the Ottoman period, most of its Turkish population lived within the walls of the city of Rhodes, whereas none of the Greeks did.

After the conquest, Rhodes became a *sand̲j̲aḳ in the eyālet* of the archipelago (D̲j̲azā'ir-i Baḥr-i Safīd [*q.v.*]) under the command of the Ḳapudān Pas̲h̲a [*q.v.*]. With the 1283/1867 administrative reform of the empire, which established the *wilāyet* as the largest unit consisting of *sand̲j̲aḳ*s and *ḳaḍā'*s, the new *wilāyet* used the same name but was reduced to 4 *sand̲j̲aḳs* (Chios [see SAKÎZ], the administrative centre; Rhodes, Lesbos [see MIDILLI], and Limni [*q.v.*] each with several adjacent islands). The administrative centre was moved to Rhodes in 1283/1876, and from then on until 1912 the two islands took turns to claim this primacy.

Rhodes left the *Dār al-Islām* in a manner that was as antithetical to its glorious entry four centuries earlier as the empire itself was to its former self. The Italian conquest, a spin-off from the war over Tripolitania, was little more than a formality when on 4 May 1912 a 6,000 men strong force landed on the island and marched the next day into the port city, abandoned by the *wālī*, who had fled to the mainland, and by the small garrison, which withdrew to the interior town of Psinthos. The Italians reduced the latter by 1 June, the casualties being 9 men on the invaders' side and 100 on the defenders' one. This conquest was characteristic of the ease with which the colonial powers of Europe usually overcame the resistance of their non-European victims. The peace treaty of Ouchy signed in October 1912 stipulated that Rhodes and other islands would be restored to the Ottomans, but Italy then took advantage of Turkey's woes caused by the Balkan War and refused to honour the pledge; moreover, Turkey's choice of the losing side in World War I and Italy's choice of the winning one facilitated the latter's goal permanently to acquire Rhodes with its dependent islands. This was the genesis of the *Isole Italiane dell'Egeo*, a possession sanctioned by the peace treaty of Lausanne (24 July 1923). By then, however, not Turkey but Greece had become Italy's contender for the islands; but only the effects of World War II made Greece's acquisition of this archipelago possible (7 March 1948).

The four centuries of Ottoman rule in Rhodes left memories of historical as well as monuments of architectural interest. At the same time, the Turks allowed most of the island's earlier physiognomy to remain intact, so that Rhodes is now a treasure trove for scholars and tourists alike. A library founded in 1208/1793 by Ḥāfiẓ Aḥmed Ag̲h̲a, a native of the island, who had risen to the position of *rikābdār-i s̲h̲ehriyārī* at the court, was further enriched by his son Ṭopk̲h̲āne Mus̲h̲īri Fetḥī Pas̲h̲a, and is now one of the source depositories for the history of Ottoman Rhodes (see Rossi in *Bibl.*). From among other buildings and sites, the *külliyye* of Murād Re'īs (d. 1018/1609) is especially noteworthy because the tombs of several notables retired or exiled to Rhodes (such as three khans of the Crimea) are in the courtyard of its *tekke*.

Bibliography: (The pre-Islamic period as well as non-Islamic aspects, outside the scope of this article, are covered by a literature whose volume and quality dwarf that devoted to our topic; this is ex-

plained not only by the number and experience of scholars studying classical and mediaeval Rhodes but also by the relatively brief and superficial effect which the Muslims had on it. As basic treatment, the article *Rhodos* in Pauly-Wissowa's *Realenzyklopädie* can be cited; another example is the ten large volumes of *Clara Rhodos*, published between 1928 and 1941 by the Istituto Storico-archeologico di Rhodi.) RODOSTO [see TEKIRDAGH].

RŌH, the generic name, used by local western Pandjābīs and Balūč for the tract of northwestern India extending southwards from Swāt and Badjawr in the north and up to the Sulaymān Mountains in the west. It was significant in the history of the later 9th/15th century and early 10th/16th century as a region from which the Lōdī [*q.v.*] sultans of Dihlī drew many of their Afghān supporters.

Bibliography: Sir Olaf Caroe, *The Pathans 550 B.C.-A.D. 1957*, London 1958, index. See also ROHILKHAND. (ED.)

ROHILKHAND, the "land of the Rohillas", is the historical appellation of an area of about 12,800 square miles between the Himalayas and the Ganges, including Katahr [*q.v.*] and the Mughal districts of Sambhal and Badāʾūn. It became current from about 1153/1740 onwards, when groups of Indo-Afghāns known as Rohīlas or, later, Rohillas, made their main settlement in India in the area thus denoted. *Rohilla* was simply an Indianised name for Afghān which developed in the 11th/17th century, but more specifically referred to the people from Rōh [*q.v.*], the term which in the 11th/17th-century Indian and Indo-Afghān works most often signified the area from Swāt to Badjawr in the north to Sībī and Bhakkar in Sind, and from Ḥasan Abdāl in the east to Kābul and Ḳandahār in the west. In the 12th/18th century Rohilla panegyric *Khulāṣat al-ansāb*, the extent of Rōh comes very close to that of present-day Afghānistān. Wendel wrote about the Rohillas in 1767: "Ils occupent seuls tout le païs au-dela du Gange, depuis le Gomaon jusqu'aux frontières du *soubah* d'Avat [Awadh], environ trois degrés en latitude, du 27° au 30°, et deux ou 2° 30 de longitude, de 94° au 96° et demi, prise du méridien de l'Isle-de-fer. Ce païs s'appelle, a notre tems, de leur nom et demeure *Rohél-Kand*" (Deleury, 156). The *Imperial Gazetteer of India* (1908), 304, says that "the name is often applied to the present Bareilly Division of the United Provinces; but it also denotes a definite historical tract nearly corresponding with that Division *plus* the Rāmpur and the Tarai *parganas* of Nainī Tāl District."

The successive Muslim rulers of Hindūstān have always attached great importance to the possession of this advantageously situated and fertile region. From early Islamic times onwards, the eastern part was known as Katahr, the home of the Katahriya Radjpūts, who, according to local traditions, may have arrived here in the 6th/12th and 8th/14th centuries, occupying first the country between the Rāmgangā and the Ganges, and subsequently spreading east of the former river. In 594/1197 Ḳuṭb al-Dīn Aybak [*q.v.*] conquered Badāʾūn [*q.v.*], probably from the Rāthor ruler Lakshmanapala. Badāʾūn was one of the earliest centres of Muslim culture in North India. Hundreds of Muslim martyrs lie buried there. The *iḳṭāʿ* of Badāʾūn was one of the most important assignments of governors already under the Muʿizzī Sultans of Dihlī and is mentioned frequently in the Indo-Muslim chronicles. Iltutmish [*q.v.*] came to the throne in 607/1211 while he held the *iḳṭāʿ* of Badāʾūn. In 633/1236 its governor Rukn al-Dīn became king of Dihlī. Some of the earliest Muslim architecture in the area dates back to these first governors. Badāʾūn held its position as the Muslim capital of Katahr for over four centuries, during which period numerous uprisings of the Katahriya *mawāsāt* ('brigands') are recorded. The importance of Badāʾūn decreased, and Bareilly became the capital, under Shāh Djahān, while Awrangzīb added the district of Sambhal (Western Rohilkhand) to the territory ruled over by the governor of Katahr.

The great majority of Afghān immigrants who, from the second half of the 11th/17th to the beginning of the 13th/19th century, settled in Katahr/Rohilkhand originated from the area of Peshāwar [*q.v.*] and belonged to the Yūsufzay tribe, mostly of the Mandanr subsection. At the beginning of the 12th/18th century, Mughal rule in the provinces of Sambhal and Badāʾūn was restricted to the vicinity of the larger cities of Bareilly, Murādābād and Badāʾūn, while there were already many Afghāns from the Peshāwar area in the local armies of the Katahr *rādjās*, and Katahr at large was dominated by rival Katahriya

Radjpūt, Djāt and Bandjara *zamīndārs*. Dāwūd Khān (*ca.* 1122-37/1710-25), founder of the Rohilla state, started his career as a petty horsetrader, and for some time was a military entrepreneur and cavalry officer in the service of one of the local *zamīndārs* of Katahr. The succeeding Rohilla leader, ʿAlī Muḥammad Khān (1137-62/1725-49), became increasingly involved in Mughal politics, assumed the title of *Nawwāb* [*q.v.*]—which was soon recognised by the emperor—and set up court at the new capital of Aonla. This happened in the wake of Nādir Shāh's invasion (1152/1739), when new waves of Yūsufzay immigrants from Rōh swelled the Rohilla ranks to around 100,000. In 1155/1742 a large campaign into the Terai and the northern hills was undertaken; Kumaon and Garhwal were reduced to tributary status. At the time of ʿAlī Muḥammad Khān's death, Mughal imperial influence in Rohilkhand had vanished. Ḳāʾim Khān, the Bangash *nawwāb* of the adjacent Afghān principality of Farrukhābād [*q.v.*], as the senior member of the Afghān nobility at the Dihlī court, now claimed the whole of Rohilkhand. He was killed, however, in the ensuing struggle with the Rohillas in 1161/1748-9, near Badāʾūn. Rohilkhand then became a confederacy of small principalities based on a dense and flourishing urban network. Another Rohilla parvenu, Nadjīb al-Dawla (1166-84/1753-70 [*q.v.*]), the main Indian ally of Aḥmad Shāh Durrānī and a supporter of the acting *wazīr* in Dihlī, ʿImād al-Mulk, against the Īrānī faction of the Awadh governor Ṣafdār Djang [*q.v.*], received Rohilkhand, next to Djalālābād [*q.v.* in Suppl.] and Sahāranpūr [*q.v.*] in *djāgīr*, with an imperial *manṣab* of 5,000. Nadjīb al-Dawla, a principal noble at the Dihlī court, became a strong champion of Sunnī revivalism, a patron of Shāh Walī Allah [*q.v.*], and Rohilkhand was turned into the ideological counterpart of Shīʿī Awadh. Having gained control of the entire Upper Miyān Doʾāb, Nadjīb al-Dawla founded a new capital which he called Nadjībābād [*q.v.*] and which was to become an important commercial centre for the control of the hill trade with Garhwal and Tibet and the east-west trade routes to Kashmīr and Peshāwar. Ṣafdār Djang, in the years 1161/1748 and 1165/1752, tried to oust the Afghāns from both Rohilkhand and Farrukhābād with the aid of the Mārāthās [*q.v.*]. But Durrānī involvement in India in the 1160s/1750s and 1170s/1760s greatly boosted the power of the Rohillas. After Nadjīb al-Dawla's death in 1184/1770, again, Durrānī influence faded, while Marāthā incursions became more frequent. As a consequence of Durrānī withdrawal from India and increased British involvement, Rohilkhand was annexed to Awadh in 1188/1774.

In the subsequent period, until the British annexation of the area in 1216/1801, the *djamaʿ* figures for Rohilkhand declined sharply, as did the trading and important horse breeding activity in the area. In the 13th/19th century the Rohillas no longer played a dominant role, but are still encountered as mercenaries, local landlords and urban élites. Wendel, Tieffenthaler, Francklin, Forster, and Hardwick all describe the flourishing conditions of the Rohilla cities and the surrounding countryside in the 12th/18th century. Wendel mentions the Rohillas as the great producers of hemp, marijuana and opium of India. The population of Muslims in Rohilkhand was 28% of the total of near 6.2 million in 1908, about double that found in the Ceded Provinces as a whole.

(A. Wink)

ROHILLAS or Rohilas, the name given to Afghāns of various tribes who came from Rōh [*q.v.*] and settled in the 11th and 12th/17th and 18th centuries in Katahr [*q.v.*] (in the western part of modern Uttar Pradesh) called Rohilkhand [*q.v.*] after them.

Bahādur Khān Rohilla, a noble of Shāh Djahān (1037-68/1628-58) founded Shāhdjahānpur; and his brother Dilīr Khān founded Shāhābād (1664). The area began to attract Afghān immigrants, among them a mercenary Dāwūd Khān (killed in 1132/1720). Dāwūd Khān's adopted son ʿAlī Muḥammad Khān (d. 1160/1748) established himself at Aonla (near Bareilly) as a local chief, and it needed an expedition personally led by the Mughal Emperor Muḥammad Shāh (1157/1745 [*q.v.*]) to dislodge him from there. His son Nadjīb al-Dawla [*q.v.*] competed with the other Rohilla leaders Ḥāfiẓ Raḥmat Khān [*q.v.*] and Dūndī Khān, who took possession of his territory. In 1166/1753 Ḥāfiẓ Raḥmat Khān sided with the minister Ṣafdār Djang [*q.v.*], while Nadjīb al-Dawla aided the Emperor and was awarded a *manṣab* [*q.v.*] of 5,000. In 1169/1756 Nadjīb al-Dawla joined the Afghān ruler Aḥmad Shāh Durrānī or Abdālī [*q.v.*]. In 1170/1757 Nadjīb al-Dawla obtained appointment as Mīr Bakhshī. All the principal Rohilla chiefs allied themselves with Aḥmad Shāh Abdālī and played an important role in his victory over the Marāthās at Pānīpat [*q.v.*] in 1174/1761. As rewards, extensive territories were assigned to them by the victor. But the Rohilla leaders could not consolidate their gains because of mutual jealousies. Nadjīb al-Dawla died in 1186/1772 and was succeeded by Ḍābiṭa Khān. Ḥāfiẓ Raḥmat Khān and his allies among the Rohilla chiefs were utterly overthrown by Shudjāʿ al-Dawla and the English in 1188/1774. Ḍābiṭa Khān (d. 1199/1785), who was not involved in this conflict, maintained his position with difficulty; his son Ghulām Ḳādir became infamous by seizing Dihlī and blinding the Emperor Shāh ʿĀlam (1202/1788). He was killed soon afterwards, and Rohilla rule in the upper Doʾāb also disappeared; the Rāmpur State [*q.v.*] was the only Rohilla principality to survive.

The Rohillas obtained commendation from contemporary observers for their promotion of agriculture. As builders, their contributions were modest, though Nadjīb al-Dawla left a town named after him (Nadjībābād [*q.v.*]), where he built a fort and some other buildings. Nor did the Rohillas leave much of an imprint on art and literature. They do not appear to have promoted their own language, Pashto, in any notable way, and it soon disappeared. In the next century, the Rohillas under Khān Bahādur Khān, a grandson of Ḥāfiẓ Raḥmat Khān, joined the Sepoy Rebellion of 1857-8 and suffered the consequences of its failure.

RŌHTĀS, a fortress in the Jhelum District of the Pandjāb province of Pākistān (lat. 32°55′ N., long. 73°48′ E.), 16 km/10 miles to the northwest of Jhelum town. It was built by Shīr Shāh Sūr [*q.v.*] in 949/1542 after his victory over the Mughal Humāyūn [*q.v.*] and named after Shēr Shāh's other fortress in Bihār, Rōhtāsgaṙh [*q.v.*].

Bibliography: *Imperial gazetteer of India*², xxi, 332. (Ed.)

RŌHTĀSGAṘH, a hill fortress and settlement in the Shāhābād District in the northeast of the state of Bihār in the Indian Union (lat. 24°37′ N., long. 83°55′ E.), some 50 km/30 miles south of the town of Sahsarām [*q.v.*]. There must have been a Hindu fort or settlement there previously, but the present fortifications date from its capture by Shīr Shāh Sūr [*q.v.*] in 946/1539. They were added to by Akbar's general Mān Singh [*q.v.*] when he was appointed governor of Bihār and Bengal. It was surrendered to the British army in Bengal soon after the battle of Baksar (Buxar [*q.v.*]) in 1764 through the efforts of Mīr Ḳāsim ʿAlī's opponent Ghulām Ḥusayn Khān Ṭabāṭabāʾī [*q.vv.*].

RONDA [see RUNDA].

ROSHANIYYA [see RAWSHANIYYA].

AL-**RUʾĀSĪ**, Ibn Akhī Muʿādh al-Harrāʾ, Muḥammad [b. al-Ḥasan] b. Abī Sāra al-Nīlī al-Naḥwī, Abū Djaʾfar, an Arab grammarian, regarded to be the legendary founder of the Kūfan school of grammar.

Very little is known about his life and grammatical views, which are rarely quoted by later grammarians. The legend about al-Ruʾāsī's founding the Kūfan school of grammar seems to have been invented by Thaʿlab [*q.v.*] in his polemics with al-Mubarrad [*q.v.*]. Both grammarians quote the name of al-Ruʾāsī (this name from the largeness of his head) in a clearly polemical vein. Al-Ruʾāsī is said to be quoted by Sībawayhi as al-Kūfī "the Kufan", which is not corroborated by the text of *al-Kitāb*. Al-Ruʾāsī was a *mawlā* of Muḥammad b. Kaʿb al-Ḳuraẓī, and probably a relative (according to Ibn al-Anbārī, his nephew) of the inventor of *taṣrīf* and Ḳurʾān reader Muʿādh al-Harrāʾ, which might be inferred from his name Ibn Akhī Muʿādh al-Harrāʾ. Later grammatical sources (e.g. al-Suyūṭī) confuse al-Ruʾāsī with his relative Muʿādh al-Harrāʾ. In Kūfa, al-Ruʾāsī studied Ḳurʾānic recitation (*ḥurūf*) under al-Aʿmash (d. 147/764); grammar he learned from ʿĪsā b. ʿUmar and Abū ʿAmr b. al-ʿAlāʾ. His disciples in Ḳurʾānic recitation were Khallād b. al-Minḳarī and ʿAlī b. Muḥammad al-Kindī, and in grammar al-Kisāʾī and al-Farrāʾ, both famous grammarians from the Kūfan school. He is said to have visited Baṣra, but was never accepted there as a grammarian. Kūfa seems not to have been his favourite dwelling place; most of the time he spent in the neighbouring al-Nīl (whence his *nisba*), from where his wife originated. Judging from secondary evidence, al-Ruʾāsī lived in the second half of the 2nd/8th century; he was a contemporary of al-Khalīl b. Aḥmad [*q.v.*], with whom he maintained contacts. During the reign of Hārūn al-Rashīd he was said to have been very old (*ʿummira*).

None of his works is extant. (1) His most frequently mentioned work on grammar is the treatise *al-Fayṣal* ("The Decisive"). The 3rd/9th century grammarian Ibn al-Sarrādj claimed to have read it (according to Yāḳūt). His other grammatical works are: (2) *al-Taṣghīr* on the diminutive; (3) *al-Ifrād wa 'l-djamʿ* on the singular and plural. His main interest lay, however, in practical problems of Ḳurʾānic recitation. Quoted are the following works: (4) *Kitāb Maʿānī al-Ḳurʾān*; (5) *al-Ikhtiyārāt fī 'l-ḳirāʾa*; (4) *Kitāb al-Waḳf wa 'l-ibtidāʾ al-kabīr*; (5) *K. al-Waḳf wa 'l-ibtidāʾ al-ṣaghīr*.

Bibliography: Ibn al-Nadīm, *Fihrist*, Cairo, 96-7; Abu 'l-Ṭayyib, *Marātib*, Cairo 1974, 48-9; Yāḳūt, *Muʿdjam al-udabāʾ*, vi, 480-2; Ibn al-Anbārī, *Nuzhat al-alibbāʾ fī ṭabaḳāt al-udabāʾ*, Stockholm 1963, 32-3; Ḳifṭī, *Inbāh al-ruwāt fī anbāʾ al-nuḥāt*, Cairo, iv, 99-103; Suyūṭī, *Bughyat al-wuʿāt*, i, 82-3 (no. 134), 109 (no. 180: another version of his biography); Sezgin, *GAS*, ix, 125-6. (J. Danecki)

AL-**RUʿAYNĪ**, Abu 'l-Ḥasan ʿAlī b. Muḥammad b. ʿAlī b. Muḥammad b. ʿAbd al-Raḥmān b. Hayṣam (al-Ḥādjdj), scholar and *adīb* of Muslim Spain.

He belonged to a family, known as the Banu 'l-Ḥādjdj, established in Baṭsha (near Seville) and was also known as Ibn al-Fakhkhār, "the son of the potter", that being his father's occupation, which he refused to follow. Al-Ruʿaynī was born in Seville in 592/1196 and died in Marrākush in 666/1267, where his funeral was widely attended. He studied the Ḳurʾānic sciences, grammar, *ḥadīth*, *fiḳh* and *adab*. Most of the details of his life we know through his own writing. He travelled widely in al-Andalus and in the Maghrib; he can be traced in Ḳabṭīl, Málaga, Jérez, Cordova, Murcia, Granada, Sabta, Tlemcen and Marrākush. At an early age (year 615/1218), he was *ḳāḍī* in Morón. However, his activities were soon concentrated in his work as *kātib* of the kings of al-Andalus and the Maghrib. By this it may be understood that he served not only the Almohads but probably also the various independent rulers who, taking advantage of the progressive weakness of the Almohad régime, appeared in al-Andalus and North Africa. In this, his career was similar to that of other contemporary *kuttāb* like Abu 'l-Muṭarrif Ibn ʿAmīra [*q.v.*]. Al-Ruʿaynī's exchange of letters with the famous *kātib* Abū ʿAbd Allāh b. al-Djannān has been preserved by al-Marrākushī. Ibn al-Djannān having written a *Risāla ʿayniyya*, al-Ruʿaynī replied with two other letters using the same device, namely, employing words all of which contained the letter *ʿayn*. He also exchanged letters with Ibn ʿAmīra.

Al-Marrākushī has also recorded some of his poems, as well as the names of his teachers from al-Andalus and abroad, this information being more complete that the list found in al-Ruʿaynī's own *barnāmadj*. This most important work, entitled *Kitāb al-Īrād li-nubdhat al-mustafād min al-riwāya wa 'l-isnād bi-liḳāʾ ḥamalat al-ʿilm fī 'l-bilād ʿalā ṭarīḳ al-iḳtiṣār wa 'l-iḳtiṣād*, is preserved in two mss. (Escorial, 1729 and private collection of Khayr al-Dīn al-Ziriklī). I. Shabbūḥ presented the text in an article which he published in 1959 and later edited in a book (Damascus 1962). The *barnāmadj* is organised according to the names of al-Ruʿaynī's teachers and according to their teachings. Its methodology and value have been assessed by al-Ahwānī and Fórneas in their seminal work on Andalusian bibliographical literature. Al-Ruʿaynī's *barnāmadj*, contrary to Ibn Khayr's *Fahrasa*, does not offer complete *riwāyāt* of the works mentioned and therefore is not of great use for the study of their introduction in al-Andalus. It is, however, of great value for the knowledge of which books were being written and transmitted in his lifetime and in those of his teachers. It contains abundant information on the teaching and transmission of the Ḳurʾānic sciences

(especially *ḳirāʾāt*), *adab* works (like al-Ḥarīrī's *Maḳāmāt*) and poetry. Among the data which he offers, it is worth noting the transmission of the *Shiʿr fi 'l-ḥudjdja ʿalā ithbāt al-ḳadar* by al-Murādī, of the *Maḳāmiʿ al-ṣulbān* by al-Khazradjī, of other *barāmidj* (he quotes many *riwāyāt* by Ibn ʿUbayd Allāh al-Ḥadjarī, d. 591/1194, through Abu 'l-ʿAbbās al-ʿAzafī), of al-Suhrawardī's *K. ʿAwārif al-maʿārif* and ʿIyāḍ's *K. al-Shifāʾ*. He has recorded valuable information about his teachers and contemporaries, like Ibn Hishām al-Azdī (the author of *Mufīd li 'l-ḥukkām*), Ibn Kharūf al-Naḥwī (d. 609/1212), Ibn Zarḳūn (d. 622/1225), Ibn Khalfūn (d. 636/1238), Abu 'l-Rabīʿ al-Kalāʿī, Abu 'l-ʿAbbās al-ʿAzafī, Abū ʿĀmir b. Ubbā (author of several theological works) and Yaḥyā b. Ibrāhīm al-Khudhūdj al-Mursī, author of a work on chess. Also noteworthy is his wide use of the *idjāza*. Al-Ruʿaynī's leaning towards *adab* and poetry is shown in his *Djanā 'l-azāhir al-naḍīra wa-sanā 'l-zawāhir al-munīra fī ṣilat "al-Maṭmaḥ" wa 'l-"Dhakhīra" mimmā walladathu al-khawāṭir min al-maḥāsin fī hādhihi al-mudda al-akhīra*, a continuation of the works by Ibn Khāḳān and Ibn Bassām [*q.v.*]. He also wrote a work on *ḥadīth* entitled *Iḳtifāʾ al-sanan fī intiḳāʾ arbaʿīn min al-sunan*, and another on Ḳurʾānic readings, *Sharḥ al-Kāfī li-bn Shurayḥ*.

(MARIBEL FIERRO)

RUBʿ (A.), literally, "quarter", in Islamic astronomical terminology, quadrant. The kind of large mural quadrant (*libna*) with a graduated altitude scale described by Ptolemy (see BAṬLAMIYŪS] was used by a series of Muslim astronomers over the centuries. Descriptions exist of *i.a.* those used in the Damascus observations in the early 3rd/9th century (*ca.* 5 m in radius), by the astronomer Ḥāmid b. Khiḍr al-Khudjandī at Rayy in the late 4th/10th century (called *al-suds al-Fakhrī*, radius *ca.* 20 m), and in the early 9th/15th century observatory of Ulugh Beg [*q.v.*] at Samarḳand (radius *ca.* 40 m!). The last-mentioned, actually a sextant rather than a quadrant, has been excavated and partially restored; those quadrants still to be seen in some of the stone observatories in India (early 18th century) are in the same tradition. With such instruments, astronomers could measure the meridian altitudes of the sun and stars, which they could then use to determine improved values of the local latitude, new values of the obliquity of the ecliptic [see MAYL and MINṬAḲA], and to check or improve stellar coordinates [see NUDJŪM].

In the 3rd/9th century, Muslim astronomers developed three main varieties of smaller quadrants (*rubʿ*) for timekeeping [see MĪḲĀT]. First, the horary quadrant (*rubʿ al-sāʿāt*), marked with a radial solar scale and curves for the hours. With this one could simply hold the quadrant vertically and align the radial edge fitted with sights towards the sun; then the bead set at the appropriate solar longitude on a thread attached at the centre of the instrument would hang over the hour curves, and from its position relative to these one could read the time (see Pls. XXXII, XXXIII). Second, the trigonometric or sine quadrant, marked with a set of parallel horizontal lines (originally for each 15° on the outer scale, representing hour lines). With this one could calculate the time of day T in seasonal hours [see SĀʿA] from the observed solar altitude h and the meridian solar altitude H—the underlying formula was approximate, equivalent to the following in modern notation:

$$T = \frac{1}{15} \text{ arc sin } \left(\frac{\sin h}{\sin H} \right)$$

(Note that the boundary conditions when the sun is on the horizon ($T = 0$ when $h = 0$) and on the meridian ($T = 6$ when $h = H$) are satisfied; the formula is in fact accurate at the equinoxes). This approximate formula has the advantages that it is much simpler than the accurate formula, that it works for any terrestrial latitude (within limits), and that it yields good results for most practical purposes (if only for lower latitudes, and certainly not for latitudes in Northern Europe). From this quadrant there developed in later centuries the sine quadrant (*rubʿ mudjayyab*) with markings resembling modern graph-paper; with this any problem of mediaeval trigonometry could be solved (see Pl. XXXV). Third, the universal horary quadrant (*rubʿ āfāḳī*), designed to solve the same trigonometric formula as the second variety but quite different in appearance. The hour-curves are now a set of circular arcs radiating from the centre to each 15° on the outer scale (with a semicircle representing the sixth hour, that is, midday). Such markings were used by Muslim and European astronomers for over a millennium, mainly on the backs of astrolabes [see ASṬURLĀB] and sometimes in combination, as shown in Pl. XXXIII, and it can be assumed that few in later centuries (especially the Europeans) had any idea of the underlying formula. This quadrant, then, is universal (*āfāḳī*), and one enters simply with the solar meridian altitude, but it can be made specific by having a cursor marked with a solar or a calendrical scale on the outer rim. A 3rd/9th-century treatise from Baghdād describes such an instrument with either a fixed cursor, serving a single latitude, or a movable cursor, enabling the user to enter with the solar longitude. This instrument was known in mediaeval Europe as *quadrans vetus* (see below).

Few early Islamic quadrants survive. But the same markings—for performing trigonometric calculations or for finding the hours—were added to the backs of astrolabes, and it is there that we can trace their development in instrumentation.

In the 5th/11th or 6th/12th century, probably in Egypt, an astronomer whose name is unknown to us hit on the clever idea of using one-half of the markings on an astrolabe plate as a quadrant, replacing the rete

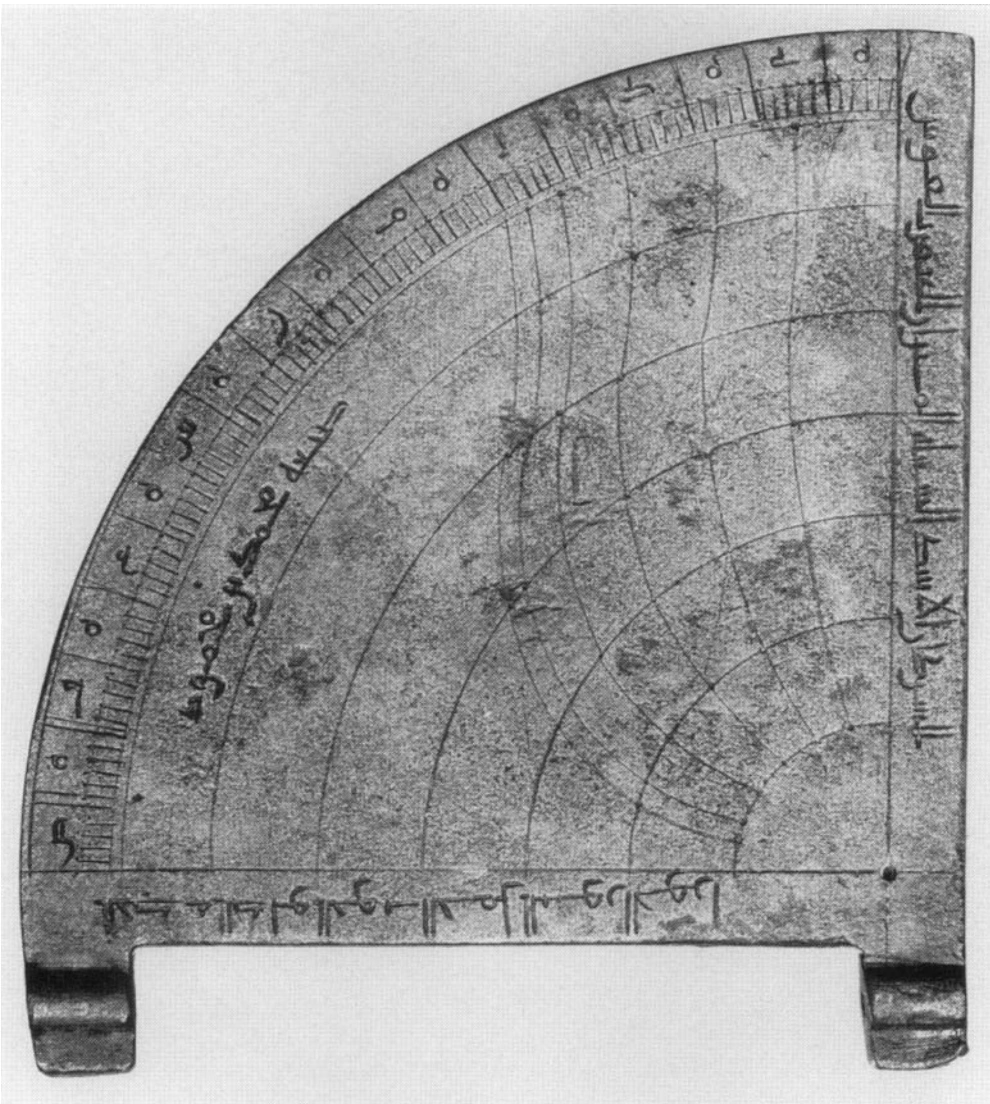
with a thread with movable bead attached at the centre (*rubᶜ al-muḳanṭarāt*). The earliest surviving examples of this kind of astrolabic quadrant are by the early-8th/14th-century Damascus astronomer Muḥammad b. Aḥmad al-Mizzī. Such quadrants, with trigonometric markings on the back, were very popular in the Ottoman Empire and generally replaced the astrolabe in those regions. Dozens of late examples survive (see Pls. XXXIV, XXXV).

The writings of al-Marrākushī (*fl.* Cairo, *ca.* 680/1280 [*q.v.*]) and Ibn al-Sarrādj (*fl.* Aleppo, *ca.* 725/1325, unpublished, extant in ms. Dublin Chester Beatty 102, 2) illustrate the variety of other quadrants developed by Muslim astronomers. A minority of Ottoman quadrants are of unusual kinds described in these earlier sources. The numerous types of European quadrants are with few exceptions based on Islamic precursors. An exception appears to be the *quadrans novus* of Prophatius Judaeus (Provence, *ca.* 1290), an unhappy combination of the Islamic *quadrans vetus* (approximate) and astrolabic horizons (accurate). Meanwhile, Muslim astronomers had developed the more satisfactory astrolabic quadrant, which was unknown in Europe until a French instrument-maker hit on the idea about 1600.

Bibliography: (An asterisk indicates that the work in question is repr. in F. Sezgin *et al.*, eds., *Arabische Instrumente in orientalistischen Studien*, 6 vols., Frankfurt, Institut für Geschichte der Arabisch-Islamischen Wissenschaften, 1991.) On mural quadrants in Islamic observatories, see A. Sayılı, *The observatory in Islam*, Ankara 1960. For two examples, see H.J. Seeman, *Die Instrumente der Sternwarte zu Marâgha* ..., in *SBPMSE*, lx (1928), 15-126*, and art. *Ulugh Beg* in *The Dictionary of Scientific Biography*, New York 1960-80, xiii, 535-537. (The accounts of observational instruments in the Islamic sources, mainly published, let alone the archaeological findings, cry out for an overview to supplement Sayılı's pioneering work).

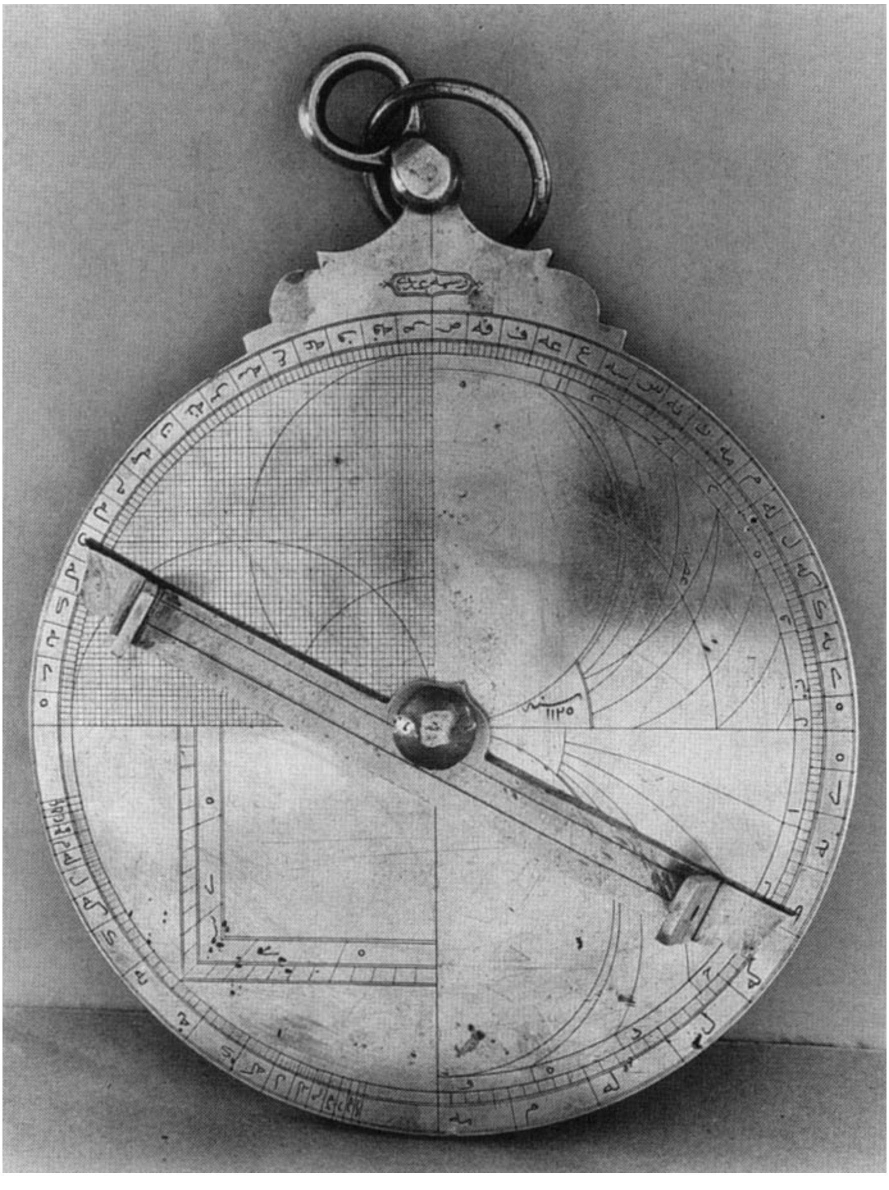
The standard work on smaller quadrants, based solely on textual sources, is P. Schmalzl, *Zur Geschichte des Quadranten bei den Arabern*, Munich 1929*, now very much outdated; see also H. Michel, *Traité de l'astrolabe*, Paris 1947, on the use of some of these. Useful studies of some quadrants by al-Mizzī and various late Ottoman instruments and texts are: W.H. Morley, *Description of an Arabic Quadrant*, in *JRAS*, xvii (1860), 322-30*; B. Dorn, *Drei in der Kaiserlichen Öffentlichen Bibliothek zu St. Petersburg befindliche astronomische Instrumente mit arabischen Inschriften*, in *Mémoires de l'Académie Impériale des Sciences de St. Pétersbourg*, 7ᵉ série, ix/1 (1865), 150 pp.*; J. Würschmidt, *Die Schriften Gedosis über die Höhenparallelen und über die Sinustafel (Zum Gebrauch des Quadranten im Islam)*, in *SBPMSE* (1928), 127-54*; and idem, *Ein türkisch-arabisches Quadrant-Astrolab*, in *Archiv für Geschichte der Naturwissenschaften und der Technik*, viii (1918), 167-81*. See also G. Fehérvári, *An eighth/fourteenth-century quadrant of the astrolabist al-Mizzī*, in *BSOAS*, xxxvi (1973), 115-17 and 2 plates; L. Janin and R. Rohr, *Deux astrolabes-quadrants turcs*, in *Centaurus*, xix (1975), 108-24; J. Mouliérac (ed.), *Syrie, mémoire et civilisation*, Paris, Institut du Monde Arabe 1993 (contains descriptions of two Syrian quadrants, including the one illustrated in Pl. XXXIII).

More recent studies include various articles reprinted in D.A. King, *Islamic astronomical instruments*, London, Variorum Reprints 1987, as well general remarks in idem, *Strumentazione astronomica nel mondo medievale islamico*, in G.L'E. Turner (ed.), *Gli strumenti*, Turin 1991, 154-89 and 581-5. Some of the earliest texts on the horary quadrant with cursor and the sine quadrant are discussed in idem, *A survey of the scientific manuscripts in the Egyptian National Library*, Winona Lake, Ind. 1986, 53 (no. B105), and idem, *al-Khwārizmī and new trends in mathematical astronomy in the ninth century*, in *Occasional Papers on the Near East* (Hagop Kevorkian Center for Near Eastern Studies, New York University), 2 (1983), esp. 28-31. On the universal horary quadrant, see especially J.D. North, *Astrolabes and the hour-line ritual*, and R.P. Lorch, *A note on the horary quadrant*, in *Journal for the History of Arabic Science*, v (1981), 113-14, and 115-120, and D.A. King (with D. Girke), *An approximate formula for astronomical timekeeping and its history over a millennium*, Institut für Geschichte der Naturwissenschaften, Frankfurt University, *Preprints Series*, 1 (1988).



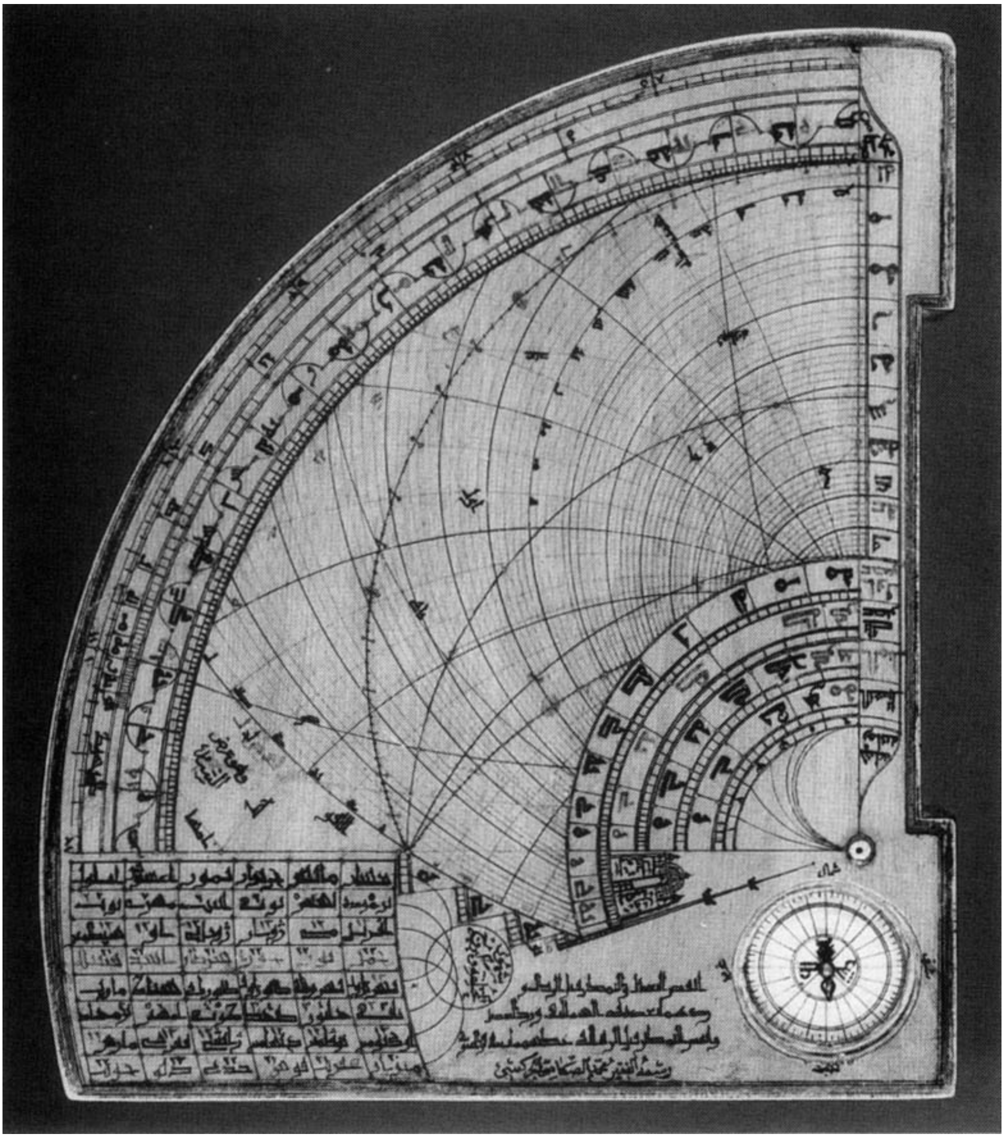
(D.A. King)

AL-**RUBᶜ** AL-**KHĀLĪ** (A.) (Empty Quarter), a vast and inhospitable sand-sea occupying much of the south and south-east of the Arabian Peninsula. It lies approximately between 45° E. and 57° E. and 17° N. and 23° N., encompassing some 200,000 sq. miles, consisting of tracts of aeolian sands with immense dunes rising over up to 60 m, areas of gravel and limestone known as *shukka* (pl. shiḳāḳ), and in the east, towards al-Liwāʾ (al-Djiwāʾ), *sabkha* [*q.v.*] at Umm al-Samīm and al-Kidan. It lies largely in Saudi Arabia, with its northwest limit roughly marked by the line of the Djabal Ṭuwayḳ escarpment. In the north and northeast the sands merge with the desert of Djafūra near the Djabrīn (or Yabrīn) oasis, and with the sands of al-Dahnāʾ [*q.v.*] in eastern Arabia. Al-Dahnāʾ in turn runs into the Nufūd [*q.v.*] sand sea in the north of Arabia. In the southwest and the south in Yemen, the Rubᶜ al-Khālī sands approach Mārib [*q.v.*] and Ḥaḍramawt [*q.v.*] respectively and in the east, they reach the Liwāʾ oasis in the United Arab Emirates and to the hinterland of ᶜUmān.

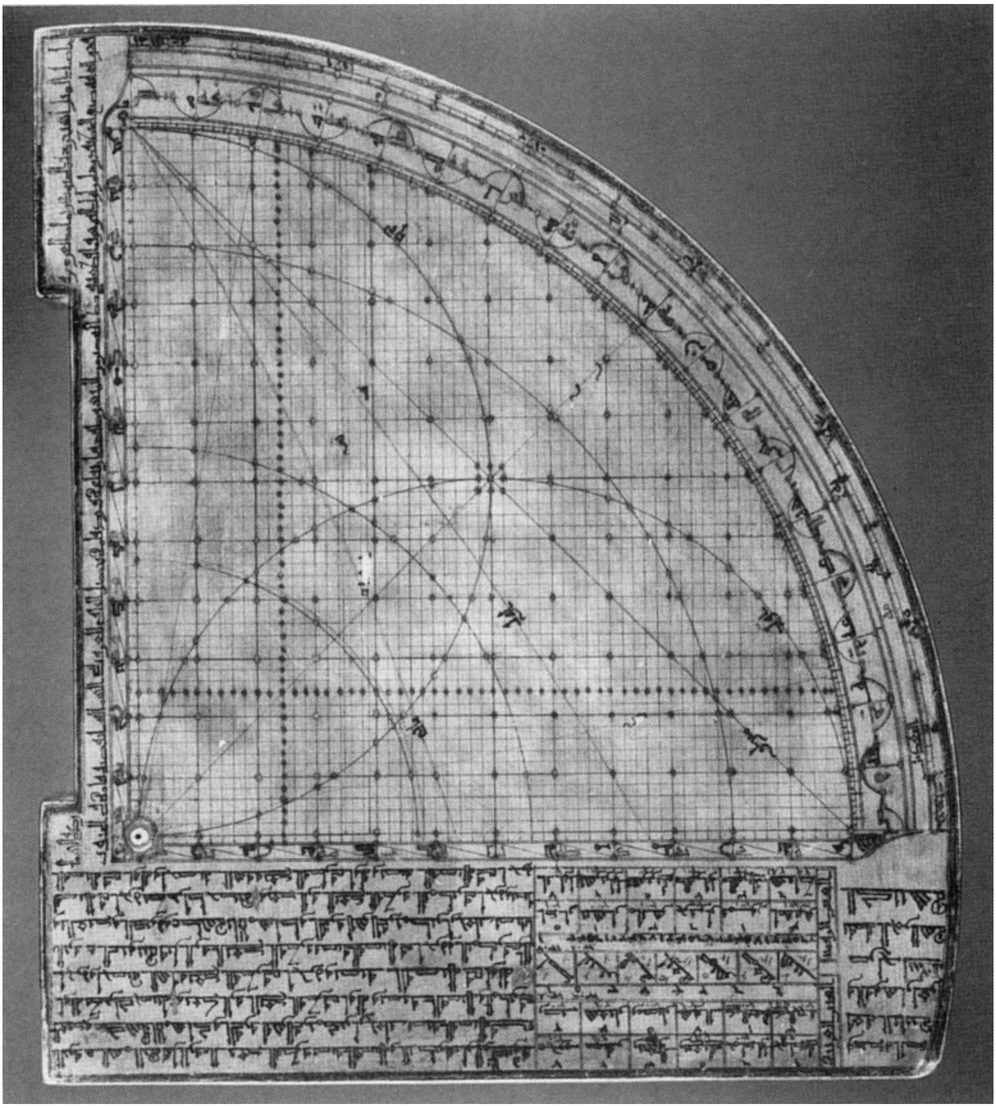


The aridity that characterises the desert today differs markedly from the environment of earlier times. In the late Miocene (6-7 million years BP [before present]), the climate was wetter with rivers flowing from the Rubᶜ al-Khālī into what is now the Arabian/Persian Gulf. Late Miocene elephant bones have been found in the UAE, while crocodile and turtle fossils indicate the presence of an ancient river system flowing from the Rubᶜ al-Khālī. Fresh-water lakes existed in the Rubᶜ al-Khālī between 9,700 BP and 6,390 BP, but desiccation followed thereafter, producing the harsh environment that constitutes the Rubᶜ al-Khālī today. In the east, the Wādī Idīma, Wādī Habawna and Wādī Nadjrān drain run-off from the ᶜAsīr highlands into the western Rubᶜ al-Khālī, where the waters run out in the sands. The broad bed of Sabkha Maṭṭī in western Abū Dhabī marks the course of a former river system that rose in the interior, with two major periods of flow in the period 80,000-70,000 BP and again 50,000 to 25,000 BP, and a lesser flow in the period 10,000 to 4,500 BP.

Some of the Rubᶜ al-Khālī sands may have blown in from the bed of the Arabian Gulf in the period before it was flooded as a result of sea level rises between about 18,000 BP and 8,000 BP, after the last Ice Age. A date of 23,000-17,000 BP has been given to the formation of sand dunes in the Liwāʾ oasis on the eastern side of the Rubᶜ al-Khālī.



The term Rubᶜ al-Khālī has attached itself to the entire sand-sea among Arabs and non-Arabs alike, although uncertainty exists over the origins of the name (Sir Percy Cox and D.G. Hogarth in R.E.



A 4th-/10th-century horary quadrant from Nīs͟hāpūr, signed by Muḥammad b. Maḥmūd. Courtesy of the Metropolitan Museum of Art, New York, N.Y. (inv. no. 36.20.54, radius 65 mm), Excavations of the Museum, 1935, purchase, Rogers Fund, 1936.

A trigonometric quadrant (upper left), horary quadrant for a specific latitude, in this case 41° serving Istanbul (upper right) and a universal horary quadrant (lower right) on an astrolabe dated 1125 AH [= 1713-14] signed by ᶜAbdī. Courtesy of the Museum of the History of Science, Oxford (inv. no. 57-84/171A, diameter 131 mm).

The trigonometrical markings on the back of the same instrument include all of the special lines and curves devised by Muslim astronomers over the centuries for solving specific problems of timekeeping.

Cheesman, *The deserts of Jafura and Jabrin*, in *GJ*, lxv [Jan.-June 1925], 139). According to Cox, Bertram Thomas, Wilfred Thesiger and H.R.P. Dickson, the name Rubᶜ al-Khālī was unknown to the indigenous people living around the desert perimeter and the only general term known to most modern travellers to describe the desert was "al-Ramal" or "al-Rimāl" (Thomas, 180; Thesiger, 37), although Cox also encountered the term Nufūd as well. Within the desert, specific tracts are identified by particular names, such as al-Kaᶜāmiyyāt, Shuwaykla, Hawaya, Ramlat al-Kuthayyib, Shakkat al-Kharīṭa and ᶜUrūq al-Awārik.

By contrast, Philby (127-32) argued that the term Rubᶜ al-Khālī was indeed known to the people with whom he travelled, including tribesmen from the sands. The terms al-Rimāl or al-Ramla were used to describe the areas occupied by pastoralists. Areas of briny water were known as Khirān; and areas of better water known as Sanam. Philby regarded the waterless district specifically as the Rubᶜ al-Khālī, a term which he also equates with Rubᶜ al-Kharab. More recently, D.P. Cole has noted that the Āl Murra used the term for the region as a whole, with lesser subdivisions given their own names.

The remoteness of the arduous terrain ensured that neither the Classical nor the Arab geographers had much detail to offer on the sands. Ptolemy gives the names of places, wells and mountains, but his knowledge of the interior is very limited. In the Arabic sources, part of the southern desert is termed al-Aḥkāf, although its application varies. Al-Hamdānī, 87; see also 127, 216) uses al-Aḥkāf for a valley between Ḥaḍramawt and Mahra. Al-Bakrī (76) associates al-Aḥkāf with the region of Shiḥr [*q.v.*] in Ḥaḍramawt. Yāḳūt (ii, 78), on the authority of al-Aṣmaᶜī, describes al-Aḥkāf as a district of Arabia, placing it between Yemen and Sabā in the southwest and al-Yamāma, al-Shiḥr and ᶜUmān in the southeast. Elsewhere, Yāḳūt associates al-Aḥkāf with the pre-Islamic tribe of ᶜĀd, iv, 1027, iii, 634), identifying it as a sandy district between ᶜUmān, al-Shiḥr and Ḥaḍramawt. J. Halèvy in 1870 refers to the desert east of Nadjrān as al-Aḥkāf, and von Wrede in 1843 (3, 22) marks it as the desert district immediately north of the Ḥaḍramawt (see also Hogarth, 333 ff.). Philby, however, declared that al-Aḥkāf was a literary name for the sands and was not used by the local people he encountered.

Another place mentioned by the sources in the Rubᶜ al-Khālī area is Wabar (or Ubar: see Thomas, 161) which Yāḳūt (iv, 896) locates between Yabrīn and Yemen. Wabar is said to have been cursed by Allāh when its people rejected the prophet Hūd, and the settlement was consumed by fire for the sins of its king, ᶜĀd b. Kinad. Philby (168 ff.) visited a place pointed out to him as Wabar and known to his guides as al-Ḥadīda, but it proved to be a meteorite crater rather than a settlement. The iron-rich meteor is now in King Suᶜūd University at al-Riyāḍ. Wabar has recently been associated with Shisur in Ẓufār by R. Fiennes and J. Zarins, but this view is not universally accepted.

A.R. al-Anṣāry has excavated a major archaeological site at Ḳaryat al-Fāw [see AL-FĀW], located on the southwestern edge of the Rubᶜ al-Khālī at the point where there is a break in the Djabal Ṭuwayḳ escarpment. It was probably an important town before its decline in the early 4th c. A.D., with paintings and sculpture reflecting its diverse commercial and cultural contacts with Yemen, Egypt and elsewhere. To date, it is one of the better candidates to be related to Bedouin legends of ancient towns in the Rubᶜ al-Khālī overwhelmed before Islam by sand or divine punishment.

The accounts by Thomas, Philby and Thesiger show that in the heart of the Rubᶜ al-Khālī, no tribes permanently inhabited the sands but rather, they lived a nomadic existence on its edges, occasionally entering the inner areas in pursuit of grazing or the oryx that formerly inhabited the remoter sands. Major tribes around the Rubᶜ al-Khālī include Āl Murra in the northeast, Banū Yās, Manāṣir, Rāshid and ᶜAwāmir in the east, Rāshid, ᶜAwāmir, Saᶜar and Bayt Kathīr in the south, and Yām in the west. The history of these camel-rearing tribes was formerly one of raiding and feud, with the seizure of camels as a principal feature of their warfare. The inner areas of the Rubᶜ al-Khālī provided a relatively secure retreat after raids on the desert margins.

The obstacle to travel formed by the Rubᶜ al-Khālī suggests to D.T. Potts that ancient routes avoided the sands, and he suggests that travellers followed easier routes between Yemen and Nadjd via al-Aflādj or from Nadjd through to Buraymī and ᶜUmān. Nevertheless, there are persistent indications that routes with seasonal pools exist between the southeastern coast and Yemen which are known to the tribes and are still used today.

The Rubᶜ al-Khālī was the last part of the Peninsula to be explored, and ignorance of its vast inner areas endured until well into the 20th century. Thomas (1930-1), Philby (1932) and Thesiger (1946-7, 1947-8) all conducted major journeys of exploration in the sands, and in modern times, oil exploration and development have made it relatively more accessible. Today, a number of international boundaries in the Rubᶜ al-Khālī are disputed and the discovery of oil has encouraged conflicting claims, several of which remain unresolved.

(G.R.D. KING)

RUʾBA B. AL-ᶜ**ADJDJĀDJ** AL-TAMĪMĪ, Abu 'l-Djaḥḥāf (Abū Muḥammad also occurs), an Arab poet of the Umayyad and early ᶜAbbāsid era (d. 145/762), the greatest exponent of the *radjaz* [*q.v.*] *ḳaṣīda*. The name Ruʾba, by which he was called after his grandfather, is attested seven times, and its diminutive Ruʾayba eight times, in Ibn al-Kalbī's genealogy (see Caskel-Strenziok ii, 489b). There is no clear cluster of attestations in Eastern Arabia, which makes Krenkow's contention (see *EI*[1], s.n.) that the name is the Persian *rōbāh* "fox" less likely. Arabic philologists suggest several explanations of this peculiar name (Ibn Durayd, *al-Ishtiḳāḳ*, 260). Al-Āmidī (*al-Muʾtalif*, 175-7) mentions three poets by that name, but only Ruʾba b. al-ᶜAdjdjādj of the tribe of the Banū Mālik b. Saᶜd b. Zayd Manāt b. Tamīm became celebrated as a poet of *radjaz* verses, in which genre he surpassed both his father [see AL-ᶜADJDJĀDJ] and the latter's rival Abu 'l-Nadjm al-ᶜIdjlī [*q.v.*]. He and his father are sometimes jointly called al-ᶜAdjdjādjān[i] (dual ᶜ*ala 'l-taghlīb*).

Of his life very little is known. His birth date is unknown, but since he is said to have died at an advanced age, 65/685 is a likely guess. Like his father he spent most of his early life in the desert (*bādiya*). In his middle years he seems to have travelled widely in the Eastern parts of the empire (Khurāsān, Kirmān) as a panegyrist, but possibly also as a soldier and a merchant (he mentions the flourishing silk trade [*bay*ᶜ *al-saraḳ*, no. 12, l. 32] in Kirmān, though he himself is poverty-stricken). For the rest of his life he seems to have settled down in Basra (*min a*ᶜ*rāb al-Baṣra*), where he became *inter alia* an important linguistic informant for the nascent Baṣran circle of philologists.

Exact dates are hard to come by. In 97/716 he made the pilgrimage in the entourage of the caliph Sulaymān b. ᶜAbd al-Malik, which also included the poets Djarīr and al-Farazdaḳ (*Aghānī*, ed. Dār al-Kutub, xiv, 85). This may indicate the true beginning of his career as a panegyrist, as Blachère suggests (*HLA*, 526). His poem (no. 54) in praise of the general Maslama b. ᶜAbd al-Malik (d. 121/738 [*q.v.*]) alludes to the latter's victory over Yazīd b. al-Muhallab whom he killed in 102/720 [see MUHALLABIDS]; it clearly shows Ruʾba's ᶜ*aṣabiyya* against the Azd, though not necessarily against the Southerners in general (he praises, e.g., the Kalbī al-Ḥakam, see below). Other addressees of his poems include:

(1) Umayyad officials (*inter alios*):
Maslama b. ᶜAbd al-Malik (see above, also no. 10); Bilāl b. Abī Burda (*inter alia ḳāḍī* in Baṣra before 118, d. 126/744; nos. 6, 30, 42, and 57); ᶜAbd al-Malik b. Ḳays al-Dhiʾbī (governor of Sind *c.* 105/723; no. 26); al-Ḥakam b. ᶜAwāna al-Kalbī (governor of Sind under Hishām, *Diiamben*, no. 13); Khālid b. ᶜAbd Allāh al-Ḳasrī (governor of Iraq, d. 126/743-4 [*q.v.*]; no. 18); Abān b. al-Walīd al-Badjalī (in 127/745 appointed chief of the guard by the caliph Marwān; nos. 15, 23, and 25); Naṣr b. Sayyār (last Umayyad governor of Khurāsān, d. 131/748 [*q.v.*]; nos. 19, 50); and al-Ḳāsim b. Muḥammad b. al-Ḳāsim al-Thaḳafī (Ahlwardt, *Dīwān*, lii, and Krenkow in *EI*[1] call him the conqueror of Sind, but that would be Muḥammad b. al-Ḳāsim [*q.v.*]; Ruʾba addresses him as Ḳāsim and describes himself as old and bald, which he would not have been at the time of Muḥammad's death in 96/715, so al-Ḳāsim is possibly a son of the conqueror of Sind. Cf., however, al-Ṭabarī ii, 1256, where under the year 94 al-Ḳāsim b. Muḥammad is mentioned as the conqueror of *arḍ al-Hind*! No. 22).

(2) Umayyad caliphs:
Hishām (105-25/724-43; no. 2, where the introductory phrase wrongly states Maslama as the addressee, and *Diiamben*, no. 9); al-Walīd II b. Yazīd (125-6/743-4; no. 39); and Marwān II b. Muḥammad (127-32/744-50; no. 41).

As he had in his way shown his attachment to the Umayyads, it is no matter for surprise that Ruʾba did not feel his life safe when he was summoned before Abū Muslim. Of the audience, we only know that Abū Muslim showed himself a connoisseur of Arabic. Two poems in praise of Abū Muslim are to be found in Geyer's *Diiamben*, nos. 4 and 6. Several other poems in praise of members of the new dynasty have survived; one of 400 lines (no. 55) is dedicated to Abū 'l-ᶜAbbās al-Saffāḥ and two to his uncle Sulaymān b. ᶜAlī (nos. 45 and 47), whom he appointed governor of Baṣra. The latest poems of Ruʾba are in praise of al-Manṣūr, who succeeded his brother as caliph in 136/754 (no. 14 and *Diiamben*, no. 8). He was then an old man and is said to have died in 145/762.

All Ruʾba's poems are in the *radjaz mashṭūr* metre; the few verses in other metres ascribed to him (nos. 104-8 of the *abyāt mufrada* in Ahlwardt's ed. of the *Dīwān*) are by other poets and wrongly attributed to him, with the possible exception of nos. 107 and 108, for which we have Abū ᶜUbayda's testimony that they constitute Ruʾba's only non-*radjaz* output (see Ullmann, *Untersuchungen*, 31n.). He had learned the art from his father, whom he even accuses of taking credit for his poems when Ruʾba began to write, and we actually have a poem by Ruʾba in which he asserts himself against his father (no. 37). From his father he also inherited a fondness for unusual words and his poems are among the most difficult in the Arabic language, as they are full of words that are never or only very rarely found in other poets (cf. Ahlwardt's lexical-statistical proof of this phenomenon in *Dīwān*, xcviii-cxii, including both al-ᶜAdjdjādj and Ruʾba). One even suspects that, for the sake of effect, the poet coined new words which did not previously exist. He certainly feels free to derive new words from existing roots and to bend roots and words to his liking. These are general features of *radjaz* (see Ullmann, *Untersuchungen*, chs. 3-8), but Ruʾba may be particularly audacious in this violent handling of the language. He is also fonder than any other poet of accumulating a number of forms from the same verbal root in the same line (*tadjnīs ishtiḳāḳ* "figura etymologica"). The resulting style is rough, harsh, but forceful, at times willfully obscure, pronouncedly Bedouin-like, a *lingua rustica* (Ahlwardt, *Dīwān*, xii), which often borders on the grotesque and ironic and seems to acquire the character of a parody of the ancient *ḳaṣīda* (Ullmann, *Untersuchungen*, 37). However, Blachère has pointed out that Ruʾba is quite capable of using simple language when the rhetorical exigencies of the situation require it (e.g. in no. 50, addressed to Naṣr b. Sayyār and warning him of Abū Muslim); it is Bedouin themes like the haunting desert descriptions that attract most of the *gharīb* vocabulary (*HLA*, 529).

As a rule, Ruʾba's poems are remarkably long. The tripartite structure *nasīb-raḥīl-madīḥ* is often adhered to, but more complex structures are not uncommon, as Nallino (*Littérature*, 158) and Blachère (*HLA*, 528) have shown. One of the more interesting *fakhr* themes is pride in his own poetry (see the collection of *shawāhid* in Ahlwardt, *Dīwān*, lix-lxi). The *Dīwān* con-

tains several monothematic pieces, in particular three desert descriptions (nos. 1, 34, and 40), which Ahlwardt considers to be incomplete poems. While this may be true, it should be noted that no. 40 (starting *wa-ḳātimi ʾl-aʿmāḳi khāwi ʾl-mukhtarak*), which is the most famous of Ruʾba's poems, is unabashedly called a *ḳaṣīda* in the later literature and the quoted line its beginning.

Some important intellectual developments reflected in Ruʾba's poetry are the following: (1) In a poem in praise of Hishām (no. 2, l. 45), he speaks against the *ḳadariyyūn*, apparently in the less usual sense of people believing in predestination (this attestation to be added to the ones collected in ḳadariyya, vol. IV, 368b). (2) In no. 22, l. 139, the term *naḥwī* "language expert" is attested, in the context of a poetic *fakhr* asserting that the poet's command of the language is superior. (3) In several places, astrological notions are alluded to (Nallino, *Littérature*, 159). (4) Koranic themes and allusions are not infrequent. His eerie depiction of Jonah in the belly of the fish in the depth of the ocean is a most impressive example (no. 10, ll. 66-74). It is the final image in a poem of giving thanks to God for being delivered out of the hands of the Khāridjites; Jonah (referred to as *ṣāḥib al-ḥūt*, not *dhū ʾl-nūn*) is a model from the past for God's deliverance out of misery.

There are many reports that all the important early philologists of Baṣra and, less often, of Kūfa were in contact with him to increase their knowledge of the *lugha*, and this to such an extent that he became tired of them. He seems to have been an important link between the oral tradition of poetry and the nascent scholarship of the philologists. Due to the high percentage of *gharīb* in his poetry, he remained a favourite of the lexicographers; in the *LʿA* lines quoted from his poetry run into the thousands.

Ruʾba is also known as a *ḥadīth* transmitter (see, in particular, Ibn ʿAsākir, *Taʾrīkh*, vi, 284-92, and Ibn Ḥadjar, *Tahdhīb*, iii, 290-1).

He had two sons, ʿAbd Allāh, to whom two poems of remarkable tenderness are dedicated (nos. 20 and 56), and ʿUḳba who also wrote poems in the same metre as his father (*GAS*, ii, 369), though nothing survives.

Ruʾba's poems were collected by several scholars, among them his younger contemporaries Abū ʿAmr b. al-ʿAlāʾ, Abū ʿAmr al-Shaybānī and Ibn al-Aʿrābī [*q.vv.*] and the later al-Sukkarī [*q.v.*]. For details on the recensions and the mss. see *GAS*, ii, 368-9. On the basis of the Berlin ms. Landberg 826 (Ahlwardt 8155), a modern copy of the ms. Cairo *adab* 516, the *dīwān* has been edited by W. Ahlwardt (Berlin 1903, repr. Baghdād n.d.), unfortunately without the commentary by Muḥammad b. Ḥabīb (d. 245/860 [*q.v.*]) which is absolutely necessary for an understanding of the poems, and in the alphabetical order of the rhymes which makes it difficult to recognise the original arrangement of the collection. As this edition was incomplete, Geyer in 1908 published, in a collection of several *radjaz* poets entitled *Altarabische Diiamben*, twelve further poems with the commentary, basing himself on the different recension contained in the ms. Cairo *adab* 519. Ahlwardt had added to his edition a collection of verses which he had found in various works quoted as by Ruʾba. This collection was extended by Geyer in his *Beiträge zum Dīwān des Ruʾbah*, in *S.B. Ak. Wien*, clxiii (1910). Even then there remain lines attributed to Ruʾba which have escaped both editors. Confusion seems to have begun at quite an early date between the poems of Ruʾba and those of his father al-ʿAdjdjādj. Ahlwardt also published a complete German translation of the whole *Dīwān* in metre. The value of this translation is considered small by Krenkow in *EI*[1] for being only a paraphrase that does not help with the difficulties of the Arabic text. Ullmann gives a fairer and more positive evaluation (*Untersuchungen*, 30n.). The new edition by ʿAbd al-Ḥafīẓ al-Saṭlī, announced in *Akhbār al-turāth*, iii (1982), 15, has so far not yet appeared.

RUBĀʿĪ (pl. **RUBĀʿIYYĀT**), a verse form.

1. In Persian.

In Persian, this is the shortest type of formulaic poem; its long history, the strict rules governing its use and the richness of its expression make it one of the jewels of Persian literature. It is usually but inaccurately called "quatrain" (Arabic *rubāʿ*, "in fours, in foursomes"; *rubāʿī*, composed of four parts > "quadriliteral"). In the 7th/13th century, Shams-i Ḳays explained the Arabic appellation thus: "because, in Arabic poetry, the *hazadj* metre is made up of four parts; thus, each *bayt* (in Persian) constructed on this metre forms two *bayts* in Arabic" (Shams, 115, ll. 3-4). This reference to Arabic poetic technique in describing a specifically Persian form of poem has for a long time confused study of the quatrain.

Shams-i Ḳays, in his magisterial treatise on Persian poetic technique (completed after 630/1232), *al-Muʿdjam fī maʿāyīr ashʿār al-ʿadjam*, tells the story of an ancient Persian poet ("and I think that it was Rūdakī", 112, l. 4) who invented the metre of the quatrain on hearing a winsome child crying out in the course of a game: *ghaltān ghaltān hamī rawad tā bun-i gū* ("the ball is rolling, rolling to the bottom of the hole"), i.e. in quantitative metre: ––––⏑–⏑––⏑⏑–. On account of its rhythm and freshness, the poem thus invented was called *tarāna* ("young and fine"); "it was also called *du baytī* (with two *bayt*)". This involved recourse to anecdote betrays awareness of the specifically Persian origin of the quatrain. But Shams

no longer possessed the elements which would have enabled him to address correctly the study of the quatrain: this is a formal adaptation of Arabic technique to a poetic material of Iranian tradition.

The survey of the *rubāʿī* supplied by Shams-i Ḳays (112-27) is the most complete that is known. The numerous treatises subsequently composed are pedagogic adaptations of it. The studies in European languages by Fr. Gladwin, Garcin de Tassy, Fr. Rückert-W. Pertsch and H. Blochmann, are annotated translations of the latter. All give prominent place to the study of the *rubāʿī*, as does Shams-i Ḳays. In the first chapter of *al-Muʿdjam*, the first metre of which he analyses the constitution and usage is the *baḥr-i hazadj*, a metre of quantitative rhythm composed of a foot of one short and three longs (*mafāʿīlun*) repeated three times, hence four equal feet. Like his predecessors, Shams seeks to locate the *rubāʿī* among the realisations of the Arabic *hazadj* metre; but he finds it so original that he relegates study of it to a footnote at the end of his survey of this metre. He then has recourse to the authority of an *imām* of Khurāsān, Ḥasan Ḳaṭṭān (115, l. 19), who had constructed an overall diagram formed of two trees with twelve branches, designed to show all the opportunities for "changing the foot by excision of a syllable" (*ziḥāf*), available in Persian in the usage of *rubāʿī* and "which did not exist in Arabic" (115, l. 5), even though "today", he says, there are numerous *rubāʿiyyāt* in Arabic, imitations of the Persian. Case by case, over six pages, Shams subsequently brings his aesthetic appreciation to bear on the major realisations of *hazadj* metre in the *rubāʿī*; these are formed on the basis of two principal types of excision of a letter (or of a syllable) at the beginning of a foot, *kharb* or *kharm*. The specifically Persian *tarāna* was thus forced into a mould which was inappropriate for it and from which modern ingenuity has been unable to extricate it (M. Farzaad, *Persian poetic metres*, Leiden 1967, 99-123).

In order to escape from the impasse to which the false path of *hazadj* was leading, it has been necessary to undertake a philological study of the antecedents of this sophisticated *rubāʿī* and a statistical study of the reality of the usage of the metre of the Persian quatrain, setting all theories aside. It is undisputed that three elements characterise the *rubāʿī*: brevity, the use of a special metre and the use of a rhyme appropriate to its structure. In its classical form, it is the shortest of Persian poems. Each one begins in the same formal fashion. It is composed of two *bayts*; each *bayt* consists of two *miṣrāʿ*s or hemistiches; the four *miṣrāʿ*s have the same metre, or are arranged in pairs, with two variants of the metre. *Miṣrāʿ*s 1, 2 and 4 rhyme; in some cases *miṣrāʿ* 3 also rhymes with the others. In short, it is a form offering almost limitless possibilities for stylistic experiments.

It is not known when the quatrain first came into existence. Its emergence in literature can be pinpointed, but it is certainly of pre-Islamic origin, and of popular origin also: the *du baytī* remains a form of poetry widely practised throughout the Persian cultural sphere. Historically, the quatrain has followed the evolution of Persian poetry in general. Written evidence remains of pre-Islamic poetry based on a syllabic metre and an accentual verse with caesura; rhyme, admittedly irregular, appears in the early Islamic period, and is followed by the use of quantitative metre, irregular at first, ultimately becoming regular quantitative versification, with regular rhyme (Lazard 1975, 612-14). The appearance, under Arabic influence, of rhyme dictated by increasingly stringent rules is understandable; more singular is the subjection of the Iranian syllabic metre to Arabic quantitative prosody (Benveniste 1930, 224). There was imitation of the quantitative principle, but application took account of previous realities. It is for this reason that the Persian metre differs from the Arabic metre in the distribution of long sounds; this applies particularly to the quatrain. The Persian metre is a syllabic metre, but with syllables divided into long and short. Accents and caesuras had moulded the elementary distributions of syllables; the major Persian metres are moulded according to these distributions. The accent has ceased to be a factor in the distribution of syllables in the classical *bayt*. The reckoning of syllables, short and long, is what matters in Persian metrical systems, rather than the reckoning of letters, which are important only for the rhyme.

Various studies have been undertaken (Benveniste, Henning, Lazard and Shafīʿī Kadkanī) with the object of identifying, in fragments of verse in Pahlavi (of the *Bundahishn*) and in older Persian (before the 3rd/9th century), transmitted through texts in Arabic as well as in Manichaean fragments, what used to be known as the *tarāna*, a term of pre-Islamic origin which denoted songs intended for feasting and wine. Rūdakī (d. 329/940 [*q.v.*]) had, at the apogee of the Sāmānids of Bukhārā, a leading role, owed to a poetic genius which led to his acceptance as a master by all the poets of the 5th/11th century. Numerous quatrains were attributed to him (including, no doubt, some pseudepigrapha), and he was even credited with the invention of the genre. But among poets who preceded him, some by as much as a century, and among poets contemporary with him, examples are known of poems which conform to the characteristic traits of the *rubāʿī*. In Arabic, the *rubāʿī* did not appear until the end of the 4th/10th century, in Khurāsān and from the pen of a poet of Pūshang in the region of Harāt (Shafīʿī Kadkanī, 1988, 2331), evidently under Persian influence.

Another important feature in the history of the quatrain is its usage in Ṣūfī circles. The question was posed in the 4th/10th century: whether in the course of the spiritual observance and the dance which accompanies it (*samāʿ* [*q.v.*]), it is permitted to listen to *rubāʿiyyāt* (Abū Naṣr al-Sarrādj al-Ṭūsī (d. 378/988), *K. al-Lumaʿ*, 299, l. 3). A number of pieces of evidence emanating from Ṣūfī circles of Khurāsān, and also from Baghdād and elsewhere (thus al-Tanūkhī, in *Nishwār al-muḥāḍara*, written in 360/971), testify to the usage of the quatrain by the Persians, simple people expressing their love to the best of their ability; "it is the discourse of lovers and madmen", the master Djunayd (d. 298/910) is supposed to have said of it, according to Sulamī (d. 412/1021). According to the same, the *samāʿ al-rubāʿiyyāt* "is suitable only for strong and experienced men" (Shafīʿī Kadkanī, 2337, l. 22).

It is therefore not astonishing that in the 5th/11th century the quatrain was in use among all the Persian lyrical poets. Attempts have been made to establish Abū Saʿīd Abi 'l-Khayr (d. 440/1049 [*q.v.*]) as the inventor of the quatrain in Ṣūfism; like others before him, he practised it, but his eminent role in the history of Khurāsānian Ṣūfism gave added respectability to the *rubāʿī*, and poems attributed to him were considered to have been endorsed by his authority. In the same period, the Ḥanbalī Ṣūfī al-Anṣārī (d. 481/1088 [*q.v.*]) composed some fine quatrains, and the mountain-dwelling hermit Bābā Ṭāhir (d. in the middle of the same century [*q.v.*]) expressed the sum of his experience in *du baytīs* in which his Persian was

blended with dialectal elements of Luristān. There are few poets who, over ten centuries, have not practised the quatrain; the modern period has seen the evolution of variants of the *rubāʿī* having 3 or 5 *miṣrāʿ*s. The most widely admired author of quatrains is ʿUmar Khayyam (d. before 530/1135 [*q.v.*]); his life, his work and his eminent position made him an easy target for pseudepigraphical artifice; it was not until a century after his death that a copy of a quatrain attributed to him was found, but the scholarly scepticism which is observed here corresponds closely to that which was denounced by the great mystic ʿAṭṭār (d. *ca.* 617/1220 [*q.v.*]), in regard to Khayyām precisely (*Ilāhī-nāma*, 215, ll. 5169-83). Thus was born a Khayyāmian tradition of quatrains, from the terrible century of the Mongols, the 7th/13th, onwards.

In his study of Persian metre based on statistical findings, P.N. Khānlari (Khānlarī 1966), has demonstrated once again that the metre of the *rubāʿī* followed rules exclusive to it. The basic structure of what he calls the *baḥr-i tarāna* consists, he asserts, of five feet; the first and the fourth, comprising two longs, never vary; feet 2 and 5, made up of two longs, may have as a variant: ⏑⏑–; foot 3, constructed thus: ⏑–⏑, can have two variants: –⏑⏑ and ––. Twelve principal realisations are identified by the author, emanating from the possibilities offered by these variants.

L.P. Elwell-Sutton (1976, 134-6), has set aside the division into feet and has sought to group the realisations of a sample of 400 lines or "hemistiches" (*miṣrāʿ*), under patterns capable of producing all the realisations. A group *a* corresponds to a basic pattern constructed thus:

––⏑⏑/–⏑–⏑––⏑⏑–

this is the most ancient, the most popular and the most frequent; group *b*:

––⏑⏑/––⏑⏑––⏑⏑–

For the two shorts in the penultimate position, it is quite common to substitute one long; the same substitution for the two shorts in the third position is exceptional, and this would be out of place in the middle of the line. These features are quite typical of Persian metre. The statistical survey has also enabled the author to state that lines of 12 and 11 syllables are the most frequent, and that there is no evidence to show that the rhyme pattern A A A A in the quatrain is older than the rhyme pattern A A B A, although the latter obtains in 70% of cases.

The quatrain is not restricted to a unique semantic field; it may be lyrical, satirical, mystical, philosophical, conveying aphoristic maxims or expressing states of mind. It should be dignified (*buland*), or delicate (*laṭīf*), or mordant (*tīz*). Its structure should be such that the first three *miṣrāʿ*s introduce the fourth, the first two sharing a certain unity, whence the ternary structure which is encountered in a number of quatrains (Bausani 1960, 532). While quatrains are to be found in almost all the Persian *dīwāns*, there are some *dīwāns* which are composed exclusively of quatrains.

There are numerous translations of Persian quatrians. The technical problems of translating the *rubāʿī* into European languages have only recently been the object of systematic consideration (Lazard 1991). The object must be to convey an impression of the form of the *rubāʿī*, a poem of such rigorous intensity that the rhythmic clash of words is constantly striking brilliant sparks of intelligence.

(C.-H. de Fouchecour)

2. In Turkish.

It is impossible to deal with the problems of the Turkish *rubāʿī* without a suitable consideration of the corresponding Persian metre; the two civilisations have broadly amalgamated.

The word *rubāʿī* signifies here the distinct type described by Eilers, sc. an independent strophe of four lines, with the basic form ––⏑⏑––⏑⏑––⏑⏑–, the rhyme sequence *aaba* and a definite meaning sequence: introduction (the first two lines), surprising new motive (third line), pointe, return to the outset (last line). We may call this kind of quatrain the "perfect genuine *rubāʿī*" (abbreviated PGR).

In this rigid and narrow sense, the word *rubāʿī* is frequently employed in Turkish (and extra-Turkish) literature, for example in the following works: Kabaklı (i, 617-18, 678-9), Özkırımlı (996), *TDEA* (xxvii, 445), Dilçin (5, etc.). Karaalioğlu (605); Gibb (i, 88-90), Kowalski (161-3), Andrews (167-70). Nevertheless, the term is sometimes employed in a broader sense, namely as an equivalent of the Turkish *dörtlük*. That is, it signifies a quatrain: a strophe consisting of four lines (which we may abbreviate as FLS). Cf. Rypka, 694 ("the quatrain [*rubāʿī*]", by which term is meant the popular Persian strophe containing eleven syllables in each line), Köprülüzade, 113-22 (where the form is arranged into the general notion of *dörtlük*, e.g. some strophes of *Ḳutadghu bilig*, which are, nevertheless, *mutaḳārib maḥdhūf*), Bertel's, 88 (= Eastern Turkish *törtlük*), Eckmann, in *PTF*, ii, 299-300 (the quatrain quoted there as "*rubāʿī*" has the metre *fāʿilātun fāʿilātun fāʿilātun faʿūlun*, similar to *tuyugh*).

The origin of the PGR is controversial, since it is in *ʿarūḍ*, but not of the Arabic type. This diachronic problem must clearly be distinguished from the synchronic structure of the PRG, as it has been described above. See on this, Doerfer (Hungary, Sweden). Substantially, two opinions exist:

(a) The "*rubāʿī*" has a purely Persian origin, either as going back to Old Persian metres (Salemann, Gershevitch) or as having developed in an early New Persian epoch (Elwell-Sutton, Eilers, Meier, Andrews, Rypka). Most Turkish authors, too, support this thesis, under Köprülü's influence (Dilçin, 208, Kabaklı, 618, Özkırımlı, 996, *TDEA*, 350-1, Karaalioğlu, 605); cf. also *PTF*, ii, 104-5, 112-13, 256, 261. To be sure, "*rubāʿī*" is mainly confined here to the narrow sense of PGR.

(b) On the other hand, Köprülüzade remarks (113-22) that the *dörtlük* (= FLS) already existed in pre-Islamic Turkish literature. He says, furthermore, that

for the "*rubāʿī*" (= PGR) neither a Turkish nor a Persian origin can finally be proven (although PGR is documented in the Persian literature much earlier). At any rate, the four-line strophe is popular both in Turkish and Persian mediaeval and modern lyrics. The same differentiation is also expressed in Bertel's, 88, 107; the PGR has originated under the influence of the Turkish FLS, but it has assumed its ultimate shape in Persian literature.

The origin of the Persian PGR under the influence of the Turkish FLS has been underlined still more expressively by Kowalski, 161-3: *Türk Ansiklopedisi*, 445; Çetin, in *İA*, 759-61; and Bausani, 527-78 (above all in 535, where Chinese parallels, also originating under Turkish influence, have been considered).

Indisputably, the first PGR metre has been documented much earlier in Persian poetry than in the Turkish. It is found as early as 333/944-5 in a poem by Abū Shakūr, whereas the first PGR metre in Turkish language belongs to the second half of the 6th/12th century, see below. This fact proves that at least the direct origin of the PGR is Persian; and this simultaneously signifies that the hypothesis of an origin from the Turkish FLS cannot in the strictest sense be proven, particularly since the first Turkish poems belong to the 5th/11th century. On the other hand, a diachronic investigation shows that an origin from the Turkish FLS (or, at least, a certain influence from this side) can also not be excluded. The most frequent metre in Maḥmūd al-Kāshgharī's *Dīwān* is ––⏑–/–⏑–. The *Dīwān* dates from 464-70/1072-8, but derives from many earlier sources. But exactly this metre occurs, too, in the first *rubāʿī*-like poem in New Persian literature, found in a satirical verse in al-Ṭabarī under the year 108/726: *az Khuttalān āmadhīh / bā rū tabāh āmadhīh / āwār bāz āmadhīh / bē dil farāz āmadhīh*. The subsequent development of early Persian metrics gradually leads to the PGR. It should be noted that these metres are largely similar to al-Kāshgharī's eleven-syllable metre ––⏑–/–⏑–/––⏑–. Cf. Ḥanẓala (250/864), ––⏑–/⏑––/⏑––/–⏑–; Mashriḳī (283/896), ––⏑⏑–/⏑–⏑–/–– (the same metre is found in a poem by Manūčihrī (432/1040-1); Abu 'l-Ḥusayn (311/923), ––⏑⏑–/–⏑⏑–/–⏑–; Shahīd (324/936), ––⏑⏑–/–⏑⏑–/–⏑⏑– (but only in a two-line verse); and finally, in Abū Shakūr, ––⏑⏑–/⏑–⏑–/–⏑⏑–. This last example is of particular interest, since it follows the PGR rhythm exactly; however, it has a rhyme sequence *aaaa*. Both the rhyme sequence *aaba* and the meaning sequence (see above) have only gradually developed in Persian literature (see below), becoming a general norm from the 5th/11th century onwards. Since Bausani has shown that a Turkish influence of the FLS both upon the East (China) and the West (Iran) is likely, the hypothesis of a Turkish FLS origin of the Persian PGR may also be regarded as possible. But the definitive shaping of PGR occurred on Persian soil, so that PGR is a witness to the Iranian spirit.

In other words, we may put forward the hypothesis that the Persians adopted models from both adjacent nomadic societies: that west of Iran (the Arabic *ʿarūḍ*) and that east of Iran (the Turkish FLS), but that they reorganised these patterns into a genuine Persian form.

So much for metrics. The meaning sequence described above is certainly of Persian origin and has been cultivated, above all, by ʿUmar Khayyām [*q.v.*], to become an admired and frequently imitated model not only for Persian, but also for Turkish poetry. The spirited and pointed rhyme sequence *aaba* has also been made a norm by ʿUmar Khayyām. It seems likely that *TDEA*, 350, is right in supposing that it was Mewlānā Djalāl al-Dīn Rūmī (604-72/1207-73 [*q.v.*]) who influenced Ottoman literature by his *Dīwān-i kabīr*, introducing the PGR in its perfect structure.

The rhyme sequence *aaba* occurs frequently in the Eastern Turkish literature of the 5th/11th century, e.g. in the *Kutadghu bilig* (196 verses) and in the *ʿAtabat al-ḥaḳāʾiḳ* (generally), cf. Köprülü, 341. To be sure, these verses are no PGR, but FLS in *mutaḳārib*, and resemble a collection of *ḳiṭaʿāt*. In MK's work, *aaba* is rare, if it exists at all, but it may be found in Stebleva's no. 44, which also follows the PGR-like metre ––⏑–/–⏑–/––⏑̄–. This sequence is widespread in modern Turkish folk-poetry, not only in the Anatolian *māni* [*q.v.*] and in other regions of Western Turks, such as Persia, but also in Central Asia (Karakalpak, Kazakh, Uzbek and New Uyghur folklores). It is even found in South Siberia—above all in Tannu-Tuva—and this may be a hint at the archaic character of *aaba* in the Turkish world. On the other hand, in Iranian folk-poetry *aaba* is also well-documented. In Iranian educated literature, the older *rubāʿiyyāt* have mostly the rhyme sequence *aaaa*, cf. Elwell-Sutton, 639-44; seven Persian poets of the 5th/11th century offer 905 cases of *aaaa* (91%), against only 91 (9%) *aaba*. In ʿUmar Khayyām's work, on the contrary, *aaba* prevails over *aaaa* (70%: 30%), and this norm is still more valid in Ḥāfiẓ, where *aaaa* has become extremely rare (about 2.5%).

The Turkish development is almost a parallel of the Iranian one. However, extensive statistical investigations of this topic are still lacking, and poets seem to behave very differently. Mīr ʿAlī Shīr Nawāʾī (845-906/1441-1501) favours *aaaa* both in his Čaghatay Turkish and Persian *rubāʿiyyāt* to about 88%. The last word is often identical in all four verses (then generally with a *radīf* [*q.v.*]). In poems of the Ādharbāydjānī poet Nesīmī (770-820/1369-1417), *aaaa* prevails over *aaba* (and *xaya*); 314 (86%) 52 : 1. But in the East Anatolian Ḳāḍī Burhān al-Dīn's (745-800/1345-98) poems we find *aaba* : *xaya* in a relation of 19 : 1; similarly in the Rumelian Yaḥyā Newʿī's (940-1007/1533-99) *rubāʿiyyāt*, *aaba* : *xaya* = 8 : 3; and in the Istanbulī Ḥāletī's (977-1040/1570-1631) poems (here, for example, the 16 poems quoted by Gibb, iii, 227-30, are *aaba* throughout). The same holds true of the Ādharbāydjānī Fuḍūlī's (d. 963/1556) work: *aaba* : *aaaa* = 65 : 7 (three *aaaa* with *radīf*), i.e. 90 : 10%. Generally speaking, the rhyme sequence *aaba* (which corresponds to that of the *māni*) found increased use in the course of time, particularly in the western area of Turkish literatures.

These and other hints at the Turkish origin of the FLS and PGR are remarkable, and may be due to a narrow Turkish-Iranian symbiosis. However, the PGR in its ideal form is owed to the Persians and above all to ʿUmar Khayyām. It remains (Eilers, 212) "ein wundervolles Zeugnis des persischen Genius". This PGR has been adopted by both Ottoman-Ādharbāydjānī and Čaghatay literature and plays an enormous role there. Kabaklı, 618, understates when he says that every *Dīwān* poet has written "one or two *rubāʿiyyāt*"; PGRs, sometimes in great number, are found in almost every important *dīwān*.

The earliest documented purely Turkish PGR was written by Mubārakshāh from Marw-i Rūd [*q.v.*] in eastern Khurāsān. It presumably belongs to the end of the 6th/12th century: *waʿdā berüsän näʾüčün kälmäs-sän / söz yalghanīnī mäning bilä ḳoymas-sän / yüzüng kün u sač tün ḳara körmäs-sän / ʿishḳingda ḳarārsïz äy ʿadjāb bilmäs-sän* "thou givest me a promise, (but) why doest thou not come? Thou abandonest neither lying nor

me. Thou dost not see that thy face is (bright as) the sun and thy hairs are black (as) the night. Thou knowest, foresooth, that thou art unsteady in thy love". Furthermore, there are two macaronic *rubāʿiyyāt* dating from the same period, Badr al-Dīn al-Ḳawwāmī of the Rayy Oghuz (6th/12th century, with a rhyme sequence *aaaa*) and Ḳurashī from Transoxania (7th/13th century, rhyme sequence *aaba*), cf. Köprülüzade, *Türk dili ve edebiyatı hakkında avaştırmalav*, 118-20.

According to Köprülü (344, and in PTF, ii, 256) the PGR metre is not adapted for the Turkish language ("étranger au rhythme du mètre national turc et très difficile à adapter à la langue turque ... caprices individuels des poètes turcs possédant une solide connaissance de la métrique persane"). On the other hand, he explains (1934, 350) that the PGR was readily adaptable to Turkish prosody, since it is a four-line strophe. Indeed, the PGR has become a favoured genre in the Turkish literatures, at least those more or less influenced by Persian poetry. This preference lasted from the earliest period (e.g. Ḳāḍī Burhān al-Dīn until the modern era (e.g. Yaḥyā Kemāl Beyātlī, 1884-1958). *Rubāʿiyyāt* have been shaped not only in the Ottoman Empire and Turkey, but also in Ādharbāydjān (see above; Nesīmī, Fuḍūlī, and many others), in Turkmenia (Āzādī, 1700-60) and even in the successive regions of the Ulus Čaghatay (Nawāʾī; Shībānī, 855-916/1451-1510; Amānī, 945-1017/1538-1608; Bābur, 888-936/1483-1530; Kāmrān Mīrzā, 1825-99; Djahān Khatun, 19th century; cf. Eckmann, in *PTF*, ii, 304-402, and Hofman).

For the poets of the Ottoman Empire (and Turkey) cf. *PTF*, ii (index 952; references given by Björkman at 403-65); Kabaklı, 618; *Türk Ansiklopedisi*, 445; Dilçin, 168, 350, etc., Özkırımlı, 996, Karaalioğlu, 605; Necatigil. As well as those named above we may mention as the most outstanding *rubāʿī* poets: Ḳara Faḍlī (d. 1564), Rūḥī from Baghdād (d. 1014/1605); Fehīm (1036-58/1627-48); Djewrī (d. 1064/1654); Neshāṭī (d. 1085/1674); Thābit (1060-1124/1650-1712); Nābī (1052-1124/1642-1712); Nedīm (1092-1143/1681-1730); Sezāʾī (1080-1151/1669-1738); Naḥīfī (d. 1151/1738); Esrār Dede (d. 1210/1796); Sheykh Ghālib (1170-1214/1757-99); ʿAwnī from Yeñishehir (1826-83); Sabahattin Eyüboğlu (1908-73); Arif Nihat Asya (1904-75); and Cemal Yeşil (1900-77). The most famous and celebrated *rubāʿī* poet, however, is ʿAzmī-zāde Ḥāletī. Nedīm glorified him with the following verse: *Ḥāletī ewdj-i rubāʿīde učar ʿanḳā gibi* "Ḥāletī is like the *ʿanḳā* (bird), flying on the *rubāʿī*'s summit", cf. *PTF*, ii, 443; *TDEA*, 350. Muʿallim Nādjī, however, criticised him. As to his biography and literary creativity cf. *EI*¹ art. s.v. (Menzel), *İA*, v, 125-6 (Yöntem); *EI*² art, s.v. (İz), *Türk Ansiklopedisi*, xviii, Ankara 1970, 346-8. He wrote 2 *ʿarḍ-i ḥāls*, 3 *ḳaṣīdas*, 2 *merthiyes*, 3 *ḳiṭʿa-yi kebīres*, 5 *tārīkhs*, 330 *beyts*, but 569 *rubāʿīs*. He was called *Üstād-i rubāʿī* "master of the *rubāʿī*" and *Khayyām-i Rūm*. (Gibb's and Kabaklı's opinion that Ḥāletī cannot equal Khayyām in respect of originality is disputed by Yöntem.)

In Turkish (Ottoman) *rubāʿiyyāt*, the *akhreb* pattern, whose first three syllables are ‒‒⏑, is much more frequently employed than the *akhrem* pattern (‒‒‒), cf. *TDEA*, 350-1; the same holds true for Čaghatay literature (e.g. for Nawāʾī). This fact may be conditioned by the structure of the Turkish languages. The *rubāʿī* appears in 12 variants, of which Turkish poetry has made a certain selection; not only the *akhrem*, but also certain kinds of *akhreb* patterns occur less often. The following table shows the patterns and their frequency:

akhreb	1	‒‒⏑/⏑‒⏑‒/⏑‒‒‒/‒	frequent according to Kabaklı, *TDEA*, Dilçin; according to Andrews (along with 2) the most frequent pattern
	2	‒‒⏑/⏑‒⏑‒/⏑‒‒⏑/⏑‒	frequent according to Kabaklı, *TDEA*, Dilçin; according to Andrews (along with 1) the most frequent pattern
	3	‒‒⏑/⏑‒‒‒/‒‒‒/‒	frequent only according to Kabaklı and *TDEA*
	4	‒‒⏑/⏑‒‒‒/‒‒⏑/⏑‒	frequent only according to Kabaklı
	5	‒‒⏑/⏑‒‒⏑/⏑‒‒‒/‒	frequent according to Kabaklı, *TDEA*, Dilçin
	6	‒‒⏑/⏑‒‒⏑/⏑‒‒⏑/⏑‒	frequent according to Kabaḳlı, *TDEA*, Dilçin
akhrem	7	‒‒‒/‒⏑‒/⏑‒‒‒/‒	frequent only according to *TDEA*
	8	‒‒‒/‒⏑‒/⏑‒‒⏑/⏑‒	frequent only according to *TDEA*
	9	‒‒‒/‒‒‒/‒‒‒/‒	rare
	10	‒‒‒/‒‒‒/‒⏑⏑‒/‒	rare
	11	‒‒‒/‒‒⏑⏑/‒‒‒/‒	rare
	12	‒‒‒/‒‒⏑⏑/‒‒⏑⏑/‒	rare

These statements can be corroborated. For example, Newʿī's 11 *rubāʿiyyāt* and Ḳāḍī Burhān al-Dīn's 20 *rubāʿiyyāt* are all *akhreb*; in Fuḍūlī's 72 examples, only one *akhrem* is to be found.

According to Dilçin, 207, a certain preference exists to employ two different variants in a *rubāʿī*, namely, one for the verses 1,2,4 (which also rhyme with each other) and another for the third (in the *aaba* pattern, unrhymed) verse; this is a frequent usage in Persian poetry too, for example in ʿUmar Khayyām's poems. This accentuation of the third verse, the underlying of its particular character is also known in the Turkish *māni*, where, to be sure, the same effect is produced by a change of caesura (e.g. *dam üstünde / duran ḳiz // bayram geldi / dolan ḳiz // ḳurbansïz / bayram olmaz // olam sana / ḳurban ḳiz* "girl standing on the roof; *bayram* has come, walk around, girl; without victims there is no *bayram*; I may become a victim for you, girl": 4,3; 4,3; 3,4; 4,3). In a more distant way, this underlining of a verse resembles certain poems in al-Kāshgharī, where, however, it is the last verse of the *aaab* pattern which has a particular structure (e.g. in Stebleva, 31.1, following the scheme ⏑‒‒/⏑‒‒//⏑‒‒/⏑‒‒//⏑‒‒/⏑‒‒//‒⏑⏑‒/‒⏑‒).

In whatever manner the problem of the genetic connection of the Turkish and Persian folk poetries (of which the PRG is a sublimation) may be explained, the symbiosis of these peoples and the similarity of their civilisations is undeniable.

3. In Arabic.

The *rubāʿiyya*, lit. "quadripartite entity", or quatrain occurs in Arabic literature both as an independent verse form and as an element of structure in longer compositions. It represents a comparatively late development of poetic form and its origins are not altogether clear.

The lines of the quatrain can either be lines in the sense of a *bayt* (two hemistichs with between 16 and 30 syllables and a caesura) or in the sense of a *miṣrāʿ* or *s̲h̲aṭr* (a single hemistich so to speak, of 15 or less syllables). In the classical *ḳaṣīda* it is the *bayt* which represents the unit of structure, in *rad̲j̲az* poetry it is the *s̲h̲aṭr*. In the *rubāʿiyya* either case can apply, leading to ambiguity in the usage of this term. However, more often than not, the *rubāʿiyya* denotes a quatrain whose lines have the length of half a *bayt*. This explains why expressions like *baytānⁱ* ("two *bayts*") or *dūbayt* (from Persian *du* "two"; also *dūbaytī*) are sometimes used as synonyms for *rubāʿiyya*.

Dūbayt, however, is more often used for a quatrain of a particular metre (*faʿlun mutafāʿilun faʿūlun faʿilun*) and rhyme scheme *aaba* (called *aʿrad̲j̲*) or *aaaa*. Common metrical variations are: (a) ––⏑⏑–⏑–⏑––⏑⏑–; (b) ––⏑⏑––⏑⏑––⏑⏑–; (c) ––⏑⏑–––⏑––⏑⏑–. When used in this sense, *dūbayt* is the Arabic equivalent of the Persian *rubāʿī*. Its origins and its development are discussed extensively in the introductory essay of Kāmil Muṣṭafā al-S̲h̲aybī, *Dīwān al-dūbayt fi 'l-s̲h̲iʿr al-ʿarabī (fī ʿas̲h̲arat ḳurūn)*, Mans̲h̲ūrāt al-d̲j̲āmiʿa 'l-Lībiyya, n.p. 1392/1972, 15-132. This book contains, arranged according to centuries, a collection of 808 poems in the *dūbayt* metre (mostly quatrains, but also some other forms, such as *muwas̲h̲s̲h̲aḥs*) by 168 poets from the 5th/11th century until the beginning of the 14th/20th century, together with 120 anonymous poems, of which 14 are in colloquial Arabic. Supplements have been published in *al-Mawrid* (1975), 153-72, and (1977), 49-108.

In most cases, only a few *dūbayt* quatrains of each author have been handed down in the literature. A more extensive collection is the *dūbayt dīwān Nuk̲h̲bat al-s̲h̲ārib wa-ʿud̲j̲ālat al-rākib*, by Niẓām al-Dīn al-Iṣfahānī (d. after 680/1281 or in 1278, Brockelmann, S I, 449), which contains some 500 quatrains arranged according to rhyme-letter in Arabic (predominantly), Persian and in a mixture of both languages (*mulammaʿ*). Eighty of the Arabic quatrains of this author are in al-S̲h̲aybī's book (*op. cit.*, 285-300). ʿImād al-Dīn al-Iṣfahānī (519-97/1125-1201 [*q.v.*]) and Ṣalāḥ al-Dīn al-Irbilī (572-631/1176-1234) are also said to have composed *dīwāns* of *dūbayt* quatrains (see al-S̲h̲aybī, *op. cit.* 74-5).

The rise of the *dūbayt* quatrain is placed by al-S̲h̲aybī among bilingual Persians in and around G̲h̲azna, and the most easterly Iranian territories. As a date he suggests the 380s A.H., i.e. coinciding more or less with the beginnings of the Persian *rubāʿī*. The Persian origin is borne out by the occurrence of a *radīf* [*q.v.*] in three early Arabic *dūbayts* (al-S̲h̲aybī, *op. cit.*, nos. 2/1, 5/1 and 8/1).

The earliest textual examples of *dūbayt* quatrains go back to the first half of the 5th/11th century. They are preserved in the *Dumyat al-ḳaṣr* compiled by Abu 'l-Ḥasan ʿAlī al-Bāk̲h̲arzī (murdered in 467/1075 [*q.v.*]). In his comment on one of these quatrains, al-Bāk̲h̲arzī speaks of "pieces in the *rubāʿiyya* metre" (*ḳiṭaʿ ʿalā wazn al-rubāʿiyya*) and he remarks that he had not heard of this method (*ṭarīḳa*) until his father had recited quatrains in this manner (*rubāʿiyyāt ʿalā hād̲h̲ā 'l-namaṭ*) (*Dumya*, ed. Muḥammad Rāg̲h̲ib al-Ṭabbāk̲h̲, Aleppo 1349/1930, 174). Two early Arabic *dūbayts* are by the Persian mystic Abū Saʿīd b. Abi 'l-K̲h̲ayr (357-440/967-1049 [*q.v.*]) famous for his more than 700 Persian quatrains.

References to quatrains of an earlier date do occur in the literature. Examples are Abū Naṣr al-Sarrād̲j̲ (d. 378/988), *K. al-Lumaʿ fi 'l-taṣawwuf*, ed. R.A. Nicholson, London 1914, 299 (*Bāb fī man kariha 'l-samāʿ*); Abū ʿAlī al-Tanūk̲h̲ī (329-84/939-94), *The table-talk of a Mesopotamian judge* (= *Nis̲h̲wār al-Muḥāḍara*), ed. and tr. D.S. Margoliouth, London 1921-2, i, 54, ii, 59: "there was a Ṣūfī present, who was humming some *rubāʿiyyāt*"; Abū ʿAbd al-Raḥmān al-Sulamī (330-412/941-1021), *Ṭabaḳāt al-ṣūfiyya*, ed. Nūr al-Dīn S̲h̲urayba, Cairo 1953, 239, in a report in which Abu 'l-ʿAbbās Aḥmad b. Masrūḳ al-Ṭūsī (d. 298/911) is asked for his opinion on the permissibility of listening to musical performances of quatrains (*suʾila ʿan samāʿ al-rubāʿiyyāt*). All these texts suggest that these quatrains were popular in Bag̲h̲dādī mystical circles. As the word *rubāʿiyya* is indefinite with regard to structural details, it is difficult to know if *dūbayt* quatrains are intended in any of these cases.

Another expression that may refer to the quatrain is *mat̲h̲nāt*, mentioned in al-D̲j̲awharī, *Ṣiḥāḥ*, Cairo 1282, ii, 453 s.v. *t̲h̲-n-y*, said to be equivalent to "what is called in Persian *dūbaytī*, which is singing (*al-g̲h̲ināʾ*)" (see also *LA*, xiv, 119 s.v. *t̲h̲-n-y*).

Quatrains or quatrain-like compositions may also be intended in a passage in *Ag̲h̲ānī*¹, xiii, 74 (= *Ag̲h̲ānī*³, xiv, 324) where *s̲h̲iʿr muzāwid̲j̲ baytaynⁱ baytaynⁱ* is attributed to Ḥammād ʿAd̲j̲rad (d. between 155/772 and 168/784 [*q.v.*]). See also G.E. von Grunebaum, in *JNES*, iii [1944], 10 and G. Vajda, *Les zindīqs en pays d'Islam au début de la période abbasside*, in *RSO*, xvii [1938], 205.

The 7th/13th century represents the Golden Age of the *dūbayt* quatrain, with many poets among mystics (such as Ibn al-Fāriḍ [*q.v.*] with over 30 quatrains and

Djalāl al-Dīn al-Rūmī [*q.v.*] with 19 Arabic *dūbayts* in the *Kulliyyāt-i Shams*), princes, men of law, philosophers and physicians. There are experiments in form, e.g. the famous *dūbayt ḳaṣīda* by Bahāʾ al-Dīn Zuhayr (581-656/1186-1258 [*q.v.*]), *Dīwān*, ed. E.H. Palmer, Cambridge 1876, 202-4; the mixture of *dūbayt* and *muwashshah*, such as the example by Aḥmad al-Mawṣilī (603-56/1207-58) quoted in Ibn Shākir al-Kutubī, *Fawāt al-Wafayāt*, ed. Muḥammad Muḥyī al-Dīn ʿAbd al-Ḥamīd, Cairo [1951], ii, 510-11; as well as the many imitations (*muʿāraḍa* [*q.v.*]) which these innovations provoked.

In this century, the *dūbayt* also spread to the western part of the Muslim world. The Escorial ms. 288 contains four texts on the *dūbayt* written by Maghribī authors, Abu 'l-Ḥakam Mālik b. ʿAbd al-Raḥmān Ibn al-Muraḥḥal (604-99/1207-99), Abū Bakr al-Ḳalalūsī (d. 707/1307), Muḥammad b. ʿUmar al-Darrādj (authorship not certain) and Abu 'l-Ḥasan ʿAlī Ibn Barrī (d. 730/1330). Two of these texts have been published by Hilāl Nādjī, *Risālatānⁱ farīdatānⁱ fī ʿarūḍ al-dūbayt*, in *al-Mawrid*, iii (1974), 145-74. Ḥāzim al-Ḳarṭādjannī (608-84/1211-85 [*q.v.*]) finds the *dūbaytī* exquisite, in spite of its non-classical origin, and therefore approves of its being practised (*lā baʾsᵃ bi 'l-ʿamal ʿalayhi fa-innahū mustaẓraf wa-waḍʿuhū mutanāsib*), see *Minhādj al-bulaghāʾ*, ed. M.H. Belkhodja, Tunis 1966, 243. After the 7th/13th century, the number of *dūbayt*-quatrains found in the literature dwindles, but there are examples in the work of authors such as Ṣafī al-Dīn al-Ḥillī (d. *ca.* 752/1351 [*q.v.*]), Ṣalāḥ al-Dīn al-Ṣafadī (d. 764/1363 [*q.v.*]), Ibn Ḥidjdja al-Ḥamawī (767-837/1366-1434 [*q.v.*]) and Ibn Ḥadjar al-ʿAsḳalānī (773-852/1372-1449 [*q.v.*]). Today, the *dūbayt* is said to be still in use in al-Kuwayt, al-Baḥrayn and ʿUmān.

In modern Arabic literature, the *rubāʿiyya* in the *dūbayt* metre is seldom found, but there are many instances of quatrains in original Khalīlian metres or modern derivatives. They represent one of the examples of the revival and development of strophic form in modern Arabic poetry (cf. S. Moreh, *Modern Arabic poetry 1800-1970*, Leiden 1976, and idem, *Technique and form in modern Arabic poetry up to World War II*, in *Studies in memory of Gaston Wiet*, ed. M. Rosen-Ayalon, Jerusalem 1977, 415-34 = Moreh, *Studies in modern Arabic prose and poetry*, Leiden 1988, 116-36).

The *dīwān* of Ibrāhīm Nādjī (1898-1953 [*q.v.*]), for example, contains, under the title *Rubāʿiyyāt*, a collection of 77 short-lined quatrains in the *sarīʿ* metre, partly in monorhyme *aaaa* and partly in cross rhyme *abab* (ed. Aḥmad Rāmī *et alii*, Cairo [1961], 225-34). In this *dīwān*, the short-lined quatrain is also used as a structural unit in 27 other poems, three of which are of the *murabbaʿ* type *aaaa, bbba, ccca* ... (see MUSAMMAṬ), most of the others showing cross rhyme (*abab cdcd efef*...). The number of quatrains per poem varies between 4 and 35. Several metres are employed, especially *kāmil, ramal* and *sarīʿ*.

The long-lined quatrain (based on a *bayt* with two hemistichs) occurs in 11 poems. The rhyme scheme for most of these is *aa xa xa xa; xb xb xb xb; xc xc xc xc* (in which x represents unrhymed hemistichs). The number of quatrains varies between 4 and 33 per poem.

The Egyptian poet ʿAlī Maḥmūd Ṭāhā (1901-49) also employed both short-lined and long-lined quatrains in longer poems. His poem *Allāh wa 'l-shāʿir* consists of 108 short-lined quatrains in the *sarīʿ* metre with rhyme scheme *abab cdcd efef* ... (*al-Mallāḥ al-tāʾih*, Cairo 1943³, 77-117).

Slightly longer is *Tardjamat shayṭān* by ʿAbbās Maḥmūd al-ʿAḳḳād (1889-1964 [*q.v.*] in Suppl.]), with the same rhyme scheme but in the *ramal* metre (*Dīwān al-ʿAḳḳād*, Cairo 1346/1928, 238-54).

Djamīl Ṣidḳī al-Zahāwī (d. 1936 [*q.v.*]), has a *dīwān* called *Rubāʿiyyāt*, Beirut 1924, containing 1,018 quatrains in different metres, all of them of the short-lined type.

Maḥmūd Darwīsh (b. 1942) publishes under the title *Rubāʿiyyāt* 22 short-lined quatrains (*abab cdcd efef* rhyme) in *Awrāḳ al-zaytūn*, Beirut n.d. (original date of publication 1964), 133-142. Eleven of these are in *Dīwān Maḥmūd Darwīsh* i, Beirut 1979⁶, 108-13. His *Yawmiyyāt djurḥ filasṭīnī*, from *Ḥabībatī tanhaḍu min nawmihā*, is a poem of heterometric quatrains (made up of lines of differing lengths), with rhyme scheme *abab cdcd* and a *ramal*-type metre (*Dīwān* i, 542-62).

More traditional are the long-lined quatrains with rhyme scheme *xa xa xa xa* by the Mahdjar [*q.v.*] poets Ilyās Farḥāt (1893-1976) in *Rubāʿiyyāt Farḥāt*, São Paulo 1954 (¹1925), and Ilyās Ḳunṣul (1914-81), in *Rubāʿiyyāt Ḳunṣul, al-Djuzʾ al-awwal*, Damascus 1956.

Ṣalāḥ Djāhīn (1931-86) published a collection of quatrains in the *sarīʿ* metre in Egyptian Arabic under the title *Rubāʿiyyāt*, Cairo 1962; also in *Dawāwīn Ṣalāḥ Djāhīn*, Cairo 1977, 205-61.

There is no uniformity with regard to the nomenclature of the modern quatrains. The long-lined quatrain is sometimes called *murabbaʿ*, the short-lined quatrains with rhyme scheme *abab* are also referred to as *muthannayāt* or *thunāʾiyyāt* (cf. Yūsuf Bakkār, *Fi 'l-ʿarūḍ wa 'l-ḳāfiya*, Beirut 1990², 177-87).

The term *rubāʿiyyāt* is also used as a name for translations of Persian quatrains, such as those by Ḥāfiẓ and Saʿdī, and, especially, ʿUmar Khayyām [*q.vv.*]. Seldom have these quatrains been translated in the original *rubāʿī* form, i.e. in the *dūbayt* metre: there is one example of a quatrain by ʿUmar Khayyām translated as a *dūbayt* quatrain, in the work of the above-mentioned Niẓām al-Dīn al-Iṣfahānī (see al-Shaybī, *op. cit.*, 287); there are six quatrains from the *Gulistān* of Saʿdī occurring in the Arabic translation by Djabrāʾīl b. Yūsuf al-Mukhallaʿ (d. 1268/1851), ed. Cairo 1340/1921, 46, 137, 144, 151, 168, 197; and some examples in the translation of ʿUmar Khayyām's quatrains by Aḥmad al-Ṣāfī al-Nadjafī (1895-1978), ed. Damascus 1350/1931, e.g. nos. 24, 194, 243, 320. Aḥmad Zakī Abū Shādī chooses the *khafīf* metre, following the example of Djamīl Ṣidḳī al-Zahāwī, wrongly alleging that it coincides with the Persian original (*Rubāʿiyyāt ʿUmar al-Khayyām*, Cairo 1931, 3). The translation made by Aḥmad Rāmī (¹1924), which is entirely in the *sarīʿ* metre, has become popular in its version sung by the Egyptian singer Umm Kulthūm (d. 1975).

Apparently the first rendition in Arabic of a collection of Khayyām's quatrains is the one published by Wadīʿ al-Bustānī (1886-1954), Cairo 1912, which has the form of septets, a 7-line stanza with the rhyme scheme aaabbCD, brought together in two cantos (*nashīd*), in each of which the septets are linked together throughout the canto by the common rhyme of the last two lines.

Muḥammad al-Sibāʿī (1881-1931) published in *ca.* 1918 his translation in three cantos of 44, 38 en 9 quintains cccAB, dddAB in an extended *muwashshah*-like fashion.

Structured along the same lines, but in Egyptian Arabic, is the work of Ḥusayn Maẓlūm Riyāḍ, *Rubāʿiyyāt al-Khayyām*, Ladjnat al-nashr li 'l-djāmiʿiyyīn, Cairo 1944.

A more recent translation in short-lined verse in the

mutaḳārib metre is by the Baḥraynī poet Ibrāhīm ʿAbd al-Ḥusayn al-ʿUrayyiḍ (b. 1908), published as *Rubāʿiyyāt al-Khayyām*, Beirut 1966, 1984².

The term *rubāʿiyya* is also employed in the sense of a literary work in four parts, translating both tetralogy and quartet.

RUBGHŪZĪ [see rabghūzī].

RUBIS [see yāḳūt].

RŪDAKĪ (properly Rōdhakī, arabicised as al-Rūdhakī) the leading Persian poet during the first half of the 4th/10th century and author of the earliest substantial surviving fragments of Persian verse. Al-Samʿānī gives his name as Abū ʿAbd Allāh Djaʿfar b. Muḥammad b. Ḥakīm b. ʿAbd al-Raḥmān b. Ādam al-Rūdhakī al-Shāʿir al-Samarḳandī, says that he was born in Rōdhak, a suburb of Samarḳand, and that he also died there in 329/940-1; there are, however, reasons to think that this date might be about a decade too early (see the discussion in Storey-de Blois). ʿAwfī says that Rūdakī was born blind and there are quite a few references to his blindness (though not to the fact that he was sightless from birth) in early Persian authors. The available biographical data all link him with the Sāmānid ruler of Bukhārā Naṣr II b. Aḥmad (301-31/914-43 [*q.v.*]) or with his minister Abu 'l-Faḍl al-Balʿamī [*q.v.*], and it was evidently under their patronage that he flourished.

Rūdakī left, as Asadī tells us, a *dīwān* of more than 180,000 verses. This was lost long ago. What have survived are a fairly large number of single verses quoted in the Persian dictionaries (notably in the oldest of them, Asadī's *Lughat-i Furs*) as well as a few complete poems quoted by anthologists and historians, the most important of the latter being a splendid *ḳaṣīda* of nearly 100 verses (beginning *mādar-i may*) which is preserved in the anonymous *Tārīkh-i Sīstān* and which, according to that source, Rūdakī sent from Naṣr's court in Bukhārā to the ruler of Sīstān, Aḥmad b. Muḥammad b. Khalaf. We also have (in chronological order of the authorities who cite them) five short poems, all of elegiac inspiration, quoted by the historian Abu 'l-Faḍl Bayhaḳī [*q.v.*], the verses beginning *bōy-i djōy-i Mūliyān* quoted by Niẓāmī ʿArūḍī in connection with an anecdote about Naṣr b. Aḥmad, a few short pieces quoted by ʿAwfī and Shams-i Ḳays and a description of spring quoted by the 8th/14th century anthologist Djādjarmī. The later anthologies add a few more poems, but the only one of these that can be ascribed more or less confidently to Rūdakī is a long ode, cited by Amīn Rāzī (1002/1593-4), in which the poet laments his old age and recalls the amorous adventures of his youth. This poem refers also the riches which the poet had formerly received from the Sāmānids, but also from "*mīr Mākān*" (evidently the Daylamī Mākān b. Kākī, d. 329/940-1 [*q.v.*]), and adds that "times have changed" and that the poet was now reduced to poverty.

The most famous of Rūdakī's works was evidently his versification of the book of *Kalīla wa-Dimna*. The *Shāh-nāma* of Firdawsī tells us how the *dastūr* Abu 'l-Faḍl (sc. Balʿamī) first had this book translated into Persian and how the *amīr* Naṣr subsequently appointed "interpreters" to read it out so that the blind Rūdakī could versify it. Horn noticed already that some of the rhymed couplets in *ramal* metre quoted from Rūdakī in Asadī's *Lughat-i Furs* clearly belong to the stories of *Kalīla wa-Dimna*, and the present author has been able to identify the location in those stories of about 50 verses. Moreover, Nöldeke (*apud* Horn) showed that some of the fragments in the same metre belong to the story of Sindbād and the Seven Ministers and that Rūdakī must consequently have versified that book as well.

From at least the 11th/17th century onwards the anthologists begin to ascribe to Rūdakī a number of poems that are in fact by Ḳaṭrān [*q.v.*], and these form the main content of the *dīwān* that is ascribed to Rūdakī in a number of manuscripts and which was lithographed in Persia in 1315/1897. It is now recognised that this *dīwān* is a forgery. The valuable collection of Rūdakī's fragments by Saʿīd Nafīsī (altogether 1,047 verses in the second edition) excises Ḳaṭrān's poems, but retains a number of other dubious verses from unreliable sources. Moreover, the collection includes a good number of pieces that the sources either quote anonymously or ascribe to a different poet, but which Nafīsī attributed to Rūdakī for stylistic reasons, as well as several "poems" that he patched together from single verses quoted in the lexica. The collection must therefore be used with caution.

Rūdakī's style is simple and direct, and consequently stands in stark contrast to the mannerism which dominated Persian poetry from the 6th/12th century onwards; it is thus hardly astonishing that his works, greatly admired though they were in his own time, soon seemed dreadfully old-fashioned and fell into oblivion. What he lacks in rhetorical ornament he makes up for in musical sonority; he is particularly fond of assonance and internal rhymes. Much of what remains of his poetry has a decidedly pessimistic tone, a lot of it along the usual lines of Islamic homiletic poetry (as represented, for example, by Abu 'l-ʿAtāhiya [*q.v.*]), but there is hardly anything overtly religious in his work and certainly no trace of Ṣūfism. "You ought not, O guests", he says in one poem, "to set your hearts for ever on this way-station, for you must slumber under the earth, even if now you sleep on silken brocade. What use to you is the companionship of others? The road into the grave must be taken alone and your companions under the ground will be ants and flies", etc. (Bayhaḳī, 188). Other poems are unashamedly hedonistic, though with a hedonism that is often shot through with melancholy. "Live merrily", he advises us, "amongst the black-eyed beauties, merrily, for the world is nought but wind and an idle tale. Be happy with what has come your way and give no heed to what has departed. Look rather at me in the company of a maiden with curly hair and the fragrance of fine musk, a face like the moon, of the race of the houris. ... This world is a breeze, a fleeting cloud, a jest. Bring the wine and let come what may." (ʿAwfī, ii, 9).

(F.C. de Blois)

RŪDHBĀR, rūdbār, meaning literally in Persian, a district along a river or a district intersected by rivers, and a frequent toponym in Islamic Persia.

Yāḳūt, *Buldān*, ed. Beirut, iii, 770-8, and al-Samʿānī, *Ansāb*, ed. Ḥaydarābad, vi, 187-90, list Rūdhbārs at Iṣfahān, Ṭūs, Balkh, Marw, Hamadhān and Baghdād, and in the provinces of Shāsh and Daylam. As homes or places of origin of noted scholars, the most significant of these were the Rūdhbār by the gate of Ṭābarān, one of the two townships making up Ṭūs [*q.v.*]; the one near Baghdād; and the one near Hamadhān.

In the historical geography of Persia, the most significant Rūdhbārs have been:

1. On the left bank of the southernmost bend of the Helmand river in southwestern Afghānistān, now in the Nīmrōz province of modern Afghānistān (lat. 30°10′ N., long. 62°39′ E.), with the modern settlement there still preserving the mediaeval name as known e.g. in the periods of Arab and Ṣaffārid domination in Sīstan.

2. In Kirmān, a district along the present-day Mīnāb or Dozdān river which in mediaeval Islamic times lay on the road connecting Djīruft [*q.v.*] with the Persian Gulf at the Straits of Hormuz, the plain of Reobarles crossed by Marco Polo in the later 7th/13th century (see Yule and Cordier, *The Book of Ser Marco Polo*[3], London 1903, i, 109, 113-14; Admiralty Handbooks, *Persia*, London 1945, 391).

3. In mediaeval Daylam [*q.v.*], with the name now surviving in the modern *bakhsh* or county of Rūdbār in Gīlān province and its chef-lieu of the same name in the valley of the Safīd Rūd [see ḳizil-üzen] and on the Ḳazwīn-Rasht road (lat. 36°49′ N., long. 49°29′ E.) (see Rāzmārā (ed.), *Farhang-i djughrāfiyā-yi Īrānzamīn*, ii, 133); the population of the *bakhsh* in *ca.* 1960 was *ca.* 60,000.

This is the most famous of the Rūdhbārs in Islamic history because the district was, from the late 5th/11th century to the 7th/13th century, a major centre for Ismāʿīlī [see ismāʿīliyya] activity. A century or so before the implantation of Ismāʿīlism there, the Rūdhbār of Alamūt [*q.v.*], in the valley of the Shāh Rūd, the southern constituent stream of the Safīd Rūd, had been the residence of the Daylamī dynasty of the Djustānids (on whom see Sayyid Aḥmad Kasrawī, *Shahriyārān-i gum-nām*, Tehran 1307/1928, 22-34; W. Madelung, in *Camb. hist. of Iran*, iv, 223-4) and already a centre of Zaydī Shīʿism. From Alamūt, Ḥasan-i Ṣabbāḥ [*q.v.*] furthered the Ismāʿīlī *daʿwa* by establishing garrisons in several other fortress in the Rūdhbār district towards the end of the 5th/11th century, such as Girdkūh, Lanbasar [*q.v.*] and Maymūndiz [*q.v.*]. These fortresses were held by the community until the operations in Daylam of Hülegü's Mongols in 651/1253, substantially completed with the reduction of most of the fortresses by 654/1256, although in the 1270s the local Ismāʿīlīs seem to have re-occupied some of the Rūdhbār fortresses. See Freya Stark, *The valleys of the Assassins*, London 1936; P.J.E. Willey, *The castles of the Assassins*, London 1963; M.G.S. Hodgson, in *Camb. hist. of Iran*, v, 430-2; F. Daftary, *The Ismāʿīlīs, their history and doctrines*, Cambridge 190, 344-8, 422 ff., 445, 448-9.

Bibliography: See also W. Barthold, *A historical geography of Iran*, Princeton 1983, 73, 141, 209, 232; D. Krawulsky, *Īrān—das Reich der Īlḫāne, eine topographisch-historische Studie*, Wiesbaden 1978, 57, 145. (C.E. Bosworth)

RŪDHRĀWAR, a rural district (*rustāḳ, nāḥiya*) of the mediaeval Islamic province of Djibāl [*q.v.*], sc. western Persia. The geographers describe it as a fertile plain below the Kūh-i Alwand, containing 93 villages and producing high-quality saffron which was exported through the nearby towns of Hamadhān and Nihāwand. The chef-lieu of the district, in which was situated the *djāmiʿ* and *minbar*, was known as Karadj-i Rūdhrāwar, characterised in the *Ḥudūd al-ʿālam*, tr. 132, § 31.8-9, as prosperous and the resort of merchants. The site of this seems to have been distinct from the Karadj which had, in earlier ʿAbbāsid times, been the seat of the Arab Dulafid family [see al-karadj] and which the author of the *Ḥudūd al-ʿālam* states was in ruins by his own time (sc. late 4th/10th century), and it may be that Karadj-i Rūdhrāwar grew up on a new site to replace the old Dulafid capital.

Karadj-i Rūdhrāwar was still flourishing in the post-Mongol period, when Ḥamd Allāh Mustawfī described it as a town on which depended 70 villages, still famed for their saffron production and yielding a tax revenue of 23,500 dīnārs (*Nuzha*, 73, tr. 76). The present ruins known as Rūdīlāwar probably mark the site of Karadj-i Rūdhrāwar (J. de Morgan, *Mission scientifique en Perse*, Paris 1894-1904, ii, 136).

(C.E. Bosworth)

al-**RŪDHRĀWARĪ**, Abū Shudjāʿ Muḥammad b. al-Ḥusayn, Ẓahīr al-Dīn, vizier to the ʿAbbāsid caliphs and *adīb* (437-88/1045-95).

He was actually born at Kangāwar [see kinkiwar] in Djibāl, but his father, a member of the official classes, stemmed from the nearby district of Rūdhrāwar [*q.v.*]. Abū Shudjāʿ Muḥammad served al-Muḳtadī as vizier very briefly in 471/1078-8 after the dismissal of ʿAmīd al-Dawla Ibn Djahīr [see djahīr,

BANŪ] and then for a longer period, Shaʿbān 476-Ṣafar or Rabīʿ I 484/December 1083 to January 1084-April or May 1091, after the second dismissal of ʿAmīd al-Dawla Ibn Djahīr, until pressure on the caliph from the Saldjūḳ sultan Malik-Shāh [*q.v.*] procured his dismissal. Hence in 478/1094 he left ʿIrāḳ for the Pilgrimage, and spent the last year of his life as a *mudjāwir* [*q.v.*] in Medina; he died in Djumādā II 488/June 1095 at the age of 51 and was buried in the Baḳīʿ al-Gharḳad cemetery there.

Al-Rūdhrāwarī is said to have been a wise and humane vizier in Baghdād, who, amongst other things, pursued a conciliatory policy regarding the Sunnīs and Shīʿīs and their rivalries in the city. The sources praise him both for his piety and his literary skills. He was the author of a poetic *dīwān*, of which some 80 verses are extant in the literary and biographical sources, and of a *dhayl* or continuation to Miskawayh's [*q.v.*] history, the *Tadjārib al-umam*, covering the years 368-89/979-99 (ed. and Eng. tr. H.F. Amedroz and D.S. Margoliouth, in *Eclipse of the ʿAbbasid caliphate*, iii, 9-332, tr. vi, 1-358; see Brockelmann, S I, 583, and Margoliouth, *Lectures on Arabic historians*, Calcutta 1930, 147).

(C.E. BOSWORTH)

RUDJŪʿ (A.), verbal noun from the verb *radjaʿa*, basically, "to return", and frequent in the Ḳurʾān in various senses, according to context. It is found e.g. in VII, 168, and XXX, 41, in the expression *laʿallahum yardjiʿūna* "perhaps they will return", which, explains al-Ḳurṭubī, has the sense "they will return from their unbelief" (*ʿan kufrihim*), or elsewhere given as the equivalent of *yatūbūna* ("they will repent of themselves"). *Rudjūʿ* would seem to be, in this sense, a synonym of *tawba*, and just as repentance is considered at the same time man's turning to God and God's turning to man, the verb *radjaʿa* is used both in the active and passive senses: man is said to return to God and be brought to God.

But the verb is employed in other contexts, and especially in verses like II, 28, "He makes you to die, and then He makes you to live, then you are brought to Him", or XXX, 11, "God begins the act of creation, then He repeats it, then you are brought to Him". Al-Ḳurṭubī comments on the first of these verses thus: "that is to say, your return is towards His punishment (*ilā ʿadhābihi mardjiʿukum*) because of your unbelief; it is also said that it is towards life (sc. the resurrection after death) and the questioning (*masʾala*), in such a way that their new beginning (*iʿāda*) is like their beginning (*ibdāʾ*), and it is in this sense that one should understand *rudjūʿ*". This glossing seems to refer implicitly to the pre-eternal *mīthāḳ* [*q.v.*] when God, creating mankind, asked them, "Am I not your Lord? They replied, 'Yes'". The interrogation at the end of time will pose the same question in order to know whether man has remained faithful to this first promise. The question is thus of a return to a primitive situation when, coming forth from the hands of God, man, at the very moment of his creation, can make no reply to his Creator but yes or no. Likewise, after death, at the moment of resurrection, "when the affair is decided" (*idh ḳuḍiya al-amr*), man is unable to plead his cause, and can only answer yes or no. This appears in Fakhr al-Dīn al-Rāzī's commentary on the second verse (XXX, 11), basing himself on the immediate sequel to this when it is a question of the Hour, whence of the Last Judgment. Having revealed, he says, that mankind will be brought back towards Him, "God explains what will take place at the moment of the return to Him (*waḳt al-rudjūʿ ilayhi*)", declaring, "those who are guilty will be thrown into despair (*yulbisu*)". Al-Rāzī explains the sense of this verb by citing the Baghdādī grammarian al-Zadjdjādjī (d. 311/923): the *mulbis* is the one who is silent (*al-sākit*) and who has his speech cut short in the course of his arguing (*al-munḳaṭiʿ fī ḥudjdjatihi*). This is how the return, in the commentaries on the verse in which the verb *radjaʿa* figures, is to be interpreted. The return to God, from this point of view, would appear to be essentially a summons to judgement at the time of the Last Judgement. It follows immediately after the resurrection, which, one might say, forms the first step. The question posed by the philosophers, that of knowing whether the soul alone, or even, the intellect alone, comes back to life, or whether there is also a resurrection of the body, is thus linked with that of *rudjūʿ*. In one sense, it is a question of faith; but belief in a spiritual return has obviously a special theological and philosophical interest.

For the *falāsifa*, such as Ibn Sīnā, the whole orientation of the human life—political, moral, intellectual and religious—is defined by two opposite poles, that of departing and that of arriving. At the departure, there is God in his oneness, God as the "First", from whom stem all the secondary beings; at the arrival, there is God as the "Last" (cf. Ḳurʾān, LVII, 3). Thus, in the political scheme of the *Shifāʾ*, Ibn Sīnā explains how the nature of the two notions of *tawḥīd* on one side, and *maʿād* [*q.v.*] on the other, must require every effort of reflection on the government of mankind. The *maʿād* as the place of return corresponds to the final cause which is, according to Ibn Sīnā, "the cause of the efficience of the efficient cause" (cf. his *Ishārāt*). The return accordingly has an ontological meaning, in so far as it is a constituent element of beings. At a first moment, starting from the First, who is a One, is seen the coming into being, by a descending process, of a multiplicity which ends up in the plurality of forms which the Agent Intellect, *wāhib al-ṣuwar*, gives, on the one hand, to the material elements and the things composed of them, and on the other, separated from all matter, to the human intelligence. From this moment onwards, there is a possible and progressive upwards motion towards unity, and it is this movement of return towards the One which, by rediscovering intelligible reality linked to unity, constitutes the return to God, without however prejudging what the outcome of this return will be. One might conceive of it from the viewpoint of a religious mystical phenomenon, or that of an intellectualist mystical phenomenon of the kind in Plotinus. For the Ikhwān al-Ṣafāʾ [*q.v.*], the particular souls, having accomplished their mission in regard to the bodies and having thus acquired the completeness (*tamām*) which they lacked, return to the universal soul. For them, to die is to pierce the covering of the body, just as, at birth, the embryo had pierced the enveloping membranes which surrounded it in the womb. (On all these questions, see the very interesting comments of L. Gardet, in his *Dieu et la destinée de l'homme*, Paris 1967, 267, 276, 279.)

The idea of a return to origins, which we have seen being sketched out in the commentaries on certain

Ḳur'ānic verses, easily takes on a mystical value. In the present life, men are separated from God by veils which their various faculties suspend between them and Him. Al-Djunayd accordingly used to teach that one should separate oneself from them by a purification of everything to which they cling in themselves, in order to lose oneself in the unique aim which is borne towards Him: this is *al-fanā' bi 'l-madhkūr*, the final aim of mystical experience, a return to the authentic origin of the creature in the divine creative act, *al-nihāya rudjū' ilā 'l-bidāya* (cf. al-Djunayd, *Enseignement spirituel*, tr. R. Deladrière, Paris 1983, 45-6). But this is a type of *rudjū'* which Ibn 'Arabī especially considered: the highest form of the mystical favour and gift is, not to arrive at the summit of the spiritual ascension but to be sent back amongst creatures in order to enlighten and guide them. Thus we have here a return to mankind. One should note that this is what happened to the Prophet: he was raised up at the time of the *mi'rādj* [*q.v.*], and he was sent back with the mission of announcing the good news and of adopting a watchful attitude (on this concept of return, see M. Chodkiewicz, *Le sceau des saints*, Paris 1986, 141, 185, 217). Finally, one should mention the idea of a return at the end of time: the return of the Messiah, of Muḥammad and of the Mahdī. This is totally bound up with the eschatological visions nurtured, above all, by various *ḥadīths*.

Bibliography: Given in the article.

(R. ARNALDEZ)

RŪFUS AL-AFSĪSĪ, Rufus of Ephesus, a Greek physician who lived at Ephesus [see AYA SOLŪK] around 100 A.D. Of his biography hardly anything is known. He was an important medical author, who wrote monographs on many questions concerning pathology and dietetics. Most of his writings, however, were lost during the Middle Ages since his work was overshadowed by that of Galen [see DJĀLĪNŪS] (cf. O. Temkin, *Galenism. Rise and decline of a medical philosophy*, Ithaca and London 1973). Consequently, only four of his works have survived in Greek: 1. On kidney and bladder diseases (ed. A. Sideras, *CMG* III, 1, Berlin 1977); 2. On satyriasmus and gonorrhea (ed. Daremberg and Ruelle, Paris 1879, 64-84); 3. On the names of the parts of the human body (ed. G. Kowalski, diss. Göttingen 1960), and 4. On questions put to patients by physicians (ed. H. Gärtner, *CMG*, Suppl. IV, Berlin 1962). Of all the other works by Rūfus, only fragments are known, transmitted by Byzantine compilers, mainly by Oribasius and Aetius of Amida. A work on the diseases of the joints was translated into Latin in the 6th century, and has thus been preserved (*De podagra*, ed. H. Mørland, Oslo 1933).

Under these circumstances, the Arabic tradition is of crucial importance. The translators, who in the 3rd/9th century rendered at Baghdād far more than one hundred books by Galen and other Greek physicians into Arabic, did not ignore Rūfus, whose works at that time had not yet been eclipsed by those of Galen. In his *Kitāb al-Ḥāwī*, Muḥammad b. Zakariyyā' al-Rāzī [*q.v.*] quotes a dozen works by Rūfus. In 377/987 Ibn al-Nadīm presents 42 titles of Rūfus (*Fihrist*, ed. Flügel, 291-2, ed. Tehran, 350), and this list was enlarged with 16 titles by Ibn Abī Uṣaybi'a (d. 668/1270) (*'Uyūn al-anbā'*, ed. A. Müller, i, 33-4). Both lists constitute an important guideline for the reconstruction of Rūfus's work.

Attention may in particular be called to the following works:

1. *Maḳāla fī Mā yanbaghī li 'l-ṭabīb an yas'ala 'anhu 'l-'alīl* = Τί δεῖ τὸν ἰατρὸν ἐρωτᾶν τὸν νοσοῦντα (Ibn Abī Uṣaybi'a, i, 34, 11-12). This work was used and copied out by Isḥāḳ b. 'Alī al-Ruhāwī in his *K. Adab al-ṭabīb* (*The conduct of the physician by al-Ruhāwī*, facs. ed. Frankfurt a. M. 1985, 134-9).

2. *Maḳāla fī 'l-Yaraḳān* = Περὶ ἰκτέρου. Greek excerpts are preserved by Aetius of Amida (*Tetrabiblos* X, chs. 17-18). An epitome in Arabic is found in the codex Berolinensis (Ahlwardt 6232); there is also a 14th century Latin tr. by Nicolaus of Regium (Niccolò de Reggio) (ed. M. Ullmann, *Die Schrift des Rufus von Ephesos über die Gelbsucht in arabischer und lateinischer Übersetzung*, in *Abh. Akad. d. Wiss. Göttingen*, phil.-hist. Kl. III. Folge, no. 138, Göttingen 1983).

3. *Maḳāla fī 'l-Ḥifẓ* = Περὶ μνήμης ἀπολωλυίας. This work can partly be reconstructed from Greek excerpts in Aetius of Amida (*Tetrabiblos* VI, ch. 23) and from the Arabic transmission in al-Rāzī, *Ḥāwī*, i, 94-5).

4. *Maḳāla fī 'l-Mālankhūliyā* or *Kitāb al-Mirra al-sawdā'* = Περὶ μελαγχολίας. Next to excerpts found in Aetius, there are above all Arabic fragments available, preserved by al-Rāzī and by Isḥāḳ b. 'Imrān (*Abhandlung über die Melancholie und Constantini Africani Libri duo de Melancholia*, ed. K. Garbers, Hamburg 1977) (cf. H. Flashar, *Melancholie und Melancholiker in den medizinischen Theorien der Antike*, Berlin 1966, 84-104).

5. *Kitāb al-Tadbīr* = Περὶ διαίτης. This is a large work on dietetics, i.e. on a proper way of life, in which an harmonious balance is sought between work and leisure, movement and rest, food and drink, sexual intercourse and continence, sleep and vigil, joy and sorrow. Many fragments have been preserved in Oribasius as well as in Ḥunayn b. Isḥāḳ (*K. al-Aghdhiya*, ms. Bankipore, Khudābakhsh 2142), al-Rāzī, Ibn Samadjūn and Ibn al-Bayṭār.

6. *Kitāb al-Sharāb* = Περὶ οἴνου, translated into Arabic by Ḳusṭā b. Lūḳā [*q.v.*]. There are fragments in al-Rāzī, Isḥāḳ b. Sulaymān al-Isrā'īlī and al-Raḳīḳ al-Nadīm al-Ḳayrawānī, *K. Ḳuṭb al-surūr fī awṣāf al-khumūr* (cf. Ullmann, *Neues zu den diätetischen Schriften des Rufus von Ephesos*, in *Medizinhistorisches Journal*, ix [1974], 30-7).

7. *Kitāb al-Laban* = Περὶ γάλακτος. From this work an excerpt was made by Aetius of Amida (*Tetrabiblos* II, chs. 86-103). A summary of the Arabic translation has been preserved in al-Rāzī, *Ḥāwī*, xxi, 440-7. It is a monograph in which all kinds of dairy products, milking and cheese are described from the most various points of view.

8. *Kitāb Tarbiyat al-aṭfāl* = Περὶ κομιδῆς παιδίων. This is a work on pediatrics and pediatric diseases, copied out by al-Rāzī in his *Ḥāwī* and by Aḥmad b. Muḥammad b. Yaḥyā al-Baladī (4th/10th century) in his *K. Tadbīr al-ḥabālā wa 'l-aṭfāl* (cf. Ullmann, *Die Schrift des Rufus "De infantium curatione" und das Problem der Autorenlemmata in den "Collectiones medicae" des Oreibasios*, in *Medizinhistorisches Journal*, x [1975], 165-90).

9. *Kitāb al-Adwiya al-ḳātila* (the Greek title has not been transmitted). This is a work on poisoning and its therapy, in which vegetable poisons and bites of insects, serpents and dogs are dealt with. Important fragments have been preserved by al-Rāzī, Ibn Sīnā (*Ḳānūn*) and al-Ḥusayn b. Abī Tha'lab b. al-Mubārak, *K. al-Munḳidh min al-halaka* (ms. Chester Beatty 4525).

10. The so-called "Journals of sick persons" are a collection of 21 clinical reports which Sarābiyūn b. Ibrāhīm inserted in his *K. al-Fuṣūl al-muhimma fī ṭibb al-a'imma* (ms. Oxford, Bodl., Hunt. 461). They deal with melancholy, frenzy, lethargy, epilepsy, paralysis, aches of the joints and angina. According to the title

they were noted down by "Rūfus and other ancient and modern physicians" (ed. Ullmann, *Rufus von Ephesos, Krankenjournale*, Wiesbaden 1978). The editor tried to prove that the 21 pieces form a unity and that no other physician than Rūfus can be considered as an author. F. Kudlien (in *Clio Medica*, xiv [1979], 148-9, and xv [1981], 137-42) is, however, of a different opinion.

All these writings show Rūfus as an all-round physician, who deals with many pathological questions and who attaches special importance to dietetic prescriptions. As can be inferred from many a remark which he interwove into his representations, he had strong cultural-historical interests. Like Galen he stood in the tradition of Hippocrates, but in contrast to the former he was not apparently interested in current philosophical questions. His attitude was less speculative, but rather, closer to the facts; yet the Middle Ages gave preference to Galen's system, which had a philosophical basis.

RŪḤ [see NAFS].

RŪḤ B. ḤĀTIM [see RAWḤ B. ḤĀTIM].

RŪḤ ALLĀH [see KHUMAYNĪ in Suppl.].

AL-**RUHĀ** or AL-RUHĀʾ, the Arabic name of a city which was in early Islamic times in the province of Diyār Muḍar [*q.v.*] but known in Western sources as EDESSA (Syriac Orhāy, Armenian Urhay). It is now in the province of Diyarbakır in the southeast of modern Turkey and is known as Urfa, a name for the city which is not clearly attested before the coming of the Turks to eastern Anatolia.

1. In pre-Islamic times.

The city is probably an ancient one, though efforts to identify it with the Babylonian Erech/Uruk or with Ur of the Chaldees cannot be taken seriously. Its site, at the junction of ancient highways from Armenia southwards and east-west from the fords across the Euphrates to Mesopotamia and Persia, must have made it strategically valuable when it was founded or re-founded by the Seleucids. Orhāy now received new names, such as "Antioch by the Callirrhoe", i.e. "by the beautiful, flowing [water]", a reference to its famed fish-ponds or to the river of Orhāy, and Edessa, originally the name of the Seleucids' own capital in Macedonia.

The names of the local rulers, called by the Greeks Phylarchs or Toparchs, are known. The early ones were vassals of the Parthians, in whose political and cultural sphere Edessa lay, but in the 2nd century A.D. it came sporadically under Roman rule, with its kings therefore as Roman vassals. These kings seem to have been of Arabic stock, although their regnal names included Iranian as well as Semitic ones. In the early 3rd century they are said to have adopted Christianity, and certainly, by the early 4th century the whole of the city was Christian and famed as the first kingdom officially to adopt Christianity as its state religion, a prominent role being assigned to King Abgar V, who was said to have acknowledged Jesus Christ as the Son of God before His crucifixion.

The monarchy in Edessa had ended *ca.* 242, affected adversely by the appearance on the scene in the Near East of the aggressive and expansionist Sāsānid Persian empire and the Roman withdrawal from much of the Mesopotamian countryside, although the Romans and the Byzantines retained dominion over the city until the Arab invasions. Edessa now became a major centre for Syriac-language literary activity and for Christian religious life, becoming, like most of Mesopotamia and Syria, Monophysite in theology during the course of the 6th century. When the Arabs appeared, there were in the city a small community of Nestorians, a Melkite hierarchy and community, and the two ethnic elements of Monophysites, the Syrian Jacobites (the majority in Edessa) and the Armenians.

2. The Islamic period up to the Ottomans.

Abū ʿUbayda in 16/637 sent ʿIyāḍ b. Ghanm to al-Djazīra. After the Greek governor Joannes Kateas, who had endeavoured to save the region of Osrhoëne by paying tribute, had been dismissed by the emperor Heraclius and the general Ptolemaius put in his place, al-Ruhāʾ (Edessa) had to surrender in 18/639 like the other towns of Mesopotamia (al-Balādhurī, 172-5; Ibn al-Athīr, ii, 414-17; Yāḳūt, s.v. *al-Djazīra*; Khwārazmī, ed. Baethgen, *Fragmente syr. u. arab. Historiker*, Leipzig 1884, 16, 110 = *Abh. KM*, viii, no. 3; Theophanes, ed. de Boor, 517, 521). The town now lost its political and very soon also its religious significance and sank to the level of a second-rate provincial town. Its last bishop of note, Jacob of Edessa, spent only four years (684-7) and a later period again of four months in his office (708). The Maronite Theophilus of Edessa (d. 785) wrote a "Chronicle of the World" and translated into Syriac the "two Books of Homer about Ilion".

Al-Ruhāʾ, like al-Raḳḳa, Ḥarrān and Ḳarḳīsiya, was usually reckoned to Diyār Muḍar (Ibn al-Athīr, viii, 218; al-Yaʿḳūbī, i, 177; M. Hartmann, *Bohtān*, 88, no. 2 and 3 = *MVAG* [1897], i, 28; Canard, *Hʾamdanides*, 91-2). In 67/686-7 al-Ruhāʾ, Ḥarrān and Sumaysāṭ formed the governorship which Ibrāhīm b. al-Ashtar granted to Ḥātim b. al-Nuʿmān (Ibn al-Athīr, iv, 218).

The "old church" of the Christians was destroyed by two earthquakes (3 April 679 and 718). In 737 a Greek named Bashīr appeared in Ḥarrān and gave himself out to be "Tiberias the son of Constantine"; he was believed at first, but was later exposed and executed in al-Ruhāʾ (Barhebraeus, *Chron. syr.*, ed. Bedjan, 119). In 133/750-1 the town was the scene of fighting between Abū Djaʿfar, afterwards the caliph al-Manṣūr, and the followers of the Umayyads, Isḥāḳ b. Muslim al-ʿUḳaylī and his brother Bakkār, who only gave in after the death of Marwān (Ibn al-Athīr, v, 333-4). But continual revolts broke out again in al-Djazīra (Ibn al-Athīr, v, 370 ff.); in the reign of al-Manṣūr, for example, the governor of al-Ruhāʾ of the same name, the builder of Ḥiṣn Manṣūr, was executed in al-Raḳḳa in 141/758-9 (al-Balādhurī, 192). When Hārūn al-Rashīd passed through al-Ruhāʾ, an attempt was made to cast suspicion upon the Christians and it was said that the Byzantine emperor used to come to the city every year secretly in order to pray in their churches; but the caliph saw that these were slanders. The Gūmāyē (from al-Djūma, the valley of ʿAfrīn in Syria), who, with the Telmaḥrāyē and Ruṣāfāyē, were one of the leading families of al-Ruhāʾ, suffered a good deal, however, from his covetousness (Barhebraeus, *Chron. syr.*, 130). In 196/812 the Christians were only able to save the unprotected town from being plundered by the rebels Naṣr b. Shabath [*q.v.*] and ʿAmr by a heavy payment; Abū Shaykh therefore fortified al-Ruhāʾ at the ex-

pense of the citizens (Barhebraeus, 136-7). At the beginning of his reign, al-Maʾmūn sent his general Ṭāhir Dhu ʾl-Yamīnayn [*q.v.*] to al-Ruhāʾ, where his Persian soldiers were besieged by the two rebels, but offered a successful resistance supported by the inhabitants among whom was Mār Dionysius of Tellmaḥrē (Barhebraeus, 139). Ṭāhir, who himself had fled from his mutinous soldiers to Kallinikos, won the rebels over to his side and made ʿAbd al-Aʿlā governor of al-Ruhāʾ; he oppressed the town very much (*ibid.*, 139-40). Muḥammad b. Ṭāhir, who governed al-Djazīra in 210/825, persecuted the Christians in al-Ruhāʾ, as did the governors under al-Muʿtaṣim and his successors.

In 331/942-3 the Byzantines occupied Diyārbakr, Arzan, Dārā and Rās al-ʿAyn, advanced on Naṣībīn and demanded from the people of al-Ruhāʾ the holy picture on linen of Christ called μανδύλιον (*al-Iḳōna al-Mandīl*); with the approval of the caliph al-Muttaḳī, it was handed over in return for the release of 200 Muslim prisoners and the promise to leave the town undisturbed in future (Yaḥyā b. Saʿīd al-Anṭākī, ed. Kračkovskiy-Vasilʼev, in *Patrol. Orient.*, xviii, 730-2; Thābit b. Sinān, ed. Baethgen, in *op. cit.*, 90, 145). The picture reached Constantinople on 15 August 944, where it was brought with great ceremony into the Church of St. Sophia and the imperial palace (see in addition to Yaḥyā, *loc. cit.*, al-Masʿūdī, *Murūdj*, ii, 331 = § 753; Ibn al-Athīr, viii, 302, and an oration ascribed to Constantine Porphyrogenitus on the εἰκὼν ἀχειροποίητος or *De imagine Edessena*, ed. Migne, *Patrol. Graec.*, cxiii, col. 432, better ed. von Dobschütz, *Christusbilder*, in *Texte u. Untersuch.*, xviii). But by 338/949-50 this treaty was broken by the Ḥamdānid Sayf al-Dawla, who, together with the inhabitants of al-Ruhāʾ, made a raid on al-Maṣṣīṣa (Yaḥyā, *op. cit.*, 732). Under the Domesticus Leo the Byzantines in 348/959-60 entered Diyār Bakr and advanced on al-Ruhāʾ (Ibn al-Athīr, viii, 393). The emperor Nicephorus Phocas towards the end of 357/967-8 advanced on Diyār Muḍar, Mayyāfāriḳīn and Kafartūthā (Yaḥyā, 815). According to Ibn al-Athīr (viii, 454, below), al-Ruhāʾ was burned to the ground in Muḥarram 361/October-November 971 and troops left in al-Djazīra. One should rather read Muḥarram 362/October-November 972 and take the reference to be to the campaign of John Tzimisces, unless there is a confusion between Edessa and Emesa (Ḥimṣ) which was burned in 358/969 (Barhebraeus, *Chron, syr.*, 190).

Ibn Ḥawḳal in *ca.* 367/978 refers to over 300 churches in al-Ruhāʾ, and al-Muḳaddasī reckons the cathedral, the ceilings of which were richly decorated with mosaics, among the four wonders of the world.

Down to 416/1025-6, the town belonged to the chief of the Banū Numayr, ʿUṭayr. The latter installed Aḥmad b. Muḥammad as *nāʾib* there, but afterwards had him assassinated. The inhabitants thereupon rebelled and offered the town to Naṣr al-Dawla the Marwānid of Diyārbakr (Greek Ἀπομερμάνης), who had it occupied by Zangī. After the murder of ʿUṭayr and the death of Zangī (418/1027), Naṣr al-Dawla gave ʿUṭayr's son one tower of al-Ruhāʾ and another to Shibl's son (Ibn al-Athīr, ix, 244). The former (according to others, a Turk Salmān, Σαλαμάνης, appointed governor, who was hard pressed by ʿUṭayr's widow) then sold the fortress for 20,000 darics and four villages to the Byzantine Protospatharius Georgius Maniakes, son of Gudelius, who lived in Samosata; he appeared suddenly one night and occupied three towers. After a vain attempt by the Marwānid *amīr* of Mayyāfāriḳīn to drive him out again, in which the town, which was still inhabited by many Christians, was sacked and burned (winter of 1030-1), Maniakes again occupied the citadel and the town (Ibn al-Athīr, ix, 281 *bis*; Michael Syrus, ed. Chabot, iii, 147; Barhebraeus, *Chron. syr.*, 214; Aristakēs Lastivertcʿi, c. 7, pp. 24-5; Matthew of Edessa, ed. 1898, c. 43, pp. 58-62 = tr. Dulaurier, 46-9; Cedrenus-Seylitzes, ed. Bonn, ii, 500; the accounts of the events preceding the surrender differ very much). Edessa under Maniakes seems to have enjoyed a certain amount of independence from Byzantium, as he sent an annual tribute thither (Cedrenus-Seylitzes, 502).

In Radjab 427/May 1036, the Patricius of Edessa became a prisoner of the Numayrī Ibn Waththāb and his many allies; the town was plundered but the fortress remained in the hands of the Greek garrison (Ibn al-Athīr, ix, 305; Barhebraeus, *Chron. syr.*, 217). By the peace of 428/1037 the emperor again received complete possession of Edessa which was refortified (Ibn al-Athīr, ix, 313; Barhebraeus, 221).

According to the Armenian sources, Maniakes was followed by Apukʿap or Λέων Λεπενδρηνός, then by the Iberian Βαρασβατζέ as strategus of Edessa; in 1059 Ἰωάννης ὁ Δουκήτζης was catapanus of the town. In 1065-6 and 1066-7, the Turks under the Khurāsān-Sālār attacked the town and the Saldjūḳ Alp Arslān besieged it for fifty days in 462/1070; it was defended by Wasil (son of the Bulgar king Alōsian?). After the victory of Malāzgird [*q.v.*], Edessa was to be handed over to the sultan, but the defeated emperor Romanus Diogenes had no longer any authority over it, and its Catapanus Paulus went to his successor in Constantinople (Scylitzes, ed. Bonn, 702). In 1081-2 Edessa was again besieged by an *amīr* named Khusraw, but in vain. After the death of Wasil, the Armenian Smbat became lord of Edessa and six months later (23 September 1083) Philaretus Brachamius succeeded him. But he lost it in 1086-7 when, in his absence, his deputy was murdered and the town handed over to the Saldjūḳ sultan Malikshāh. The latter appointed the *amīr* Buzān governor of al-Ruhāʾ and Ḥarrān. When the latter had fallen in 487/1094 fighting against Tutush [*q.v.*], Tutush's general Alpyārūḳ occupied the town, but it was not plundered by his army as he was poisoned by a Greek dancing-girl called Galī. Then the Armenian Kuropalates Tʿoros (Theodorus), son of Hetʿum, took the citadel. When in 1097-8 Count Baldwin of Bouillon captured Tell Bāshir, Tʿoros asked him to come to al-Ruhāʾ to assist him against their joint enemies, and received him with joy, but was shortly afterwards treacherously murdered by him (Matthew of Edessa, ed. 1898, 260-2 = tr. Dulaurier, 218-21; *Anonym. Syriac chronicle of 1203-1204*, in Chabot, *C.-R. Acad. Inscr. Lettr.* [1918], 431 ff.).

From 1098 the Latins ruled for half a century the "County of Edessa" to which also belonged Sumaysāṭ and Sarūdj (1098 Baldwin of Bouillon) I; 1100 Baldwin of Bourg II; 1119 Joscelin (de Courtenay) I; 1131 the latter's son Joscelin II). The town suffered a great deal under them, and there was some justification for Matthew of Edessa's comment that Baldwin du Bourg "hated Christians more than Turks". Ecclesiastical disputes, for instance, on the vexed question of the date for celebrating Easter, divided the Christians, Latin versus Monophysites. Despite their private jealousies, the Crusaders managed to hold on to the county of Edessa, largely because of the divided counsels of the Muslim *amīrs*, but with the rise of the resolute and skilful Atabeg of Mawṣil, ʿImād al-Dīn Zangī—coinciding in 1143 with the deaths of two of

the strongest figures in the Christian camp, the Byzantine emperor John II Comnenus and Fulk, king of Jerusalem—the days of Crusader control over Edessa were numbered.

On 25 Djumādā II 539/23 December 1144, ʿImād al-Dīn Zangī took it (a detailed description of these events in the *Anonymous Syriac chronicle of 1203-1204*, ed. Chabot, in *CSCO*, series iii, vol. xv, 118-26; tr. Chabot, *Une épisode de l'histoire des Croisades*, in *Mélanges Schlumberger*, i, Paris 1924, 171-9). Under Joscelin II and Baldwin of Kaysūm, the Franks again attempted to retake the town in October 1046 and succeeded in entering it by night, but six days later Nūr al-Dīn appeared with 10,000 Turks, and soon occupied and sacked it; the inhabitants were put to death or carried into slavery. Baldwin was killed and Joscelin escaped to Sumaysāṭ (Barhebraeus, 311-12). The fall of this eastern bulwark of the Crusaders aroused horror everywhere; in Europe it led to the Second Crusade. The Syrian Dionysius bar Ṣalībī as Diaconus wrote an "oration" and two poetic *mēmrē* about the destruction of the town. Three similar pieces were written by Basilius Abu 'l-Faradj b. Shummānā, the favourite of Zangī; he had also written a history of the town of Orhāy (Baumstark, *Gesch. d. syr. Lit.*, 293, 298).

After the death of Nūr al-Dīn, his nephew Sayf al-Dīn Ghāzī took the town in 1174; in 1182 it fell to the Ayyūbid Ṣalāḥ al-Dīn, who later handed it over to al-Malik al-Manṣūr. When al-Malik al-ʿĀdil died in 1218, his son al-Malik al-Ashraf Sharaf al-Dīn Mūsā became lord of al-Ruhāʾ, Ḥarrān and Khilāṭ. In June 1234 the town was taken by the army of the Rūm Saldjūḳ ʿAlāʾ al-Dīn Kayḳubād and its inhabitants deported to Asia Minor (Kamāl al-Dīn Ibn al-ʿAdīm, tr. Blochet, in *ROL*, v, 88; Barhebraeus, *Chron. syr.*, 468). But it was retaken within four months by al-Malik al-Kāmil. In 1244 the Mongols passed through the district of al-Ruhāʾ and in 1260 the troops of Hülegü. The people of al-Ruhāʾ and Ḥarrān surrendered voluntarily to him, but those of Sarūdj were all put to death (Barhebraeus, *Chron. syr.*, 509; *Chron. arab.*, ed. Beirut, 486).

In the time of Abu 'l-Fidāʾ, al-Ruhāʾ was in ruins. Ḥamd Allāh Mustawfī in *ca.* 740/1340 could still see isolated ruins of the main buildings. According to al-Ḳalḳashandī, the town had been rebuilt by his time (*ca.* 1400) and repopulated and was in a prosperous state. In connection with the campaigns of Tīmūr, who conquered al-Djazīra in 1393, al-Ruhāʾ is repeatedly mentioned in the *Ẓafar-nāma* of Sharaf al-Dīn ʿAlī Yazdī (written in 828/1425).

3. The Ottoman and modern periods.

Al-Ruhā was conquered by sultan Selīm I, probably in 923/1517. The first Ottoman tax register was compiled in 924/1518; the tax-paying population at that time consisted of 782 Muslim families and 75 bachelors, 300 Christian families and 42 bachelors, amounting to a total of 1,082 families and 117 bachelors, or an estimated population total of slightly over 5,500. This low figure was probably due to the upheavals of the Ottoman-Ṣafawid War, for only eight years later, in 932/1526, the tax-paying population had increased to 988 Muslim and 334 Christian families, along with 182 Muslim and 89 Christian bachelors. Moreover, 213 Ottoman military men had settled in the town, thus bringing total population to about 8,000 people. A further tax register from the last year of Süleyman the Magnificent (973/1566) records 1,704 Muslim and 866 Christian families, along with 705 Muslim and 221 Christian bachelors; these figures point to a total population of 13,000-14,000 inhabitants. The town consisted of five large *maḥalles* named after the five gates and must have possessed an active textile industry, for the dye houses of al-Ruhā and nearby Ḥarrān produced the impressive revenue of 100,000 *aḳčes*. A *bedestān* is also on record.

In the 10th/16th century, al-Ruhā formed part of the *beglerbeglik* of Diyārbekir, and was located on the caravan route from Mawṣil and Mārdīn to Aleppo. It was therefore visited by several European travellers, among them an anonymous merchant whose travel account was published in 971-2/1564. He mentions the principal features of the town which were to recur in European travel accounts throughout more than two centuries: the strong walls and impressive citadel, the sanctuary of Abraham/Ibrāhīm, venerated by Christians and particularly by Muslims, the fishpond next to the sanctuary, and, at a distance from the town, a well frequented by lepers and other sick people. A few years later, al-Ruhā was visited by the Augsburg physician and botanist Rauwolf (982/1575), who describes the town as handsome and well-built. The town possessed a lively trade in rugs and carpets, which were sometimes sold to Europe, and also served as a point of transit for goods from Damascus, Aleppo and Istanbul, which were sold in Persia and ʿIrāḳ.

The most detailed description of al-Ruhā/Urfa before the 13th/19th century is due to the Ottoman traveller Ewliyā Čelebi, who passed through the town (which he calls Urfa, as do all other visitors of this period) in 1056/1646. His interest in it may have been due to the fact that one of his relatives had served as a *ḳāḍī* there. He describes two fortresses, one the citadel on the hill and the other a fortified settlement (*wārōsh*). The citadel he links with King Nimrod, and the two Roman columns standing there Ewliyā interprets as a catapult with which this ruler supposedly had the prophet Ibrāhīm al-Khalīl (Abraham) thrown into the fire. Otherwise, the citadel contained 20 small houses inhabited by the commander (*dizdār*) and his 200 men, in addition to a mosque, an armoury, a barn and a number of cisterns. Ewliyā mentions only three gates, partly with names different from those recorded in the 10th/16th century tax register. He claims to have counted 2,600 houses in the fortified section. If his count was accurate and the area outside the fortifications remained uninhabited, the town must have stagnated since 973/1566. As Ewliyā's figures concerning houses are generally more generous than the household data found in late 10th/16th century tax registers, the upheavals of the Djelālī period, particularly the occupation by the forces of Ḳarā Yazīdjī in 1008/1599-1600, must have taken their toll. Houses were generally built of mud brick, but there were quite a few opulent residences with their own gardens and baths, belonging to pashas and more rarely to *ḳāḍīs*.

He also enumerates 22 mosques; the mosque

known as Ḳizil Djāmiʿ was considered to be of great age and a former monastery, converted into a mosque by Hārūn al-Rashīd. The minaret, undated, often has been regarded as the bell tower of the church which formerly stood on the mosque site, but according to Gabriel, it is an original minaret. Ewliyā has also picked up a legend of Jesus' visit to al-Ruhā and his stay in a local monastery. Ewliyā records three *medreses*; the *medreses* possessed no *waḳf* revenues, but the traveller comments on the multitude of Kurdish scholars, both in the *medreses* proper and in the local *dār al-ḥadīth* and *dār al-ḳurrāʾ*. There were also three *zāwiyes*. Among the public kitchens, the most notable was the *ʿimāret* of Ibrāhīm, supposedly built by the caliph al-Maʾmūn. Connected with the *ʿimāret* was al-Ruhā/Urfa's major sanctuary, dedicated to Ibrāhīm by Ṣalāḥ al-Dīn Ayyūbī's nephew al-Malik al-Ashraf (608/1211-12), and visited by pilgrims from all over the Islamic world.

Ewliyā was not much impressed with the shopping streets and markets of al-Ruhā/Urfa; but though the Küre Čarshïsï was not of imposing appearance, quantities of valuable goods were sold there. He records a total of 400 shops and a large number of mills, one of them named for a certain Ṭayyāroghlu Aḥmed Pasha. The town also possessed a tannery; here a superior quality of yellow maroquin leather was manufactured. According to the French merchant Tavernier, al-Ruhā/Urfa, along with Toḳāt and Diyārbekir, was the source of the finest maroquin leathers. In addition, the town was noted for its cotton fabrics, and there was also some silk production.

Ewliyā's account is confirmed by the description of Tavernier, who passed through the town in 1054/1644. On his sight-seeing tour, this merchant and traveller saw many houses poorly built or even totally in ruins; there were so many empty lots that Tavernier compared the town to a desert. He also observed rugs and carpets spread out by the side of the fish pond, and commented on the veneration Muslims felt for this site. A church in the midst of a cemetery supposedly had been selected by St. Alexis as a place of retreat; and not far from the town Tavernier was able to see the Armenian church and monastery of St Ephrem in the midst of a Christian necropolis. This monastery was partly located in grottoes cut into the living rock, a feature of the local landscape also noted by Ewliyā and many other travellers; in the early 13th/19th century they were used as habitations.

When Thévenot passed through al-Ruhā/Urfa in 1074/1664, the damages mentioned by Ewliyā and Tavernier were still clearly visible. A valuable record of al-Ruhā/Urfa's otherwise poorly documented 13th/18th century is found in the accounts of revenues and expenditures pertaining to the mosque of Ibrāhīm al-Khalīl and the then newly constructed Riḍwāniyye *medrese*. These survive for a few years beginning with 1151/1738-39 (Osmanlı Arşivi, Istanbul, Maliyeden Müdevver 2004). The register contains a listing of the shops, gardens, mills and public baths belonging to these foundations, along with information about tenants and rents. The foundations also received rent from the Aladja Khān, in addition to a mulberry orchard located in front of the *medrese*. These accounts document the existence of a flourishing *čarshı*, with relatively few properties untenanted. Apparently Urfa's recovery was under way by this time. Thévenot also commented on the large number of ruined houses, even though the walls were in good condition and the town populous.

The Danish traveller Niebuhr passed through the town in the spring of 1179-80/1766, and produced a sketch map of the built-up area, which shows the town as possessing four gates, but there must have been an entrance to the citadel, even though his sketch does not show any. Thus we can understand why most accounts mention only four gates, while the Ottoman tax registers and B. Poujoulat (before 1256/1840) record five. His account mentions twelve minarets, of which the mosque of Khalīl al-Raḥmān was the most notable, and also two Christian churches within the walls. The Armenian church was in a largely ruinous condition, but the surviving part richly decorated with Persian rugs; the congregation numbered about 500 families, while the Jacobite church served only about 150 persons. In Niebuhr's time, Turkish was the principal language spoken in al-Ruhā/Urfa, but merchants and mule drivers usually knew Arabic and Kurdish as well.

However, in socio-economic terms, the richest travel account between Ewliyā's time and the republican period is due to Buckingham. He visited the town in 1234/1816, and as Ottoman-Wahhābī warfare closed the roads, spent considerable time there. By his time, the name al-Ruhā had been almost completely supplanted by Urfa, the only people who still called the town by its old name being Christian Arabs. He estimated the town's population as 50,000 persons; 47,500 were Muslims, 2,000 Christians and 500 were Jews. However, Poujoulat, who was in Urfa before 1256/1840, claims that the population consisted of only about 15,000 (14,000 Muslims, 1,000 Armenians, 100 Jacobites). As in Aleppo, the town consisted of two factions, namely the Janissaries and the *sherīfs*, and Buckingham complained of the former's lack of discipline. Buckingham describes the houses as consisting of good masonry, and resembling those of Aleppo; many of the townsmen obviously lived more comfortably than their forefathers, who had made do with the mud brick seen by Ewliyā and his contemporaries. *Ḥarem* and *selāmlïḳ* were separated by a courtyard; the upper floors of the *selāmlïḳs* generally contained opulently furnished reception rooms. Because of the insecurity due to warfare, many of the bazaars were closed; but in more peaceful times, the townsmen were still known for their lively cotton trade. Buckingham was even able to observe cotton printers at work. In addition, rough woollen cloth and rugs, the latter of good quality, were manufactured in Urfa. Goods from India, Persia and Anatolia were ordinarily available. The traveller mentions mohair fabrics from Ankara, which he calls shalloons, and some cashmere shawls.

A slightly later description of Urfa is due to the Prussian officer von Moltke, who visited it in 1254/1838. He mentions a mosque which he does not name, and which must have been the Ḳizil Djāmiʿ, for the structure is described as a solidly-built tower of great antiquity. The author also visited a large foundation adjacent to the two fishponds, which he describes as a *medrese* and which must have been the foundation which Ṣalāḥ al-Dīn had added to the mosque of Ibrāhīm (587/1191). He also made a map of the town and recorded the presence of numerous orchards.

From 1307-8/1890 or slightly earlier dates the description by Cuinet. According to him, the town possessed a population of 55,000, of whom 40,835 were Muslims; about 1297/1880, Sachau had estimated the number of Urfa's inhabitants at minimally 50,000. However, these optimistic evaluations were contradicted by Djewdet Pasha's claim (1298/1881) that Urfa *ḳaḍā* consisted of only 2,380 households or families (1,337 Muslims, 1,003 Christians, 29 Jews).

If we compare the estimates by Buckingham and Sachau-Cuinet, it would seem that population growth in the 13th/19th century was just able to compensate for wartime population losses, and Urfa's population must have been at a low ebb for several decades in the mid-century. Private houses in Cuinet's time were generally built in rough or even regularly hewn stone. The streets possessed wide pavements, while a channel in the centre served for the evacuation of water and household waste. The city walls had deteriorated, but the citadel apparently was in better condition. The town now possessed 18 *medreses* with 500 students, in addition to a *rüs̲h̲diyye*. There were also primary schools for the children of the various Christian churches, so that a total of 2,464 students were receiving a formal education.

At this time, Urfa was a flourishing centre of textile manufacture. The cotton industry survived the competition by factory-woven textiles, partly because manufacturers switched to imported thread which was woven locally. However, to remain competitive, weavers were forced to accept very low wages. By the early 20th century the ancient trade route linking northern Mesopotamia with Aleppo had revived, and Urfa's new prosperity permitted the construction of a town quarter *extra muros*. This development was, however, cut short when, after the fall of the Ottoman Empire Syria became a French and ʿIrāḳa British mandate. British and later French troops occupied Urfa in 1919-20. After severe fighting, which included a local uprising, the Treaty of Lausanne determined the inclusion of Urfa into the newly-founded Republic of Turkey (1923).

Throughout the Republican period, it has not been possible to re-establish Urfa's former trade links. This situation has emphasised the agricultural character of the *vilayet*. Grain is the main crop; apart from wheat, barley and beans are also significant. Productivity is often low, as much of the land is subject to erosion. A significant share of the grain grown is not intended for the market. Irrigation is a precondition for increasing productivity, and the regulation of the Fırat (Euphrates), the region's only important body of water, is expected to expand the area amenable to irrigation.

Limited opportunities in agriculture and the progress of mechanisation have diminished employment here, so that there has been considerable migration of labour to e.g. Adana, Gaziantep and Diyarbekir in search of work; female labour finds work cotton-picking in the Çukorova. Low incomes have likewise limited the progress of education, and literacy rates are lower than the national average. Since 1980-2, however, Urfa has been the site of a college of Dicle University at Diyarbekir, and the foundation of a local university is envisaged by the town's citizens.

(SURAIYA FAROQHI)

RŪḤĀNIYYA (A.), a term derived from the adjective *rūḥānī* according to a well-known mode for the formation of abstract nouns and generally translated by "spirituality" in modern dictionaries. In the ancient texts, however, its usual meaning is rather that of "spiritual being", except in cases where it refers to the *d̲j̲inns* and the *s̲h̲ayāṭīn* which, like the *malāʾika*, evade the sensible perception of the majority of men, but are not of a "spiritual" nature. It is in fact in the vocabulary of angelology that it is most often encountered. Among the *falāsifa* and the Ṣūfīs, it denotes more specifically the *spiritus rector*, the angel who rules (*mudabbir*) each of the celestial spheres. It is in this sense that the Ik̲h̲wān al-Ṣafāʾ (*Rasāʾil*, Beirut 1957, xi, 215) speak of "angels which the *ḥukamāʾ* called *rūḥāniyyāt*". Similarly, ʿAbd al-Karīm al-D̲j̲īlī, in ch. lxii of his *K. al-Insān al-kāmil*, explains that each of the seven heavens is governed by an angel created *min rūḥāniyyati kawkab tilka 'l-samāʾ*. Among the Is̲h̲rāḳiyyūn or Illuminationists, and in particular in the work of al-Suhrawardī, *rūḥāniyya* is also used to denote the "angel of the species", the *rabb al-nawʿ* (see H. Corbin, *En Islam iranien*, Paris 1971, index s.v.).

This word appears frequently in literature relating

to magic. According to Ibn Khaldūn (*Muḳaddima*, iii, 127, tr. Rosethal, iii, 159), magic (*al-siḥr*) consists in "linking the superior natures with the inferior natures. The superior natures are the *rūḥāniyyāt al-kawākib*". This is a statement confirmed by ps.-Madjrīṭī (*Ghāyat al-ḥakīm*, ed. H. Ritter, Leipzig 1933, 182), who claims to reveal the techniques by which it is possible to convoke (*istidjlāb*) the *rūḥāniyya* of the celestial bodies.

While *rūḥāniyya* is currently used in Ṣūfī texts as a denomination of these "cosmic intelligences"—Ibn ʿArabī, for example, speaks in the *K. al-tadjalliyāt* (ed. O. Yahya, Tehran 1988, 317) of purified human spirits granted access to the contemplation of *rūḥāniyyāt mufāraḳa*, forthwith identified with the spirits (*arwāḥ*) of the celestial spheres—it also often denotes the "spiritual entity" of a prophet or of a deceased *walī* whose *murīd* receives supernatural assistance. Thus Ibn ʿArabī speaks (*al-Futūḥāt al-Makkiyya*, Būlāḳ 1329, iii, 43), of his *sulūk* with the *rūḥāniyya* of Jesus. This usage is associated with the notion of sainthood, *uwaysiyya*, which is characterised by the transmission of a *baraka* independently of any contact with a physically present *shaykh*. It is encountered frequently in the literature of the Naḳshbandī *ṭarīḳa*, where the *silsila* presents numerous cases of this type (e.g. that of Abu 'l-Ḥasan al-Kharaḳānī, d. 425/1033 [*q.v.*], who is directly linked with Abū Yazīd al-Biṣṭāmī, d. 234/857 or 261/874 [*q.v.*]). On the doctrinal justification of these chronological anomalies, see ʿAbd al-Madjid al-Khānī, *al-Ḥadāʾiḳ al-wardiyya*, Damascus 1306, 9. In *al-Saʿāda al-abadiyya*, Damascus n.d., 27-8, the same author describes the rites which, at the time of *ziyārat al-ḳubūr*, allow the establishment of a connection with the *rūḥāniyya* of the *walī* whose body is interred in the tomb that is visited. (On this practice, see also the *Rashaḥātʿayn al-ḥayāt* of Fakhr al-Dīn ʿAlī Ṣafī, Tehran 1356/1977, ii, 468). Paul Fenton has drawn attention to an analogous Jewish practice, that of *yiḥūd*, which is also conducted over the tomb of a saint. On the beliefs associated with this meaning of *rūḥāniyya*, see M. Gaborieau, A. Popovic and T. Zarcone (eds.), *Naqshbandis. Cheminement et situation actuelle d'un ordre mystique musulman*, Istanbul-Paris 1990, index s.vv. *rūḥāniyya* and *uwaysiyya*. In *Imaginary Muslims*, London 1993, Julian Baldick has analysed a singular case of the exploitation of traditional data concerning this theme with the appearance in Central Asia, at the end of the 16th century, of a mythical "History of the Uwaysīs".

Bibliography: Given in the article.

(M. Chodkiewicz)

RŪḤĪ (d. after 917/1511), Ottoman historian. There is little definite information about this historian apart from his *makhlaṣ* Rūḥī. From ʿĀlī's [*q.v.*] reference to him in the *Künhü 'l-akhbār* as Edrenewī Mewlānā Rūḥī, it is probable that he was a member of the *ʿulamāʾ* and had a family or professional association with Edirne (J. Schmidt, *Muṣṭafā ʿĀlī's Künhü 'l-aḥbār and its preface according to the Leiden manuscript*, Istanbul 1987, 58). Any identification with Rūḥī Fāḍil Efendi (d. 927/1528), son of the *shaykh al-Islām* Zenbilli ʿAlī Efendi, remains hypothetical (Babinger, *GOW*, 42, and *EI*[1], art. *Rūḥī*). The format of his history and the declaration that he was commanded to write it by Bāyezīd II [*q.v.*] suggest that he may have been connected with the Ottoman court (cf. V.L. Ménage, *Edirneli Rûhî'ye atfedilen Osmanlı tarihinden iki parça*, in *İ.H. Uzunçarşılı'ya armağan*, Ankara 1976, 311-33).

Rūḥī's history, known either as *Tewārīkh-i Āl-i ʿOthmān* or as *Taʾrīkh-i Rūḥī*, narrates the history of the dynasty down to 917/1511. It is divided into two parts: (i) *mebādī*, "beginnings", on general considerations and the virtues of the Ottomans; and (ii) eight *maṭālib*, "questions, researches", each of which describes the reign of one sultan. It was cited as a source by ʿĀlī and Münedjdjim-bashī, and may also have been used by Luṭfī Pasha [*q.v.*] in his *Taʾrīkh* (M.K. Özergin, *İA*, art. *Rūḥī*, at ix, 765). It was thought no longer to exist as an independent text until in 1925 J.H. Mordtmann identified several surviving manuscripts (*Rūḥī Edrenevī*, in *MOG*, ii [1925], 129-36). Of these, however, the "Oxford Anonymous" (ms. Bodleian, Marsh 313) is probably not the work of Rūḥī but an earlier history (covering events to 889/1484 only) which was his main source (Ménage, *Neshrī's History of the Ottomans*, London 1964, 11-13). The work remains unpublished (for manuscripts, see Babinger, *GOW*, 43).

Bibliography: In addition to the references given above, see the bibl. to M.K. Özergin, *İA*, art. *Rûhî*.

(F. Babinger-[Christine Woodhead])

RUHMĪ, a name given in early Islamic geographical, travel and maritime literature to an eastern region of South Asia, most likely in the ancient Suhma region in the western part of Bengal [see BANGĀLA]. There is considerable confusion about its location; readings vary from Ruhmī (al-Yaʿḳūbī, 106) to Rahma (Ibn al-Faḳīh, 15) and Dahum (*Sharaf al-Zamān Ṭāhir Marvazī on China, the Turks and India*, ed. and tr. V. Minorsky, London 1942, text 35). Of these, the closest to Bengali is Dharma (a spelling used by Sulaymān al-Tādjir), a possible reference to a famous Bengali king Dharmapāla (769-801 A.D.). Sulaymān al-Tādjir also noticed correctly Dharmapāla's non-aristocrat and humble origin. According to Ibn Khurradādhbih, 63-7, Ruhmī, a vast kingdom, was bordered by Kāmrūn (Kamrup) not far from China, and was bountifully supplied with elephants, buffaloes and Indian aloe woods. Its coast, according to *Ḥudūd al-ʿālam*, tr. 87, included areas such as Nimyās, Samandar, Andrās, Ūrshīn and Harkand (ancient Harikela near Čandradvīpa in South Bengal, from which comes Baḥr al-Harkand, the early Arabic name for the Bay of Bengal). The kingdom fought constantly with its neighbours, Ballaharā (Radja Ballahrāya of the Rāṣṭrakūṭa dynasty of the Deccan) and Djurz (Gurdjaras of Kanawdj). It was particularly famous for its fine cotton cloth, later known as muslin. In addition to gold coins, cowrie-shells were used for currency. Trade with the Arabs flourished in the port cities in the south, especially in Shāṭiʾ-djām (Chittagong [*q.v.*]) and Samandar. The recent dicovery of two ʿAbbāsid coins in Bangladesh, one from Paharpur dated 172/788, from the time of Hārūn al-Rashīd (170-208/786-809) and the other from Mainamati minted during the reign of al-Muntaṣir (247-8/861-2) attests to this early Arab-Bengal trade link which undoubtedly speeded up the Islamisation of the region.

Bibliography (in addition to references given above): Sulaymān al-Tādjir and Abū Zayd al-Sīrāfī, *Akhbār al-Ṣīn wa 'l-Hind* (237/851), ed. and tr. J. Sauvaget, *Relation de la China et l'Inde*, Paris 1948, text 13-14.

(M.Y. Siddiq)

RUḲAYYA, daughter of Muḥammad and his wife Khadīdja. She is sometimes said to have been the eldest of his four daughters, but this is unlikely. She and her sister Umm Kulthūm were betrothed and married to two sons of Abū Lahab [*q.v.*], but the latter told his sons to divorce their wives when Muḥammad began his career as a prophet. The divorces could not have been, as sometimes stated, after the revelation of

sūra CXI, in which Abū Lahab is attacked, unless that was an early Meccan revelation. The statement in some sources that the divorces took place before the marriages had been consummated, is probably an invention to keep the holy family free from contamination with the family of Abū Lahab. After the divorce, Ruḳayya was married to ʿU̲th̲mān b. ʿAffān [*q.v.*], went with him and other Muslims to Abyssinia, and returned to Mecca before the *Hid̲j̲ra*. She made the *Hid̲j̲ra* to Medina with her husband, but died while Muḥammad was absent from Medina on the expedition to Badr [*q.v.*]. After several miscarriages she had a son, ʿAbd Allāh, but a few years after his mother's death a cock pecked his eye and he died.

RUḴHĀM [see Suppl.].

al-**RUKHKH** (a.), a huge, ostrich-like bird (*Aepyornis maximus*), now extinct, probably existing well into historical times as a peculiar species in Madagascar, where it is mentioned by among others Marco Polo. Other aepyornitidae, such as the New Zealand Moa bird, which became extinct only around the 14th century, might have contributed to the genesis of the *rukhkh*'s image. Though early Arab seafarers could conceivably have seen the bird face-to-face, Arabic tradition soon turned the *rukhkh* into a fabulous creature embellishing it with all kinds of strange details.

While early references to al-D̲j̲āḥiẓ cannot be verified, the first mention of the *rukhkh* is found in Buzurg b. S̲h̲ahriyār's (4th/10th century) *ʿAd̲j̲āʾib al-Hind*. Further references are mostly contained in works belonging to the genre of *ʿad̲j̲āʾib* literature, such as Abū Ḥāmid al-G̲h̲arnāṭī's (d. 565/1169-70 [*q.v.*]) *Tuḥfat al-albāb*, al-Dimas̲h̲ḳī's (d. 727/1327 [*q.v.*]) *Nukhbat al-dahr fī ʿad̲j̲āʾib al-barr wa 'l-baḥr* and Ibn al-Wardī's (d. 749/1349 [*q.v.*]) *K̲h̲arīdat al-ʿad̲j̲āʾib*; later summaries are rendered by al-Damīrī (d. 808/1405 [*q.v.*]) and al-Ibs̲h̲īhī (9th/15th century [*q.v.*]). By way of its mention in the *Travels* of Sindbād the sailor, itself included in the widely-read *Arabian Nights* (Chauvin, *Bibliographie*, vi, 92-3, vii, 12), the *rukhkh* became known and was discussed in Western sources.

According to the fabulous accounts of various Arabic authors, the *rukhkh* is capable of carrying an elephant while airbound; each of its wings has 10,000 feathers of an enormous size, and it lays eggs as big as a mountain (cf. G. Thompson, *Motif-index*, B 31.1). These accounts obscured the opportunity to perceive the *rukhkh* as a real creature and succeeded in relegating it to the realm of fantasy, similar to the ʿAnḳāʾ [*q.v.*], and closely assimilated with the Sīmurg̲h̲ [*q.v.*], with both of which the *rukhkh* is in fact sometimes confused. On the other hand, already authors such as al-Ābī (d. 421/1030) in his *Nat̲h̲r al-durr*, vi, 532, qualify the alleged rejuvenating properties of his feathers (or beak) as a tall tale (*kad̲h̲ib*).

Bibliography: J. Vernet, *Rujj = Aepyornis maximus*, in *Tamuda*, i (1953) 102-5; H. Eisenstein, *Einführung in die arabische Zoographie*, Berlin 1990, index s.v. *Vogel (ruḫḫ)*. (U. Marzolph)

al-**RUKHKHAD̲J̲** (in *Ḥudūd al-ʿālam*, tr. Minorsky, 111, 121, Rukhud̲h̲; in al-Muḳaddasī, 50, 297, Rukhūd, perhaps to be read as Rukhwad̲h̲), the name given in early Islamic times to the region of southeastern Afghanistan around the later city of Ḳandahār [*q.v.*] and occupying the lower basin of the Arg̲h̲andāb river (see D. Balland, *EIr* art. *Arḡandāb*). The Islamic name preserves that of the classical Arachosia, through which Alexander the Great passed on his Indian expedition in 330 B.C. (see *PW*, ii/1, cols. 367-8 (W. Tomaschek)), which is itself a hellenisation of Old Pers. Harakhuvatis̲h̲, Avestan Harakhvaiti. In Syriac it was rendered as Rokhwad, a region with a Nestorian Christian community, in the Acts of the Synod held at Ctesiphon in 544 A.D. (see Markwart-Messina, *A catalogue of the provincial capitals of Ērānshahr*, Rome 1931, 17, 84; C.E. Bosworth, *Sīstān under the Arabs, from the Islamic conquest to the rise of the Ṣaffārids (30-250/651-864)*, Rome 1968, 9).

The region was first raided by the Arab commander ʿAbd al-Raḥmān b. Samura in the caliphate of ʿUt̲h̲mān, when Sīstān and Bust [*q.vv.*] were first attacked, but the Muslims were for long blocked in securing any permanent foothold beyond Bust by the implacable hostility of the local rulers of southeastern Afg̲h̲ānistān, the Zunbīls, whose winter residence was in the *garmsīr* or hot region of al-Rukhkhad̲j̲ and their summer one in the cooler *sardsīr* of the region of Zamīndāwar [*q.v.*] or Bilād al-Dāwar immediately to the north. These Zunbīls remained a hostile force till the second half of the 3rd/9th century, when the Ṣaffārid Yaʿḳūb b. al-Layt̲h̲ engaged in warfare with them [see ṣaffārids], and it is only after this that the native dynasty disappears from historical mention and that the Islamic geographers were able to treat al-Rukhkhad̲j̲ as part of the *Dār al-Islām*. Thus the *Ḥudūd al-ʿālam*, 111, describes it as a prosperous and pleasant district. These authors mention as two of its main towns Pand̲j̲wāy and Tigīnābād; for a discussion of the location of these, see ḳandahār at IV, 536b. Administratively, al-Rukhkhad̲j̲ seems often to have been linked with Sīstān; Ibn Ḥawḳal², 425, tr. 412, gives a global figure for the revenues of these two provinces as 100,000 dīnārs plus 300,000 dirhams. After this time, the name al-Rukhkhad̲j̲ falls out of use; the G̲h̲aznawid historian Gardīzī (wrote in the mid-5th/11th century [*q.v.*]) seems to be the last author regularly to refer to Rukhūd. Only the site of an Islamic settlement now called Tepe Arukh preserves its name.

Since Arab raiders captured many slaves from the pagan region of al-Rukhkhad̲j̲, one occasionally meets the *nisba* al-Rukhkhad̲j̲ī, e.g. for Hārūn al-Ras̲h̲īd's *mawlā* Abu 'l-Farad̲j̲, who became a very influential secretary and governor for the caliphs of the early 3rd/9th century; see Bosworth, *op. cit.*, 82-3; Patricia Crone, *Slaves on horses, the evolution of the Islamic polity*, Cambridge 1980, 190. Whether the vizier of the Būyid *amīr* in Bag̲h̲dād Mus̲h̲arrif al-Dawla, Muʾayyid al-Mulk Abū ʿAlī al-Ḥusayn al-Rukhkhad̲j̲ī (see H. Busse, *Chalif und Grosskönig, die Buyiden im Iraq (945-1055)*, Wiesbaden-Beirut 1969, 244), derived his *nisba* from Afg̲h̲ānistān or from the village near Bag̲h̲dād of al-Rukhkhad̲j̲iyya (cf. Yāḳūt, *Buldān*, ed. Beirut, iii, 38—a settlement of persons transported from al-Rukhkhad̲j̲ in Afg̲h̲ānistān?), is unclear.

(C.E. Bosworth)

RUKHṢA (a.), literally "permission", dispensation".

1. In law.

Here, *rukhṣa* is a legal ruling relaxing or suspending by way of exception under certain circumstances an injunction of a primary and general nature (*ʿazīma* [*q.v.*]).

The general obligation to fast during Ramaḍān is, by way of *rukhṣa*, suspended during the days of an illness or a journey, under condition that these days are made up after Ramaḍān. Similarly, the general prohibition to eat meat that has not been ritually slaughtered is suspended if a Muslim could only survive by violating it. As a rule, one has the choice whether or not to make use of the *rukhṣa*. However, if one fears that one may die if one does not avail oneself of the *rukhṣa*, following it is obligatory, except in the case that one is threatened to be killed if one does not renounce Islam, for then martyrdom is to be preferred. The circumstances permitting a dispensation of the strict rule are either the necessity to preserve one's life or the removal of hardship, such as in the permission for a physician to look at a woman's pudenda or the relaxation of the obligation to perform *ṣalāt* during a journey. The distinction between *rukhṣa* and *ʿazīma* does not have legal consequences, except that, according to the Ḥanafīs, tacit consensus (*idjmāʿ sukūtī*) can establish a *rukhṣa* but not a *ʿazīma*.

(R. Peters)

2. In Ṣūfism.

The way in which the concepts of *rukhṣa* and its counterpart *ʿazīma* are used in Ṣūfism involves an extrapolation from a juridical to a much more ethical domain. Here they refer to two opposite and differently-valued patterns of behaviour. *ʿAzīma* denotes a way of life characterised by determination and firmness of purpose, and is consequently of a higher level than *rukhṣa*, which lacks these characteristics. These two words refer also, particularly in their plural form, to concrete deeds in which the two behavioural patterns manifest themselves. E.g. celibacy and *tawakkul* (trust in God to such an extent that one does not support oneself) are considered to be *ʿazāʾim*, whereas marriage and supporting oneself are seen as *rukhaṣ*. The depreciatory valuation of the latter is to be witnessed in the idea expressed e.g. by al-Makkī in his *Ḳūt al-ḳulūb* that *rukhaṣ* are (meant) for the weak, whereas the *ʿazāʾim* are characteristic of the strong. Also, al-Ḳushayrī makes it clear in his *Risāla* that, with these strong persons, the Ṣūfis are meant. On the other hand, in *Ḳūt al-ḳulūb* and also in the *Kitāb al-Lumaʿ* by Abū Naṣr al-Sarrādj, the tradition is quoted according to which God loves the use of both *rukhaṣ* and *ʿazāʾim* equally well, albeit that in the latter source this tradition is quoted primarily as a warning against denouncing people who avail themselves of *rukhaṣ*. Thus the overall picture painted by these sources is that in Ṣūfī circles a surplus value is attached to the *ʿazāʾim* (B. Reinert, *Die Lehre vom tawakkul in der klassischen Sufik*, Berlin 1968, 135-7; R. Gramlich, *Schlaglichter über das Sufitum. Abū Naṣr as-Sarrāğs Kitāb al-lumaʿ eingeleitet, übersetzt und kommentiert*, Stuttgart 1990, 240; idem, *Das Sendschreiben al-Qušayris über das Sufitum*. Eingeleitet, übersetzt und kommentiert, Wiesbaden 1989, 538).

Naḳshbandī Ṣūfis even claim that their attitude of strictly confining themselves to *ʿazāʾim* and avoiding the use of *rukhaṣ* is one of the most distinctive characteristics of their order. Yet even Naḳshbandīs have had to take the above-mentioned tradition in consideration, and therefore, according to a saying by Bahāʾ al-Dīn Naḳshband, this brotherhood, although abstaining from these practices, yet does not denounce others who observe them (J. ter Haar, *Follower and heir of the Prophet. Shaykh Aḥmad Sirhindī (1564-1624) as mystic*, Leiden 1992, 80-1, 107). This strong emphasis on *ʿazīma* is partly a reaction to other Ṣūfis who used the idea of *rukhṣa* in order to justify certain controversial practices like *samāʿ* and *raḳṣ* [*q.vv.*] (L. Massignon, *La passion d'al-Hallaj*, Paris 1922, ii, 779-81). A different and much more positive valuation of *rukhaṣ* is to be found in the *Kitāb Ādāb al-murīdīn* by Abu 'l-Nadjīb al-Suhrawardī, where they are considered to be an integral part of a special type of affiliation, viz. the affiliation of the *mutashabbihūn*, i.e. the lay members affiliated to an order, a designation which in this source at least has no pejorative connotation. Their affiliation is admittedly of a lower level compared to that of the Ṣūfis proper; nevertheless, it is a valuable one, since, according to a saying of the Prophet, "Whoever makes the effort to ressemble a group of people is one of them" (M. Milson, *A Sufi rule for novices. Kitāb Ādāb al-Murīdīn of Abū al-Najīb al-Suhrawardī*, Cambridge and London 1975, 17-21, 72-81).

Bibliography: Given in the article.

(J.G.J. ter Haar)

RUKN (a.), pl. *arkān*, literally "corner (as in *al-rukn al-yamānī* = the southeastern corner of the Kaʿba), support, pillar". The singular *rukn* occurs twice in the Ḳurʾān, in XI, 82/80, when Lot seeks for support in a strong *rukn*, pillar, or, figuratively, a leader or chief; and in LI, 39, where Pharaoh and his support, *rukn*, i.e. retinue, reject Moses.

1. In religious and legal usage.

Here, it is commonly found in the expression *arkān al-dīn* or *arkān al-ʿibāda*, denoting the basic "pillars" of religion and religious observance. These so-called "pillars of Islam" are usually enumerated as (1) the profession of faith, *shahāda*; (2) the pilgrimage, *ḥadjdj*; (3) the worship, *ṣalāt*; (4) fasting, *ṣawm*; and (5) almsgiving, *zakāt, ṣadaḳa*. To these some authorities add a sixth, perpetual warfare against infidels, *djihād*.

Bibliography: See almost all the general works on the Islamic faith, e.g. H.U.W. Stanton, *The teaching of the Qur'an*, London 1919, 58 ff.; H.A.R. Gibb, *Islam*, ch. 4; Gaudefroy-Demombynes, *Muslim institutions*, London 1954, ch. 6; A. Rippin, *Muslims, their religious beliefs and practices. i. The formative period*, London and New York 1990, ch. 7. The teachings of ʿAbd al-Ḳāhir al-Baghdādī [*q.v.*] are translated in Rippin and J. Knappert (eds.), *Textual sources for the study of Islam*, Manchester 1986, 10-11, 89 ff. See also W.C. Smith, *Arkān*, in *Essays on Islamic civilization presented to Niyazi Berkes*, Leiden 1976, 303-16, repr. in idem, *On understanding Islam*, The Hague, etc. 1981, 162-73 (contends that *arkān* originally meant "parts of the body"). For greater detail, see the individual *EI* articles on these "pillars" and also sharīʿa. (Ed.)

2. In natural science and alchemy.

Here, it denotes "cardinal point", "part", "direction" and, in particular, "element".

In the *Sirr al-khalīḳa* attributed to Balīnās [see balīnūs], a source that has played a fundamental role in much of Islam's alchemical tradition, the word *rukn* appears in its literal sense of a corner, side or an extremity (see Lane, i/3, 1148-9). Yet it functions as a

technical term in this text, since it is employed consistently and exclusively in a cosmological context. Thus in a discourse on winds (*riyāḥ* [see RĪḤ]), the author tells us that the *rukn* which faces the east (*muḳābil al-mas͟hriḳ*) is cold-moist, since it is here that the cold-moist wind blows, stabilising and strengthening the *rukn* (*K. Sirr al-k͟halīḳa wa-ṣanʿat al-ṭabīʿa*, ed. U. Weisser, Aleppo 1979, 135). This cosmological idea of strength appears to have subsequently been integrated into the ordinary meaning of the word, for one of the meanings of *rukn* found in the standard Arabic lexicons (e.g. *TʿA*) is the strongest side (*d̲j̲ānib*) of a thing (see Lane, *loc. cit.*).

Again, in a discourse on the motion of celestial bodies, the *Sirr*, 140, uses the term to designate each of the four geographical regions or sides of the physical world—*rukn al-mas͟hriḳ, rukn al-g͟harbī*, etc. Finally, in the course of an explication of the *ṭabāʾiʿ* (natures) [see ṬABĪʿA], the term is employed strictly in a conceptual sense, that of the four directions—*al-rukn al-s͟harḳī, al-rukn al-g͟harbī*, etc. (188). Here *rukn* is practically equivalent to *d̲j̲iha*.

But it is in the grand alchemical corpus attributed to D̲j̲ābir b. Ḥayyān [*q.v.*] that the term reaches its full technical maturity and sophistication. As in the *Sirr*, here too *rukn* appears in a cosmological context. Thus, explicating variously his doctrine of the formation and elemental structure of the physical world, the alchemist distinguishes between natural elements which constitute gross physical bodies and artificial elements which are extracted out of these bodies through alchemical procedures; the former are designated by the term *usṭuḳussāt* (sing. *usṭuḳuss*) or *ʿanāṣir* (sing. *ʿunṣur*), etc., and the latter by the term *arkān* (see e.g. *K. al-Lāhūt* and *K. al-Bāb*, ed. P. Lory, Damascus 1988, 12, 31; cf. P. Kraus, *Jābir ibn Ḥayyān*, ii, Cairo 1942, 6). In the *K. al-Ḥudūd, rukn* is unambiguously defined: it is that "compound" (see below) which is produced by alchemical operations (*al-mudabbara*) (ed. P. Kraus, Paris 1935, 481). This stands in sharp contrast to the definition of Ibn Sīnā [*q.v.*], who explains *rukn* as a relative concept: it is any simple body (*d̲j̲ism basīṭ*), he tells us, that constitutes an essential part (*d̲j̲uzʾ d̲h̲ātī*) of the physical world. Thus, according to Ibn Sīnā, an individual thing (*al-s͟hayʾ*) is a *rukn* in relation to the world; in relation to what is composed from it, it is an *usṭuḳuss*; and in relation to what is generated from it, it is an *ʿunṣur* (Arabic text in A.M. Goichon, *Lexique de la langue philosophique d'Ibn Sīnā*, Paris 1938, 144).

There is in the *corpus D̲j̲ābirianum*, however, another distinct use of the term, something that manifests a profoundly distinguishing philosophical feature of the cosmological tradition which its author represents. Thus *arkān* designates the four *ṭabāʾiʿ*, hot, cold, moist and dry. Here, unlike the case practically with all other philosophical traditions in Islam, the term *ḳuwwa* (δύναμις) is never applied to the *ṭabāʾiʿ*; and *kayfiyya* (ποιότης) extremely rarely (cf. P. Kraus, *Jābir ibn Ḥayyān*, ii, 147, 165; S.N. Haq, *Names, natures and things*, Dordrecht and London 1993, 57-62). These D̲j̲ābirian *arkān* were the primary material elements of all things; they were the "first simple elements", as opposed to earth, water, air and fire which latter were the "second compound elements" (see e.g. *K. al-Taṣrīf* and *K. al-Mīzān al-ṣag͟hīr*, ed. Kraus, 412, 482).

In Abū Bakr al-Rāzī [*q.v.*], as much as we know of his writings, the term is used but rarely. In his *Sirr al-asrār*, where *rukn* does make an appearance, it conveys the broad sense of an element, equivalent to the Aristotelian στοιχεῖον (see tr. J. Ruska, Berlin 1937, 121). But, like D̲j̲ābir (Kraus, *Jābir ibn Ḥayyān*, i, Cairo 1943, no. 500), al-Rāzī too wrote a whole book on this subject, the lost *K. al-Arkān* (H.E. Stapleton, R.F. Azo and M.H. Ḥusain, *Chemistry in Iraq and Persia in the tenth century A.D.*, in *Memoirs of the Asiatic Society of Bengal*, viii [1927], 337). In general, it is in the specified Aristotelian sense that *rukn* is most frequently employed in the alchemical and cosmological writings of mediaeval Islam.

Weisser, *Das „Buch über das Geheimnis der Schöpfung" von Pseudo-Apollonius von Tyana*, Berlin and New York 1980. (S. NOMANUL HAQ)

RUKN AL-DAWLA, ABŪ ʿALĪ AL-ḤASAN B. BŪYA, second in age of the three brothers that founded the Būyid dynasty [see BUWAYHIDS]. His fortunes followed those of the elder brother ʿAlī (later ʿImād al-Dawla [*q.v.*]) up to the latter's occupation of Fārs in 322/934; Rukn al-Dawla was then given the governorship of Kāzarūn and other districts. But shortly afterwards he was forced by the ʿAbbāsid general Yāḳūt, at whose expense the Būyid conquest of Fārs had been made, to seek refuge with his brother; and when Yāḳūt was in turn defeated by the Ziyārid Mardāwīd̲j̲ [*q.v.*], the Būyids' former overlord, against whom they had revolted, ʿImād al-Dawla, who then found it advisable to conciliate Mardāwīd̲j̲, sent Rukn al-Dawla to him as a hostage. On Mardāwīd̲j̲'s assassination in the following year (323/935), Rukn al-Dawla escaped and rejoined ʿImād al-Dawla, by whom he was supplied with troops to dispute the possession of D̲j̲ibāl with Mardāwīd̲j̲'s brother and successor, Wus͟hmgīr. Rukn al-Dawla succeeded at the outset in taking Iṣfahān; but the first round of his contest with Wus͟hmgīr ended in Rukn al-Dawla's ejection from that city in 327/939, when he again fled to Fārs.

In the next year Rukn al-Dawla's help was sought by his younger brother al-Ḥusayn (later Muʿizz al-Dawla [*q.v.*]), who had meanwhile set himself up in K͟hūzistān, against the Barīdīs [*q.v.*]; whereupon Rukn al-Dawla, being now possessed of no territory, attempted to take Wāsiṭ but was obliged to retire when the caliph al-Rāḍī [*q.v.*] and the *amīr* Bad̲j̲kam [*q.v.*] opposed him. Almost immediately afterwards, however, he succeeded in recovering Iṣfahān, owing to Wus͟hmgīr's championship of Mākān b. Kākūya in a quarrel with the Sāmānid Naṣr b. Aḥmad [*q.v.*]; and when the latter ruler died in 331/943, Rukn al-Dawla, who had meanwhile supported the Sāmānid cause, was able to drive Wus͟hmgīr as well from al-Rayy, of which he had momentarily regained possession on the retirement of the Sāmānid general Abū ʿAlī Čag͟hānī.

With al-Rayy, Rukn al-Dawla gained control of the whole D̲j̲ibāl; and but for two short intervals (of about a year in each case) retained it for the rest of his days. Up to 344/955-6, however, his position was highly precarious. For not only Wus͟hmgīr but also the Sāmānids continued to challenge it. It was only by playing them off against each other and sowing dissensions between the Sāmānid princes and the commanders whom they sent against him that Rukn al-Dawla was able to maintain it. Even so (as indicated above) he was driven from al-Rayy, and his representatives were expelled from most parts of the province, once in 333/944-5 and again in 339/950-1, in each case by Sāmānid forces. Indeed, he was obliged in the end to become the Sāmānids' tributary (at least two agreements for the payment of tribute being recorded); it was on this basis that he first made peace

with them in 344/955-6, as again in 361/971-2. In the course of his long contest with Wus̲h̲mgīr, who, until he was killed in an accident in 357/968 never ceased to intrigue with the Sāmānids against him, Rukn al-Dawla on several occasions invaded Ṭabaristān and Gurgān, but was unable to incorporate these provinces permanently in his dominions. And though in 337/948-9, after he had defeated an attempt on al-Rayy made by the Musāfirid or Sallārid Marzubān b. Muḥammad, whom he took prisoner, he gained control of southern Ād̲h̲arbāyd̲j̲ān, his ejection two years later from al-Rayy itself (see above) naturally cost him this as well.

Rukn al-Dawla received his *laḳab* simultaneously with his brothers in 334/945-6, on Muʿizz al-Dawla's entry into Bag̲h̲dād; and on ʿImād al-Dawla's death in 338/949 succeeded him as head of the family and *amīr al-umarāʾ* (though this title was also held by Muʿizz al-Dawla). The last two years of his life were rendered unhappy—so much so that he never recovered from the shock induced by the news—owing to the conduct of his son, ʿAḍud al-Dawla [*q.v.*], in taking advantage of an appeal for help sent by ʿIzz al-Dawla Bak̲h̲tiyār [*q.v.*] (son of Muʿizz al-Dawla and his successor in the rule of ʿIrāḳ), to imprison the latter, and, in conjunction with Rukn al-Dawla's own *wazīr* Abu 'l-Fatḥ Ibn al-ʿAmīd [*q.v.*], who had been sent likewise with a force to Bak̲h̲tiyār's aid, to seize that province for himself. And though ʿAḍud al-Dawla obeyed his command to release Bak̲h̲tiyār and return to his government in Fārs, Rukn al-Dawla was only with difficulty persuaded to visit ʿAḍud al-Dawla in 365/975-6 at Iṣfahān, in order to ensure that by receiving a confirmation of his appointment as heir, he should succeed without dispute. Rukn al-Dawla died at al-Rayy in Muḥarram of the next year/September 976.

In the settlement arrangements made at Iṣfahān just before his death (see above), Rukn al-Dawla nominated his eldest son ʿAḍud al-Dawla, at this moment ruler in Fārs and subsequently in ʿIrāḳ also, as his successor, but provided that Rayy should go to his second son Fak̲h̲r al-Dawla [*q.v.*], and Hamad̲h̲ān to the third son Muʾayyid al-Dawla [*q.v.*] as subordinate to ʿAḍud al-Dawla; in the event, Rayy passed under Muʾayyid al-Dawla's control, and Fak̲h̲r al-Dawla, who fled to the Ziyārids and Sāmānids, was only able to establish his claims there after Muʾayyid al-Dawla's death.

As shown above, Rukn al-Dawla faced considerable difficulties in setting the northern amirate of the Būyids on a firm basis, but what success he achieved was largely attributable to the firm backing and wise advice of his vizier, the famous Abu 'l-Faḍl Ibn al-ʿAmīd [*q.v.*], who served the Būyid for 32 lunar years (328-60/940-70) and was able to contain the violence and rapacity which were the normal attributes of a ruler like Rukn al-Dawla who had begun as a Daylamī robber chief. Nevertheless, Miskawayh, in *Eclipse of the ʿAbbasid caliphate*, ii, 279, tr. v, 298-9, lamented that Ibn al-ʿAmīd was prevented from establishing the rule of justice by his master's impetuosity and lack of inherited kingly authority. The circle of scholars and literary men which grew up around the vizier, one which at various times included such luminaries as Abū Ḥayyān al-Tawḥīdī [*q.v.*], the philosopher Abu 'l-Ḥasan al-ʿĀmirī [*q.v.* in Suppl.] and Miskawayh himself, as Ibn al-ʿAmīd's coadjutor, made Rayy at this time a dazzling centre of Arabic culture (see J.L. Kraemer, *Humanism in the renaissance of Islam. The cultural revival during the Buyid age*, Leiden 1986, 210-11, 223, 230, 241-6). It is less easy to estimate whether there was a specifically Persian element within Rukn al-Dawla's ethos of rulership, but he does seem to have conceived of himself as a monarch in the line of ancient Persia, possibly as an inheritance from his early life in the entourage of Mardāwīd̲j̲; a silver medal struck at Rayy in 351/962 depicts the *amīr* as a Persian emperor and has a legend in Pahlavi "May the glory of the king of kings increase!" (see G.C. Miles, *A portrait of the Buyid prince Rukn al-Dawlah*, ANS Museum Notes no. 11, New York 1964; Kraemer, *op. cit.*, 44).

RUKN AL-DĪN [see ḲILĪD̲J̲ ARSLAN II and III].

RUKN AL-DĪN BĀRBAK S̲H̲ĀH b. Nāṣir al-Dīn Maḥmūd S̲h̲āh, Bengal Sultan of the restored Ilyās S̲h̲āhī line, *r.* 864-79/1460-74.

Bārbak was one of the most powerful of the medieval rulers of Bengal, achieving a great reputation from his warfare against the Hindu rulers of Orissa and northern and eastern Bengal, regaining Silhet [*q.v.*] (Sylhet) and also Chittagong [*q.v.*] from the Arakanese. He recruited for his armies Ḥabas̲h̲ī military slaves and Arab mercenaries, and popular hagiographical tradition attributed many of Bārbak's conquest to one of this latter group, the warrior-saint S̲h̲āh Ismāʿīl G̲h̲āzī ʿArabī, concerning whom a *Risālat al-S̲h̲uhadāʾ* was composed in 1042/1633 by Pīr Muḥammad S̲h̲aṭṭārī, see Storey, i, 990. Bengal prospered under Bārbak; he undertook extensive building work on his palace at Gawr or Lak̲h̲nawtī [*q.v.*] and was a great patron of Bengali literature.

(C.E. BOSWORTH)

RUKN AL-DĪN K̲H̲URS̲H̲ĀH, Nizārī Ismāʿīlī *imām* and the last lord of Alamūt. The eldest son of ʿAlāʾ al-Dīn Muḥammad III (r. 618-53/1221-55), Rukn al-Dīn (al-Ḥasan), also known as K̲h̲urs̲h̲āh, was born in Rūdbār around the year 627/1230; and it was in his childhood that he was designated to succeed to the Nizārī imāmate. Rukn al-Dīn succeeded, as an *imām*, to the leadership of the Nizārī Ismāʿīlī community and state upon the assassination of his father on the last day of S̲h̲awwāl 653/1 December 1255. His very brief but eventful reign as the eighth and last lord of Alamūt coincided with the completion of the Mongol conquests in Persia and the final year in the history of the Persian Nizārī state of the Alamūt period.

By the time of Rukn al-Dīn's accession, the Persian Nizārīs of Ḳuhistān and Ḳūmis had already experienced a foretaste of the destructive powers of the Mongol hordes. But it remained for Hülegü or Hūlāgū [*q.v.*] or Hülegü himself, leading a major Mongol expedition to Persia, to uproot the Nizārī state centred in Rūdbār [see RŪD̲H̲BĀR] in the central Alburz mountains of northern Persia. The sources are generally ambiguous on Rukn al-Dīn's policy vis-à-vis the Mongol invaders. Vacillating between submis-

sion and resistance, he eventually seems to have aimed towards a compromise solution, perhaps hoping to avert at least the Mongol capture of the chief Nizārī strongholds in Rūdbār. But he did adopt a conciliatory policy towards the Sunnīs who had played a part in spurring the Mongols against the Nizārī Ismāʿīlīs. Be it as it may, Rukn al-Dīn was drawn into an intricate and ultimately futile web of negotiations with the Mongols, from the time of Hūlāgū's arrival in Persia in Rabīʿ I 654/April 1256. The Nizārī ruler also dispatched several embassies, headed variously by his vizier Shams al-Dīn Gīlakī and a number of his own brothers, to Hūlāgū, who persistently demanded nothing less than Rukn al-Dīn's total submission and his orders for the demolition of the Nizārī fortresses, including Alamūt, the traditional seat of the Nizārī state.

Having grown weary of Rukn al-Dīn's delaying tactics, Hūlāgū soon decided to launch his assault on Nizārī Rūdbār, ordering the main Mongol armies to converge on Maymūn-Diz [*q.v.*], where the Nizārī ruler was then staying. On 18 Shawwāl 654/8 November 1256, Hūlāgū himself encamped on a hilltop facing Maymūn-Diz. After the failure of a last round of Nizārī-Mongol negotiations followed by a few days of intense fighting, the Nizārī ruler was finally obliged to surrender. On 29 Shawwāl 654/19 November 1256, Rukn al-Dīn Khurshāh, accompanied by a group of Nizārī dignitaries and Naṣīr al-Dīn al-Ṭūsī, descended from Maymūn-Diz and presented himself before the Mongol conqueror, marking the close of the Nizārī state of Persia; he had ruled for exactly one year.

Subsequently, Rukn al-Dīn was treated hospitably by the Mongols whilst they still needed his cooperation to persuade the remaining Nizārī strongholds to surrender. Rukn al-Dīn now issued a general order of surrender to the commandants of the Nizārī fortresses; about forty such fortresses in Rūdbār fell readily into Mongol hands, and they were duly dismantled after their garrisons were taken into custody. Alamūt did not surrender until the end of Dhu 'l-Ḳaʿda 654/December 1256, and Lanbasar [*q.v.*] held out for another year while Girdkūh resisted its Mongol besiegers until 669/1270. The Persian historian Djuwaynī, who took part in the truce negotiations between his master Hūlāgū and the Nizārīs and drew up Rukn al-Dīn's actual terms of surrender, has left a vivid description of Alamūt, before the Mongols destroyed that impregnable fortress and its famous library.

As the Nizārī *imām*'s usefulness to the Mongols approached its end, Hūlāgū approved of Rukn al-Dīn's curious request to visit the Great Khān Möngke [*q.v.*] in Mongolia. On 1 Rabīʿ I 655/9 March 1257, Rukn al-Dīn set out on his fateful journey to Ḳaraḳorum, accompanied by a group of companions and some Mongol escorts. Once in Ḳaraḳorum, or its vicinity, however, Möngke refused to meet with the captive Nizārī *imām*, on the apparent pretext that he still had not delivered Lanbasar and Girdkūh to the Mongols. By that time, Möngke had already sanctioned a general massacre of the Persian Nizārīs who were in Mongol custody. Rukn al-Dīn Khurshāh's own tragic end occurred sometime in the late spring of 655/1257, when he and his companions, then supposedly on the return journey to Persia, were put to the sword by their Mongol guards somewhere along the edge of the Khangai mountains in central Mongolia.

(F. DAFTARY)

RUKNĀBĀD (or ĀB-I RUKNĪ, the water of Rukn al-Dawla), a subterranean canal (*ḳanāt*) which runs from a mountain (called Ḳulayʿa: P. Schwarz, *Iran im Mittelalter*, ii, 48, no. 7) about six miles from Shīrāz. Enlarged by a secondary canal, it follows for a part of the way the road from Iṣfahān to Shīrāz. Its waters reach as far as the vicinity of the town towards the cemetery in which the poet Ḥāfiẓ [*q.v.*] is buried, when they are not entirely absorbed for irrigation purposes. According to Ḥasan Fasāʾī (*Fārs-nāma-yi Nāṣirī*, part ii, 20), "all the waters of the plain of Shīrāz come by subterranean channels except the water from the spring of Djushk... The best waters are those of the Zangī and Ruknī canals.... The Ḳanāt-i Rukni (i.e. Ruknābād) was made in 338/949-50, one-and-a-half *farsakhs* to the northeast of Shīrāz by Rukn al-Dawla Ḥasan b. Būya [see BUWAYHIDS]; its waters rise in the ravine of Tang-i Allāh Akbar a mile north of Shīrāz; it waters the plain of al-Muṣallā". In the 8th/14th century, Ruknābād is mentioned by Ibn Baṭṭūṭa and by Ḥamd Allāh Mustawfī Ḳazwīnī (*Nuzhat al-ḳulūb*, tr. Le Strange, 113: "The water comes from subterranean canals and the best is that of Ruknābād"). But it is to the poets that this canal really owes its fame. In the 6th/12th century Saʿdī declares himself charmed by the land of Shīrāz and the waters of Ruknābād (*Kulliyyāt*, Calcutta 1791, fol. 299b, 1. 4). In the following century, ʿUbayd-i Zākānī sings: "The zephyr which blows from al-Muṣallā and the wave of Ruknābād remove from the stranger the memory of his native land" (text quoted by E.G. Browne, who finds in it an echo of Saʿdī, *LHP*, iii, 238). Ḥāfiẓ in particular immortalised Ruknābād in his verses: "Pour out, cup-bearer, the wine that is left, for in Paradise thou shalt find neither the stream of Ruknābād nor the promenade of al-Muṣallā" (ed. Khalkhālī, Tehran 1306/1927, no. 3, v. 2); "Shīrāz and the wave of Ruknī and the sweet breeze of the zephyr, blame them not, for they are the pride of the universe" (*ibid.*, no. 35, v. 7); "The zephyr which blows from al-Muṣallā and the wave of Ruknābād will never allow me to depart" (*ibid.*, no. 168, v. 9); "May God a hundred times preserve our Ruknābād, for its limpid waters give a life as long as that of Khiḍr" [*q.v.*] (*ibid.*, no. 277, v. 2), and in a piece which may be apocryphal (*ibid.*, part 2, no. 71): "The water of Ruknī, like sugar, rises in al-Tang (-i Allāh Akbar)". According to later writers, Ruknābād, which Ibn Baṭṭūṭa called a great water-course (*al-nahr al-kabīr*), gradually dried up. Among the notable travellers of the 17th century, Chardin, almost alone in mentioning it, saw only a large stream and gives Ruknābād the fanciful meaning "Ruknenabat, veine ou filet de sucre" (*Voyages*, ed. Langlès, viii, 241). At

the end of the 18th century, W. Franklin praises the sweetness and clearness of the waters of this little stream to which the natives attribute medicinal qualities. At the beginning of the 19th century, Scott Waring notes that its breadth was nowhere more than six feet. Ker Porter observes that the canal has become choked up through neglect. The *Kulthūm-nāma* deplores the disappearance of the groves that surrounded it. At a later date we have the same observation by Gobineau ("Cette onde poétique ne m'apparut que sous l'aspect d'un trou bourbeux"), Curzon ("a tiny channel filled with running water") and Sykes ("a diminutive stream").

The *Fārs-nāma-yi Nāṣirī* mentions a second Ruknābād in Fārs: "The source of the warm stream of Ruknābād is part of the district of Bikha-yi Fāl (Lāristān); it is over a *farsakh* north of the village of Ruknābād; having a bad flavour and an unpleasant smell, it is of no use for agriculture; it cooks in a few minutes eggs put into it; one can only bathe in it at some distance from the spring" (ii, 318 middle, 288).

(H. Massé)

RUḲYA (A.), from the root *r - ḳ - y* meaning "to ascend" (cf. Ḳurʾān, XVII, 93, XXXVIII, 10; to this, LXXV, 27, adds the idea of "enchanter", "one who cures" and "magician" *rāḳ*ⁱⁿ, a term often found in the *Sīra*, in *Ḥadīth* and in the Sunna), "enchantment, magical spell". Since casting a spell was usually by means of a magical formula pronounced or written on an amulet of parchment or leather, *rāḳ*ⁱⁿ is to be connected with *ḳāriʾ* and *riḳḳ* [*q.v.*]. The term *tarāḳī* of the preceding verse, 26, from the root *r-ḳ-w/y*, variously understood by the commentators, means "collar bones" (see *TA* and Lane, s.v.; *Steingass, Persian-English dict.*, 291), and reminds one of the *Clavicules de Salomon*, a book of magic, printed in 1641 and reissued by Pierre Belfond, Paris n.d. It is known that Judaeo-Arabic tradition attributes various works of a magical nature (notably Solomon's seal) to Solomon, a mythic character of the Ḳurʾān who controls the winds, animals, spirits, named seventeen times in the Ḳurʾān (see esp., XXXVIII, 30-9, and cf. Ibn Saʿd, viii, 147; Ibn al-Athīr, i, 160-70; Ibn al-Mudjāwir, i, 103, ii, 164, 173, 180, etc.).

Ruḳya, corresponding to Latin *carmen*, magical chant, consists in the pronouncing of magical formulae for procuring an enchantment. It is one of the procedures of *siḥr* [*q.v.*], used by the Prophet himself and, because of this, permitted in exceptional cases, on condition that it brings benefit to people and does not harm anyone. One may have recourse to it against poison, bites, fever, the evil eye, etc. (many refs. in A. Kovalenko, *Magie et Islam*, diss. Strasbourg 1979, reprod. by Minute S.A., Geneva 1981, pp. 721; cf. 113 and 247 (notes); see also G. Bousquet, *L'authentique tradition musulmane*, Paris 1964, 301 nos. 105-6, and 308 no. 130). According to Muslim, ii, 279, "charms are forbidden as soon as they touch upon, in one manner or another, polytheism".

The Prophet thought that beneficial *ruḳya* could modify the fate decreed by God and that it was in fact part of it (al-Tirmidhī, ii, 7). For him, "the evil eye definitely exists. If something could forestall destiny, the [evil] eye would precede it" (Muslim, ii, 275). In this case, he recommended *ruḳya*. Faced with a slave whose colour had altered, he said to one of his wives, "Have recourse to magical means, for he has been affected by some malevolent glance" (*ibid.*, ii, 277; Bousquet, *op. cit.*, 232-2 no. 104). He himself used *ruḳya* in order to cure a sick man; he placed his right hand on him and pronounced a conjuration formula (Muslim, ii, 276-7). When he was ill, he recited over himself magical formulae and spat. ʿĀʾisha used to do it for him when sorrow was particularly heavy upon him (*ibid.*, ii, 277). The angel Gabriel would sometimes come to him and apply a *ruḳya* (*ibid.*, ii, 274-5). There exists a complete literature called *al-Ṭibb al-nabawī* "Prophetic medicine", full of recipes and practices of this kind attributed to Muḥammad (see Ibn al-Athīr, *Usd al-ghāba*, ii, 258, 277 = ii, 289, 300; A. Perron, *La Médecine du Prophète*,; K. Opitz, *Die Medizin im Koran*, Stuttgart 1906; T. Fahd, *La divination arabe*, Paris 1967, 241-5; and art. KHAWĀṢṢ AL-ḲURʾĀN).

Starting from these Prophetic examples, *ruḳya* from then onwards multiplied enormously, and, especially, amongst the more backward milieux of society. The intellectual classes were unanimous in formally forbidding the practise of magic, but, in the absence of a definition of the idea of *siḥr* in the Ḳurʾān, as likewise in Islamic law, this prohibition was watered down by the Prophetic example. Al-Djuwaynī (d. 681/1283), an Ashʿarī jurist, wrote, "God has merely prohibited what is harmful and not that which is useful; if it is possible for you to be useful to your brother, then do it" (cited in Bousquet, *op. cit.*, 301 n. 104); whilst Ibn Khaldūn wrote, "The religious law makes no distinction between sorcery, talismans and prestidigitation. It puts them all into the same class of forbidden things" (*Muḳaddima*, tr. Rosenthal, iii, 169).

For al-Ghazālī, who provided Islamic theology with its definitive formulation, magic is based on a combined knowledge of the properties of certain terrestrial elements and of propitious astral risings. This knowledge is not in itself blameworthy, but it could only serve to injure others and to do evil (*Iḥyāʾ*, i, 49-50). The privileged place given to this knowledge is justified by words attributed to the Prophet, "The superiority of the believer who also possesses knowledge over the merely pious believer is that of 70 degrees" (cited in *ibid.*, i, 12).

RŪM. 1. In Arabic literature.

Rūm occurs in Arabic literature with reference to the Romans, the Byzantines and the Christian Melkites interchangeably. This issue of nomenclature is the first problem that confronts the reader of Arabic literature. Most often, however, the reference is to the Byzantines, which is the meaning followed in this entry.

The sources for the pre-Islamic times include the important Namāra [*q.v.*] inscription. All the literary sources were written in later Islamic times, deriving from the historian Ibn al-Kalbī.

In the Islamic period, the first reference to Rūm occurs in the Ḳurʾān (*Sūrat al-Rūm*, XXX, 1-5): "The Rūm have been vanquished in the nearer part of the land..." Ḳurʾān exegesis contains several explanations for these verses and provides further information on the Byzantines (al-Ṭabarī, *Djāmiʿ al-bayān fī taʾwīl al-Ḳurʾān*, Cairo 1954, xviii, 17-19; al-Ālūsī, *Rūḥ al-maʿānī*; Ibn Kathīr, *Tafsīr al-Ḳurʾān al-ʿAẓīm*). Rūm also occurs in *ḥadīth* literature, where Constantinople, in particular, partakes in apocalyptic traditions. Such is the *ḥadīth* in al-Bukhārī stating that Umm Ḥaram had heard the Prophet saying "The first among my people to attack the city of Caesar will see their sins forgiven" (*Ṣaḥīḥ*, 56, ch. 93) or that found in Ibn Ḥanbal, "The Dadjdjāl will not appear until the Byzantines are vanquished" (*Musnad*, 178). The *Sīra* of Ibn Hishām includes several references to the Rūm in various contexts such as warfare, justice, trade and the diplomatic relations with Emperor Heraclius (*Sīrat al-Nabī*, ed. M. ʿAbd al-Ḥamīd, iv, 170). The conquest literature which chronicles the conflict between Byzantium and the Arab Islamic forces digresses into various other subjects as well such as Muḥammad al-Azdī's diversion into issues of Byzantine injustice (*K. Futūḥ al-Shām*, ed. Nassau Lees, Calcutta 157-8). Ibn al-Aʿtham al-Kūfī's references in his *K. al-Futūḥ*, Haydarābād 1968, i, 151) are connected with scenes of Byzantine ceremonial, elegance and wealth.

In the main historical chronicles, in al-Ṭabarī's *Taʾrīkh al-Rusul wa 'l-mulūk*, for instance, references to Rūm are guaranteed at the end of each year; the account closes by mentioning Muslim raids into Byzantine territory. For Constantinople [see al-ḲusṬanṬīniyya], in particular, the last major siege led by Maslama in 98/716-17 is recounted in detail in the anonymous *Kitāb al-ʿUyūn*, ed. de Goeje, Leiden 1869, i, 23-33. The conflict between Byzantium and the Islamic state directed the orientation of the sources so that warfare holds a predominant place in the *Futūḥ*, chronicles and historical works.

The Rūm figure prominently in the Arabic geographical literature of the 3rd-5th/9th-11th centuries. The geographers of the early "ʿIrāḳī" school, Ibn Khurradādhbih, Ibn Rusta, Ibn al-Faḳīh and Ḳudāma b. Djaʿfar included in their respective works a chapter on the Byzantines. Ibn Khurradādhbih's *al-Masālik wa 'l-mamālik* provides information on fiscal revenues, itineraries, geographical boundaries, and the make-up of Byzantine population. Ibn Rusta's *al-Aʿlāḳ al-nafīsa* includes the most detailed Arabic description of Constantinople. Among the geographers of the "Balkhī" school, Ibn Ḥawḳal alone, in his *K. Ṣūrat al-arḍ*, provides a full-length chapter on the lands of Rūm. Foremost among all Arabic works are the two masterpieces of al-Masʿūdī, *K. al-Tanbīh wa 'l-ishrāf* and *Murūdj al-dhahab*, which include not only geographical material and anecdotes on the Rūm but also attempt at a systematic historical treatment of Byzantine history after the rise of Islam. See also Manuela Marin, *«Rūm» in the works of three Spanish Muslim geographers*, in *Graeco-Arabica*, iii (Athens 1984), 109-17.

The organisation of the Byzantine administration and the army is referred to in various texts such as Ḳudāma b. Djaʿfar's *K. al-Kharādj* (255-7) and the *Mafātīḥ al-ʿulūm* of al-Khʷārazmī (see for this last, C.E. Bosworth, *Al-Khʷārazmī on the secular and religious titles of the Byzantines and Christians*, in *CT*, xxxv, no. 139-40 [1987] (= *Mélanges Ch. Pellat*), 28-36). Descriptions of Byzantine ceremonial are found in Ibn Rusta, where the Muslim prisoner Hārūn b. Yaḥyā witnessed several ceremonials of the Byzantine court (123-5). Anecdotes concerning the court ceremonial are found in al-Masʿūdī (*Murūdj*, ii, 18) and Ibn al-Faḳīh (*Mukhtaṣar K. al-Buldān*, 137-8) and other works. Important references to Rūm are made in the context of embassies and diplomatic relations, hence the importance of Ibn al-Farrāʾ's *Taʾrīkh al-Rusul wa 'l-mulūk wa-man yaṣluḥ li 'l-sifāra* written in the 4th/10th century. Special works like the *K. al-Dhakhāʾir wa 'l-tuḥaf* of the Ḳāḍī Ibn al-Zubayr, ed. M. Ḥamīdullāh and S. Munadjdjid, Kuwayt 1959, from the 5th/11th century, deal mostly with exchange of gifts between Muslim and Byzantine rulers and include information on ceremonials.

In works typically referred to as *adab*, references to the Byzantines are most often scattered and anecdotal. Al-Djāḥiẓ has dispersed references in his *K. al-Ḥayawān*. He deals in a much more consistent way with the topic in his epistle *Risāla fī al-radd ʿalā 'l-Naṣārā* (ed. A. Hārūn, in *Rasāʾil*, iii) and in *al-Akhbār wa-kayfa taṣiḥḥ*, in *JA*, cclv [1967], 65-105). Some anecdotes are rather extensive, such as those mentioned by al-Tanūkhī (d. 384/945-6) concerning an Arab prisoner captured by the Byzantines (*al-Faradj baʿd al-shidda*, ed. A. al-Shāldjī, Beirut 1978, ii, 192-205) or the meeting between a Christian grandfather and a Muslim grandson (*ibid.*, ii, 29-31). The *K. al-Aghānī* includes information on the Byzantine Empress Irene (Būlāḳ, xvii, 44), anecdotes on the correspondence between the Umayyad caliph ʿUmar b. ʿAbd al-ʿAzīz and the Byzantine Emperor (viii, 157) as well as on the poet Imruʾ al-Ḳays, explaining how his death was related to a Byzantine princess (viii, 73). In a typical *adab* work such as Ibn Ḳutayba's *ʿUyūn al-akhbār*, references are mentioned in several books, depending on the context, whether war, food, morals, etc... In addition to anecdotes, some works of *adab* contain statements about the various civilised nations in the context of the Shuʿūbiyya [*q.v.*] controversy such as the *K. al-Imtāʿ wa 'l-muʾānasa* of Abū Ḥayyān al-Tawḥīdī (d. 414/1023). One should note also Ṣāʿid al-Andalusī's (d. 462/1070 [*q.v.*]) *Ṭabaḳāt al-umam*.

References to the Byzantine language and script imply some mutual knowledge of the rivals' respective language. Most of the information concerning the literary achievements of the Rūm appears within the intellectual discussion that accompanied the Shuʿūbī movement, notably by al-Djāḥiẓ in his *K. al-Bayān wa 'l-tabyīn*. The first section of the *Fihrist* of Ibn al-Nadīm describes the four different Greek scripts used by the Rūm in Baghdād.

In poetry, references are scattered in isolated verses. More significant poems are found in Abū Nuwās and Abu 'l-ʿAtāhiya as they sing the praises of Hārūn al-Rashīd, while Abū Tammām (*Dīwān*, ed. Shāhīn ʿAṭiyya, Beirut 1889, 289, verse 18 and 35, verses 6-10) and al-Buḥturī (*Dīwān*, Beirut, 1911, 24, verses 3-14) focus on the achievements of al-Maʾmūn and al-Muʿtaṣim. The capture of Amorium in 233/838 by al-Muʿtaṣim was the subject of a famous poem by Abū Tammām. The most notable Arab poet to deal at length with the Arab-Byzantine wars is al-Mutanabbī. As long as he remained at the court of the Ḥamdānid Sayf al-Dawla [*q.v.*] in Aleppo, Mutanabbī devoted poems to each of the Amīr's campaigns against the Byzantines, so that his poems are useful as topographical and historical sources.

Bibliography: This is enormous, since references to the Rūm can be found almost anywhere. One may single out, in addition to sources mentioned in the article, Ḳāḍī ʿAbd al-Djabbār's *Tathbīt dalāʾil al-nubuwwa*, Beirut 1966, which focuses on personal traits and morality of the Byzantines, and al-Ḳāḍī al-Nuʿmān's *K. al-Madjālis wa 'l-musāyarāt* which has the benefit of including the Fāṭimids in the picture. Irfan Shahid, *Byzantium and the Arabs in the fourth century*, Washington 1984, see also his *Byzantium and the Arabs in the fifth century*, Washington 1989, investigates very meticulously the pre-Islamic sources on the Byzantines. M. Canard, *Les éxpeditions des Arabes contre Constantinople dans l'histoire et la légende*, in *JA*, ccviii-ccix (1926), 61-121, provides a good introduction for the references to the Byzantines and, particularly, Constantinople in the genre of folkloric traditions. A. Miquel, *La geographie humaine du monde musulman jusqu'au milieu du XIème siècle*, Paris 1967-88, 4 vols., provides an excellent introduction to the Arab geographers' view of the world around them including the Rūm. Also valuable is Ahmad Shboul, *Byzantium and the Arabs: the image of the Byzantines as mirrored in Arabic Literature*, in *Proceedings of the First Australian Byzantine Studies Conference*, London 1979, and idem, *Al-Masʿūdī and his world*, London 1979, ch. 6, *The Byzantines*. 2. Relations between the Islamic powers and the Byzantines.

(a) *Military and political aspects of Arab-Byzantine relations*

The Muslims, first the Arabs and then, with the incursions of the Turkmens into Anatolia from the 5th/11th century onwards, the Turks, had close relations, often bellicose but at times on a more peaceful level, for a period of some eight centuries. This extended from the initial Arab conquests of Byzantine imperial territories in the Levant, Egypt and the Mediterranean islands until the final extinction of the remnants of the Byzantine empire, and also of Greek independence, by the falls of Constantinople (857/1453), the Despotate of Morea (864/1460) and the empire of Trebizond (865/1461).

The ambivalent relations of the two great world faiths and powers of the Near East and Eastern Europe were thus manifested in both the politico-military sphere and also the cultural one (see section (b) below). Constantinople was from the outset a goal of Muslim arms, as the supreme bastion of the rival faith of Christianity, and Arab raids were directed at the East Roman capital itself from the caliphate of ʿUthmān onwards, with the warriors' enthusiasm soon buttressed by apocalyptic traditions looking forward to the city's capture. Such traditions, e.g. the prophetal *ḥadīth* that Constantinople would fall to an Islamic ruler who bore the name of a prophet (in this case, of Solomon) seem to have been a motive behind the prolonged, but ultimately unsuccessful, onslaught on the Byzantine capital begun by Sulaymān b. ʿAbd al-Malik (97-99/716-18) (see R. Eisener, *Zwischen Faktum und Fiktion. Eine Studie zum Umayyadenkalifen Sulaimān b. ʿAbdalmalik und seinem Bild in den Quellen*, Wiesbaden 1987, 129-37; and see ḲUSṬANṬĪNIYYA).

When the new caliph ʿUmar (II) ʿAbd al-ʿAzīz abandoned the expansionist plans of his predecessors, the apocryphal and messianic motives decreased in vigour, and the last effort of the Arabs against Constantinople was that of the prince Hārūn, later the caliph al-Rashīd, who appeared at Scutari in 165/781-2 but was bought off by a timely offer of tribute from the Empress Irene. The real legacy of these Arab attacks was in the spheres of folklore and hagiography rather than a material one. Thus the tomb of the veteran Medinan Companion Abū Ayyūb al-Anṣārī [*q.v.*], who died during the siege of Constantinople by Yazīd b. Muʿāwiya in his father's caliphate, became regarded as a source of *baraka* or charisma for the Muslims, most recently by the Ottoman Meḥemmed II the Conqueror [*q.v.*], after his entry into Constantinople, who erected a splendid mosque, the present one of Eyüp, on the tomb's supposed site. The siege of Constantinople by Maslama b. ʿAbd al-Malik [*q.v.*] during Sulaymān's caliphate left behind, it was believed, a tangible memorial in the shape of a mosque, identified in the later popular mind with what is now called the Arab Camii in Karaköy (in fact, this building was given as a church to the Dominicans, as the Church of St. Paul or St. Dominic, in 1232, during the Latin occupation of Constantinople, and only became a mosque at the Ottoman conquest). Hārūn al-Rashīd's efforts, though in reality without issue, played a big part in later Ottoman Turkish folklore, and according to one story retailed by the 11th/17th century traveller Ewliyāʾ Čelebi [*q.v.*], Hārūn avenged a massacre of Muslims within Constantinople by hanging the Emperor Nicephorus I in Santa Sophia (see M. Canard, *Les expéditions des Arabes contre Constantinople dans l'histoire et dans la légende*, in *JA*, ccviii [1926]. 87-106 = *Byzance et les Musulmanes du Proche Orient*, Variorum Reprints, London 1973, no. I; C.E. Bosworth, *Byzantium and the Arabs: war and peace between two world civilisations*, in *Jnal. of Oriental and African Studies*, iii-iv [Athens 1991-2], 1-4).

There was periodic naval warfare along the coasts of southern and western Anatolia and against Byzantine islands like Cyprus [see ḲUBRUS], Rhodes [see RODOS], Crete [see IḲRĪṬISH] and Sicily [see SIḲILLIYA], although the Byzantine navy generally managed to retain maritime control—with intervals of Muslim successes—over the first three of these islands and over the Aegean islands in general until the advent of Italian, Catalan and French adventurers there, above all, the Venetians and Genoese, in the 12th century A.D. (see, in general, E. Eickhoff, *Seekrieg und Seepolitik zwischen Islam und Abendland. Das Mittelmeer unter byzantinischer und arabische Hegemonie (650-1040),*

Berlin 1966; H. Ahrweiler, *Byzance et la mer. La marine de guerre, la politique et les institutions maritime de Byzance aux VII^e-XV^e siècles*, Paris 1966; and on one specific early naval battle, DHĀT AL-ṢAWĀRĪ, in Suppl.).

By land, warfare was intermittent between Greeks and Arabs in southeastern Anatolia and its marches for some four centuries. When not distracted by internal difficulties of the caliphate, the Muslims normally mounted summer raids (*ṣawāʾif*, sing. *ṣāʾifa* [*q.v.*]) and, occasionally, winter ones (*shawātī*, sing. *shātiya*), often under the leadership of Umayyad or ʿAbbāsid princes (e.g. Maslama, al-ʿAbbās b. al-Walīd b. ʿAbd al-Malik and ʿAbd al-Malik b. Ṣāliḥ b. ʿAlī) and other prominent commanders. Quite often, their raids penetrated deep into Byzantine territory, such as the famed sack by al-Muʿtaṣim of Amorion (ʿAmmūriya [*q.v.*]) in 223/838. But on the whole, there were no permanent, large-scale Arab annexations in Anatolia, and in the later 3rd/9th century, the advent to the throne in Byzantium of the vigorous Macedonian emperors set the Christians on the offensive in northern Syria and al-Djazīra, this impetus only being checked by the appearance of the Turkmens as a factor in the politics of the region and, behind them, the constituting of the Great Saldjūḳ sultanate [see SALDJŪḲS]. Only then, in the second half of the 5th/11th century, was the stage set for the gradual advance of the Turks into Anatolia after the Saldjūḳ sultan Alp Arslan [*q.v.*] had decisively defeated Romanus IV Diogenes at Mantzikert or Malāzgird [*q.v.*] in 463/1071, thereby gaining control over much of eastern Anatolia. During the next four centuries, Anatolia was to be completely taken over by Turkish dynasties, to be finally unified by the Ottomans [see ʿOTHMĀNLĪ], with portentous changes in the ethnic and religious composition and the socio-economic make-up of Asia Minor (see section (c) below).

The interface of Byzantine-Arab land contact was essentially the region of southeastern Anatolia backed on the Muslim side by a line of "strongholds" (*ʿawāṣim* [*q.v.*]), a line of protective fortresses stretching in an arc from Antioch through the Anti-Taurus and the upper Euphrates region to Manbidj. Before this line of rear defences lay a stretch of debatable land, much fought over, the *ḍawāʾiḥ al-Rūm* or "exterior lands facing the Greeks", in which were situated the "gaps" or *thughūr* [*q.v.*], the forward strongholds, stretching from Tarsus on the Cilician coast to Malaṭya and the mountains of eastern Anatolia. For the general course of this frontier warfare, see the standard histories of Byzantine-Arab relations and of Byzantium, such as A.A. Vasiliev, H. Grégoire and M. Canard, *Byzance et les Arabes*, 4 vols., Brussels 1935-68 (incs. trs. by Canard of the relevant Arabic texts, and vol. iv, *Die Ostgrenze des byzantinische Reiches von 363 bis 1071* by E. Honigmann); Vasiliev, *History of the Byzantine empire*, Madison 1952, esp. vol. i; G. Ostrogorsky, *History of the Byzantine state*, Oxford 1956, ²Oxford 1969; R. Jenkins, *Byzantium, the imperial centuries A.D. 610-1071*, London 1966; J.M. Hussey (ed.), *The Cambridge medieval history*, iv, *The Byzantine empire*, esp. ch. XVII by Canard, *Byzantium and the Muslim world to the middle of the eleventh century*, and, more specifically from the Arab side, Bosworth, *The Byzantine defence system in Asia Minor and the first Arab incursions*, in *Procs. of the Fourth International Conference on the history of Bilād al-Shām*, i, ʿAmmān 1987, 116-24, and idem, *Byzantium and the Syrian frontier in the early Abbasid period*, in *Procs. of the Fifth International Conference on the History of Bilād al-Shām*, Eng. and Fr. section, ʿAmmān 1412/1991, 54-62.

A notable feature here is a certain symbiosis which takes place along the Byzantine-Arab borders, with the evolution of a frontier society differing from the more stable and peaceable communities of the hinterlands (see Bosworth, *The city of Tarsus and the Arab-Byzantine frontiers in early and middle ʿAbbāsid times*, in *Oriens*, xxxiii [1992], 276). Part of this society involved, from the Arab side, the activities of Islamic *ghāzīs* [*q.v.*] or fighters for the faith, motivated in varying proportions by a love of plunder and by a spirit of *djihād* [*q.v.*] or warfare for the extension of the *Dār al-Islām*, and from the Greek side, the activities of the *akritai* or frontier fighters. The Muslim *ghāzīs* based themselves in the frontier posts, variously called *ḥiṣn*, *maslaḥa ribāṭ*, etc., in the *ḍawaʾiḥ*, whilst their Greek counterparts sallied forth from cities and outposts on the Anatolian plateau and in the Taurus mountains, heavily fortified as part of the reshaping of the Byzantine empire, from the later 7th century A.D. onwards, into military themes perpetually organised for warfare (see R.-J. Lilie, *Die byzantinische Reaktion auf die Ausbreitung der Araber. Studien zur Strukturwandlung des byzantinisches Staates im 7. und 8. Jhd.*, Munich 1976; Bosworth, *The Byzantine defence system in Asia Minor and the first Arab incursions*, 119 ff.). A further feature of these frontier societies was the development of an epic literature there (although this was not necessarily contemporaneous with the events purported to be described in it), seen on the Greek side in the epic of Digenes Akrites and on the Arabic one in the stories of Sīdī Baṭṭāl [see AL-BAṬṬĀL, SAYYID GHĀZĪ] and Dhu 'l-Himma [*q.v.*], whilst, again on the Arab side, we know of an only partially-extant work, the *Siyar al-thughūr* "Ways of life, conduct, along the frontiers" by the 4th/10th century author al-Ṭarsūsī (himself a native of the *thaghr* of Tarsus [see ṬARSŪS], possession of which oscillated between the Greeks and Arabs until Nicephorus Phocas captured it in 354/965), which treated of life along the Muslim side of the frontier (see Bosworth, *The city of Tarsus and the Arab-Byzantine frontiers...*, 271-2, 280 ff.; idem, *Abū ʿAmr ʿUthmān al-Ṭarsūsī's* Siyar al-thughūr *and the last years of Arab rule in Tarsus (fourth/tenth century)*, in *Graeco-Arabica*, v [Athens 1993], 183-95).

The frontier warfare, and the territorial advances and withdrawals of each side, created in the *ḍawāḥī* something like a scorched-earth zone, and, at the human level, brought in plentiful supplies of slave captives for both sides. To make up depleted populations in the frontier territories, groups of peoples were often transplanted from the interiors of the Arab and Byzantine empires and settled there; thus there were to be found, on both sides of the frontier, members from the community of the Mardaites, brought from the Amanus region of northwestern Syria [see AL-DJARĀDJIMA, and also ZUṬṬ]. At intervals, exchanges of captives might be arranged, and these are enumerated in the Arabic sources as a series of *fidāʾs* [*q.v.* in Suppl.] or "ransomings", taking place during the 3rd/9th and 4th/10th centuries and usually on the banks of the Lamos or Lamas Su river near Seleucia or Silifke (see Bosworth, *Byzantium and the Arabs...*, 13-16, and LAMAS-ṢŪ).

(b) *Cultural and artistic relations of the Arabs and Byzantines*

One should not dwell exclusively on the military aspects of relations without noting that, interspersed between the frontier raiding and warfare, were long periods of peace (even if these last were, in strict Islamic law, periods of truce, *hudna*, rather than of *ṣulḥ*), during which diplomatic, cultural and commercial intercourse was possible. The two sides, the Arab-Muslim and the Greco-Byzantine, shared a common

world-view, a teleological view of human existence as progressing from the divine act of Creation to the last things (these being, for the Muslims, the vanquishing of Satan or the Anti-Christ (*Dadjdjāl* [*q.v.*]), the Resurrection and the Judgement) and the end of human history; both had similar ethical standards, the pursuit of justice in this world and of individual salvation for the next one. Hence despite political rivalry and military clashes, there was the possibility of occasional co-operation in such spheres as artistic, cultural and scientific ventures.

This was favoured, in practice, by the fact that, although they were enemies of the Greeks from the religious point of view, the Arabs—in distinction from their view of the Franks or Western Europeans, whom they regarded with contempt as barbarians [see IFRANDJ]—considered Byzantium as a world power and world culture on a par with themselves. A passage in the *Kitāb. Ṭabaḳāt al-umam* of the Spanish Muslim *ḳāḍī* of Toledo, Ṣāʿid b. Aḥmad al-Ḳurṭubī (wrote 460/1068) divides the peoples of the world into those concerned with learning and the sciences and those not; in the first category are included peoples like the Indian, Persians, Chaldaeans, Greeks (as *Yūnān*, i.e. the ancient Greeks), the *Rūm* (i.e. the Byzantines), Egyptians, Arabs and Jews (Fr. tr. R. Blachère, *Livre des catégories des nations*, Paris 1935, 36-7, cited in B. Lewis, *The Muslim discovery of Europe*, London 1982, 68-9). For their part, the Byzantine emperors not infrequently accorded the representatives of their Muslim foes a higher rank at their court and among their society than those of the Western Europeans. In a famous passage of his *De ceremoniis aulae byzantinae*, Constantine VII Porphyrogenitus (913-59) gives "Saracen (lit. Hagarene) friends" precedence at the imperial table over the "Frankish friends", and amongst the Saracens in general, the eastern ones (*toi anatolikoi prokrinomenoi*) are accorded the best places (see Bosworth, *Byzantium and the Arabs*, 17).

When the Arabs overran the former territories of the Byzantine empire in the Near East, they saw numerous monuments to Christian architectural achievement. Above all, in Greater Syria, there were still some forested areas with timber as yet unfelled and plentiful supplies of fine building stone, together with a human tradition of building skills and fine craftmanship. The presence of these factors favoured the erection of imposing Islamic public buildings and private palaces in the region, of which the Umayyad Mosque in Damascus and the Mosque of ʿUmar and the Dome of the Rock in Jerusalem were conspicuous examples. Sir Hamilton Gibb suggested that, in Jerusalem, there was a conscious aim of emulating the Christian practice of cathedral building (*Arab-Byzantine relations under the Umayyad caliphate*, in *Studies on the civilization of Islam*, ed. S.J. Shaw and W.R. Polk, Boston 1962, 50 ff.). Moreover, there is a persistent tradition in later Islamic historians that the caliph al-Walīd (I) b. ʿAbd al-Malik sent to the Byzantine emperor (presumably Justinian II, 685-95, 705-11) requesting, and in fact obtaining, help for the adornment of the Umayyad Mosque in Damascus and the Prophet's Mosque in Medina, in which last place the governor ʿUmar b. ʿAbd al-ʿAzīz was building a fine new structure in place of the original, simple building [see ARCHITECTURE. I (2)]. The geographer al-Muḳaddasī (158, partial Fr. tr. A. Miquel, *La meilleure répartition pour la connaissance des provinces*, Damascus 1963, 170-1), describes how the Emperor sent precious metals, skilled artisans and mosaic cubes (*fasāfisa*, *fusayfisa* < Grk. *psēphos*), including some cubes retrieved from ancient cities, presumably in Anatolia (see Bosworth, *op. cit.*, 18-20, and FUSAYFISĀʾ). Such a request for the skills of artisans from Byzantium does, however, raise questions of the motivations behind the actions of both sides. It may be that the Emperor acceded to the caliph's request as an act of condescension, the bestowal of artistic expertise on benighted barbarians, and that al-Walīd thought that he was cunningly acquiring artistic and trade secrets, knowledge of which would in future make him independent of recourse to infidels. Oleg Grabar has discussed these questions, in an attempt *inter alia* to explain which mosaicists from Byzantium should be necessary when there were clearly, from the evidence of the workmanship of the new Islamic structures at Jerusalem, local artisans who were completely competent in such specialisations. (*Islamic art and Byzantium*, in *Dumbarton Oaks Papers*, xviii [1964], 69-88, esp. 82 ff. = *Studies in medieval Islamic art*, Variorum Reprints, London 1976, no. IV).

Recourse to Byzantium for artistic guidance, and for what would now be called technical aid, was made two-and-a-half centuries later by the Umayyad rulers of Muslim Spain, with whom Constantinople had intermittent diplomatic relations: both powers shared a common hostility to the ʿAbbāsids. In 839-40 the Emperor Theophilus (829-42) sent an embassy to ʿAbd al-Raḥmān II [*q.v.*] in his capital Cordova, seeking to get the *amīr* to use his influence among the band of Muslim adventurers from al-Andalus under Abū Ḥafṣ ʿUmar al-Ballūṭī, who had established themselves in the Byzantine posession of Crete and subjugated the Christian Greek population there. Then, a century later, the Umayyad caliph ʿAbd al-Raḥmān III [*q.v.*] looked to Constantinople for assistance and advice, regarding the Byzantine capital as the outstanding centre of cultural splendour in the Mediterranean basis, and possibly also in an endeavour to counterbalance the cultural impact in Spain of the Islamic East, and particularly of Baghdād. It seems that in the A.D. 950s ʿAbd al-Raḥmān sent the Mozarab bishop Recemundo or Rabīʿ b. Zayd [*q.v.*], who had already been employed on a mission to the Emperor Otto I, to Constantinople in order to acquire *objets d'art* for the decoration of the new palace, *al-Madīnat al-Zahrāʾ* [*q.v.*], which the Umayyad ruler was building outside Cordova. The later Moroccan historian Ibn ʿIdhārī records that, keeping up the tradition, ʿAbd al-Raḥmān's son al-Ḥakam I [*q.v.*] maintained these diplomatic relations with Byzantium, and sent to Nicephorus Phocas for a mosaicist and for materials to decorate the Great Mosque at Cordova (see E. Lévi-Provençal, *Un échange d'ambassades entre Cordoue et Byzance au IXe siècle*, in *Byzantion*, xii [1937], 1-24; idem, *Hist. Esp. musulmane*, Paris-Leiden 1950, i, 251-4, ii, 146-53, cited in Bosworth, *op. cit.*, 20-1).

Canard, in his article *Le cérémonial fatimite et le cérémonial byzantin, essai de comparaison*, in *Byzantion*, xxi (1951), 355-420 = *Byzance et les Musulmanes du Proche Orient*, no. XIV, drew attention to similarities between the court practices of the Byzantine emperors (known to us in detail from Constantine Porphyrogenitus's *De ceremoniis*) and those of the Fāṭimid caliphs, and mooted the possibility (415 ff.) of cultural influences in Fāṭimid North Africa and Egypt emanating from Byzantium. He found it difficult to produce evidence of a deliberate policy of imitation on the part of the Fāṭimids, but did draw attention to the significant role in the early Fāṭimid caliphate of ethnic groups from various parts of the Byzantine empire, such as the Sicilian (or Dalmatian, or even Greek?)

Djawhar (d. 381/992 [*q.v.*]), in whose conquering army was certainly a corps of *Rūm*. I. Hrbek, discussing the role of the Ṣaḳāliba [*q.v.*] and Rūmīs in the Fāṭimid army, opined that the majority of these Rūmīs came from the Balkans, over which Byzantium claimed a general suzerainty, the Balkans being for long a great reservoir for slave manpower (*Die Slawen im Dienste der Fāṭimiden*, in *ArO*, xxi [1953], 543-81, esp. 567 ff.). We also have evidence of some direct diplomatic contact between Byzantium and the Fāṭimid caliph al-Muʿizz in the shape of an embassy from Constantinople to his palace at Manṣūriyya near Ḳayrawān in 346/957 seeking peace after naval clashes in the Mediterranean between ships of the Spanish Umayyads and their Byzantine allies on the one side and ships of the Fāṭimids on the other (S.M. Stern, *An embassy of the Byzantine emperor to the Fatimid caliph al-Muʿizz*, in *Byzantion*, xx [1950], 239-58 = *History and culture in the medieval Muslim world*, Variorum Reprints, London 1984, no. IX), but this seems to have been an isolated occurrence.

In addition to these sporadic artistic and cultural relations between Byzantines and Arabs, there were also odd cases of co-operation, and even, on one occasion, something like a joint expedition, for scientific purposes. The caliph al-Maʾmūn [*q.v.*] was known for his interest in science and learning, and he brought together various experts in his *Bayt al-Ḥikma* [*q.v.*] at Baghdād, with the aim of recovering and translating the ancient Greek scientific, medical and philosophical heritage. According to Ibn al-Nadīm's *Fihrist*, al-Maʾmūn sent to the Emperor in Constantinople for books on science, which the latter somewhat unwillingly sent, and he further endeavoured, but without success, to attract from the Byzantine capital to his own court the celebrated mathematician and philosopher Leo, subsequently Archbishop of Thessalonike. Al-Maʾmūn's son al-Wāthiḳ [*q.v.*] inherited his father's interests, and when he became caliph he sent to Ephesus in Rūm the astronomer and mathematician Muḥammad b. Mūsā al-Khʷārazmī [*q.v.*], with the aim of getting information on the "Companions of the Cave", *Aṣḥāb al-Kahf* [*q.v.*]; for this quest, the Emperor Michael III (842-67) provided a guide (see Bosworth, *op. cit.*, 22-3).

After the 5th/10th century, the Byzantines and the Arabs tended to be separated from each other geographically by the intrusion of a new ethnic element, the Turks, as will be described in the next section, and diplomatic and cultural contacts were much reduced, although whilst ever the rulers in Constantinople controlled maritime traffic through the Straits and the Dardanelles, they had a continuing role in the slave trade between the Ḳipčaḳ Steppe and South Russia which was such a vital factor in the replenishment of military personnel in the Mamlūk state [see MAMLŪK].

(c) *Byzantium and the Turks*

With the coming of the 5th/11th century, Muslim pressure on Byzantium passed from the hands of the Arabs into those of the Turks, in the shape of Turkmen begs or tribal leaders and the more organised Turkish principalities which arose in Anatolia towards the end of that century, such as that of the Dānishmandids [*q.v.*] in northern and eastern Anatolia and the branch of the Saldjūḳs in Konya. All these now became the spearhead of Islamic penetration of Anatolia and of the region's gradual subtraction from Byzantine control.

In later decades of the century, the Saldjūḳ adventurer Sulaymān b. Ḳutalmish b. Arslan Isrāʾīl and his raiding bands penetrated right across the length of Asia Minor, at a time when the Byzantine empire was weakened by succession disputes, so that for several years, until 490/1097, Sulaymān was able to make Nicaea or Iznik [*q.v.*], in the extreme northwest of Anatolia, his temporary capital.

Under the emperors of the Comneni dynasty, and with assistance from the Frankish Crusaders who passed through Asia Minor en route for the Holy Land, the Byzantine position was in the 6th/12th century generally re-established in western Anatolia and in the Black Sea and Mediterranean coastlands. But the defeat of Manuel I Comnenus at Myriocephalon in 572/1176 showed the rising strength of the Saldjūḳ sultanate of Rūm in Konya, and in the last two decades of the century the Byzantine frontier defences largely crumbled. Also, the Latin conquest of Constantinople in 1204 reduced the Byzantine hold over Asia Minor to its northwestern portion, ruled from their temporary capital of Nicaea for over half-a-century, and this meant that, even though the rule of the Palaeologi was restored in Constantinople, the next two centuries were ones of steady decline, with Byzantium as a vassal state of the Ottomans after the mid-8th/14th century.

These last Byzantine rulers formed merely one element, and that of decreasing authority, within a states-system of South-East Europe and Asia Minor which included rising powers in the Balkans like Serbia and Bulgaria, the Italian and other merchant adventurers in Greece and the Aegean isles, but, above all, the Turks of Anatolia. An indication of the Byzantine emperors' enfeeblement was that, whereas earlier monarchs had disdained to link themselves with lesser families, and certainly not with infidels, the Palaeologi had to seek allies where they could find them, and this not infrequently involved marriage alliances with Muslim ruling families. Michael VIII (1259-82) had diplomatic relations with the Mongol Golden Horde in South Russia and with the Il-Khānid of Persia, Hülegü, and gave his illegitimate daughter Euphrosyne in marriage to the Djočid *amīr* Noghay. The claimant to the throne in Constantinople John Cantacuzenus (1347-54) in 1346 allied with the Ottoman chief Orkhan during the course of a succession dispute within Byzantium, and gave his daughter Theodora in marriage to Orkhan. (C. Imber, *The Ottoman empire 1300-1481*, Istanbul 1990, 23). In the northeast of Anatolia, the empire of Trebizond, surrounded along its land frontiers with Turkish territory, only survived as long as it did by means of alliances and agreements with the Muslims. Thus the Bayandur Turkmen tribe pressed particularly hard on Trebizond until Ḳara ʿOthmān, founder of the Aḳ Ḳoyunlu [*q.v.*] or "White Sheep" Turkmen principality, married the princess Maria of Trebizond. Ḳara ʿOthmān's grandson Uzun Ḥasan married in *ca.* 862/1458 Despina, daughter of the Trebizond Emperor John IV Comnenus, and Despina's daughter Martha was to marry Shaykh Ḥaydar Ṣafawī of Ardabīl and become the mother of Shāh Ismāʿīl I of Persia [see UZUN ḤASAN, in *EI*[1]].

The history of the Turkish advance and the gradual take-over of Anatolia, may be followed in ANADOLU (iii), in ʿOTHMĀNLĪ, in SALDJŪḲ. III. 5, in the articles on the various *beyliks*, and in such standard works (which also discuss such contentious questions as the nature and pace of Islamisation and the relative contribution to Anatolian life and society by what eventually became the Greek and Armenian substratum) as Cl. Cahen, *Pre-Ottoman Turkey. A general survey of the material and spiritual culture and history c. 1071-1330*, London 1968; S. Vryonis, *The decline of medieval Hellenism in Asia Minor and the process of Islamization from*

the eleventh through the fifteenth century, Berkeley, Los Angeles and London 1971; Osman Turan, *Selçuklar zamanında Türkiye. Siyâsi tarih Alp Arslan'dan Osman Gazi'ye 1071-1318*, Istanbul 1971; F. Taeschner's chs. *The Turks and the Byzantine empire to the end of the thirteenth century* and *The Ottoman Turks to 1453*, in *Camb. med. hist.*, iv/1, 737-75; A.G.C. Savvides, *Byzantium in the Near East: its relations with the Seljuk sultanate of Rum in Asia Minor, the Armenians of Cilicia and the Mongols A.D. c. 1192-1237*, Thessalonike 1981; etc.

Finally, it is interesting to note the vicissitudes of use of the actual ethnic/dynastic term *Rūm* during these later centuries of the empire's existence. Byzantine Greek sources refer to the empire as *Rhōmania* or *Rhōmaiōn/rhōmaikai chōrai* from the 9th century onwards. In more recent Islamic usage, *Rūm* had always had a geographical sense also (see above, (a)), designating the Greek lands of the Byzantine empire beyond the Taurus-upper Euphrates frontier zone. Hence when the Turks penetrated into these regions during the later 5th/11th century, it was natural that a line of begs like those of the Dāni<u>sh</u>mandids [*q.v.*], who were originally based on the Sivas district, should style their territories Rūm, and we find Malik Muḥammad <u>Gh</u>āzī (529-36/1134-42) styled on his Greek-legend coins "the Great King of Romania and Anatolia". The Anatolian Sal<u>dj</u>ūḳs, whose principality was based on the region of Konya and southern Cappadocia—territories which were for long strongly Greek in ethnos and still in early Ottoman sources called *Yūnān wilāyeti* "province of the Greeks"—referred to their state, at least in informal usage, as that of Rūm and themselves as *Sal<u>dj</u>ūḳiyān-i Rūm*, thereby in some measure conceiving of themselves as heirs to the Byzantines in south-central Anatolia (although *Rūm* continued also, as with regard to the Greeks who had lived within the Arab caliphate centuries before, to denote the Greek Christian population of Asia Minor; towards the middle of the 8th/14th century, the Moroccan traveller Ibn Baṭṭūṭa records sailing to Alanya in the Bilād al-Rūm, "called after the Rūm because it used to be their land in olden times, and from it came the ancient Rūm and the Yūnānīs. Later on it was conquered by the Muslims, but in it there are still large numbers of Christians under the protection of the Muslims, these latter being Turkmens", *Riḥla*, ii, 255, tr. Gibb, ii, 415).

The expansion of the Ottomans in the 8th/14th century eventually made them masters of the former Byzantine territories, *grosso modo* those of *Rhōmania*, in both Anatolia and the Greco-Balkan region. Since the territories of the Palaeologi were latterly mainly in Europe, this *Rhōmania* became for the Ottomans Rūm-eli [*q.v.*], or Rumelia, the land characterised by its predominantly Orthodox Christian population, the Rūm. The circumscribed remnant of the Byzantine empire was by now rarely in Ottoman sources styled *Rūm*, nor was its emperor styled Ḳayṣar, the latter office being more commonly referred to by the (originally Armenian) title *Tekfūr* "king". It was the Ottomans who took over for themselves, and especially from the times of Meḥemmed I and II [*q.vv.*], the title of *Sulṭān* (or *Pādi<u>sh</u>āh* or *<u>Kh</u>ān*)*-i Rūm*, regarding themselves as being already, before the final capture of Constantinople, substantially the heirs to both the Byzantine empire and the Rūm Sal<u>dj</u>ūḳ sultanate. Thus it was natural that the Tīmūrid historian Niẓām al-Dīn <u>Sh</u>āmī [*q.v.*] should, in his *Ẓafar-nāma* (ed. F. Tauer, Prague 1937-56, i, 257), call the Ottomans of Bāyezīd I, whom Tīmūr crushed, the *Rūmiyān*, adducing at the same time the Ḳurʾānic reference to the Rūm and their defeat (XXX, 1, reading *<u>gh</u>ulibat al-Rūm*). See in general on these questions, P. Wittek, *Le sultan de Roum*, in *Ann. de l'Inst. de Philologie et d'Hist. Or. et Slaves, Bruxelles*, vi = *Mélanges Emile Boisacq*, ii (1938), 361-90; Savvides, *A note on the terms Rūm and Anatolia in Seljuk and early Ottoman times*, in *Byzantinotourkika meletēmata. Anatypōse arthrōn 1981-1990*, Athens 1991, no. X [171]-[178].

RŪM ḲALʿESI, Ḳalʿat al-Rūm, a fortress in mediaeval northern Syria, which lay on the right bank of the Euphrates river where it takes its great westernmost bend, hence to the north-north-west of Bīre<u>dj</u>ik [*q.v.*]. Its site accordingly comes within the modern Turkish province (*il*) of Gaziantep.

According to Arnold Nöldeke's description, it is situated "on a steeply sloping-tongue of rock, lying along the right bank of the Euphrates, which bars the direct road to the Euphrates from the west for its tributary the Merziman as it breaks through the edge of the plateau, so that it is forced to make a curve northwards around this tongue. The connection between this tongue of rock, some 1,300 feet long and about half as broad, and the plateau which rises above it is broken by a ditch made by man about 100 feet deep. The walls of the citadel with towers and salients follow the outlines of the rock along its edge at an average height of 150 feet above the level of the Euphrates, while the ridge extending along the middle of the longer axis rises 100 to 120 feet higher" (A. Nöldeke, in *Petermanns Mitteil.* [1920], 53-4, where the main road up to the citadel, the buildings, etc., are also described).

The unusual position of the fortress on a high cliff suggests that it corresponds to the tower of <u>Sh</u>ītamrat "hovering like a cloud in the sky" which <u>Sh</u>almaneser III took in 855 B.C. (E. Honigmann, art. *Syria*, in Pauly-Wissowa, iv, A, cols. 1569, 1592).

It seems probable (following e.g. Marmier, B. Moritz, F. Cumont, R. Dussaud, etc.) that Rūm Ḳalʿesi should be identified with Urima, Armenian Uremna, but later called in that language Hṛomklay and similar names. Urima was an Armenian bishopric, as is recorded up to the time of Matthew of Edessa, and it is likely that this was the place which Syriac historians like Michael the Syrian and Barhebraeus call Ḳalʿa Rōmaytā and Byzantine historians Rhōmaiōn Koula.

In the early 12th century, Rūm Ḳalʿesi came within the Frankish County of Edessa [see al-ruhā]. The Jacobite metropolitan Abu 'l-Fara<u>dj</u> Basīl bar <u>Sh</u>ummāna of Edessa, who escaped to Samosata after the second devastation of the town in 1146 by the Turks, had been previously imprisoned in Rūm Ḳalʿesi by Joscelyn de Courtenay. In 1148 the Armenian Catholicos Grigor III Pahlavuni moved his residence to "the fortress of the Romans" (Arm. Hṛomklay) at the demand of the Franks of the former County of Edessa (whose capital had been since 1145 at Tell Bā<u>sh</u>ir). The Armenian Catholicos resided there until 1293, although Rūm Ḳalʿesi also contained many Jacobite as well as Armenian Christians. Until the later 13th century, events in Rūm Ḳalʿesi impinged little on the affairs of the Islamic lands, although when the Emperor Frederick Barbarossa passed through

Anatolia in 585/1189, it is recorded by Abū Shāma that the Armenian Catholicos of Ḳalʿat al-Rūm (sc. Grigor IV) sent a letter to the Ayyūbid sultan Ṣalāḥ al-Dīn [*q.v.*], and another in the following year, asking for help (*K. al-Rawḍatayn*, in *Rec. Hist. Or. des Croisades. Historiens arabes*, iv, 435-6, 453-6).

In 1260 the Mongol Il-Khan Hülegü [*q.v.*] crossed the Euphrates by bridges of boats at Malaṭya, Ḳalʿat al-Rūm, Bīra and Ḳarḳīsiyāʾ (Barhebraeus, *Mukhtaṣar T. al-Duwal*, Beirut 1890, 486; idem, *Chronography*, ed. Bedjan, 509). Then in the reign of the Mamlūk sultan al-Manṣūr Ḳalāwūn, an Egyptian army of 9,000 horse and 4,000 foot under Baysarī as well as Syrian forces under Ḥusām al-Dīn of ʿAyntāb came to Rūm Ḳalʿesi and laid siege to the fortress 19 May 1280. The sultan demanded that the Catholicos should surrender the fortress and move with his monks to Jerusalem, or if he preferred, to Cilicia. When the Catholicos refused to do so, the Egyptians laid waste the country around the town which was inhabited by Armenians, on the next day forced their way over a wall only recently built into the town, and set it on fire. The whole population fled into the citadel. After the Egyptians had ravaged and plundered the country round for five days, they retired.

In the reign of al-Ashraf Khalīl they undertook a new expedition against Rūm Ḳalʿesi in 691/1292, in which the prince of Ḥamā, al-Malik al-Muẓaffar, took part with Abu 'l-Fidāʾ in his retinue (Abu 'l-Fidāʾ, *Annales muslemici*, ed. Reiske-Adler, v, 102 ff.). On Tuesday, 8 Djumādā II, the Egyptians appeared before the town and erected 20 pieces of siege artillery. It fell after a siege of 33 days. On 11 Radjab/29 June 1292, it was plundered and a massacre carried out among the garrison of Armenians and Mongols. Among the 1,200 prisoners, who were mostly taken to the sultan's arsenal on 28 June (al-Nuwayrī, *Nihāya*, ms. Paris, fols. 100-1 cited in Quatremère, *Hist. des Sult. Mamlouks*, ii/1, 141, n. 30), was the Armenian Catholicos (Ar. "*Khalīfat al-Masīḥ*, whom they call *Kāthāghīkūs*", cf. Yāḳūt, iv, 164), Stephanos IV of Rūm Ḳalʿesi, with his monks; he died a prisoner in Damascus (Barhebraeus, *Chronography*, 579). According to the inscription of ownership in a Syrian manuscript (B.L. ms. Syr. no. 295), it belonged to a certain Rabban Barṣawmā of Ḳalʿa Rōmaytā, high priest of Raʿbān, who in a note refers to the harsh imprisonment which he suffered from the Egyptians; Armenian verses on the fall of the fortress are preserved on a relic casket (Wright, *Catal. syr. mss. Brit. Mus.*, i, 231b, Carrière, *Inscription d'un reliquaire arménien*, in *Mélanges orientaux*, Paris 1883, 210, n. 1; Promis, *Mem. dell' accad. di Torino*, xxxv [1884], 125-30). The inscription on the great gate of the citadel, which was restored by al-Ashraf Khalīl, speaks of him as a victor who among other feats had put the Armenians to flight, an allusion to the capture of Rūm Ḳalʿesi (van Berchem, in *JA* [May-June 1902], 456; the inscription published by Sobernheim, in *Isl.*, xv [1926], 176). The sultan sent boastful bulletins of victory to the cities of Syria in which he proclaimed the capture of this impregnable citadel as an unprecedented feat of arms and concluded with the words: "After the capture of this fortress, the road is open to us to conquer the whole of the East, Asia Minor and ʿIrāḳ so that with God's will we shall become owners of all the lands from the rising of the sun to its setting" (al-Nuwayrī, ms. Leiden, fol. 58, tr. in Weil, *Gesch. d. Chalifen*, iv, 183-4).

The fortress of Ḳalʿat al-Rūm was rebuilt on orders of the sultan by the *nāʾib* of Syria, Sandjar al-Shudjāʿī, and given the name of Ḳalʿat al-Muslimīn; another part of the town was left in ruins, however (Quatremère, *Hist. des Sultans Mamlouks*, ii/1, 139-40).

The successor of the imprisoned Armenian patriarch Stephanos, Grigor VII of Anavarza (1293-1307), took up his residence in Sīs in Cilicia, which henceforth was the seat of the Catholicos. Rūm Ḳalʿesi, in spite of its restoration as a frontier fortress (cf. also Abu 'l-Fidāʾ, ed. Reinaud, 226; al-Dimishḳī, ed. Mehren, 214), under the Mamlūks never seems to have recovered from the blow. In 775/1373-4, much damage was done by floods in Ḳalʿat al-Muslimīn as well as in Aleppo, al-Ruhāʾ, al-Bīra and Baghdād (al-Ḥasan b. Habīb, *Durrat al-aslāk fī dawlat al-atrāk*, in Weijers, *Orientalia*, ii, Amsterdam 1846, 435).

In the spring of the year 881-2/1477 the Mamlūk sultan Ḳāʾitbay made a tour of inspection as far as Ḳalʿat al-Muslimīn (described by Abu 'l-Baḳāʾ Ibn al-Djīʿān, ed. R.V. Lanzone, *Viaggio in Palestina e Soria di Kaid Ba*, Turin 1878; tr. R.L. Devonshire, in *Bulletin IFAO*, xx [Cairo 1921], 1-43). After the battle of Mardj Dābiḳ [*q.v.*], the fortress became Ottoman, and under Ottoman rule came under the *pashalïḳ* of Aleppo (Ḥādjdjī Khalīfa, *Djihān-numā*, 598).

Only a few remnants of the fortress now remain, as well as of an Armenian monastery and a mosque (plans of the fortress in Moltke and following him in Humann and Puchstein, *Reisen...*, 175, and in A. Nöldeke, in *Peterm. Mitt.* [1920], pl. 3, map: *Plan von R.K. in 1:2000*; photographs in F. Frech, in *Geogr. Zeitschr.*, xxii [1916], pl. 1; Cumont, *Études syriennes*, 170, fig. 54; from the north: Humann and Puchstein, *op. cit.*, 176, fig. 25; from the east with the Euphrates: A. Nöldeke, *op. cit.*, pl. 13).

(E. Honigmann-[C.E. Bosworth])

RŪM SALDJŪḲS [see saldjūḳs].

RŪMELİ, originally Rūm-ili, the territory of the Rūm [*q.v.*], the geographical name given to the Balkan peninsula by the Ottomans; also the

name of the Ottoman province which included this region. The Muslims knew the Byzantines as *Rūm*, and the Eastern Roman Empire as *Bilād al-Rūm* or *Mamlakat al-Rūm*, hence once Anatolia came under Turkish-Islamic rule, the designation Rūm survived as a geographic name to designate Asia Minor. Some Western travellers of the 13th century, however, referred to Anatolia under Turkish rule as *Turquemenie* or *Turquie* and used the name *Romania* for the area under Byzantine rule. Subsequently, this expression came to designate the Balkan peninsula where Greek Orthodoxy predominated.

Ottoman Turks borrowed the name *Rūm-ili* from the Greek *Rhōmania* and began to use it, in contradistinction to *Anadolu*, to refer to the lands they conquered from the Byzantines beyond the sea. The name *Rūm* by itself, retained its original meaning and remained as a geographical name designating the area under Saldjūḳ rule in Asia Minor (see further, RŪM. 2).

During the time of the Emperor Justinianus, the northern borders of the Byzantine Empire were the Danube and Drava. Ottoman sultans from Bāyezīd I [*q.v.*] onwards considered the peninsula extending to the south of the Danube as their area of sovereignty. Murād II was clearly following this notion when he obtained the commitment from Hungarians not to cross the Danube in the treaty he made with them in 1444 (H. Inalcik, *Fatih devri*, i, Ankara 1954, 22).

The first settlement of the Anatolian Turks in the Balkans is related to the incident of ʿIzz al-Dīn Kaykāwūs of the Saldjūḳs fleeing and taking refuge in Byzantium in 662/1264. The emperor Michael VIII Palaeologus allocated the steppes of the Dobrudja for him to settle there with his men. Following this, a group of 30 to 40 Turcoman clans (*oba*) who supported him, crossed to the Dobrudja in the company of Sarî Ṣaltuḳ Baba (see P. Wittek, *Yazijioghlu ʿAlī on the Christian Turks of the Dobruja*, in *BSOAS*, xiv [1952], 639-68). Ibn Baṭṭūṭa mentions Babadagh town around the 1330s (tr. H.A.R. Gibb, ii, 449). In the second half of the century, first the khan of the Golden Horde, Berke, and then the powerful *Amīr* Noghay, directly interfered in Balkan affairs and took the Muslim Turks in the Dobrudja under their protection. Around this time, Saḳdjî (Isaḳdjî) on the lower Danube is described as a Muslim city [see DOBRUDJA] and cited as the headquarters of Noghay (Baybars, *Zubdat al-fikra*, ed. W. Tiesenhausen, Tkish tr. *Altın-Ordu devleti tarihine ait metinler*, Istanbul 1941, 221).

Noghay, who converted to Islam, appears to have come under the influence of Sarî Ṣaltuḳ. After the fall of Noghay, Tokhtu, the pagan khan of the Golden Horde, appointed his son Tuḳal Bugha in Saḳdjî. Moreover, the Bulgarians having killed Noghay's son, Čeke began to harrass the Turks of the Dobrudja. In this situation, some of the Dobrudja Turks returned to Anatolia in 1307-11 (see Wittek, *op. cit.*, 651) and those who remained converted to Christianity. Most probably these Turks, together with the Christian Comans or Ḳumans, were established in the despotate of Dobrudja under the rule of Balîḳ and his brother Dobrotić shortly before the year 1366 [see DOBRUDJA]. Initially, the centre of this despotate was Ḳalliaḳra, but at the time when the Ottoman Turks arrived it was Varna.

In the first half of the 14th century, Turcoman *amīrs* of Aydîn, Ṣarukhān and Karasî, having conquered western Anatolia, crossed the Aegean Sea with their fleets and made raids into the Balkans. The most celebrated hero of these raids was Ghāzī Umur Bey [*q.v.*] of the Aydîn-oghlu.

The first Ottoman conquests in the Balkans.

Due to Umur's death in May 1348, the Ottomans assumed the leading role in the Turkish operations in Rūmeli. In 1345 when the Serbian king Stephen Dushan died and his empire in the Balkans disintegrated, the Ottoman leader Orkhan [*q.v.*] became an ally of John Cantacuzenus and married his daughter Theodora. In the second civil war that erupted in the Byzantine Empire, the Ottomans took sides with Cantacuzenus while the Serbians and Bulgarians supported John V. A contingent of 10,000 men sent by Orkhan under the command of his son Süleymān Pasha routed the Serbian-Greek forces supporting John V. This victory, won in the autumn of 1352, is the turning-point that made it possible for the Ottomans to settle in Rūmeli. Rūmeli had already become a field of operations for the *ghāzīs* from Anatolia. The *ghāzī* groups which had organised themselves independently, had already started crossing into Rūmeli, taking advantage of the Byzantine civil war and the struggle between Byzantium, the Serbs and Bulgarians.

Cantacuzenus notes Süleymān's reluctance to evacuate the various places which he occupied in Rūmeli, but he only mentions Tsympe (Djimbi or Djinbi) among these. Ottoman chronicles mention Aya Shiline or Aya Shilonya, Odköklek and Eksamilye among the fortresses which Süleymān occupied in the period 1352-4. The places which Cantacuzenus tried to have him evacuate must be these fortresses. Thus the first settlement of the Ottomans took place in the isthmus of Gallipoli in 1352 and the conquest of Gallipoli followed two years later. It was one of the sons of Asen, the *Tekfūr* of Gallipoli, who assisted the Ottomans to cross over to Rūmeli and settle there. He converted to Islam and took the name Melik. With his co-operation, a ship was built in Lapseki and Aḳča-Burgos on the opposite shore was taken, after which 3,000 men crossed to Ḳozlu-Dere and took Bolayîr. On 2 March 1354, hit by a violent earthquake, the city walls of Gallipoli unexpectedly collapsed and the *Tekfūr* of the fortress fled by ship, and Süleymān Pasha captured the city.

According to the details given by Cantacuzenus, at the time when he was trying to recover the Tsympe fortress from Süleymān by promising him 10,000 pieces of gold, through "Divine Providence" a severe earthquake ruined almost all of the cities in Thrace and the people ran to take refuge in the cities whose walls were not affected. Süleymān conquered these cities, as well as Gallipoli, and placed there Turks whom he had brought from Anatolia. Ottoman settlements in Rūmeli created great agitation and anxiety in Constantinople, and Cantacuzenus, who was held responsible for this, was compelled to abdicate the throne.

Süleymān made Gallipoli the headquarters for his subsequent raids. His conquests in Rūmeli included Migalḳara (Malḳara), Ipsala, Vize, Tekfūr Daghî Seyyid Ḳawaghî, Bolayîr and Gelibolu [*q.v.*] itself.

The Ottoman expansion in the Balkans.

Following their settlements in the towns of the Gallipoli isthmus and Gallipoli itself in the period 1352-4, the Ottomans established military posts or *udjs*, oriented in three directions. The first *udj* was used as the base for the raids along the shore in the direction of Tekfūr Daghî, Čorlu and Constantinople; the second in the middle was for the raids in the direction of Malkara, Hayrabolu and Vize through Ḳoñru-Dagh (today Kuru Dağ); and the third *udj* became the base for the raids along the River Maritsa, in the

direction of Ipsala and Edirne. This *udj* system was maintained throughout the Ottoman conquest of Rūmeli, and as the conquest advanced, the *udj* settlements were moved farther ahead in the three directions. Due to Süleymān's death in 1357 and Orkhan's old age, there appears to have been a retreat. Various places conquered in Süleymān Pasha's time were lost. During this time, Hadjdjī Ilbeyi and Ewrenos Bey had been active in the left-hand *udj*. Over the course of time, this *udj* was transferred to Ipsala, and then to Gümüldjine, Serez and Kara Ferye, and from there on, splitting into two branches, it moved to Tīrhala and Üsküp. As for the right-hand *udj*, it was first transferred to Yanbolu, Karinova and Pravadi, where it split into two, one moving to Tīrnova and Nikebolu and the other to the Dobrudja. The middle *udj* first moved to Čirmen, then to Zagra and Filibe and then split into two, with one branch shifting to Sofia and Nish, and the other to Köstendil and Üsküp. Conquests made in these three directions, constituted the right, left and middle *sandjaks* of Rūmeli. In the middle branch, the *sandjaks*, first of Edirne then of Sofya, became the centres of the *Beylerbeyi* or governor of Rūmeli. Turkish immigration and settlement followed these frontier zones, starting with Süleymān Pasha. The Ottomans in Rūmeli dispatched successively Turcoman or Yörük clans in the *udjs*. As these frontier settlements moved forward, the earlier frontier centres which were left behind flourished over the course of time as Turkish towns. Specifically, pious and commercial establishments created by endowments [see WAKF] played an essential role in the development of these early frontier towns. Edirne, Filibe, Serez, Üsküp, Sofya, Silistre, Tīrhala, Yeñi Shehir and Manastīr initially developed in this manner, adorned by the endowments of the *udj beyis*, and subsequently became the main towns of Rūmeli, maintaining their significance until the present time.

Conditions at the Ottoman conquest.

In their conquests the Ottomans, along with the frontier raids, used the policy of *istimālet* or conciliation towards the subject peoples, treating them in such a way so as to win them over to their side. As noted by ʿĀshīk Pasha-zāde (ed. Atsız, 123) "They did not injure the infidel population, perhaps they even granted favours to them. They captured only those leading men among them". So "the infidels of Djinbi became allies with these *ghāzīs*". The Ottomans faithfully followed this policy in the conquest of Rūmeli, with the state trying to win over the peasant population especially. The feudal lords were either eliminated, or, if they did not resist, were integrated into the Ottoman military cadres. Even during the times of Murād II and Meḥemmed II [*q.vv.*], we find Christian military families kept as Ottoman *sipāhīs* enjoying *tīmārs* (see Inalcik, *Ottoman methods of conquest*, in *SI*, ii [1954], 103-29). Likewise, peasant soldiers called *voynik* or *voynuk* whom we find in the areas once under the empire of Stephen Dushan, were, under the Ottomans, kept in the military cadres of the new state. In the 15th century, under the same name, they reached significant numbers in Macedonia, Thessaly and Albania. Similarly, the Martolos [*q.v.*] in the fortresses along the Danube and the Christian nomads of the military group called Eflāk [*q.v.*] (Vlachs) were admitted into the Ottoman military cadres under the command of their own overlords. This policy, coupled with the protection of the Church's organisation, facilitated Ottoman expansion in the Balkans. This came at a time when the Byzantine Empire, the Bulgarian Tsardom and Dushan's empire had already disintegrated. Western feudal practices started to take hold in the Balkans, and due to the weakening of a central power, feudalism began to spread. The local feudal lords, called *tekfūr* by the Ottomans, strove to strengthen their control over land and peasant labour in the countryside. When the Ottomans arrived, they first ended the local feudal structures by placing agricultural lands exclusively under state control, as *mīrī* [*q.v.*]. They systematically abolished the corvées and replaced them with a fixed tax called *čift resmi* [*q.v.*]. The landlords, who could not secure the support of the peasants against Ottoman invasion, sought the aid of the Latins and Hungarians invading the Balkans under a Crusader banner. The Latins and Hungarians, of Roman Catholic faith, considered the native Greek Orthodox population as schismatics and had been trying to convert them to Catholicism by force. The Ottomans, on the other hand, not only offered recognition and protection to the Orthodox Church but they granted to its priests tax exemptions or even *tīmārs*, in order to turn them into employees of the state (see *Sûret-i defter-i sancak-i Arvanid*, ed. Inalcik, Ankara 1954, 58, 73).

The settlement of the Turks in the Balkans.

Mass immigration and settlement occurred especially in the 14th century. Later on, Tīmūr's occupation of Anatolia gave rise to a big wave of migration from Anatolia to Rūmeli. At that point, Edirne became the capital of the empire. As a result of these migrations, Thrace, eastern Bulgaria, the river valley of the Maritsa and then the Dobrudja became thickly populated by Turks. The evidence of the Ottoman population and tax registers reveals conclusively that, in these regions in the 16th century, Turks formed a large part of the population. Although spontaneous migration, continuing from the time of Orkhan, was by no means less important, the state's policy of deportation was largely responsible for this result. A classification of the place names found in the 15th century surveys indicates that settlements were associated with nomadic Yörük groups such as the Kayī, Salurlu, Türkmen and Akčakoyunlu, or with sedentary or nomadic groups associated with a place name in Anatolia, such as, Ṣarukhānlī, Menteshelī, Simawlī, Ḥamīdlī and Eflughanlī, or with the followers of famous military leaders, such as Dāwūdbeglī and Turakhanlī, or with members of the Ottoman military organisations such as *doghandjī*, *čawush*, *damghadjī*, *müderris*, *kādī* and *sekbān*, or with a *zāwiye* [see ZĀWIYA] or pious endowment. It should also be pointed out that dervish convents played a crucial role in the formation of Turkish villages. Turkish immigrants generally formed independent villages with Turkish names and did not generally mix with the local Christian populations. Even in the towns, Christian neighbourhoods were always separate. In the 14th-15th centuries, Islamisation appears to have been quite sporadic, occuring mostly on the successive military frontier zones on the Via Egnatia, Maritsa valley and eastern Balkan passes. According to the *djizye* registers of 893-6/1487-91, only 255 cases of conversion were identified over three years. Levies of Christian boys [see DEWSHIRME] are not included in the figure. The use of the native language can be taken as an indication of Islamisation. Bosnian and Albanian Muslims and Pomaks constitute the largest of such groups. Those Muslim groups who spoke exclusively Turkish or were bilingual, with Turkish as the mother tongue, were definitely of Anatolian Turkish origin. Turks or

Tatars of the northern Black Sea steppe, Turks of the Deli-Orman region, Dobrudja and Varna, as well as those of the Maritsa Valley, were of this category while there were also Noghays [*q.v.*] in the Dobrudja and in Budjak [*q.v.*] or Moldavia.

Population of Rūmeli, Ottoman census of 1894

Province	Muslim	Greek	Armenian	Bulgarian	Jewish
Edirne	434,366	267,220	16,642	102,245	13,721
Manastîr	630,000	228,121	29	—	5,072
Yanya	235,948	286,294	—	—	3,677
Ishkodra	330,728	5,913	—	—	2,797 Catholic
Girit	74,150	175,000	500	—	200
Adalar	30,809	226,590	83	2	2,956
Čataldja	18,701	35,848	585	5,586	966
Selānik	463,000	277,000	1,257	223,000	37,206 (2,311 Catholic)
Kosova	419,390	29,393	—	274,826	1,706 (5,588 Latin)

Source: K. Karpat, *Ottoman population,* Madison 1985, 155.

Quite numerous records (*ifrādāt*) about farms in the newly-opened up agricultural lands indicate the substantial expansion of arable lands in Rūmeli in the 16th century. It was coupled with a significant increase in population. It is estimated that shortly before 1535, the population of Rūmeli had risen to five millions. The Turks introduced or spread cotton and rice cultivation into the Balkans. The establishment of a large centre like Istanbul, with an estimated population of 400,000, in the 16th century, provided a great market for Thrace and Bulgaria and encouraged all sorts of agricultural production. In the Ottoman period, too, there was an increase in mining activities and new mineral workings were exploited. In Novobrdo, Kratovo, Rudnik, Trepče and Zaplanina in Serbia, copper, lead, gold, iron and, especially, silver were being produced. Sidre-Kapsa in Macedonia was the most important silver production centre. Silver and lead were being produced at various places in Bosnia-Herzegovina. The most important iron production sites were Samakov in Bulgaria, and Vlasina and Rudnik in Serbia.

The administrative organisation of Rūmeli.

In Gelibolu, Süleymān Pasha, bearing the official title of commander-in-chief of the main forces of the state, was in practice the *Beylerbeyi*. Murād I (1362-89) with his *Lala,* Shāhīn, conquered Adrianople in 1361. When he ascended the throne he apppointed Shāhīn to the middle *udj* to conquer territories in the direction of Filibe. The first chef-lieu was Adrianople or Edirne [*q.v.*]. Thus Rūmeli emerged as a separate military-administrative region under the rule of a *Beylerbeyi.* The fact that the empire was divided by the straits and the Sea of Marmara necessitated the *de facto* division of the realm into two large administrative regions, Rūmeli and Anadolu. The *beylerbeylik* of Rūmeli, the first such governorate in the Ottoman Empire, maintained its special position even after other *beylerbeyliks* were formed [see EYĀLET].

In the 14th and 15th centuries, the governor of Rūmeli mostly resided in the empire's capital city. Like the viziers, he bore the title of *pasha*, and participated in the government deliberations in the *diwān-i humāyūn*. Because the *Beylerbeyi* of Rūmeli commanded the most important army of the state, composed of *timār*-holding *sipāhīs* of Rūmeli, the Grand Viziers Maḥmūd Pasha and Ibrāhīm Pasha both held the position of *Beylerbeyi* of Rūmeli at the same time.

The areas conquered in the 15th century were added to the territory of the *Beylerbeyi* of Rūmeli; not only the area to the south of the Danube, but also Kilia and Aḳ Ḳermān beyond the Danube were assigned to it in 1484. In 1541, however, with the establishment of the governorate of Budin, the number of Ottoman *beylerbeyliks* in Europe increased. Bosnia became a *beylerbeylik* in the same year.

In a list of 1475 (Iacopo de Promontorio de-Campis, ed. F. Babinger, *Die Aufzeichnungen*, Munich 1957), the following seventeen *sandjaḳ beys* are cited in Rūmeli: 1. Istanbul; 2. Gallipoli; 3. Adrianople; 4. Nikebolu/Nigbolu; 5. Vidin; 6. Sofia; 7. Serbia (Laz-ili); 8. Serbia (Despot-ili); 9. Vardar (Ewrenos-oghullarî); 10. Üsküp; 11. Arnawut-ili (that of Iskender Bey); 12. Arnawut-ili (that of Araniti); 13. Bosna (belonging to the king); 14. Bosna (that of Stephen); 15. Arta, Zituni and Athens; 16. Mora; and 17. Manastîr. The *Beylerbeyi* of Rūmeli would raise about 22,000 men from these seventeen *sandjaḳs*. In addition, there were 8,000 *aḳîndjîs* (skirmishers or raiders) and 6,000 *ʿazebs* (foot soldiers).

In an Ottoman document from the early years of Süleymān I's reign, the *sandjaḳs* or *liwās* of Rūmeli are listed according to the rank of the beys in charge, with each name of the *sandjaḳ* followed by the salary (in *aḳčes*) of the *sandjaḳ beyi*:

1. Pasha; 2. Bosna, 739,000; 3. Mora, 606,000; 4. Semendire, 622,000; 5. Vidin, 580,000; 6. Hersek, 560,000; 7. Silistre, 560,000; 8. Okhri, 535,000; 9. Awlonya, 535,000; 10. Iskenderiyye, 512,000; 11. Yanya, 515,000; 12. Gelibolu, 500,000; 13. Köstendil, 500,000; 14. Nikebolu, 457,000; 15. Sofia, 430,000; 16. Inebakhtî, 400,000; 17. Tîrhala, 372,000; 18. Aladja Ḥiṣār, 360,000; 19. Vulčetrin, 350,000; 20. Kefe, 300,000; 21. Prizren, 263,000; 22. Ḳarlî, 250,000; 23. Aghrîboz, 250,000; 24. Čirmen, 250,000; 25. Vize, 230,000; 26. İzvornik, 264,000; 27. Florina, 200,000; 28. Ilbasan, 200,000; 29. Čingene (Gypsies), 190,000; 30. Midilli, 170,000; 31. Ḳaradagh (Montenegro), 100,000; 32. *Müsellemān-i Ḳîrḳ Kilise*, 81,000; and 33. *Voynuḳ*, 52,000.

Among these, Čingene, *Müsellem* and *Voynuḳ* were not territorial *sandjaḳs* located in a particular place. Each one of these scattered groups was put under a *sandjaḳ-beyi*, whose main duty was to be the commander of the *sipāhīs* in his *sandjaḳ*. In a list compiled *ca.* 1534 (Topkapı Palace Archives, D. 9578, see *Belleten*, no. 78, 250, 258), we find all the *sandjaḳs* mentioned above except Sofya, Inebakhtî and Florina. The *sandjaḳ* of Selānik is added. In general, Selānik was included in the sultan's *khāṣṣ* [*q.v.*] or given to the viziers as a retirement pension. In this

period, Sofia was included in the sultan's *khāṣṣ*, or else assigned independently to the administration of a *subashī*. The *sandjak* belonging to the *Beylerbeyi* during the early years of Süleymān I included the cities of Üsküp, Pirlipe, Manastîr and Kesriye and was spread over a wide region. Afterwards, these towns became the centres for *sandjak beyis*.

In the list given by ʿAynī ʿAlī shortly before 1018/1609 (*Ḳawānīn-i Āl-i ʿOthmān*, published in *Taṣwīr-i Efkār* [Istanbul 1280] 11-13), Sofya and Manastîr were included under the Pasha *sandjak*. This list includes additionally the *sandjaks* of Selānik, Üsküp, Duḳagin, Ḳîrḳ Kilise and Aḳ Ḳermān (together with Bender). On the other hand, before 1609, some *sandjaks* of Rūmeli were assigned to the newly-formed provinces of Djezāʾir-i Baḥr-i Sefīd, Kefe and Bosna. *Sandjaks* assigned to the Djezāʾir-i Baḥr-i Sefīd were Gelibolu, Aghrîboz, Inebakhtî, Ḳarlî ili and Midilli. Those assigned to the province of Bosna were Kilis, Hersek, Pojega, İzvornik, Začana (Začasna), Rahovidja and Ḳîrḳa. The province of Djezāʾir-i Baḥr-i Sefīd was created as a *beylerbeylik* for Barbarossa Khayr al-Dīn Pasha [*q.v.*], appointed grand admiral of the empire or *ḳapudan-i deryā* in 1533 [see EYĀLET]. The sandjaks of Silistre, Nikebolu/Nigbolu, Čirmen, Vize, Ḳîrḳ Kilise, Bender and Aḳ Ḳermān from Rūmeli were added to the province of Özi or Silistre. According to a *ruʾūs defteri*, official register of appointments of governors, written *ca.* 1644, the *sandjaks* of Rūmeli were: I. Köstendil, 2. Tîrhala, 3. Prizren, 4. Yanya, 5. Delvine, 6. Vulčetrin, 7. Üsküp, 8. Elbasan, 9. Awlonya, 10. Dukagin, 11. Iskenderiyye, 12. Okhri, 13. Aladjaḥiṣār, 14. Selānik, and 15. *sandjak* of the Voynuḳs. In the 18th century, Morea was separated from the *eyālet* of Rūmeli to become an independent *eyālet* under a *muḥaṣṣil* [*q.v.*].

During the period of the *Tanẓīmāt* [*q.v.*], in the 19th century, administrative divisions of Rūmeli underwent numerous changes, and smaller provinces were formed. Shortly before 1263/1847, the new *eyālets* of Üsküp, Bosna, Yanya and Selānik were formed and the main *eyālet* of Rūmeli included only the three *sandjaks* of Iskenderiyye, Okhri and Kesriye (*Sāl-nāme* of 1263/1847). In 1862, the first *wilāyet* of Rūmeli was composed of the *liwās* of Kesriye, Okhri and Ishḳodra, with Manastîr as the centre of the *wilāyet* (*Sāl-nāme* of 1278/1862). Following the formation of the *wilāyet* of Ṭuna in 1280/1864 with the *sandjaks* of Rusčuk, Tulča, Vidin, Sofya, Tırnova, Nish and Varna, new *wilāyets* were formed one after another, namely Bosna, Ishḳodra, Yanya, Selānik and Edirne, thereby reducing Rūmeli to a mere geographical name. The new *wilāyet* of Selānik included Manastîr, Serez, Drama and Üsküp. After Bulgaria seceded in 1312/1894, Rūmeli was divided into the *wilāyets* of Edirne, Selānik, Ḳosova, Yanya, Ishḳodra and Manastîr (*Sāl-nāme* of 1312/1895).

RŪMELI ḤIṢĀRĪ, a fortress and village at the narrowest part of the Bosphorus which has at this point its strongest current (called Şeytan akıntısı). The castle served, together with Anadolu Ḥiṣārî [*q.v.*], to control the maritime passage between the Euxine (Black Sea) and the Propontis (Sea of Marmara). In Ottoman sources it is also called Boghazkesen and Rūmeli Orta Ḥiṣārî ḳalʿesi. Two existing Byzantine towers were taken in 1452 by Meḥemmed II and remodelled and enlarged in three months (oldest Ottoman inscription of Istanbul). The castle was completed in Rabīʿ II 856/June-July 1452, being the result of a division of labour between the sultan and his leading commanders (Sarudja, Khalīl, Zaghanos), extensively described by Byzantine and Ottoman contemporaries. Only the Donjon of Coucy (Aisne) exceeded the three towers in size at this period. At the barbican (*ḥiṣār-peččе*), 18-20 guns were

installed. Rūmeli Ḥiṣārī served as a prison and as a check-point for customs (see ISTANBUL, Plate VII; ʿOTHMĀNLĪ. V. ARCHITECTURE, Plate VI).

The village was already in Ewliyā's time a summer resort, frequented by members of the Ottoman ruling class (e.g. Köprülü-zāde ʿĀṣim and Mekkī-zāde), who owned waterfront palaces (*yalī*). Rūmeli Ḥiṣārī preserved its predominantly Muslim character, with more than a dozen Friday mosques and *masdjids*, until the early 19th century. There were prominent dervish convents. The *sheykh* of the Bektāshī *tekke* of Shehīdler above the castle was an important figure in the Young Turk period. In 1863 Robert College, the forerunner of the modern Boğaziçi Üniversitesi, was opened by the American Presbyterian Christoph Rheinlander Robert. There was a small Armenian quarter in the vicinity of Surp Santukht (late 18th century).

RŪMĪ, a designation for the Turks from al-Rūm [*q.v.*], which was once under the Eastern Roman Empire. The name *Rūmī* was widespread in all eastern Islamic countries, including the Arab lands, Persia, Central Asia and Indonesia, from the 9th/15th century onwards. The Ottomans restricted the name *Rūm* to the provinces in the Amasya and Sivas areas. The *Rūmīs* were appreciated particularly for their tactical skills and for skills in the making of firearms. *Rūmī* mercenaries were employed by the Mamlūk sultans, the rulers of Arabia, ʿIrāḳ, and, thereafter, by the Indian and Indonesian rulers (J. Aubin, *Mare Luso-Indicum*, ii, 175-9).

While employment opportunities with high salaries attracted a great number of individual Anatolian soldiers, who had once been in the service of the Turcoman rulers, the Ottoman sultans also gave permission to friendly rulers to enlist volunteers from their territory. Such *Rūmī* mercenary groups equipped with muskets played in those countries a prominent part in the struggle against the Portuguese from the first decade of the 16th century. The Mamlūks and even local Arab chiefs in lower ʿIrāḳ took them into their service by the 1520s. *Rūmīs* who were sent by the Mamluk sultan to Yemen became a dominant military group in the internal power-struggle there until the Ottomans finally established their own firm control in the land *ca.* 1539. Already in 1513, Afonso de Albuquerque wrote to the king of Portugal that, unless *Rūmīs* were eliminated, there would be no security for the Portuguese in the Indian Ocean.

In Persia, *ustād-i Rūmīs*, Ottoman experts, founded guns in the *destūr-i Rūmī*, Ottoman style, for the first Ṣafawid rulers. In India, Bābur [*q.v.*] had in his service two *Rūmī* founders who founded guns and showed him how to use them tactically. In 1538 Ottoman soldiers from Süleymān Pasha's [*q.v.*] army entered the service of the sultan of Gudjarāt, who promised a salary ten times higher than that under the Ottomans. In 1567 two large ships carrying 500 Turks including gun-founders, gunners and engineers to build ships and fortresses, reached Atjeh [*q.v.*].

Not only Turkish soldiers, but also merchants known as *Rūmīs*, appeared on the western coasts of the Indian subcontinent and in Indonesia in the 10th/16th century, forming quite sizeable colonies in Diù, Calicut and Bantam. Joining earlier Arab traders, *Rūmīs* obtained a trading post at Pasai [*q.v.*] in Sumatra as early as 1540.

The term *Rūmī* also indicated a special motif in the form of a leaf or stylised animal designs in Ottoman art and in architectural ornamentation. For the *Rūmī* calendar, see TAʾRĪKH.

RŪMIYA (wrongly Rūmiyya, cf. Yāḳūt, ii, 866-7), the name given to the city of Rome by the Arab geographers, with the exception of the western ones (al-Bakrī, al-Idrīsī and al-Ḥimyarī), who use the form Rūma, as also Ibn Khaldūn (only Ibn Rusta writes Rūmiyya, treating it as if it were a *nisba*).

Rome's fame, both as the seat of power of the Rūm [*q.v.*] and then as the centre of Christianity, could not fail to be noted by the mediaeval Arabs. In fact, the solicitude, if not critical sense, which they displayed in grasping at every item of information about the city, ended up in a host of pieces of information which is in striking contrast to their almost total ignorance, up to the time of al-Idrīsī, with regard to Christian Western Europe. Unfortunately, this involved only indirect information, with the unique exception of the narrative (in Ibn Rusta, 129-30) of the mysterious Hārūn b. Yaḥyā, who fell into the hands of the Byzantines and who visited Rome towards the end of the 9th century A.D. (furthermore, it is known that an event as sensational as the sacking of the Roman basilicas, in 846 A.D., has left no trace whatever in the Arabic texts). Again, the pieces of information are drawn from anonymous sources and, going beyond this fiction, from the domain of the imaginary and legendary, such as the largely factitious picture of mediaeval Rome fixed in the minds of the Arabs. It is as if they had seen its landscape, urban and rural, through the eyes of someone else, in other words, through the intermediacy of the Greco-Byzantine and Syriac tradition, as the analysis of texts (cf. I. Guidi, in *Bibl.*) has shown.

This procedure is indeed what is responsible, either through an ambiguous geographical representation, which goes back rather to Constantinople (presence of the sea on three sides, the golden gate and the gate "of the king", the situation of the great market); or through this fairy-like enchantment, marked by an unparalleled display of gold and precious stones (e.g. in regard to the altar of the Lateran church); or, finally, through exaggerated figures evoking a setting in which thousands of churches are crammed (with 120,000 bells...), as many as 23,000 monasteries, 22,000 markets and 660,000 baths! It should nevertheless be remarked that this attitude does not seem to be shared by all the authors. In so far as one can identify the different traditions, one may conclude that only Ibn Khurradādhbih [*q.v.*], on the one hand, followed by al-Idrīsī, al-ʿUmarī and (in part) Ibn Rusta, and on the other hand, Yāḳūt and al-Ḳazwīnī [*q.vv.*], following the version of Ibn al-Faḳīh (absent from the abridgment, which alone has survived), devote a considerable amount of space to the marvellous. In this context, one should particularly note the mention of the columns or talismanic statues, of which Yāḳūt and al-Ḳazwīnī preserve the most complete memory, connected with the legend of the *Salvatio Romae*, or indeed with that of the birds who bring olives to ensure a supply of oil for the lamps, or yet again, with the belief in the apotropaic power of certain images.

The edition which has recently appeared (see *Bibl.*)

of the *Masālik* of al-Bakrī [see ABŪ ʿUBAYD AL-BAKRĪ], comes opportunely to allow us to verify, at the same time as demonstrating the dependence of the *Rawḍ* of al-Ḥimyarī [see IBN ʿABD AL-MUNʿIM AL-ḤIMYARĪ], the existence, in regard to Rome, of a clearly different tradition, one in which an interest, which may be called "historical" in the wider sense, is dominant.

Instead of a topography with fabulous features, such as the enceinte with two walls separated by a paved-over river (or in some way covered over) with copper flags, side-by-side with a canal having the same paving with flags and running through the market, there appears here, within a natural setting which is much more realistic, nothing more than the name of the Tiber, at the side of that of Octavius (with the reminiscence of the age of bronze) and, on the other hand, that of Constantine. The sumptuous description of churches found elsewhere is here likewise reduced to that of St. Peter, not without some realistic details. A sequel to this absence, or near-absence, of the monumental and the fantastic, is the attention here to the human beings and to their nature (the Romans are the most cowardly people in the world!) and to their customs. If al-ʿUmarī himself knows a lot about the Pope, and if others (Yāḳūt, Ibn Rusta, etc.) underline the role, both spiritual and cultural (*sic*) of Rome, it is al-Bakrī and al-Ḥimyarī above all—and more than anyone else—who stop at the social and religious life of Rome's inhabitants, shown in a number of remarks: on Sunday and the celebration of the Eucharist, on monogamy and adultery, the laws of hereditary succession and fasting, oaths and the sacred texts. One would like to know the source from which they derived all this information. It is regrettable that, at the present stage of our knowledge, all one can say is to exclude any identification of this information with the *History* of Orosius (ed. Badawī, Beirut 1982), the sole work of Latin literature which was translated into Arabic.

RŪMLI LEWEND [see LEWEND].

AL-**RUMMA** or RUMA, WĀDĪ, the main regional drainage system of north Arabia, running over 1,000 km/620 miles from the Ḥarrat Khaybar in the Ḥidjāz, to the north-east of Medina through al-Ḳaṣīm to run out in southern al-ʿIrāḳ. Al-Hamdānī (ed. Müller, i, 144) mentions Baṭn al-Rumma flowing between two mountain areas in the neighbourhood of the lands of the tribe of al-Ṭayyiʾ and the fertile land of al-Ḳaṣīm to the south. He also mentions (i, 145) Wādī Sarīr as being the name of the lower part of Wādī al-Rumma, in an area associated with the Banū ʿĀmir of Tamīm. Much the same is reported by Yāḳūt (i, 75) citing al-Aṣmaʿī: he also declares that the Wādī al-Rumma flows betweeen two mountains, the black Abān and the white Abān. Musil (*Northern Neǵd*, New York 1928, 224, also 130) knew of the two Abān mountains between which the Wādī al-Rumma ran its course. These distinctive ranges of rocky hills lie in western al-Ḳaṣīm beside the modern road to Medina under the names Abān al-Asmar (on the north side of the al-Rumma channel) and Abān al-Aḥmar (on the south bank) (R.A. Bramkamp, L.F. Ramirez, G.F. Brown and A.E. Pocock, *Geology of the Wadi ar Rimah quadrangle, Kingdom of Saudi Arabia*, in *Miscellaneous geologic investigations*, Map 1-206 A [1963/1383]).

Al-Bakrī, writing in the 5th/11th century, refers to it as a great valley (*ḳāʿ*) in Nadj into which a number of other wādīs flow (*Muʿdjam mā istaʿdjam*, ed. Wüstenfeld, Göttingen and Paris 1877, 410). Yāḳūt (ii, 635-6) refers to the Wādī as a valley that runs through north Arabia under a series of names. It was known as al-Rumma in the land of the Ghaṭafān, after which it was Baṭn al-Rumma on the road between Fayd [*q.v.* in Suppl.] (a Ḥadjdj halt on the Darb Zubayda) and Medina. The same watercourse then became Wādī 'l-Hādjir and in the lands of the Ṭayyiʾ it was known as Ḥāʾil. Among the Banū Taghlib the Wādī was called Suwā, while in the Banū Kalb land it was called Ḳurāḳir. It ran out at al-Nīl near al-Kūfa.

The great length of the Wādī led to the local changes of name recorded by al-Hamdānī and Yāḳūt and the same phenomenon is noted by modern authorities. From its head in the Ḥarrat Khaybar to al-Ḳaṣīm, it is called Wādī Rīsha (J.G. Lorimer, *Gazetteer of the Persian Gulf, ʾOmān and Central Arabia*, Calcutta 1908, IIA, 281-2, 597-8, IIB, 1591, 1601-2). By contrast, Musil, *op. cit.*, 220, refers to it merely as "al-Wādī" in al-Ḳasīm. Modern mapping describes the entire course in this area as Wādī al-Rumma (or al-Rimah) from its head in the Ḥarrat Khaybar as far as the point at which it reaches the Dahnāʾ [*q.v.*] sands to the north-east of al-Ḳaṣīm, and which form a great natural barrier. In the Dahnāʾ, the Rumma is known as Wādī al-Mustāwī (H.R.P. Dickson, *Kuwait and her neighbours*, London 1956, repr. 1968, 53), and beyond the Dahnāʾ it becomes Wādī al-Baṭn, whose course eventually marks Kuwait's western border with ʿIrāḳ. Wādī al-Baṭn runs out at the Ratk ridge towards Ḥawr al-Ḥammar, west of al-Basra.

The western reaches of the Wādī al-Rumma were first explored by C.M. Doughty (*Travels in Arabia Deserta*, Cambridge 1888, ii, 329, 391-3 and *passim*), who describes its shallowness, its salinity in al-Ḳaṣīm, and the sands blocking it to the east. C. Huber (*Journal d'un Voyage en Arabie, 1883-1884*, Paris 1891, ll. 13) also mapped its course around ʿUnayza. Musil, *op. cit.*, 38-9 describes the fertility of the alluvium that ran against the Dahnāʾ sands as they form a dam across the Wādī. In parts of al-Ḳaṣīm, the Wādī is virtually invisible and this is noted by several travellers. H.St.J. Philby (*Arabia of the Wahhabis*, London 1928, repr. 1977, 177 ff.) described wells and springs in the Wādī al-Rumma channel near to ʿUnayza, and the practice of establishing palm groves that tapped the brackish water beneath the saline *sabkha*. Doughty says that the Wādī had not flowed for some 40 years in his day, but Philby (*op. cit.*, 257) speaks of regular floods in the west of al-Ḳaṣīm before the early 20th century. These would transform the depression known as Zuḳaybiyya into a lake. In 1982, the present writer saw the entire country west of Uḳlat al-Ṣuḳūr on the western course of the Wādī al-Rumma turned by rainfall into a vast shallow lake which fed into the Rumma.

In the 19th century, the lower course, the Wādī al-Baṭn, provided a route from Kuwait into al-Ḳaṣīm (Doughty, ii, 392; D.G. Hogarth, *The penetration of Arabia*, repr. Beirut 1966, 277; Dickson, 60). Here there were wells, notably at Ḥafar and at Riḳāʿī, but in this lower stretch of its course, beyond the Dahnāʾ, the Wādī normally does not flow. By 1936 Ḥafar had a Saudi fortress, and today Ḥafar al-Baṭn has grown into a major Saudi military base.

AL-**RUMMĀNĪ**, Abu 'l-Ḥasan ʿAlī b. ʿĪsā b. ʿAlī b. ʿAbd Allāh (296-384/909-94). By profession a *warrāḳ* [*q.v.*], al-Rummānī (also known as al-I<u>khsh</u>īdī, see below) was a seminal thinker in the Arab linguistic and literary sciences in 4th/10th century Ba<u>gh</u>dād. He was born in Ba<u>gh</u>dād and died there, having written, during the course of a long and active life, in excess of one hundred works on a wide but coherent range of topics (for a list of these works, see Mubārak, *Al-Rummānī*, 37-103). Much of his literary output was taken by dictation, and included works on grammar (*naḥw*), lexicography (*lu<u>gh</u>a*), rhetoric (*balā<u>gh</u>a*), the Ḳurʾānic sciences (*ʿulūm al-Ḳurʾān*), and philosophical theology (*kalām*). Although he is widely quoted in later sources, only a handful of his works, or fragments thereof, appears to have survived. They are:

(1) *Ḳ al-Alfāẓ al-mutarādifa al-mutaḳāribat al-maʿnā* (ed. Fatḥ Allāh Ṣāliḥ ʿAlī al-Miṣrī, al-Manṣūra 1407-1987). A short lexical work, it is divided into 142 *fuṣūl*, each *faṣl* containing a set of words (or phrases) that are synonymous. The work is representative of a technical genre common during this period.

(2) *K. al-<u>Dj</u>āmiʿ fī ʿilm* (or *tafsīr*) *al-Ḳurʾān*. A work on Kurʾānic philology, it appears originally to have been very large, only parts of which have survived (as yet unedited). They are: Part 7—Paris, B.N. 6523; Part 10—Tashkent, Akademi<u>ya</u> 3137; Part 12—Jerusalem, Mas<u>dj</u>id al-Aḳṣā 29 (= Cairo, Maʿhad al-Ma<u>kh</u>ṭūṭāt, Microfilm Collection 18 (see *GAS*, viii, 113, and, for a discussion of the work, accompanied by citation of select passages, Mubārak, *Al-Rummānī*, 83-8).

(3) *K. al-Ḥudūd fi 'l-naḥw* (in *Rasāʾil fi 'l-naḥw wa 'l-lu<u>gh</u>a*) ed. Muṣṭafā <u>D</u>jawād and, Yaʿḳūb Maskūnī, *Silsilat kutub al-turā<u>th</u>*, 11, Ba<u>gh</u>dād 1388/1989, 37-50). A short lexical work, it constitutes a small dictionary of 88 technical terms that commonly occur in Arab[ic] grammatical theory of the period.

(4) *K. Maʿāni 'l-ḥurūf* (ed. ʿAbd al-Fattāḥ Ismāʿīl <u>Sh</u>al<u>dj</u>ī, <u>D</u>judda 1404/1984). This is a systematic treatise on the categorical nature and function of the grammatical particles in Arabic. The work is representative of a technical genre that evolved, during this period, amidst debates over the nature of speech and the status of grammar in relation to logic.

(5) *K. Manāzil al-ḥurūf* (in *Rasāʾil fi 'l-naḥw wa 'l-lu<u>gh</u>a*, 51-79). Although handed down as a separate work, it, in effect, constitutes, with some slight variation; the final 23 *abwāb* of the *K. Maʿāni 'l-ḥurūf*.

(6) *al-Nukat fī iʿ<u>dj</u>āz al-Ḳurʾān* (in *<u>Th</u>alā<u>th</u> rasāʾil fī iʿ<u>dj</u>āz al-Ḳurʾān*, ed. Muḥammad <u>Kh</u>alafallāh and Muḥammad Za<u>gh</u>lūl Salām, *<u>Dh</u>a<u>kh</u>āʾir al-ʿArab*, 18, Cairo 1955[1], 1988[2], 75-133[1] [= 89-104[2]]). This work is a *risāla* that treats the subject of the uniqueness or inimitability of the Ḳurʾān. In structure, it constitutes a compilation of short paragraphs illustrating the author's teaching, but without any arguments (or counter-arguments), and with, sometimes, little contextual continuity. Without abandoning the traditional theological arguments that had been put forth on behalf of the Ḳurʾān's inimitability, al-Rummānī attempts to put the entire issue on firmer ground by logically subordinating the theological arguments to the notion of the Ḳurʾān's incomparable style, which rests squarely upon the quality of its eloquence (*balā<u>gh</u>a*). According to al-Rummānī, *balā<u>gh</u>a* is divisible into the following ten categories: (i) terseness (*ī<u>dj</u>āz*), (ii) comparison (*ta<u>sh</u>bīh*), (iii) metaphor (*istiʿāra*), (iv) euphony (*talāʾum*), (v) end-rhymes [of the Ḳurʾānic verses] (*fawāṣil*), (vi) paronomasia (*ta<u>dj</u>ānus*), (vii) transformation of a root [into various *awzān*] (*taṣrīf*), (viii) implication (*taḍmīn*), (ix) emphasis (*mubāla<u>gh</u>a*), and (x) distinctiveness [of expression] (*ḥusn al-bayān*).

(7) The *<u>Sh</u>arḥ Kitāb Sībawayh*. This appears to have been a rather large work, only portions of which survive, for the most part unedited (see, however, E. Ambros (ed. and tr.), *Sieben Kapitel des Šarḥ Kitāb Sībawaihi von ar-Rummānī in Edition und Übersetzung*, Vienna 1979; *Ḳism al-ṣarf, al-<u>dj</u>uzʾ al-awwal*, ed. R.A. al-Damīrī, Cairo 1408/1988. They are: Istanbul Feyzullah Efendi 1984-7 (= vols. ii-v of the *<u>Sh</u>arḥ*); and Vienna, Akademie 2442 (= Part 3 of the *<u>Sh</u>arḥ*). This work has been the subject of a number of studies, the most comprehensive of which being Mubārak, *Al-Rummānī* (see also *GAS*, ix, 112, and *Bibl.* for further titles).

(8) *Tafsīr al-Ḳurʾān*. An apparently very large work, only a small portion of which has survived (as yet, unedited): Cairo, al-<u>Kh</u>izāna al-Taymūriyya *tafsīr* 201 (*GAS*, viii, 270). It was highly regarded throughout the later mediaeval period (for a discussion of the work, with remarks about it from later authors, see Mubārak, *Al-Rummānī*, 96-9).

One thing that distinguishes Baṣran grammarians of this period, from their predecessors, is the patent and increasingly more refined awareness of the importance of distinguishing between purely syntactic phenomena and such stylistic alternatives as are available within the syntactic constraints of a given language (in this case, Arabic), when making judgements about acceptable and accepted usage. Al-Rummānī is representative of this trend.

Theologically, al-Rummānī belonged to the I<u>kh</u>-<u>sh</u>īdiyya (Yāḳūt, *Ir<u>sh</u>ād*, V 280-1) after Ibn al-I<u>khsh</u>īd, the eponymous founder of the school; whence al-Rummānī's auxillary *nisba*, al-I<u>khsh</u>īdī), one of three competing Muʿtazilī schools of *kalām*, in Ba<u>gh</u>dād, the other two being the Bā Hā<u>sh</u>imiyya and the so-called "old Ba<u>gh</u>dād" school. As a young man, al-Rummānī had witnessed the legendary debate (320/932) between Abū Saʿīd al-Sīrāfī [*q.v.*] and Abū Bi<u>sh</u>r Mattā b. Yūnus over the relative merits of logic and grammar. He would serve as the main source for al-Tawḥīdī's recapitulation (*Imtāʿ*, i, 128) of the events (the other informant, albeit with less of a memory for the details, being al-Sīrāfī himself). As an expert in jurisprudence (*fiḳh*), as well as grammar and theology, al-Rummānī was appointed, along with al-Sīrāfī, to a judgeship over Ba<u>gh</u>dād's East District, shortly after Abū Muḥammad Ibn Maʿrūf had been appointed chief judge of the city (Kraemer, *Philosophy*, 73; al-Hamadhānī, *Takmila*, 197; Ibn al-<u>D</u>jawzī, *Muntaẓam*, vii, 38, 54). Probably as Ibn Maʿrūf's official witness (*<u>sh</u>āhid*), al-Rummānī was a member of

a self-appointed delegation of notables (many of them jurisconsults) that appeared before ʿIzz al-Dawla Bakhtiyār to air the grievances of the populace (*Imtāʿ*, iii, 151-2).

Al-Rummānī studied under such influential figures as Ibn al-Sarrādj (d. 317/929), Ibn Durayd (d. 321/933), and al-Zadjdjādj (d. 311/923). Those who, at one time or other, had studied under al-Rummānī would prove themselves no less distinguished than his teachers. It is al-Rummānī who is credited with having dubbed one such student, Ibn Nuʿmān (d. 413/1022), with the epithet by which the precocious young *shaykh* would come better to be known, viz. *al-mufīd*, "the instructor", as a consequence of his having outwitted al-Rummānī in debate after having been present at, and posed a question during, one of the latter's widely attended lectures (Niʿma, *Falāsifat al-shīʿa*, 456). Among al-Rummānī's devoted disciples was the brilliant and irascible Abū Ḥayyān al-Tawḥīdī (d. 414/1023), the source for much of our knowledge about al-Rummānī. Al-Tawḥīdī adjudged al-Rummānī to be endowed with a capacity for eloquent expression tantamount to the legendary al-Djāḥiẓ (Yāḳūt, *Irshād*, v, 252, possibly the greatest praise he could lavish on anyone.) Other appraisals of al-Rummānī were less enthusiastic: "It used to be said", notes Yāḳūt (v, 281), "[that] 'the grammarians of the day are three: one whose speech is incomprehensible—that being al-Rummānī; one some of whose speech is comprehensible—that being Abū ʿAlī al-Fārisī; and [perhaps not without a tinge of irony] one all of whose speech is comprehensible without a teacher—that being al-Sīrāfī' "]. In another less than enthusiastic appraisal of al-Rummānī, apparently provoked by his somewhat controversial habit of integrating grammar and logic (*Nuzhat*, 157-8). It was the same Abū ʿAlī al-Fārisī who, on at least one occasion, made what he had to say completely understood, in no uncertain terms (Yāḳūt, v, 281), noting that "if grammar is what al-Rummānī says it is, then we have no part in it; and if grammar is what we say it is, then he has no part in it". If, by some estimates, perspicuity was the hallmark of eloquence, then, given some of al-Rummānī's notoriety for obfuscatory discourse, complicated by the fact that he treats the subject of eloquence, at some length, in the *Nukat fī iʿdjāz al-Ḳurʾān*, it is not entirely surprising to find at least one contemporary, Abū 'l-Ḥasan al-Badīhī (protégé of Yaḥyā b. ʿAdī, distinguished pupil of al-Fārābī), complaining that al-Rummānī was unaccustomed, with respect to eloquence, of practising what he so ardently preached (*Baṣāʾir*, i, 171-2). Al-Rummānī's definition of eloquence (*balāgha*) given in the *Nukat* (75) is preceded by two preliminary counter-definitions of what, in his opinion, eloquence is not, one of which, as if to respond to his critics, runs: "Eloquence is not the [act of] making a given meaning understood, because sometimes two speakers (*mutakallimān*) will make a given idea understood, one of whom is eloquent, the other incapable of expressing himself well" (*Nukat*, 75). His positive definition of eloquence, cited, with some slight variation, by Ibn Rashīḳ (*ʿUmda*, i, 246), yet ascribed not to al-Rummānī but to an unnamed *muḥdath* poet, runs as follows: *wa-innama 'l-balāgha īṣālu 'l-maʿnā ila 'l-ḳalbi fī aḥsani ṣūratⁱⁿ min(a) 'l-lafẓ*—"What eloquence in fact is, is the conveying of a given idea to the heart (= mind) in the most beautiful form of wording" (*Nukat*, 75; cf. *ʿUmda*, i, 246, wherein *ibdāʾ* replaces *īṣāl*). If, as Versteegh has attempted to show (*Greek elements*, 94, n. 20), al-Rummānī, like other Muʿtazilīs of the period, was operating under influences, either direct or indirect, that bear the stamp of stoicism, then his appeal to rhetoric is, in effect, an appeal to logic, under which the stoics, in contrast to the Aristotelians, subsumed rhetoric (along with dialectic).

In the context of his discussion of the incomparability of the Ḳurʾān's stylistic qualities, al-Rummānī introduces a number of innovations into the treatment of the tropical use of language, with e.g. his notion of the *aṣl al-lugha*, the basic or proper meaning of an expression, that would become pervasive throughout later literary theory. His treatment of metaphor (*istiʿāra*) and comparison (*tashbīh*) also exhibits a rather radical departure from previous theory (for a discussion of these topics, see Heinrichs, *Hand of the Northwind*). His approach to these and other matters would greatly influence other theorists, both contemporary and later, among them Abū Hilāl al-ʿAskarī (d. *ca.* 395/1004), al-Ḥātimī (d. 388/988), and Ibn Sinān al-Khafādjī (d. 455/1073-4), to name only a few, and signals the point at which Arab(ic) literary theory begins to emerge as a discipline independent of, for example, Ḳurʾānic hermeneutics, in the context of which much of the earlier theorising had taken place.

RUNDA, Sp. RONDA, the chef-lieu of the district (*kūra*, sometimes *iḳlīm*) in mediaeval al-Andalus of Tākurunnā, situated to the north-west of Rayya [*q.v.*] (modern Malaga).

This is a very mountainous region, well watered by rivers and abundant rain, allowing the development of agriculture and stockrearing. The town of Runda is described in the Arabic sources as an impregnable fortress, and this fact, in addition to its geographical situation, has moulded its history. The northern part of the town is protected by a ravine (*tajo*) formed by the river, a kilometre long and 160 m deep. This natural defence was completed by a powerful fortress with triple walls. Outside the walls, urban expansion in the shape of suburbs (*rabaḍ*) only happened in the 13th and 14th centuries A.D. Traces of its Islamic past are visible today in its baths (situated below the town, on the river side), the *miḥrāb* of the great mosque, preserved in a church, a minaret and some *rābiṭas*. The so-called house of the Gigantes is the best example of civilian Islamic architecture there, since it has kept the greater part of its structure and décor.

One should also add the Almocabar (*al-maḳābir*) gate in the enceinte and a few other architectural remains preserved in the modern buildings. At the time of its conquest by the Christians (1485), the town had numerous mosques, dwelling houses (most of them on a modest scale) and 77 shops. The defensive value of Runda was reduced through the town's lack of a water supply, hence at some unknown date—but one during the Islamic period—a stairway was constructed in the rock down to the river, still in part preserved. The Arabic sources call the river the *nahr Runda*, but its Castilian name (Guadalevín) is clearly Arabic in origin. The usually accepted etymology (*wādī 'l-laban*) has been rejected by E. Terés, who suggests the local toponym *wādī 'l-liwā* as a possible alternative, even though it is not confirmed in the sources (the place name *al-liwā* is cited only once, in a *ḳaṣīda* by a poet of Runda).

The population of Runda and its hinterland comprised, as well as indigenous elements, a strong Berber presence, plus some Arab lineages. Among the Berbers, one notes the presence of the W.lhāsa (of Nafza [*q.v.*]), as well as the Banu 'l-Khalīʿ (see below) and the Banu 'l-Zadjdjālī. These last, of undistinguished origin, according to Ibn Ḥayyān, later installed themselves at Cordova and reached there a high position. The famous poet ʿAbbās b. Firnās (3rd/9th century) belonged to a Berber family settled in the Runda district (the very name of Tākurunnā is considered to be of Berber origin). The presence of Nafza Berbers is attested until a late date by the patronyms of persons like the poet Abu 'l-Baḳāʾ (7th/13th century) and the mystic Ibn ʿAbbād (8th/14th century), both born at Runda. The references to Arabic lineages are much less numerous. According to al-Rāzī, cited by Ibn al-Khaṭīb, a descendant of Saʿd b. ʿUbāda [*q.v.*] settled in the region of Tākurunnā. In the 5th/11th century the Banu 'l-Ḥakīm, an important Arab family of Seville, chose to reside at Runda and thereafter played an important role in the town's history. The Arabic *nisba*s borne by the natives of Runda are recorded in the biographical sources, but, as elsewhere in al-Andalus, this fact does not guarantee a genuine Arab origin. The existence of a small Jewish community is attested by the presence of a Jew as interpreter in the negotiations which led to the surrender of the town in 1485; and a Jewish physician of Runda is mentioned in the 6th/12th century.

In the Umayyad period, the Berbers of Runda and its district were often involved in rebellions against the *amīrs* of Cordova. However, the Banu 'l-Khalīʿ, who were clients of the Umayyads of Syria, had given their support to the youthful ʿAbd al-Raḥmān I when he had landed in the peninsula; the lord of the *kūra* of Tākurunnā, ʿAbd al-Aʿlā b. Awshadja, offered him his help and a body of 400 cavalrymen. In the reign of Hishām I, the Berbers of Tākurunnā rose in 178/795-6. This rising was severely suppressed by the *amīr*'s army, who killed a large part of the rebels; those who escaped took refuge in regions fairly distant from Runda (Talavera and Trujillo). This first Berber revolt resulted in a depopulation of Runda and its district, which has probably, however, been exaggerated by the Arabic sources. Other Berber revolts are recorded in the region in the reign of ʿAbd al-Raḥmān II, in 211/826 and 235/849; but it was above all in Muḥammad's reign (238-73/852-86) that the movement challenging the authority of the *amīrs* became widespread in the Runda district. At first revolt, led by Asad b. al-Ḥārith b. Rāfiʿ in 261/874, was soon extinguished. But in 265/878-9 the revolt reached the districts of Tākurunnā, Algeciras and Rayya, as a reaction against the tax exactions of the governors, and after this the Umayyad administration began building fortresses (*ḥuṣūn*) in order to overawe the region. Then in 267/880 broke out the great revolt of ʿUmar b. Ḥafṣūn [*q.v.*], himself a native of Runda. Under the *amīr* ʿAbd Allāh (275-300/888-912), this extended through the *kūra* of Rayya and adjacent regions, including Runda. In his struggle, ʿUmar sought help from Awshadja of the Banu 'l-Khalīʿ, who abandoned him, however, after his conversion to Christianity. ʿAbd al-Raḥmān III succeeded in re-establishing peace in the area, and after the fall of ʿUmar's capital Bobastro [see BUBASHTRU in Suppl.), all fortresses in the region were destroyed except for those necessary for exercising the central government's authority.

With the disintegration of caliphal power, Runda became one of the *taifa* principalities dominated by the Berbers, in this case by Zanāta members of the Banū Īfran, brought in as part of the armies of the *ḥādjib* Ibn Abī ʿĀmir al-Manṣūr [*q.v.*]. At first recognising the suzerainty of the Ḥammūdid ruler of Malaga, after 431/1039 Abū Nūr Hilāl al-Īfranī declared himself independent in Runda, as one of the belt of Berber principalities (Carmona, Morón, Arcos and Runda) surrounding the ʿAbbādid principality of Seville, and which were in fact absorbed by this latter power under al-Muʿtaḍid. Abū Nūr Hilāl was deposed by the ʿAbbādid, but his son Abū Naṣr Fatūḥ succeeded him in 449/1057 and ruled till 457/1064, when al-Muʿtaḍid finally incorporated Runda in his principality as the advance post of Sevillan authority expanding towards Malaga. Al-Muʿtamid entrusted it to his son al-Rāḍī [*q.v.*], and it was from him that the Almoravid commander Gharrūr took possession of the town in 484/1091.

In the last years of Almoravid power, local lords proclaimed their independence all through al-Andalus, and in 540/1145-6 the lord of Arcos, Jerez and Runda, Abu 'l-Ḳamar Ibn ʿAzzūn, recognised the authority of the Almohads immediately after they appeared at Cadiz. It was in this century that the armies of Castile attacked the region on several occasions, taking captives, burning crops and seizing fortresses. With the decay of the Almohads, Runda became a frontier post of the kingdom of Granada against the Christians, alternatively controlled by the Naṣrids and the Marīnids [*q.vv.*], although it seems also to have preserved a certain feeling of local solidarity and independence. This oscillation of control continued into the 8th/14th century, and during this period, especially under the Marīnid sultan Abu 'l-Ḥasan ʿAlī (731-49/1331-48), the fortifications of Runda were strengthened. However, Marīnid influence there declined after this, with Runda being frequently the seat of rivals for the Naṣrid throne in Granada. This role continued during the internal succession disputes of the Granadan rulers, but it remained also the advance position against Christian military pressure. Despite truces between Granada and Castile, frontier incidents were frequent, often only recorded in the Castilian chroniclers. Military activity intensified in the later part of the 9th/15th century. Thus the men of Runda were at the head of the important capture of Zahara, one of the last efforts undertaken against the Christians, when an army of 300 cavalry and 4,000 infantry seized the town in December 1481, under the command of Abrahem Alhaquine (thus according to Spanish sources; this Ibrāhīm al-Ḥakīm was probably a member of the family of the Banu 'l-Ḥakīm). But this success was short-lived, as the Catholic monarchs now began the

final assault on the Granadian kingdom. In 1484 fresh Castilian advances isolated Runda more and more from the rest of the kingdom, and after a short siege (8-22 May 1485), the commander of Runda, Ibrāhīm al-Ḥakīm (the *alguacil mayor* of the Castilian chronicles) surrendered the town to the Marquis of Cadiz. This led to the loss of the whole surrounding region and that of Malaga and the Mediterranean shores. The population of Runda had to abandon the town to Christian settlers, although the people of the smaller rural settlements were allowed to remain as vassals of Castile.

Runda had never reached the cultural level of other towns in al-Andalus, but there was a certain intellectual development in the 7th/12th and 8th/14th centuries, when persons like Yūsuf b. Mūsā b. Sulaymān al-Muntas̲h̲āḳirī, a prolific author and the teacher of Ibn al-K̲h̲aṭīb [*q.v.*], emerged. But Runda's most famous sons were the poet Abu 'l-Baḳā' (601-84/1204-85), the author of a renowned *ḳaṣīda* on the loss of Cordova, Seville, Valencia and other towns of al-Andalus, and the mystic Ibn ʿAbbād [*q.v.*].

(MANUELA MARÍN, shortened by the editors)

AL-**RUNDĪ**, Abū Khālid Yazīd b. Muḥammad al-Muʿtamid b. ʿAbbād, AL-RĀḌĪ BI-LLĀH, prince of Runda [*q.v.*] or Ronda in Spain (460-94/1068-91).

Yazīd, more generally known by his *laḳab* of al-Rāḍī, was one of the sons of the Taifa king of Seville, al-Muʿtamid [*q.v.*], born of his famous concubine Iʿtimād. Her master's love for her and his miserable end in the Almoravid's prisons, became a central feature of the ʿAbbādid poetic *dīwāns*, the most brilliant ones of the culture of al-Andalus. The fate of the children of this liaison seem likewise to have inherited some of the tragic poignancy.

Al-Rāḍī appears on the scene with the Almoravids [see AL-MURĀBIṬŪN]. In 479/1086 he was governor of Algeciras when the Berbers disembarked, summoned for help by the Taifa princes in face of the progress of the Christians. Distrustful of his new allies, Yūsuf b. Tās̲h̲ufīn, the Almoravid leader, decided to occupy the town. Al-Rāḍī had to cede the place at the orders of his father, and retired to Runda, where he was to remain permanently.

Averted for a while by the victory at Zallāḳa [*q.v.*], the danger from the Christians re-appeared two years later in the east. According to ʿAbd Allāh Ibn Zīrī, the ruler of Granada, al-Muʿtamid apparently saw the opportunity to re-assert his authority over Murcia, occupied but then relinquished a few years before, and to provide al-Rāḍī with an appanage worthy of him. He charged his son with attacking the Christians, who were devastating the region of Lorca, but the prince, more at home with his books than in battle, went down in defeat, and 3,000 of the troops of Seville were cut to pieces by 300 Christian cavalrymen. This inglorious rout drove al-Muʿtamid to make an irrevocable decision to call in fresh Almoravid intervention.

The Berbers' check at the siege of Aledo, for which Yūsuf b. Tās̲h̲ufīn blamed the Andalusian rulers, sealed the fate of the Taifas. After Granada and Malaga (483/1090), the Almoravid directed his blows towards the ʿAbbādids. Seville was taken by assault in Rad̲j̲ab 484/September 1091. Al-Muʿtamid was taken prisoner and compelled to order his sons to lay down their arms. Al-Rāḍī showed his reluctance. Runda, situated on a rocky outcrop, was practically impregnable, and the Almoravid forces, directed by G̲h̲arrūr, did not even dare to embark on the siege. In the end, al-Rāḍī gave in to the solicitations of his father, to which Iʿtimād is said to have joined her entreaties, and surrendered to the Berbers. As soon as he was in G̲h̲arrūr's hands, the latter, of whom ʿAbd Allāh Ibn Zīrī has left a distinctly unflattering portrait, had al-Rāḍī put to death in a corner of the ramparts.

Al-Rāḍī is, in sum, the most frequently-mentioned of al-Muʿtamid's sons, since he was, with his father, "the poet of the ʿAbbādids". An assiduous scholar, he leant towards Ibn Ḥazm's Ẓāhirī school. His father on several occasions reproached him for preferring the pen to the Arabs' lance, but other sources speak of his passion for horses. It is especially hard to grasp the reality of his character since the epic tale of the ʿAbbādids probably owes a lot to that of the Ḥamdānids. Both, as Arabs and as patrons, poets and warriors, fought against the Christians and against the mounting pressure of the "Barbarians" within Islam. These striking resemblances led posterity to assign the roles at Seville, as they had been at Aleppo, to the proud and brave al-Muʿtamid as Sayf al-Dawla, and his son al-Rāḍī, as a distant echo of Abū Firās, with whom he shared a love of poetry, a mediocre political sense and a miserable end.

(G. MARTINEZ GROS)

RŪNĪ, ABU 'L-FARADJ [see ABU 'L-FARADJ B. MASʿŪD RŪNĪ, in Suppl.].

RŪPIYYA, an Indian coin, a rupee. In the later 9th/15th and early 10th/16th centuries, the silver *tanka* [*q.v.*] of the sultans of Dihlī had become so debased that when Shīr Shāh (947-52/1540-5) reformed the coinage, the name could no longer be given to a silver coin. To his new silver coin, corresponding to the original fine silver *tanka*, he therefore gave the name *rūpiyya* = rupee, i.e. the silver coin (Sanskrit, *rūpya, rūpaka*), and *tanka* became a copper denomination. The weight of the rupee was 178 grains (11.53 gr) and it rapidly established itself in popular favour. Under the Mughals it was struck all over India at over 200 mints and with the decline of Mughal power continued to be struck by their successors, notably the English East India Company. In the 11th/17th century, Akbar and Djahāngīr struck many square rupees; on one coin of Akbar the name *rūpiyya* occurs. Djahāngīr for a short period struck a heavy rupee of 220 grains (14.259 gr), but, on the whole, the rupee showed little variation in weight. In the 19th century the British rupee gradually drove the local issues out of circulation, and with few exceptions, the local mints closed. Such native states as still issued their own rupees before 1947 struck them on the same standard as the Indian Government rupee.

Aḥmād Shāh Durrānī [*q.v.*] adopted the rupee as his monetary unit on becoming independent, and until the early 20th century it remained the standard coin of Afghānistān. The Hindu kings of Assam also struck the rupee. At present in South Asia, the rupee remains the currency of India, Pākistān, Nepal, Ceylon/Sri Lanka (since 1870) and Bhutan (there since the 1974 currency reform called the *ngultrum*) (see C.L. Krause, C. Mishler and C.R. Bruce II, *1991 Standard catalog of world coins*[17], Iola, Wisc. n.d. [1991], 197-201, 1347-68, 1593-6).

By the early years of the 20th century, the Indian rupee had become current along the Arabian shores of the Persian Gulf and along the East African coast, including the British and German possessions there. The rupee continued in use in East Africa until problems caused by the fluctuations of dual currency systems led to the rupee being suddenly demonitised there on 8 February 1921 in favour of local currencies (see V.T. Harlow *et alii*, *History of East Africa*, ii, Oxford 1965, 430).

In the Middle East, the Indian rupee had been brought to Mesopotamia by the British and Indian forces invading Ottoman territory there from the last months of 1914 onwards, and it became the established currency under the British post-war occupation of ʿIrāḳ and the Mandate until, just before the ending of the Mandate, it was displaced on 1 April 1932 by a national currency, the ʿIrāḳī dīnār (see Admiralty Handbooks, Naval Intelligence Division, *Iraq and the Persian Gulf*, London 1944, 478). Within eastern Arabia, the Indian rupee was counterstamped *Nadjd* in 1251/1835, 1256/1840 and 1278-93/1862-76. Kuwayt minted its own copper *bayzas* [see PAYSA] in 1304/1886-7, but no rupees, and inaugurated its own currency of *fulūs* and dīnārs in 1380/1961. In the Trucial Oman states, after 1971 the United Arab Emirates [see AL-IMĀRĀT AL-ʿARABIYYA AL-MUTTAḤIDA, in Suppl.], various emirates acquired their own currencies, based on the *riyāl*, in the 1960s and 1970s. In the Sultanate of Masḳaṭ and ʿUmān, until 1970 there was a dual currency of the rupee and the *riyāl*, the first made up of 64 *bayzas* and the second of 200 *baysas* (see RIYĀL and, in general, Krause *et alii*, *op. cit.*, 1194-5, 1409-13, 1533).

J. ALLAN-[C.E. BOSWORTH])

RŪS, occasionally *Rūsiya*, the Arabic rendering (and thence into other Islamic languages) of Eastern Slavic **Русь** (*Rus'*). This was the designation of a people and land from which modern Russia, Ukraine and Belarus' derive.

The rapid ethnic, political and social evolution of this term and the people(s) which it denoted during the 3rd-4th/9th-10th centuries produced a series of temporally multi-layered, occasionally contradictory notices in the classical Islamic geographical literature. In contemporary Byzantine sources it appears as Ῥῶς (which may, indeed, be the source of the Arabic form, Barthold, *Arabskie isvestiya o rusakh*), cf. also Ῥωσσία, the name of the country derived from it and the infrequently noted form (pl.) Ῥούσιοι). Modern Russ. *Rossiya* ("Russia") is taken from the Byzantine ecclesiastical usage. Al-Idrīsī, 914, mentions "Outer Russia" (*bilād al-rūsiyya al-khāridjiyya*). It is not clear if this usage has any relationship to the ἔξω Ῥωσία noted by Constantine Porphyrogenitus, the geographical contours of which are equally uncertain. The form *Urus* and its variants, found in a number of Turkic languages (e.g. Ḳaračay-Balḳar *Orus*, Noghay, Ḳazaḳ *Orıs*, Čuvash *Vırăs*) goes back to the Arabic form. Mediaeval Latin sources record them as (*Annales Bertiniani*, s.a. 838-9) *Rhos*; (The Bavarian Geographer, 9th century) *Ruzzi*; (Liudprand of Cremona, mid-10th century) *Rusios*; (Thietmar of Merseburg, d. 1018) *Ruscia*; Old Germ. *Ruz, Riuz*; Old Swed. *Ryds*. Long-standing attempts to identify this ethnonym with the *Hrōs* mentioned in the 6th century Syriac ecclesiastical history of Pseudo-Zacharias Rhetor have generally (with the exception of some Soviet scholars) been rejected (see Łowmiański).

The origins of the Rūs

The origin and etymology of this term/ethnonym and thus, it is averred, the ethnic affiliations of the people or socio-mercantile group that first bore this name in the Islamic and other sources of the 3rd-4th/9th-10th century, are much debated. It has long been argued (cf. Thomsen) that *Rus'* is the Slavic rendering of the Baltic Finnic term for "Swede": Finn. *Ruotsi*, Est. *Rootś*, Vot. *Rôtsi*, Liv. *R'uqt'š* (but cf. Volga Finnic: Mari *Ruš*, Udm. *Zuč*, Komi-Perm. *Roč* "Russian" and Samoyedic [Nenets] *Lūtsa, Lūsa* "Russian". There have been two centuries of occasionally heated discussion of this issue between "Normanists" (those favouring a Scandinavian origin of the Rus' and by extension the Rus' state) and their opponents, the "Anti-Normanists." The Classical Normanist position, from the philological perspective, posits: Slav. *Rus'* < Finn. *Routsi* < Old Norse *roþer, roþsmenn, roþskarlar* "rowers, seamen" associated with the coastal region of Sweden, Roslagen (see Łow-

miański, and in Jenkins *et al.*, *Constantine Porphyrogenitus De administrando imperio. Commentary.* Historical evidence in support of the Scandinavian origin of the Rus' is adduced from the account in the *Annales Bertiniani*, s.a. 838-9, of an embassy from the "Rhos Chacanus" (Ḳag͟han of the Rus') to Constantinople. Unable to return to their homeland because of nomadic pressure in the Western Eurasian steppes, the embassy was diverted to the Frankish court at Ingelheim. There, to the consternation of the Franks, it was discovered that the mysterious Rhos were, indeed, Swedes. A century later, Liudprand of Cremona appears to confirm this ethnic identification in noting in his listing of the northern peoples the "Rusios whom we call by another name the Northmen" (*Rusios, quos alio nos nomine Nordmannos apellamus*). Elsewhere he further explains that there is a certain people established in the North whom, because of the characteristics of their physical appearance (*a qualitate corporis*) "the Greeks call Ρούσιος, Rusios, but we, however, because of their location call Northmen (*Nordmanni*)." On the basis of these and other connections made in contemporary sources with the Viking world, the formation of the Rus' state is thus seen as part of that outpouring of Viking energy aimed initially at gaining control of vital international trade routes and ending in some instances as conquest and colonisation. The name *Rūs* does, indeed, figure in some accounts of Viking raids on Muslim Spain. Al-Yaʿḳūbī, s.a. 229/843-4, tells of the attack of the "Mad͟jūs who are called Rūs" on Seville (Is͟hbīliyya). "Mad͟jūs" [*q.v.*] was a term used rather broadly for pagans and more specifically for Zoroastrians and Norsemen. Al-Masʿūdī also mentions "a nation of the Mad͟jūs" who, before the year 300/912-3, had raided Andalus. He identified them with the Rūs and posited the Pontic region as their starting point. Ibn Ḥawḳal, in his account of the destruction of the K͟hazar cities at the hands of the Rūs in 358/968-9 (more probably several years earlier, this date represents the year in which Ibn Ḥawḳal first heard of these events), remarks that after their despoiling of K͟hazaria "they came at once to the land of Rūm and Andalus..." He then refers to earlier expeditions, commenting that they, the Rūs, "are the ones who of old went to Andalus and then to Bard͟haʿa." He also notes that "the ships of the Rūs and Pečeneg Turks" sometimes attack Spain. This alliance of Rus' and Pečenegs [*q.v.*], who were often at odds, while not unknown, is all the more remarkable in that it implies Pečeneg involvement in sea-borne expeditions. A most dramatic turn of events in Rūs activities in the Mediterranean occurred in 860, when the "Rhos" mounted an unsuccessful naval assault on Constantinople from which the Byzantines believed themselves to have been spared only through divine intercession. The Patriarch Photius (858-67, 878-86), an astute and well-informed statesman, referred to these invaders as an ἔθνος ἄγνωστον a hitherto "unknown people" (see Vasiliev). The Rūs who attacked the Byzantine capital appear to have come from Kiev (Vasiliev) rather than from Western or Northern Europe. Almost a century later, the Byzantine Emperor Constantine VII Porphyrogenitus (d. A.D. 959) in his *De administrando imperio*, written *ca.* 948-52, gives an account of how the Rus' merchants travel from Novgorod to Kiev and then down the Dnieper and into the Black Sea to trade with Constantinople. The names of the Dnieper rapids are reported in both Rhos (Ῥωσιστὶ) and Slavic (Σκλαβηνιστὶ). The "Rhos" forms are clearly Scandinavian.

G. Vernadsky proferred an Iranian origin: *Rus* < Alanic *Ruk͟hs-As* through a conjectured relationship of the Alans with the early (Eastern) Slavic tribal confederation of the Antes. The Varangians (Old Norse *Vaeringi*, pl. *Vaeringjar*, Rus'. *Варяг* (*Varąg*) Mod. Russ. *Варяг* (Varyag), Arab. *Warank*, Greek Βαράγγοι < *várar* "pledge, oath, guarantee" = "men of the pledge", he argues, who in the 8th-9th century became the dominant force here, merged with this grouping and assumed their name. This dilution of strict Normanism has found few adherents. Anti-Normanists have countered with a variety of theories, both philological and historical. Perhaps best grounded are the Slavist Anti-Normanists who point to the presence of toponyms and hydronyms with the element *rus-/ros-* in the Eastern Slavic lands. These, in turn, may be associated with the Slavic or Balto-Slavic **rud/*rus* "reddish, ruddy, blond" (e.g. Ukr. *rusîy* "blond", Lith.*raũsvas* "red", cf. Latin *russus* etc., see P. Rospond, Mavrodin). H. Paszkiewicz (*The origin of Russia*, 1954, repr. New York 1969, 143-4), a Normanist, suggested that this was the Slavic name of the Norsemen, so called because of their ruddy complexion.

Eastern Slavic sources do not help to clarify the situation. The later Kievan Rus' tradition associates "Rus'" with the south, i.e. the Middle Dnieper Kievan region (cf. Hrus͟hevs'kîy, i). The Primary Chronicle (also called the *Chronicle of Nestor*), however, in its introductory genealogical comments places the "Rus" among the peoples in Japheth's part of the world, in this case the northern, Finnic ethnic groupings. Further on, it includes them in a listing of the "Varangians, Swedes, Normans (*Ourmane*), Gotlanders, Angles, Galicians, Italians (*Volūk͟hva*), Romans, Germans, etc. Clearly, they are associated with the Germanic North. The Chronicler, often evincing a Byzantinocentric viewpoint, comments (*PSRL*, i, 17) that the Rus' land began to be so-called at the time of the accession of the Emperor Michael III (852). In another passage (*PSRL*, i, 23) discussing Oleg's conquest of Kiev, traditionally dated to 882, the Rus' are again associated with the North: "he (sc. Oleg) had with him Varangians, Slovene (sc. a tribe associated with Novgorod) and the rest who are called Rus'." Elsewhere, however, the Chronicle (*PSRL*, i, 25-6), s.a. 898, notes the Polyane, the Eastern Slavic tribe most closely associated with Kiev, "who are now called Rus'" (*nîne zovomaya Rus'*). Still further on, the Chronicler attempts to explain these discrepancies thus (*PSRL*, i, 28): "the Slavic nation (*sloven'skîy yazîk*) and the Rus' (*rouskîy*) are one; for it was called Rus' from the Varangians (*ot Varyag bo prozvas͟hasya Rous'yu*), but first they were Slavs, although they were called Polyane, nonetheless, they were of Slavic speech..."

In addition to philological argumentation and to the ethnographic and ethnogenetic data offered by our sources, the Normanist position is based largely on the Primary Chronicle's "historical" account of the genesis of the Rus' state. According to it, in 859 (the dating, at best, is off by several years), the Varangians "from across the sea" levied tribute on the Finnic Čyud', the Novgorodian Slovene, the Finnic Merya and the Slavic Kriviči, while the Slavic Polyane, Severyane and Vyatiči to their south were tributaries of the K͟hazars. In 860-2, the Varangians were expelled, but the northern groupings proved unable to govern themselves. As a consequence, the Varangians, led by Ryurik, who settled in Novgorod, and his two brothers, Sineus and Truvor, were summoned to rule over them. Ryurik brought with him "the whole of Rus'." From "these Varangians it was

called the land of Rus'" (*PSRL*, i, 19-20). Two Varangian subordinates of Ryurik, Askold and Dir, then came to the south, taking Kiev. Al-Masʿūdī (d. *ca.* 345/956-7) in his *Murūdj* (iii, 64 = § 908), mentions the "king al-Dīr [Dayr], first among the kings of the Ṣaḳāliba." The occasionally suggested identification of al-Dīr with the Varangian Dir is questionable. It is much more likely that, despite the similarity in names, al-Masʿūdī's al-Dīr was a Central European Slavic ruler and his contemporary. With Ryurik's death, sometime between 870-9, power was given to his kinsman, Oleg < *helgi*. Oleg is presented in the traditional narrative as the guardian of Ryurik's son, Igor'. In 880-2, Oleg took Kiev, killing Askold and Dir. Another Rus' tradition preserved in the Novgorodian First Chronicle (*NPL*, 107, 434), depicts Igor' as the conqueror of Kiev, with Oleg merely as his general. The charismatic Oleg, about whom legends imputing prophetic abilities developed, has also been identified with the הלגו *hlgw* of the Geniza Khazar Hebrew document, the so-called "Cambridge" or "Schechter" document. This *Helgu, the "king of Rusia", perished in the aftermath of an unsuccessful raid on Byzantium. According to the Primary Chronicle, Oleg, after taking Kiev then set about conquering the neighbouring Slavic tribes. In 907, he launched his first raid against Constantinople. Igor', according to the Chronicle, began to rule in 913. There are, indeed, serious problems of chronology and questions regarding the identity of the personages involved. Pritsak, for example, posits a conflation of several Helgi/Olegs, real and mythical. Nonetheless, it is generally accepted that the account has some underlying historical basis.

The Anti-Normanists minimise the importance of the non-autochthonous elements. They contend that in the 6th-7th century there existed in the Middle Dnieper region the Polyane tribal union which took the name *Ros* or *Rus* deriving from a toponym or hydronym. Some support for this may be found in the "Bavarian Geographer", an anonymous work composed before 821, which places the "Ruzzi" next to the "Caziri" (Khazars). The power of this Kiev-centred state, according to Soviet Anti-Normanists, grew as reflected in the 838-9 embassy to Constantinople. The Swedes noted here, they suggest, were merely Vikings in Rus' service. The tale of the summoning of the Varangians, they further argue, is mythical. Ryurik may have been a real figure, but his ethnic affiliation is unclear.

The Normanist vs. Anti-Normanist controversy cannot be resolved on the basis of the currently available written sources. Archaeological evidence, similarly, does not provide decisive proof. A recent assessment of the data from a Scandinavianist perspective concludes that the Rus' were Scandinavians, but constituted only one element in a mixed population. The Vikings called Rus' *svípjoð hian mikla* "Sweden the Great", indicating an almost proprietary sense in an area of economic expansion and opportunity. The other Old Norse term for the region was *Gǫrd/Gorðum* in the 10th-11th century and *Garðaríki*, "kingdom of (fortified) towns or steads", in the 12th-13th century.

The Islamic sources, while not providing the conclusive information needed to resolve these questions, shed some light on the early Rus'. Genealogical tradition, as reflected in the anonymous *Mudjmal al-tawārīkh*, dated 520/1126, presents the eponymous Rūs as the brother of Khazar and the son of Japheth. Dissatisfied with his own place of abode, Rūs wrote to his brother and "asked for a corner of his country." He obtained an island, difficult of access, with soggy soil and foul air. These and other themes are drawn from information that was part of the body of Islamic geographical literature of the 3rd-4th/9th-10th centuries (see below). Balʿamī, in his translation of al-Ṭabarī, s.a. 22/643, reports the words of Shahriyār, the ruler of Darband/Bāb al-Abwāb [*q.v.*], to the commander of the Arab advance forces, ʿAbd al-Raḥmān b. Rabīʿa, to the effect that he was "between two enemies the Khazar and the Rūs. These peoples are the enemies of the entire world and, in particular, of the Arabs." This seems very early, indeed, for a Rus' presence in this region. The Khazars, of course, were already an important factor in the North Caucasus. The pairing of the Rūs with them as enemies of the Islamic world has an anachronistic ring. Nonetheless, some scholars are willing to accept its historicity (cf. Lewicki, *Źródła arabskie do dziejów słowiańszczyzny*; Togan, *Ibn Faḍlān's Reisebericht*. Novosel'tsev cites several other references to the Rūs dating to the time of Khusraw I Anūshirwān (531-79), e.g. in al-Thaʿālibī, who built fortifications against the "Turks, Khazars and Rūs." These, too, are most probably anachronistic. The earliest reliable reference to Rūs in the Islamic sources is perhaps to be seen in the "mountain of the Rūs" from which the river *drws* flows, noted in al-Khʷārazmī's *Ṣūrat al-arḍ*; Novosel'tsev).

One of the earliest and most important notices is found in Ibn Khurradādhbih, writing probably *ca.* 272/885-6, on the "route of the Rūs merchants" who brought goods from Northern Europe/Northwestern Russia to Baghdād. It interrupts a notice on the route of the Rādhāniyya [*q.v.*], a Jewish merchant company, which appears to have been supplanted by the Rūs. Noonan has recently suggested that the latter may have initiated these contacts as early as A.D. 800. A hoard of coins found at Peterhof, near St. Petersburg, contains twenty coins (Sāsānid, Arabo-Sāsānid and Arab dirhams, the latest dated to 189/804-5) with graffitti in Arabic, Turkic (probably Khazar) runic, Greek and Scandinavian runic (more than half the total). This may be viewed as evidence for the existence of the route described in Ibn Khurradādhbih by the late 2nd/early 9th century (see T. Noonan, *When did Rūs/Rus' merchants first visit Khazaria and Baghdad?*). In Ibn Khurradādhbih's famous account, the Rūs are described as "a kind (*djins*) of the Ṣaḳāliba," a sentence that has often been taken to indicate that they are a Slavic tribe. The Arabic is much more imprecise. The primary meaning of *djins* is "kind, type, variety, species." The term Ṣaḳāliba (sing. Ṣaḳlabī < Gr. Σκλάβος) while often used to designate the Slavs, was also employed to denote the whole of the fair-haired, ruddy-complexioned population of Central, Eastern and North-eastern Europe. In mediaeval Greek and Latin, *sclavus* became synonymous with "slave" (the English word [< French *esclave*] deriving ultimately from the ethnic designation). Our source further notes that these Rūs merchants "transport beaver hides, the pelts of the black fox and swords from the farthest reaches of the Ṣaḳāliba to the Sea of Rūm. The ruler of Rūm takes a tithe of them. If they wish, they go to the (ms. Oxford, Bodleian, Huntington 433, fol. 74b نس, ms. Paris, Bibliothèque nationale 2213, fol. 49a س, ms. Vienna, Nationalbibliothek 783, fol. 65a نيس, see also Golden, *Khazar studies*), تنيس *tnys* river (variously read/identified as the "Tanais" [Τάναϊς] i.e. the Don (so De Goeje), يتيل *yitil*, i.e. Itil (= Volga, see Lewicki, *Źródła*) or تين *Tīn* (= Don, see Marquart, or Siverskiĭ Donets', see Pritsak, *An Arabic text on the trade*

route of the corporation of ar-Rūs in the second half of the ninth century), the River of the Ṣaḳāliba. They travel to Khamlīdj/Khamlīkh, the city of the Khazars whose ruler takes a tithe of them. Then they betake themselves to the Sea of Djurdjān and they alight on whichever of its shores they wish .... Sometimes, they carry their goods from Djurdjān by camel to Baghdād. Ṣaḳlab slaves translate for them. They claim that they are Christians and pay the *djizya*." Much has also been made of the Rūs use of "Ṣaḳlab" translators, attesting, it is argued, a common Slavic tongue. Although we do not know with certainty what language was used, it may well have been Slavic, the most practical *lingua franca* in Central and Eastern Europe. Ibrāhīm b. Yaʿḳūb [*q.v.*], the 4rd/10th century Jewish traveller, who journeyed to Central Europe and the Western Slavic lands, remarked that "the majority of the tribes of the North speak Ṣaḳlabī (most probably, here meaning Slavic) because of their commingling with them. Among them are the Germans (Ṭudishkī), Hungarians (Unḳalī), Pečenegs, Rūs and Khazars." The *Ḥudūd*, has preserved the tradition that among the Rūs "lives a group of Slavs who serve them" (see below). There is no doubt that the Rūs had very intimate ties with Slavic speakers and the Scandinavian-speaking element was certainly bilingual, if not completely slavicised by the late 10th century. Igor's son, Svyatoslav (d. 972) already bears a Slavic name. There were, it might also be noted, Slavic colonies in caliphal territories that presumably could have also provided speakers fluent in Slavic and Arabic. A variant of Ibn Khurradādhbih's account, taken, perhaps, from a common source is found in Ibn al-Faḳīh. See also Pritsak, *An Arabic text*, and the earlier comments of Marquart, who suggest that the intellectual circle of Ibn al-Faḳīh's father in Hamadhān served as this common source. Here, the merchants in question are designated as Ṣaḳlab. After their arrival at the Sea of Rūm (most probably the Black Sea is meant here) and their payment of the tithe, they go to "Samkarsh of the Jews" (cf. *Samkarṣ of the Khazar "Cambridge" document = Samkerč = Tmutorokan' /Ταματάρχα /Φαναγουρία; see literature cited in Lewicki, *Źródła*). Then they turn towards the Ṣaḳāliba or they betake themselves from the Sea of the Ṣaḳāliba by this river, which is called the River of the Ṣaḳāliba, until they come to Khamlīkh..." Ultimately, their goods may go as far as Rayy. The identification of the various Ṣaḳlab waterways remains problematic. Al-Masʿūdī, *Murūdj*, remarks that the Rūs consist of "numerous peoples of diverse kinds. Among them are a kind (*djins*) called اللوذغانه *al-Lūdhʿāna* (or اللوذعانه **al-Lūdhghāna*) and they are the most numerous. They frequently visit, for the purpose of trade, the land of Spain [Andalus], Rome, Constantinople and the Khazars." The *Lūdhʿāna/Lūdhghana* have been identified with the Rūs grouping noted as الكوذكانه *al-Kūdhkāna* by al-Masʿūdī in his *Tanbīh*, 141. These, in turn, have been viewed as garblings of الاردمانه *al-Urdmāna* (cf. Marquart, who, while noting this possibility, preferred to view this as a corruption of *al-rāhdāniyya/al-rādhāniyya*; Minorsky, *Kuda ezdili drevnie rusi?*). Pritsak, following Kokovtsov, has suggested that the לוזניו *Lwznyw* of the "Cambridge" document, taken from an Arabic-script source لوزنيو (*lūzniyū*) is a corruption of لودمانى (*lūdmānī*, see Golb and Pritsak) = *Lo(r)dman* = *Nordman*. Pritsak has, moreover, put forward an interesting thesis in explication of the Ibn Khurradādhbih/Ibn al-Faḳīh notices. The Ṣaḳlab lands were primary sources for the slave trade (the "river of the Ṣaḳāliba" denoted the "river of Slaves" coming from the Khazar empire via the Volga and Don rivers). The two major companies involved in this trade on an international level were the Rādhāniyya/Rāhdāniyya (*ca.* 750) and the Rūs, who ultimately replaced them. Both were based in (southern) France (this is well-established for the Rādhāniyya, see Lewicki, *Źródła*, who associates the Rāhdāniyya mostly with trade in cloth). Kmietowicz, also places the Rādhāniyya "most probably in France, though they were equally connected with Spain." He derives the term for this trading diaspora from *raeda/rheda*, the name for a type of vehicle, > *veredarius* "messenger, courier, traveling merchant." The Rūs, according to Pritsak, were near Rodez: *Rutenicis* < Celto-Latin *Ruteni/Ruti* > Middle French *Rusi*, Middle Germ. *Rūzzi* (the source of Finnic *Routsi*). Unlike the Rādhāniyya, Pritsak argues, who as Jews enjoyed religious neutrality in the Mediterranean, the Rusi were obliged to seek a northern point of entry into Eastern Europe and the Baltic zone. They integrated themselves into the Frisian-Scandinavian world and by the late 8th century, developed a "Danish" type "society of nomads of the sea." Ryurik was the Frisian Danish king Rørik. The Slavic and "Rhos" (Scandinavian) languages noted by Constantine Porphyrogenitus were simply two of the *linguae francae* used by this trading diaspora (Pritsak, *Origin*). While it might be noted that neither of the two passages make any reference to the slave trade, Khazaria, as is well-known from the Arabic geographical literature, was a major source of slaves entering the eastern Islamic world and the Rūs were deeply involved in this trade.

The evidence is highly circumstantial at best. Given the complexities of their conjectured origins, it may, nonetheless, not be amiss to view the Rūs at this stage of their development, as they began to penetrate Eastern Europe, not as an ethnos, in the strict sense of the term, for this could shift as new ethnic elements were added, but rather as a commercial and political organisation. The term was certainly associated with maritime and riverine traders and merchant-mercenaries/pirates of "Ṣaḳāliba" stock (Northern and Eastern European, Scandinavian, Slavic and Finnic).

The Rūs Ḳaghanate

We have already noted that the *Annales Bertiniani* refer to the Rus' ruler as *Chacanus*. This is the Turkic title *Ḳaghan* "emperor". Kievan Rus' tradition, although overwhelmed by Byzantine models, occasionally made use of the title in literature of the Christian age: e.g. the references to "our ḳaghan Vladimir" (*kagan nash Vladimir*) and "our ḳaghan Georgii" (Yaroslav) in the mid-11th century religio-ideological tract "The sermon on Law and Grace" [*Slovo o zakone i blagodati*] of Metropolitan Ilarion (see *Des Metropoliten Ilarion Lobrede*) and the application of this title to several figures in the Igor' Tale (*Slovo o polku igoreve*). There is also the graffito in the Cathedral of St. Sophia in Kiev which reads "O Lord, save our ḳaghan" (*spasi gospodi kagana nashego*, Visotskiy). The Islamic geographers, based on traditions stemming from the 3rd/9th century, mention the *khāḳān rūs* (Ibn Rusta/*rūs-khāḳān* (*Ḥudūd*)/*khāḳān-i rūs* (Gardīzī, in Gardīzī/Barthold; *Mudjmal al-tawārīkh*). This title could only have come to the Rus', or more likely one grouping of them, through intimate contact (i.e. a marital tie) with one of the ruling, charismatic steppe dynasties. In all likelihood, this was the Khazar royal line. Such a tie is perhaps hinted at in the *Islendingabóc* with its references to "Yngve the King of the Turks" (see discussion in Golden, *The question of the*

Rus' Qağanate). The location of this Rūs ḳag͟hanate has been and remains the source of much speculation. Equally unclear are the inception point and ultimate fate of this polity. Pritsak, *Origin*, suggests that the Rūs ḳag͟hanate was founded by a K͟hazar ruler who fled to the Rus' *ca.* 830-40. He places the ḳag͟hanate in the Rostov-Yaroslav region of the Upper Volga. Smirnov, was of the opinion that it appeared only briefly, *ca.* 830, and was soon destroyed by the migration of the Ugro-Turkic tribal confederation that became the Hungarians in Danubian Europe. Since the latter were already on the Don by 838, cutting off the Rhos embassy from its return route from Constantinople and forcing its diversion to the Frankish lands, this would appear to have been a very short-lived political phenomenon. On the other hand, the sacral ruler described by Ibn Faḍlān in 309/921-2 (see below) certainly possessed many of the attributes of a holy Turkic Ḳag͟han. The memory of this institution, in any event, endured into the Christian era of Rūs history, as we have seen, and could be summoned for ideological purposes.

The location of the Rūs lands

The tradition represented by Ibn Rusta, Gardīzī and others (cf. al-Maḳdisī, *Mud͟jmal*, Marwazī; al-Ḳazwīnī; Ibn Iyās, in Seippel; al-Bākuwī, see also discussion in Zak͟hoder, place the Rūs on an island of three days' journey in width in a lake (or a sea). It is densely wooded, damp, soggy and possessing foul, unhealthy air. Gardīzī (or rather his sources), followed by al-Maḳdisī, puts the island's population at 100,000. Ibn Iyās and al-Bākuwī comment that the island is a "fortress" that protects them from their enemies. Some scholars are inclined to place this island in the north. Novgorod, it might be remembered, in Scandinavian tradition was termed *Hólmgarðr* "Island-Garth" (Barthold, *Arab. izvest.*; Novosel'tsev). Other suggestions include Aldeigjuborg, North-east Rus', Kiev, Tmutorokan' and the Taman peninsula (see literature in Golden, *Question*). Fak͟hr al-Dīn Mubāraks͟hāh, simply notes that they live on islands. This, however, may refer to a later time period. For example, al-Dimas͟hḳī, says that they have islands in the "Sea of Māyuṭas" (text has the corrupted form "Mānīṭas" = Maeotis, the Sea of Azov). Al-Nuwayrī, terms the Black Sea the "Sea of the Rūs", adding that the Rūs "inhabit the islands in it". Al-Masʿūdī, who is uncertain of the geography involved and is perhaps referring to the situation in his day, comments regarding the Rūs who raided Spain that they "reach their country from a gulf (*k͟halīd͟j* "bay" ? "canal"?) which meets the Sea of Uḳyānus, (but) not through the gulf in which are the bronze lighthouses. In my opinion—but God knows best—this gulf is connected to the Sea of Māyuṭas and Bunṭas and this people is the Rūs..." A more northerly orientation can be assumed from Ibn Ḥawḳal's comment that the honey, wax and beaver furs brought to the Islamic world from K͟hazaria actually come from the region around Rūs and Bulg͟hār. Indeed, some of the prized fur animals are only found "in these northern rivers which are near Bulg͟hār, Rūs and Kūyāba" (see below). Al-Idrīsī, gives us some idea of the distances involved, informing us that "from Bulg͟hār to the first border of Rūs is 10 days' journey. From Bulg͟hār to Kūyāba it is about 20 days' journey." The anonymous author of the *Ḥudūd*, probably reporting the situation close to his own time (372/982) places the Rūs territory west of the "mountains of the Pečenegs." To its south is the river Rūtā (? Dūnā?), to the west are the Ṣaḳāliba and in the north are the "Uninhabited Lands." In contrast to the forbidding depiction of the island of the Rūs, the *Ḥudūd* views the Rūs habitat as "extremely favoured by nature with regard to all the necessities (of life)." Indeed, Ibn Rusta, seemingly contradicting his remarks about the Rus' island but obviously referring to a different grouping of Rūs and perhaps conflating earlier and later traditions, notes that they have many towns. The "island" theme, in any event, most probably referred to only one grouping of Rūs.

By the late 9th century, there were three urban-territorial units associated with the Rus'. The *Ḥudūd*, following the tradition also found in al-Iṣṭak͟hrī and Ibn Ḥawḳal (a mélange of these and other traditions are also recorded in al-Idrīsī), notes three subdivisions of the Rūs, each based on an urban centre: (1) *Kūyābā* (= Kiev, cf. the קיוב [Qiyōḇ] of the 10th century K͟hazar Kievan letter, Golb and Pritsak, the Κίοβα/Κίαβα noted by Const. Porph., who mentions that the city is also called Σαμβατάς, the meaning of which is unclear (Pritsak, *op. cit.*, 44, derives this term from Balkan Latin *sambata* "Saturday", the principal market day. He further suggests that Kiev is based on the name of the K͟hazarian vizierial family of K͟hʷārazmian origin Kūya (< **kaoya* "peculiar to the Iranian sacred ruling dynasty Kaway + *-āwa*"). This form arose in the late 9th century), and the *Cuiewa* of Western sources (Thietmar of Merseburg). Old Norse knew it as *Kœnugarðr* "Boat-Garth". This is the southernmost of the Rūs lands ("nearest to the Islamic lands"). It is also closest to and bigger than Bulg͟hār. A Rūs king resides in Kūyābā. (2) *Ṣalāwiyya* (*Ṣalāba* in the *Ḥudūd*). Barely commented on by al-Iṣṭak͟hrī (who says that it is the farthest from them) and Ibn Ḥawḳal, the *Ḥudūd* remarks that it is a "pleasant town from which, whenever peace reigns, they go for trade to the districts of Bulg͟hār." Only Ibn Ḥawḳal notes the presence of a king in it. Al-Idrīsī says that it is on the top of a mountain. The Ṣalāwiyya are clearly the Slovene of the Lake Il'men region and Novgorod. The latter was actually founded *ca.* 930, the earlier "Novgorod" is perhaps to be identified with the "Ryurikovo gorodis͟hče", to the south which contains some Scandinavian finds (Clarke and Ambrosiani). It continued to have a strong trade orientation towards the Finno-Ugric forest peoples, competing here with Volga Bulg͟haria up to the Mongol conquest. (3) *Art͟hāniyya* (< *Rothania ? Ruthenia ?) whose city is *Ārt͟hā(n)* (*Ḥudūd*: ارتاب *ʾrtāb*, recte ارثان was noted for its secretiveness and inhospitality (killing all strangers who enter). Yet they actively engaged in trade bringing their goods to the outside world. According to al-Iṣṭak͟hrī and Ibn Ḥawḳal, they exported black sable, black fox, beaver pelts, lead and mercury (see also al-Idrīsī, 917-18). The *Ḥudūd* also ascribes to them the production of "very valuable blades and swords which can be bent in two, but as soon as the hand is removed they return to their former state." Al-Idrīsī locates it four days' travel from both Kūyāba and Ṣalāwa. Art͟hān(iyya) is probably to be located near the Volga or in the Volga-Oka mesopotamia (hence some efforts have been made to identify them with one or another Finno-Ugric people, cf. Swoboda). It might be noted in this connection that Arabo-Jewish documents refer to the Volga as *Art͟hā* and the furs imported from there were termed *art͟hī* (Goitein). It is unclear which, if any, of these centres may be identified with the Rūs Ḳag͟hanate.

Al-Idrīsī gives the names of a large number of cities in "Rūsiyya" and its immediate environs: Lūbas͟ha (Lyubeč), Zāḳa (Sakov), Sklāhī, G͟halīsiyya (Galicia, Halič), Snūblī, Turūbī (Turov), Barazlāw

(Pereyaslavl'), Qnw (Kanev ?), ʾIskī, Mūlsa, Kāw (on the Danābrus/Dnieper = Kiev ?), Brzūla, Usiyya, Brāsānsa, Lūḏjgha, Armn, Mrtūrī, at the mouth of the river Danast/Dnestr (some of these are discussed in Lewicki, *Polska i kraje sąsiednie w świetle Księgi Rogera geografa arabskiego z xii w. al-Idrīsī'ego*, and Beylis.

Relations with neighbours

The Islamic sources paint a picture of largely bellicose relations with their neighbours. The *Ḥudūd* reports that "they war with all the infidels who live round them, and come out victorious." Ibn Rusta, Gardīzī and al-Maḳdisī, note the Ṣaḳāliba as the principal victims. The Rūs come by boat, capture them and send them off to the slave markets of Khazarān and Bulghār. They also take their foodstuffs since they have no cultivated fields of their own. Gardīzī adds that many Ṣaḳāliba agree to take service with the Rūs, working as servants (confirmed by the *Ḥudūd, loc. cit.*: "among them lives a group of Slavs who serve them"). It has often been assumed that these were the Ṣaḳlabī servants who functioned as translators for the Rūs merchants who came to Baghdād noted in Ibn Khurradādhbih (see above). How these translators acquired Arabic, if this was, in fact, the language to which they translated, is unclear. Ibrāhīm b. Yaʿḳūb remarks that the commerce of the Ṣaḳāliba "frequently comes by land and sea to the Rūs and Constantinople." The Ṣaḳāliba in question here are probably the Western Slavs. That same author, 5, reports that the Rūs also attack the Pruss (Burūs), crossing over to attack them in ships "from the West." These would appear to be Rūs operating in the Baltic. Prior to the 10th century Rūs and Ṣaḳāliba were to be found in the Khazar military service and as the servants of the Khāḳān, living in the Khazar capital. The Khazar judiciary made provisions for its ethnically variegated subject population. There were seven judges, two each for the Jews, Muslims and Christians and "one for the Ṣaḳāliba and Rūs who render judgment according to pagan judicial principles (*bi-hukm al-djāhiliyya*), the judgment of reason" (al-Masʿūdī, *Murūdj*; al-Iṣṭakhrī). Al-Masʿūdī, *Tanbīh*, mentions groups of Rūs, who like the Armenians, Bulgarians (Burghar) and Pečenegs, had entered the Byzantine military service. By the late 10th century, Rūs contingents, whose assistance, unlike the free-lance mercenaries already found in Byzantine service, had been requested by Constantinople, were used to suppress domestic rebellions in Anatolia (see below). Rūs-Pečeneg relations (the Pečenegs entered the Pontic steppe, driving out the Proto-Hungarian tribal union in the late 3rd/end of the 9th-beginning of the 10th century) were very complex. In 915, the first of a number of Rus'-Pečeneg "peaces" were arranged, but by 920, Igor' had launched a campaign against the nomads. Thereafter, the periods of hostility largely overshadowed the periods of more pacific interaction. As a consequence, Ibn Ḥawḳal's statement, that the Pečenegs are the "fighting power" (*shawka*) of the Rūs and their allies (*aḥlāf*)" seems quite remarkable, as does also his statement (see above) that Rūs and Pečeneg ships attacked Spain. Minorsky, *Kuda ezdili*, suggested a very different sense of this passage, translating *shawka* as "thorn" and emending *aḥlāf* to *akhlāf* "opponents." This seems closer to the general tenor of Rus'-Pečeneg relations. Although the Pečenegs had ceased to be a threat to the Kievan state and had largely been driven into the Byzantine borderlands by the Rūs and Ḳîpčaḳs by his day, al-Idrīsī made note of the warfare of these nomads on Rus' and Byzantium. He also was aware of the internecine strife that had become increasingly characteristic of Rus' domestic politics, commenting that the Rūs "have wars and constant dissension with their own kind (*maʿa djinsihim*) and with lands that are close to them" (904, 960). Allusions to similar problems may be seen in the statement of the *Mudjmal* that "they do not favour one another." Ibn Rusta and Gardīzī, however, using notices that go back to an earlier era, stress their unity, cf. Ibn Rusta: "if a people (*ṭāʾifa*) goes to war against them, they all go on campaign. They are not disunited, but are as one hand against their foes until they defeat them." He also comments that they are less fearless in combat when fighting on foot rather than from ships, their favoured mode of warfare. These two authors also note their use of "swords of Solomon" (*al-suyūf al-sulaymāniyya*), which were similar to "Frankish" blades, but less ornate. They appear to have been produced in the land of Salmān in Khurāsān (see Lewicki, *Źródła*).

Government

We have already noted the reports of the Muslim geographers regarding the Rūs Ḳaghan. Of our written sources, it is only Ibn Faḍlān, however, who appears to have actually encountered Rūs in Volga Bulgharia, during his sojourn there in 309/921-2. It is from him that we gain a detailed description of a Rūs ruler. It is not made clear if this ruler was the Ḳaghan; our source merely refers to him as the "king." According to Ibn Faḍlān, he resides in a castle, surrounded by his retinue of 400 select warriors who die when he dies. Each of them has a slave-girl to serve them. The king sits on a jewel-encrusted throne (al-Ḥanafī, in Seippel, *Fontes*, calls it a golden throne) along with 40 slave-girls, with whom he sometimes has public sexual intercourse. The king does not normally step down from the throne, even for the performance of natural functions. If he leaves the throne, his feet are not permitted to touch the ground. A horse is brought up to the throne and he mounts upon it from there. In addition, "he has a deputy who commands the armies, attacks the enemy and stands in his place before his subjects." This is clearly a description of a sacral king, in many respects similar to that of the Khazar Ḳaghanate (except for the sexual licentiousness), with its holy Ḳaghan and the *Shad/beg/yilig* who ran the actual affairs of government. If this notice is not a contamination from the notice on the Khazar Ḳaghan which immediately follows it in the text, it may be viewed as a significant piece of evidence in support of the thesis of the Khazar origins of the Rūs Ḳaghanate. Ibn Faḍlān, however, never refers to the Rūs ruler as "khāḳān." This special retinue or comitatus (perhaps the body referred to as "one group of them who practise chivalry" in the *Ḥudūd*), may be a variant of the Scandinavian *hirð* (Rus'. *grid'* "warrior, princely bodyguard", Fasmer; Jones).

The *Ḥudūd* remarks that a tithe is taken on their "booty and commercial profits." Gardīzī, however, states that their king collects this tax from merchants. Legal disputes are first brought to the "khāḳān" who renders a decision (Ibn Rusta; Gardīzī, see also al-Maḳdisī). If one of the disputants disagrees with the verdict, the king orders that they engage in a ceremonial sword fight. Whoever has the sharper sword and succeeds in chipping the blade of the other is declared the winner. Ibn Rusta adds, however, that "their companions come and stand armed. The two fight and whosoever of the two is more powerful than the other becomes the arbiter in his case as he

wishes." A later report, from the 8th/14th century author Nadjm ad-Dīn al-Ḥarrānī (in Seippel, *Fontes*), states that "they do not obey a king or any law (*sharīʿa*)." There is a very distinct tradition found in al-Marwazī which is repeated and slightly mangled in ʿAwfī. The former remarks that the Rūs king is called Walādimīr (*bi-walādimīr*). In ʿAwfī this was transformed into "Būlādhmīr" (Kawerau; Barthold, *Novoe musul'manskoe izvestiye o russkikh*). This, of course, is a reference to Volodimir/Vladimir I (972-1015), who brought about the conversion of Rus' to Orthodox Christianity. Curiously, Ibn Khurradādhbih, who gives the titles of the various rulers of interest or importance (including those of the Ṣaḳāliba), makes no mention of the Rūs ruler.

Economy

The initial picture presented is that of mobile, urban-based traders/raiders. Ibn Rusta reports that the Rūs "possess no real estate property (*ʿaḳār*), nor villages, nor cultivated lands." He subsequently notes, however, that they have many towns. Rather than engaging in agrarian pursuits, "their profession is trade (*tidjāra*) in sable, grey squirrel and other such furs which they sell to purchasers. They take the value of the goods in gold and fasten it to their belts." This strong mercantile emphasis is noted by the other Muslim authors, who universally speak of their involvement in extensive trading relations with their immediate neighbours, the Khazar empire and Volga Bulgharia (through which their goods reached the Islamic lands), Byzantium, Spain and Central Europe (al-Iṣṭakhrī; al-Masʿūdī, *Murūdj*). Ibrāhīm b. Yaḳūb reports that Rūs and Ṣaḳāliba traders come to "Farāgha [Prague] from Karākūʾ [Kraków]" for trade. Kiev's importance as a major commercial centre continued and is reflected in later Muslim sources. Thus al-Idrīsī comments that Muslim merchants from Armenia come to Kiev. This finds confirmation in contemporary Georgian sources (e.g. the journey of the "great merchant Zankan Zorababeli" of T'bilisi who was sent off to Rūs on a diplomatic-marital mission *ca.* 1184 "by relays of horses", *K'art'lis ts'khovreba*), using an already well-established route. The importance of this region for trade with the Islamic world would appear to be supported by considerable numismatic evidence (Islamic dirhams first begin to surface in what became Russia and the Baltic region *ca.* 800; on this see Noonan, *Why dirhams first reached Russia: the role of Arab-Khazar relations in the development of the earliest Islamic trade with Eastern Europe*). The volume of this trade seems to have exceeded that of their commercial relations with Byzantium. Although Sawyer (*Kings*, 123-6) cautions that the presence of these dirhams does not necessarily constitute evidence of a great volume of trade, nor need they have reached these areas solely by trade, Ibn Faḍlān (see below) gives direct evidence of goods being exchanged for Islamic coins. The Rūs, it may be concluded, at least in the early stages of their history, were largely merchant middlemen and on occasion pirates. They produced nothing of their own, but raided, extorted/collected tribute or traded for furs and other commodities of the Northern forest zone which they then brought to the Mediterranean or the Islamo-Central Asian world either directly or through yet other middlemen, Volga Bulgharia or Khazaria. However it was obtained, the volume of Islamic coinage entering Rus' declined in the late 10th century and had largely stopped by 1015. The causes of this change, much debated, remain unclear. Local sources of precious metals were not unknown. Thus, al-Masʿūdī (*Murūdj*) mentions silver mines in Rūs territory more or less equal to the silver sources in the Pandjhīr mountains in Khurāsān.

Personal appearance and clothing

Ibn Rusta describes the Rūs as possessed of "long bodies, a (good) visage and fearlessness." Our sources (Ibn Rusta, Gardīzī) stress their personal neatness; some are clean-shaven, others braid or plait their beard. Iṣṭakhrī and Ibn Ḥawḳal attribute this personal fastidiousness to their mercantile pursuits. Ibn Rusta further remarks that they treat their slaves well. This, too, could be viewed as an indication of a higher cultural level. Their clothing is made of linen (Gardīzī) and they wear arm bands/bracelets of gold. Their trousers, according to Ibn Rusta and the *Ḥudūd*, are made out of 100 cubits of (cotton) fabric, which they gather in at the knee and fasten there. They also wear "woollen bonnets with tails let down behind their necks" (*Ḥudūd*). Al-Iṣṭakhrī and Ibn Ḥawḳal report that they wear short coats. Ibn Faḍlān, however, who remarks that they are as tall as date palms, blond and ruddy, says that they do not wear short coats or caftans but a *kisāʾ* (a cloak, see Dozy, *Supplément*, ii, 476). He goes on to note that each of them carries an axe, a sword and a knife from which they are never parted. Their women are bedecked with various gold and silver ornaments in displays of ostentation commensurate with their husband's wealth.

Customs and religion

Our sources are impressed with the spirit of independence and enterprise inculcated among the Rūs from birth. Ibn Rusta, followed by Gardīzī, al-Maḳdisī and the *Mudjmal*, reports that "when a baby boy is born to one of them, he sets before the baby boy a drawn sword and places it between his hands and says to him 'I leave you no goods as inheritance. You have nothing except what you may acquire for yourself by this, your sword.'" Marwazī (in Kawerau) adds that the daughter receives her father's inheritance, while the son is given a sword and told "your father acquired his wealth by the sword, imitate and follow him." This same sense of rugged individualism was reflected in their treatment of the ill. Ibn Faḍlān remarks that "when one of them falls ill, they pitch a tent for him, in a secluded place away from them, and they cast him away there. They place with him quantities of bread and water" and leave him alone until he either recovers or dies. Transgressors were dealt with harshly. Thieves, this same source informs us, were hung by the neck from stout trees until dead and then left to rot.

This same author was quick to note their human frailties. He appears to contradict, at least in part, the report of their personal neatness noted above, declaring them the "dirtiest of God's creations" because of their lack of personal hygiene. To this failing were added inordinate suspicion and covetousness. Ibn Rusta and Gardīzī report as an example, in this regard, that they go out to perform their natural functions only when accompanied by several friends to stand guard. Otherwise, a man on his own would be killed. So great is their distrust and perfidy that if one acquires even a little wealth "his brothers and friends who are with him crave it, try to kill him and dispossess him of it" (Ibn Rusta). How much of this is accurate and how much travellers' tall tales highlighting the greed of the "barbarian" is difficult to gauge. It is highly doubtful, however, that the Rus' could have been as effective a commercial and

military force as they were, given such a state of *bellum omnium*. Ibn Faḍlān was also shocked by their lack of modesty (engaging in sexual intercourse with their slave-girls while their friends looked on).

This same source has much to say about their beliefs. When ships arrive, he reports, they each come out bearing bread, meat, onions, milk and wine. They proceed to a long piece of wood planted in the ground on which has been carved the face of a man. It is surrounded by smaller idols and other long pieces of wood planted into the ground. They prostrate themselves before the large image, which they address as "Lord" and announce what goods they have brought. They conclude their devotions by saying "I want you to provide me with a merchant who has many dīnārs and dirhams, who will buy from me everything that I want him to buy, and he will not contradict me in what I say." If business is good, more offerings are made. In especially good circumstances, sheep and cattle are slaughtered, much of which are consumed, at night, by dogs. Ibn Faḍlān, occasionally adopting a mocking tone and anxious to display their ignorance to his readers, reports that nonetheless, he who made the offering says "my lord is satisfied with me and has eaten my gift".

According to the tradition preserved in the accounts of Ibn Rusta and Gardīzī, their shamans or "medicine men" (*aṭibbāʾ/ṭabībān*), enjoyed a very high status. They could pass judgment on the king and govern them. They could select as sacrifice to their gods whomsoever they pleased, human and animal. These unfortunates were hung by the neck until dead. The commandments of their "medicine men" must be carried out (Ibn Rusta; Gardīzī). We have relatively brief descriptions of their funerary customs in Ibn Rusta, Gardīzī and the *Ḥudūd*. Ibn Rusta reports that "when one of their important people (*djalīl minhum*) dies, they dig him a grave, like a spacious house, and place him in it. Together with him, they place his personal clothing (*thiyāb badanihi*), gold bracelets which he wore, much food, vessels with drink and gold money also. They bury with him in the grave the wife that he loved (best). She, after this (sc. his burial) is still alive. They seal up the door of the grave and she dies there." Al-Iṣṭakhrī and al-Masʿūdī, *Murūdj*, also note that they cremate their dead, together with their wife or slave-girl, horses and finery. Al-Masʿūdī further adds that "when the wife dies, the husband is not cremated. If one of the unmarried men dies, he is married after his demise, and the women request that they be cremated (with him) so that they may, according to their own thinking, enter among the souls of paradise." Ibn Faḍlān, however, provides us with one of the most extraordinary, ethnographically detailed depictions of the funeral of a Rūs chief. The customs were related and explained to him on a number of occasions ("they told me of the things they did with their chiefs at their death, the least of which is cremation"). He also appears to have witnessed one such spectacular funeral. The deceased was placed in a grave over which a roof was erected. He remained there for 10 days while new clothing was fashioned for him. When a great man dies they ask his household "who of you will die with him?" Those who answer in the affirmative are duty-bound to fulfill this commitment. The majority of those who agreed to do so were slave-girls. One of the slave-girls was then given this honour. The deceased was to be taken out of his grave and placed in a special structure on a boat which was taken out of the river and mounted on a kind of wooden holding frame. The corpse, because of the cold was remarkably well-preserved. An old woman called the "angel of death," was now put in charge. The deceased was placed in the special structure. Food (bread, meat, onions) was placed before him. A dog was sacrificed, cut in half and thrown on the boat. Two cows were also sacrificed (as well as other animals). The slave-girl who was to die with her master then had sexual intercourse with her master's relatives or boon companions and she was given copious amounts of wine so that she became dull-witted (*taballadat*). The men outside began to strike their shields with wooden sticks in order to drown her cries as she was strangled. A close relative of the deceased man, completely naked, set fire to the wood under the boat. The sacrificed slave-girl was placed beside her master. In response to Ibn Faḍlān's questions, one of the Rūs explains their views: "You Arabs are stupid. You take the most loved and distinguished among you and dump them in the earth. The earth consumes them (as do also) insects and worms. But we cremate them in fire, in the flick of an eye, and he enters Paradise immediately." A small burial mound was then set up on the site in which the boat was burned. A large piece of *khadang* wood was placed on the spot and the deceased's name was written on it as well as that of the king of the Rūs. This *khadang* wood was especially associated with the Rūs lands (see Ṭūsī, *ʿAdjāʾib al-makhlūkāt*). The corpses of slaves were simply abandoned to dogs and birds of prey.

Although Artha/Arthāniyya was famous for its inhospitality to strangers, killing all outsiders who came to it (al-Iṣṭakhrī and al-Ḥarrānī), the other areas of Rūs' were not. Ibn Rusta says that they were generous to their visitors. They were ferocious, however, in exacting revenge (*Mudjmal*).

The Rūs Caspian raids and the fall of Khazaria

It was undoubtedly the lucrative trade routes of the Volga that first drew the Rūs to Eastern Europe. The Rūs both traded with and raided the Islamic lands. As early as the era of the ʿAlid al-Ḥasan b. Zayd (250-70/864-84 [*q.v.*]), leader of the Zaydī Shīʿī principality in Ṭabaristān, the Rūs attempted to raid the region. A second raid took place in 297/909-10, aimed at Ābaskūn [*q.v.*]. A third raid took place in 299/911-12 and a fourth one, according to al-Masʿūdī "sometime after 300/312" (Dorn, Aliev, Minorsky; slightly different dates in Barthold and Pritsak). At the outset of this last raid the Rūs in return for being allowed passage through Khazar lands in order to raid the Caspian coasts, offered half of the spoils to the Khazar ruler. The raid caused much devastation, especially in the regions of Bardhaʿa, al-Rān, Baylakān, Ādharbaydjān, Shirwān and the city of Bākuh. The Rūs then returned to the Volga estuary. Here they were attacked, apparently with the acquiescence of the Khazar ruler, by Khazar Muslims (the Ursiyya and others), as well as some Christians, desirous of revenge. According to al-Masʿūdī, those that escaped were finished off by the Burṭās and Volga Bulghars. An even more ferocious eruption of the Rūs into the Caspian Islamic lands took place in 332/943-4. In that year Bardhaʿa [*q.v.*] was again a target. It was taken and the Rūs settled in, showing every intention of remaining for some time, but remained there only for some months. The Khazar-Byzantine entente by this time had come to an end. The Rūs now figured prominently in actions that were overtly hostile to Khazaria. According to the "Schechter" document, when the Khazar ruler Joseph, responding to Byzantine persecutions of Jews under the emperor Romanus I (920-44), "did away with many Christians" in his realm, Romanus retaliated by inciting "Helgu

[הלגו/Oleg, see above], king of Rusia" against Khazaria. "Helgu" was forced to flee by sea where he and his men perished. The Letter of the Khazar ruler, Joseph, to Ḥasday b. Shaprut, the Jewish courtier of the Spanish Umayyads, reports, *ca.* 960, that the Khazars were continually at war with the Rūs. "If I left them (in peace) for one hour, they would destroy the entire land of the Ishmaelites up to Bagdad" (Kokovtsov). The main confrontation appears to have taken place in 354/965. The immediate causes for the Rūs assaults on Khazaria are not elucidated in our sources. Given the ongoing hostilities reported in the Letter of Joseph, however, Byzantine involvement in inciting revolts within the Khazar sphere of influence, the Rūs attempts to gain unrestricted passage through the Khazar-controlled Volga route to the Caspian, these may be easily conjectured. Khazaria was a fading power. The Rūs formed an alliance with the Oghuz Turks and together they advanced on Khazaria. The Primary Chronicle has a very laconic notice reporting only that in 6473/965 the Rūs ruler, Svyatoslav (d. 972) attacked the Khazars and "took their city and Bela Veža" (= Sarkel, a *var. lect.* says only that Bela Veža was captured). Al-Muḳaddasī reports two accounts that he "heard." According to the first, Khazaria was attacked by al-Maʾmūn of Djurdjān who captured the Khazar ruler. He subsequently heard that "an army from Rūm, called Rūs, conquered them and took possession of their land." Miskawayh writes that in 354/965 "news came to the effect that the Turks had invaded the territory of the Khazars. The latter invoked the aid of the people of Khʷārazm, who declined saying: You are Jews; if you want us to help you, you must become Muslims. They all adopted Islam in consequence with the exception of their king." Ibn al-Athīr has, basically, the same report, adding, however, that after the Khʷārazmians drove off the Turks (the Oghuz), the Khazar ruler converted to Islam as well (see Golden, *The migrations of the Oğuz*, 77-80). Ibn Ḥawḳal, who learned of these events in 358/968-9, paints a picture of large-scale devastation. The dating of the events described in Ibn Ḥawḳal has been the subject of some debate, some scholars placing them in 358/968-969, the year in which our source first heard of the Rūs raid (Kalinina, *Svedeniya Ibn Khaukalya o pokhodakh Rusi vremeni Svyatoslava*, who, following Marquart and Barthold, *Arab. izvest.*, does not believe that Volga Bulgharia was affected by the raids). There is no reason, however, to doubt Ibn Ḥawḳal, who had first-hand information. In addition, the Rūs and their Oghuz allies followed a similar pattern 20 years later, in 985, when they attacked Volga Bulgharia, the first in boats, the second by land (*PSRL*, i, 84). A distant echo of these events is found in al-Idrīsī, writing in the mid-6th/12th century, who says of the Rūs who neighbour "on the land of the Unkariyya (Hungarians) and Maḳadhuniyya; they have at present, at the time that we were writing this book, conquered the Burṭās, the Bulghār and Khazars, taken away control of their lands and nothing remains of these people except the name in (their former) lands." This, of course, is inaccurate for his day since the Burṭās and Volga Bulghars were still very much on the scene.

There are references to Rūs activities in Bāb al-Abwāb/Darband found in the *Taʾrīkh al-Bāb*. In 377/987, the *amīr* Maymūn called in the Rūs to help him against local chiefs. The Rūs came with 18 ships but uncertain of their reception, sent only one in to reconnoitre the situation. When these men were massacred by the local population, the Rūs went on to Masḳaṭ, which they looted. Rūs professional soldiers appear to have already been on the scene. Thus in 379/989, this same Maymūn is reported to have refused the demand of the Gīlānī preacher, Mūsā al-Ṭūzī, to turn over his Rūs ghulāms to him for either conversion to Islam or death. Maymūn's attempt to have a counterbalance (Rūs ghulāms) to the local population ultimately failed, for he was driven from the city and forced to surrender the ghulāms (Minorsky, *Sharvān*). He returned in 382/992. In 421/1030, the Rūs raided the Shirwān region, but were then induced, with "much money," to aid the ruler of Gandja, Mūsā b. Faḍl, in suppressing a revolt in Baylaḳān. "The Rūs then quitted Arrān for Rūm and thence proceeded to their own country" (see *ibid.*). One of the variant mss. of this source (see idem, *Studies in Caucasian history*), using only the Top Kapı ms. 2951 of Müneddjim-Bashī's *Djāmiʿ al-duwal*, which contains extracts from the *Taʾrīkh al-Bāb*, says that in 422/November 1031, the Rūs "came a second time and Mūsā set forth and fought them near Bakūya. He killed a large number of their warriors and expelled them from his dominions." This was followed in 423/1032 by a Rūs raid into Shirwān, joined now by the Alans and Sarīr. They were defeated, in 424/1033, by local Muslims who "wrought great havoc" among them (Minorsky, *Studies*, and idem, *Sharvān*). It is unclear to which Rūs grouping these raiders may have belonged. Pritsak, *Origin*, suggests that they operated out of a base near the Terek estuary and had their principal home in Tmutorokan'. He also conjectures that shortly thereafter, the Rūs, operating in the Caspian, may have provided some military assistance to the Oghuz in a power struggle in Khʷārazm. Khāḳānī tells of a Rūs raid *ca.* 569/1173 or 570/1174. These Rūs appear to have been Volga pirates who came in 73 ships. At the same time, although it is unclear if their actions were coordinated, the Ḳïpčaḳs [*q.v.*] attacked Darband and went on to take Shābarān as well. The Shirwānshāh, Akhsitan/Aghsartan I turned to the Georgian king, Giorgi III (d. 1184), for aid. Together they defeated both the Rūs and the Ḳïpčaḳs. The Georgian sources, however, only mention attacks of the Khazars of Darband. Completely anachronistic, of course, is the tale of Alexander's wars against the Rūs found in Niẓāmī's *Iskandar-nāma*. The Rūs king, called Ḳnṭāl, is presented as the ruler of the Burṭās, Khazars, Alans and (W)īsū (Vepsi).

Later sources offer little new historical or ethnogeographical information regarding the Rūs, being largely compilations based on the earlier sources. We have a brief description of the Mongol conquest of Rus' in Djuwaynī, lacking in specific details. Other sources, e.g. Djūzdjānī, merely note them in passing.

There are occasional references to the "Rūs", here designating the Russians/Muscovites, in later Ottoman-Ṣafawid era Islamic sources, e.g. *kanāz Iwān* (Russ. *knyaz' Ivan* = Ivan IV "the Terrible"), mentioned in a discussion of Russo-Crimean Tatar relations s.a. 980/1572-3, in Hasan Rūmlū, 584-5. The Crimean Tatars had raided and burned Moscow in 1571, but another raid the following year was repulsed. Ottoman materials for the history of the later Eastern Slavic peoples have been relatively little investigated (cf. Ewliyā Čelebī's comments on the *Rūs-ī menḥūs* "inauspicious Rūs" Ukrainian Cossacks).

The conversion of the Rūs

The Islamic and Arabic-writing Christian authors provide useful data on the conversion of the Rūs to

Orthodox Christianity. In 987, the Byzantine emperor Basil II (976-1025) was faced with the revolts of Bardas Sclerus and Bardas Phocas. The latter, having double-crossed Sclerus, with whom he briefly joined forces, proclaimed himself emperor on 17 Djumādā 377/14 Aylūl 1298/14 September 987, as we are informed by Yaḥyā of Antioch (d. *ca.* 1066). Basil, now desperate, sent to the Rūs, "even though they were enemies," for assistance. The Rūs ruler, Volodimir/Vladimir, agreed to send troops in return for a marital alliance. He was to marry Basil's sister. Volodimir also agreed to convert to Orthodoxy and, with him, his people, who were without any religion or religious law. Basil subsequently sent him a metropolitan and bishops. When the wedding arrangements were settled, the Rūs troops were sent and they helped to put down the revolt. Essentially similar accounts are given by Abu Shudjāʿ al-Rūdhrāwarī [*q.v.*] (d. 1095), al-Makīn, al-Dimashḳī and Ibn al-Athīr (see Rozen and Kawerau; Ibn al-Athīr dates these events to 375/985-6). Some of the 6,000 Rūs troops sent to aid Basil remained in Byzantine service, forming the nucleus of the famous "Varangian Guard" (see V.G. Vasil'evskiy). The Rus' tradition relates only that Volodimir, who had long been considering the adoption of a monotheistic religion and had examined Islam, Judaism and Christianity, was already inclining towards the latter in its Orthodox form. Islam he rejected because of its prohibition on alcohol, remarking that "for Rus', drinking is a joy, we cannot exist without it" (*PSRL*, i, 84 ff.). In 988 he marched on Byzantine Crimea, taking Chersones/Korsun'. With this he now forced Basil and his brother Constantine into a marital tie. Their sister Anna was sent to Volodimir, who in return agreed to convert himself and his people to Orthodoxy (*PSRL*, i, 109 ff.). The two accounts do not necessarily contradict each other. Volodimir may well have used his excursion to the Crimea to insure that he received his Byzantine princess.

Another Islamic tradition, however, depicts the Rūs as first converting to Christianity and somewhat later to Islam. Marwazī, who mentions that their ruler is called *Walādimīr* (see above) relates that after they "entered Christendom," their new faith "sheathed their swords" and prevented them from acquiring wealth by their customary means (warfare). They were reduced to poverty. They were then drawn to Islam, which allowed them to engage in holy war. They dispatched an embassy, consisting of four relatives of the king, to Khwārazm. The Khwārazmshāh sent an Islamic scholar to instruct them and they converted to Islam (Kawerau, also found in ʿAwfī/Barthold, placing this event in 300/912).

Writing systems

Ibn Faḍlān speaks of wooden grave markers on which the Rūs inscribed the name of the deceased and that of the Rūs king. Similarly, al-Nadīm writes that one of his informants "believes that they have writing inscribed in wood, and he showed me a piece of white wood with an inscription on it." This may perhaps be a reference to writing on birchwood bark, well known in later Kievan Rus'. The Byzantine missionary Constantine (Cyril), before his famous mission to the Slavs of "Moravia" journeyed, *ca.* 860, to the Khazar empire. According to the *Vita Constantini*, in the Khersonese he found a Psalter and book of the Gospel written in the Rus' or Rush script (*ros'kî [rous'kîmi, roushkimi] pismeni pisano*). He also encountered someone who spoke this language and found that he could understand him. Indeed, he quickly began to read and speak this tongue (Grivec *et al.*; Istrin). Since, Constantine/Cyril was bilingual, in Greek and Slavic, it could only have been the latter tongue, whose writing system he was able to assimilate so quickly. Needless to say, there is much debate over the significance and indeed historicity of this passage. The existence of calendrical and other types of markings among the Eastern Slavs by the 2nd-4th centuries A.D. is posited by some Russian scholars (Rîbakov). The use of a "proto-Cyrillic" alphabet based on Greek, which was already employed in Danubian Bulgaria, is also suggested for Pre-Christian Rus' (Istrin). The oldest Cyrillic monument dates to 863 (from Preslav, Bulgaria). The earliest writings in Cyrillic in Rus' are dated to the early 10th century. There is still some debate over whether Constantine/Cyril invented the "Glagolitic" alphabet, itself perhaps derived from a Greek or Cyrillic base, but quite different in appearance from "Cyrillic", or the script that now bears his name.

AL-**RUṢĀFA**, the name of several places in the Islamic world, from Cordova in the west to Nīshāpūr in the east (see Yāḳūt, *Buldān*, ed. Beirut, iii, 46-50).

Amongst the Ruṣāfa settlements of ʿIrāḳ were:

1. Ruṣāfat Abi 'l-ʿAbbās (ʿAbd Allāh al-Saffāḥ), begun by the first ʿAbbāsid caliph in lower ʿIrāḳ on the banks of the Euphrates, near al-Anbār [*q.v.*], and probably identical with that town called al-Hāshimiyya.

Bibliography: Yaʿḳūbī, *Buldān*, 237, tr. Wiet, 9; Yāḳūt, *Buldān*, iii, 46.

2. al-Ruṣāfa, the name of a quarter of the city of Baghdād [*q.v.*] founded soon after the caliph al-Manṣūr [*q.v.*] built his Round City.

The quarter of al-Ruṣāfa (whose name refers to the paved, embanked causeway across the swampy ground enclosed by the bend of the Tigris within which the quarter was laid out) was, according to the historical accounts, built by al-Manṣūr on the eastern banks of the river, opposite the palace of al-Khuld and the Round City, for his son and heir al-Mahdī [*q.v.*] when the latter returned from Rayy in northern Persia in Shawwāl 151/October-November 768. It combined a palace complex, with protective rampart and moat, and an army encampment with a review ground (*maydān* [*q.v.*]) and with various estates granted out as *ḳaṭāʾiʿ* to members of the ʿAbbāsid family and to the great military commanders (see Yaʿḳūbī, *Buldān*, 249, 251, tr. 31-2, 35-6). From this last function as a military centre, it was originally known as ʿAskar al-Mahdī. Al-Ṭabarī (iii, 365-7, tr. H. Kennedy, *Al-Manṣūr and al-Mahdī*, Albany 1990, 56-9) plausibly explains that the caliph wished to separate his Arab supporting forces by the river which divided the two sides of Baghdād, so that if one section of the army rebelled, he could call upon the forces on the opposite bank.

The building of al-Ruṣāfa took seven years, and was not completed till 159/776, by which time al-Mahdī had (in 159/775) succeeded to the throne. The new quarter was connected to the western side of Baghdād by a bridge of boats, *al-Djisr*, whose obvious strategic importance was such that each end was guarded by a police post of the *shurṭa* [*q.v.*]. Lassner has suggested that al-Manṣūr began the construction in al-Ruṣāfa of a palace complex of such splendour in order to buttress his son's right to succeed to the caliphate against his nephew ʿĪsā b. Mūsā [*q.v.*], thereby asserting al-Mahdī's claims.

As caliph, al-Mahdī made al-Ruṣāfa his official

residence, but towards the end of his reign preferred to spend much of his time at a new palace and pleasure ground, that of ʿĪsābādh, also on the eastern side of the city but away from al-Ruṣāfa. His successors Hārūn al-Rashīd and al-Amīn [*q.vv.*] chose, however, to reside at al-Khuld on the western side; and eventually, al-Muʿtaṣim [*q.v.*] moved his seat to the new military centre of Sāmarrā [*q.v.*] some 100 km/60 miles upstream from Baghdād.

The foundation of al-Ruṣāfa was the starting-point for the expansion of Baghdād into such suburbs as Shammāsiyya to its north-east and Mukharrim to its south; in later times, the tombs of the ʿAbbāsid caliphs were located along the river bank above al-Ruṣāfa.

Lassner, *The topography of Baghdad in the early Middle Ages*, Detroit 1970, 64-5 (trs. the relevant section in the survey of the historical topography of Baghdād by al-Khaṭīb al-Baghdādī, 95 ff.). (C.E. Bosworth)

3. In Syria.

This place, distinguished as Ruṣāfat Hishām, Ruṣāfat al-Shām, is now a ruinous site 30 km/19 miles to the south of the Euphrates in a depression near the Djabal Bishrī, on the ancient desert route from Ḥimṣ-Salamiya to al-Raḳḳa or al-Raḥba, containing the pilgrimage place of the "Arab" Saint Sergius, martyred here in the early 4th century, after which it was officially named Sergiupolis in Byzantine times. Archaeological excavations have shown it to be a Roman site, which in the 6th century was embellished with four churches inside the impressive rectangular city walls; among them, the basilica of the Holy Cross, founded in 559 and housing the relics, shows by inscriptions a continuous building tradition until the 12th century. Also inside the city walls, three large cisterns and an ingenious system of supply and distribution of the spring rain water remained famous throughout mediaeval sources. It seems to be referred to in the *K. al-ʿUyūn wa 'l-ḥadāʾiḳ*: "It had been a Byzantine city of ancient foundation with cisterns and a 'water way' (*ṭarīḳ li 'l-māʾ*) from the margins of the desert" (in *Fragmenta*, 101). Outside the north gate a church or *praetorium* (?) is connected to the Ghassānid prince al-Mundhir b. al-Ḥārith (569-82) by an inscription, and literary sources point to the presence of the Ghassanids as well: al-Nuʿmān b. al-Ḥārith b. al-Ayham is mentioned as a governor there, and is said to have repaired the cisterns destroyed by a Lakhmid and to have constructed a large new one (Yāḳūt, ii, 955, 784 (according to the *Akhbār mulūk Ghassān*); Ḥamza al-Iṣfahānī, *Taʾrīkh*, Berlin 1340/1921-2, 79 (and quoted by Ibn al-ʿAdīm, *Bughya*, i, 114), as well as Abu 'l-Fidāʾ, *Mukhtaṣar*, Cairo 1325, i, 73, only mention the restoration).

Al-Aṣmaʿī mentions, besides the B. Djafna of Ghassān, the B. Ḥanīfa (of Bakr b. Wāʾil, Ibn al-Kalbī-Caskel, ii, 156; Kaḥḥāla, *Ḳabāʾil*, i, 312-13) as inhabitants (quoted by al-Bakrī, *Muʿdjam*, i, 441); it is he who gives a further name of this, *Ruṣāfa al-Zawrāʾ* (compare Bakrī with Yāḳūt, ii, 784, 955; Musil, *Palmyrena*, 267; the "Byzantine" name for al-Ruṣāfa, Ḳ.ṭāmīlā, supposed by Ibn al-ʿAdīm, i, 113, remains unexplained, cf. Ibn Khurradādhbih, 218, B.ṭ. lāmiyā, 35 *mīls* from it?). Earlier, the city was within the region of the Tanūkh (al-Balādhurī, *Futūḥ*, 145; I. Shahid, *Byzantium and the Arabs in the fourth century*, Washington 1984, 405, 465), and—after them?—of the Taghlib (al-Ṭabarī, i, 2072; Rotter, *Die Umayyaden und der zweite Bürgerkrieg*, Wiesbaden 1982, 131). This may have led to the occasional attribution of al-Ruṣāfa to Diyār Muḍar (e.g. al-Ṭabarī, iii, 2219). In the ʿAbbāsid period, it came under the control of the B. Khafādja b. ʿAmr, a branch of the (North Arabian) ʿUḳayl (al-Aṣmaʿī, in Yāḳūt, ii, 284; Caskel, ii, 338; Kaḥḥāla, *Ḳabāʾil*, i, 351); al-Bakrī alone connects this Ruṣāfa with a verse by al-Akhnas b. Shihāb al-Taghlibī on the extended animal-hunting of the (South Arabian) B. Bahrāʾ (? *sharakun lāḥibun*, 56; Yāḳūt, ii, 782). Ibn al-ʿAdīm mentions some B. Ṣāliḥ of Hāshim here at the time of Hārūn al-Rashīd (*Bughya*, iii, 1467-8, vii, 3446).

Administratively, al-Ruṣāfa belonged to Ḳinnasrīn or Aleppo in Umayyad and later ʿAbbāsid times (Ibn al-ʿAdīm, i, 113-14), under Hārūn al-Rashīd it was added to the *ʿawāṣim* province (Ibn al-Faḳīh, 111), but some transmitters were uncertain about its district (*Ruṣāfat al-Raḳḳa*, even *al-Ruṣāfa in the Djazīra*, Ibn al-ʿAdīm, v, 2103 with correction; Ibn ʿAsākir, iv, 259; Ibn Khurradādhbih mentions it twice, apparently with its closer neighbours, 74, and together with Bālis in the *ʿawāṣim*, 75). From Zangid until Mamlūk times it seems to have mostly been known as a Christian suburb or in the district of Ḳalʿat Djaʿbar, which was also called Kālōnīkōs/ Kallinikos—in this way a remark by Barhebraeus, *Chronography*, ed. Budge, 120, tr. ²111, could be understood: "Hishām died in Ruṣāfa of Kallinikos" (cf. *ibid.* tr. ²218; *Syriac Chronicle, ad a.* 1234, i, 215), and it would fit the reading of an Arabic inscription on the silver goblet from the Ruṣāfa treasury suggested by R. Degen, "This is what Zayn al-Dār, daughter of *ustādh* Abū Durra, bestowed to the church of the protected Ḳalʿat Djaʿba[r]," probably meaning al-Ruṣāfa (before 1243, in Ulbert, *Resafa*, iii, 72; for Ḳalʿat Djaʿbar as a district (*aʿmāl*), cf. Ibn al-Dawādārī, vii, 283, year 624/1227).

Nothing is reported on the Islamic conquest of al-Ruṣāfa, and the sources rather convey the impression of its lying in ruins until the building activities of Hishām (Ibn al-ʿAdīm, i, 113). But it is mentioned as being on the march of the Ḳaysī Djaḥḥāf b. Ḥakīm from the Djazīra against the B. Taghlib with their poet al-Akhṭal and their "day" at Djabal Bishrī in 73/692-3 (al-Balādhurī, *Ansāb*, v, 329; *Aghānī*, Būlāḳ, xi, 59; Ibn al-ʿAdīm, i, 431 ff.; *Khizānat al-adab*, Cairo, ix, 4); and also, before 724, a Bishop Abraham of al-Ruṣāfa is documented (Degen 70-1, quoting Wright, *Cat. of Syriac mss.*, ii, 796 ff.).

The main information on al-Ruṣāfa in Muslim sources pertains to the caliph Hishām (105-24/724-43), whose residence it became at least in summer and who was buried there. While these sources unanimously locate the residence in or next to this al-Ruṣāfa (e.g. Ibn Faḍl Allāh al-ʿUmarī, *Masālik*, Cairo 1342/1924, 332-3), some modern authors have doubted this and identified it with the ruins of Ḳaṣr al-Ḥayr al-Sharḳī [*q.v.*] (Sauvaget, *Remarques sur les monuments omeyyades*, in *JA* [1939], 1-13). This theory was finally rejected by O. Grabar (*City in the desert*, 1978, 1-2, 31). It is not very easy to recognise the original tradition within the several additions transmitted by the historians; the news of the death of his predecessor and the regalia were brought to Hishām at al-Zaytūna, where he possessed a small dwelling (*duwayra*), and he then rode from al-Ruṣāfa to Damascus (al-Ṭabarī, ii, 1467); perhaps because of the unexplained leap, later sources locate either the transmission of the news and the regalia to al-Ruṣāfa (*al-ʿUyūn wa 'l-ḥadāʾiḳ*, 82; Abu 'l-Fidāʾ, *Mukhtaṣar*, Cairo 1325, i, 203) or from al-Zaytūna to al-Ruṣāfa (Yāḳūt, ii, 784). While O. Grabar still thinks of an identification of al-Zaytūna with Ḳaṣr al-Ḥayr al-

Sharḳī (*City in the desert*, 13-14), a hint by Ibn Buṭlān [*q.v.*] possibly gives the clue to understanding the sequence of residences: Hishām was fleeing from the mosquitoes on the banks of the Euphrates to al-Ruṣāfa (in Yāḳūt, ii, 785)—this fits the surroundings of the straitened dimensions of his princely residence al-Zaytūna, perhaps in the vicinity of his further possessions near al-Raḳḳa. Another often-embellished story mentions him avoiding the Syrian cities in favour of al-Ruṣāfa because of the plague; like other Umayyads, he fled to the desert (e.g. al-Ṭabarī, ii, 1737; Ibn al-ʿAdīm, i, 113-14).

Hishām is reported to have reconstructed al-Ruṣāfa and erected two castles there (*ḳaṣrayn*, al-Ṭabarī, ii, 1738; *al-ʿUyūn wa 'l-ḥadāʾiḳ*, 101; Ibn Buṭlān, *ibid.*). Whether their descriptions as possessing a pool and olive yard (al-Ṭabarī, ii, 1813) or as being luxurious constructions with floral paintings (Ibn al-ʿAdīm, vii, 3044: *maṣāniʿ* here evidently not meaning the cisterns, as in *ibid.*, i, 113) go back to eye witnesses or are literary *topoi*, cannot be decided. Brief archaeological soundings and a survey showed several large Umayyad structures to the south of the city (Otto-Dorn, Ulbert, Sack). The court of Hishām was magnificent, and must have shown Persian traditions in several respects (cf. the analysis by R. Hamilton, *Walīd and his friends*, Oxford 1988, *passim*). Whoever was interested in Persian topics among the early ʿAbbāsid caliphs would also refer to accounts of Hishām's court (e.g. al-Manṣūr, al-Ṭabarī, iii, 412; al-Masʿūdī, iv, 47-8, 133-4 = §§ 2234, 2379). Even translations from the Persian seem to have originated from Hishām's secretaries in al-Ruṣāfa, Sālim b. ʿAbd al-Raḥmān or ʿAbd Allāh and his son Djabala (al-Ṭabarī, ii, 1750, 1649-50; al-Masʿūdī, *Tanbīh*, 106, 113; Ibn al-ʿAdīm, ix, 4143; M. Grignaschi, in *BEO*, xix [1967] 12-13, 24-5, 51-2). The Arab tradition at his court was upheld by the poets (see, besides the famous competition by al-Farazdāḳ, Djarīr and al-Akhṭal, descriptions by Ismāʿīl b. Yasār al-Nasāʾī, in *Aghānī*, iv, 125; Khālid b. Ṣafwān al-Ahtam, in Ibn al-ʿAdīm, vii, 3044; Abu 'l-Nadjm, in *Aghānī*, ix, 78 ff., Ibn al-ʿAdīm, x, 4640). And in one respect he tried to surpass pre-Islamic customs: he himself built the greatest hippodrome (*ḥalba*) for 3,000 horses here, six bowshots long (*Aghānī*, x, 64; al-Masʿūdī, iv, 41 = § 2219; Ibn al-ʿAdīm, vi, 2858). Also, the biographies of traditionists at his court contain material on al-Ruṣāfa, most famous among them being al-Zuhrī (*GAS*, i, 280-3), Abū Manīʿ ʿUbayd Allāh b. Abī Ziyād and his grandson Abū Muḥammad al-Ḥadjdjādj b. Yūsuf (Ibn al-ʿAdīm, v, 2100 ff.; al-Samʿānī, vi, 135; Ibn ʿAsākir, x, 669-70, iv, 259-60), Khuṣayf b. ʿAbd al-Raḥmān or Ibn Yazīd al-Ḥarrānī (Ibn al-ʿAdīm, vii, esp. 3265-6). Out of Hishām's family, his son Sulaymān stayed in al-Ruṣāfa until his defeat by Marwān II (al-Ṭabarī, ii, 1908).

Hishām's tomb and body were desecrated under the first ʿAbbāsid (al-Ṭabarī, iii, 2498-9; al-Yaʿḳūbī, ii, 427-8). The town had an ʿAbbāsid governor in 137/754 (al-Ṭabarī, iii, 94-5); but apart from occasional visits of a caliph, only one event is mentioned, the sack by the Carmathians at the end of 289/December 902, when the mosque, adjoining the cathedral, was burnt and the ʿAbbāsid defender Sabk al-Daylamī killed (al-Ṭabarī, iii, 2219; Ibn al-ʿAdīm, ii, 946: better, Shibl al-Daylamī; cf. the excavations by D. Sack).

Eyewitnesses are few, and are repeatedly quoted in geographical sources: al-Aṣmaʿī, who mentions merchants, rich and poor, travelling abroad and employing local Bedouins (*ʿarab*), a small *sūḳ* with ten shops and textile manufacturing (Yāḳūt, ii, 284-5; still in al-Idrīsī, ed. Rome, 649, Ibn al-ʿAdīm, i, 113-14, and Ḥādjdjī Khalīfa, *Djihān-numā*, 594, without any contemporary observations). Apart from the cisterns and the walls the city is especially famous for its Christian buildings, figuring in the mentioning of its *dayr*, listed separately by al-Bakrī, Yāḳūt, and al-Ḥimyarī. This gave rise to several *topoi* and anecdotes of nostalgia of the Umayyads and of the monasteries, which do not seem to correspond with reality, as already noticed by Musil (*Palmyrena*, 268; cf. the story connected to the visit of al-Mutawakkil in 244/858, al-Ṭabarī, iii, 1436; al-Ḥimyarī, *Rawḍ* (Beirut 1975), 253; Ibn al-ʿAdīm, i, 114, quoting the *K. al-Diyārāt* by al-Shimshāṭī; for the cliché of the monastery, see L. Conrad, in *The quest for understanding*, ed. S. Seikaly *et alii*, Beirut 1991, 271-2). Only the Christian Ibn Buṭlān was interested in the great church, of which he describes the external gold mosaic in 440/1048-9 (cited in Yāḳūt, ii, 785). Judaeo-Arabic inscriptions in one building, dated 1102 and 1127, prove the presence of a Jewish community there (A. Caquot, in *Syria*, xxxii [1955], 70-4).

Ibn Shaddād gives an account of the end of habitation in al-Ruṣāfa, added to a long quotation from Ibn al-ʿAdīm (ed. A.-M. Terrasse-Eddé, 394, tr. 21-2): the Mongols had spared the inhabitants on their march in 658/1260, and after the Mamlūk reconquest, a governor was left there until 668/1269-70, when the inhabitants left for Salamiya, Ḥamāt and other places, apparently because of the destruction, which is also archaeologically evident. Since then, the site has been deserted.

(C.-P. HAASE)

4. In Muslim Spain.

Munyat al-Ruṣāfa, in Spanish Arrizafa, Arruzafa, is the name of the country residence founded by ʿAbd al-Raḥmān I (138-72/756-88 [*q.v.*]) to the north-west of Cordova and to which he gave the name of the Ruṣāfa in Syria (see 3. above) founded by his grandfather Hishām b. ʿAbd al-Malik.

The first Umayyad *amīr* of al-Andalus purchased lands which had belonged to a Berber chief of Ṭāriḳ's army, Razīn al-Burnusī, and built there a palace (*ḳaṣr*) and gardens. The Arabic sources class the Cordovan Ruṣāfa amongst the three most important constructions of ʿAbd al-Raḥmān I's reign (the other two being the Grand Mosque and the palace of Cordova). The *amīr* enjoyed living there very much and spent most of his time there. In the course of his residence at al-Ruṣāfa, he ordered the execution of three rebels: his nephew al-Mughīra b. al-Walīd, Wahb Allāh b.

Maymūn and ᶜAyshūn b. Sulaymān al-Aᶜrābī. Their corpses were dragged as far as Cordova and gibbeted on the banks of the Guadalquivir. In his reign, it became, in some measure, the seat of power, since at the time of his death, his son Hishām, who happened to be at Mérida, hastened to arrive there before his brother Sulaymān (who was at Toledo and who was disputing with him the right of succession).

Moreover, ᶜAbd al-Raḥmān I made the gardens at al-Ruṣāfa the first botanical gardens in the history of al-Andalus. He had planted in his grounds exotic plants, mainly brought from Syria, to which he sent envoys to contact his sisters. The most famous of these fruits imported from the East was the so-called *safarī* pomegranate, whose name is connected with Safr b. ᶜUbayd al-Kilāᶜī, from the *djund* of al-Urdunn. The latter is said to have cultivated this variety of pomegranate in the region of Rayya [*q.v.*], whence it was spread throughout al-Andalus. The origin of the date-palm groves in the Iberian Peninsula is equally attributed, with no real basis in truth, by some Arabic authors to a palm tree at al-Ruṣāfa. ᶜAbd al-Raḥmān I's successors continued the tradition of periods of residence at al-Ruṣāfa. It was probably in the reign of ᶜAbd al-Raḥmān II (206-38/822-52 [*q.v.*]) that the poet ᶜAbbās b. Firnās tried, at al-Ruṣāfa, to imitate the flight of birds, dressed in a garment of silk covered with feathers and bearing wings. But above all, it was the *amīr* Muḥammad (238-73/852-86), known for his zeal as a builder, who enlarged and improved the buildings and the gardens of this residence, where he loved to take rest and where he organised hunting parties. The *amīr* transferred from Cordova to al-Ruṣāfa accompanied by his entourage of chamberlains and eunuchs, and thus surrounded by all the splendour of the Umayyad court. He charged his *wazīr* Hāshim b. ᶜAbd al-ᶜAzīz with the construction of a new *madjlis* at al-Ruṣāfa and provided him with 10,000 dīnārs for this. However, the *wazīr* had the *madjlis* built at his own expense. When the work of building was finished, Hāshim gave back to the *amīr* his 10,000 dīnārs and, as a further gesture, prepared for him a sumptuous banquet. The first Umayyad caliph, ᶜAbd al-Raḥmān III al-Nāsir (300-50/912-61 [*q.v.*]), had accompanied, whilst he was still young, his grandfather the *amīr* ᶜAbd Allāh during his pleasure sessions at al-Ruṣāfa. But his preferred country residence was the *munyat al-Nāᶜūra*. During his reign, al-Ruṣāfa is mentioned as a residence for important visitors, such as the North African chief Ayyūb b. Abī Yazīd Makhlad b. Kaydād al-Īfranī in 335/946. Al-Nāṣir's son and successor al-Mustanṣir (350-66/962-76) preferred above all the *munyat Arḥāʾ Nāṣiḥ*.

Between the residential palace complex and the city of Cordova there developped a suburb (*rabaḍ*), equally called al-Ruṣāfa, and the *nisba* from this was borne by some Cordovan scholars, such as the father of al-Ḥumaydī [*q.v.*]. It was there that al-Manṣūr Ibn Abī ᶜĀmir, al-Mustanṣir's *ḥādjib*, had his palace built, which he later abandoned for *al-munya al-ᶜāmiriyya*, whose exact location is controversial. With the arrival of Berber troop contingents during the rule of al-Manṣūr, the suburb of al-Ruṣāfa became the residence of the Banū Māksan b. Zīrī and the Banū Zāwī b. Zīrī, whose houses were destroyed in the course of the troubles during the first reign of Muḥammad al-Mahdī. Like the other northern suburbs of Cordova, that of al-Ruṣāfa suffered the consequences of the *fitna* and its name disappears from the Arabic sources after the 4th/10th century.

As for the *munyat al-Ruṣāfa*, it was first of all despoiled by al-Mahdī in 400/1009 during his second reign. The caliph used the contents of the palace, like those of the *munyat al-Nāᶜūra* and the royal palace in Cordova, in order to pay his troops and to support the costs of the fight against the rival army of the Berbers on which his rival Sulaymān al-Mustaᶜīn depended. In the following year, and in order to ward off the Berber advance, al-Ruṣāfa was totally destroyed on the orders of Wāḍiḥ, the military chief of Cordova. He even had the trees in the famous gardens cut down, but shortly afterwards he realised the uselessness of his action from the point of view of the defence of Cordova. Only the name of the Umayyad princes' residence survived. After the Christian conquest, in 633/1236, the land involved was bestowed on the counts of Hornachuelos. Later, a monastery was established on the site.

The Ruṣāfa of Cordova early became a favoured subject of the court poets. Some very famous verses on its solitary palm tree are attributed to the founder, ᶜAbd al-Raḥmān I (according to other version, its author is said to have been ᶜAbd al-Malik b. Bishr b. ᶜAbd al-Malik b. Marwān). A poem of ᶜAbbās b. Firnās on al-Ruṣāfa, reproduced by Ibn Ḥayyān [*q.v.*], describes at length its buildings, streams, plants, birds, etc. After its destruction, Ruṣāfa became, like Cordova, a poetic subject for the expression of nostalgia for departed splendours (texts of Ibn Zaydūn and Ibn Burd, given by Ibn Bassām, Ibn Khāḳān and al-Maḳḳarī; this same Ibn Zaydūn mentions the existence of a garden of marguerites, *rawḍ al-ukḥuwān*). In Almohad times, poets still gathered before the site of al-Ruṣāfa in order to drink and to recite poetry. The poem of al-Ḳāsim b. ᶜAbbūd al-Riyāḥī develops the theme of *ubi sunt*.

The second al-Ruṣāfa in al-Andalus was situated at Valencia, between the town and the sea (the place-name is still preserved under the form Ruzafa, a quarter of the modern town). There is no information on the foundation of this Valencian Ruṣāfa. E. Lévi-Provençal was the first to suggest the name of the Umayyad prince ᶜAbd Allāh al-Balansī, son of ᶜAbd al-Raḥmān I, as its possible founder, at the same time warning of the lack of documentary evidence. This hypothesis has nevertheless been commonly accepted by Spanish and Arab scholars. The Arabic sources stress above all the beauty of the grounds of al-Ruṣāfa, considered as the most attractive pleasure-ground in the vicinity of Valencia (together with the *munya* of Ibn Abī ᶜĀmir). The poet Muḥammad b. Ghālib al-Ruṣāfī (d. 572/1177) was originally from there and devoted some poems to it. In 480/1087, Castilian troops commanded by Alvar Fáñez, giving aid to the prince al-Ḳādir, installed themselves at al-Ruṣāfa. It was likewise there that king James I of Aragon encamped with his army, besieged the town and conquered it in 636/1238. Like its Cordovan homonym, this Ruṣāfa became a literary subject in the poetical or rhymed prose texts written on the occasion of the loss of Valencia (texts of Ibn al-Abbār and Ibn ᶜAmīra preserved by al-Ḥimyarī and al-Maḳḳarī).

AL-**RUṢĀFĪ**, ABŪ ʿABD ALLĀH MUḤAMMAD b. Ghālib, al-Balansī, Hispano-Arabic poet born at al-Ruṣāfa near Valencia, died in 572/1177.

Information on his life is very sparse. In his youth he left his native land, which he hymns in several poems suffused with nostalgia (*Dīwān*, no. 56 and, especially, no. 21). In 555/1160 he went, with several other poets, to Gibraltar in order to welcome and greet the Almohad caliph ʿAbd al-Muʾmin [*q.v.*], before whom he recited a long poem (no. 24), celebrating him as the restorer of orthodoxy. According to al-Marrākushī, al-Ruṣāfī was still not twenty years old at that point, which would place the date of his birth around 536/1140-1. On this reckoning, he must have died before the age of forty, a piece of information which one might have thought would have attracted the attention of the Arabic biographers, who are nevertheless silent on this question. This poem, like others dedicated to the Almohad rulers and notables, appears to have assured his career as a panegyrist of the new dynasty. However, al-Ruṣāfī prefered to live away from the court, for reasons which he explains (*Dīwān*, no. 23), and to make a living by practising his trade.

This trade of mending clothes (*raffāʾ*) and his living far away from Valencia led him to compare himself with al-Sarī al-Raffāʾ [*q.v.*] of Mawṣil (*Dīwān*, no. 48), whilst the Hispano-Arabic anthologists compare him, on the basis of his descriptions, with Ibn al-Rūmī [*q.v.*]. He is the continuator of the poetic school of Ibn Khafādja [*q.v.*], sharing with Ibn Khafādja his independence with regard to authority, his taste for the classical form of the *ḳaṣīda* in face of the popular forms like the *muwashshaḥ* and the *zadjal* and the enthusiasm with which he hailed a new dynasty.

The *Dīwān* of al-Ruṣāfī, which was in circulation according to Ibn al-Abbār, is now lost. The one published by Ihsān ʿAbbās in 1960, using the historical and literary sources, remains incomplete. There should be added to it the poems in the *Iḥāṭa* of Ibn al-Khaṭīb [*q.v.*] (Cairo 1974, ii, 505-15) and in the *Taʾrīkh Mālaḳa* of Ibn ʿAskar [*q.v.* in Suppl.]. Others may come to light, as has happened with the publication of the anthology of Ibn Bushrā (A. Jones, *The ʿUddat al-jalīs of ʿAlī ibn Bishrī. An anthology of Andalusian Arabic* Muwashshaḥāt, Cambridge 1992, 95-6).

Bibliography: Virtually all the bibliographical references can be found in *Dīwān al-Ruṣāfī al-Balansī, Abī ʿAbd Allāh Muḥammad b. Ghālib, 572 h.*, ed. I. ʿAbbās, Beirut 1960, which may be completed with *Ar-Ruṣāfī de Valencia. Poemas*, tr. and introd. T. Garulo, Madrid 1980, ²1986. See also J.T. Monroe, *Hispano-Arabic poetry. A student anthology*, Berkeley and Los Angeles 1974; Garulo, *Una moaxaja de al-Ruṣāfī de Valencia*, in *Homenaje al Prof. Fórneas Besteiro*, Granada (in the press). (TERESA GARULO)

AL-**RUṢĀFĪ, MAʿRŪF** [see MAʿRŪF AL-RUṢĀFĪ].

RUSČUK, an administrative district and a port on the Danube in Bulgaria (often wrongly called and written as Rushčuk), officially in Bulgarian Ruse (Pyce). It is situated at the confluence of the Rusenski Lom (Tk. Ḳara Lom) and the Danube, which then reaches a width of 1,300 m/4,264 feet. It faces the Rumanian port of Giurgiu (Tk. Yer Köki) and spreads out along terraces of loess, above the level of flooding. It is the main port on the Danube and the fourth largest town of Bulgaria, being a rail and road hub (Bridge of Friendship over the river, built in 1954), as well as an industrial and cultural centre with a population of 200,000.

After the decay of the mediaeval Červen some 15 miles inland, which survived as the name of a Bulgarian eparchy and the ruins of which could still be seen in the 17th century (cf. Ḥādjdjī Khalīfa, *Rumeli und Bosna*, tr. J. von Hammer, Vienna 1812, 44), the new Ruse arose on the Danube half-a-day's journey away. The Turkish name Rusčuk, by which the town is still almost exclusively known outside of Bulgaria, is undoubtedly a diminutive from Ruse (Ruse = Rusčuḳ; cf. the name of the island of Rhodes, Turk. Rodos and Rodos-čiḳ for Rodosto), but only seems to have come into being in the first third of the 17th century. In the two treaties concluded between the Porte and Hungary on 20 August 1503 (cf. von Hammer, *GOR*, ii, 331-2, and the text on 618: *Rwcz* = Ruse) and 1 April 1519 (cf. Theiner, *Monumenta Hungarica*, ii, 624: *Kusly* for *Russy*) and in Mercator's map of 1584 the Bulgarian form still appears. The town must have already attained considerable prosperity in the 16th century. It quickly developed under Turkish rule and became an important centre of traffic, trade, industry and strategy in Danubian Bulgaria and surpassed the two fortified towns of Nicopolis [see NĪKBŪLĪ] and Silistria which played the leading part there at the beginning of Ottoman rule (cf. A. Iširkov, *Bulgarien, Land und Leute*, Leipzig 1917, ii, 102-3). The French traveller Pierre Lescalopier, who reached Rusčuk on 14 June 1576, in his valuable journal, which has only been published in part, describes *Rusci* as a populous town: *ceste ville est peuplé et y a quantité de marchandise de toutes sortes et des vivres en abondance et à bon pritz* (cf. *Revue de l'Histoire diplomatique*, xxxv [Paris 1921], 46). Shortly before, the famous Ottoman architect Sinān [*q.v.*] built a mosque there for the Grand Vizier Rustem Pasha [*q.v.*], still admired in the 17th century, presumably in the north at the water's edge. The figure given for the population, as for the mosques, varies; of the latter, Rusčuk had at one time a considerable number. The Franciscan Peter Bogdan

Bakšić, later Archbishop of Sofia, in 1640 found in *Ruhcich* 3,000 Turkish houses with 15,000 inhabitants and 10 mosques of stone (*fatte die pietra bianca*), and 200 Armenian houses with over 1,000 inhabitants and a citadel with five towers (cf. Eug. Fermendžin, *Acta Bulgariae ecclesiastica* = vol. xviii of the *Monumenta spectantia historiam Slavorum meridionalium*, Zagreb 1887, 74). In 1659 Filip Stanoslavov counted 6,000 Turkish wooden houses with over 30 mosques (*ibid.*, 263; cf. also 7, 10, 26, 31, 88, 137, 299 [*Russi o Ruhcich*: 1685], 300 with further particulars). Ewliyā Čelebi (*Seyāḥet-nāme*, iii, 313-14; cf. the Bulgarian tr. by D.G. Gadžanov, in *Periodičesko spisanie na bălgarskoto kniževno druzestvo v' Sofija*, lxx, Plovdiv 1909, 654-5) about the same time mentions 2,200 houses of wood, also three Christian quarters, the mosque of Rustem Pas̲h̲a, baths and three caravanserais in "Urusčuḳ". The only Jews, he says, were those who visited the place on their trading journeys. The people, whom he praises for their hospitality, lived by commerce and spoke Bulgarian as well as the "language of Wallachia and Moldavia". Ewliyā Čelebi says the melon (*ḳawun*) there was particularly good, 10 being sold for 1 *pen(e)z* (5 of which = 1 Vienna groschen or 3 kreuzers, 150 = 1 taler).

Rusčuk is regularly mentioned in the many records of travel on the Danube in the following centuries. References to the town in the 18th and first half of the 19th century are in general agreement. The inhabitants seem at all times to have conducted a busy trade in wool, cotton, silk, leather and tobacco, which at an earlier period was for a considerable part in the hands of Ragusan merchants, who had a settlement there from 1673 to 1755. The English clergyman R. Walsh (1827) estimated the population at 18-20,000 souls. The streets of the town, which was surrounded by walls on three sides after the manner of Turkish fortresses, as a rule sloped steeply to the Danube, which was partly undefended. Turks, Greeks, Bulgars and Armenians lived in some 7,000 houses and conducted a busy trade with Turkey (cf. R. Walsh, *Narrative of a journey from Constantinople to England*[2], London 1828, 207). Helmuth von Moltke who visited Rusčuk in 1835 and described it (cf. *Briefe über Zustände und Begebenheiten in der Türkei*[3], Berlin 1877, 11 ff., 132 ff., 424 ff.), was surprised that "this important Turkish fortress with its long, dominated and enfiladed lines without outer works, half armed and defectively planned" could offer the enemy such resistance.

As an important frontier fortress, Rusčuk was a military prize in the Russo-Turkish wars. Besieged in 1773, it was the site of a great battle on 4 July 1811. The fortunes of war favoured the Turks, led by the Grand Vizier Aḥmed Pas̲h̲a, after which the Russians, commanded by Kutusov, constructed fortifications and fell back on to the other bank of the Danube after having reduced the town to cinders. During the Crimean War, Rusčuk served as the base for a diversionary manœuvre aimed at threatening Bucarest. During the War of 1877-8, Ottoman forces commanded by Ḳayṣerili Aḥmed Pas̲h̲a had to surrender the town and its fortress to the Russians on 21 February 1878 after a long siege. Rusčuk was important in the history of the reform movement in the Ottoman empire. After the deposition of Selīm III [*q.v.*] (29 May 1807), the officers of the Niẓām-i D̲j̲edīd [*q.v.*] regrouped there around Muṣṭafā Bayraḳdār [*q.v.*] and launched the counter-revolution there which swept away Muṣṭafā IV. It was the seat of a *sand̲j̲aḳ bey*, and sometimes of a *pas̲h̲a* (*ca.* 1840, when Danubian Bulgaria was divided into three *pas̲h̲aliḳs*: Rusčuk, Vidin and Silistre); in 1864 the town became the administrative centre of the new *wilāyet* of the Danube (*Ṭūna wilāyeti*), whose first governor was the reformer Midḥat Pas̲h̲a [*q.v.*]. Under his impulsion, it enjoyed an early process of Westernisation: urban reform, development of the docks, the first railway link (Rusčuk-Varna, 1866), the beginnings of industrialisation, the first hospital, etc.. A provincial printing press was set up, which published the bilingual newspaper *Tuna-Dunav* (14 March 1865-1 September 1877) and an annual *sālnāme* (*Ṭūna wilāyeti sālnāmesi*) which allows one to see the extent of these reforms.

Rusčuk was the birthplace of the Grand Vizier Čelebi-zāde S̲h̲erīf Ḥasan Pas̲h̲a (d. 1205/1791), of the *kātib* Amānī Čelebi (d. 1000/1591 according to von Hammer, *GOD*, iii, 83), and of the famous Ottoman author Aḥmed S̲h̲erīf Ḥasan Midḥat Bey (1841-1912, cf. F. Babinger, *GOW*, 389-90), not forgetting the novelist of Sephardic Jewish origin and writer in German, Elias Canetti, the Nobel Prize-winner for literature in 1981.

The post-Ottoman history of Rusčuk, which became officially Ruse, begins in 1878. The Westernisation begun by Midḥat Pas̲h̲a increased in momentum under Bulgarian rule. In accordance with the Treaty of Berlin, the fortifications were partly demolished, an urban plan transformed the main Muslim cemetery into a public garden, and numerous mosques disappeared (Kanitz numbered them at 29 in 1874; there were no more than seven in 1936). The eclectic architectural style of Central Europe triumphed. The Muslim population, despite being socially reduced in status and weakened by the exodus of its elites, nevertheless managed to maintain a certain cultural life. Thus eight journals in Turkish appeared up to 1910, essentially on account of the activity of Aḥmed Zekī. Turkish education remained active, with two secondary schools in 1921-2; from 1952 to 1957 there functioned in Rusčuk the sole Turkish lycée for girls in Bulgaria. After the 1960s, the policy of national assimilation pursued under the régime of Todor Živkov gradually stifled all signs of a specifically cultural and religious life. The town's population, which had risen from 26,000 in 1880 to 49,500 in 1934, grew rapidly with industrialisation, actively promoted by the Communist régime. The former Turkish element of the town disappeared under a massive influx of rural Bulgarians. In 1985 the town had 195,000 inhabitants; nevertheless, the villages of the administrative disitrict of Rusčuk have a 25% Turkish population.

AL-RUSHĀṬĪ, Abū Muḥammad ʿAbd Allāh b. ʿAlī b. ʿAbd Allāh b. ʿAlī b. K̲h̲alaf b. Aḥmad b. ʿUmar al-Lak̲h̲mī al-Marī al-Andalusī, traditionist and historian of Muslim Spain.

He was born in 466/1074 at Orihuela (Murcia). His *nisba* al-Rus̲h̲āṭī is of Romance origin and refers to a physical characteristic. One of his ancestors had on his body a mole (*s̲h̲āma*) of the type known as "rose" (*warda*) called by the Christians "*rūs̲h̲a*"; the Romance-speaking servant (*k̲h̲ādim ʿad̲j̲amiyya*) who cared for him as a child called him "Rus̲h̲aṭelo", from which the *nisba* of the family derived. When he was six years old, al-Rus̲h̲āṭī's family moved to Almería, where he completed his studies and where later he taught. Having witnessed the conquest of the town by the Almoravids in 484/1091, he himself died a martyr when the Christians conquered Almería in 542/1147. His teachers were the two most famous traditionists of the time, Abū ʿAlī al-G̲h̲assānī (d. 498/1104) and Abū ʿAlī al-Ṣadafī (d. 514/1120), the *muḳriʾ* Abu 'l-Ḥasan Ibn Ak̲h̲ī 'l-Dūs̲h̲ and his maternal uncle Abu 'l-Ḳāsim Ibn Fatḥūn (d. 505/1111), author of a *K. al-Wat̲h̲āʾiḳ*. Al-Rus̲h̲āṭī also obtained the *id̲j̲āza* from Abū ʿAbd Allāh al-K̲h̲awlānī (d. 508-1114), author of a *fahrasa*, and from his famous contemporary Abū Bakr b. al-ʿArabī (d. 543/1148 [*q.v.*]). Like many other scholars of his time, al-Rus̲h̲āṭī did not perform the *riḥla fī ṭalab al-ʿilm* abroad. His most famous work is the *Iḳtibās al-anwār wa-iltimās al-azhār fī ansāb/asmāʾ al-ṣaḥāba wa-ruwāt al-āt̲h̲ār*, a book praised by Ibn Kat̲h̲īr and one similar in methodology (*uslūb*) to the genealogical work by al-Samʿānī (d. 562/1167 [*q.v.*]). The only extant edition of this most important genealogical tract is the partial text by E. Molina López and J. Bosch-Vilá, restricted to the entries related to al-Andalus. According to Ḥ. al-D̲j̲āsir, ʿAbd al-Raḥmān al-ʿUt̲h̲aymīn is preparing a complete edition of the preserved text. The *Iḳtibās* contained five parts, of which only parts one, three and five have reached us (the mss. are found in Tunis and Ḳarawiyyīn; their description can be found in Molina-Bosch Vilá's and al-D̲j̲āsir's works). Part of the missing contents can be restored by means of the preserved abridgements (a list in Molina, 541-3, and al-D̲j̲āsir, 623-38) written by later authors, among them, Ibn al-K̲h̲arrāṭ al-Is̲h̲bīlī (d. 581/1180) and Mad̲j̲d al-Dīn Ismāʿīl b. Ibrāhīm al-Bilbīsī (d. 802/1399), in whose *talk̲h̲īṣ* he added what Ibn al-At̲h̲īr had added to the *Ansāb* of al-Samʿānī. The parts of Ibn al-K̲h̲arrāṭ's *Ik̲h̲tiṣār* dealing with al-Andalus have been incorporated by Molina-Bosch Vilá into their partial edition of al-Rus̲h̲āṭī; they have also used material from al-Bilbīsī's abridgement.

Al-Rus̲h̲āṭī's other works are the *Kitāb al-Iʿlām bi-mā fī Kitāb al-Muk̲h̲talif wa 'l-muʾtalif li 'l-Dāraḳuṭnī min al-awhām* and a refutation of the famous *mufassir* ʿAbd al-Ḥaḳḳ b. ʿAṭiyya (d. 541-2/1146-7), who had criticised certain passages of his own genealogical work. Although he is remembered as an expert in *ansāb* and *ʿilm al-rid̲j̲āl*, al-Rus̲h̲āṭī also studied grammar, *adab*, *fiḳh* and *ḥadīt̲h̲*. In the last field, he transmitted the *K. ʿUlūm al-ḥadīt̲h̲* by al-Ḥākim al-Nīsābūrī [*q.v.*]. Among his numerous pupils, we find especially traditionists (some with an interest in *ʿilm al-rid̲j̲āl* and history) like Abū Bakr b. Abī D̲j̲amra (d. 599/1202), Abu 'l-Walīd b. al-Dabbāg̲h̲ (d. 546/1151), Ibn Bas̲h̲kuwāl (d. 578/1182 [*q.v.*]), Ibn Ḳurḳūl (d. 569/1173), Ibn Ḥubaysh (d. 584/1188 [*q.v.*]), two authors of *fahāris*, Abū Muḥammad b. ʿUbayd Allāh (d. 591/1195) and Ibn K̲h̲ayr (d. 575/1179 [*q.v.*]), as well as the grammarian Ibn Maḍāʾ [*q.v.*].

(Maribel Fierro)

RUSTĀḲ, Arabised form of M. Pers. *rōstāg*, meaning "rural district, countryside", and given the broken pl. *rasātīḳ*.

(1) In the mediaeval Islamic usage of the Arabic and Persian geographers and of the Arabic writers on finance and taxation, *rustāḳ* is used both as a specific administrative term and in a more general sense. Thus, reflecting the more exact usage, in Sāsānid and early Islamic ʿIrāḳ, each *kūra* [*q.v.*] or province was divided into *ṭassūdjs* or sub-provinces, and these last were in turn divided into *rustāḳs*, districts or cantons, centred on a *madīna* or town. According to Hilāl al-Ṣābiʾ, *K. al-Wuzarāʾ*, a *ṭassūdj* might contain up to twelve *rustāḳs*, and a *rustāḳ* might contain up to twelve villages (cited in F. Løkkegaard, *Islamic taxation in the classic period*, Copenhagen 1950, 164-7). Al-Muḳaddasī's usage, however, is less neat and formal. Thus the *rasātīḳ* which he gives for the *iḳlīm* [*q.v.*] of Syria are extensive rural districts, such as the six ones of Damascus province (*kūra*): al-Ghūṭa, the Ḥawrān, al-Bathaniyya, al-Djawlān, al-Biḳāʿ and al-Ḥūla (text, 154, Fr. tr. A. Miquel, *Aḥsan at-aqāsīm* ... (*La meilleure répartition* ...), Damascus 1963, 160, cf. also 23 and n. 51). Likewise, the *Ḥudūd al-ʿālam* speaks of *rustāḳs* as administrative subdivisions, but in a vaguer sense (see tr. Minorsky, index at 524).

(2) In wider literary usage, the *rustāḳ/rustā* or countryside may be contrasted with the urban centres, and its populations regarded as country bumpkins compared with the more sophisticated town-dwellers, so that in Persian, *rustā-ṭabʿ* "having a rustic nature" was a contemptuous expression. Thus the Ṣūfī *shaykh* Abū Saʿīd Mayhanī [*q.v.*] had to be dissuaded from burying himself in the *rūstā*, in this case, the small country town of Mayhana [*q.v.*] in northern Khurāsān; cf. C.E. Bosworth, *The Ghaznavids*, 152.

Bibliography: Given in the article.

(C.E. Bosworth)

AL-**RUSTĀḲ**, the name of a town and area in ʿUmān [*q.v.*] which finds no place in the classical Arabic geographies. The town is situated about 112 km/70 miles west, as the crow flies, of the chief town of the Sultanate, Muscat [see MASḲAṬ], on the northern side of the range of al-Djabal al-Akhḍar. The district, according to Lorimer (*Gazetteer of the Persian Gulf*, Calcutta 1908, IIB, 1603-4), is the region of western Hadjar from al-Ḥazm with all the villages therein.

The word itself is universally defined as Arabised Persian (see the previous article) meaning "village", "market-town", "encampment of tents or huts", "rural area". The Arabic lexica invariably gloss it with the word *sawād* "rural district", "environs of town" (Fīrūzābādī, *al-Ḳāmūs al-muḥīṭ*; *LA*). The town was the centre of the interior during the pre-Islamic Sāsānid period, with Ṣuḥār [*q.v.*] as the port. The massive fort which can still be seen, and was known even in the 20th century as Ḳalʿat Ibn Sharwān (i.e. Anūshīrwān), had, one assumes, a pre-Islamic predecessor, though the present building dates in all probability from the times of the Yaʿāriba (11th-12th/17th-18th centuries). The early and late Yaʿāriba imāms, as well as the Āl Bū Saʿīd imāms [*q.v.*] (also 12th/18th century), regarded al-Rustāḳ as their capital.

The district today comprises 150 villages, including al-Ḥazm, and has an estimated population of 75,000. It is the centre of the Omani date industry and also produces limes, grapes, quinces and mangoes. Al-Rustāḳ has its own research apiary and is a centre for the production of honey in the Sultanate.

RUSTAM, the principal hero of the Iranian epic, especially in the version of Firdawsī [*q.v.*].

1. In Iranian legend.

Neither his name nor that of his father Zāl occur in the Avesta. In the *Yashts*, Kərəsāspa (in Persian, Karshāsp or Garshāsp) is the most important heroic figure. Marquart conjectured that originally "Rustam" was no more than an epithet of Kərəsāspa, which only by chance was not attested in the extant Avestan texts. The exploits later attributed to Rustam would be the result of a blend of the legends of Kərəsāspa with historical memories of Gondophares, the ruler of the Indo-Parthian empire in the first century A.D. It is now generally accepted, however, that in the Avestan tradition Zāl and Rustam did not yet belong to the cyle of legends about the Kayanid kings. Some scholars (in particular Nöldeke) assumed that they had their origin in the legends of the original population of Drangiana and Arachosia; others assigned them to the traditions of the Saka people who came to the same lands (later known as Sīstān and Zābulistān) in the late 2nd century B.C. (cf. *Camb. hist. of Iran*, iii, 454-6).

The oldest form of the name known is the Middle Iranian Rōdstahm (in Pahlavi writing, *lwtsthm*), from which the Soghdian *rwstmy* was derived. It is likely that tales about Rustam were given a place already in the *Khwāday-nāmag*, the synthesis of various legendary cycles compiled in the late Sāsānid period. This lost source is reflected in the works of Muslim historians and writers of *adab* works, who already mention a few stories about Rustam, in particular his guardianship of Siyāwakhsh, his combat with Isfandiyār and his death. These stories are, however, far less elaborate than they are in the *Shāh-nāma*. Relatively close to the Persian epic is the chronicle of the kings of Iran by al-Thaʿālibī [*q.v.*], written in the early 5th/11th century, but also in this source many of the best known adventures are missing. Indications of Rustam's popularity in early Islamic times are the occurrence of his name in the 1st/7th century, both as that of a Sāsānid general and of Christian monks in Mesopotamia (cf. Nöldeke, 11). Fragments of his legends are to be found in the work of the Armenian Moses of Khoren (7th or 8th century A.D.) and in a Soghdian manuscript found at Turfan which relates Rustam's fights with the demon (see *Camb. hist. of Iran*, iii, 457, 1229, with further references).

Only Firdawsī's *Shāh-nāma* contains a continuous story of the hero. His ancestors were local rulers of Sīstān and Zābulistān, who were vassals to the kings of Iran. Among them Garshāsp and Narīmān are mentioned, but only his grandfather Sām is a figure of some epic content. Rustam's father Zāl, who especially in the Arabic sources is also called Dastān, married Rūdāba (Rūdhāwadh according to al-Thaʿālibī), the daughter of the king of Kābul who was descended from the "dragon-king" Ḍaḥḥāk. This indicates a demonic streak in Rustam. His body, commonly compared to that of an elephant, was already at the time of his birth so enormous that he could only be delivered with the help of the miraculous bird

Sīmurgh. When he grew up, he besought God to reduce his weight so that he could walk without sinking into the ground. In Arabic, a common epithet to his name is *al-shadīd*; in Persian he is called *tahamtan* "the one with the mighty body". Rustam's steed Rakhsh is as formidable among horses as his master is among humans.

His earliest deeds are the killing of a white elephant escaped from his father's stables, and the conquest of the fortress of Sipand in revenge for his great-grandfather Narīmān. The philological evidence points out that these two narratives were later added to Firdawsī's text (cf. *Shāh-nāma*, i, 275-81). With the assignment to bring Kay Ḳubād down from the Alburz mountains, in order to become the king of Iran, begins his service to the Kayanid dynasty. He rescues Kay Kāwūs from the hands of the White Demon in Māzandarān and, another time, from his captivity with the Hamāwarān of Yaman. Conspicuous is his role in the wars with the arch-enemy Afrāsiyāb (Frāsiyāt in Arabic sources) of Tūrān. Major tales in the *Shāh-nāma* with Rustam as a prominent character are the revenge for prince Siyāwakhsh (or Siyāwush), his fight with the demon Akwān, the story of Bīzhan and Manīzha and the duel with his son Suhrāb. The Herculean Seven Deeds (*haft khwān*) of Rustam were in all likelihood copied from similar deeds ascribed to Isfandiyār.

The final episodes tell about a tragic controversy with the last Kayanid kings. According to the version of al-Dīnawarī, the cause of this conflict was Rustam's refusal to accept the new religion which king Gustāshp (Avestan Vistāspa; in Arabic, Bishtāsb or Bishtāsf), the protector of Zarathustra, had embraced. Other sources only mention Rustam's refusal to fulfill the duties of a vassal. Gustāshp sends his son Isfandiyār (Avestan Spəntō.dāta; called Isfandiyādh by al-Dīnawarī) to capture the disobedient Rustam, who kills the prince in a man-to-man fight. Finally, the hero himself falls victim to the treachery of his own brother Shaghād, who lures him into a trap during a hunting-party. In a last effort before he dies, Rustam manages to kill his murderer by a miraculous shot from his bow. Isfandiyār's son Bahman takes revenge on Rustam's family and has his son Farāmurz executed.

Heroes modelled on Rustam appear many times over in Persian epics written after Firdawsī. The characters in those works often bear the names of his ancestors or descendants. In lyrical poetry, comparisons drawn with Rustam are particularly frequent in the panegyrics of Farrukhī [*q.v.*], who himself came from Sīstān and was a near contemporary of Firdawsī. He was also used as an exemplum by mystical poets, notably by Sanāʾī and Djalāl al-Dīn Rūmī [*q.vv.*], especially in the latter's *Dīwān-i Kabīr*.

2. In Islamic art.

The earliest representation of Rustam in Islamic art is probably that in the Edinburgh University Library manuscript of Rashīd al-Dīn's *Djāmiʿ al-tawārīkh* (1306; ms. Arab 20, fol. 6b). He is there represented seated before King Minūčihr, wearing a headcloth and tiger-skin over Mongol clothes, and grasping a mace; he is bearded and has long horizontal moustaches. In the celebrated Demotte *Shāh-nāma* (*ca.* 1330), Rustam wears Mongol dress or armour, but in the 14th century manuscripts of the epic produced at Shīrāz under the Indjūʾid and Muẓaffarid rulers he is once more distinguished by a tiger-skin surcoat, and this convention, once established, persisted throughout Persian painting.

The next stage was the addition of a leopard's head or mask fixed over his helmet, and this originated under the patronage of Iskandar Sulṭān, its earliest appearances being in the British Library *Miscellany* of 1410-11 (Add. 27261, fol. 298b) and a fragment dated to 1413 in the Topkapı Sarayı Library (B. 411, fol. 161b). It seems not unlikely that this very effective addition to the hero's panoply was due to the initiative of the young prince himself; he could easily have seen, or been told of, classical or Hellenistic portrayals of Heracles in the skin of the Nemean lion with its mask on his head.

It took a little time for this complete panoply to be universally established. In Bāysunghur's *Shāh-nāma* of 1430, Rustam always wears an ordinary helmet with his tiger-skin surcoat, but in the copy made a year or two later at Shīrāz for his brother Ibrahīm Sulṭān (Bodleian Library, Ouseley Add. 176) the leopard's head appears in several miniatures. In the Royal Asiatic Society *Shāh-nāma* of Muḥammad Djūkī (ms. 239; Herat, *ca.* 1440) it appears in only one miniature (fol. 145b). *Shāh-nāma* manuscripts produced under Turkman patronage in the middle years of the 15th century also present the hero sometimes with, and sometimes without, the leopard's mask on his helmet. But in the numerous copies of the epic illustrated in the Commercial Turkman style, and issuing from Shīrāz during the last quarter of the century, the leopard's mask is invariable.

Thus by the beginning of the Ṣafawid dynasty, Rustam's full panoply is well established, and to this period (*ca.* 1505) belongs the most splendid portrayal of Rustam in the whole of Persian painting: "Rustam lassoing the King of Shām" in the Kunstgewerbemuseum, Leipzig, in which the leopard's head helmet is topped by a magnificent seven-fold plume, and the hero's moustache and beard are red. This miniature is probably the work of Sulṭān Muḥammad in his young days. Later in the Ṣafawid period, attempts were made to represent Rustam as an old man in the latter stages of his career, but at the same time painters sometimes failed to show him as a child in his earliest exploits; thus, in depicting his killing the mad elephant, an artist may show him in full panoply with moustache and beard.

In the 17th century, the languid and slightly decadent style of Riḍā ʿAbbāsī [*q.v.*] was ill-suited to epic illustration, and Rustam sometimes presents an awkward and distinctly unheroic figure. His late appearances under the Ḳādjārs show him with the wasp waist and luxuriant black beard of Fatḥ ʿAlī Shāh [*q.v.*]. But the traditional panoply survives to the end.

Bibliography: B.W. Robinson, *Persian painting*

and the national epic, London 1983, and references there given. (B.W. Robinson)

RUSTAM b. FARRUKH HURMUZD (thus in al-Ṭabarī; in al-Masʿūdī, b. Farrukh-zād), Persian general and commander of the Sāsanid army at the battle of al-Ḳādisiyya [*q.v.*] fought against the Arabs in Muḥarram 15/February-March 536 or Muḥarram 16/February 637, the battle in which he was killed.

His father is described as the *ispabadh* [*q.v.*] of Khurāsān, for which province Rustam was deputy. In the lengthy account by al-Ṭabarī of the battle of al-Ḳādisiyya, derived mainly from Sayf b. ʿUmar, there is much folkloric material, doubtless derived from materials used by the *ḳuṣṣāṣ* [see ḲĀṢṢ], in which the Persian Emperor Yazdagird III and Rustam try to dissuade the Muslims from battle by a use of verbal parables and a show of superior splendour and luxury; but these are of no avail, and Rustam leads his forces into battle and is killed by Hilāl b. ʿUllafa al-Taymī (See F.M. Donner, *The early Islamic conquests*, Princeton 1981, 397, for the various traditions concerning this episode).

RUSTAMIDS or Rustumids, an Ibāḍī dynasty, of Persian origin, which reigned from Tāhart (in what is now Algeria) 161-296/778-909.

The birth of the Ibāḍī principality of Tāhart is bound up with the great Berber rising begun by Maysara (called, as a tribute from his enemies, *al-Ḥaḳīr* "The Vile") in 122/740. As a result of this rising, the greater part of the Maghrib fell away definitively from the control of the caliphate in the East, with the exception of the principality of Ḳayrawān (Kairouan), which only achieved virtual independence with the coming of the Aghlabids [*q.v.*] in 184/800. The Ibāḍī chief Abu 'l-Khaṭṭāb al-Maʿāfirī [*q.v.*], once elected Imām, seized Tripoli and then, in 141/758, Kayrawān, from where he ejected the Ṣufrī Khāridjites and then entrusted its government to ʿAbd al-Raḥmān b. Rustam. It seemed that the whole of the Maghrib, now detached from the caliphate, was likely to fall to Khāridjism, with its two strands of Ibāḍism and Ṣufrism.

ʿAbd al-Raḥmān b. Rustam b. Bahrām, the founder of the Ibāḍī principality of Tāhart, was certainly of Persian origin, without one being able to connect him, with any certainty, to the Persian royal house, as certain sources suggest. Having arrived in Ḳayrawān, with his mother, as a child, he felt attracted towards Ibāḍism which, with other doctrines, was being taught in the Great Mosque there, until Saḥnūn [*q.v.*], appointed *ḳāḍī* in 234/848-9, "broke up the circles of innovators (*ahl al-bidaʿ*)" (M. Talbi, *Biographies Aghlabides* ..., Tunis 1968, 104), and forbade them to spread their "deviations" (*zayghahum*). In 135/752, like others, he took the high road towards the East (*riḥla*) in order to complete his education at Baṣra, at that time the spiritual centre of Ibāḍism, at the feet of Abū ʿUbayda Muslim b. Abī Karīma, the great authority of the age, who gave out instruction in which political theology necessarily played a large role, conformable to the general principles of Khāridjism which had itself arisen from of a succession to power crisis. Five years later, in 140/757, together with Abu 'l-Khaṭṭāb, he was one of five missionaries, the *ḥamalat al-ʿilm* (lit. "bearers of knowledge"), who set out for the Maghrib in order to pass on to the phase of the *khurūdj*, i.e. open insurrection, with the aim of installing a just Islamic régime conformable to the Ibāḍī ideas of an elective and equalitarian theocracy, considering that all the previous existing authorities had more or less betrayed true Islam since the time of the arbitration (*taḥkīm*) at Ṣiffīn (37/657) [see IBĀḌIYYA].

The conjunction of affairs was at that moment especially favourable. Khāridjite propaganda had been introduced into the Maghrib some four decades previously, and it found there its most fertile ground. The Ṣufrīs were the first to enter the lists and, thanks to some resounding victories, had founded three principalities: at Sidjilmāsa, at Tlemcen and in the region of Salé on the Atlantic shores. The Ibāḍīs had the ambition of assuming for themselves power over the eastern Maghrib, and nearly succeeded.

However, Baghdād was not yet disposed freely to relinquish control, and still had the means within its general framework of policy to achieve this. In 144/761 Ibn al-Ashʿath recaptured Ḳayrawān, and Ibn Rustam fled into the central Maghrib. He ended up at Old Tāhart, in a region where several Ibāḍī Berber tribes were solidly established. He was not immediately elected Imām in place of Abu 'l-Khaṭṭāb, killed in battle, but he continued his involvement in the warfare against the ʿAbbasids, and in 151/768 he besieged, without success, the chief town of the Zāb, Ṭubna, the ancient fortress of Tubunda, which had become an advance bastion protecting Ifrīḳiya.

The Ibāḍiyya in the end had to renounce the capture of Ḳayrawān, firmly held by a governor of first-rate competence, Yazīd b. Ḥātim al-Muhallabī, and then decided to found their own principality in the Tāhart region where ʿAbd al-Raḥmān b. Rustam had already found refuge. There, in 161/778, "on a slope which dominated, from a height of a thousand metres, the steppes and their pasture-grounds" (Ch.-A. Julien, *Histoire de l'Afrique du Nord*, ii, 34), and in a place where there was abundant water, they constructed their capital, New Tāhart or Tīhart (9 km/6 miles to the west of present-day Tihert, founded in 1863, the administrative centre of a *wilāya* or province in modern Algeria), around which was built a protective wall with four gates. The site offered advantages at the same time for sedentaries and nomads alike, and constituted a natural fortress.

After his return from Baṣra, ʿAbd al-Raḥmān b. Rustam had already been in charge of various responsibilities, whence the uncertainty of the sources regarding the date of his investiture as Imām. This probably did not take place officially till after the foundation of Tāhart, sc. in 162/779. Ibn Rustam evidently combined in himself the conditions of knowledge and piety required by the Ibāḍiyya for the election of their Imām. But the main reason which tipped the balance in his favour was that, if disputes should arise, he had "no tribe to bring him aid, and no clan to support him" (Ibn al-Ṣaghīr, *Akhbār* ..., in *CT*, nos. 91-2 [1975], 321-2).

Externally, Ibn Rustam practised a pacific policy with regard to his neighbours, the ʿAbbāsid governors in Ḳayrawān, the ʿAlid Idrīsids in Fās or Fez, and the Ṣufrī Midrārids in Sidjilmāsa. Internally, he devoted his efforts to strengthening his power and to furthering the economic prosperity of his principality, thanks, in particular, to financial support from the Ibāḍiyya of the East, to the impulse given to trans-Saharan trade, and to agricultural and urban development. Tāhart speedily became a rich and

cosmopolitan metropolis, and the Sunnī Ibn al-Ṣaghīr observed a host of people there, people stemming from Baṣra, Kūfa, Ḳayrawān and other places, all attracted by the justice and order which prevailed there.

Before his death, which probably took place in 171/788, ᶜAbd al-Raḥmān b. Rustam appointed a council to choose a new Imām. The choice fell on his son ᶜAbd al-Wahhāb. Till the end of the kingdom of Tāhart, the succeeding Imāms all came from his line, but with a chronology more or less uncertain and with many troubles which often took on the character and tiresome nature of schisms. In a theocracy guided by the Ḳurʾān and Tradition, where the Imām had ideally to double as a pious theologian controlled by religious leaders no less pious than himself, in a theocracy which was in principle equalitarian, austere and puritanical—ᶜAbd al-Raḥmān is depicted as perched on the roof of his modest house, finishing off its building with the help of a slave—such an evolution was inevitable. In Tāhart, wrote Julien, *op. cit.*, ii, 37, "people lived in a permanent state of religious exaltation". The following is the most likely succession of the Imāms, theoretically elected but in fact succeeding by virtue of the dynastic succession rule against a background of schisms and political crises:

ᶜAbd al-Raḥmān b. Rustam, 161-71/778-88
ᶜAbd al-Wahhāb b. ᶜAbd al-Raḥmān, 171-208/788-824
Abū Saᶜīd Aflaḥ b. ᶜAbd al-Wahhāb, 208-58/824-72
Abū Bakr b. Aflaḥ, 258-60/872-4
Abu 'l-Yaḳẓān Muḥammad b. Aflaḥ, 260-81/874-94
Abū Ḥātim Yūsuf b. Muḥammad, first reign 281-2/894-5
Yaᶜḳūb b. Aflaḥ, first reign 282-6/895-9
Abū Ḥātim Yūsuf b. Muḥammad, second reign 286-94/899-907
Yaᶜḳūb b. Aflaḥ, second reign ?
Yaḳẓān b. Abi 'l-Yaḳẓān, 294-6/907-9

The first schism (*iftirāḳ*) broke out as soon as ᶜAbd al-Wahhāb came to power, with his election contested by a splinter group of the Ibāḍiyya. It took shape as the Nukkāriyya [see AL-NUKKĀR], who had their hour of glory under the command of Abū Yazīd [*q.v.*], the "Man on the Donkey", who almost succeeded in putting an end to the Fāṭimid caliphate of Mahdiyya. Towards 195/811, a conflict broke out between the Ibāḍiyya of Tāhart and their Zanāta Berber neighbours, who professed Muᶜtazilism in its Wāṣilī form. It is related that the controversy preceded the open conflict which was finally resolved in favour of Tāhart, thanks in particular to intellectual and military support from the Nafūsa [*q.v.*] Berbers of southern Tripolitania.

The second schism which broke out amongst the Ibāḍiyya was that of the Khalafiyya, from the name of Khalaf b. al-Samḥ, a grandson of the Imām Abu 'l-Khaṭṭāb, who succeeded his father as governor of the Djabal Nafūsa [*q.v.*] to the south of Tripoli but without the agreement of the Imām ᶜAbd al-Wahhāb, who rightly feared that a new dynasty would become installed there. Khalaf's partisans, taking as a pretext the discontinuity of the kingdom of Tāhart, proclaimed Khalaf as an independent Imām. The secession of the Djabal Nafūsa continued during Aflaḥ's imāmate until at least 221/836—the date of a decisive defeat inflicted on Khalaf—and the Khalafiyya maintained their doctrinal stance until the very end of the Rustamids.

Aflaḥ's reign, an exceptionally long one, was the Golden Age of the Rustamid imāmate. Despite various shocks which rocked the eastern part of the principality, his reign was relatively peaceful. He was able, by a combination of pliant policies and largesse, to impose his autority on the nomadic tribes, which were quarrelsome by nature.

His successors were less fortunate or skilful. The Tāhart principality had fluid frontiers, more human than geographical ones. It was very little urbanised, and had no *limes* or frontier march supported by a line of powerful fortresses. The Imām's territory had no other frontiers except those of the tribes which considered themselves Ibāḍī, and consequently recognised his authority, and this ultimately on the spiritual rather than the temporal level. This was the case e.g. of the Ibāḍiyya within the Aghlabid principality. Moreover, the principality was a mosaic of very differing ethnic elements: Berber tribes, predominantly nomadic and having divergent interests, Persians who had got rich in the shadow of Rustamid power, and fractions of the Arab *djund*—through their profession, bellicose in nature—who had fled from Ifrīḳiya. Once the religious bond became relaxed, all these ingredients became a typically explosive mixture. Hence the internal history of the Rustamid state was full of ups and downs, especially after Aflaḥ's death.

Armed clashes forced Abū Bakr to yield his power to his brother Abu 'l-Yaḳẓān, who was supported by the Arabs. The latter was nevertheless not able to take up residence at Tāhart until 268/882, thanks to the support of the Lawāta and Nafūsa Berbers. Having learnt from these occurrences, he followed, it is recorded, a policy of justice, tolerance and balance, on an indispensable foundation of piety, austerity and erudition.

During his own lifetime, Abu 'l-Yaḳẓān appointed his son Abū Ḥātim to succeed himself, a procedure not at all, at least in principle, in accordance with Ibāḍi tradition. It is true that the make-up of Tāhart had, meanwhile, changed considerably. Henceforth, at the side of a cosmopolitan plebs or *ᶜāmma*, there were all sorts of groups of people, including a great number of Mālikīs and Shīᶜīs, whose weight began to be felt on the chequerboard of politics. In these conditions, an uncle of Abū Ḥātim, Yaᶜḳūb b. Aflaḥ, preferred to leave the capital and settle amongst the Zuwāgha Berbers who formed part of the Khalafiyya. Civil warfare soon resumed. Abū Ḥātim was driven out of Tāhart and his uncle Yaᶜḳūb took his place. But this was not for long, and political alliances, from now onwards no longer reserved for the Ibāḍī community, were made and unmade according to shifting interests. Yaᶜḳūb, in turn, lost his capital, and Abū Ḥātim returned to power, supported by the *ᶜāmma*, a mixture of both Ibāḍīs and non-Ibāḍīs. Disorder got worse and the central power became more relaxed. Abū Ḥātim was ruler only in name, and was assassinated by his nephews, which merely added to the disorders. Yaḳẓān b. Abi 'l-Yaḳẓān was on the throne when the troops of Abū ᶜAbd Allāh al-Shīᶜī came to extinguish the Rustamid principality; Tāhart offered no resistance.

Wedged between two hostile regimes, that of the ᶜAlid Idrīsids on the west and that of the ᶜAbbāsid governors, and then the Sunnī Aghlabids on the east, the Rustamids practised, by force of circumstances, a policy of rapprochement: to their south, with the Ṣufrī Midrārids of Sidjilmāsa, who, moreover, controlled the vital route by which gold came; and to their north, with the strongly Mālikī Umayyads of Cordova, disregarding, in the interests of practical politics, the fact that Mālik had condemned to death the Ibāḍī heretics (Saḥnūn, *Mudawwana*, Cairo 1323/1905, ii, 47).

To the east, after vain attempts to seize Tripoli

from the Aghlabids, the Imām ʿAbd al-Wahhāb, who had directed the battle in person, relinquished the town itself and the seas to the Aghlabids, and contented himself with the hinterland, having been neither conqueror not vanquished, and with a reversion to the *status quo ante*. In 239/853-4, the Aghlabid Abu ʾl-ʿAbbās Muḥammad I built a town in the neighbourhood of Tāhart, which he provocatively called al-ʿAbbāsiyya in honour of his suzerains. The Imām Aflaḥ burnt it down and informed the caliph in Cordova of his action; the latter sent him 100,000 dirhams. Finally, in 283/896 Ibrāhīm II inflicted a severe defeat at Mānū, near the sea and to the south of Gabès, on the Nafūsa, the spear-head of Ibāḍī power. In the west, the Imām ʿAbd al-Wahhāb allowed Idrīs I to capture Tlemcen in 173/789 almost without any adverse reaction.

Across the seas, the Ibāḍī Imāms of Tāhart and the Mālikī *amīrs* of Cordova had extremely amicable relations, despite their doctrinal differences, united by a common political interest. In 207/822, ʿAbd al-Raḥmān II gave a warm welcome to three sons of the Imām ʿAbd al-Wahhāb arriving at Cordova on an embassy, probably to greet the *amīr* on his accession to power. In 229/844, "Cordova informed Tāhart officially of its victory over the Northmen" (Lévi-Provençal, *Hist. Esp. mus.*, i, 245), and in 239/853 Muḥammad I sent a sumptuous present to the Imām Aflaḥ on his accession. Furthermore, members of the Rustamid family, installed in Muslim Spain, held high offices in Cordova, up to the ranks of commander and vizier. Possibly one might think, as did Lévi-Provençal, of links of vassalage (*loc. cit.*).

At its apogee, the Rustamid capital was very prosperous. Al-Yaʿḳūbī describes it as "an important city, very famous and with a great influence, which people have termed the ʿIrāḳ of the Maghrib", adding that "a fortress on the coast serves as a port for the fleet of the principality of Tāhart; it is called Marsā Farūkh" (tr. Wiet, *Les Pays*, 216-17). Concerning the commercial routes by land, Ibn al-Ṣaghīr, *op. cit.*, 325, noted that there were roads connecting Tāhart with the land of Sūdān and with all the lands to the East and the West. It was probably in order to stimulate trade with Sub-Saharan Africa that Abū Bakr b. Aflaḥ sent an embassy headed by a rich merchant of Tāhart, Ibn ʿArafa, to the "king of the Sūdān" (*ibid.*, 340). A great tolerance reigned within the city, whose population included, amongst others, Christians (*ʿadjam*), who are described as being especially influential and rich (Julien, *op. cit.*, ii, 37). The people of Tāhart were fond of controversy and disputation, and the Imāms themselves were often scholars as well-versed in the profane sciences as the religious ones.

(M. Talbi)

RÜSTEM PASHA (906?-968/1500?-1561) Ottoman Grand Vizier.

Born *ca.* 1500 in a village near Sarajevo, Rüstem Pasha came of a family most probably of Bosnian origin (though some sources mention Croatian or possibly Albanian ancestry), whose pre-Muslim surname had been either Opukovič or Čigalič (cf. Albèri, *Relazioni degli ambasciatori veneti al senato*, ser. iii, vol. iii, 89; C. Truhelka, *Bosnische Post*, Sarajevo 1912, no. 80). A register from the *ḳāḍī*'s [*q.v.*] court at Sarajevo, dated 974/1557, records the sale of a house by Ḥādjdjī ʿAlī Beg b. Khayr al-Dīn, *mütewellī* of Rüstem Pasha's *bedesten* in the city, on behalf of one "Nefīsa Khanum, daughter of Muṣṭafā and sister of Rüstem Pasha". A brother, Sinān Pasha (d. 961/1554), was also in the service of the Ottoman government, rising to the rank of *Kapudan Pasha* [*q.v.*].

Educated in the palace school, Rüstem Pasha's first recorded post was as *silāḥdār* on the Mohács [*q.v.*] campaign, and then as *mīrākhūr-i ewwel*. The date of his appointment as *beglerbegi* [*q.v.*] of Diyār Bakr is unknown, but it was from this post that he was appointed *beglerbegi* of Anatolia in 945/1538 (Pečewī, *Taʾrīkh*, Istanbul 1281/1861, i, 206). The following year, he became third vizier and was married to

Mihrimāh, the daughter of Ḳānūnī Süleymān and Khurrem Sulṭān [*q.vv.*]. In 948/1541 he was promoted to second vizier, and in 951/1544 succeeded Khādim Süleymān Pasha [*q.v.*] as Grand Vizier. Dismissed in 960/1553 during the outcry caused by the execution of Süleymān's eldest son Muṣṭafā, Rüstem Pasha spent two years in retirement before being re-appointed Grand Vizier in 962/1555, following the execution (at which he is said to have connived) of Ḳara Aḥmed Pasha [*q.v.*], grand vizier since 960/1553. He then served in this post until his death, probably from dropsy, in 968/1561. He was buried in the *türbe* designed for him by the architect Sinān [*q.v.*] next to the Shehzāde mosque in Istanbul. (For further biographical details, see S. Altundağ and Ş. Turan, *İA*, art. *Rüstem Paşa*; F. Babinger, *EI*[1], art. *Rüstem Pasha*; *Sidjill-i ʿOthmānī*, ii, 377-8, iii, 106).

Rüstem Pasha was Süleymān's longest-serving Grand Vizier (a total of fourteen-and-a-half years in two periods of office), but one whose reputation, both contemporary and historical, was mixed. During his first period of office a major treaty was concluded with the Hapsburg Emperor (in 1547) stipulating the annual payment of 30,000 ducats' "tribute" by the latter. Internally, his tenure was marked throughout by his successful efforts to build up government finances, neglecting no possible sources of income, even, according to the Habsburg ambassador Busbecq, selling vegetables and flowers grown in the grounds of Ṭopḳapï Sarāyï [*q.v.*] (Ogier Ghiselin de Busbecq, *The Turkish letters*, tr. E.S. Forster, Oxford 1968, 30). On the other hand, Rüstem Pasha was held largely responsible for introducing the sale of government offices and for allowing imperial *khāṣṣ*s [*q.v.*] to be given out in tax farms, thus paving the way for the bribery and corruption detected by later Ottoman historians. He amassed an immense personal fortune (see the inventory of possessions on his death given by Pečewī, *Taʾrīkh*, i, 23, taken from ʿĀlī's [*q.v.*] *Künhü 'l-akhbār*), and was accused of greed and avarice both on his own behalf and that of the state (for several complaints against him, see M.T. Gökbilgin, *Rüstem Paşa ve hakkındaki ithamlar*, in *Tarih dergisi*, viii/11 [1955], 11-50).

Rüstem Pasha appears to have enjoyed the sultan's full confidence, due partly to his abilities and partly to the mutual agreement between himself, Mihrimāh Sulṭān and Khurrem Sulṭān. However, his positive achievements as Grand Vizier were overshadowed by his involvement in the conspiracy leading to the execution of the popular prince Muṣṭafā, which cleared the way for the eventual succession of one of Khurrem Sulṭān's two surviving sons, Selīm II [*q.v.*] (Gökbilgin, *op. cit.*, 20-4, 38-43). Rüstem's dismissal in 960/1553 may have been at his request, in order to forestall demands from supporters of Muṣṭafā for his own execution.

Busbecq's description of Rüstem Pasha as "a man of keen and far-seeing mind" is largely borne out by Ottoman sources, who attest his capable administration and loyal service, stressing his financial acumen and the fact that even where offices were sold these were only to worthy people who were never thereafter dismissed. Whereas to Busbecq he seemed "always gloomy and brutal" and ʿĀlī criticised his dislike of dervishes and poets, Pečewī stresses his correct manners, sobriety and piety (Busbecq, *Turkish letters*, 29, 190; J. Schmidt, *Pure water for thirsty Muslims: a study of Muṣṭafā ʿĀlī of Gallipoli's Künhü l-aḫbār*, Leiden 1991, 153, 89, 159; Pečewī, *Taʾrīkh*, i, 21-2). He was nevertheless a master of political intrigue and a controversial figure.

As a patron of architecture, Rüstem Pasha commissioned, in addition to his principal foundation in Istanbul, the Rüstem Pasha mosque, at least four *medreses* and a number of other mosques, *ʿimārets*, *kerwānsarāys*, and other structures throughout Anatolia and Rumeli. Many of these were also designed by Sinān. However, it is now thought that the historical work *Tewārīkh-i Āl-i ʿOthmān* (or *Taʾrīkh-i Rüstem Pasha*) for long attributed to Rüstem Pasha's authorship, is in fact part of the *Djāmiʿ ul-tewārīkh* of Maṭrāḳčī Naṣūḥ [*q.v.*], compiled at Rüstem Pasha's request (L. Forrer, *Die Osmanische Chronik des Rustem Pascha*, Leipzig 1923; H.G. Yurdaydın, *An Ottoman historian of the XVIth century: Naṣūḥ al-Maṭrāḳī and his* Beyān-ı menāzil-i sefer-i ʿIrāḳayn *and its importance for some ʿIrāqī cities*, in *Turcica*, vii (1975), 180-2).

(Christine Woodhead)

RUSWĀ, Mirzā Muḥammad Hādī, Urdu novelist, poet, translator and writer on scientific, philosophical and religious subjects. He was born in Lucknow most probably in 1858. His ancestors had migrated from Persia during the Mughal period. His great-grandfather, Mīrzā Dhu 'l-Faḳār ʿAlī Beg, took up permanent residence in Awadh [*q.v.*] during Āṣaf al-Dawla's time (1775-97), and became adjutant in the Nawāb's army. Ruswā received his early education from his father, Āghā Muḥammad Taḳī, who taught him Arabic, Persian and mathematics. For learning English, Ruswā went to La Martinière College, where he remained until the middle grade. By the time he was sixteen years of age both his parents died. Ruswā came into a large inheritance, but his maternal uncle, who was his guardian, appropriated most of it. What remained was squandered by Ruswā himself in self-indulgence and extravagant living. At this time, a friend of his father, by the name of Ḥaydar Bakhsh, who was a calligrapher by profession, came to Ruswā's aid, and helped him through his financial difficulties. Ruswā enrolled himself in Thomason Engineering School, Roorkee, and obtained an overseer's diploma in 1876. Thereafter, he worked first in Rae Bareli and, later, in the Quetta region of Balūčistān, where his duties were connected with the laying of railway tracks. Not long afterwards he resigned from his job, and took up employment as instructor of Persian in the Church Mission School, Lucknow. From there he passed his high school examination as a private candidate.

In 1888 Ruswā joined Christian College, Lucknow, to teach Arabic and Persian, and stayed there for over thirty years. In 1894 he passed his B.A. examination from Punjab University as a private student. Together with his full-time job in Christian College, he taught briefly in Isabella Thorburn College, an institution for women students. Towards the latter part of his life, he showed an open involvement with religion, which found expression in a number of religious tracts composed by him and in the publication of a journal entitled *al-Ḥakam*, which contained articles on religious matters written from a Shīʿī point of view. This journal continued to be published from 1902 to 1907. In 1919 Ruswā found employment in the Bureau of Translation, Osmania University, Ḥaydarābād (Deccan), where he spent the remaining years of his life. He died in Ḥaydarābād on 21 October 1931 and was buried there.

Ruswā was a man of varied talents. His intellectual preoccupations were not restricted only to literary pursuits, but extended to other fields as well, such as philosophy and science. For giving expression to his

philosophical interest, he founded the bi-monthly *Ishrāḳ*, a journal devoted to the dissemination of philosophical ideas. It appeared for the first time on 5 May 1884, and was perhaps the first journal of its kind in Urdu. However, it was shortlived, and had to be discontinued after one and a half years due to a lack of enthusiasm on the part of Urdu readers. In addition to his original contributions, Ruswā published in this journal his Urdu translations of two of Plato's works, namely the *Apology* and *Crito*. At a later date, while working at Ḥaydarābād, he translated several works dealing with philosophy and psychology. He also took an interest in astronomy and chemistry, and composed some works on these subjects. Among his other accomplishments was his participation in the development of a system of Urdu shorthand and a keyboard for the Urdu typewriter.

In the literary field, Ruswā is known primarily for his novels. He was also a poet of a minor sort, writing conventional verses. His first poetical work, a *mathnawī* entitled *Naw bahār* ("Spring"), appeared in 1886. He also composed a verse drama, in the *mathnawī* form, under the title *Muraḳḳaʿ-i Laylā Madjnūn* ("An album of Laylā and Madjnūn"), which was completed probably in 1887. He used the pen-name of "Mīrzā" for his poems, reserving the pseudonym "Ruswā" for his novels. In the beginning, his mentor in poetry was the respected contemporary poet of Lucknow, Dabīr (1803-75 [*q.v.*]). As a novelist, Ruswā was the author of five original works, namely *Afshā-yi rāz* ("Exposed secret"), *Umrāʾo Djān Adā*, *Dhāt-i sharīf* ("A perfect knave"), *Sharīf-zāda* ("Of good breed"), and *Akhtarī Begum*. *Afshā-yi rāz* (1896), of which only the first part seems to have been completed, represents Ruswā's earliest attempt at novel-writing. Its theme, dealing with the decadent society and culture of Lucknow during the latter part of the 19th century, was elaborated by the author in his next novel, *Umrāʾō Djān Adā* (1899), which tells the life story of a courtesan, on whose name the title of the novel is based. Ruswā's third novel, *Dhāt-i sharīf* (1900), has for its central theme the life of a gullible and degenerate aristocrat who succumbs to the deceptions and allurements of unscrupulous hangers-on, and brings destruction upon himself due to his indiscretions. In *Sharīf-zāda* (1900), the story revolves around a person of meagre means who, by virtue of his character, personal effort and hard work, finds success in life. Ruswā's last novel, *Akhtarī Begum* (1924), is a narrative of a middle class household, and contains a plot built upon misunderstandings. Of all the above-mentioned novels, *Umrāʾo Djān Adā* is decidedly a masterpiece, and contributes, for the most part, to Ruswā's literary fame. On its appearance, it was welcomed in literary circles and was so well-received by the reading public that it went through several editions during a short time. In this novel Ruswā gives a sensitive portrayal of the current state of society and provides an insight into the traditional culture representative of the Muslim upper class in Lucknow. Because of its realistic delineation of the theme, its successfully constructed plot, and its superb characterisation, *Umrāʾo Djān Adā* has come to be regarded by many critics as the first true novel in Urdu.

(MUNIBUR RAHMAN)

RUTBIL [see ZUNBIL].

RUTUL, a people of Dāghistān in the eastern Caucasus.

Until the Soviet period the Rutuls lacked a common ethnic self-designation, but rather referred to themselves by village (*aul*) or as members of the *Rutul Magal*. The Rutul Magal was one of the numerous free societies or clan federations found in Dāghistān prior to the Soviet period. This is one of the few cases where all of the members of a given ethnic group belonged to the same free society. In addition to the Rutuls, who dominated this free society, a number of Tsakhur and Lezgin villages were also members of the Rutul Magal. The existence of this free society helped in the establishment of a distinct Rutul ethnic group during the Soviet period.

The Rutuls traditionally inhabited 20 villages in Rutul district in southern Dāghistān (18 of which are in the Samur valley and 2 others in the Akhtīčai valley) and 2 villages across the border in neighbouring Ādharbaydjān. The Rutuls lived under very strong Lezgin and Ādharbaydjānī influence, and until the Russian Revolution they were on the verge of total assimilation by these two other culturally more dominant peoples. The Rutul language belongs with Lezgin to the Samurian group of the northeast (Čečeno-Dāghistānī) division of the Caucasian language family. The Rutul language is only vernacular (i.e. it has no written form). Prior to the Russian Revolution, there was almost universal illiteracy among the Rutuls, and the few individuals who could write used classical Arabic. After the Revolution and until the 1930s, Lezgin and Azeri Turkish served as the literary language among the Rutuls. Since that time, Russian has been the primary literary language used by the Rutuls of Dāghistān, and Azeri by those of Ādharbaydjān.

The Rutuls were polytheistic until the appearance of Zoroastrianism in the northern Caucasus starting sometime around the 5th century B.C. Later Christian influences penetrated the Rutul region from the south (primarily by Armenians living in Ādharbaydjān prior to the appearance of the Ādharbaydjānī Turks in the 11th century). According to Rutul legend, Islam was introduced by the Arabs in the 7th and 8th centuries, but was more likely spread from other areas in Dāghistān between the 10th-13th centuries. Although officially Muslim, Islam was practic-

ed among the Rutuls and other southern Dāghistānīs with many Christian, Zoroastrian, and polytheistic holdovers. During the 18th-19th centuries conservative Ṣūfī movements were active among the Rutuls and during this period many of the pre-Islamic cultural rituals and beliefs were eliminated. The Rutuls today are Sunnī Muslims. As among all other Dāghistānī peoples, and many other North Caucasians, pre-Islamic clan vendetta laws are still common among the Rutuls to this day.

Until the mid-20th century, patriarchal-clan endogamic marriage patterns prevailed among the Rutuls. Since that time traditional clan endogamy has been breaking down. In addition to clan exogamy, some ethnic intermarriage patterns with other Dāghistānī peoples is beginning to develop, and in particular in urban areas of Dāghistān.

The traditional economy among the Rutuls was based on transhumant pastoralism. Sheep and goats were the most common stock animals raised by the Rutuls for food, milk, and wool. As this is a dry and mountainous region, little agriculture was practised and animal husbandry predominated. Traditionally, women engaged in agriculture while the men tended the animals. Horses were also raised for transport as were some cattle. Rug weaving and ceramics were common crafts among the Rutuls, and the trade in these goods formed an important part of the Rutul traditional economy.

There was a long tradition of seasonal migration by the Rutul men to find winter employment in other parts of Dāghistān and northern Ādharbaydjān. As there are no urban areas within the Rutul region itself, a significant emigration to areas outside the Rutul region by young people developed during the Soviet period. Derbend and Makhač-kala in Dāghistān, and Bākū, Shekī, and Kuba in Ādharbaydjān are the main cities to which the Rutul migrate.

The Rutuls are one of the numerically small peoples of the Caucasus. According to the census returns of the USSR, there were 10,495 Rutuls in 1926; 6,732 in 1959; 12,071 in 1970; 15,032 in 1979; and 29,672 in 1989. The radical changes in population reflect the rapid rate of assimilation of the Rutuls by their neighbours during the 1930s, and then a reversal of that trend afterwards. The doubling of their population between 1979 and 1989 represents a rise in Rutul consciousness (i.e. redefinition by Rutuls who formerly called themselves Dāghistānīs, Lezgins or Ādharbaydjānīs).

Bennigsen, *The problem of bilingualism and assimilation in the North Caucasus*, in *Central Asian Review*, xv/3 (1967), 205-11. (R. Wixman)

RUWALA (A., also Ruwayla, conventional renderings Eng., Roala, Rwala, Ruwalla, Ruweilah; German, frequently Ruala, Rualla, Ruola, also Rawalla and Erwalla; French, Rou'ala, Roualla), an important tribe in northern Arabia.

The Ruwala and other ʿAnaza [*q.v.*] say that the Ruwala are from the Ḍana Muslim group of ʿAnaza. An authoritative Ruwaylī genealogist, Fraywān b. Frayḥ al-Muʾabḥil al-Shaʿlān, opposes Djās to Bishr; Djās has, as descendants, Zayyid and Wahhāb; Zayyid has Rwayli (the Ruwala) and Mislim, who are the Swālma, Shadjaʿa and ʿAbdilla; the Wahhāb are opposed to Zayyid and the descendants of Wahhāb are the ʿAli (Wald ʿAli) and Mufarridj, who are the Ḥasana and Mesalīkh (Lancaster 1981, 25). Other authorities (e.g. Musil, 1928, quoting the then *amīr* Nūrī Shaʿlān) give the Ḍana Muslim as the Benī Wahhāb and the al-Djās: the Benī Wahhāb divide into the Ḥasana and the Wald ʿAlī; the Djās into the Miḥlef and the Ruwala. The names are similar, but their position in relation to each other is inconsistent.

The sections (*fukhūḍ*) of the Ruwala are: al-Murʾaẓ and al-Doghmān (who together are the Djumʿān), al-Ḳaʿādḳiʿa and al-Fraydja. The Kwātzba, now reckoned as part of the Ruwala, claim descent from Ḳaḥṭān [*q.v.*] and joined the Ruwala possibly in the 18th century (Musil, *Arabia deserta*, 1927, 14-6; Lancaster, 1981, 155-6). The shaikhly family is Ibn Shaʿlān of the Murʾaẓ section, who took over the shaykhdom from Ibn Ḳaʿkāʿ of al-Ḳaʿādḳiʿa, possibly in the 16th century (Musil, 1928, 51; Lancaster, 1981, 126-7).

The areas used by the Ruwala in the present and past include Tayma and Khaybar, the Djubba, Wādī Sirḥān, al-Wudiyān, al-Labba, the Ḥamad and Ḥawrān. Numbers are difficult to establish, but the Ruwala say they were and are the largest and most powerful tribe in the northern Arabian desert. Shaykh Faysal b. Fawwāz Shaʿlān estimates there to be over half a million, most of whom are in northern Saudi Arabia, with a few in Syria and Jordan.

Inconsistencies, noticeable in the sources, in the precise relationships of the Ruwala to other parts of the Ḍana Muslim group, in their sections, locations and numbers, may be understood by reference to Ruwaylī concepts. The genealogy is seen as a way of talking about political and jural relationships of closeness and distance between constituent parts of the group, not actual descent. The shaikhly family often personifies the tribe in historical and political discussion; this encourages a shift in political focus to be seen as a migration from one area to another which is not justifiable when more detailed information is available. The Ruwala are, as they have always been, concerned with living their lives in their own terms; they see their *shaykh*s as ambassadors, or agents, between them and the agencies of other governments, rather than leaders as such. From this point of view, the movement northwards in the late 18th century is a political and economic shift on the part of the shaikhly family and those Ruwala who saw the shift as a useful option.

The Ruwala say they are from ʿAnaz, who was the brother of Maʿaz, the sons of Wāʾil. This ʿAnaz b. Wāʾil genealogy is not totally consistent with the information of Hishām b. Muḥammad al-Kalbi in his *Djamharat al-nasab* on ʿAnaza b. Asad, "alter Stamm, später zu Rabīʿa gerechnet" (tr. Caskel and Strenziok, Band ii, 189, and Band i, tables 141 and 172). The Rabīʿa and Bakr b. Wāʾil tribes dominate the recorded history of northern Arabia in the early and mediaeval periods. Yāḳūt, iii, 644, records the ʿAnaza in Khaybar, as does Abu 'l-Fidā, *Taḳwīm*, tr. Reinaud, 120. Sections of the Ruwala continue to own date gardens there and in Tayma (Lancaster, 1981, 128). The Djlās (identified with the Ruwala by Burckhardt, *Notes*, i, 6), and other ʿAnaza, are mentioned in Ottoman tax registers of 1558 as wintering around Ṣafad (A. Cohen and B. Lewis, *Population and revenue in 16th century Palestine*, Princeton 1979, 160). Abujabr (*Pioneers over Jordan*, London 1989, 166) mentions a family from a section of the Ruwala who left Tayma about 1600 and settled in al-Ḥusn, near Irbid in Jordan. Thus the Ruwala have been using the wider region for a long period, although political and economic shifts have caused them to be identified with, and to identify themselves with, different areas.

Musil, quoting other tribes in the region, says the Ruwala were the "most Bedu" tribe in northern Arabia. At this date (1908-16), "being Bedu" meant camel-herding. The camel herds provided subsistence and enabled the Ruwala to provide services of protection and restitution to those parts of the wider population unwilling or unable to protect themselves, to provide guides and protectors to caravans, and to sell camels in the markets of Syria and Egypt for meat, transport animals and for agricultural work. Camel herding, together with tribal political and jural processes, permitted a system of government (*ḥukūma*—based on mediation and consensus) that was an alternative to that of states. Raiding (*g̲h̲azu*) took a variety of forms (Lancaster 1981, 140-5), the purpose being the acquisition of booty and personal reputation.

Burckhardt, Wallin, Guarmani, the Blunts, and Musil provide a partial history of the tribe during the 19th century and up to the First World War. During this period the Ruwala became pre-eminent among the ʿAnaza tribes. Although opposing Wahhābī political ambitions, in 1809 they defeated a Turkish government army outside Baghdad in pursuit of the Wahhābī forces; thus the Ruwala achieved independence of both Ibn Suʿūd (who relieved them of the obligation to recognise his overlordship) and of the Turks (Lancaster, 1981, 128-9). Relationships with the Turkish government in Damascus were always ambivalent shifting between open hostility and uneasy compliance (Euting, 1896, i, 93; Musil, 1928). In 1909, Nawwāf b. Nūrī S̲h̲aʿlān, with his father's reluctant support (Musil 1927, 1928) retook D̲j̲awf from Ibn Ras̲h̲īd of the S̲h̲ammar, whose political fortunes were in decline [see RAS̲H̲ĪD, ĀL]. After the First World War, Nawwāf had plans for the S̲h̲aʿlān kingdom of northern Arabia, to which Nūrī was opposed. The rise of the power of Ibn Suʿūd, and the French and British mandates over Transjordan and Syria, together with the death of Nawwāf in 1921, ended any possibility of this, and *amīr* Nūrī handed over D̲j̲awf and the Wādī Sirḥān to Ibn Suʿūd in 1926, signing the Treaty of Hadda. *Amīr* Nūrī, according to one of his great-grandsons, S̲h̲ayk̲h̲ Fayṣal b. Fawwāz, was conscious of the contradictions inherent in the political role of a tribal *amīr* and an urban ruler. The present *amīr* Mitʿib b. Fawwāz, and his generation of S̲h̲aʿlān *s̲h̲ayk̲h̲s*, see their function as maintaining freedom of access for tribesmen to the economic and political resources of the various states in which the Ruwala live.

The increasing use of motor transport exacerbated a trend signalled by the opening of the Suez canal in 1870 and the Ḥid̲j̲āz Railway in 1908, to the point where there was little market for surplus camels, except for meat and some agricultural work. This was the real cause for the ending of raiding. The Ruwala had lost, between a declining market for camels, and the loss of services now provided by the Mandate governments or Ibn Saʿūd, a substantial part of their income. They managed, between the late 1920s until the 1950s, by having vastly increased herds, and employment in the Arab Legion, as Méharistes, and with Ibn Suʿūd. Some Ruwala became Ik̲h̲wān, and a few, under Firḥān al-Mas̲h̲hūr, were involved in the Ik̲h̲wān revolt of Fayṣal al-Darwīs̲h̲ of the Muṭayr (Glubb papers; Philby papers). There were also problems with the authorities of the French and British Mandates, and with Ibn Suʿūd, over whether the Ruwala were a Syrian or a Saudi tribe. As their *amīr* was based near Damascus, and many Ruwala used Syria in the summer, it was decided the Ruwala were a Syrian tribe, while those who stayed in Saudi Arabia in summer and paid taxes to Ibn Suʿūd were Saudi citizens. The Treaty of Hadda guaranteed the Ruwala their traditional markets and grazing areas. During the thirties, al-Awrens b. Ṭrād S̲h̲aʿlān based himself outside H4 (IPC pumping station) in eastern Jordan from where he advised the Iraq Petroleum Company and developed an extensive political network. The *amīr* Nūrī, and after 1936 his grandson *amīr* Fawwāz b. Nawwāf, were members of the Syrian Chamber of Deputies.

With the increase in oil wealth in Saudi Arabia, together with the drought of 1958-62, many Ruwala joined the newly-formed National Guard in Saudi Arabia or became employed in the oil companies. The rise of the Baʿt̲h̲ party to power in Syria in the 1960s, and the resulting political and economic difficulties for particular tribes, encouraged the Ruwala to concentrate on options in Saudi Arabia. At this date *amīr* Nāyif b. Nawwāf filled a position similar to that of Speaker of the House of Commons in Saudi Arabia. After the S̲h̲aʿlān lost their assets in Syria, many of them, under the leadership of S̲h̲ayk̲h̲ Nūrī b. Fawwāz, together with Ruwala tribesmen, collected at al-Rīs̲h̲a in eastern Jordan and began smuggling from Saudi Arabia into Syria as a political action (Lancaster 1981). The antagonism to Syria was simultaneously expressed as active support for King Ḥusayn of Jordan in the troubles with the Palestinian *Fidāʾiyyīn*.

The smuggling ended with some reconciliation between the S̲h̲aʿlān and the Syrian authorities, together with pressure from the Jordanian government. The closing of the desert roads between Syria and Jordan by the Syrian authorities during the 1980s ended the viability of al-Rīs̲h̲a as a base for trading (legitimate or otherwise) by the Ruwala and others. Profits from smuggling were invested in sheep herds, gardens, property and businesses, especially in Saudi Arabia but also in Jordan and in Syria. The Ruwala are an important group in the National Guard of Saudi Arabia, and are represented in the Army and Air Force; they play an active part in government, the professions and business in Saudi Arabia. Their political influence is apparent in Saudi Arabia, Jordan and Syria.

While they say they are no longer Bedouin, as they do not depend on the *bādiya* or desert as in the past, they maintain their strong tribal identity.

Bibliography: The chief authorities are A. Musil, particularly *The manners and customs of the Rwala bedouins*, New York 1928; *Arabia deserta*, New York 1927; and *Northern Nejd*, New York 1928. Raynaud and Martinet, *Les bedouins de la mouvance de Damas*, Beirut 1922; V.M.P. Mueller, *En Syrie avec les bedouins*, Paris 1931; and M. von Oppenheim, *Die Beduinen*, i, Leipzig 1939, continue Ruwala coverage. W. Lancaster, *The Rwala bedouin today*, Cambridge 1981, provides an anthropological analysis. Articles by Lancaster deal with detailed aspects: *The logic of the Rwala response to change in contemporary nomadic and pastoral peoples*, in *Asia and the North, studies in Third World societies*, viii (1982); *The concept of territoriality among the Rwala bedouin*, in *Nomadic Peoples*, xx (1986); and *Desert devices: the pastoral system of the Rwala bedouin*, in *A world of pastoralism; herding systems in comparative perspective*, ed. J.G. Galaty and D.L. Johnson, New York 1990.

Lewis, *Nomads and settlers in Syria and Jordan 1800-1980*, Cambridge 1987; M. Meeker, *Literature and violence in northern Arabia*, Cambridge 1979 (a semiotic analysis of some Ruwala poetry, with which the Ruwala disagree on methods of analysis and interpretation). (W. and Fidelity Lancaster)

RUʾYĀ (A.), derived from the Semitic root *r-ʾ-y* which gives rise to formations expressing "sight" (*ruʾya(t)*) and "vision" (*ruʾyā*), one of the aspects of vision being nocturnal vision, the dream.

1. In the meaning of dream.

On relations between "seer" (*rōʾe* = Aram. *ḥōzē* = Ar. *ḥāzī*), "soothsayer" (*kāhin*, *ʿarrāf*, etc.) and "prophet" (*nabī*), see the articles KĀHIN, KIHĀNA, NUBUWWA.

The Semitic terminology of the dream and of the vision evolves in two fundamentally different semantic zones:

(1) The first is situated in the space extending between sleep and waking and is consequently expressed by the roots *y/w-sh-n* (cf. Akkadian *shittu* "sleep", and *shuttu* "dream", Hebr. *shēnā* "sleep", Ar. *sina* "sleep"), *n-w-m* (cf. Akk. *munattu* "dawn", "dream", Hebr. *tᵉnūmā* "light sleep, dozing", Ar. *manām* "somnolence", "dream") and Akk. *b-r-y*, Aramaic *ḥ-z-y*, Hebr. and Ar. *r-ʾ-y* (whence, respectively, Akk. *tabrīt/mūshī*, Hebr. and Aram. *ḥēzion/layla*, Hebr. *marʾa/ha-layla*, Ar. *ruʾyā*, all denoting nocturnal vision or dream). Thus the first group expresses "deep sleep" and the second "light sleep", between sleeping and waking, an activity relating to the domain of waking, if not to waking itself. It is in this last group that is situated the point of concurrence between the nocturnal vision or dream and the prophetic vision (diurnal and nocturnal) or ecstasy (cf. Fahd, *La divination arabe*, 269, based on A.L. Oppenheim, *The interpretation of dreams in the Ancient Near East. With a translation of an Assyrian Dream-Book*, in *Transactions of the American Philosophical Society*, N.S., xlvi/3 [Philadelphia 1956], 179-373, cf. 225-6; E.L. Ehrlich, *Der Traum im Alten Testament*, Beihefte zur ZATW, lxxiii, Berlin 1953, 1-12; on the difficulty of establishing a line of demarcation between dream and vision, cf. A. Guillaume, *Prophétie et divination*, French tr. Paris 1941, 261-2).

(2) The second is situated in a specific period of life, sc. puberty, a period marked by the development of sexuality (*TʿA*, viii, 355). The dream is then expressed in all Semitic languages through the root *ḥ-l-m*, which indicates, in the adolescent, a degree of physical maturity (becoming fat, fleshy, expansion of the sexual organs, nocturnal pollution) and of intellectual maturity (acquiring good judgment, being kind and gentle, patient and master of oneself).

Concerned to distinguish the true dream, rendered by *ruʾyā*, from the false dream, resulting from the passions and preoccupations of the soul, or furthermore the dream inspired by God from that inspired by Satan, Muslim tradition adopted *ḥ-l-m* for the expression of the latter, on the basis of the following tradition: "The *ruʾyā* comes from God and the *ḥulm* from Satan" (cf. *Concordance*, i, 504; al-Bukhārī, ii, 324 = *Khalk*, 11; Ibn Khaldūn, *Muḳaddima*, iii, 8 ff., tr. Rosenthal, iii, 103 ff.; other references in Goldziher, *Abhandlungen zur arab. Philologie*, i, 110). However, the lexicographers continue to treat them as synonyms, as is the case with Ugaritic *ḥ-l-m*, Hebr. *ḥᵃlōm*, Aram. *ḥelmā*/Syriac *ḥelmō*, etc., which refer to the prophetic dream as much as do the derivatives of *r-ʾ-y* and of *ḥ-z-y* (cf. Ehrlich, *op. cit.*, 1).

The Ḳurʾān seldom uses *ḥulm* in a pejorative sense with the meaning of dream; *aḥlām* appears twice, in XII, 44 and XXI, 5, preceded by *aḍghāth* "incoherent and confused dreams", and once unqualified in the former of these verses, in the expression *taʾwīl al-aḥlām*, "interpretation of dreams", while the innumerable verbal and nominal forms of *r-ʾ-y* are used to denote all kinds of vision, whether it be real, intellectual or metaphorical (see *Concordance*, s.v. *raʾā*). The verb *raʾā* and the substantive *ruʾyā* convey the dream of Joseph (XII, 4-5) as well as that of his fellow-prisoners (XII, 36) and that of the Pharaoh (XII, 43). The order communicated to Abraham to sacrifice his son (XXXVII, 102, 105) was given to him in a dream; Allāh fulfilled the dream (*ruʾyā*) of Muḥammad that he would return to Mecca (XLVIII, 27); the dream of the *isrāʾ* and of the *miʿrādj* which he had before the emigration to Medina, were given to him to test the faith of those who had followed him; this was, in a sense, "the Tree of Temptation in the Ḳurʾān" (XVII, 60).

After *ruʾyā* the Ḳurʾān uses *manām* (XXXVIII, 102), of which it makes a divine sign (XXX, 23) a summons before God, analogous to death (XXXIX, 42) and an instrument of divine direction, used by God to guide His Prophet and the believers step by step (VIII, 43-4). The *Sīra* and historiography relate a large number of dreams which marked the major events of the Prophet's life, those of his contemporaries and of his successors (cf. *La divination arabe*, 255 ff.).

Shortly before his death, the Prophet is supposed to have said: "Nothing remains of prophecy other than the good dream; the just man sees it or it makes itself seen by him" (Ibn Saʿd, *Ṭabaḳāt*, iii, 18). This gives an impression of the importance accorded by him to the dream in which he saw a divine intervention (on dream and prophecy, see NUBUWWA).

As a result of the conduct of the Prophet, which consecrated a pre-Islamic usage, the study of dreams was developed considerably under Islam. The oneirocritics, of whom Abū Bakr, the first caliph was one, proliferated and Arab oneiromancy was born, nourished, at the outset, by the inexhaustible sources of the oral tradition, in which certain symbolic constants, certain techniques and even an oneirocritical style and clichés began to be established; they are to be found dispersed in the *Sīra*, the *Maghāzī*, in *Ḥadīth* and before long in the *Ṭabaḳāt* of Ibn Saʿd (d. 230/845), secretary of al-Wāḳidī (d. 207/823), where there is a list of dreams interpreted by Ibn al-Musayyab, who lived in the time of the Umayyad caliph ʿAbd al-Malik b. Marwān (65-86/685-705). This was the first attempt at the compilation of a literary genre which was to undergo a considerable expansion (*Ṭabaḳāt*, v, 91-3; list quoted in full in *La divination arabe*, 310-12).

Ibn al-Musayyab was succeeded by Ibn Sīrīn [*q.v.*], whose renown as an oneirocritic has survived to this day (cf. Abdel Daim, *L'oniromancie arabe d'après Ibn Sīrīn*, Damascus 1958; *La divination arabe*, 312 ff.; Fahd, *L'oniromancie orientale et ses répercussions sur*

l'oniromancie de l'Occident médiéval, in *Oriente e Occidente nel Medioevo: Filosofia e Scienze*, Rome 1971, 347-74). His name figures among the ancestors of oneiromancy in the earliest treatise of *Taʿbīr* which is known, the *Dustūr fi 'l-taʿbīr* of Abū Isḥāḳ Ibrāhīm b. ʿAbd Allāh al-Kirmānī who lived under al-Mahdī (158-69/775-85), a treatise which has not survived, but the existence of which is confirmed by Abū Bakr al-Anbārī (d. 328/940); it served as the basis for numerous later works, in particular for *al-Is̲h̲āra ilā ʿilm al-ʿibāra* (cf. *La divination arabe*, 315, 345, 352).

At this stage, Arab oneiromancy lacked a method for the classification of dreams, according to precise categories, illustrated by concurrent examples which would make clearer the significance of symbolic constants in a secular spirit. The Arabic translation of the *Oneirocritica* of Artemidorus of Ephesus (cf. *Le Livre des Songes*, Arabic tr. by Ḥunayn b. Isḥāḳ, ed. Fahd, Damascus 1964), commissioned by al-Maʾmūn, and *al-Ḳādirī fi 'l-taʿbīr*, composed by Abū Saʿīd Naṣr b. Yaʿḳūb al-Dīnawarī for the caliph al-Ḳādir bi 'llāh (381-422/991-1031) in 397/1006, a work which makes systematic use of the former, filled this gap (cf. Fahd, *Ḥunayn Ibn Isḥāq est-il le traducteur des* Oneirocritica *d'Artémidore d'Ephèse?*, in *Arabica*, xxi [1975], 270-84).

Attributed to Ibn Ḳutayba is a *Taʿbīr al-ruʾyā* (cf. G. Lecomte, *Ibn Qutayba*, Damascus 1965, 157, no. 23), substantial extracts from which have been preserved by Abū ʿAlī al-Ḥusayn b. Ḥasan b. Ibrāhīm al-K̲h̲alīlī al-Dārī in his *al-Muntak̲h̲ab fī taʿbīr al-ruʾyā* (cf. *La divination arabe*, 316 ff., 335, no. 27; for the content of these extracts, *ibid.*, 317-26). If this attribution were to be proved authentic (see the indications of authenticity, *ibid.*, 326), "it would follow from this that Arab oneiromancy was, as early as the middle of the 3rd century of the Hid̲j̲ra, if not before, with al-Kirmānī, in possession of a coherent doctrine for the interpretation of dreams, with solid principles which were to serve as the basis for the development which it was later to undergo" (*ibid.*, 317).

This development is clearly illustrated in the inventory which the author of this article has compiled of oneirocritical treatises, in which 181 treatises have been identified and located (*La divination arabe*, 329-363). On the basis of the principal treatises it may be concluded that the symbolic constants of Arab oneiromancy, the origin of which is inseparable from that of the Arabs and which has developed and become enriched incessantly over the centuries, was supplemented, in the 3rd/9th century, by a written code of principles, laws, procedures, drawn from uninterrupted oral traditions, conveying the benefits of a long and rich experience of the past. The oneirocritical treatise always includes the following two sections, although in highly disproportionate volume: the first, a theoretical introduction revealing the general rules, the *modi procedendi* and the duties of the oneirocritic; the second, the symbolic, in the form of equations between realities of all kinds and symbols, often followed by justifications and examples. The internal organisation of the material takes the form of hierarchical lists of the beings or objects susceptible to being seen in dreams (the pattern of this may be found in *Les songes et leur interprétation en Islam*, in *Les songes et leur interprétation, Sources Orientales*, ii, Paris 1958, 132 f.).

But in practice, use of such lists can prove problematical. In an attempt to make consultation of such works easier, lists have come into being where oneirocritical themes are classified in alphabetical order. Such was the structure of the *Keys to dreams*, veritably encyclopaedic dictionaries of dreams, which held long and illustrious sway. Nevertheless, consultation is not always easy; dreams may be experienced in all kinds of circumstances where the work to be consulted is not within reach; and, since the dream is fleeting and may soon be forgotten, there is the risk of losing its benefit. This concern led to the versification of oneirocritical material, after the pattern of all materials of didactic vocation.

On the other hand, there exist monographs dealing with only one group of oneirocritical themes (see inventory: nos. 12, 43, 56, 81, 87, 95, 104). However, only the vision in dreams of the Prophet of Islam was the object of special monographs which were usually the result of a mystical experience (cf. nos. 3, 6, 16, 21, 22, 50, 51-4, 57, 74, 84, 111, 118, 119).

Finally, it is appropriate to provide a glimpse of the content of the typical theoretical introduction which is to be found in the major oneirocritical works. The most complete example is to be found in the introduction to *al-Ḳādirī fi 'l-taʿbīr* by Abū Saʿīd Naṣr b. Yaʿḳūb al-Dīnawarī (d. *ca.* 400/1009). It is the most ancient Arab oneirocritical treatise which has survived in its entirety, in spite of its substantial length. It exploited all the information from the *Book of Dreams* by Artemidorus that was susceptible of adaptation to its milieu.

The introduction to this treatise, composed of 30 chapters (*faṣls*), divided into 1396 *bābs*, comprises 15 *maḳālas* on the nature of sleep, the conduct to be followed by the dreamer, the modalities of the dream, the angel of the dream, the nature of the dream, the varieties of true and of false dream, the times and seasons of the dream, the definition of interpretation, the rules to be followed by the narrator of the dream and by the interpreter, the omens to be observed at the time of interpretation, interpretation and the days of the week and the types of oneirocritics (cf. *La divination arabe*, 336-7; for more detailed information, see *Les songes et leur interprétation en Islam*, 133-47).

Finally, it may be noted that incubation, practised by the ancient Semites (cf. Ehrlich, *op. cit.*, 13-55; Oppenheim, *loc. cit.*, index s.v. *Incubation dream*, 352; A. Haldar, *Associations of cult prophets among the ancient Semites*, Uppsala 1945, 81-2; *Sources orientales*, ii, 39-41 (Egypt), 80-1 (Assyro-Babylonia), has survived in *istik̲h̲āra* and the custom of sleeping in mosques (cf. ISTIK̲H̲ĀRA and *La divination arabe*, 363-6).

Bibliography: Most of the material contained in this article has been borrowed from the present author's *La divination arabe*, Paris 1987, and from his contribution to *Sources orientales*, ii, Paris 1959, 127-58, under the title *Les songes et leur interprétation en Islam*. 2. In its philosophical-mystical meaning.

In its philosophical-mystical meaning, the term, like *manām*, describes the dream as a means to transmit fictitious observations or, in the best instances, information and knowledge which convey another, higher reality. As such, this information has its origin in God or in persons near to God, such as prophets, holy men and Ṣūfīs. Starting points in this interpretation of dreams are found in the Ḳurʾān (sūras VIII, 43/45; XII, 43; XXXVII, 102/101; etc.) and in the tripartite subdivision of dreams, found in Islamic *ḥadīth* and in other cultures (see Gätje, *Traumlehren*, 258): true dreams, which have their origin in God and bear a prophetic character; false dreams, which come from Satan; and dreams connected with man's nature and therefore unable to predict anything about the future. In Ṣūfī literature, the dream mainly appears as a means for having a dialogue with deceased Ṣūfīs and holy men, or even with the Prophet, and to receive messages, warnings or pieces of advice (see the works by Schimmel and Smith, in *Bibl.*).

Islamic philosophy, going back to the Ḳurʾānic-mystical interpretation of the dream, considers it as a means to transmit the truth, its prophetical-divine origin serving as a criterion. This criterion, however, caused discussions about the postulates of dreams. Galen's explanation that they originate from a mixture of the fluids in the human body, and his localising (as against Aristotle) fantasy and thought in the brain and not in the heart, is often drawn into the argumentation. Beyond this, with reference to the Neoplatonic philosophy of the divine emanations as well as to the Aristotelian-Peripathetic doctrine of the soul and of the divine intellect, the dream is given an important part in the process of human perception. This development culminates in the precedence of divinely-inspired prophetic knowledge over human knowledge (see Daiber, *Abū Ḥātim*), defended by the Ismāʿīlī Abū Ḥātim al-Rāzī [*q.v.*] against Abū Bakr al-Rāzī [see al-Rāzī, Abū Bakr], and in the transmission of this prophetic knowledge by way of portentous dreams, which owe their existence to the divine active intellect. The latter view is represented by Abū Naṣr al-Fārābī [*q.v.*].

The origin of this development can already be found in Abū Yūsuf al-Kindī [*q.v.*], who links up with Aristotle (*De anima*), but puts new accents, which he owes to the Alexandrian exegesis of Aristotle and which presuppose a Neoplatonic-hermetic concept of the soul (see Genequand, in *Bibl.*). In his *Fī Māhiyyat al-nawm wa 'l-ruʾyā* (= *Rasāʾil*, i, 293-311), which was translated into Latin by Gerhard of Cremona (ed. Baeumker, 12-27), and in his as yet unpublished treatise on the anamnesis of the soul (see Endress, *Al-Kindī's theory*), the soul appears in an intermediate position between the perception of matter and the eternal ideas of the divine intellect; in the process of its purification, and in its endeavour to return to its divine origin, the soul avails itself of the "shaping capacity" (*al-ḳuwwa al-muṣawwira*), i.e. of the fantasy, the carrier of the dreaming activity, which increasingly liberates itself from sensory perceptions. After that, the soul remembers more and more its originally divine situation i.e. the world of the intellect. In its most complete form, the dream is no longer confused dreams (*aḍghāth*), or mere opinion, but the remembrance of the shape of sensible objects, or of the genus and species of intelligible objects. Thus the soul is capable of anticipating the future in a dream (al-Kindī, *Rasāʾil*, i, 303).

Al-Kindī's doctrine of the dream is part of his doctrine of the intellect (see Jolivet, *L'intellect*, esp. 128 ff.), in which the cognitional constituent appears as being integrated in a Neoplatonic doctrine of anamnesis. This accentuation was not continued by al-Fārābī. In the latter's doctrine of the dream, the remembrance of intelligibles is not mentioned. On the contrary, in a newly created terminology al-Fārābī speaks of the "imitation" (*muḥākāt*) of perceptible particulars (*al-djuzʾiyyāt*) and of the "separating intelligibles" (*al-maʿḳūlāt al-mufāriḳa*) which ensue in a dream. The imaginative pictures in the dream are thus the result of a cooperation between perception, imitating imagination or fantasy, and the divine "active intellect". If this imitation is not limited to sensible phenomena, if it is not solely oriented towards the activities of nutrition and desire, and if it is not shaped by the constitution of the body (see Galen, *De dignotione ex insomniis*), then the dream represents "exalted objects" (*mawdjūdāt sharīfa*), i.e. the intelligibles of the divine "active intellect"; the point at issue then is prophecy, prophesying "divine things". From this al-Fārābī, while modifying Plato's doctrine of the philosopher-king, deduces his well-known thesis on the sovereign of the Ideal State, who should be both philosopher and prophet. His starting-points in literature are first of all Aristotle's works, in particular, *De anima*, the *Nicomachaean ethics* and the theory of the dream and divination in the *Parva naturalia*, and also the exegesis of Aristotle by Alexander of Aphrodisias. The parallel between al-Fārābī and the new accentuation of Aristotelian doctrines, found in the transmitted Arab version of the *Parva naturalia*, is remarkable. Deviating from the Greek text, the latter emphasises the divinity of the intellect, which causes the "images" (*ṣuwar*) which come into being in "true dreams" (see the Arabic ms. Raza Library, Rāmpūr, no. 1752, dating from the 11th/17th century, fols. 7a-54b, of which fols. 44b l. 11-fol. 47b l. 25 deal with the dream; cf. Davidson, 340 ff.; Pines; Ravitzky).

Above all, al-Fārābī is convinced that, as Aristotle said, the soul thinks in images, and for this needs perception; its imaginative power imitates reality and produces imitating images. The most perfect imitations of the particulars and intelligibles, which originate in the divine active intellect and are realised in a dream by the imaginative power, are made into statements about the future and into prophecies. They are then transmitted to mankind by the sovereign, either in the form of philosophical argumentations or in the form of prophetic "warnings". At this, al-Fārābī, in his thesis on the perfect "religion" as imitation of "philosophy", presupposes the reciprocal dependence of the two. Religion is an indispensable "instrument" of philosophy because, in the Ideal State (*al-madīna al-fāḍila*), it realises the practical part of the latter, namely ethics. In agreement with Aristotelian epistemology, according to which the soul does not think without the images of perception, religion is at the same time a perceptible image of philosophy and of the intelligibles, which experience their realisation in the most perfect form in the prophetical revelation (for further details, see Daiber, *Prophetie; Ruler*). And so prophetic revelation in a dream is not only a perceptive representation of what had been pre-existing in the mind, and what has been inspired by the active intellect; for by transmitting laws and prescriptions of "religion", this revelation also clears

the way for realising the practical part of philosophy, namely the ethics of every single person in the Ideal State.

Later philosophers, above all Ibn Sīnā and Ibn Rus̲h̲d [*q.vv.*], were decisively influenced by al-Fārābī's doctrine of the divine active intellect as the cause of prophetic dreams. They took up al-Fārābī's Neoplatonic attachment of separate intellects to certain heavenly spheres, a doctrine which had further developed Aristotle's conception of the spirits of the spheres, as well as al-Kindī's doctrine of the intellect. In their works, the divine active intellect (*al-ʿaḳl al-faʿʿāl/al-fāʿil*), the tenth and last member of these intellects, appears as an emanation of the ninth intellect which rules the sphere of the moon. However, Ibn Sīnā and Ibn Rus̲h̲d did not adopt al-Fārābī's idea of religion as being the visualisation of philosophy. Contrary to Aristotle, but in consequent continuation of al-Kindī's Neoplatonism, they maintain that thinking does not need perception through the senses; the active intellect leads the thinking soul out of the stage of potentiality.

Ibn Sīnā's explanations in his *Kitāb al-S̲h̲ifāʾ* and in his *Risāla al-manāmiya* show that al-Fārābī's doctrine of dreams was modified. He gives more attention to the elements mentioned by Galen, and al-Fārābī's explanations are completed; in the common sense (*ḥiss mus̲h̲tarak*), the dream is the sensorial representation of the forms which have been abstracted from the matter. This representation has been realised by the preserving "forming power" (*muṣawwira*), together with the combining "fantasy" (*mutakhayyila*). The interpretation of dreams (*taʿbīr al-ruʾyā*) deals with the *maʿānī*, the *intentiones* of these abstractions, which belong to the realm of the perception, of the intellect or of the heavenly world. In Ibn Sīnā's work the function of the prophetic dream appears, in a modified form, as providence (*ʿināya*) of the "divine power", or of the "intellectual" and "heavenly angels"; the *ʿināya* becomes their tool, and is allotted to just rulers, to outstanding scholars and, beyond them, to all mankind; it is no longer a privilege of the prophet.

Ibn Rus̲h̲d, in his *Epitome of the Parva naturalia*, essentially follows Ibn Sīnā and does not bring any new element. The dream is a spiritual process and gets its bearings from the *maʿānī*, which are deposited in the faculty of memory (*ḥāfiẓa, d̲h̲ākira*), abstracted by the faculty of thought (*al-mufakkira*) from the individual perceptions, which at first have been united in the common sense, then preserved by the imaginative power (*muṣawwira, mutak̲h̲ayyila*). Beyond that, the prophetic dream is an activity of the active intellect; in as much as the sensorial representations and their *maʿānī* are already potentially present in the soul, the dream enables the actualisation of the potential intelligence of the human being, of his "material" intellect, that is, by the active eternal intellect. Certainly, the possibility of scientific knowledge through dreams, admitted by al-Fārābī and, to a certain extent, also by Ibn Sīnā, is limited by Ibn Rus̲h̲d (as already had been the case with Ibn Bād̲j̲d̲j̲a) (see Davidson, 342 ff.); the inspiration given by dreams is limited to what is useful or harmful, and to a few practical arts; it does not extend to theoretical science. Prophetic revelation recedes here into the background.

Instead, Ibn Rus̲h̲d propagates a connection between the form of the soul, understood as eternal potentiality of the "material" intellect, and the divine, eternal, active intellect. This connection is said to be the road to the most perfect form of human knowledge. For Ibn Rus̲h̲d, the universality of this general form of the soul excludes any individuality (and thus also the individual immortality of the soul). Here, too, can be detected a basic tenet of Islamic philosophical thinking, which had become apparent with al-Kindī and which could appeal to the Ḳurʾān, to mystics, and to the religious tradition of Islam, namely tracing human knowledge back to God, considering prophetical knowledge as superior to human knowledge, and dreams as the road along which God transmits knowledge to mankind. However, Ibn Rus̲h̲d limited the traditional appreciation of this road.

RUʾYAT ALLĀH, the vision of God. It is usually qualified by the phrase *bi 'l-abṣār*, "through perception", to distinguish it from a metaphorical concept, sometimes acknowledged, of vision "through the heart", cf. al-Ashʿarī, *Maḳālāt*, 157, ll. 10-13 and 216, ll. 10-13.

Whether it is or will be possible for men to see God with their own eyes is one of the questions which have deeply divided Muslim theologians. Sunnīs of all persuasions (Ḥanbalīs, Kullābiyya, Ashʿarīs, Karrāmiyya and Māturīdīs) maintain that it is so. The notion was absolutely refuted, on the other hand, by the Djahmiyya and then by the Muʿtazilīs, also, it is said, by the Khāridjīs, the Zaydīs, and the majority of the Murdjiʾīs (cf. *Maḳālāt*, 216, ll. 14-15; ʿAbd al-Djabbār, *al-Mughnī*, iv, 139, ll. 4-6; Abu 'l-Yusr al-Pazdawī, *Uṣūl*, 78, ll. 6-7). Among the Imāmī Shīʿīs, only the earliest theologians (Hishām b. al-Ḥakam, etc.), adherents of a "corporealist" conception of God, acknowledged His visibility; but early theologians such as al-Kulaynī and Ibn Bābawayh (thus, even before the "conversion" of the Imāmīs to Muʿtazilī *kalām*) adopted the contrary view (cf. Vajda, *Le problème*, in *Le Shīʿisme imâmite*, 33-46).

To say that God is "visible through perception" does not necessarily mean, for the adherents of this thesis, that He is so for all, and in all circumstances. The customary Sunnī position, as defined at an early stage in the profession of faith of the *aṣḥāb al-ḥadīth* articulated by al-Ashʿarī (*Maḳālāt*, 292, ll. 12-13) is that God will be seen only in the after-life and only by believers; infidels will be deprived of the sight of Him, in conformity with Ḳurʾān, LXXXIII, 15. In this world, on the other hand, God could be seen by nobody, with the exception of the Prophet Muḥammad (although this last point is controversial, on account, notably, of two contradictory statements attributed to Ibn ʿAbbās and ʿĀʾisha).

Here as elsewhere, the Ḳurʾān is invoked in support of both theories. The opponents of the notion of visibility invoke VI, 103: *lā tudrikuhu 'l-abṣāru*, "perceptions do not comprehend Him". In reply, the Sunnīs propose two interpretations. For some (such as al-Asharī), the implication of the verse is more specific; a qualification such as "in this world" is to be understood. Others, including Ibn Kullāb and later al-Māturīdī, distinguish between *idrāk* and *ruʾya*: God denies that perceptions "comprehend" Him, not that they "see" Him.

The Sunnīs, for their part, invoke LXXV, 22-3, where it is said that on the Day of Resurrection faces will be *ilā rabbihā nāẓira*, "their Lord regarding". To which the Muʿtazilīs reply that *naẓara* is equivalent here to *intaẓara*, and the expression is metonymical. It is the reward of their Lord which they "will wait for".

The Sunnīs also have recourse to VII, 143: since Moses, a prophet, asked to see God, it follows, they say, that God can be seen. To which the Muʿtazilīs reply, following al-Djubbāʾī, that it was not for himself that Moses made this request, but for his incredulous people, who demanded it of him.

The Sunnīs also base a major part of their argument on a well-known *ḥadīth* according to which the Prophet, on a night of full moon, is said to have promised his Companions "You shall see (*tarawna*) your Lord as you see this moon" (al-Bukhārī, *mawāḳīt*, 16 and 26; *tawḥīd*, 24, 1-3). For the Muʿtazilīs, either the *ḥadīth* is inauthentic or else *tarawna* is to be understood in a figurative sense, as a synonym of *taʿlamūna*.

In the realm of rational controversy, the Muʿtazilīs place the greatest emphasis on the argument that, in order to be seen, a thing must be either substance or accident, and God is neither one nor the other. The solution proposed by al-Ashʿarī (and also adopted by the Māturīdīs) is that visibility is not confined to substances and accidents; it is a necessary characteristic of all existing things—and God exists.

RUʾYAT AL-HILĀL (A.), a term in Islamic astronomy denoting the sighting of the lunar crescent. In this article, astronomical aspects are covered.

Muslim astronomers from the 2nd/8th century onwards performed calculations to predict the visibility of the lunar crescent, of particular importance for the fixing the beginning and end of Ramaḍān and the festivals [see HILĀL, i. In religious law; ʿĪD; RAMAḌĀN; ṢAWM; TAʾRĪKH]. Over the centuries, the techniques and visibility conditions that they used became more sophisticated. Even the simplest procedures involved a knowledge of the longitudes of the sun and moon at sunset on the night when visibility was in question and methods for finding the difference in setting times of the sun and moon [see MAṬĀLIʿ]. More complicated procedures involved the altitude of the moon above the horizon or the apparent velocity of the moon. These conditions are recorded in astronomical handbooks [see ZĪDJ] and treatises on astronomical timekeeping [see MĪḲĀT].

The earliest Muslim astronomers adopted a simple Indian visibility condition, namely, that the difference in setting times of the sun and moon be at least 12 equatorial degrees (or 48 minutes of time). Using this, they calculated tables displaying for a specific latitude and for different solar longitudes the minimum elongation between sun and moon necessary for visibility (see Pl. XXXVI). More complicated tables involved directly the lunar latitude or served a series of different latitudes. Some later astronomers used conditions so complex that they had to calculate by hand the various astronomical quantities involved and then investigate whether these satisfied their visibility conditions, not always explicitly stated (see Pl. XXXVII). The results of their labours were circulated in astronomical ephemerides [see TAḲWĪM], in which for each day of a given year the positions of the sun, moon and planets would be tabulated and for each month the lunar visibility calculations and predictions, as well as astrological prognostications, would be recorded (see Pl. XXXVIII) and occasionally illustrated (see Pl. XXXIX). There are no known mediaeval records of conflicts with the *ʿulamāʾ*, who favoured actual sightings of the crescent (see HILĀL. i) and used simple arithmetical procedures (based on alternating months of 29 and 30 days) when adverse weather conditions prevailed.

This is a subject on which a great deal of work remains to be done. First, there are numerous astronomical discussions of the subject yet to be studied. Second, there are even more legal discussions awaiting study (see, for example, the volume by ʿAbd al-Wahhāb cited below). And third, there are references to actual practice scattered throughout the historical literature. Of particular historical interest are various S̲h̲īʿī treatises.

In the modern world, with instant communications between places where the crescent can be seen and others where it cannot, as well as less mutual understanding between religious scholars and scientists, there is occasionally some confusion about the beginning and end of Ramaḍān.

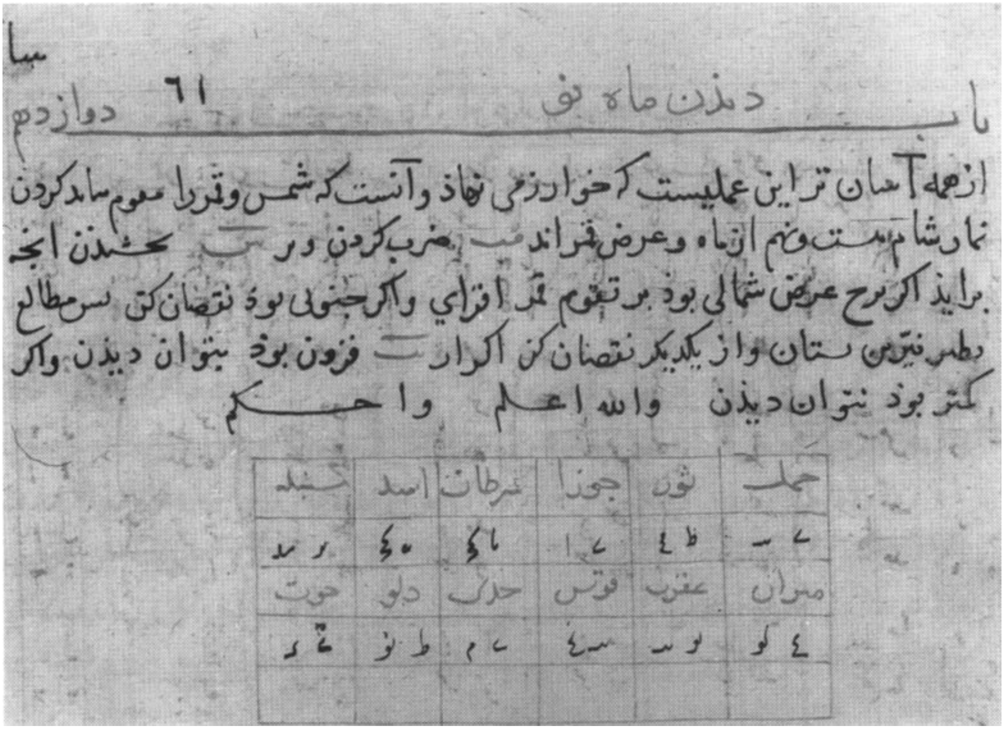
Bibliography: Several different mediaeval procedures and tables are analysed in the following articles: E.S. Kennedy, *The crescent visibility theory of Thābit bin Qurra*, in *Procs. of the Mathematical and Physical Society of the United Arab Republic* (1960), 71-4, idem and M. Janjanian, *The crescent visibility table in Al-Khwārizmī's* Zīj, in *Centaurus*, xi (1965), 73-8 (the table is Andalusian and unrelated to al-K̲h̲ʷārazmī), and idem, *The lunar visibility theory of Yaʿqūb ibn Ṭāriq*, in *JNES*, xxvii (1968), 126-32, all three repr. in E.S. Kennedy *et al.*, *Studies in the exact sciences in Islam*, Beirut 1983; and D.A. King, *Some early Islamic tables for determining lunar crescent visibility*, in *Annals of the New York Academy of Sciences*, 500 (1986), 185-225, idem, *Ibn Yūnus on lunar crescent visibility*, *Jnal. of the History of Astronomy*, xix (1988), 155-68, and *idem*, *Lunar crescent visibility predictions in medieval Islamic ephemerides*, in S. Seikaly, R. Baalbaki, P. Dodd (eds.), *Quest for understanding. Arabic and Islamic studies in memory of Malcolm H. Kerr*, Beirut 1991, 233-51, all three repr. in King, *Astronomy in the service of Islam*, Aldershot, Variorum Reprints 1993; J.P. Hogendijk, *Three Islamic lunar crescent visibility tables*, in *Jnal. for the History of Astronomy*, xix (1988), 29-44, and idem, *New light on the lunar crescent visibility table of Yaqʿūb ibn Ṭāriq*, in *JNES*, xlvii (1988), 95-104. These works contain references to other technical literature on the subject (such as that in *zīd̲j̲s*).

See also H.P.J. Renaud, *Sur les lunes du Ramadan*, in *Hespéris*, xxxii (1945), 51-68, unique of its genre, for the practice in Morocco. A large number of original sources from legal texts are collected in Muḥammad b. ʿAbd al-Wahhāb, *al-ʿAd̲h̲b al-zulāl fī mabāḥit̲h̲ ruʾyat al-hilāl*, Ḳaṭar 1977.

On the problems associated with the Muslim calendar nowadays, see M. Ilyas, *A modern guide to the astronomical calculations of Islamic calendar, times & qibla*, Kuala Lumpur 1984, and Imad-ad-Dean Ahmad, *Signs in the heavens. A Muslim astronomer's perspective on religion and science*, Beltsville, Md. 1992.

(D.A. KING)

RŪYĀN, a district of the Caspian coastlands region of Persia comprising the western half of Māzandarān [*q.v.*].



Iranian tradition. According to Darmesteter, *Avesta*, ii, 416, Rūyān corresponds to the mountain called *Raodita* ("reddish") in *Yas̲h̲t*, 19, 2, and *Rōyis̲h̲n-ōmand* in *Bundahis̲h̲n*, xii, 2, 27 (tr. West, 34). Al-Bīrūnī, *Chronologie*, ed. Sachau, 220, makes Rūyān the scene of the exploits of the archer Āris̲h̲ (cf. Ẓahīr al-Dīn Marʿas̲h̲ī, *Taʾrīk̲h̲-i Ṭabaristān u Rūyān u Māzandarān*, ed. Dorn, 18 [*Yas̲h̲t* 8, 6, in this connection mentions the hill Aryō-xs̲h̲nθa]). In the letter addressed to the *mōbad* Tansar by king *Gus̲h̲nasps̲h̲āh (3rd century A.D.?), the latter claims to be lord of Ṭabaristān, Patis̲h̲k̲h̲ʷār-gar, Gīlān, Daylamān, Rūyān and Damāwand.

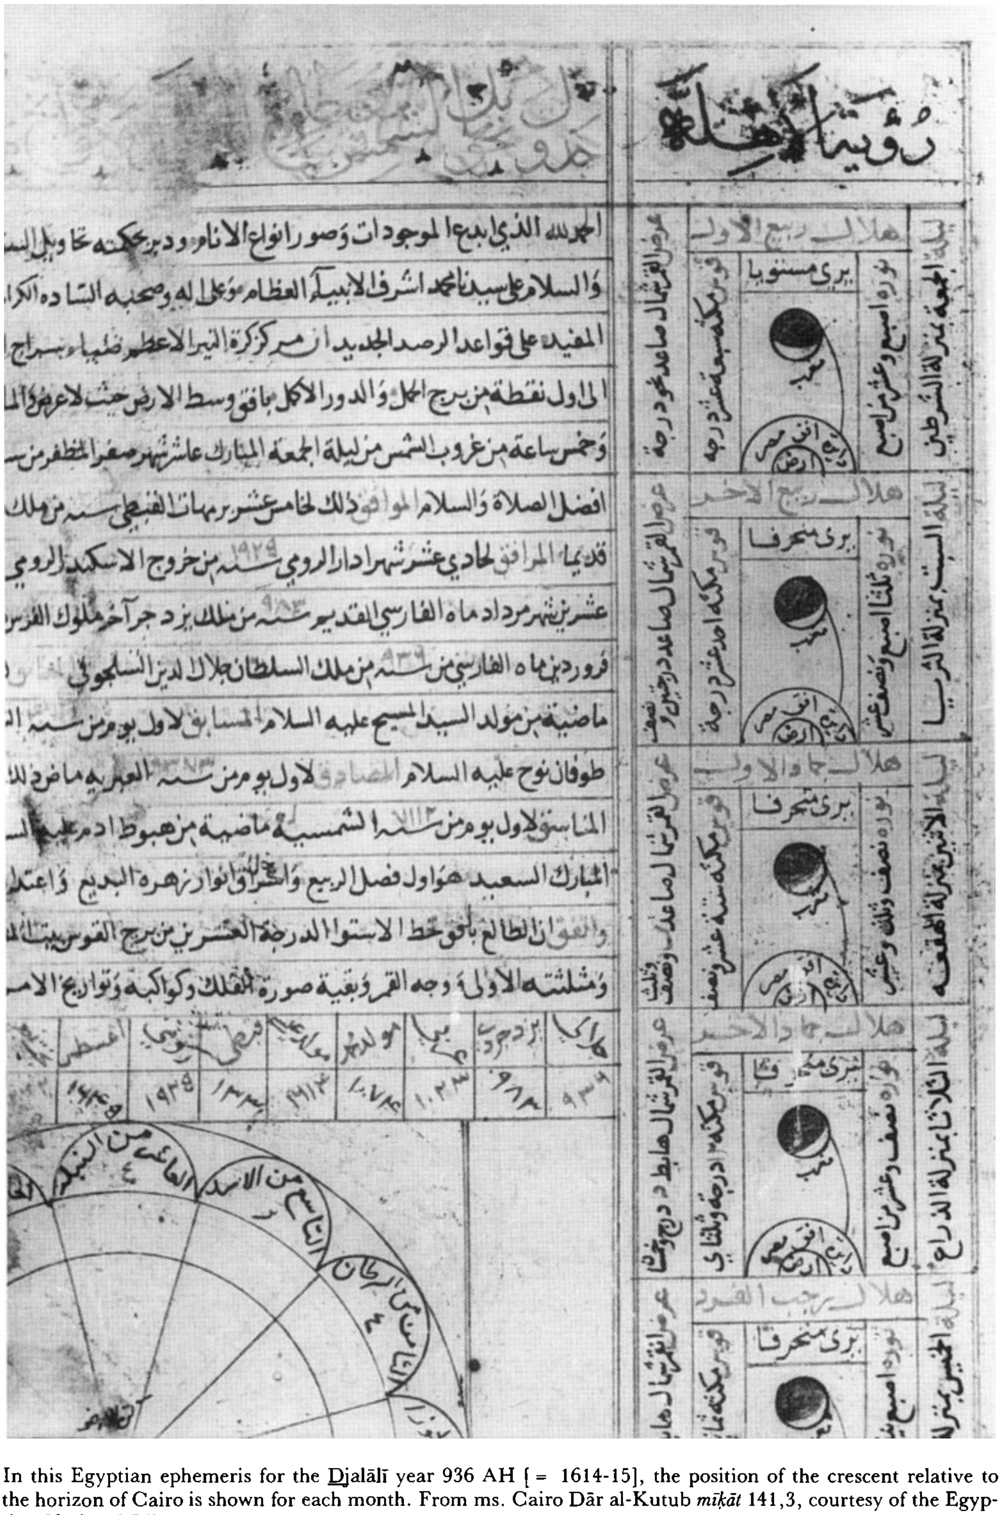
Geography. According to Ibn Rusta, 150, and Ibn al-Faḳīh, 304 (the latter cites Balād̲h̲urī as authority, but the passage is lacking in the *Futūḥ al-buldān*), Rūyān was at first an independent *kūra* attached to Daylam. It was conquered by ʿUmar b. al-ʿAlāʾ (after 141/758), who built a town there with a *minbar* and attached it to Ṭabaristān. Rūyān comprised an extensive area the districts of which lay between two mountains (Ibn al-Faḳīh: "between the mountains of Rūyān and Daylam"); each township could supply from 400 to 1,000 soldiers (Ibn al-Faḳīh: in all 50,000). The *k̲h̲arād̲j̲* levied on Rūyān by Hārūn al-Ras̲h̲īd was 400,050 dirhams. The town of Rūyān called Kad̲j̲d̲j̲a was the headquarters of the *wālī*. Rūyān was near the mountains of Rayy and was reached via Rayy. The text of the two authors above quoted suggests that, between Rūyān and unsubjected Daylam, was a region which formed the military zone from which operations were conducted against Daylam. To this zone belonged S̲h̲ālūs or Čālūs, a town called *al-Kabīra* (situated opposite Kad̲j̲d̲j̲a), another (?) town called al-Muḥdat̲h̲a and lastly Muzn. (But on these frontiers, see the *Ḥudūd al-ʿālam* and Ẓahīr al-Dīn.)

Al-Iṣṭak̲h̲rī, 206, enumerates the mountains of "Daylam" (in the broad sense) as the following: D̲j̲ibāl Ḳārin, D̲j̲ibāl *Fād̲h̲ūsbān and D̲j̲ibāl al-Rūband̲j̲ (according to Barthold, *al-Rūyand̲j̲ = Rūyān). In these last-named highlands, there were formerly kingdoms (*mamālik*); in the part adjoining Ṭabaristān the kings were of Ṭabaristān, and in the part adjoining Rayy they were of Rayy.

According to the *Ḥudūd al-ʿālam* (written in 372/982), tr. Minorsky, 135, comm. 387, Nātil (according to Iṣṭak̲h̲rī, 217, one *marḥala* west of Āmul) Čālūs, Rūd̲h̲ān (= Rūyān) and Kalār (west of Čālūs) formed a province of Ṭabaristān, but the authority there belonged to a king named Ustundār. Rūd̲h̲ān produced red woollen materials for waterproofs and blue *gilīm* (a kind of carpet material).

Rustamdār. From the Mongol period we find the geographical term *Rustamdār*. According to Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, ed. Le Strange, 161, the greater part of its territory was irrigated by the

The crescent visibility theory of Abū Dja'far al-Khwārazmī [*q.v.*] from the early 3rd/9th century. The table, which serves the latitude of Baghdād (taken by the author as 33°), displays the minimum distance between the sun and moon for each zodiacal sign. From ms. Cairo Ṭalʿat falak *fārisī* 11, fol. 61a, courtesy of the Egyptian National Library.



Calculations of the possibility of crescent visibility on the first day of the civil months of the year 1125 AH [= 1713-14]. The tables, part of a set for the years 1125-30 AH and serving Cairo, show the lunar longitude and latitude (but, alas, for the purposes of analysis not the solar longitude), the apparent distance between the sun and moon, the altitude of the moon, the difference in setting times of the two luminaries, and then at the end of each line a prediction. If the crescent cannot be seen, the new month will start on the next day. From ms. Cairo Dār al-Kutub *ṣināʿa* 166,2, fol. 40a, courtesy of the Egyptian National Library.

In these extracts from a Yemeni ephemeris for the year 808 AH [= 1405-6], the information at the top of the double-page for a specific civil month relates to the astrological implications of the full moon in the middle of that month and to the new moon on day one, for which the prediction is that it will not be seen (*lā yurā*). The main tables show the ecliptic positions of the sun, moon and five naked-eye planets, as well as the implications of the relative positions of the moon and the other celestial bodies, for each day of the month in question. From ms. Cairo Dār al-Kutub Taymūr *riyāḍa* 274, pp. 104-5, courtesy of the Egyptian National Library.

In this Egyptian ephemeris for the Djalālī year 936 AH [= 1614-15], the position of the crescent relative to the horizon of Cairo is shown for each month. From ms. Cairo Dār al-Kutub *mīkāt* 141,3, courtesy of the Egyptian National Library.

Shāh-rūd (?!) and ʿAlī b. Shams al-Dīn Lāhīdjī, *Taʾrīkh-i Khānī*, ed. Dorn, 298, says that Ṭālaḳān (on the upper Shāh-rūd) adjoined Rustamdār. On the other hand, Ẓahīr al-Dīn gives the term a larger connotation and uses it sometimes as a synonym of Rūyān and sometimes with a special meaning. An examination of the passages led R. Vasmer, *Die Eroberung Ṭabaristāns*, 123-4, to the conclusion that Rustamdār in the proper sense was situated towards Kudjūr and Kalār, while Rūyān primarily meant the country between Rustamdār and Ḳasrān (i.e. the country towards Rayy). According to Ẓahīr al-Dīn, 19-20, the eastern frontier of Rustamdār was originally at Sī-sangān (near the mouth of the river of Kudjūr), but in the time of the Saldjūḳ Sandjar was brought back to Alīsha (near Āmul?); the western frontier was at first at Malāṭ (near Langarūd in Gīlān), but in 590/1193 was brought back to Sakhtasar (on the eastern frontier of Gīlān) and in 640/1242 at Namak-āwa-rūd (west of Kalārastāḳ). It is curious that Ẓahīr al-Dīn, 17, seems to place the "town of Rūyān" (the Kadjdja of Ibn Rusta) at Kudjūr, but the passage is not very explicit and the legend of the foundation of the town given by Ẓahīr al-Dīn may belong to a period before the appearance of the term Rustamdār.

The princes of Rūyān. The title attested for the dynasty is Ustundār (perhaps **Ustan-dār* < *Ōstān-dār*; cf. al-Ṭabarī, i, 2638). It is not clear if the dynasty also took the title of *pādhūspān* (<*pātgōspān*), which in Sāsānid terminology was at first borne by the viceroys of the four great divisions of the empire, the prerogatives of which were lessened in time by the increase in power of the military commanders (*sipāhbadh*; cf. Christensen, *L'Iran sous les Sassanides*², 139, 352, 518 ff.). The fact is that in the passage in al-Iṣṭakhrī, 206, the mountain of *Fādhūsfān is mentioned separately and, it seems, to the east of *Rūyāndj, but it is possible that the two names only mean the two parts of "Rūyān" which at this time were under Ṭabaristān and Rayy respectively. In any case, in the genealogy of the Ustundārs (Ẓahīr al-Dīn, 146-54, 320-1), Pādūspān appears as the personal name of the eponymous founder and of certain princes only. The eponym Pādūspān (towards the end of the 7th century?) was regarded as one of the three sons of Gīl-Gawbāra, a descendant of the Sāsānid Djāmāsp (who reigned 497-9). Towards the beginning of the 4th/10th century (al-Iṣṭakhrī, 206, see above), the dynasty seems to have passed through a crisis which it survived. After the death of Djalāl al-Dawla Kayūmarth b. Bīsutūn b. Gustahm in 857/1453, his possessions were divided between his two sons: the line of Kāwūs reigned in Nūr, in the valley of the left bank tributary of the river of Āmul (Haraz-pay), and that of Iskandar at Kudjūr, on the northern slopes of the mountains of Nūr.

On the feudal wars in Māzandarān, see Ẓahīr al-Dīn, ed. Dorn, also ed. ʿAbbās Shāyān, Tehran 1333 *Sh*./1954, indices. The princes of Rustamdār retained their autonomy down to the time of the Ṣafawids. In 947/1540 the expedition of Shāh Ṭahmāsp against Malik Djahāngīr b. Malik Kāwūs, who had shut himself up in the fortress of Lāridjān, was a failure (cf. Ḥasan Rūmlū, *Aḥsan al-tawārīkh*, ed. Seddon, 299). In 997/1589 the maliks Djahāngīr b. ʿAzīz of Nūr and Djahāngīr b. Muḥammad of Kudjūr came to pay homage to Shāh ʿAbbās, but finally in 1003/1594 they were both dispossessed of their lands; the ruler of Nūr submitted voluntarily, while he of Kudjūr was seized by force (cf. Iskandar Munshī, *Taʾrīkh-i ʿĀlam-ārā*, 265, 334, 354-7).

(V. MINORSKY)

RŪZBIHĀN b. Abī Naṣr al-Fasāʾī al-Daylamī AL-BAḲLĪ AL-SHĪRĀZĪ, Ṣadr al-Dīn Abū Muḥammad (522-606/1128-1209), Persian Ṣūfī author. Rūzbihān was born into a family of Daylamī origin in the town of Fasāʾ (Pasāʾ) in Fārs and raised without religious guidance. From early youth, however, he was susceptible to dreams and powerful ecstasies, so that he soon abandoned his early trade as a grocer (whence his name Baḳlī), was initiated into a branch of the Kādharūnī *ṭarīḳa*, and travelled in search of religious knowledge. For 50 years he preached in the mosque of Shīrāz, and he established a *ribāṭ* [*q.v.*] there in 560/1165 that continued to be a centre of Ṣūfī training and activity under his descendants for several generations. His predilection for the outrageous ecstatic sayings (*shaṭhiyyāt*) of earlier Ṣūfīs earned him the sobriquet "Doctor Ecstaticus" (*shaykh-i shaṭṭāḥ*). He recorded his spiritual experiences with directness and power, using a prose style of great rhetorical density. Although the *ṭarīḳa Rūzbihāniyya* did not endure as an institution, his writings, particularly his mystical Ḳurʾān commentary, have been studied, preserved, and commented on by a select group of readers in the Ottoman regions (e.g. ʿAynī Sīmābī), in Central Asia (Djāmī [*q.v.*]), and in India (Dārā Shukōh [*q.v.*]), as well as in Persia proper, up to the present day.

Rūzbihān is the subject of two hagiographies written by his grandsons: *Tuḥfat ahl al-ʿirfān* by Sharaf al-Dīn Ibrāhīm b. Ṣadr al-Dīn Rūzbihān Thānī, completed in 700/1300 (ed. Dj. Nūrbakhsh, Tehran 1349/1970), and *Rūḥ al-djinān* by Shams al-Dīn ʿAbd al-Laṭīf b. Ṣadr al-Dīn Rūzbihān Thānī, which was dedicated to the Atābak Nuṣrat al-Dīn Aḥmad-i Lur (r. 696-733/1296-1333) (both texts ed. M.T. Dānish-Pazhūh, *Rūzbihān-nāma*, Tehran 1347/1969).

Among his chief extant writings on Ṣūfism are the following: (i) *Kashf al-asrār*, a spiritual autobiography in Arabic written in 577/1181-2 (partial editions by N. Hoca, Istanbul 1971, and P. Nwyia, in *al-Machriq*, lxiv [1970], 385-406); (ii) *ʿArāʾis al-bayān fī ḥaḳāʾiḳ al-Ḳurʾān* (several times lithographed in India), a voluminous Ṣūfī *tafsīr* in Arabic building on previous commentaries by al-Sulamī and al-Ḳushayrī [*q.vv.*]; (iii) *Manṭiḳ al-asrār*, an Arabic collection of ecstatic sayings (*shaṭhiyyāt*) with commentary and a lexicon of Ṣūfī terminology; (iv) *Sharḥ-i shaṭhiyyāt* (ed. H. Corbin, Tehran 1966), a Persian translation and expansion of the *Manṭiḳ al-asrār* (extracts tr. L. Massignon, in *Kitâb al ṭawâsîn*, Paris 1913, 79-108); (v) *ʿAbhar al-ʿāshiḳīn* (ed. with full bibliographic and biographic essays by H. Corbin and M. Muʿīn, Tehran 1958, also ed. Dj. Nūrbakhsh, Tehran 1349/1971), a Persian treatise on mystical love; (vi) *Mashrab al-arwāḥ* (ed. N. Hoca, Istanbul 1974), an Arabic treatise on 1,001 spiritual states (*aḥwāl*); (vii) *Risālat al-ḳuds* and (viii) *Ghalaṭāt al-sālikīn* (both ed. Dj. Nūrbakhsh, Tehran 1351/1972), Persian treatises for Ṣūfī novices; (ix) *al-Ighāna*, also known as *Sharḥ al-ḥujub wa 'l-astār fī maḳāmāt ahl al-anwār wa 'l-asrār* (lith. Ḥaydarābād 1333/1915), a commentary in Arabic on the veils that separate the soul from God. He also wrote poetry in

Arabic and Persian, plus numerous other works on standard religious subjects such as *ḥadīth*, exoteric Ḳurʾān commentary, and S̲h̲āfiʿī jurisprudence, some of which have only been preserved in excerpts in his biographies.

Bibliography: In addition to the texts mentioned in the article, see L. Massignon, *La vie et les œuvres de Ruzbehan Baqli*, in *Opera minora*, ed. Y. Moubarac, Beirut 1963, ii, 451-65; H. Corbin, *En islam iranien*, Paris 1972, iii, 9-146; C. Ernst, *Words of ecstasy in Sufism*, Albany 1985; idem, *The symbolism of birds and flight in the writings of Rūzbihān Baqlī*, in *Sufi*, xi (1991), 5-12; idem, *The stages of love in early Persian Sufism, from Rābiʿa to Rūzbihān*, in *Sufi*, xiv (1992), 16-23; A. Godlas, *The Qurʾanic hermeneutics of Rūzbihān al-Baqlī*, diss., University of California at Berkely 1991, unpubl. New editions and French translations of the *Kas̲h̲f al-asrār, Risālat al-ḳuds, al-Ig̲h̲āna*, and several minor theological texts are forthcoming from P. Ballanfat. (C. Ernst)

RŪZNĀMA (P.), literally "record of the day", hence acquiring meanings like "almanac, calendar, daily journal" etc.

1. As a mediaeval Islamic administrative term.

In the ʿAbbāsid caliphate's financial departments, the *rūznāmad̲j̲* was the day-book (*kitāb al-yawm*) in which all the financial transactions of the day—incoming taxation receipts, items of expenditure—were recorded before being transferred to the *awārad̲j̲*, the register showing the balance of taxation in hand. The form *rūznāmad̲j̲* points to an origin of this practice in Sāsānid administration. Later, in Fāṭimid and early Ayyūbid Egypt, *rūznāma* was used in a sense contrary to its etymological meaning and its usage in the eastern Islamic world, sc. for the rendering of accounts every ten days.

Bibliography: C.E. Bosworth, *Abū ʿAbdallāh al-Khwārazmī on the technical terms of the secretary's art*, in *JESHO*, xii (1969), 121-2. (C.E. Bosworth)

2. In the sense of almanac, calendar [see TAḲWĪM].

RŪZNĀMED̲J̲I (P.-Tkish.), the Ottoman term for the keeper of a daybook (*rūznāme* or *rūznāmče*), referring principally to the official in charge of the register of daily income and expenditure of the central treasury, *k̲h̲azīne*. From the diminutive form *rūznāmče*, this official was known alternatively as *rūznāmčed̲j̲i*, a title often contracted to *rūznāmče* and identical with the name of the daybook itself. The *rūznāmed̲j̲i* and his scribal staff formed part of the financial bureaucracy headed by the *bas̲h̲ defterdār* [*q.v.*]. The late-15th century *ḳānūnnāme* of Meḥmed II assigns a relatively high scribal status to the *rūznāmed̲j̲i*. This, together with the essential nature of such a register, indicates that the post probably dates from the earliest period of Ottoman administration.

By the mid-10th/16th century, the *rūznāmed̲j̲i*'s office was developing two relatively distinct branches. The *rūznāmed̲j̲i-yi ewwel*, later *büyük rūznāmed̲j̲i* (chief daybook keeper), was the senior official with overall responsibility for recording all kinds of income and expenditure; the *rūznāmed̲j̲i-yi t̲h̲ānī*, later *küčük rūznāmed̲j̲i* (second, or lesser, daybook keeper) became specifically concerned with recording expenditure on the wages and salaries of palace servants and lesser officials of the central administration.

The designation *rūznāmed̲j̲i* was also applied generally to the daybook clerk(s) in various other offices of the central and provincial administration, e.g. keepers of *tīmār rūznāmeleri*, registers of appointments to *tīmār* and *zeʿāmet* [*q.vv.*] holdings.

During the 19th-century *Tanẓīmāt* [*q.v.*], the *k̲h̲azīne* daybook was retitled synonymously *yewmiyye defteri*, and the *rūznāmed̲j̲i* as *yewmiyye kātibi*.

Kütükoğlu (ed.)], *Tarih boyunca paleografya ve diplomatik semineri, 30 nisan - 2 mayıs 1986: bildiriler*, Istanbul 1988, 113-39, 333-46. (Christine Woodhead)

AL-**RUZZ** (A., vars. *aruzz*, *uruzz*), the Arabic word for rice, *Oryza sativa* L., one of two major cultivated species, the other being the indigenous African variety *O. glaberrima*, both of which spring from perennial rice. Arabic agronomical manuals do not distinguish among the known varieties of wild rice, although several types may well have been employed in addition to the domesticated kind.

From its place(s) of origin in India or China *ca.* 3,000 BC., the use of rice spread to the Middle East, where it was also cultivated in pre-Islamic times, albeit in limited areas such as Mesopotamia and Jordan. Knowledge of rice spread slowly among the classical cultures of the Mediterranean; its diffusion westward as a cultivated crop is evident in Islamic times and references to its cultivation in al-Andalus from the 4th/10th century are numerous.

The 6th/12th century Andalusī author Ibn al-ʿAwwām, who cites (ii, 55-63), among others, his eastern predecessor Ibn Waḥshiyya [*q.v.*] (see ms. Bodleian, Hunt. 349, fol. 21), relates various methods of planting rice. These included the familiar (and recommended) submerging of the seedlings in water to drown their weed competitors; however, they were also planted in drier or drained areas which required careful weeding. Transplanting seedlings to the paddy field after they had swollen was the preferred technique, but non-transplanting was apparently also practiced. Milling techniques were basic; the plants were dried after harvesting and then placed in sacks and beaten with metal rods to remove the kernels. After winnowing, the kernels were placed in another bag and beaten to remove the husk. After a second winnowing, the milled, unpolished, white grains were stored in earthenware jars. There is no mention of subsequent polishing of the grains or of using the ancient Indian technique of parboiling the plant to preserve more of its nutrients, such as vitamin B1. Two crops a year were harvested, the summer crop being said to be better than the winter one.

Out of all the cereals known in the mediaeval Islamic world, rice did not seem to enjoy the widespread popularity that wheat, sorghum and barley did. Nevertheless, in areas where it was heavily cultivated, such as the southern parts of the Sawād of ʿIrāḳ and K̲h̲ūzistān, rice bread was the staple of the poor (Ibn Ḳutayba, *ʿUyūn al-akhbār*, i, 221) and al-D̲j̲āḥiẓ reports that it was the favoured fare of misers, who offered it to their guests (*Kitāb al-Buk̲h̲alāʾ*, ed. van Vloten, 129; see also Ḥ. Zayyāt, *K̲h̲ubz al-aruzz*, in *al-Machreq*, xxxv [1937], 377-80). The rice bread baker was called *k̲h̲ubz aruzzī* (the *nisba* of the popular poet of Baṣra Abu 'l-Ḳāsim Naṣr al-K̲h̲ubzaʾ aruzzī [*q.v.*]. The physician al-Rāzī (d. 320/932) observed that rice bread was less digestible than wheat bread, hence it should be eaten with salty food or with a lot of fat or with milk or garlic in order to prevent ill side effects. In this connection, Canard (122) has remarked upon references to the consumption of rice and rice bread with fish in ʿIrāḳ. Ibn Zuhr (d. 557/1162) adds

that rice bread produces thick humour, causes obstructions in the intestines and has an astringent effect upon the stomach.

The general medical view of rice itself was that it inclined towards the "cold" element by nature which, it was said, could be modified when cooked with milk or fat and eaten with sugar. When cooked with milk, oxymel was recommended to be drunk afterwards to counter obstructions in the stomach caused by it.

Food preparation with rice was not, however, confined only to bread among the lowest classes. The mediaeval Arabic culinary manuals, which reflect the urban ambience of a leisured class, contain recipes where rice is employed in a number of ways. The following is a representative selection taken from the anonymous work of probable Egyptian provenance of the 7/13 or 8/14 century (see anon., *Kanz*, index). These include rice as an alternative to cornstarch as a thickening agent in stews made with meat and vegetables, where the rice is added in the last stage of preparation. In another receipt, washed rice cooked in fresh milk and seasoned with mastic, camphor and cinnamon appears to be close to the modern popular rice pudding dish, *muḥallabiyya*. The mediaeval version of *muḥallabiyya*, by contrast, was made with meat or chicken, sweetened with honey and seasoned with spices to which saffron-coloured rice is added. Indeed, the most common way of using rice in a substantial dish was to cook meat and/or vegetables with it in the same pot. One variation called *al-labaniyya* containing meat and leeks or onion is cooked in milk (*laban*) together with a little powdered rice. A dish called *al-aruzziyya* contains meat and seasonings (pepper, dried coriander and dill), into which a small amount of powdered rice is added during cooking and washed (whole) rice towards the end of the preparation. A further use for rice is found in the well-known Egyptian spiced beverage *sūbiyya*, which could be made with either wheat or rice. And, as with certain other beverages, this could have been made in both an intoxicating and a legal, non-alcoholic, version. The method of preparing rice flour is given in one receipt for use in another preparation called *us̲h̲nān*, a perfumed (powdered, pasty?) mixture for washing and scenting the clothes and hands. Finally, rice was also used in making vinegar.

The remaining extant mediaeval Arabic cookbooks contain dishes similar in style to these just mentioned. One, *aruzz mufalfal*, which appears in several versions, was evidently very popular and ressembles a type of Turkish *pilaw*. Made with spiced meat and/or chick peas or pistachio nuts, the dish may contain rice coloured with saffron, white rice alone or a combination of both. A variation of this dish, called *al-mud̲j̲addara*, made from lentils and plain rice, is similar to the modern preparation of the same name. Modern uses of rice which may not go back earlier than the 8th/14th century include rice presented alone as accompaniment to other dishes and as a filling for vegetables such as courgettes and the leaves of the cabbage and vine.

RUZZĪK B. ṬALĀʾIʿ, Abū S̲h̲ud̲j̲āʿ al-Malik al-ʿĀdil al-Nāṣir, Mad̲j̲d al-Islām, vizier of the Fāṭimid caliph al-ʿĀḍid li-Dīn Allāh, d. 558/1163.

He succeeded his father, Abu 'l-G̲h̲ārāt Ṭalāʾiʿ b. Ruzzīk, al-Sayyid al-Ad̲j̲all al-Malik al-Ṣāliḥ Fāris al-Islām, fatally wounded in Ramaḍān 556/September 1161. In order to avoid his father's fate, Ruzzīk, attacked in the doorway to his ministry, had a subterranean passage dug connecting the Dār Saʿīd al-Suʿadāʾ where he lived and the Dār al-Wizāra opposite to it. More relaxed than his father, who had wished to play in the Fāṭimid caliphate of Egypt the role which the Great Sald̲j̲ūḳ sultans had played in the ʿAbbāsid caliphate a century previously (see al-Fāriḳī, cited in Ibn al-Ḳalānisī, *D̲h̲ayl Taʾrīk̲h̲. Dimas̲h̲ḳ*, ed. Amedroz, Beirut 1909, 330, 360-1), Ruzzīk reduced the tax burden (on the meaning of *ḥusbānāt* in the passage of ʿUmāra of Yemen cited by Muḥammad Ḥamdī al-Mināwī, *al-Wizāra wa 'l-wuzarāʾ fī 'l-ʿaṣr al-fāṭimī*, Cairo 1970, 287, see Th. Bianquis, *Le fonctionnement des diwans financiers*, in *AA*, xxvi [1992], 57). He abolished the taxes levied on the pilgrims to the profit of ʿĪsā b. Abī His̲h̲ām, *amīr* of the Holy Cities. He summoned from Alexandria ʿAbd al-Raḥīm b. ʿAlī al-Baysānī, al-Ḳāḍī al-Fāḍil, who headed the *dīwān al-d̲j̲ays̲h̲* and whose remarkable administrative career was to extend into the Ayyūbid period.

Ruzzīk did not have time properly to put into practice his reforms since he could not make firm his own power. Ṭalāʾiʿ b. Ruzzīk, on his death bed, had warned his son against the danger posed by the *amīr al-d̲j̲uyūs̲h̲* Abū S̲h̲ud̲j̲āʿ S̲h̲āwar b. Mud̲j̲īr al-Saʿdī, governor of the Ṣaʿīd or Upper Egypt, and had advised him not to provoke him unnecessarily. However, Ruzzīk wished to replace him at Ḳūṣ [*q.v.*] by the *amīr* Nāṣir al-Dīn S̲h̲ayk̲h̲ al-Dawla Ibn al-Rifʿa. S̲h̲āwar then marched on Cairo with his troops; repulsed towards the Oases, he returned back on to Tarūd̲j̲a, to the west of the Delta, and finally occupied Cairo in Muḥarram 558/January 1163. Ruzzīk fled to one of the intimates of his sister, the wife of the caliph al-ʿĀḍid, Sulaymān, Yaʿḳūb or Munīl b. al-Fayḍ, al-Bīḍ, or al-Nayṣ al-Lak̲h̲mī, possibly a Christian, who betrayed him and handed him over to Ṭayy b. S̲h̲āwar. The later killed him in Ramaḍān 558/August 1163, putting an end to the attempt of this family, of Armenian origin, to assume supreme power in Egypt (its ancestor Ruzzīk had arrived in Egypt with Badr al-D̲j̲amālī [*q.v.*]). As a convert to Twelver S̲h̲īʿism, Ṭalāʾiʿ had been fiercely anti-Sunnī, and his son followed him in this.

Bibliography: The Arabic sources mentioning Ruzzīk are numerous but jejune and repetitive. See, above all, ʿUmāra al-Yamanī, *K. al-Nukat al-miṣriyya fī ak̲h̲bār al-wuzarāʾ al-miṣriyya*, ed. Derenbourg, Paris 1897, 69-70; Ibn Ẓāfir, *Ak̲h̲bār al-duwal al-munḳaṭiʿa*, ed. Ferré, Cairo 1972, 111-13, with rich annotation and bibl.; Maḳrīzī, *Ittiʿāẓ al-ḥunafāʾ*, iii, 242-63 and index. Further information on this vizierate and on the sources in Ayman Fuʾād Sayyid, *al-Dawla al-fāṭimiyya fī Miṣr, tafsīr d̲j̲adīd*, Cairo 1413/1992, notes, 219-21. See also Ibn al-

Wardī, *Taʾrīkh*, n.p. n.d. [Cairo], ii, 66; J.-C. Garcin, *Remarques sur le plan topographique de la grande mosquée de Qûṣ*, in *AI*, ix (1970), 97-108; idem, *Un centre musulman de la Haute Egypte médiévale, Qûṣ*, Cairo 1976, indispensable for the period of the military vizierate. (TH. BIANQUIS)

RZEWUSKI, (Count) Wenceslas Severin (1785-1831?), the son of a Hetman or supreme general of Poland.

Born at Lemberg (Lvov), he was eight years old at the time of the Second Partition of Poland in 1793. Deeply moved by the dismemberment of his native land, Wenceslas' father voluntarily exiled himself to Austria and chose Vienna for his home. He established friendly relations with the Viennese aristocracy and the French emigrés, and it was in this Franco-Germanic milieu that the young Rzewuski was brought up. Under the influence of his uncle, Jan Potocki, he early acquired a great love for the Orient and avidly studied oriental languages. Together with the famous orientalist Josef von Hammer, he began in 1809 the publication of a periodical, *Die Fundgruben des Orients* "Treasures of the East".

Also, whilst applying himself to the study of Arabic, he set up his own stud farm, having conceived the extravagant idea of improving the European horse stocks by bringing in new blood from the Arabian desert. A journey to the East was now vital for him. In 1817, having made various preparations, he set out for Istanbul in order to realise his plan. His journey took two years and had no element of the merely pleasant jaunt. He explored Turkey and Syria; went into the mountains of Nadjd; ploughed through the desert with Bedouin tribes who proclaimed him *amīr*, joined up with, in their company, the escort providing the safety of the Pilgrimage Caravan and thus was able—although a non-Muslim—to get into Mecca, whose site and the rites there he describes briefly; had a long stay with Lady Hester Stanhope; took part, against his better judgement, in the rising at Aleppo of 1819; and returned to Europe with 140 horses chosen from amongst the best of the Nadjdī stock.

Once back home, he wrote in 1822 a work in two volumes, totalling some 800 pages, *Sur les chevaux orientaux et provenants* (sic) *de races orientales*. Vol. I is devoted to the Bedouins, their natural habitat, their customs and their tribes. It is thus a lively and vivid travel narrative, rich in anecdotes and descriptions of all kinds. Everything goes past in review: towns, notably Aleppo and Damascus, the countryside, the desert, famous historical sites (Palmyra, Baalbek), the Caravan to Mecca, eminent personalities (Lady Hester Stanhope and the explorer ʿAlī Bey, whose last moments he describes, dying, he affirms, in the Christian faith) and the main events, especially the great revolt at Aleppo, whose course is recorded day by day.

Bibliography: Rzewuski's book, unpublished, is in two volumes, richly illustrated with drawings in Indian ink, in the Warsaw Library, no. Tv. 6651; cf. L. Damoiseau, *Voyage en Syrie et dans le désert*, Paris 1833, 9, 67, 77, 114-15, 130, 140.

(J. CHELHOD)

S

ṢĀʿ (A., masc. or fem.), a measure for grain "of the value of 4 *mudd* (*modius*) according to the custom of Medina" (*LʿA*; al-Khwārazmī, *Mafātīḥ al-ʿulūm*, ed. Van Vloten, 14). If the cubic contents of the *ṣāʿ*, like that of the *mudd*, varied with town and district as far as commercial transactions were concerned, the value of the *ṣāʿ* was from the canonical point of view fixed in religious law by the Prophet in the year 2/623-4 when he laid down the ritual details of the orthodox feast of *ʿīd al-fiṭr*, which carried with it the compulsory giving of alms called *zakāt al-fiṭr*, the value of which in grain was one *ṣāʿ* for each member of a family. It was, of course, the *ṣāʿ* of Medina that was chosen as the standard measure and the *mudd* of Medina henceforth was called *mudd al-nabī*.

This primitive *mudd* of orthodox Islam was standardised by Zayd b. Thābit; and it is from this standard that the *mudd*s and *ṣāʿ*s made henceforth for religious use seem to have been copied more or less accurately. This is, at least, what has been proved for the Maghrib from various documents. According to these documents, the official capacity of the *mudd al-nabī* would be approximately 5 gills and that of the *ṣāʿ* 5 pints.

The Muslim jurists give the following estimates of this measure. For them the value of the *ṣāʿ* is 26 ²/₃ *riṭls* or *raṭls*, the *riṭl* being equivalent to 128 Meccan drams and the dram equivalent to 50 ²/₅ grains of barley. We see how lacking in precision this definition is. If there is no *mudd* or *ṣāʿ* available, the quantity of grain to be distributed for the *zakāt al-fiṭr* is measured with the hands held together, half open, with palms upwards.

Lastly, besides this use of the *ṣāʿ* and of the *mudd al-nabī*, these measures are further used in certain measurements required by religious law: (1) to calculate the *zakāt*, and (2) to measure the minimum quantity of water necessary for an ordinary ablution (*wuḍūʾ*, a *mudd*) and for general ablution (*ghusl*, a *ṣāʿ*).

SĀʿA (A.) "hour", hence "clock".

1. In technology.

Monumental water-clocks are described in detail in two Arabic treatises. Al-Djazarī [*q.v.* in Suppl.] in his book on mechanical contrivances completed in Diyār Bakr in 602/1206 describes two such machines. Riḍwān b. al-Sāʿātī, in a treatise dated 600/1203, describes the water-clock built by his father Muḥammad at the Djayrūn gate in Damascus (see E. Wiedemann and F. Hauser, *Über die Uhren in Bereich der Islamischen Kultur*, in *Nova Acta der Kaiserl. Leop. Deutschen Akad. der Naturforscher*, ciii [1918], 167-272). It fell into disrepair after Muḥammad's death and was restored to working condition under his son's supervision. It was a large construction, having a timber working face about 4.73 m wide by 2.78 m high, built into the front of a masonry structure. The clock had several design defects which undoubtedly caused the

breakdown that Riḍwān undertook to repair. Moreover, Riḍwān himself was not an engineer and his description, though containing some valuable information, omits to deal with some important constructional details.

Al-Djazarī's two clocks, on the other hand, were manufactured and constructed in a very workmanlike manner. Although very similar in principle to al-Sāʿātī's, they did not incorporate any design defects. The first and larger of the two was described in such careful detail that it was possible to construct a full-size working facsimile from al-Djazarī's instructions and illustrations for the World of Islam Festival, in the South Kensington Science Museum, London, in 1976.

The working face of the clock consisted of a screen of bronze or wood about 225 cm high by 135 cm wide, set in the front wall of a roofless wooden house which contained the machinery. At the top of the screen was a Zodiac circle about 120 cm in diameter, its rim divided into the twelve "signs". It rotated at constant speed throughout the day. Below this circle were the time-signalling automata which were activated at each hour. (The clock worked on "unequal" hours, i.e. the hours of daylight or darkness were divided by twelve to give hours that varied in length from day to day.) These included doors that opened, falcons that dropped balls on to cymbals and the figures of five musicians—two drummers, two trumpeters and a cymbalist. The musicians were operated by the discharge of water from an orifice, whereas all the other automata were operated by a heavy float that descended at constant speed in a reservoir. A cord tied to a ring at the top of the float led to a system of pulleys that activated various tripping mechanisms.

The speed of descent of the float was controlled by very ingenious water machinery that included a feed-back control system and a flow regulator, the latter for varying the rate of discharge daily in order to produce the "unequal" hours. The same system was used by Riḍwān, and both writers attribute its invention to Archimedes. There is a treatise that exists only in Arabic and is attributed to Archimedes (*On the construction of water-clocks*, ed. and tr. D.R. Hill, London 1976). The treatise almost certainly contains Hellenistic, Byzantine and Islamic material, but its first two chapters describe water machinery that is essentially the same as that used by Riḍwān and al-Djazarī. There is every likelihood that these chapters were indeed the work of Archimedes.

Al-Djazarī's book also contains descriptions of four other water-clocks, two of which embody the principle of the closed-loop, and four candle-clocks which on a small scale are as impressive from an engineering point of view as the water-clocks.

Other Arabic works add to our knowledge of Islamic hydraulic timekeeping. A certain Ibn Djalaf or Ibn Khalaf al-Murādī worked in al-Andalus in the 5th/11th century (D.R. Hill, *Arabic water-clocks*, Aleppo 1981, 36-46). Unfortunately, the unique manuscript of his treatise on machines is badly defaced, but it is possible to determine the essential details of the automata and water-clocks that are described in it. The most important feature that they incorporate is complex gear-trains, which include segmental gears (i.e. gears in which one of the wheels has teeth on only part of its perimeter, a device that makes intermittent action possible).

Al-Khāzinī's justly famous book on physics, *Kitāb Mīzān al-ḥikma* (ed. Hāshim al-Nadwa, Ḥaydarābād 1940) was completed in 515/1121-2. In the eighth treatise, two steelyard clepsydras are described. On the short arm of the beam was a vessel that discharged water at constant speed from a narrow orifice. Two sliding weights were suspended to the long arm, which was graduated into scales. At a given moment, the weights could be moved to bring the beam into balance and the time could then be read off from the scales (Hill, *Arabic water-clocks*, 47-62).

In 1276-7 a work entitled *Libros del saber de astronomia* was produced in Castilian under the sponsorship of Alfonso X of Castile (5 vols., ed. M. Rico y Sinobas, Madrid 1863). This consists of various works that are either translations or paraphrases of Arabic originals. It included five timepieces, one of which is of significance in the history of horology. This consisted of a large drum made of walnut or jujube wood tightly assembled and sealed with wax or resin. The interior of the drum was divided into twelve compartments, with small holes between the compartments through which mercury flowed. Enough mercury was enclosed to fill just half the compartments. The drum was mounted on the same axle as a large wheel powered by a weight-drive wound around the wheel. Also on the axle was a pinion with six teeth that meshed with 36 oaken teeth on the rim of an astrolabe dial. The mercury drum and pinion made a complete revolution every four hours, and the astrolabe dial made a complete revolution in 24 hours. This type of timepiece had been known in Islam since the 5th/11th century—at least 200 years before the first appearance of weight-driven clocks in the West (S.A. Bedini, *The compartmented cylindrical clepsydra*, in *Technology ad Culture*, iii [1963], 115-41).

The mechanical clock was invented in western Europe towards the end of the 13th century. Almost certainly its inventor came from the ranks of the makers of water-clocks. The verge escapement made the mechanical clock possible, but all its other features—weight-drive, automata, gear-trains and segmental gears—were present in Islamic water-clocks. It is highly probable that these ideas were transmitted from Islam to the European makers of water-clocks. An Islamic influence on the genesis of the mechanical clock may therefore be postulated.

Several of Taḳī al-Dīn's writings are concerned with timekeeping, and one of these, *The brightest stars for the construction of mechanical clocks*, written about 973/1565, has been edited with Turkish and English translations. (Sevim Tekeli, *The clocks in the Ottoman Empire...*, Ankara 1966). In this he described the construction of a weight-driven clock with verge-and-foliot escapement, a striking train of gears, an alarm and a representation of the moon's phases. He also described the manufacture of a spring-driven clock with a fusee escapement. He mentions several mechanisms invented by himself, including, for example, a new system for the striking train of a clock. He is known to have constructed an observatory clock and mentions elsewhere in his writings the use of the pocket watch in Turkey. Taḳī al-Dīn's descriptions are lucid, with clear illustrations, showing that he had mastered the art of horology. Clockmaking did not, however, become a viable indigenous industry, and Turkey was soon being supplied with cheap clocks from Europe. Taḳī al-Dīn himself commented on the low price of these European clocks, which entered Turkey, he said, from Holland, France, Hungary and Germany.

Bibliography: There is now an Arabic edition of al-Djazarī, *al-Djāmiʿ bayn al-ʿilm wa 'l-ʿamal al-nāfiʿa fī ṣināʿat al-ḥiyal*, ed. Ahmad Y. al-Hassan, Institute for the History of Arabic Science, Aleppo; English tr. D.R. Hill, *The book of knowledge of ingenious*

mechanical devices, Dordrecht 1974. Further bibliography given in the text. (D.R. Hill)

3. In eschatology.

Al-Sāᶜa ("the Hour") is one of the most notable concepts of Ḳurʾānic eschatology, for which numerous parallels can be detected in Judaism and Christianity. *Al-Sāᶜa* indicates throughout the scripture the time of the resurrection (XXII, 7) and of the Last Judgement (XXII, 55-7) [see BAᶜTH; ḲIYĀMA]. When the *Sāᶜa* comes, people will meet Allāh carrying their sins with them (VI, 31). Each soul will be given the reward due for its works (XX, 15); the believers will enter Paradise, whereas the idolaters will not be saved by their gods (XXX, 12-16). Those who disbelieve deny the *Sāᶜa* (e.g. XXXIV, 3). The *Sāᶜa* is inevitable (XL, 59), and expected to occur suddenly (XLVII, 18; XLIII, 66), and within a short time (e.g. XVI, 77; LIV, 1; XLII, 17; XXXIII, 63). It will be swift (LXXIX, 42-6). Its exact time is, however, known to Allāh alone (XLIII, 85).

The materialisation of the Ḳurʾānic *Sāᶜa* will be preceded by a cataclysmic catastrophe. The moon will be split (LIV, 1), the earth will quake, and the people will be terrified (XXII, 1-2). The preceding signs (*ashrāṭ*) of the *Sāᶜa* are already manifest (XLVII, 18). The Hour is already "heavy" in the heavens and in the earth (VII, 187).

In post-Ḳurʾānic *ḥadīth*, the portents of the Hour became the subject of numerous traditions in which they were described as natural disasters. The sun will rise from the west (al-Bukhārī, *Ṣaḥīḥ*, 81 [*Riḳāḳ*], 40), a "fire" [i.e. volcanic eruption] will thrust the people from the East to the West (Bukhārī, 92 [*Fitan*], 24), or will burst out in the Ḥidjāz, and illuminate the necks of the camels in Syria (Muslim, 52 [*Fitan*]). Entire tribes will be swallowed up (*khasf*, cf. Ḳurʾān LXVII, 16) by the earth (e.g. Aḥmad b. Ḥanbal, *Musnad*, Cairo 1313/1895, iii, 483, v, 31).

The statements about the portents of the *Sāᶜa* are usually traced back to the Prophet himself; his knowledge about the coming events is taken to demonstrate his prophetic capability, for which reason the traditions containing his apocalyptic utterances concerning the *Sāᶜa* sometimes appear in chapters about his miracles (e.g. al-Bukhārī, 61 [*Manāḳib*], 25).

The most typical structure of Muḥammad's apocalyptic predictions is: "The Hour will not come until..."—*lā taḳūmu 'l-sāᶜa ḥattā*... (for a thorough survey of the various traditions of this type, see Ibn Ḥadjar al-ᶜAsḳalānī, *Fatḥ al-bārī, sharḥ Ṣaḥīḥ al-Bukhārī*, Būlāḳ 1310/1892, repr. Beirut n.d., xiii, 72 f.).

Several traditions of the Prophet comply with the Ḳurʾānic tenet that the time of the Hour is known to Allāh alone (e.g. al-Bukhārī, 2 [*Īmān*], 37). But other traditions stress that it is near at hand, and that Muḥammad was sent as a prophet at a distance of only two fingers away from it (e.g. ᶜAbdallāh b. al-Mubārak (d. 181/797), *Musnad*, ed. al-Sāmarrāʾī, Riyāḍ 1987, no. 87). Sometimes a specific date was indicated for the Hour (e.g. at the turn of a century). After the date had elapsed while nothing happened, the traditions had to be reinterpreted, and new traditions shifting the end to a later date were put into circulation (see S. Bashear, *Muslim apocalypses and the Hour: a case-study in traditional reinterpretation*, in *IOS*, xiii [1993], 75-99).

The eschatological chaos which was to antedate the *Sāᶜa* did not remain limited to natural disasters, but was also expanded in Muslim tradition to human society. Many traditions are based on the conviction that the *Sāᶜa* will come when the orders of cultural and social structures are turned upside down; nomads will construct high buildings, masters will be born to slave-girls, the poor and naked will become leaders, etc. (e.g. al-Bukhārī, 2 [*Īmān*], 37; Ibn Ḥanbal, i, 27, 51-2, 319). Religious and moral degeneration was turned into the most characteristic symptoms of the Hour: Knowledge will vanish, ignorance will prevail, fornication will become routine, and wine drinking will spread (*ibid.*, iii, 151). Spiritual values will give way to showy ambitions. The Hour will not come, says a tradition, till people start competing with each other in (erecting grandiose) mosques (e.g. Ibn Mādja, 4 [*Masādjid*], 2). The most crucial signs of religious degeneration antedating the Hour are that the Arab tribes will revert to the idolatry of the *Djāhiliyya* (al-Bukhārī, 92 [*Fitan*], 23), and that the pilgrimage to the Kaᶜba will be renounced (*ibid.*, 25 [*Ḥadjdj*], 47). The decay of the Muslims before the Hour will eliminate the distinction between them and their non-Muslim predecessors. A tradition of the Prophet states that the Hour will not come until his community starts following in the footsteps of the previous communities (*ibid.*, 96 [*Iᶜtiṣām*], 14; Ibn Ḥanbal, ii, 325, 336, 367).

Other traditions focus on specific Islamic groups whose decline is said to indicate the impending *Sāᶜa*. A tradition says that the Hour will not occur as long as one Companion of Muḥammad is still alive (*ibid.*, i, 89, 93). Another tradition says that one of the portents of the Hour is the perdition of the Arabs (al-Tirmidhī, 46 [*Manāḳib*], 69). Such statements indicate that, like many other topics, that of the *Sāᶜa* was, too, used for advertising the virtues (*faḍāʾil*) of various groups and factions within the Islamic community.

The great bulk of the traditions about the *Sāᶜa* are recorded in the *ḥadīth* compilations in the sections entitled *Fitan* (sometimes also called *Malāḥim* [*q.v.*]), i.e. tribulations, civil strife and wars which started since the murder of ᶜUthmān [see FITNA]. These historical events were identified with the portents of the Hour, and they, too, appear in Muḥammad's apocalypses. They are often referred to in a cryptic manner. Once interpreted they can be used for dating the traditions (see L.I. Conrad, *Portents of the Hour: Ḥadīth and history in the first century A.H.* (forthcoming in *Isl.*). See also M. Cook, *Eschatology, history and the dating of traditions*, unpublished paper submitted to the third colloquium *From Jāhiliyya to Islam*, The Hebrew University, Jerusalem 1985).

The apocalyptic predictions of Muḥammad contain also messianic ideas: ᶜĪsā b. Maryam [*q.v.*] will descend and restore peace, faith and justice, and will defeat the Dadjdjāl [*q.v.*] (e.g. Ibn Ḥanbal, ii, 406). This vision of eschatological combat with evil powers which will mark the beginning of a new golden era was incorporated into the symptoms of the Hour. The expected Descent of ᶜĪsā and his clash with the Dadjdjāl appear amongst the portents of the Hour in the earliest *ḥadīth* compilations. In the *Djāmiᶜ* of Maᶜmar b. Rāshid (d. 154/770) (preserved in the *Muṣannaf* of ᶜAbd al-Razzāḳ (d. 211/827), x-xi, ed. Ḥabīb al-Raḥmān al-Aᶜẓamī, Beirut 1970), a tradition is recorded in which ten symptoms of the Hour are counted (ᶜAbd al-Razzāḳ, xi, no. 20792). Some of them reflect Ḳurʾānic imagery. The signs are: Three instances of people being swallowed up in the ground; the emergence of the Dadjdjāl; the Descent of ᶜĪsā; the emergence of the Beast (*Dābba* [*q.v.*]; see Ḳurʾān, XXVII, 82); the Smoke (*Dukhān*; see Ḳurʾān, XLIV, 10); the breaking loose of Yādjūdj and Mādjūdj (Gog and Magog; see Ḳurʾān, XXI, 96-7); a chilly wind which will take away the soul of every believer; and the rising of the sun from the west.

Historical enemies of the Muslims were turned into

the evil party of the eschatological wars. In the early *Ṣaḥīfa* of Hammām b. Munabbih (d. 132/749), they are the Turks. Battles with various Turkish tribes are said to mark the approaching Hour (Hammām b. Munabbih, *Ṣaḥīfa*, ed. Rifʿat Fawzī ʿAbd al-Muṭṭalib, Cairo 1985, no. 126). In the *Djāmiʿ* of Maʿmar b. Rās͟hid, the Rūm, i.e. the Byzantines, appear as the eschatological rivals. The traditions about them reflect the greatest military ambition ever nurtured by the Muslims, namely the conquest of Constantinople [see ḲUSṬANṬĪNIYYA]. At the same time, they also reveal the Muslim apprehensions of the grand military power of the Byzantine empire. The expected battle for Constantinople is predicted in a clear eschatological context. It is stated in ʿAbd al-Razzāḳ (xi, no. 20812) that the Hour shall only come when the battle with the Byzantines breaks out. During the battle, Constantinople will fall, the Dadjdjāl will appear and the Muslims will die fighting him. But according to other traditions, the Dadjdjāl will soon be defeated by ʿĪsā (Ibn Ḥibbān, xv, no. 6813. See also W. Madelung, *Apocalyptic prophesies in Ḥimṣ in the Umayyad age, JSS*, xxxi [1986], 158 f.). In a tradition appearing in other *ḥadīth* compilations (e.g. al-Buk͟hārī, 58 [*Djizya*], 15), the anticipated combat with the Byzantines is again set in an eschatological context, but this time, it is not the much-desired fall of Constantinople which is predicted but rather a massive Byzantine attack of which the Muslims seem to have been worried at the time when the tradition was first prompted. This attack is the last of six events which, according to Muḥammad's prophesy, will precede the Hour (for a detailed analysis of this tradition, see Conrad, *art. cit.*). The first five are well known from Islamic history: Muḥammad's own death; the conquest of Jerusalem; a frightful epidemic (interpreted by Muslim commentators as the plague of ʿAmwās [*q.v.*] in ʿUmar's days); abundance of wealth with which no one will be satisfied any longer (said to refer to spoils coming in from the occupied lands in the days of ʿUthmān); a devastating *fitna* (explained as the events which took place following the murder of ʿUthmān). The sixth sign is a truce with the Byzantines, which the latter will soon violate and then attack the Muslims with a mighty army. According to Muslim commentators, only the latter event is yet to come (see Ibn Ḥadjar, *Fatḥ al-bārī*, vi, 199).

In less prevalent traditions, the expected eschatological wars include battles against other historical enemies of Islam, namely the Jews. Muslim tradition had turned them into the supporters of the Dadjdjāl. It is related that when the Hour occurs, inanimate objects will be able to talk, and each stone will surrender to the Muslims the Jew who hides behind it (e.g. al-Buk͟hārī, 56 [*Djihād*], 94; Muslim, 52 [*Fitan*]; Ibn Ḥanbal, ii, 398, 417, 530).

The messianic expectations for salvation following the eschatological wars were not only focused on the Descent of ʿĪsā who would defeat the Dadjdjāl, but also on the appearance of the Mahdī [*q.v.*]. His exact identity was disputed between various political groups, and their disparate pretensions are often reflected in the traditions, including those referring to the Hour. In some of them, it is stated that the *Sāʿa* will not occur until a man from Muḥammad's family comes and fills the earth with justice (e.g. *ibid.*, iii, 17, 36). A more specific tradition attributes to Muḥammad the statement that the man's name will coincide with that of the Prophet (*ibid.*, i, 376). Such statements could confirm the claims of the ʿAlīds, who anticipated a Mahdī of Muḥammad's family. But other groups expected their own Mahdī. Muslims of Yamanī descent awaited the emergence of a South Arabian ("Ḳaḥṭānī"), i.e. non-Ḳuras͟hī, leader, whose chief achievement would be the conquest of Constantinople (see Madelung, *Apocalyptic prophecies*, 149 f.). Some identified him with the prophet S͟huʿayb b. Ṣāliḥ (Ibn Ḥadjar, *Fatḥ al-bārī*, xiii, 67-8). Such expectations triggered off the reaction of those who believed that leadership should only be invested with members of Ḳurays͟h. The latter included the predicted advent of the Ḳaḥṭānī among the ominous portents of the *Sāʿa*. A tradition stating that the Hour will not come until the Ḳaḥṭānī leads the people was recorded by al-Buk͟hārī under the derogatory heading (92 [*Fitan*], 23: "The change of time till idols are worshipped"). In other traditions with the same statement about the Ḳaḥṭānī, the hopes for the conquest of Constantinople are scorned (ʿAbd al-Razzāḳ, xi, no. 20816). Another tradition of the Prophet predicts the advent of a man from the *mawālī* whose name is Djahdjāh; he will lead the people at the end of days (al-Tirmid͟hī, 31 [*Fitan*], 50; Ibn Ḥanbal, ii, 329). Some Muslim scholars identified him with the Ḳaḥṭānī (Ibn Ḥadjar, *Fatḥ al-bārī*, vi, 397).

Bibliography (in addition to the references given in the article): Wensinck, *Handbook*, 100-1 (s.v. *Hour*). A variety of prophetic traditions with numerous kinds of *as͟hrāṭ al-sāʿa* may be found in the *Fitan* sections of the following *ḥadīth* compilations: Ibn Abī S͟hayba, *al-Muṣannaf fī 'l-aḥādīth wa 'l-āthār*, Bombay 1967, xv, 5 f.; Buk͟hārī, *Ṣaḥīḥ, Kitāb* no. 92; Muslim, *Ṣaḥīḥ, Kitāb* no. 52; Abū Dāwūd, *Sunan, Kitāb* nos. 34, 36; Ibn Mādja, *Sunan, Kitāb* no. 36; Tirmid͟hī, *Ṣaḥīḥ, Kitāb* no. 31; Nūr al-Dīn al-Hayt͟hamī, *Kas͟hf al-astār ʿan zawāʾid al-Bazzār*, ed. Ḥabīb al-Raḥmān al-Aʿẓamī, Beirut 1979, iv, 88 f.; idem, *Madjmaʿ al-zawāʾid wa-manbaʿ al-fawāʾid*, repr. Beirut 1987, vii, 223 f., viii, 5 f.; Muḥammad b. Aḥmad Ibn Ḥibbān, *al-Iḥsān fī taḳrīb Ṣaḥīḥ Ibn Ḥibbān, tartīb ʿAlāʾ al-Dīn al-Fārisī*, ed. S͟huʿayb al-Arnaʾūṭ, Beirut 1988, xv, 5 f.; al-Ḥākim al-Naysābūrī, *al-Mustadrak ʿalā 'l-Ṣaḥīḥayn*, Ḥaydarābād 1342/1923, iv, 418 f.; al-Ḥusayn b. Masʿūd al-Bag͟hawī, *Maṣābīḥ al-sunna*, Beirut 1987, iii, 465 f.; Ibn Ḥadjar al-ʿAsḳalānī, *al-Maṭālib al-ʿāliya bi-zawāʾid al-masānīd al-t͟hamāniya*, ed. SAʿĀDA (A.), happiness, bliss, a central concept in Islamic philosophy to describe the highest aim of human striving, which can be reached through ethical perfection and increasing knowledge. In non-philosophical literature, the term (as opposed to *s͟haḳāwa, s͟haḳwa, s͟haḳāʾ, s͟haḳā*) describes either happy circumstances in life (see for instance Ibn Ḥanbal, *Musnad*, ed. Cairo 1313/1895-6, i, 168, 29-30, iii, 407, last section), the unexpected happiness of a long life (*Musnad*, iii, 332, 28), preservation from temptations (*ibid.*, i, 327, 9-10; Abū Dāwūd, *Sunan, Kitāb al-Fitan*, 2, Ḥimṣ 1973, iv, no. 4263), or the eternal stay in Paradise.

The last meaning is based on the Ḳurʾān (e.g. sūra XI, 105/107, 108/110), whose eschatological implications led to the newly-created term *yawm al-saʿāda* = "Day of Resurrection" (cf. Dozy, *Supplément*, i, 654). The Ḳurʾān, and occasionally *ḥadīth* (e.g. al-Tirmid͟hī, *Sunan, Tafsīr al-Ḳurʾān*, ed. Ḥimṣ, ix, no.

3341), already indicate that mankind, because of divine predestination, is divided into "happy" inhabitants of Paradise and "unhappy" dwellers in Hell. However, the impact of predestination is mitigated by utterances according to which an active effort of the human being is required. Next to human acceptance (*riḍā* [*q.v.*]) of what God has predestined, *Musnad*, i, 168, 26-7, also mentions the prayer to God for obtaining what is good (*istikhāra* [*q.v.*]) as a characteristic of *saᶜāda*.

Under the influence of various classical doctrines (cf. Spaemann), namely of Platonic political philosophy, of Aristotelian ethics, of Neo-Platonism, and partly also of Islamic mysticism, the possibility for a human being to strive after *saᶜāda* is often described in Islamic philosophy as the pursuit of "assimilation to God" (ὁμοίωσις θεῷ, Plato, *Theaet.*, 176 B), of nearness to God, and of knowledge of God through a virtuous life. At the beginning of Islamic philosophy, this interpretation is found in al-Kindī's works. His *Risāla fī ḥudūd al-ashyāʾ wa-rusūmihā* (ed. Abū Rīda, *Rasāʾil*, i, 177 ff. = *Cinq épîtres*, 37 ff.), his utterances transmitted in the *Muntakhab Ṣiwān al-ḥikma* of Abū Sulaymān al-Sidjistānī (ed. Dunlop, §§ 246-8), his *Risāla fī alfāẓ Sukrāṭ* (ed. Fakhry, *Dirāsāt*, 45-60), his *Risāla fī Alkibiades wa-Sukrāṭ* (cf. Atiyeh, 123 ff., Alon, 131 ff.; Butterworth, in *Political aspects*, 32 ff.) and his *Risāla fī 'l-ḥīla li-dafᶜ al-aḥzān* (ed. Walzer-Ritter, 1938), which goes back to a lost Hellenistic treatise, describe a concept of virtue which is inspired by the Platonic cardinal virtues. Socrates is named as the ideal of moderation and of spiritual values, which are superior to wordly possessions. The person who turns his attention to intelligibles, and who in his doings keeps to the virtues, will "not be unhappy (*shakiyy*)" in the hereafter, will be near to his Creator and will know Him (*Muntakhab*, § 248, Eng. tr. Atiyeh 1966, 225). This image of Socrates was adopted, with some modifications, by Abū Bakr al-Rāzī [*q.v.*] in his *al-Sīra al-falsafiyya* (ed. Kraus, *Rasāʾil*, 99 ff.; tr. Arberry, *Aspects*, 120 ff; cf. Walker in *Political aspects*, 77 ff.). The person who leads a moderate life and who, as far as possible, restrains his passions, "assimilates himself to God as far as possible" (*Rasāʾil*, ed. Kraus, 108, 8 ff.). In his *Maḳāla fī amārāt al-iḳbāl wa 'l-dawla* (= "political success"), Abū Bakr al-Rāzī expresses this as follows (*Rasāʾil*, ed. Kraus, 145, 8): "progress (*tanakkul*) and knowledge (*ᶜilm*) belong to the symptoms of "happiness" (*iḳbāl*) and indicate that a person "is attentive to happiness" (*tayakkuẓ al-saᶜāda lahu*)." Knowledge and justice are named as the main aims of the human being.

This ideal of virtue was adopted by Abu Bakr's opponent, the Ismāᶜīlī Abū Ḥātim al-Rāzī [*q.v.*], with one alteration: the bearer par excellence of the Platonic cardinal virtues and of the Aristotelian principle of the golden centre is the Prophet Muḥammad, who possesses knowledge revealed by God. He who follows him and does not rely upon his own intuition, is able to understand the religious laws and can be sure of salvation (*nadjāt*) (Abū Ḥātim, *Aᶜlām*, ed. Al-Sawy, 77 ff., esp. 110, 9 ff.; cf. Daiber, 1989).

The high appreciation of reason as the guideline for a practical philosophy, understood as ethics in the first place, is characteristic of the philosophers mentioned so far, and culminates in al-Fārābī's [*q.v.*] thesis of the ideal sovereign as philosopher and prophet (cf. Daiber, *Ruler*). His knowledge, inspired by the divine active intellect, enables him to govern the Ideal State by ordering religious laws. Religion appears as the imitating picture ("imitation") and the "instrument" of philosophy, which is essentially understood here as practical philosophy and as ethics of the individual person in the State. In this way, philosophy, thus understood, realises itself through religion and becomes an ethical insight into "what is good and evil in the actions usually performed by human beings" (al-Farabi, *Mabādiʾ*, ed. Walzer, 204, 1-2). As was the case with Aristotle (*Nicomachean Ethics*, 1144a, 5-6), philosophy is not exclusively "scientific perception" or theoretical philosophy; rather, it provides a human being with an ultimate degree of happiness (*al-saᶜāda al-kuṣwā* = *eudaimonía*; cf. Daiber, *Prophetie*, 733-4; Shahjahan) with the help of the above-mentioned ethical insight, i.e. practical philosophy. When al-Fārābī speaks of "political happiness" (see Galston, in *Political aspects*, 100 ff.), he has in mind the Aristotelian concept of the human being as ζῷον πολιτικόν (*Politics*, 1253a, 2), who needs the help of his fellow-citizen in an Ideal State, governed by a philosopher who possesses prophetical knowledge.

This "political happiness" is reflected in the practical aspect of al-Fārābī's concept of *saᶜāda*. It is part of the ultimate happiness, namely that of the hereafter; the human being can reach this when his soul liberates itself from its corporeal existence, actualises its potential intellect and arrives at the level of the active intellect. But happiness, in its complete form, is at the same time practical perfection. For practical philosophy, on the one hand, shows the way to theoretical perfection, to contemplation; on the other, theoretical perfection is the signpost towards practical philosophy, the ethical insight into the Perfect •State. The latter's sovereign, the prophet-philosopher, transmits it to his subjects, the state's citizens, in the form of religious laws, religion being the sum total of these laws.

In this way, theoretical philosophy develops into practical-ethical perfection through practical philosophy and through religion that is, through the guidance of religious prescriptions, transmitted by the philosopher-prophet. At the same time, practical-ethical perfection in the Ideal State, in society, is the prerequisite for theoretical perfection, i.e. contemplation. The theoretical and practical aspects of knowledge, of moral-ethical insight respectively, are thus inseparably united in al-Fārābī's concept of *saᶜāda*.

This link between ethics and knowledge is also found in the *Epistles* (*Rasāʾil*) of the Ikhwān al-Ṣafāʾ [*q.v.*], possibly composed in A.D. 959-60. Their political philosophy betrays the influence of al-Fārābī (Enayat; Abouzeid), but they accentuate more strongly the Neo-Platonic elements and are eschatologically inspired. Through "purification" of his soul and reform of his character, the human being acquires increasing knowledge of "intelligibles" (*al-umūr al-ᶜakliyya*), for it is only knowledge (*maᶜrifa*) of God which leads to ultimate happiness and to salvation in the hereafter (*Rasāʾil*, iii, 241, 322-3; tr. and comm. Diwald, 203 ff., 419 ff.). For this, a human being needs as a preliminary step the fraternal society, a society which is aware of its solidarity in being obedient to the divine law (*nāmūs* [*q.v.*]), and jointly pursues "the good of the religion and of the world" (*ṣalāḥ al-dīn wa 'l-dunyā*) (*Rasāʾil*, i, 223, 16).

The stronger accentuation of individual ethics, already expressed by the Ikhwān al-Ṣafāʾ, led Miskawayh [*q.v.*], in his *Tahdhīb al-akhlāk*, to declare that a human being certainly does need the help of his fellow-citizen, and therefore must live with him in love (*maḥabba*) and friendship (*ṣadāka*), but also that inequality is the reason why everyone must strive after his own happiness by bringing his character to perfec-

tion (*al-kamāl al-khulḳī*) (*Tahdhīb*, 72, 10 ff.). For the individual in society, he thus offers ethics which are inspired by the Platonic-Aristotelian doctrine of virtues (Fakhry, 1991, 107 ff.). Just and virtuous acts and increasing knowledge of the "spiritual things" (*Tahdhīb*, 83 at the end) purify the soul of the "physical things" (*al-umūr al-ṭabīʿiyya*; see *Tahdhīb*, 91, 18; cf. Plotinus, *Enn.* I, 6), lead to "tranquility of the heart"(*Tahdhīb*, 40, 5) and to "nearness to God" (*djiwār rabb al-ʿālamīn*; see *Tahdhīb*, 13 at the end). This is the state of perfect knowledge and of wisdom, in which the human being resembles the divine first principle, the divine intellect (*Tahdhīb*, 88-9); Miskawayh called it the ultimate happiness, which is preceded by several preliminary steps (*saʿādāt*) (Miskawayh, *al-Saʿāda*; Ansari 1963; Fakhry, 1991, 121 f.).

Among the Islamic thinkers who followed Miskawayh's ethics (Fakhry, 131 ff.), mention may be made here of al-Rāghib al-Iṣfahānī [*q.v.*]. In his *Kitāb al-Dharīʿa ilā makārim al-sharīʿa* he offers an original adaptation of Greek ethics as it was known to him through al-Fārābī, Miskawayh and the *Rasāʾil Ikhwān al-Ṣafāʾ*, to the statements of the Ḳurʾān (Daiber, *Griechische Ethik*). He replaces Miskawayh's Platonic-Neoplatonic concept of the assimilation to God by the Ḳurʾānic concept of *khilāfa* (sūra II, 30; VI, 165). As the "representative" (*khalīfa*) of God in this world, the human being imitates God as much as he is able to, by following the *sharīʿa* and by concerning himself about his sustenance on this earth (cf. sūra XI, 61/64: *istaʿmarakum*). Thus a human being acquires happiness in this world which, as in Miskawayh, is a preliminary to the "real happiness" in the hereafter (*al-Dharīʿa*, 128, 4 ff.; cf. *Tafṣīl al-nash'atayn*).

In al-Rāghib al-Iṣfahānī's ethics, by which al-Ghazālī [*q.v.*] was deeply impressed, a mystical tendency can be detected which was already visible in the *Rasāʾil Ikhwān al-Ṣafāʾ* and in Miskawayh's work. There is not so much concern about the rôle of the individual in society, but rather about striving after the happiness lying in the knowledge of, and the nearness to, God, which is a happiness of the hereafter. This corresponds to the Neoplatonic ἀπράγμων βίος ideal of the philosopher who withdraws from society (cf. Kraemer 1986, 128).

In accordance with this view, the prophet, for Ibn Sīnā, is a Ṣūfī who preaches the divine laws as a way to the mystical path, to the liberation of the soul from the body, to its intellectual perfection, and to the vision of God (Ibn Sīnā, *Risāla fi 'l-saʿāda*; Ansari 1962-3; E.I.J. Rosenthal, 144 ff.). But for Ibn Sīnā too, life in society remains an indispensable preliminary to happiness in the hereafter. Obedience to the lawgiver, to the prophet, is a postulate, as is the fulfilment of duties towards God and towards the fellow man. According to Ibn Sīnā's view, which is clearly associated with that of al-Fārābī, the sovereign, who is a prophet and a Ṣūfī, unites in his person practical and theoretical wisdom (Morris, in *Political aspects*, 153 ff.). This union creates happiness (*al-Shifāʾ, al-Ilāhiyyāt*, ii, 455, 14), but is also a postulate for the sovereign, who combines it with prophetical qualities.

It was the Andalusian philosopher Ibn Bādjdja, and, above all, his younger contemporary Ibn Ṭufayl [*q.vv.*], who drew the final conclusion from the increasingly mystical-Neoplatonic orientation of the *saʿāda* concept. Society is no longer a postulate for the individual to strive after happiness. On the contrary, it is only the isolated philosopher (*al-mutawaḥḥid*), the Ṣūfī, who, withdrawing from society, obtains ultimate happiness through his self-government (*tadbīr*) and his vision of the truth (Altmann; Daiber, *Autonomie*, 242 ff.; Harvey, in *Political aspects*, 199 ff.). For him, it is possible to achieve a mystical ascent to higher forms of knowledge, namely by liberating the soul from the matter and by the union (*ittiṣāl*) with the divine active intellect, which is an emanation from God. Society is only a place to meet (*liḳāʾ, iltiḳāʾ*), which may be useful for the individual and may stimulate his emulation in striving after intellectual perfection. In opposition to Plato's view, the citizen no longer serves society; at best, society can stimulate the individual in his striving after happiness, to be found in intellectual perfection.

In his philosophical novel *Ḥayy Ibn Yaḳẓān*, Ibn Ṭufayl (cf. Fradkin, in *Political aspects*, 234 ff.) consequently developed the thesis that the individual's philosophy and society's religion are not contradictory, but do not support each other either. Ibn Ṭufayl's compatriot Ibn Rushd, who was twenty years his junior did not share with him this radical turning-away from al-Fārābī (Daiber, *Autonomie*, 246-7). In his *Epistle on the possibility of conjunction with the active intellect*, he declares that in this life, too, it is possible to strive after happiness as long as this is not hampered by society. For this, theoretical study should be combined with acts (tr. Bland, 108-9). The aim of such a striving is the immortality of the soul, which is achieved when the soul increasingly unites its acquired knowledge with the active intellect. This union, which is the most perfect form of human cognition, is possible because the active intellect is the form of the *intellectus materialis*, which in its turn is the form of the soul, i.e. its eternal potentiality. It is not only remarkable that Ibn Rushd denies (against al-Ghazālī) the individual immortality, deriving this denial from the union of the soul with the eternal form of the active intellect; much more important is his conclusion that striving after philosophical knowledge, i.e. after happiness, is not a duty of individuals or of individual states, but a task of mankind. This philosophical knowledge is the most perfect form of the universal human knowledge of religious truth which is reflected in the *sharīʿa*. Accordingly, the Ideal State, i.e. the Philosophical State, comprises all mankind; the best Islamic State, a State which only existed during the period of the first four caliphs, is at best an imitation of such a Philosophical State.

Ibn Khaldūn [*q.v.*], the last great Islamic thinker, incorporated into his philosophy of history Ibn Rushd's universalistic opinion, as well as al-Fārābī's and Ibn Sīnā's doctrines (Mahdi, 1957). He put new accents and, by introducing the term *ʿaṣabiyya* [*q.v.*], he gave a new significance to the concept of society. The *polis*, the state, is indispensable for the entire human society, for its progress (*Muḳaddima*, iii, 54 at the end: *iṣlāḥ al-bashar*) and for its preservation. In his philosophy, which he preaches to mankind in the form of "political laws" (*aḥkām al-siyāsa*), the sovereign of the Ideal State, the prophetical lawgiver, deals with the well-being of the world (*maṣāliḥ al-dunyā*) and with the "salvation" of mankind "in the hereafter" (*ṣalāḥ ākhiratihim*) (*Muḳaddima*, i, 343). Philosophy, understood as ethics and politics, as well as religion and the society of the state, are seen here as indispensable materials for the well-being of all mankind in this world and for their happiness (*saʿāda*: *Muḳaddima*, i, 343, 4) in the hereafter.

(H. Daiber)

SAʿĀDAT ʿALĪ KHĀN, Nawāb of Awadh or Oudh (regn. 1798-1814).

His brother Āṣaf al-Dawla had died in September 1797, but after a four months' interim, Āṣaf al-Dawla's putative son Wazīr ʿAlī Khān was set aside and the British governor-General Sir John Shore installed in his place Saʿādat ʿAlī Khān, who had been living under British protection in Benares since 1776. His reign is noteworthy for the extension of British control over the Oudh territories. A treaty concluded with the late Nawāb in 1775 had placed these territories under the protection of the East India Company, which undertook to provide troops for their defence in return for an annual subsidy; in 1798, a fresh treaty increased the subsidy to 76 lakhs a year and transferred the fort of Allāhābād [*q.v.*] to the Company as an arsenal, the Company undertaking to maintain a body of 10,000 men for the defence of the Nawāb's dominions both against internal and external enemies. The mutinous behaviour of the Nawāb's troops prompted the new Governor-General, the Marquis Wellesley (1798-1805), to propose that this useless and dangerous force, which Saʿādat ʿAlī Khān had himself declared would be useful only to the enemy, should be disbanded and replaced by the Company's troops. Alarmed by the dangers that

threatened his person, Saʿādat ʿAlī K͟hān was at first eager for this reform, but afterwards refused his consent and also refused to abdicate, and only in 1801 yielded to pressure and signed the Treaty of Lucknow; this relieved him from all pecuniary obligations to the Company, by the cession of six districts yielding a revenue equal to the cost of the Company's troops, and the Nawāb undertook to introduce into his territories a system of administration conducive to the prosperity of his subjects and calculated to check the ruin that threatened the resources of his country.

Thus Wellesley's fears that the buffer state of Oudh might come under pressure from the west, in particular from the ruler of Afg͟hānistān Zamān S͟hāh (who had already invaded the Pand̲jāb in 1797) in alliance with the Rohilla [*q.v.*] Afg͟hāns, were set at rest. With the cession of the western part of Oudh and its lands along the Ganges and D̲jamnā rivers, only a rump of the state remained until its complete annexation in 1856. Europeans already controlled much of Oudh's economy by the early 19th century, especially the trade in fine cloths and raw cotton, and this commercial control now increased.

Saʿādat ʿAlī K͟hān's reign was an Indian summer of the Mug͟hal culture of Hindūstān, with Lucknow especially flourishing as a centre of S͟hīʿī culture [see LAK͟HNAW]. Saʿādat ʿAlī K͟hān died in 1814 and was succeeded by his second son G͟hāzī al-Dīn Ḥaydar, who subsequently became the first king of Oudh [see AWADH].

SAʿADYĀ BEN YŌSEF, SAʿĪD (ABĪ) YAʿḲŪB YŪSUF AL-FAYYŪMĪ (269-331/882-942), Jewish theologian, philosopher and philologist who wrote in Arabic, considered through his independence and breadth as the initiator of several Jewish intellectual disciplines, and a pioneer in mediaeval Jewish philosophy; he was one of the very few Jewish thinkers covered by the Arabic biographers (cf. Ibn al-Nadīm, *Fihrist*, i, 320).

1. *Life*

He was born at Dīlās in the province of Fayyūm in Egypt, but little is known of his youth except that his father, of humble origin, had the reputation of being a scholar. He probably received a solid education in the Biblical and Rabbinical spheres as well as in Arabic culture. Saʿīd began his literary work at a precocious age, writing in 300/912-13 a Hebrew-Arabic dictionary called *ʾEgrōn* (Hebr. "Collection") (ed. N. Allony, Jerusalem 1969). If the title reminds one of the *K. al-D̲jāmiʿ* of the grammarian ʿĪsā b. ʿUmar al-T̲hakafī (d. 149/766), its alphabetic arrangement according to the final letters "in order to facilitate the writing of verses" could have been the model for the *Ṣiḥāḥ* of al-D̲jawharī (d. 398/1007 [*q.v.*]). Of his *K. al-Lug͟ha*, the oldest Hebrew grammar, also written at this time, only fragments exist. In the course of his period of education, he addressed to Isḥāḳ b. Sulaymān al-Isrāʾīlī (d. *ca.* 344/955) at Ḳayrawān, a physician at the Ag͟hlabid court, a philosophical correspondence which did not, it seems, meet with the approbation of this Neoplatonist. In 303/915, he put together his defence of Rabbinical Judaism against the Karaites [*q.v.*], very numerous in Egypt.

In this same year, Saʿīd left for Palestine, where, according to al-Masʿūdī (*Tanbīh*, 113), he perfected his education at the feet of Abū Kat͟hīr Yaḥyā al-Kātib al-Ṭabarānī (d. 320/932). The latter is also mentioned by Ibn Ḥazm in his *K. al-Fiṣlal wa 'l-niḥal*, iii, 171, as being, together with David al-Muḳammis and Saʿīd himself, one of the *mutakallimūn* of the Jews.

In 309/921, very likely with the aim of getting to know the great Jewish academies of Mesopotamia, Saʿīd left for Bag͟hdād, stopping en route at Aleppo. In 310/922 he was the main protagonist in the controversy over the calendar, in which the heads of the Babylonian community were in opposition to Aharōn Ben Mēʾīr, head of the Palestinian academy. Saʿīd emerged victorious from this quarrel, which is mentioned even by the Syrian historian Elias of Nisibin (11th century) in his chronology. This victory had a determining influence on his career, since, in recognition of his services to the Rabbanite cause, Saʿīd was elected *ʿallūf* or master of the Babylonian academy of Pūm Peditha.

A Jewish society in full transition, becoming progressively Arabised and intellectually enriched by new philosophical and scientific disciplines, posed challenges, to which the creative genius of Saʿīd was able to respond. Stopping up the breaches, he consolidated Rabbinical Judaism's authority, faced as it was with the twin threats of schismatic movements, in part inspired by Islamic heresies, and of Muslim polemics. According to Maimonides, "If it had not been for Saʿadyā, the divine religion might well have almost disappeared, for he made clear its mysteries and strengthened its weak points by spreading it and supporting it by his word and pen" (*Epistle to the Yemen*, ed. A. Halkin, New York 1952, 64). In 316/928, despite his non-Babylonian origin, he was nominated as Gaʾōn or Chief Scholar of the academy at Sūraʾ (whence the name by which he is best known), and under his direction, this institution enjoyed a remarkable renaissance.

Through political intrigues in which the caliph al-Ḳāhir had to intervene, Saʿīd Gaʾōn was deposed in 320/932, but was restored in 327/938 and functioned in the office till his death in 331/942. During the interim years of isolation, he had devoted himself to his literary work.

2. *Works*

H. Malter, Saʿīd's biographer, listed over 200 titles, covering almost all the domains of learning cultivated at that time, such as exegesis, philosophy, philology, law, liturgy, polemics and chronology.

In the legal sphere, Saʿīd was the first Jewish author to have composed his decisions in Arabic. He made the first attempts at codification, in the form of monographs whose structure is clearly inspired by the model of the Islamic *fatwās*.

His main work in philosophy, and the first systematic attempt at a synthesis between the philosophy of *kalām* and Jewish dogmas, was the *K. al-Amānāt wa 'l-iʿtiḳādāt* (ed. in Arabic script S. Landauer, Leiden 1880, in Hebrew script, ed. Y. Kafih, Jerusalem 1970, Eng. tr. S. Rosenblatt, *The Book of beliefs and opinions*, New Haven 1948), written in 322/933. It had a deep influence on Jewish thought,

above all in its Hebrew translation *Sefer ha-ʾemūnōt we-ha-deʿōt*, made in 582/1186 by Yehūdāh Ibn Tibbon. Its importance only faded with the appearance of Maimonides' *Guide for the perplexed*. The arrangement of the work follows, without becoming dependent upon them in a servile fashion, the five principles (*uṣūl*) of Muʿtazilī doctrine. Thus Saʿīd adopted the proof of the existence of God by the contingency of the world, whilst he denied atomism, the rational basis of universal contingency according to *kalām*. His doctrine of the relations between reason and revelation and his rational justification for the dogmas of Judaism became the model for later Jewish philosophers. In it, he attacks, in particular, the Muslim theses concerning abrogation (*naskh*) of the Mosaic revelation.

There are indications that Saʿīd had presumably at his disposal the Arabic translation of the doxographical compilation *De placitis philosophorum* made by Ḳusṭā b. Lūḳā [*q.v.*]. He seems equally to have utilised the *K. al-Zahra* of his contemporary Ibn Dāwūd (d. 294/907). In his *Tafsīr Kitāb al-Mabādī* (Fr. tr. M. Lambert, *Commentaire sur le Sefer Yesira*, Paris 1891, written in 319/931, Saʿīd, as a true *mutakallim*, was particularly interested in the problem of the origin of things.

Saʿīd was also the author of the first translation of the Hebrew Bible into Arabic (*Tafsīr*). Each book was preceded by an Arabic preface, explaining its structure and contents. Faithful to the rationalist tendencies of the Muʿtazila, Saʿīd endeavoured to attenuate the anthropomorphisms. With the accompaniment of a commentary of a philosophical character, his translation became the Vulgate for Arabic-speaking Jews and served as a basis, too, for the Arabic version adopted by the Samaritans and by the Coptic Church. The first published edition, at Constantinople in 953/1546 within the polyglot Sorcino Pentateuch, was the first Arabic text to be printed in the East. The Arabic versions of the polyglot Pentateuch of Paris (1645), with the Latin translation of Gabriel Sionita, and of Walton (London 1654-7), were those of Saʿīd.

(P.-B. FENTON)

SABʿ, SABʿA (A.), seven, is a number of greatest importance in both the Semitic and the Iranian traditions as it combines the spiritual Three and the material Four. Its history probably begins in Babylon with the observation of four lunar phases of seven days each. The seven planets (including sun and moon) have reigned supreme in human thought since Antiquity. Each of them is connected with a specific colour, scent and character. Niẓāmī's (d. in the early 7th/13th century [*q.v.*]) Persian epic *Haft paykar* is the finest elaboration of these ideas. The imagined seven stations between the sublunar world and the transplanetary sphere served as models for the way of the seeker in almost all religions (the Mithras cult is a good example). In Islam, it found its best-known example in the seven valleys in ʿAṭṭār's (d. in the early 7th/13th century [*q.v.*]) *Manṭiḳ al-ṭayr*. Before him, al-Nūrī (d. 294/907 [*q.v.*]) had spoken of the "city of the heart" with its seven walls. To this group of ideas belong also the 70,000 veils of light and darkness which, according to Ṣūfī thought, separate God and human beings. For the Ikhwān al-Ṣafāʾ [*q.v.*], divine creation reaches human kind in seven degrees through the First Intellect.

Seven was often connected with periodicity; the development of human life, especially, was thought to depend upon a seven-year rhythm. Here, the classical example is Ibn Ṭufayl's (d. 581/1185 [*q.v.*]) *Ḥayy Ibn Yaḳẓān*.

Seven plays a considerable role in early Islamic tradition: the Ḳurʾān often mentions the seven heavens, and heptads appear frequently in Sūrat Yūsuf. The *sabʿ mathānī* (sūra XV, 89) are often thought to point to the *Fātiḥa* with its seven sentences. The number of the *sawāḳiṭ al-Fātiḥa*, the letters not found in the *Fātiḥa* (which are used in magic) is again seven. Seven sūras begin with *ḥ-m*, which was later interpreted to mean *ḥabībī Muḥammad*, "My beloved Muḥammad", and the Ḳurʾān has not only seven *wudjūh* "aspects", but also seven canonical ways of recitation. During the *ḥadjdj* or Pilgrimage, the *ṭawāf* around the Kaʿba has to be performed seven times, as has the running (*saʿy*) between Ṣafā and Marwa, and Satan is stoned with three times seven stones.

Al-Bukhārī speaks of seven major sins, and many ritual acts, prayers and invocations should be repeated seven times in order to yield a positive result. But according to a *ḥadīth*, the infidel eats "with seven stomachs."

The Seven Sleepers, mentioned in sūra XVIII, 22, may be the models for numerous groups of heptads, such as the *haft ʿafīfa*, the seven virtuous women, who are venerated in Sind and the Pandjāb as a unit, or the seven protective saints in Marrakesh. In popular usage, one finds customs such as begging alms for a religious purpose from seven women called Fāṭima; in Pākistān, the material for the bridal dress is cut by seven happily-married women. In all these cases, seven points to completion, as it also does in book titles like *Haft iḳlīm* "The seven climes" or *Haft ḳulzum* "Seven oceans" (which, however, is a work on poetic rules).

Ṣūfism knows the seven *laṭāʾif*, fine spiritual points in the body, and seven major prophets are connected with them. Heptads appear in visions (see Rūmī, *Mathnawī*, iii, ll. 1985 ff.). The mystical hierarchy has seven degrees, and in some Ṣūfī traditions, seven saints are sometimes called "the eyes of God." The Tīdjāniyya [*q.v.*] dervishes believe that the Prophet honours their meeting with his presence when a certain litany of blessings over him is repeated seven times.

In the Persian tradition, expressions with Seven abound. For Nawrūz [*q.v.*], *haft sīn* are prepared, that is 7 items (fruit, plants, etc.) whose names begin with *s*; heroic acts such as Rustam's *Haft khʷān* appear sevenfold. Sindbād's seven journeys too belong in this category. The spheres are often called the "seven mills", Ursa Major appears as "seven thrones", *haft awrang*, and to ward off evil one may say "Be seven Ḳurʾāns (or seven mountains) between [the disaster and us]!" To do the work of seven mullās means "to achieve nothing."

Seven reigns the whole philosophy of the Ismāᶜīlīs, the Sevener Shīᶜīs [see ISMĀᶜĪLIYYA], who have developed a complicated system of heptads: seven prophets are the seven pillars of the House of Wisdom, the seventh imām in the succession of a prophet will bring the resurrection. From God's creative words "Be! and it becomes", with its seven Arabic letters (*k.n f.y.k.w.n*), are formed the principles out of which the seven primordial fountains flow. The seven prophets correspond to the seven spheres, the seven imāms in each prophetic cycle, to the seven earths. The heptagonal fountain in the Ismāᶜīlī Centre in London symbolises the structure underlying everything in Ismāᶜīlī thought in an artistic form.

Nevertheless, the number seven leads only to the goal at the end of the created universe, beyond which lies the Eight of eternal bliss—hence the *ḥadīth*, according to which Hell has seven gates, while Paradise has eight.

Conrad, *Seven and the* Tasbīᶜ. *On the implications of numerical symbolism for the study of medieval Islamic history*, in *JESHO*, xxxi (1988), 42-73; Hartmann-Schmitz, *Die Zahl 7 im sunnitischen Islam*, Frankfurt-Bern 1989; A. Schimmel, *The mystery of numbers*, New York 1993.

(ANNEMARIE SCHIMMEL)

SABAʾ or the Sabaeans (Greek Σαβαῖοι), the name of a folk who were bearers of a highly developed culture which flourished for over a millennium before Islam, together with three other folks, Maᶜīn, Ḳataban and Ḥaḍramawt [*q.vv.*]. The main Sabaean centre was at Maryab (later Mārib, see MAʾRIB) in Yemen with its fertile oasis on the western edge of the desert known to Arab geographers as Ṣayhad (modern Ramlat al-Sabᶜatayn). In early historical times there were also Sabaean settlements in the Wādī Adhana above the great dam which waters the oasis of Mārib, in some smaller oases to the north, and in parts of the Wādī Djawf or Wādī Madhāb. All these locations are approximately 1,000 m above sea level. The montane plains lying west of Mārib and having an average level of 2,000 m above sea level were the home of other folks who spoke the same language as the Sabaeans proper, and seem to have formed some kind of federation under the hegemony of Sabaʾ. Towards the end of the first millennium B.C., these highland folks became politically dominant in the Sabaean federation.

Our knowledge of the Sabaeans is derived principally from their own inscriptions. Modern scholarship was first made aware of these by Carsten Niebuhr, member of a Danish exploratory mission in the end of the 18th century. A sporadic number of inscriptions were published and studied during the earlier part of the 19th century, but it was Eduard Glaser's travels in the last decades of the century which produced a large number of copies (mostly squeezes) forming the real foundation of subsequent research. It must be admitted, however, that later 19th and early 20th century scholars indulged too freely in speculative deductions based on insufficient evidence. A turning point came in 1950; from then onwards, an ever more rapid archaeological activity resulting in the discovery of new texts has overturned not a few conclusions too confidently advanced by earlier researchers. At the time of writing, the flow of new material is still in full course, and it has to be anticipated that some of the presently current hypotheses may in their turn prove to be invalid. Any account that can be written at the moment must be taken as still tentative.

1. Script and language. The monumental inscriptions are drafted in a variety of South Semitic alphabet, the so-called *musnad* script [see MUSNAD. 1]. The Sabaic language, with the languages of Maᶜīn, Ḳataban and Ḥaḍramawt, forms an independent branch of Semitic, having in common one distinctive feature that is found nowhere else in Semitic: the use of suffixed *-ān* in the function of a "definite article" corresponding to the Arabic prefixed *al-*. Within this language group, Sabaic is distinguished from the other three by using *h* as prefix of the causative verb and as base of the 3rd person pronouns, where the others have a sibilant. On the southern borders of the Sabaean domain, the area between the Yisliḥ pass and Dhamār used Sabaic language, as did the non-Sabaean Radmān folk to the east thereof, in the Radāᶜ area. By the end of the 3rd century A.D. the other three languages had fallen into disuse, at least for epigraphic purposes, and the inscriptions throughout Yemen, now under Himyarite domination (see below), are in a late form of Sabaic; there are indications that the language may by this time have become a prestigious "learned" language, not in everyday use (this is comparable with the case in North Arabia, where the Nabataean inscriptions are in Aramaic, though the everyday language was probably Arabic).

The general consensus today is to assign the oldest substantial body of Sabaic inscriptions (apart from a handful of seemingly earlier examples) to the 8th century B.C. Yet it still remains not altogether easy to discount completely one point which led Pirenne to propose a dating a couple of centuries later. Inscriptions of this period have rigidly geometrical forms, subjected to strict canons of proportion, astonishingly like Greek inscriptions of the 6th-5th century, but wholly unlike any other Semitic script of that or any earlier dating. It is hard to envisage how this style can have evolved totally independently, with a time-lag of two centuries, in two adjacent cultures with ancient trade links between them. In the latter part of the first millennium B.C., the *musnad* script developed (as was the tendency in Greco-Roman inscriptions) more decorative embellishments, at first with the introduction of serifs at the ends of the strokes.

2. History. For the pre-history of Sabaʾ, that is, before the beginning of the epigraphic record, there is no evidence available as yet. Silt deposits in the Mārib oasis point to intensive agricultural exploitation by artificial irrigation going back to at least the early second millennium B.C.; but what, if any, connection there may have been between these ancient agriculturalists and the Sabaeans as we know them, is wholly obscure. Trade links between South Arabia and Mesopotamia there must have been, judging by Akkadian references to South Arabian products such as frankincense and myrrh; but the first specific mention of Sabaeans in Akkadian sources is in the 8th century B.C., when the governor of Suḫu (approximately ᶜĀna on the middle Euphrates) and Mari intercepted and plundered a caravan of folk from Taymāʾ and Sabaʾ ("whose home is far away"), seemingly for making a detour to evade transit dues in Suḫu (A.

Cavigneaux and B.K. Ismail, *Die Statthalter von Suḫu und Mari*, in *Baghdader Mitt.*, xxi [1990], 351). Two other texts, known to us for a long time and recording "gifts" made by Sabaeans to Assyrian rulers in *ca.* 715 and 685 B.C., have led some scholars to postulate a Sabaean group living close to Assyria, since "gifts" was interpreted as "tribute". In fact, it is now clear that the "gifts" were such as a trade mission would normally bring (and still do today) in order to smooth their path.

In this archaic phase, the Sabaean rulers used regnal names chosen from a total list of only six, but accompanied optionally by a cognomen chosen from a list of four; the use of these styles was exclusive to the rulers, hence a reference to an individual by these styles was sufficient to indicate ruler status. However, the inscriptions drafted as from the ruler himself commonly added the title "*mkrb* of Sabaʾ"; this term is now believed to have much the same signification as Arabic *mud̲j̲ammiʿ* "unifier" (which was applied to Ḳuṣayy [*q.v.*]), possibly implying that he was head both of Sabaeans proper and of non-Sabaean elements in the federation. A few early inscriptions do contain references to "kings (*ʾmlk*) of Marib", as well as to "kings" of other small communities such as Haram, Nas̲h̲ḳ, etc. It remains uncertain whether or not a *mkrb* of Sabaʾ was simultaneously a "king" of Marib.

The archaic flowering of Sabaean culture lasted until some time after the middle of the first millennium B.C. The fact that through the fourth, third and second centuries B.C. the important frankincense trade was in the hands of the Maʿīn folk suggests some falling-off in Sabaean ascendancy.

The second great flowering of Sabaean culture was in the first three centuries A.D., by which time a very different political picture had emerged. The various folks of the 2,000 m highland zone played a much more dominant role; and some of their leaders, who traditionally bore the title *ḳwl* "prince" (in later Sabaic and in Arabic, *ḳayl*), founded dynasties who ruled as "king of Sabaʾ" or "king of Sabaʾ and *d̲h̲ū* (lord of) Raydan". The dual title has been presumed to be the origin of the remark in the late first century A.D. Greek document known as the *Periplus* that a single ruler named Charibael was "king of two nations, Himyarites and Sabaeans", and had his residence at Ẓafār (near modern Yarim), of which the adjacent citadel is named Raydan (see ḤIMYAR). Throughout these three centuries there was a confused situation, with Sabaeans and Himyarites sometimes at war with each other, sometimes united under a single monarch as had been the case under Charibael; occasionally there appear to have been two rulers reigning simultaneously in Mārib and Ẓafār and both claiming the dual title "king of Sabaʾ and *d̲h̲u* Raydan". Somewhat oddly, the indigenous inscriptions of this period never speak of a "king" of the Himyarites; on one occasion when a king of Sabaʾ was at war with the Himyarites, he alludes to his antagonist simply as "the Raydanite" (much as a European might speak of "the Hapsburg").

In addition to the Sabaeo-Himyarite conflicts, there were wars waged by varying alliances among Sabaʾ, Ḳataban, Radman (see above) and Ḥaḍramawt, and also involving Abyssinians (Ḥabas̲h̲at [*q.v.*]) settled in the Red Sea coastal region. But by the beginning of the 4th century A.D., S̲h̲ammar Yurʿis̲h̲, whom the Arab writers call "the first Tubbaʿ" [see TUBBAʿ] had put an end to these conflicts by eliminating Ḳataban and Ḥaḍramawt, and for the first time uniting the whole of what is today Yemen, employing the title "king of Sabaʾ and *d̲h̲u* Raydan and Ḥaḍramawt and the South (*Ymnt*)"; in the 5th century this title was further enlarged by the addition of "and their Arabs (i.e. Bedouin) in the highland and the Tihāma".

The 4th to 6th centuries A.D. are thus politically speaking a Himyarite period and do not properly belong to the history of Sabaʾ, despite the fact that what is called the Late Sabaic language continued to have great prestige value and to be employed for epigraphic purposes.

Mediaeval Arab writers have preserved for us from the Himyarite period a mass of oral traditions which contain much authentic material mingled with folklore motifs. But they knew practically nothing about the genuine history of Sabaʾ before the 4th century A.D., though they do mention the names of one or two of the most prominent individuals of the first-third centuries, notably king Ilīs̲h̲araḥ Yaḥḍib, whom they credit with the building of the famous palace of G̲h̲umdān [*q.v.*] in Ṣanʿāʾ.

3. Religion. The religion of all four South Arabian folks down to the beginning of the 4th century A.D. was a polytheistic paganism. Though it is probable that this may have survived among the peasantry and in remoter parts of the kingdom through the 4th to the 6th centuries, the upper classes, who are the authors of our inscriptional material, went over to some form of monotheistic creed, a cult of "the Merciful (*Rḥmn-n*), the Lord of Heaven", which could perhaps best be described as "Ḥanafite" [see ḤANĪF] since it is devoid of explicit marks of either Judaism or Christianity. At the same time, already from the end of the 4th century, a few explicitly Jewish texts attest an influential Jewish presence, and in the 6th century under Abraha [*q.v.*] Christianity prevailed.

For the period down to the early 4th century A.D., few would now agree with the excessive reductionism of D. Nielsen, who in the 1920s held that all the many deities in the pagan pantheon were nothing more than varying manifestations of an astral triad of sun, moon and Venus-star; yet it is certainly the case that three deities tend to receive more frequent mention than the rest. The first, in the sense that his cult is found among all four of the South Arabian folks and that in invocations of several deities his name normally comes first, is ʿAt̲h̲tar, a male counterpart of north Semitic Is̲h̲tar/ʿAs̲h̲toret̲h̲/Astarte. He is often qualified by the epithet "eastern" and occasionally by the complementary one "western", which tends to support the commonly accepted identification of him with the planet Venus, regarded as "morning star" and "evening star".

But just as the Greek local patron deities such as Athene in Athens, Artemis in Ephesus, etc., figure more prominently than the remoter and universal Zeus, so in South Arabia the most commonly invoked deity was a national one, who incorporated the sense of national identity. For the Sabaeans this was *ʾlmḳh* (with an occasional variant spelling *ʾlmḳhw*). A probable analysis of this name is as a compound of the old Semitic word *ʾl* "god" and a derivative of the root *ḳhw* meaning something like "fertility" (cf. Arabic *ḳahā* "flourish"); the *h* is certainly a root letter, and not, as some mediaeval writers seem to have imaginged, a *tāʾ marbūṭa*, which in South Arabian is always spelt with *t*. The "federal" significance of this deity appears notably in the fact that at the shrine on D̲j̲abal Riyām (Arḥab) the worshippers of the local folk-deity Taʾlab were instructed that they must not omit to make an annual pilgrimage to *ʾlmḳh* in Mārib.

Many European scholars still refer to this deity in a simplicistic way as "the moon god", a notion stemming from the "triadic" hypothesis mentioned above;

yet Garbini has produced cogent arguments to show that the attributes of *ʾlmḳh* are rather those of a warrior-deity like Greek Herakles or a vegetation god like Dionysus. (The remarks made in the art. ḲATABĀN on this topic as it affects the situation in Ḳataban went to press before Garbini's article had appeared; they now need modifying in the light of that article.)

Nevertheless, the moon certainly had much religious significance. A very common symbol engraved on altars and religious buildings shows a crescent embracing a disc. It is presumably this symbol that the Muslim writers had in mind when they say that the first act of the day for an ancient Yemeni king was to "bow down to the images of the sun and moon". This is not to say, of course, that they were right in seeing the disc as representing the sun; some modern scholars have been inclined to think it represents the planet Venus.

The place occupied by the sun in the pantheon is not easy to assess. The Radman folk had as their national patron-deity s^2ms^1 *ʿlyt* "Lofty Sun", and elsewhere there are mentions simply of "Sun" without qualification. But it is dubious whether the majority belief is justified, that numerous references to a feminine deity described simply as "She-who-is-possessed of (*d͟hāt*)" a certain quality, are necessarily to a solar goddess (too often, the interpretation proposed for the term describing the quality has been dictated by the preconception that it must be a quality of the sun).

Certain of the ancient religious practices have a special interests in that they have survived in some form or another until the present day. Worth mentioning are the communal pilgrimages (*ziyārāt*) on prescribed days; a code of ritual purity (see Ryckmans); and a ritualised hunting of the ibex, thought of as connected with the divine blessing of rain (Ryckmans and Serjeant).

4. Sabaʾ in Bible and Ḳurʾān. The visit of the Queen of Sheba to king Solomon, and the abundant accretions of legend around it [see BILḲĪS], have been too extensively discussed to need mention here, except for the remark that there is a possibility that such a visit might have been associated with a trade mission, like the missions to the Assyrian kings (see above). In the Ḳurʾānic allusion (XXVII, 27 ff.) the name Sabaʾ does not occur; she is simply "the queen of the south". But Sabaʾ does feature in a passage (XXXIV, 15-16) which is one of those where the fate of ancient peoples is mentioned as a warning against worldly pride. The prosperity of the Mārib oasis (situated on each side of the wadi bed, hence "the garden of the left" and "the garden of the right") had been dependent on the maintenance of the great dam in good order; after the death of king Abraha the political fabric that had made repairs possible crumbled, the irrigation system was destroyed and the oasis was devastated.

5. Sabaeans in Africa. Around the middle of the first millennium B.C., there were Sabaeans also in the Horn of Africa, in the area that later became the realm of Aksum (Eritrea). The evidence consists of only a scanty number of inscriptions, which, however, make it clear that we have to do with genuine Sabaeans, holding to the national cult of *ʾlmḳh*. They were mixed up with various non-Sabaean communities, and it is still much in dispute how one can envisage the actual demographic (and political) situation. There are five places in the Bible where the writer distinguishes S͟heba (שבא) son of Yoḳṭan (who appears in the Arab genealogies as Ḳaḥṭān [*q.v.*]), i.e. the Yemenite Sabaeans, from Seba (סבא) son of Kus͟h, implying an African habitat. This spelling differentiation, however, may be purely factitious; at all events the indigenous inscriptions make no such difference, and both Yemenite and African Sabaeans are there spelt in exactly the same way.

(A.F.L. BEESTON)

ṢABĀ, FATḤ ʿALĪ K͟HĀN, Persian poet, was born in Kās͟hān, probably in 1179/1765, and died in 1238/1822-3. His people belonged originally to Ād͟harbayd͟jān, and came from the Dunbalī stock, a tribe of Kurds settled in the region of K͟hūy. Members of his family held jobs as governors and administrators under the Zand and Ḳād͟jār rulers. His father, Āḳā Muḥammad, was governor of Kās͟hān under the Zands, and his eldest brother, Muḥammad ʿAlī K͟hān, was minister to the Zand ruler Luṭf ʿAlī K͟hān (*r.* 1203-9/1789-94). Ṣabā also seems to have been identified with this monarch, and is reported to have composed poems in his praise. When Luṭf ʿAlī K͟hān fled from Kirmān in 1208/1794 from the Ḳād͟jārs, Ṣabā's brother was captured and put to death by the orders of Āg͟hā Muḥammad S͟hāh (*r.* 1193-1212/1779-97 [*q.v.*]), founder of the Ḳād͟jār régime. Following this tragedy, the poet wandered from place to place in fear of his life until he was fortunate to find refuge with Fatḥ ʿAlī K͟hān (afterwards Fatḥ ʿAlī S͟hāh, *r.* 1212-50/1797-1834 [*q.v.*]), who was governor-general of Fārs at that time. Ṣabā transferred his allegiance to the Ḳād͟jārs, and reportedly destroyed the *dīwān* which contained poems composed by him in praise of his former patrons, the Zands.

In 1212/1797, on the occasion of Fatḥ ʿAlī S͟hāh's accession to the throne, Ṣabā presented a *ḳaṣīda* which was well received by the new ruler. His fortunes prospered until he was appointed poet-laureate at the court. For some time he was also governor of Ḳum and Kās͟hān, and held the honorary title of Iḥtisāb al-Mamālik ("Censor of the Provinces"). Eventually, however, he abandoned his administrative assignments to remain permanently at the court. He accompanied the monarch on his various travels and campaigns. It was during one of these campaigns in 1228/1813, involving Persia's hostilities with Russia, that Ṣabā, at the behest of the S͟hāh, undertook the composition of his long epic poem, *S͟hāhans͟hāh-nāma* ("Book of the King of Kings").

Ṣabā died in 1238/1822-3 in Tehran. His eldest son, Mīrzā Ḥusayn K͟hān (d. *ca.* 1264/1848), who

used ʿAndalīb as his pen-name, succeeded him as Fatḥ ʿAlī S̲h̲āh's poet-laureate, and continued in that position during Muḥammad S̲h̲āh's reign (1250-64/1834-48 [*q.v.*]) as well. Ṣabā's family occupies a distinctive place in the history of 19th century Persian literature insofar as some of its members were leading literary figures of the Ḳād̲j̲ār period. These included, in addition to Ḥusayn K̲h̲ān ʿAndalīb, Ṣabā's youngest son, Abu 'l-Ḳāsim Furūg̲h̲ (d. 1290/1873), his nephew, Aḥmad K̲h̲an Ṣabūr (d. 1228/1813), and his grandson, Maḥmūd K̲h̲ān (d. 1311/1893), the last-named being the poet-laureate of Nāṣir al-Dīn S̲h̲āh (*r.* 1264-1313/1848-96 [*q.v.*]).

Ṣabā was generous and helpful towards his fellow-writers. He often used his influence at the court to assist his literary colleagues in their professional needs. One of those benefiting from his good offices was the author Fāḍil K̲h̲ān Garrūsī (b. 1196/1781-2, d. 1254/1838-9), who was officially commissioned, on Ṣabā's recommendation, to write a history of poets, later named by him as *And̲j̲uman-i K̲h̲āḳān* ("Assembly of the Emperor").

Ṣabā was a prolific poet. In his youth he took his poetic training under Ḥād̲j̲d̲j̲ī Sulaymān Ṣabāḥī (d. 1218/1803-4), who was his fellow-townsman. Ṣabā's verse output consists predominantly of *ḳaṣīdas* and *mat̲h̲nawīs*. His poetic skill finds its characteristic expression in his panegyrics, of which those in praise of Fatḥ ʿAlī S̲h̲āh and other dignitaries occupy a prominent place. Together with *S̲h̲āhans̲h̲āh-nāma*, cited earlier, his better-known *mat̲h̲nawīs* include *K̲h̲udāwand-nāma* ("Book of the Lord"), *ʿIbrat-nāma* ("Book of warning"), and *Guls̲h̲an-i Ṣabā* ("The rose-garden of Ṣabā"). *S̲h̲āhans̲h̲āh-nāma*, a poem containing some 40,000 couplets, which the poet claims to have composed in three years, is patterned after Firdawsī's *S̲h̲āh-nāma*, and describes chiefly the events of Fatḥ ʿAlī S̲h̲āh's reign. *K̲h̲udāwand-nāma*, another lengthy poem of nearly 25,000 couplets, deals with the history and miracles of the Prophet Muḥammad and with the battles fought by his cousin and son-in-law, ʿAlī. The third *mat̲h̲nawī*, *ʿIbrat-nāma*, is a poem denouncing some unnamed individuals, identified only as Jews, who were allegedly sowing mischief in the kingdom. The last-named *mat̲h̲nawī*, *Guls̲h̲an-i Ṣabā*, contains counsels addressed to the author's son, Mīrzā Ḥusayn K̲h̲ān ʿAndalīb, and ends with a eulogy in praise of Fatḥ ʿAlī S̲h̲āh and his family. Composed probably when Ṣabā was in his mid-forties, it represents one of the best works of the poet. In the simplicity of its expression, it presents a marked contrast to much of Ṣabā's poetry, which suffers from a frequent use of quaint and unfamiliar words and phrases.

Many contemporary and later writers have showered rich praise upon Ṣabā and his works. According to Riḍā-ḳulī K̲h̲ān Hidāyat [*q.v.*], no poet equal to him had appeared in Persia for some seven hundred years. Comments such as these are of course a gross exaggeration of the truth, and do not merit serious consideration. The subject-matter of the poet is limited in its appeal and his style tends to be laboured and heavy. Ṣabā's chief contribution perhaps lies in the fact that he played a major role in the Persian poetic revival (*bāzgas̲h̲t*), which began in the 12th/18th century and was directed towards a return to earlier native models in contrast to the Indian style (*sabk-i Hindī* [*q.v.*]) favoured by Persian poets of the preceding two centuries.

(MUNIBUR RAHMAN)

SABAB (A.), pl. *asbāb*, literally "rope" (*ḥabl*), the basic sense as given by the lexicographers (cf. *LʿA*), coming to designate anything which binds or connects. It is "anything by means of which one gains an end (*maḳṣūd*; al-D̲j̲urd̲j̲ānī) or an object sought" (*maṭlūb*; in the *Baḥr al-d̲j̲awāhir*). One can mention *asbāb* with the sense of "bonds" in Ḳurʾān, II, 166: "When the bonds [which unite them] are broken...". Ibn ʿAbbās interpreted this as friendship (*mawadda*); Mud̲j̲āhid, "alliance" (*tawāṣul*) in this context. The sense is also found of "a means of achieving s. th.". Ibn Manẓūr cites the expression "I made such a thing into a means of obtaining what I needed"; here, *sabab* is a synonym of *wadad̲j̲* "a means of arriving at s. th.". From this arises the sense of "way of access", found in the Ḳurʾān: the way which leads to the heavens (*asbāb al-samawāt*), and the use of the term in philosophy in the expression *asbāb al-ʿilm* ("the ways of knowledge"; cf. Gardet and Anawati, *Introduction à la théologie musulmane*, 66, 375). From this same point of view, *asbāb* has assumed the sense of "means of subsistence".

1. In philosophy and medical science.

The *ḥukamāʾ* use the term as a synonym of *ʿilla* (one may consult ʿILLA, which deals with both terms in *falsafa* and *kalām*). Al-Tahānawī gives in his *Iṣṭilāḥāt*, following the *Baḥr al-d̲j̲awāhir*, an interesting general presentation. The *sabab* is also called *mabdaʾ* "principle"; it is "that which a thing needs, whether in its quiddity or in its existence ... It is either complete (*tāmm*: this is the divine causality in its perfect unity) or else incomplete (*nāḳiṣ*), and is then divided into four types (these are the causes in the physical and metaphysical sense). The cause may be interior to the thing, and if the thing is with it potentially, it is the material cause (*sabab māddī*). If it is in activity, it is the formal cause (*sabab ṣūrī*). Or if it is not interior to the thing, then it has an effect on its existence; it is the efficient cause (*sabab fāʿilī*). If it has an effect on the efficience of its efficient cause (*fī fāʿiliyyat fāʿilihi*), it is the final cause (*sabab g̲h̲āʾī*). One should note that this is

the way Ibn Sīnā defines the final cause (cf. *Ishārāt*, ed. Sulaymān Dunyā, iii, 444-5, with the comm. of Naṣīr al-Dīn Ṭūsī). If the efficacious action of the cause (*ta^caddī al-sabab*) is constant (*dā'imī*) or present in the greater number of cases (*akthārī*, cf. Aristotle, τὸ ἐπὶ τὸ πολύ), the cause is termed essential (*sabab dhātī*) and the effect caused (*musabbab*) the essential end (*ghāya dhātiyya*). If there is efficacity in the smallest number of cases equal to that where it does not occur (*ta^caddī akallī aw musāwī*), this cause is said to be accidental (*sabab ittifākī*), and the effect which is caused is termed the accidental end. It has been said that if all the conditions of efficacity combine, the cause is essential and the end essential. If not, the efficacity is impossible and there is no accidental cause. To put it another way, every cause, as such, has a necessary effect as soon as all the conditions for its action are brought together; if not, it has no action at all and the power which essentially constitutes it as a cause remains without effect. Accordingly, there is no accidental cause.

One may reply to this that, amongst its conditions, everything which gives in reality its efficacity to the action of the cause, is taken into account as part of the cause; but one must also take into account the factors which are not part of it, such as the absence of any obstacle (*intifā' al-māni^c*) and the disposition of an object to receive the action of a cause (*isti^cdād al-kābil*). Now when these two latter conditions can be equally realised or not realised, the causality of the cause becomes accidental there where it exerts its effect. Let us take an example. Fire burns by its essence; but it will not burn a combustible matter which is damp (here the dampness constitutes an obstacle) or an incombustible matter (which is incapable of receiving the action of fire). Consequently, if there are as many chances that the matter is or is not made up of dry wood, and if it happens that it is in fact dry wood, the fire burns, but accidentally, since it is accidental that dry wood is involved.

Physicians use the word *sabab* in a more particular sense than the philosophers. For them, it denoted uniquely the efficient cause, and even, not every efficient cause but exclusively those which have an effect within the human body, whether they produce illnesses or restore health or preserve health. They are either of a corporeal nature, and are then either substances like food or medicines, or they are accidents, such as heat and cold. They also distinguish the *asbāb* which are internal to the body, like the temperament and the humours; those which are external, like warm air; and those which are of a psychical nature (*min al-umūr al-nafsāniyya*), like anger.

Finally, in Ḳur'ānic exegesis one should understand the expression *asbāb al-nuzūl* in a sense analogical to its legal sense (see 2. below): the reasons or circumstances which explain the revelation of such or such a verse, and to which certain commentators appeal in their quest for a rational form of exegesis (see Gardet and Anawati, *op. cit.*, 29-30).

2. In law.

Here, *sabab* is defined as the designation given by the law maker for an injunction (*ḥukm*). The *sabab* itself may not be the actual cause but merely serves as a mark (*^calāma*) to indicate that a certain *ḥukm* should apply. The classic example is found in the case of travelling as permitting the breaking of fasting during Ramaḍān. The main difference between *sabab* and *^cilla*, when considering *ḳiyās*, is marginal in practice, since *^cilla* is merely a subdivision of *sabab*. *^cIlla* is also termed *sabab munāsib*, a *sabab* which can be understood by human reasoning. Travelling is therefore described as both *^cilla* and *sabab* in regard to permitting breaking of the fast during Ramaḍān since, by the application of reason, it is apparent that the objective is to reduce hardship. However, since there is no rational explanation why Ramaḍān has been prescribed for fasting, it is therefore *sabab* but not *^cilla*.

The schools of *fiḳh* are divided in their opinions about *sabab*. The Shāfi^cī and Ḥanafī ones, like the modern Germanic school of law, concentrate on the apparent will. By contrast, the Mālikī and Ḥanbalī schools and the Shī^ca focus on the actual intention, a tendency similar to that in Roman law. In contemporary Islamic civil application, the importance of *sabab* can perhaps be well understood from the UAE Civil Code definition of it as "the direct purpose aimed at by the contract".

3. In prosody [see also ^cARŪḌ].

Here, *sabab*, lit. "tent rope", and *watid*, lit. "tent peg", denote the two smallest metrically meaningful elements which serve as building-blocks for the feet (*adjzā'*, sing. *djuz'*). Following the established tent-verse analogy of the *bayt*, the inventor of prosody, al-Khalīl [*q.v.*], coined these terms to characterise the variable (*sabab*) and the stable elements (*watid*) within each foot. The *sabab* consists of two letters/consonants (the *watid* of three), of which the second may be either vowelless or vowelled, resulting in the two subtypes of the *sabab khafīf*, "the light cord", and the *sabab thaḳīl*, "the heavy cord." Syllabically speaking, the light cord is one long syllable (e.g. *ḳad*), the heavy cord two short ones (e.g. *laka*). A foot consists of one *watid* and either one or two *sababs*. The "heavy cord" exists only in conjunction with a "light cord" to form the feet *mutafā^cilun* and *mufā^calatun*, from which the metres *kāmil* and *wāfir* are constructed. The combination of "heavy cord" and "light cord" (*muta-fā-* and *-^calatun*, respectively, i.e. ⏑⏑–) is also covered by the metrical term *fāṣila* (more precisely *fāṣila ṣughrā*), which seems to go back to al-Khalīl also. Since neither this term nor the *fāṣila kubrā* (⏑⏑⏑–) is useful for the system, because both can be interpreted in terms of *sabab* and *watid*, they are best seen as elements used in the analysis of the really existing metres (*awzān*) rather than the abstract ideal metres (*buḥūr*) of the system. Breaking the *fāṣila ṣughrā* up into two *sababs* allowed for a unified definition of the *ziḥāf* as a deviation from the ideal norm that befalls the second letter of a *sabab* (Stoetzer, 42-3). The *ziḥāfāt*, usually elisions, are characteristic of the *sabab*; they may change from one line to the next.

Some Persian prosodists introduce as a third type of *sabab* the *sabab-i mutawassiṭ*, consisting of an overlong syllable (e.g. *yār*) (Elwell-Sutton, 9; Khānlarī, 94, n. 2, quoting the *Durra-yi Nadjafī* of Nadjafḳulī Mīrzā Mu^cizzī).

(W.P. Heinrichs)

4. In grammar.

The term is used by Sībawayhi in his *Kitāb* 39 times (Troupeau, *Lexique-Index* s.v.) to denote a "semantic link" between words that brings about a change in the expected case ending. Thus alongside *zaydᵘⁿ lakītu akhāhu* we find *zaydᵃⁿlakītu akhāhu*, where the dependent (*manṣūb*) form of *zaydᵃⁿ* is acceptable because it is "semantically linked" with *akhāhu* (*min sababihi*, *Kitāb*, i, Der. 32/Būl. 43). In this way, Sībawayhi acounts for a variety of inflectional problems, particularly concord, the most familiar being the attraction of *ḥasanᵘⁿ* to *ḥasanⁱⁿ* in *marartu bi-radjulⁱⁿ ḥasanⁱⁿ abūhu* due to the *sabab* between *radjulⁱⁿ* and *abūhu* (*ibid.*, i, 195/228). The "semantic link" is always realised by a bound pronoun, either suffixed (as in *akhāhu*, *abūhu*, above) or concealed, as in *anta fa-nẓur*, with *anta* assigned the same case as the concealed agent pronoun of *unẓur* because of the *sabab* between them (*ibid.*, i, 59/71). This pronoun is obligatory: in **mā zaydᵘⁿ munṭalikᵃⁿ abū ʿamrin* it is not enough to know that Abū ʿAmr really is Zayd's father—without the pronoun this expression is disallowed, contrast *mā zaydᵘⁿ munṭalikᵃⁿ abūhu* (*ibid.*, i, 24/31). In addition to the direct *sabab*, Sībawayhi recognised an indirect link which he calls *iltibās* "involvement", e.g. *marartu bi-radjulⁱⁿ mukhāliṭihi dāʾᵘⁿ* (*ibid.*, i, 193/226; here the suffixed pronoun has moved from *dāʾᵘⁿ* to its predicate *mukhāliṭihi*) and, one stage more remote, "involvement with something semantically linked", e.g. *marartu bi-radjulⁱⁿ mukhāliṭⁱⁿ abāhu dāʾᵘⁿ* (see Mosel, 297). Subsequently, *sabab* was largely dropped from grammatical theory and replaced by other explanations or synonyms. By the time of Ibn al-Sarrādj (d. 316/929, *Mūdjaz*, 62), it is virtually restricted to the adjectival structure *marartu bi radjulⁱⁿ ḥasanⁱⁿ abūhu*, later commonly termed the *naʿt sababī*.

(M.G. Carter)

SABAH, a state consisting of over 29,000 square miles of territory on the northern coast of the island of Borneo and a constituent part of Malaysia since 1963. Formerly it was known as North Borneo (1877-8 to 1946) and was governed by the British North Borneo Company (incorporated by Royal Charter in 1881) by virtue of agreements between the Company and the Sultans of Brunei [*q.v.* in Suppl.] and Sulu [*q.v.*]. In July 1946 the Company transferred all its rights to Britain and the territory became a Crown Colony which lasted until 1963 when Sabah joined the Federation of Malaysia.

The Muslim population is a small percentage of the total (3%-4%), but increasing as a result of an aggressive *dakwah* programme. They are predominantly coastal dwellers (Bajaus and Bruneis), living in the major river towns where the language is Malay and Samal. Historically Islam has always had a presence in the area, at least from the 17th century, and the pre-modern history of Sabah is part of the history of Brunei and Sulu.

It is in the period from the late 19th century to the present that the historical record for Islam begins and it has three main features which, together, define the modern form of the religion.

First, the international aspect. The reference here is to the treaties between the Sultans of Brunei and Sulu with the British, as to the transfer of territory and sovereignty to the latter. They are examples of the late 19th century practice of international relations involving Muslim sovereigns and the modern European *imperium* in the East. Sovereignty was undoubtedly transferred from the European point of view but not necessarily from the Muslim. State practice on either side was not strictly comparable, and the misunderstandings of the 1880s continue to give rise to inter-state dispute in modern Southeast Asia, in this case between the Philippines and Malaysia.

Second, from the point of view of the colonial power, Islam was but one of a number of "native" religions and laws. From this perspective it had no status in state sovereignty or the definition of the state. The *sharīʿa* came to be reduced in status and restricted to basic provisions on family matters and sexual misconduct. The line between *sharīʿa* and *adat* or *ʿāda* [*q.v.*] was typically blurred.

Third, from the transfer to the Federation of Malaysia in 1963, Islam gained an immediate political presence and its status was no longer that of "native belief" and law but instead became an important defining element in public and social life. Now, legislation has been introduced to implement the *sharīʿa*, to encourage education in Islam, to distribute funds for religious purposes and, in general, to make Islam an essential element in the Malaysian polity.

(Virginia Matheson Hooker)

ṢABĀḤ, ĀL, Arabian dynasty from the ʿUtūb branch of the ʿAnaza tribe, rulers of al-Kuwayt [*q.v.*] from *ca.* 1165/1752 until the present. They presided over its development from a small port dependent on pearling, fishing and the transit trade with India to its current position as an independent, oil-rich state.

Āl Ṣabāḥ originated in Nadjd and migrated with other members of the ʿUtūb to Ḳaṭar [*q.v.*] in about 1085/1674 and then to al-Kuwayt early in the 12th/18th century. The rise to power of the founder of the dynasty, Ṣabāḥ I (*ca.* 1165-71/1752-6), remains obscure. His claim to authority was of a civil nature, not based on descent from the Prophet or any role as a religious leader, and he does not seem to have imposed it by force but by agreement with other sections of the ʿUtbī community. During the late 12th-13th/18th-19th centuries, Āl Ṣabāḥ managed to maintain their political authority with the internal support of local tribesmen and merchants. They also succeeded for the most part in achieving a delicate balance in handling their relations with those external forces who could have swept them from power, namely the Ottomans, the British and the Suʿūdī-led Wahhābīs. Moreover, the succession proceeded relatively smoothly, ensuring family cohesion and stability.

The exception to this pattern was the dynamic figure of Mubārak (1313-34/1896-1915), who came to power by assassinating two of his brothers, Muḥam-

mad I (1310-13/1892-6) and Djarrāḥ. Despite Ottoman suspicions of British involvement in the coup and Mubārak's concern to achieve British protection, it was not until 1316/1899 that an agreement was signed, excluding other foreign powers from acquiring Kuwaytī territory by lease or purchase and preventing their representatives from being received in al-Kuwayt without British approval. In an accompanying letter, Mubārak was assured of "the good offices of the British Government". This close association with Britain proved valuable in maintaining al-Kuwayt's independence in the face of Ottoman pressures, especially during World War I, and it may also be seen as offering conditions promoting commercial development and modernisation. However, it restricted Mubārak in his dealings with his Arabian neighbours, the Āl Rashīd [*q.v.*] of Djabal Shammar and ʿAbd al-ʿAzīz b. Suʿūd [*q.v.*], effectively preventing any Kuwaytī territorial expansion at their expense; early in the reign of Aḥmad I (1339-69/1921-50), it even led to territory being ceded to the Suʿūdīs.

Following a period of recession with the decline of the pearling industry and economic warfare with Ibn Suʿūd, al-Kuwayt won a reprieve with the discovery of oil in 1356/1938. Exports began on 30 Radjab 1365/30 June 1946, ushering in a new era of prosperity, especially after the accession of ʿAbd Allāh III (1369-85/1950-65). ʿAbd Allāh oversaw the creation of al-Kuwayt's modern infrastructure, initiating ambitious construction projects, a comprehensive welfare state, extensive education and health facilities. He also ended the 1316/1899 Anglo-Kuwaytī agreement, which was increasingly resented, asserting al-Kuwayt's full independence as a sovereign state on 6 Muḥarram 1381/19 June 1961. Immediately, he was threatened with invasion by al-ʿIrāḳ, laying claim to sovereignty over al-Kuwayt, but on this occasion Britain's prompt action in sending forces to the border deterred the ʿIrāḳīs from invading. The present ruler, Djābir III (1398-/1977-) was less fortunate when on 10 Muḥarram 1411/2 August 1990 he was faced with an actual ʿIrāḳī invasion, resulting in the occupation of his country and his exile in Suʿūdī Arabia until after the liberation of al-Kuwayt in the Gulf War of Radjab-Shaʿbān 1411/January-February 1991.

(ELIZABETH M. SIRRIYEH)

ṢABĀḤ AL-DĪN ("Prens" Sabahattin) (1877-1948), late Ottoman political theorist. Ṣabāḥ al-Dīn was born in Istanbul, the elder son of *Dāmād* (imperial son-in-law) Maḥmūd Djelāl al-Dīn Pasha. His mother was Senīḥa Sulṭān, a younger sister of Sultan ʿAbd al-Hamīd II. He was educated privately.

When his father fled to Paris in 1899, Ṣabāḥ al-Dīn and his younger brother Luṭf Allāh accompanied him. Ṣabāḥ al-Dīn came to the fore as one of the leading Young Turk emigré publicists and politicians. Backed by his father's wealth, he soon became a serious competitor of Aḥmed Riḍā for the leadership of the Young Turk movement. In 1902 he took the initiative in bringing together the first "Congress of Ottoman Liberals" in Paris, where his group, that of Aḥmed Riḍā, but also Armenian, Albanian and Arab delegations met. At the congress a split occurred between the centralist and nationalist Young Turk movement of Aḥmed Riḍā (the *Ittiḥād we Teraḳḳī Djemʿiyyeti* [*q.v.*] or "Committee of Union and Progress") and the other groups over the question whether armed struggle, including foreign intervention, was acceptable as a means to depose the sultan. Together with the Armenians, Ṣabāḥ al-Dīn supported intervention and armed resistance (an abortive attempt at a military coup with the help of the garrison in Tripolitania was actually undertaken by his followers after the congress). Later in 1902, Ṣabāḥ al-Dīn united his followers in a separate organisation, the *ʿAdem-i Merkeziyyet we Teshebbüs-ü Shakhsī Djemʿiyyeti* ("Society for Decentralisation and Private Initiative").

The name of the society reflected Ṣabāḥ al-Dīn's ideological stance. He was a follower of Le Play and, especially, of Edmond Desmolins, whose *A quoi tient la supériorité des Anglo-Saxons* (1897) influenced him deeply. In Ṣabāḥ al-Dīn's eyes, society could only progress on the basis of the improvement of its smallest constituent parts, sc. the family and the individual. Unlike most other Young Turks, who saw the state as the only vehicle for the modernisation of society, he saw the secret in creating a strong "individualism" in the Ottoman Empire. Ṣabāḥ al-Dīn was a thinker and writer (from 1906 to 1908 he edited the Paris-based newspaper *Teraḳḳī* "Progress") but not a very astute politician. As a concrete political programme, his brand of sociology had little to offer in the way of solutions for the short-term problems of the Ottoman Empire.

In 1907, his group participated in the second "Congress of Ottoman Liberals" in Paris, which was organised by the Armenian Dashnaks. After the 1908 constitutional revolution, he returned to Istanbul, but, although he had many followers in the *Aḥrār Firḳasi* ("Liberal party", 1908-9) and the *Ḥürriyyet we Iʾtilāf Firḳasi* ("Entente Liberale", 1912-13, 1919-22), he never joined any of these parties and he did not actively participate in the politics of the second constitutional period. He had to leave the Ottoman Empire when he was accused of involvement in the murder of the Grand Vizier Maḥmūd Shewket Pasha [*q.v.*] in 1913. After World War I he returned, but as a member of the Ottoman dynasty he was banned from Turkey again in 1924. Thereafter he lived in exile in Switzerland until his death in 1948.

(E.J. ZÜRCHER)

SABAHATTİN ALİ (Ottoman orthography, Ṣabāḥ ul-Dīn ʿAlī), Turkish novelist and short story writer, born in Komotini [see GÜMÜLDJINE, in Suppl.], eastern Thrace (now in Greece), on 12 February 1906 or 25 February 1907, died on 2 April 1948. His father was the army Captain Ali Salahaddin and he had his elementary education in Istanbul, Çanakkale, and Edremit. His childhood in Çanakkale during World War I was to leave deep emotional traces on him; later, when the family came to Edremit, the area was under invasion and they found themselves under dire financial circumstances, so that Sabahattin Ali had to work as a street seller. He continued his education at Balıkesir and Istanbul Teacher Training Colleges (1921-7). Upon graduation, he worked in Yozgat as a teacher for a year before he was

sent to Germany in 1928 by the Ministry of Education to further his studies. He returned in 1930 and taught German in Aydın and Konya, but in 1932, because of his poem *Memleketten haberler*, he was sentenced to one year's imprisonment for disparaging Atatürk, being freed after 10 months under a general pardon. Between the years 1934 and 1945, he worked in the publications section of the Ministry of Education and later as a teacher in Ankara. He was highly criticised for his political activities and, in 1945, resigning from his duties, he moved to Istanbul, becoming a journalist. Because of an article which he published in the satirical magazine *Marko Paşa*, he was sentenced to three months in jail. In 1948, after he left prison, he began to work as a lorry driver and wrote in the journal *Zincirli Hürriyet*. He was under constant police surveillance, hence decided to run away to Bulgaria, but was killed on 2 April 1948, by the smuggler who was helping him to cross the frontier, possibly in an ambush.

Sabahattin Ali began to publish his sentimental poetry and short stories in journals during 1925-6. Later, he abandoned poetry and became known by his short stories and his novel *Kuyucaklı Yusuf*. His familiarity with the Anatolian villagers, which stemmed from his childhood memories, became clearer as he met more people in the prisons. The bulk of his later work is devoted to the village life and people; their struggle with nature, their social and economic conditions, and their mistrust for officials and intellectuals. Some of his stories are about workers, but these are not as detailed as the village stories. The middle-class people and the intellectuals are reflected as negative personalities who despise and mistreat the villagers; his administrators are corrupt and take sides with the rich. The women in his stories are pushed into prostitution by society. His characters are not well developed psychologically; the plot and the motivation of his characters are more important. His first novel *Kuyucaklı Yusuf (1937)* is his village novel. The events start in Aydın in 1903 and end in 1915 in Edremit. It is based on the oppositions of city: nature; corruption: naivety; lust: love. His second novel, *İçimizdeki şeytan*, takes place in İstanbul and is set among the young university students before World War II. *Kürk mantolu Madonna* is a love story about an intellectual, his problems with his family and his society. In all the three of his novels the heroes are men who are not in harmony with their communities.

Sabahattin Ali strove in his writings to be a social realist; he did not abstract art from society and believed that art and literature had a mission, which was to lead human beings towards the more beautiful and the just and to teach them about themselves and life. He began by employing an elaborate literary language, as in his early love stories, but shifted to using very plain, non-descriptive language, believing that the written language should reflect the spoken form.

Bibliography: 1. First editions of his works. (a) Poetry: *Dağlar ve rüzgâr*, Istanbul 1934. (b) Short story collections: *Değirmen*, Istanbul 1935; *Kağnı*, Istanbul 1936; *Ses*, Istanbul 1937; *Yeni dünya*, Istanbul 1943; *Sırça köşk*, Istanbul 1947. (c) Novels: *Kuyucaklı Yusuf*, Istanbul 1937 (in French: *Youssouf le Taciturne*, Paris 1977); *İçimizdeki şeytan*, Istanbul 1940; *Kürk mantolu Madonna*, Istanbul 1943.

(Çiğdem Balim)

ṢABANDJA, modern Turkish Sapanca, a town in northwestern Anatolia, in the classical Bithynia, situated on the southeastern bank of the freshwater lake of the same name and to the west of the Sakarya river (lat. 40°41′N., long. 30°15′E.).

Almost nothing is known of its pre-Islamic history, although there are Byzantine remains; the name may be a popular transformation of Sophon. According to Ewliyā Čelebi, the town was founded by a certain Ṣabandjī Ḳodja, but this last must be merely an eponymous hero. It seems to appear in history only in the 10th/16th century, when Süleymān the Magnificent's Grand Vizier Ṣarī Rüstem Pasha [see RÜSTEM PASHA] is said to have founded there a mosque, a public bath and a caravanserai with 170 rooms. Ewliyā describes it a century later as having 1,000 houses, and Ṣabandja was at this time the centre of a *ḳaḍā*ʾ in the *liwā*ʾ of Ḳodja-eli [*q.v.*], connected administratively and financially with the *eyālet* of the Ḳapudan Pasha or Grand Admiral. Its main importance was as a staging-post on the road from the capital to the Anatolian interior, and then, in the early 20th century, as a station on the railway line from Üsküdar into Anatolia. During the Greco-Turkish warfare of 1921, it was occupied by the Greeks from 16 March to 21 June and damaged. It is now the chef-lieu of an *ilçe* or county in the *il* or province of Sakarya, with fruit-growing as an important local agricultural activity; in 1960 the town had a population of 5,788 and the *ilçe* one of 13,114.

The lake of Ṣabandja (15 km/9 miles by 5 km/3 miles) has been important for its fish since Antiquity; it is mentioned by Ammianus Marcellinus as *lacus sumonensis*, and in later Byzantine times the mountain by the lake was called Siphones. The project of connecting the lake by means of a canal with the Gulf of Izmit was mooted as far back as the Emperor Trajan's time, and in the Ottoman period, during the reigns of Muṣṭafā III and Murād III in the 10th/16th century, and after (see İ.H. Uzunçarşılı, *Sakarya nehrinin Izmit körfezine akıtılması ile Marmara ve Karadeniz'in birleştirilmesi hakkında vesikalar ve tetkik raporu*, in *Belleten*, iv/14-15 [1940], 149-74).

SABASṬIYYA, Sebasṭiyya, the Arabic name of various towns in the Near East.

1. The ancient Samaria, which Herod had changed to Σεβαστή in honour of Augustus. The form Σεβάστεια—as in the case of other towns of this name—was presumably also used, as the Arabic name (which is sometimes also written Sabaṣṭiyya) suggests. By the end of the classical period, the town, overshadowed by the neighbouring Neapolis (Sichem; Arabic, Nābulus), had sunk to be a small town (πολίχνιον) and played only an unimportant part in the Arab period. It was conquered by ʿAmr b. al-ʿĀṣ while Abū

Bakr was still caliph; the inhabitants were guaranteed their lives and property on condition that they paid poll-tax and land-duties (al-Balā<u>dh</u>urī, 138; Ibn al-A<u>th</u>īr, ii, 388). Al-Battānī is the first of the Arab geographers to mention it, but gives already much less accurate figures for its position than Ptolemy had done. In the later Arab geographers, Sabasṭiyya appears as a place in the <u>D</u>jund Filasṭīn. According to a tradition found as early as Jerome, for example, the tomb of John the Baptist was there (Ibn al-A<u>th</u>īr, *loc. cit.*: Yaḥya b. Zakariyyā'; xi, 333); on its site there was in Late Antiquity a basilica built and in the Crusading period (in the second half of the 6th/12th century) a church of St. John; remains of the latter still survive. According to western sources, Sabasṭiyya was again a bishopric at this time (Lequien, in *Oriens Christianus*, iii, 650 ff.). Usāma b. Munḳi<u>dh</u>, about 534/1140, visited the town and its sanctuary. Ṣalāḥ al-Dīn advanced on Sabasṭiyya in 580/1184, but its bishop, by handing over 80 Muslim prisoners, saved the town from the terrible fate of Nābulus (Ibn al-A<u>th</u>īr, xi, 333; Abu 'l-Fidā', *Annales*, in *Recueil des hist. orient. des croisades*, i, 53; Ibn <u>Sh</u>addād, in *ibid.*, iii, 82; *Epistola Balduini*, in Röhricht, *Regesta regni Hierosol.*, no. 638). In the year 583/1187 it was finally taken from the Crusaders by Ḥusam al-Dīn ʿUmar b. Lā<u>dj</u>īn; the church of St. John was turned into a mosque and the bishop brought to ʿAkkā (Ibn al-A<u>th</u>īr, xi, 357).

Bibliography: Battānī, *Kitāb Zī<u>dj</u> al-Ṣābī*, ed. Nallino, in the *Pubblicazioni d. Reale Osservat. di Brera in Milano*, xl/2, 39, no. 114; Ibn al-Faḳīh, 103; Ibn <u>Kh</u>urradā<u>dh</u>bih, 79; Yaʿḳūbī, *Buldān*, 329; Yāḳūt, *Buldān*, ed. Wüstenfeld, iii, 33; Derenbourg, *Vie d'Ousâma*, tr. 188-9, 486, Arabic text, 528, 617; V. Cuinet, *La Syrie*, 192; Thomsen, *Loca sancta*, i, 102; Schürer, *Gesch. d. jüd. Volkes im Zeitalter Christi*[4], ii, 195-8; R. Hartmann, *Palästina unter den Arabern* (*Das Land der Bibel*, i/4), 14; Baedeker, *Palästina u. Syrien*[6], Leipzig 1904, 195; Le Strange, *Palestine under the Moslems*, 28, 523; H.C. Luke and E. Keith-Roach, *The handbook of Palestine and Trans-Jordan*[2], London 1930, 130-1; A.-S. Marmardji, *Textes géographiques arabes sur la Palestine*, Paris 1951, 92.

2. A place in the <u>Th</u>ug<u>h</u>ūr al-<u>Sh</u>āmiyya, according to Ibn <u>Kh</u>urradā<u>dh</u>bih, 117, on the Cilician coast, 4 *mīls* from an otherwise unknown Iskandariyya, which again was 12 *mīls* from Ḳurāsiyya (Κοράσιον). It is the ancient 'Ελαιοῦσσα or Σεβαστή, the modern Ayaṣ.

Bibliography: Pauly-Wissowa, v, 2228, s.v. Elaiussa; ii/A, 952, s.v. Sebaste no. 5; Tomaschek, in *SB Ak. Wien* (1891), Abh. viii, 65; E. Herzfeld, in *Peterm. geogr. Mitteil.*, lv (1909), 29, col. 2.

3. A town in Asia Minor, which was taken by al-ʿAbbās b. al-Walīd in 93/711-12 along with al-Marzubānayn and Ṭūs (read Ṭarsūs!), whose situation is unknown. In some manuscripts of al-Ṭabarī and Ibn Tag<u>h</u>rībirdī, the name is wrongly written Samasṭiyya (or something like that) which can hardly, as Brooks suggests, stand for the Byzantine Μίσθεια in Phrygia. The reference is rather to the Phrygian Σεβαστή (Pauly-Wissowa, ii/A, 951, no. 1).

Bibliography: Ibn al-A<u>th</u>īr, iv, 457; Ṭabarī, ii, 1236, with note *b.*; Ibn Tag<u>h</u>rībirdī, *Nu<u>dj</u>ūm*, ed. Popper, i, 251; E.W. Brooks, in *Jnal. of Hellenic Studies*, xviii (1898), 193.

4. A town of this name said to be not far from Sumaysāṭ on the upper Euphrates is mentioned by Yāḳūt, iii, 33. It might be Juliopolis in Cappadocia (Ptolemy, v. 6. 25, ed. Müller, 893), which was presumably called after Augustus and perhaps may have also been called Sebasteia; but perhaps we should rather assume there has been some confusion with Sīwās on the Upper Nahr Ālis (Halys or Ḳïzïl Irmaḳ [*q.v.*]). (E. HONIGMANN*)

SABʿATU RI<u>DJ</u>ĀL, collective designation of seven patron saints venerated in certain Moroccan towns and tribal areas, as well as in some parts of Algeria. Probably the oldest group of this kind are the Seven of the Ra<u>dj</u>rā<u>dj</u>a (Regraga), a Berber maraboutic tribe (later: family) belonging to the Ḥāḥā (Maṣmūda) and composed of the descendants of 13 saints (the original seven plus six affiliates), whose tombs and *zāwiyas* are located west, east and on top of their holy mountain, <u>D</u>jabal al-Ḥadīd, between al-Sawīra (Mogador) and the Tansift in <u>Sh</u>ayāẓima (Chiadma) country.

According to local tradition, the Ra<u>dj</u>rā<u>dj</u>a had been Christians since the time of Christ, but when they heard of Muḥammad's call, seven of them travelled to Mecca, met the Prophet, embraced Islam and were commissioned to Islamise the Mag<u>h</u>rib, which they did. The most conspicuous feature of their cult is the annual circular pilgrimage, *dawr*, which begins on 21 March (vernal equinox) and lasts 40 days. For a detailed description of its rites, symbolism and mythology by a *sawīrī* participant, see ʿA. Mana, *Les Regraga*, Casablanca 1988.

While the origins of the Seven Ra<u>dj</u>rā<u>dj</u>a are shrouded in myth, the Seven Saints of Marrakesh are historical persons who lived between the 6th/12th and 10th/16th centuries. They include men like the famous Ḳāḍī ʿIyāḍ [*q.v.*], and Muḥammad b. Sulaymān al-<u>D</u>jazūlī [*q.v.*], spiritual ancestor of most Moroccan Ṣūfī orders. H. de Castries, in his *Les sept patrons de Marrakech, les Sabʿatu Rijal*, in *Hespéris*, iv/3 (1924), 245-303, has shown that the circular pilgrimage to the Seven was established by the famous savant and mystic Abū ʿAlī al-Ḥasan al-Yūsī in 1688-9, at the demand of the Sultan Mawlāy Ismāʿīl [*q.v.*]. The latter took a dim view of Regraga influence, and tried to curb it by having the *ʿulamā'* of Fās issue a *fatwā* (1687-8) denying their title of Companions of the Prophet and by creating a rival pilgrimage centre at Marrakesh. The new *ziyāra* proved such a success that the term *sabʿatu ri<u>dj</u>āl* became synonymous with the name of the city. In 1811 Mawlāy Sulaymān, under Wahhābī influence, condemned the Marrāku<u>sh</u>ī infatuation with the Seven, but his successors respected it.

Other instances of the veneration of seven saints have been observed near Amizmiz, among the Barānis (northeastern Morocco), in Fās, in <u>Sh</u>af<u>sh</u>āwen and in other places in Northern Morocco, in Ifni and in Algeria (Kabylia, Awrās).

ṢABBĀG<u>H</u> (A.), lit. dyer, is a technical term which was applied to a group of skilled craftsmen in Islamic Middle East and North Africa. In a polemical

writing, the Arab writer al-Djāḥiẓ argued that the dyers, tanners, cuppers, etc. were exclusively Jewish in the early Islamic period, but historians like al-Khaṭīb al-Baghdādī and other writers have indicated names of Muslims bearing the name al-Ṣabbāgh which may indicate the involvement of Muslims in the dyer's profession at least during later Islamic centuries. A statement attributed to the Prophet Muḥammad said that "the most habitual liars were the dyers" (*akdhab al-nās al-ṣabbāghūn*); but, according to Abū ʿUbayd Ibn Sallām (d. 232/846), *al-ṣabbāgh* acquired a new shade of meaning and was applied to persons who were engaged in "forgery and embellishment of *ḥadīth*" (al-Khaṭīb, *Taʾrīkh Baghdād*, xiv, 216).

According to a tale in the *Alf layla wa-layla*, the dyer's trade tended to be hereditary. The dyers had a low status in society due to the foul odour associated with their work. The *ḥisba* manuals speak of the trickery of the dyers, who allegedly cheated their customers by applying non-permanent dye for their cloth. In the modern era, the Damascene dyers were well-known for providing the dye indigo (*al-nīl*), lapis lazuli (*lāuwardī*), dark blue dye (*kuḥlī*) and a variety of other shades for their customers' cloth (al-Ḳāsimī, *Ḳāmūs*, 267). The Yemeni dyers of the early 20th century have preserved some of the traditional skills of their trade. The biographer al-Ṣafadī (d. 764/1362) recorded the biographies of some notable Muslims affiliated to the dyers' families who had unusual names like ʿAbd al-Sayyid Muḥammad b. ʿAbd al-Wāḥid b. Djaʿfar al-Ṣabbāgh (d. 477/1084), who lectured on jurisprudence at the Niẓāmiyya college in Baghdād and wrote some books. His grandson ʿAbd al-Sayyid b. ʿAlī al-Ṣabbāgh (d. 563/1168) was also a man of some distinction.

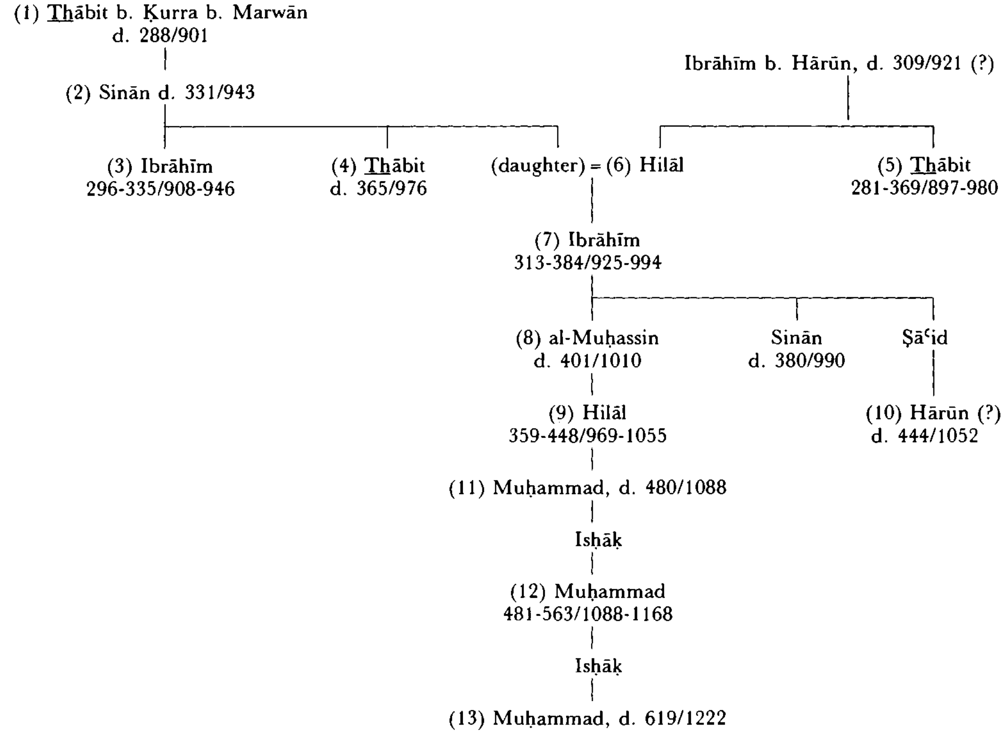
ṢĀBIʾ (A.), or, with the usual weakening of final *hamza*, *Ṣābī*, plural *Ṣābiʾūn, Ṣābiʾa, Ṣāba*, in English "Sabian" (preferably not "Sabaean", which renders *Sabaʾ* [*q.v.*]), a name applied in Arabic to at least three entirely different religious communities:

(1) the *Ṣābiʾūn* who are mentioned three times in the Ḳurʾān (II 62, V 69, XXII 17) together with the Christians and Jews. Their identity, which has been much debated both by the Muslim commentators and by modern orientalists, was evidently uncertain already shortly after the time of Muḥammad and remains uncertain now. They were clearly not Mandaeans (as Chwolsohn and many others believed), and hardly Elchasaites (as proposed below, s.v. ṢĀBIʾA); there is indeed little reason to believe that Muḥammad and his compatriots could have had any knowledge of either of these communities. The present author has argued that they might possibly have been Manichaeans, i.e. what the Arab antiquaries refer to as the *zanādiḳa* among the Ḳuraysh.

(2) The *Ṣābat al-baṭāʾiḥ*, or *mughtasila*, of Southern ʿIrāḳ, the remnant of an ancient Jewish-Christian sect, the Elchasaites. They owed the designation "Sabians" evidently to the fact that some of the early Ḳurʾān commentators in Baṣra or Kūfa saw in them a possible candidate for identification with the Sabians of the holy book.



(3) The Sabians of Ḥarrān, a community following an old Semitic polytheistic religion, but with a strongly Hellenised elite, one of the last outposts of Late Antique paganism. These adopted the Ḳurʾānic name *Ṣābiʾa* during the 3rd/9th century so as to be able to claim the status of *ahl al-kitāb* and thus avoid persecution. (Arabic Muslim and Christian authors occasionally also apply the name *Ṣābiʾ*, by extension, to the pagans of ancient Greece and to other polytheists.) It is only with these last that Muslim authors of the ʿAbbāsid period were acquainted at first hand and, except in discussions of the Ḳurʾān, the name *Ṣābiʾ* is normally applied either to Ḥarrānian pagans or else to their Muslim descendants (e.g. the astronomer al-Battānī [*q.v.*]). In particular, the name was applied, in effect as a *nisba*, to two distinguished families of scholars and secretaries of Ḥarrānian origin who flourished in Baghdād between the 3rd/9th and 5th/11th centuries, and it is with these that the present article is concerned.

The two families in question were related to each other by marriage, although the exact nature of their relationship has been the subject of much confusion. Ibn al-Ḳifṭī (*Taʾrīkh al-Ḥukamāʾ*, ed. A. Müller and J. Lippert, Leipzig 1902) says (twice on pp. 110-1) that Thābit b. Sinān (no. 4) was the maternal uncle (*khāl*) of the historian Hilāl b. al-Muḥassin (no. 9) and he says again (on p. 110) that Hilāl was "the son of his (i.e. Thābit's) sister"; this information is repeated by the sources dependent on Ibn al-Ḳifṭī (i.e. Ibn Abī Uṣaybiʿa and Ibn al-ʿIbrī) and has been accepted by modern authors. However, Yāḳūt (*Udabāʾ*, ii, 397) quotes a poem by Abū Isḥāḳ Ibrāhīm (no. 7) lamenting the death of "his maternal uncle" Thābit b. Sinān; i.e. Thābit was the maternal uncle not of Hilāl, but of his grandfather Ibrāhīm (similarly, al-Ṣafadī, x, 464, paraphrasing Yāḳūt, says of Ibrāhīm *wa huwa* <*ibn*> *ukht Thābit*; badly "emended" in the edition.) Yāḳūt's version is confirmed by Hilāl himself when he introduces one of the anecdotes in his *Rusūm dār al-khilāfa* (ed. ʿAwwād, Baghdād 1383/1964, 86) with the words: "My grandfather Ibrāhīm b. Hilāl told me about this matter saying: my grandfather Sinān b. Thābit told me saying: my father Thābit was", etc. It is thus clear that Sinān was the maternal grandfather of Ibrāhīm, not of Hilāl. To be sure, Hilāl refers elsewhere in the same book (p. 49) to Sinān b. Thābit as *djaddī*, but in the light of the just-quoted passage it is evident either that *djaddī* is a haplography for *djadd djaddī*, or else that it here means not "my grandfather" but "my ancestor".

Bibliography: The most complete study of the *Ṣābiʾūn* in general and of the two families outlined below remains D. Chwolsohn, *Die Ssabier und der Ssabismus*, 2 vols., St. Petersburg 1856. See also F. de Blois, *The "Sabians" (Ṣābiʾūn) in pre-Islamic Arabia* (forthcoming).

1. Abu 'l-Ḥasan Thābit b. Ḳurra b. Marwān b. Thābit [*q.v.*] (died 288/901), the celebrated mathematician, astronomer and translator of Greek books, was the first member of the Sabian community to come to the notice of Muslim intellectuals. He was born in Ḥarrān but spent most of his life in Baghdād, where he enjoyed the especial patronage of the caliph al-Muʿtaḍid.

Genealogical table of the Ṣābiʾ families

2. His son Abū Saʿīd Sinān served as personal physician of three successive caliphs: al-Muḳtadir, al-Ḳāhir and al-Rāḍī. Al-Ḳāhir forced him to convert to Islam, but his children apparently remained in the ancestral religion. Sinān was responsible for building hospitals and supervising the medical profession in Baghdād, and is credited with introducing a system of examining and licensing the practising doctors. The sources list various writings of his on history, mathematics and astronomy; strangely, they mention no medical titles. His only extant work seems to be a short treatise on ethics, *Siyāsat al-nufūs* (Brit. Mus. Cat., p. 205). He died (according to al-Ṣūlī and Yāḳūt) on 1 Dhu 'l-Ḳaʿda 331/943.

Bibliography: Ṣūlī, *Akhbār al-Rāḍī wa 'l-Muttaḳī*, ed. J. Heyworth Dunne, London 1935, 245; Masʿūdī, *Murūdj*, i, 19-20 = § 14; *Fihrist*, 272, 302; Bīrūnī, *al-Āthār al-bāḳiya*, 243-75 (detailed summary of Sinān's *Kitāb al-Anwāʾ*); Yāḳūt, *Udabāʾ*, iv, 257-8; Ibn al-Ḳifṭī, 190-5; Ibn Abī Uṣaybiʿa, i, 220-3; Chwolsohn, i, 569-77; Brockelmann, I², 244-5, S I, 386; Sezgin, v, 291, vii, 331; Y. Dold-Samplonius, *Sinān ibn Thābit*, in *Dictionary of scientific biography*, xii, 447-8; M. Ullmann, *Die Medizin im Islam*, Leiden 1970, 124.

3. His son Abū Isḥāḳ Ibrāhīm was an important astronomer and mathematician. He was born in 296/908-9 and died in Muḥarram 335/946 (according to Ibn Abī Uṣaybiʿa; the earlier authorities give no dates). A collection of six of his scientific writings has been published under the title *Rasāʾil ibn Sinān* (Ḥaydarābād 1366-7/1947-8).

Bibliography: Bīrūnī, *al-Āthār al-bāḳiya*, 326; *Fihrist*, 272; Ibn al-Ḳifṭī, 57-9; Ibn Abī Uṣaybiʿa, i, 226; Chwolsohn, i, 577-8; Brockelmann, I², 245, S I, 386; Sezgin, v, 292-5, vi, 193-5, vii, 274-5; R. Rashed, *Ibrāhīm ibn Sinān*, in *Dictionary of scientific biography*, vii, 2-3.

4. His brother Abu 'l-Ḥasan Thābit succeeded his father as physician to the caliph al-Rāḍī and served then in the same capacity under al-Muttaḳī, al-Mustakfī and al-Muṭīʿ. He died on 11 Dhu 'l-Ḳaʿda 365/976 (thus Ibn al-Nadīm and also Yāḳūt, quoting Hilāl; others differ). He was, however, best known as the author of a history of events from 295/908 (i.e. the ascension of al-Muḳtadir, with whose reign al-Ṭabarī's history breaks off) up to the year of his own death (according to Ibn al-Nadīm) or to the end of 363/974 (Ibn al-Athīr, viii, 476). Although this work is lost, it is quoted extensively not only in the surviving writings of Thābit's great-great nephew Hilāl (below, no. 9), but also by Miskawayh, al-Hamadhānī, Ibn al-Athīr, al-Dhahabī and others, and is thus indirectly doubtless one of the most important sources for the events of the period in question. As a court physician, Thābit was evidently especially well informed about the private affairs of his masters.

The *Taʾrīkh akhbār al-Ḳarāmiṭa* which has been published as the work of Thābit (ed. Suhayl Zakkār, Beirut 1391/1971) is, in the judgement of the present author, a clumsy forgery knocked together out of extracts from Ibn al-Athīr.

Bibliography: *Fihrist*, 302; Yāḳūt, *Udabāʾ*, ii, 397-8; Ibn al-Ḳifṭī, 109-11; Ibn Abī Uṣaybiʿa, i, 224-6; Ibn Khallikān, 127; Chwolsohn, i, 578-81; M.S. Khan, *Miskawaih and Ṯābit ibn Sinān*, in *ZDMG*, cxvii (1967), 303-17.

5. Abu 'l-Ḥasan Thābit b. Ibrāhim b. Hārūn (thus in Tadjaddud's edition of the *Fihrist*, 149, 360, and al-Thaʿālibī, *Yatīma*, ed. Damascus, ii, 23; most other sources have Zahrūn) was born in al-Raḳḳa in Dhu 'l-Ḳaʿda 283/897 and died in Baghdād in Shawwāl 369/980 (these dates according to Ibn al-Ḳifṭī, 115). He served as a physician to several important persons, among them the Būyid *amīr al-umarāʾ* ʿAḍud al-Dawla. His writings on medicine and his

translations of Greek medical books are not known to have survived. Ibn al-Ḳifṭī (76) surmised that his father might have been the Abū Isḥāḳ Ibrāhīm b. Zahrūn al-Ḥarrānī al-Manṭiḳī of whom Thābit b. Sinān (as quoted by Ibn al-Ḳifṭī) says that he died in Ṣafar 309/921; however, the identification of the two is not certain.

Bibliography: *Fihrist* 272, 303; Ibn al-Ḳifṭī 111-5; Ibn Abī Uṣaybiʿa, i, 227-30; Chwolsohn, i, 584-5.

6. His brother Abu 'l-Ḥasan Hilāl, whose dates are not recorded, was the physician of the *amīr* Tūzūn at the same time that his brother-in-law Thābit b. Sinān was looking after the health of the caliph.

Bibliography: Ibn al-Ḳifṭī 350; Chwolsohn, i, 587.

7. His son Abū Isḥāḳ Ibrāhīm was born on 5 Ramaḍān 313/925 and, though trained as a doctor and astronomer, he made his name as a secretary in the service of the Būyid *amīr* Muʿizz al-Dawla, who appointed him chief secretary (*ṣāḥib dīwān al-inshāʾ*) in 349/960. Although ʿIzz al-Dawla Bakhtiyār attempted to convert him to Islam and even offered the post of *wazīr* as a reward, Ibrāhīm remained true to the faith of his fathers. After the death of Muʿizz al-Dawla, Ibrāhīm got caught up in the rivalry between ʿIzz al-Dawla Bakhtiyār and his cousin ʿAḍud al-Dawla Fanā-Khusraw, and his attempts to serve two masters led to his being imprisoned by each of them in turn. The victorious ʿAḍud al-Dawla kept him under house arrest from 367/978 till 371/981 and ordered him to spend his enforced leisure composing a history of the Būyids, *al-Kitāb al-Tādjī fī akhbār al-dawla al-daylamiyya*, the pages of which are reported to have been sent, as they were completed, to the *amīr*, who then returned them, corrected, to their imprisoned author. The often-repeated anecdote according to which Ibrāhīm provoked the anger of the *amīr* by confiding to an indiscreet friend that the history he was composing was nothing but a fabric of lies involves a number of chronological errors and cannot be taken at face value (see, in detail, the article by Madelung). The *Kitāb al-Tādjī* has not survived as such, though it is quoted (or plagiarised) by several later historians; moreover, a substantial extract from its first part was edited by an anonymous Zaydī author and has survived in a unique ms. in Ṣanʿāʾ (ed. Muḥammad Ḥusayn al-Zubaydī, Baghdād 1977; also in W. Madelung, *Arabic texts concerning the history of the Zaydī imāms of Ṭabaristān, Daylamān and Gīlān*, Beirut 1987, 9-51).

Ibrāhīm returned to favour after the death of ʿAḍud al-Dawla (in 372/983) and enjoyed the friendship in particular of the celebrated Twelver Shīʿī poet al-Sharīf al-Raḍī [*q.v.*] with whom he corresponded in prose and verse (see *Rasāʾil al-Ṣābī wa 'l-Sharīf al-Raḍī*, ed. Muḥammad Yūsuf Nadjm, Kuwait 1961) and who lamented his death (on 12 Shawwāl 384/994) in a famous elegy. He also compiled a history of his own family (mentioned by Ibn al-Nadīm). His collected letters have survived in a number of manuscripts, but only a small selection has been printed (*al-Mukhtār min rasāʾil Abī Isḥāḳ ... al-Ṣābī, al-djuzʾ al-awwal* [apparently all published], ed. Shakīb Arslān, Bāʿabda 1898; repr. Beirut 1966). A good number of his poems are quoted by Thaʿālibī. Though he resisted to the end the temptation of conversion, Ibrāhīm was in all other regards a typically Muslim man of letters whose elegant Arabic epistles and poems were greatly admired by his contemporaries.

Bibliography: *Fihrist*, 134; al-Thaʿālibī, *Yatīma*, i, 14, 34, 69, 187-8, 190-1, 508, and especially ii, 23-86; idem, *Tatimmat al-yatīma*, ed. ʿA. Iḳbāl, i, 73; Yāḳūt, *Udabāʾ*, i, 324-58; Ibn al-Athīr, viii, 397; ix, 11, 74, 226; Ibn al-Ḳifṭī, 75-6; Chwolsohn, i, 588-604; Brockelmann, I², 95, S I, 153-4; J.Chr. Bürgel, *Die Hofkorrespondenz ʿAḍud ad-Daulas...*, Wiesbaden 1965, 112-21 and *passim* (contains summaries of many of his letters); Sezgin, ii, 592; v, 314; A. Arazi, *Une épître d'Ibrāhīm b. Hilāl al-Ṣābī sur les genres littéraires* [with an edition of his *Risāla fī 'l-farḳ bayn al-mutarassil wa 'l-shāʿir*], in *Studies in Islamic history and civilisation in honour of Professor David Ayalon*, Jerusalem 1986, 473-505. The extract from *al-Kitāb al-Tādjī* has been studied in a series of articles by M.S. Khan, in *Arabica*, xii (1965), 27-44; xvii (1970), 151-60; xviii (1971), 194-201; in *Islamic Studies*, viii (1965), 247-52; and by W. Madelung, *Abū Isḥāq al-Ṣābī on the Alids of Ṭabaristān and Gīlān*, in *JNES*, xxvi (1967), 17-57.

8. His son Abū ʿAlī al-Muḥassin, called Ṣāḥib al-Shāma, died (according to Yāḳūt) on 8 Muḥarram 401/1010, like his father still a pagan. Ibn al-Ḳifṭī consulted an autograph of his containing bibliographies of the works of Thābit b. Ḳurra and Sinān b. Thābit. Yāḳūt quotes a few of his poems and mentions also his two brothers Abū Saʿīd Sinān (d. Radjab 380/990; see also his father's elegy on his death in al-Thaʿālibī, *Yatīma*, ii, 48-9) and Abu 'l-ʿAlāʾ Ṣāʿid.

Bibliography: Yāḳūt, *Udabāʾ*, vi, 244-9; Ibn al-Ḳifṭī, 114, 116, 119; Ibn Abī Uṣaybiʿa, i, 224-7; Chwolsohn, i, 604-5.

9. His son was the famous historian Abu 'l-Ḥusayn Hilāl [*q.v.*] (359-448/969-1055), a Muslim convert. His history (of which only a small part is extant) continues that of his ancestor Thābit b. Sinān.

10. Abū Naṣr Hārūn b. Ṣāʿid "b. Hārūn" al-Ṣābiʾ, was (according to Ibn al-Ḳifṭī, 338) the chief physician in Baghdād and died on 3 Ramaḍān 444/1052. He could well have been the son of Ṣāʿid b. Ibrāhīm (see no. 8).

11. Abu 'l-Ḥasan Muḥammad b. Hilāl, called Ghars al-Niʿma, served as a secretary at the time of the caliph al-Ḳāʾim. He inherited from his father a considerable fortune and was thus apparently able to retire from official service and devoted himself to literary and philanthropic activities. Of the latter, we know in particular of his endowment of a public library in Baghdād with 1,000 books. He died in Dhu 'l-Ḳaʿda 480/1088. His history, *Dhayl Taʾrīkh Hilāl al-Ṣābī*, or *ʿUyūn al-tawārīkh*, which continued his father's chronicle down almost to the time of his own death, has not survived as such, but it was used extensively by al-Khaṭīb al-Baghdādī, Ibn al-Djawzī and, in particular, by Sibṭ Ibn al-Djawzī, whose account of the events from 448-79/1055-86 seems to be almost entirely dependant on Ghars al-Niʿma. Extant is his *Kitāb al-Hafawāt al-nādira min al-muʿakkilīn al-malḥūẓīn* (etc.), a collection of over 400 amusing anecdotes (ed. Ṣāliḥ al-Ashtar, Damascus 1387/1967). Fragments survive of his *Kitāb al-Rabīʿ*, evidently also a compendium of anecdotes in the style of the *Nishwār al-muḥāḍara* of al-Tanūkhī.

Al-Ṣafadī (*al-Wāfī bi 'l-wafayāt*, ii, nos. 555, 570; following al-Dhahabī) gives the dates (reproduced in our table) of two of his descendants: his grandson Abu 'l-Ḥasan Muḥammad b. Abī Naṣr Isḥāḳ (no. 12), who was head of the *dīwān* of the caliph al-Muḳtadī, and his great-great grandson al-Shaykh al-Ṣāliḥ Abu 'l-Ḥusayn Muḥammad b. Isḥāḳ (13), the last recorded member of this illustrious lineage.

(F.C. de Blois)

ṢĀBIʾA (a.), the name of two rather mysterious groups in early Islamic times:

1. *Ṣābiʾat al-baṭāʾiḥ*.

The Mesopotamian dialectal pronunciation of *ṣābiʿa*, where the *ʿayn* has been transformed into *y* or *ī*, also occurs in Mandaean (cf. Lidzbarski, *Ginzā*; Nöldeke, *Mandäische Grammatik*; R. Macuch, *Handbook*, 94, l. 16: *ṣabuia*). This substantive, which became current in Mecca during the period of Ḳurʾānic preaching, irrespective of its etymology, derives from the Semitic root *ṣ-b-ʿ* (Aramaic, Hebrew, Syriac; Ethiopic *ṣabkha*), corresponding to *ṣ-b-gh* in Arabic. The verb signifies, in the first form, "to dye, to bathe, to immerse", whence, in the second form, "to baptise (by immersion)". Consequently, the noun denotes "baptists", named three times in the Ḳurʾān (II, 62; V, 69; XXII, 17), in the company of the Believers, the Jews and the Christians, with whom they share the title of "people of the Book" (*ahl al-kitāb*). In the last of these verses (XXII, 17), the *ṣābiʾūn* occupy the third place after the Believers and the Jews, and are followed by the Christians, the Zoroastrians and the polytheists; which would suggest a closer relationship between them and the Jews. A reference to baptism is to be found in sūra II, 138, where the context is that of the "imprint" (*ṣibgha*) of God on the Muslim, which is compared to Christian baptism (J. Penrice, *A Dictionary of the Koran*, repr. London 1970, 81; cf. al-Kulīnī, *Kāfī*, lith. Tehran 1307/1928, 152, where *ṭīna* "matter", is opposed to *ṣibgha* which "is Islam" (*hiya l-islām*); other references *apud* Kraus, *Jābir*, ii, 171, n. 1).

Given the indisputable monotheism of the *ṣābiʾūn* of the Ḳurʾān, this can only refer to a baptising religious community. There is a temptation to think immediately of the Mandaeans, who are dispersed, at the present day, on the banks of the Euphrates and of the Tigris in the south of ʿIrāḳ, and along the river Kārūn in Khūzistān. They are called by their Arab neighbours *ṣubba* or *ṣubbī* "baptisers"; they form two groups: the *mandāyē* (gnostics) and the *nāṣōrāyē* (observants). This is the thesis defended by D. Chwolsohn in *Die Ssabier und der Ssabismus*, dating from 1856. Although it has been severely criticised over certain of its conclusions, this work remains a basis for studies of the Sabians (cf. J. Hjärpe, *Analyse critique des traditions arabes sur les Sabéens Ḥarraniens*, Uppsala 1972, 1 ff.).

On the basis of a text of Ibn al-Nadīm (*Fihrist*, 340), where there is reference to a baptising sect called *al-mughtasila*, also known as *ṣābat al-baṭāʾih*, "the Sabaeans of the marshes", whose leader was called ' l.ḥ.s.y.ḥ (var. ' l.ḥ.s.ḥ and ' l.ḥ.s.dj), Chwolsohn identified the latter with Elchasai (i, 112 ff.), thus identifying Mandaeans and Elchasaites. He found evidence for this in information recorded by Hippolytus in *Refutatio omnium haeresium*, ix, 13 (ed. Wendland, 251), where it is said that Elchasai, founder of the sect, is supposed to have given a revealed book to a man named Sobai. Chwolsohn made of the last-named "a later personification of the name of a sect, this being that of the Sabaeans—the Mandaeans being called *al-ṣubba*" (Hjärpe, *op. cit.*, 11). On the basis of the etymological sense of *ṣābiʾa*, he considers that the term had been translated by *al-mughtasila*, "the baptisers" (i, 110). A year before the appearance of *Die Ssabier*, E. Renan had contributed a *Note sur l'identité de la secte gnostique des Elchasaïtes avec les Mandaïtes ou Sabiens*, in *JA*, vi (1855), 292-4.

Since then, researches into the Elchasaites have made it possible to correct this confusion (see, for example, A.J.W. Brandt, *Elchasai: ein Religionsstifter und sein Werk*, Leipzig 1912, and more recently, A.F.J. Klijn and G.J. Reinink, *Patristic evidence for Jewish-Christian Sects*, Leiden 1973 = *Suppl. to NT*, xxxvi; G.P. Luttikhuizen, *The revelation of Elchasai*, Tübingen 1985 = *Texte u. Studien zum antiken Judentum*, 8. It is thanks to the biography of Mānī, found in the *Codex Manichaicus Coloniensis* (cf. W. Sundermann, *Mitteliranische manichäische Texte kirchengeschichtlichen Inhalts* = Berliner Turfantexte, xi, East Berlin 1981, 19, text 2.1, tr. 3), that it is known that the Elchasaites were not identified with the Mandaeans. In fact, Mānī "grew up, lived, formed his system of thought and matured his vocation" between A.D. 219-20 and 240, in a community of sectaries called, in Greek and Coptic documents, *baptistai* ("baptisers, baptists"), by Arab authors, *al-mughtasila* ("those who purify themselves, who wash themselves") and, according to the Syriac tradition, the *mᵉnaqqᵉdē* ("those who purify themselves" or "are purified") and *ḥellē ḥewwārē* ("white vestments"). Cf. al-Ṭabarī, *Tafsīr*, xxviii, 55 f. on the *ḥawāriyyūn*, a term normally denoting the apostles of Jesus, but al-Ḍaḥḥāk sees here *al-ghassālūn* in Nabataean, since, as others specify "they cleaned their garments".

These "sectarians" are identical, as is declared by the Codex of Oxyrhyncus, not with the Mandaeans, which has been the general belief until now, but with the Elchasaites, disciples of the doctrine which spread in consequence of a vision experienced in "the land of the Parthians", around the year A.D. 100, by the prophet Elchasai (Alkhasaios) (H.-Ch. Puech, *Le manichéisme*, in *Histoire des Religions*, ii, Paris 1972 = *Encyclopedie de la Pléiade*). At twelve years old, then again at twenty-four years old, Mānī received from the Holy Spirit the command to leave this community and to show himself in public, vigorously proclaiming his doctrine. Excluded from his community for having deviated from the Law, in turning towards "Hellenism" and towards the "world", he left it accompanied by his father and by his two sole supporters. In his eyes, baptism was said to have been nothing more than a false religion, instigated by the "Spirit of Error" (*ibid.*, 532-3). In spite of this, he "claimed as his own a number of views borrowed from Elchasaism" (*ibid.*), while criticising "two of their principal practices: the habit of daily and frequently repeated ablutions; the prohibition concerning bread, fruit and vegetables of foreign provenance and of profane origin" (*ibid.*).

The Elchasaites are one of those sects which are described as "Judaeo-Christian", such as the Nazaraeans, the Ebionites and the Archontics. The Ebionites, established in Transjordania in the time of Trajan, formed one of the groups belonging to Palestinian Christianity; they were very close to Rabbinical Judaism and rejected all Greek doctrines, in particular the all-too-speculative Christology of St. Paul, in whom "they saw an Antichrist, responsible for the apostasy of so many brothers". In the eyes of the Hellenistic churches, they took on little by little "the appearance of a heretical sect, while in fact, they were the most direct heirs of the primitive Church, even if they no longer had the combative vitality". They adopted "a Gospel inspired by the synoptic

Gospels, but adapted to their doctrinal idiosyncrasies, the Gospels of the Ebionites, of which only a few fragments are known" (cf. on this subject, E. Trocmé, *Le Christianisme des origines au Concile de Nicée*, in *Histoire des Religions*, ii, Paris 1972, 234-5).

These Ebionites drew the attention of a major theologian of the last century, A. von Harnack; he saw in their doctrine "Christian parallels with Islam" (*Christliche Parallelen zum Islam*, Vortrag im Leipziger akademischen Docentenverein, 1877-8, 18 ff.).

More recently, three scholars have taken an interest in this problem: P. Roncaglia, *Eléments ébionites et elkasaïtes dans le Coran*, in *Proche-Orient Chrétien*, xxi (1971), 101-26; M. Hamidullah, *Two christians of Pre-Islamic Mecca: ʿUthmān ibn al-Ḥuwairith and Waraqa ibn Naufal*, in *Jnal. of the Pakistan Historical Soc.*, vi (1958), 97-103, and Abū Mūsā ʾl-Ḥarīrī (pseudonym of J. ʿAzzī), *Ḳiss wa-nabī. Baḥth fī nashʾat al-Islām* ("Priest and prophet. Research into the origin of Islam"), Jounieh-Kasslik 1979, pp. 223. This is a very methodical study of the Ḳurʾānic elements which make possible the construction of a thesis which has tempted many scholars in the past, sc. the Judaeo-Christian origin of Islam. Identifying "Nazaraeans" (*naṣārā*) with Ebionites, the author makes Waraḳa b. Nawfal, the cousin of Khadīdja, first wife of Muḥammad, the teacher and mentor of the latter, preparing him to succeed him at the head of the small Ebionite community of Mecca (on the Christians in Mecca on the eve of the Hidjra, cf. Lammens in *BIFAO*, xiv [1918], 191-230, and A. Jeffrey, *Christians at Mecca*, in *MW*, xix [1929], 24-35).

Having examined all the elements capable of having an origin in the Gospel of the Ebionites, known also by the name Gospel of the Hebrews, current according to St. Jerome among the Nazaraeans, in other words the Aramaic-speaking Judaeo-Christians of Palestine and Syria (cf. B. Altaner, *Précis de Patrologie*, tr. Grandcladon, Mulhouse-Tournai 1941, 53-4), the author considers that Muḥammad abandoned the path traced by Waraḳa when he left Mecca for Medina and founded the Islamic state, where the tradition of Arab political isolationism was revived. He sees the signs of this separation appearing in the contradictions arising between what he calls the "Ḳurʾān of the priest and the prophet" and the "*muṣḥaf* of ʿUthmān". The thesis in itself is fascinating, but its demonstration will remain based on assumptions which are not likely to be confirmed by new sources.

The "baptismal imprint", to which there is reference in sūra II, 138, quoted above, may apply to Ebionites/Nazaraeans as well as to Elchasaites/*mughtasila*. On the latter, see the interesting study written by F. de Blois, intitled *The Sabians* (Ṣābiʾūn) *in Pre-Islamic Arabia*, to appear in *JSS*, which includes an annotated translation of the text of the *Fihrist* concerning them. In this study the author proposes a new interpretation of the term *ṣābiʾūn* which he translates by "converted", on the basis of the root *ṣ-b-ʾ*, which will be considered further at a later stage. He sees in this term, applied to Muḥammad and his followers by their Meccan adversaries, a reference to the Manichaeans. On the basis of a possible equivalence between *ṣābiʾ* and *zindīḳ* in the sense of "heretic", "infidel", the author believes that, in the time of Muḥammad, the word *ṣābiʾ* signified "Manichean", being later replaced by *zindīḳ*. But Kister (*Arabica*, xv [1968], 144-5, quoted by de Blois, n. 39) supplies evidence for an equivalence *zindīḳ* = *mazdakī*.

Two texts seem ostensibly to support the view of F. de Blois:

The first refers to the caliph al-Walīd who, according to *Aghānī*, vi, 135-6, was a *zindīḳ* and followed the doctrine of Mānī, which was preached to him by a man of the Kalb. He had, in a basket covered by a silk veil (*ḥarīriyya*), an image (*ṣūra*) of a man, in the eyes of which mercury and sal-ammoniac had been placed. These eyes seemed to move and wink. The caliph is supposed to have said to his visitor, al-ʿAlāʾ al-Bandār, the narrator of this account: "That is Mānī. God has sent no prophet either before him or after him!" After leaving the caliph, the Kalbī was found strangled in the desert by a mysterious figure who descended from the sky. The Bedouins who witnessed the scene transported his body to the caliph.

The second text is a description of the *zandaḳa* by the ʿAbbāsid caliph al-Mahdī (cf. al-Ṭabarī, *Taʾrīkh*, iii, 588). A *zindīḳ* was brought before him who refused to repent; then he had him decapitated and crucified and said to his son al-Hādī: "When you accede to the caliphate, devote yourself to the repression of this band (*ʿiṣba*), I mean the followers of Mānī. It is a sect (*firḳa*) which calls upon people to behave well, by avoiding the commission of turpitudes, by practising ascetism here on earth, by preparing for the life hereafter; then, it incites them to deny themselves the consumption of meat, the touching of pure water, to abstain from killing reptiles in order to avoid the commission of a sin; subsequently, it makes them worship two [entities]: the Light (*nūr*) and the Darkness (*ẓulma*); finally, it allows them marriage with sisters and daughters, ablution with urine, the seizure of children in the streets with the object of removing them from the Darkness and leading them towards the Lights. Raise before the followers of this sect the gibbet (*khashab*) and draw the sword from the scabbard, for the honour of Allāh, who has no partner". And the caliph added: "I have seen in a dream your grandfather al-ʿAbbās handing me two swords and commanding me to slay the dualists (*aṣḥāb al-ithnayn*)".

Whatever the part played here by folkloric elements, these two texts reflect the opinion held by Muslims, in the Umayyad and ʿAbbāsid period, regarding the Manichaeans. However, there is no evidence to suggest that this opinion differed from that current in the time of Ḳurʾānic preaching. Therefore, it must be reckoned inconceivable that such Manichaeans could have been considered, in the Ḳurʾān, as forming part of the "people of the Book".

The Manichaeans had scriptures; but it is questionable to what extent these scriptures were known in Central Arabia at the beginning of the 7th century A.D. There are definitively some convergences to be observed between Ḳurʾānic and Manichaean concepts in matters of prophecy and revelation. But these convergences derive from "an anonymous tendency of general thought" (T. Andrae, *Mahomet*, 110), where are encountered ideas of the "Messenger of God", of the "seal of the prophets", of the Paraclete promised by Jesus, of ecumenism, of possession of total truth and absolute knowledge, the claim of accommodating previous revelations and of achieving "a complete gnosis, a pure and perfect knowledge, of which the clarity and evidence are immediate and the scope infinite" (Puech, *Histoire des litteratures*, i, 679).

It is important to bear in mind the fact that Central Arabia was (and remained) hermetically sealed to any religious mission emanating from Byzantium, from Persia, from Abyssinia. If Manichaeans succeeded in making their way to Mecca, it was only in the role of merchants or of slaves. The latter played a significant part in the penetration of certain Judaeo-Christian ideas into nascent Islam. An obvious example is that

of Zayd b. Ḥārit̲h̲a whom Muḥammad emancipated and then adopted. It was he who taught Muḥammad and ʿAlī to read and write. Attention may also be drawn to ʿAddās, a Christian slave and a native of Nineveh, who acknowledged the prophethood of Muḥammad, also to the seven djinns inhabiting Nisib who believed his message and went away to convey it to their fellows (Ḳurʾān XLVI, 29-32; LXXI, 1; etc.).

It may be noted, in conclusion, that the name Muḥammad was not widely known before the time of the Prophet. Among those who bore this name before Islam, Ibn Saʿd, *Ṭabaḳāt*, i, 1, 112, mentions Muḥammad b. Sufyān al-Tamīmī and describes him as a "bishop". This name corresponds to the Greek-Latin Εὐλόγιος/Eulogius. Did the adversaries of the Prophet see in this an indication of his belonging to a baptising community? Al-Ṭabarī, *Tafsīr*, i, 242, renders *ṣābiʾ* by *murtadd* "renegade", and adds that "The Arabs call *ṣābiʾ* anyone who abandons his religion for another". The polytheists said of the Prophet: *ḳad ṣabaʾa*, an expression which could be rendered by *ḳad taʿammada*, "he has had himself baptised" (cf. Ibn Saʿd, i/1, 123). In the same commentary, Ziyād b. Abīh (d. 53/673) and Ḳatāda (d. 117/735) supply the information that the *ṣābiʾūn* "worshipped the angels (*malāʾika*)", a fact attested by St. Hippolytus, ix, 13, 2-3, with regard to the Elchasaites; see also St. Epiphanius, xix, 4. 1-2; xxx, 17, 6; liii, 1, 9 (references given by de Blois, *loc. cit.*; cf. Marcel Simon, *Remarques sur l'angelolâtrie juive au début de l'ère chrétienne*, in *CRAI* [1971], 120-32). It may be noted, finally, that the *akwāl^un^ sabʿat^un^*, "the seven words", which Ibn al-Nadīm attributes to the *mug̲h̲tasila*, as they have been restored by I. Stern and M.A. Lewy (quoted by de Blois, *loc. cit.*), find an echo in sūra IV, 159, where, speaking of Jesus, the Ḳurʾān says: "On the day of Resurrection, he will testify against them (= those who are said to have believed in Him)".

2. *The Ṣābiʾat Ḥarrān.*

Thus far the discussion has been of baptising sects, whose nomenclature derives from the root *ṣ-b-ʿ*. Not being appropriate for the pagan gnostics of Ḥarrān, this root was replaced by the commentators by a root *ṣ-b-ʾ*, in the sense of "to bow down" before the celestial bodies, to worship the planets, which fitted the cults of the Ḥarrānians perfectly. In fact, bowing and prostration before the rising and setting planets formed part of their three daily prayers. Idolatry is often astrolatry. It was this last which was resisted by Abraham in Ḥarrān (Ḳurʾān, VI, 74-8; XXXVII, 83-8; etc.).

The astrolators of Ḥarrān sought to reach the "spiritual beings" (*rūḥāniyyāt*) with the aid of "celestial temples" (*al-hayākil al-ʿulwiyya*), the planets; these "temples" "rise and set" (Ḳurʾān, VI, 76-8); whence the necessity to have "figures and representations" (*ṣuwar wa-as̲h̲k̲h̲āṣ*) by which the "temples" may be reached and thereby the "spiritual beings", "because they bring us closer to God, they say" (Ḳurʾān, XXXIX, 4) and serve mankind as "mediators (*s̲h̲ufaʿāʾ*) before Him" (Ḳurʾān, X, 19). This information is to be found in the work of the Arab polygraphs and in al-S̲h̲ahrastānī's *Milal*, the data from which have been collected and analysed by Hjärpe, *Les Sabéens Ḥarraniens*, cited in section 1. above. On the astral nature of Arab paganism, see T. Fahd, *Le panthéon de l'Arabie centrale à la veille de l'hégire*, Paris 1968, 18 ff.

The Arabic sources, and in particular Ibn al-Nadīm, who devoted to the Ḥarrānians copious pages which served as a point of departure for D. Chwolsohn, explain the designation of *ṣābiʾa*, claimed for themselves by the astrolators of Ḥarrān, as arising from an act of usurpation on their part, following a visit by the caliph al-Maʾmūn to the region. Called upon to explain their religious allegiance, they claimed to be *sābiʾa* and, consequently, "People of the Book", with the aim of evading the caliph's threats. For the same purpose, they declared themselves to be *ḥanīfs*, another Ḳurʾānic term for "monotheist" (vol. III, 60, 87-9, etc.; W. Montgomery Watt, art. ḤANĪF; Hjärpe, *op. cit.*).

The explanation is indeed plausible. Al-Maʾmūn had much respect for the Ḥarrānian scholars who were then present in large numbers in Bag̲h̲dād. The most eminent of them was T̲h̲ābit b. Ḳurra [*q.v.*]. Chwolsohn devotes a long chapter to biographies of the Sabian scholars (i, ch. 12); there he introduces some thirty of them: philosophers, doctors, astronomers and mathematicians.

The Sabians of Bag̲h̲dād were, it seems, considered to be heterodox by the Sabians of Ḥarrān (Ibn K̲h̲allikān, *Wafayāt*, n. 127, tr. de Slane, i, 288). The threats of the caliph were to reveal support for the former, who had succeeded in gaining his favour as scholars and philosophers, against the latter whose paganism was even more manifest.

T̲h̲ābit b. Ḳurra made known through numerous writings (Chwolsohn, ii, 1-6; Wiedemann, in *SPMSE* [1920-1]) the theology and the philosophy of the Ḥarrānians. He succeeded in forging amicable relations with the scholars of his time (Muslims, Jews and Christians) and was therefore capable of diffusing ideas which were to appear in the theologico-philosophical speculations of the subsequent period, at the time of the development of what has been called "Arab hermeticism" (cf. J. Doresse, *L'hermétisme égyptianisant*, in *Histoire des Religions*, ii, Paris 1972, 479-82), inspired by "Sabian" doctrines and "Indianised" hermeticist astrology, the expression of which is to be found in:

(1) *K. Sirr al-k̲h̲alīḳa*, attributed to Bālīnūs [*q.v.*] Apollonius of Tyana (ed. and German tr. Ursula Weisser, Aleppo 1979 and Berlin-New York 1980), "drawn from a treatise of Hermes, *On the causes*..." "It offers two items of great interest, a study of the Creation and the famous account of the discovery of the *Emerald Table*" (cf. J. Ruska, *Tabula Smaragdina. Ein Beitrag zur Geschichte der hermetischen Literatur*, Heidelberg 1926).

(2) *Munāẓarat al-falāsifa* (*Turba philosophorum*), containing "fragments of the *Physica* and the *Mystica* of Democritus" (cf. Ruska, *Turba Philosophorum. Ein Beitrag zur Geschichte der Alchimie*, Berlin 1931).

(3) *G̲h̲āyat al-ḥakīm* of Abu 'l-Ḳāsim Maslama b. Aḥmad al-Mad̲j̲rīṭī, a manual of talismanic astrology nourished from Sabian sources, a factitious work of Hippocrates, translated into Latin under the title of *Picatrix* (cf. ed. H. Ritter, Teubner 1933; German tr. Ritter and M. Plessner, Leipzig-Berlin 1962; Ritter, *Picatrix, ein arabisches Handbuch hellenistischer Magie*, in Vorträge der Bibliothek Warburg, 1921-2, Leipzig-Berlin 1923, 94-124).

(4) *al-Filāḥa al-nabaṭiyya* (Damascus 1993), a geoponic compilation probably translated from the Syriac by Ibn Waḥs̲h̲iyya [*q.v.*] at the end of the 9th and beginning of the 10th centuries A.D., containing "religious data" relating to a stellar theology based on "secrets" and on "revelations" made by the Sun, the Moon and Saturn to Adam, to Seth, his son, to Messus and to other leaders of rival gnostic sects in Babylonia. The author of the third recension of the book, Ḳūt̲h̲āma, was the leader of the sect of the

Kūkaeans, known from Syriac authors; he relates, in long digressions, the echoes of their quarrels, the essential points of which are to be found in a brief survey published in *ZDMG*, suppl. iii/1, Wiesbaden 1977, 362 [see also NABAṬ. 2.].

In a very detailed study, Michel Tardieu sees the Ḥarrānians as Platonists (cf. *Ṣābiens coraniques et "Ṣābiens... de Ḥarran"*, in *JA*, cclxxiv [1986], 1-44), "in the academic sense of the term. Plato was the object of their study and the centre of the research activity of their school" (39). He refuses to describe them as "gnostics" since, according to him, "they were not philosophers by profession. But they utilised the philosophers, and Plato in particular" (*ibid.*). He bases his argument on a statement by al-Masʿūdī (*Murūdj*, ed. Pellat, ii, Paris 1965, 536-7, § 1395; cf. also his *K. al-Tanbīh wa 'l-ishrāf*, 162, tr. 3-5), declaring that he "saw at Ḥarrān, on the knocker of the door of the meeting-place of the Ṣābians, an inscription in Syriac characters, drawn from Plato", which read as "He who knows his nature becomes a god" and "Man is a celestial plant. In fact, man resembles an upturned tree, the root being turned towards the sky and branches [sunk] in the ground" (Tardieu, 13 ff.). He sees, in the first "an echo of *Alcibiades*, 133.C" and, in the second, "a reminiscence" of *Timaeus*, 90 A.7-B.2 (cf. ref. 3, n. 8 and 14). It may be noted that echoes of these quotations are to be found in the literature of the "Sayings of the Sages" (*Placita philosophorum*) and that the quotation from the *Timaeus* occurs twice in the *Nabataean agriculture* (i, 360). There is no evidence to indicate that the Nabataeans of the region of Sūrā were Platonists; it has been observed that various currents of a gnostic tendency had developed there.

At the end of this extremely erudite survey, the author identifies the *ṣābiʾa* of the Ḳurʾān with the "Archontics" of Epiphanius (*Haer.*, xxix, 7, xl, 1, 5), known also by the name of "Stratiotics" (Epiphanius, *ibid.*, xxvi, 3, 7), followers of the "celestial bands", a Judaeo-Christian sect of gnostic character, formed in Palestine and known in Egypt (*ibid.*, xl, 1, 8) and in Arabia (*ibid.*, xl, 1, 5). The Ḳurʾānic term would be derived from the Hebrew *ṣābā*, "army" (an explanation already proposed by E. Pococke). Such an association leads the discussion back to Judaeo-Christian circles, among whom the Elchasaites/*mughtasila* provide, in the present writer's opinion, the best explanation of the Ḳurʾānic *ṣābiʾa*.

Thus, whatever may be the origin of the name of the *ṣābiʾūn*, the latter are shown to belong to two distinct groups: on the one hand, the disciples of Judaeo-Christian baptising sects (Ebionites, Elchasaites, *mughtasila*, Stratiotics) and, on the other, Ḥarrānian astrolators, the last representatives of decadent Greco-Roman paganism. Both groups may be described as gnostic: the first, Christian and the second, pagan. Hence the ambiguity of the term denoting them, and the diversity of commentaries relating to the three Ḳurʾānic verses which name them. A degree of corruption has occurred over the centuries, both in the terminology and the concepts, and this has greatly hindered the task of the historian of ideas and of religions.

(T. FAHD)

AL-SĀBIḲŪN (A.), lit. "foregoers": a term occasionally applied in Shīʿism to the Prophet, Imāms, and Fāṭima in recognition of their status as pre-existent beings and the first of God's creatures to respond to the demand "Am I not your Lord?" (*a-lastu bi-rabbikum?*). The term derives primarily from Ḳurʾān, LVI, 10-11 (*wa 'l-sābiḳūn al-sābiḳūn ulāʾika 'l-muḳarribūn*); there are also examples of verbal usage (e.g. "how could we not be superior to the angels, since we preceded them (*sabaḳnāhum*) in knowledge of our Lord?" al-Kirmānī, *Mubīn*, i, 304). The Shīʿī concept of pre-existence closely parallels Ṣūfī theories concerning the Nūr Muḥammadī [*q.v.*] and the pre-eternal Covenant. Justification for the doctrine is found in numerous *akhbār*, where a variety of details, many of them contradictory, are given concerning the series of events preceding the creation.

The theme of light is central to many of these traditions. Thus, "God created us from the light of his greatness" (al-Kulaynī, *Kitāb al-Ḥudjdja*, *bāb* 94, p.

303); "God created me [Muḥammad] and ʿAlī and Fāṭima and Ḥasan and Ḥusayn and the (other) imāms from a light" (al-Kirmānī, *Mubīn*, i, 304); "I [Muḥammad] was created from the light of God; He created my family from my light and created those that love them from their light; the rest of mankind are in hell" (al-Kirmānī, *Faṣl*, 71); in one account, the Throne was created from the light of the Prophet, the angels from that of ʿAlī, the heavens and earth from that of Fāṭima, the sun and moon from that of Ḥasan, and heaven from that of Ḥusayn (*ibid.*, 75-6).

The term *sābiḳūn* was also widely used in early Bābism, where it was applied with what seems deliberate ambiguity to the group of eighteen disciples who, with the Bāb, formed the primary cadre of the sect's hierarchy, the Letters of the Living (*ḥurūf al-ḥayy*). A faction which seems to have been broadly identical with the party centred on Ḳurrat al-ʿAyn [*q.v.*] maintained that these early believers were *sābiḳūn* in the double sense of having preceded the rest of mankind in recognition of the new cause and in being actual incarnations of the Prophet and Imāms. Thus Mullā Muḥammad Ḥusayn Bushrūʾī [*q.v.*] was identified as Muḥammad, Mullā ʿAlī Bisṭāmī as ʿAlī and Ḳurrat al-ʿAyn as Fāṭima. This doctrine received approval in several writings of the Bāb, notably in the early chapters of his Persian *Bayān*. Later, Bābism introduced numerous variations on this theme, and in the early period of Bahāʾī Bābism, several believers were given names of God, preceded by the title *Ism Allāh* (thus *Ism Allāh al-Aṣdaḳ*).

(D. MacEoin)

SABĪL (A.), pl. *subul*, literally "way, road, path", a word found frequently in the Ḳurʾān and in Islamic religious usage.

1. As a religious concept.

Associated forms of the Arabic word are found in such Western Semitic languages as Hebrew and Aramaic, and also in Epigraphic South Arabian as *s¹bl* (see Joan C. Biella, *Dictionary of Old South Arabic, Sabaean dialect*, Cambridge, Mass. 1982, 326). A. Jeffery, following F. Schwally, in *ZDMG*, liii (1899), 197, surmised that *sabīl* was a loanword in Ḳurʾānic usage, most likely taken from Syriac, where *s̲h̲ᵉbīlā* has both the literal sense of "road" and the figurative one of "way of life", just as in Arabic (*The foreign vocabulary of the Qurʾān*, Baroda 1938, 162).

Thus we find in the Ḳurʾān its literal usage, as in III, 91/97, "whoever is able to make his way thither (sc. to the Kaʿba in Mecca)", etc. Figuratively, it has various senses, including (1) the idea of fighting in the way of God, *sabīl Allāh* (II, 149, etc.) [see D̲J̲IHĀD, MUD̲J̲ĀHID]; (2) the true way of the Prophet, as in XXV, 29/27, "O would that I had taken, along with the Messenger, a way!"; (3) a means of achieving or acquiring an object, or finding a way out of a difficulty, as in IV, 19/15, "or [until] God appoints for them (i.e. women committing indecency) a way [of dealing with them]"; and (4) in the expression *ibn al-sabīl* "son of the road", later taken as "traveller, wayfarer" and therefore as a fit object of charity or compassion. Cf. II, 172/178 (which may however here refer to those early believers who had suffered in Mecca for their faith by displacement or forced emigration; see R. Bell, *Bell's commentary on the Qurʾān*, ed. C.E. Bosworth and M.E.J. Richardson, Manchester 1991, i, 35, and R. Paret, *Der Koran, Kommentar und Konkordanz*, Stuttgart etc. 1980, 38-9, with citation from G.-R. Puin, *Der Dīwān von ʿUmar ibn al-Ḫaṭṭāb*, Bonn 1970).

From the idea of doing something charitably or disinterestedly, *fī sabīl Allāh*, the word *sabīl* acquired in later Islamic times the specific meaning of "drinking fountain, public supply of water provided by someone's private munificence and charity", at the side of which is also found, less commonly, *sabbāla* "public fountain, drinking basin" (Dozy, *Supplement*, i, 630). For the social and architectural aspects of these, see 2. below.

Bibliography: Given in the article.

(C.E. Bosworth)

2. As an architectural term.

As noted above, the *sabīl* is used in mediaeval Islamic sources to designate water-houses which provided drinking water for free public use. In Egyptian *waḳf* documents of the Mamlūk and Ottoman periods, the term *sabīl* is also used to designate other charitable objects, such as *ḥawḍ al-sabīl*, i.e. a drinking trough for the animals, or *maktab al-sabīl* which is a charitable elementary school for boys.

Although public water-supply is not specifically Islamic—it was a basic feature of Roman and Byzantine cities—the significance of the *sabīl* in Islamic cities is due to the repeated precept in the Ḳurʾān to give water to the thirsty. However, the *sabīl* was not common in all Islamic cities, and in the cities where it was widespread its appearance does not seem to predate the 12th century. In some cities, such as Cairo, Fez or Istanbul, the *sabīl* is characterised by a distinctive architectural form. It is always richly decorated and thus meant to be an aesthetic element in the street.

1. Cairo. Mediaeval Cairo was at a distance from the Nile and, because of its hot and dry climate, the provision of drinking water was a matter of great importance. Drinking water was transported from the Nile in goats skins by camels and mules and sold in the street by ambulant water-carriers or in shops. However, providing water on a charitable basis gave the ruling establishment a good reason to demonstrate their piety.

As a charitable foundation, a *sabīl* was sustained by *waḳf* endowments. The *waḳf* documents of Mamlūk and Ottoman Cairo include a great deal of references to *sabīls*, though the descriptions are generally brief. Some were attached to mosques, others were independent constructions. In the late 8th/14th century it became customary to combine the *sabīl* with a *maktab* or primary school for boys; the *maktab* was built above the *sabīl*.

The *sabīl* is usually built on two levels, an underground cistern (*ṣihrīd̲j̲*) and on the street level a room (*ḥānūt al-sabīl*) where the *muzammilātī*, or attendant of the *sabīl*, served the public. Through the win-

dow grills he issued the water in copper or ceramic cups to the passer-by. The openings at the lowest part of the grills have the shape of a row of arches which are large enough for the cups to be passed. A stone bench was built beneath the window to allow the user to stand at the level of the grill to receive the cup.

The intake of the *sabīl* was filled once a year during the season of the Nile flood in the summer; camels or mules carried the water from the Nile or the K͟halīdj or Canal of Cairo in goat skins. The intake was filled in from an opening on the façade of the *sabīl*. It was made of brick and roofed with domes supported by piers and had an entrance for the maintenance staff. It was cleaned before the yearly refill and sprayed with incense; the water was perfumed with basil leaves.

Water from the intake was raised by means of buckets and filled into basins of stone or marble where the cups were replenished. A more sophisticated type of *sabīl*, such as that of Sultan al-G͟hawrī, had a cistern located in a back room behind the *ḥānūt*. From this cistern a *s͟hādirwān* was fed. The *s͟hādirwān* in Cairene terminology is a fountain in the wall surmounted by a decorative niche, usually made of painted and gilded wood with *muḳarnas* [*q.v.*], and connected to a sloping marble panel (*salsabīl*) which led the water from the wall down into a stone or marble basin. The function of the *s͟hādirwān*, which faced the *sabīl* window, was not only decorative but it served also to air the water coming from the cistern.

The floor of a *sabīl* was always paved with marble. Water was raised from the intake through a round opening surrounded by a marble balustrade (*k͟haraza*). The ceiling of the *sabīl*, which is visible to the public through the grills, was made of wood and as a rule richly painted and gilded. Cairene *sabīl*s are usually adorned with the Ḳurʾānic inscription of *Sūrat al-insān* (LXXVI, 16-18) which refers to Paradise, where a heavenly ginger-flavoured water from a fountain called Salsabīl will be served.

The *maktab* of the *sabīl* is a room, similar to a loggia, open with a double or triple arch on each side. It was reached by its own staircase.

The *muzammilātī* was in charge of cleaning the premises of the *sabīl* and its utensils and of raising the water from the cistern and serving it to the thirsty. *Waḳf* documents usually stipulate that he should be clean, good-looking, free of infirmity and healthy; some documents stipulate that he should have good manners. The *muzammilātī* dwelt in an apartment attached to the *sabīl*.

Whereas Mamlūk *sabīl*s were served by one person only, some Ottoman *sabīl*s had more than one *muzammilātī*, such as that of ʿAbd al-Raḥmān Katk͟hudā, which had three. In the Ottoman period the *muzammilātī* was sometimes assisted by a person called the *sabīlī*.

The opening time of *sabīl*s varied; some were open all day long, and during the month of Ramaḍān all night; others were open only at specific hours of the day, between the prayers of noon (*ẓuhr*) and afternoon (*ʿaṣr*); yet others were open only during summer.

Cairo has an important number of *sabīl*s from the Mamlūk and Ottoman periods. The earliest extant *sabīl* is that of Sultan al-Nāṣir Muḥammad built in the early 8th/14th century. Today it is ruined and appears as an L-shaped portico on columns built along the corner of the *madrasa* of al-Nāṣir's father al-Manṣūr Ḳalāwūn. It was surmounted by a small dome decorated with faience mosaic on the base. The *sabīl* of Amīr S͟hayk͟hū (755/1354) is a very different type of building; it is hewn in the rock in the form of a vaulted room.

By the second half of the 8th/14th century, the standard location of the *sabīl* was at the corner of a religious building with a *maktab* on the upper floor. With two large iron-grilled windows, one on each façade, it was well ventilated. This device was maintained throughout the Mamlūk and Ottoman periods. Some mosques have more than one *sabīl-maktab*.

Sultan Ḳāʾit Bāy, who was a great builder, erected a number of separate *sabīl*s all over the city. They had one or two apartments attached to them, sometimes also a shop. Some had a *miḥrāb* in the wall of the *ḥānūt*. The only extant free-standing *sabīl-maktab* of Ḳāʾit Bāy is at the Ṣalība street (884/1479); it has three façades and is one of the most lavishly decorated monuments of mediaeval Cairo, with polychrome inlaid marble, carvings, and inscriptions.

The *sabīl* of Sultan al-G͟hawrī, attached to his religious-funerary complex (909/1504) in the centre of the old city of Cairo, is described in the *waḳf* document with more detail than usual. It projects from the street with three façades, each with a large window. Behind each window there was a marble basin connected to a *fawwāra*, a kind of water tap, which received water through lead tubes from the *s͟hādirwān*. In summer the windows of the *sabīl* were protected with awnings against the sun.

The Ottomans founded fewer religious buildings than the Mamlūks, but they erected an important number of *sabīl-maktab*s in Cairo, some of which have a *miḥrāb* and were used also for prayer.

Until the 18th century the *sabīl-maktab*s continued to be built in the Mamlūk style. In the mid-18th century, a new trend for façade decoration in carved stone appears also in *sabīl* architecture. Amīr ʿAbd al-Raḥmān Katk͟hudā, a great patron of architecture who created a new style of façade decoration, sponsored in 1157/1744 one of the most handsome *sabīl-maktab*s of the old city of Cairo. Built at the bifurcation of the main street of al-Ḳāhira, it has three façades with marble carved in Turkish style and inlaid in Mamlūk style. The eastern façade has a trilobe *muḳarnas* portal. The interior is panelled with Turkish ceramic tiles. Two apartments for the staff are attached to the building. It has a *miḥrāb* in the shape of a painted niche in the ceramic tiles surmounted by a representation of Mecca.

In the late 18th century, the architectural style of the *sabīl*s of Cairo shows Turkish influence. This can be seen at the curved semi-circular and faceted façades, the floral carvings, the inscribed cartouches with poems and chronograms, often in Turkish, and the elaborate window grills. However, the *sabīl* maintains its basic traditional features such as the *maktab* on the upper floor. The *sabīl* attached to the *madrasa* of Sultan Maḥmūd (1164/1750) has five facets and was used also for teaching; along with the *sabīl*s of Ruḳayya Dūdū (1174/1761) and Nafīsa al-Bayḍāʾ (1211/1796), it is among the finest examples of the late Ottoman period. In the 19th century the Turco-Italian influence is even more pronounced, while the Islamic decorative repertoire tends to vanish. The *sabīl*s of this period, unlike their contemporaries in Turkey, however, maintain the curved façades.

2. Fās. The city of Fās is often said to be built on water because of the abundance of the water which it receives from the river Fās and its tributaries, as well as from a multitude of springs. In the 5th/11th century an underground system of piped channels was built beneath the city to serve its mosques, houses and fountains.

Fās has preserved an important number of public fountains known popularly as *siḳāya* (from *saḳā* "to

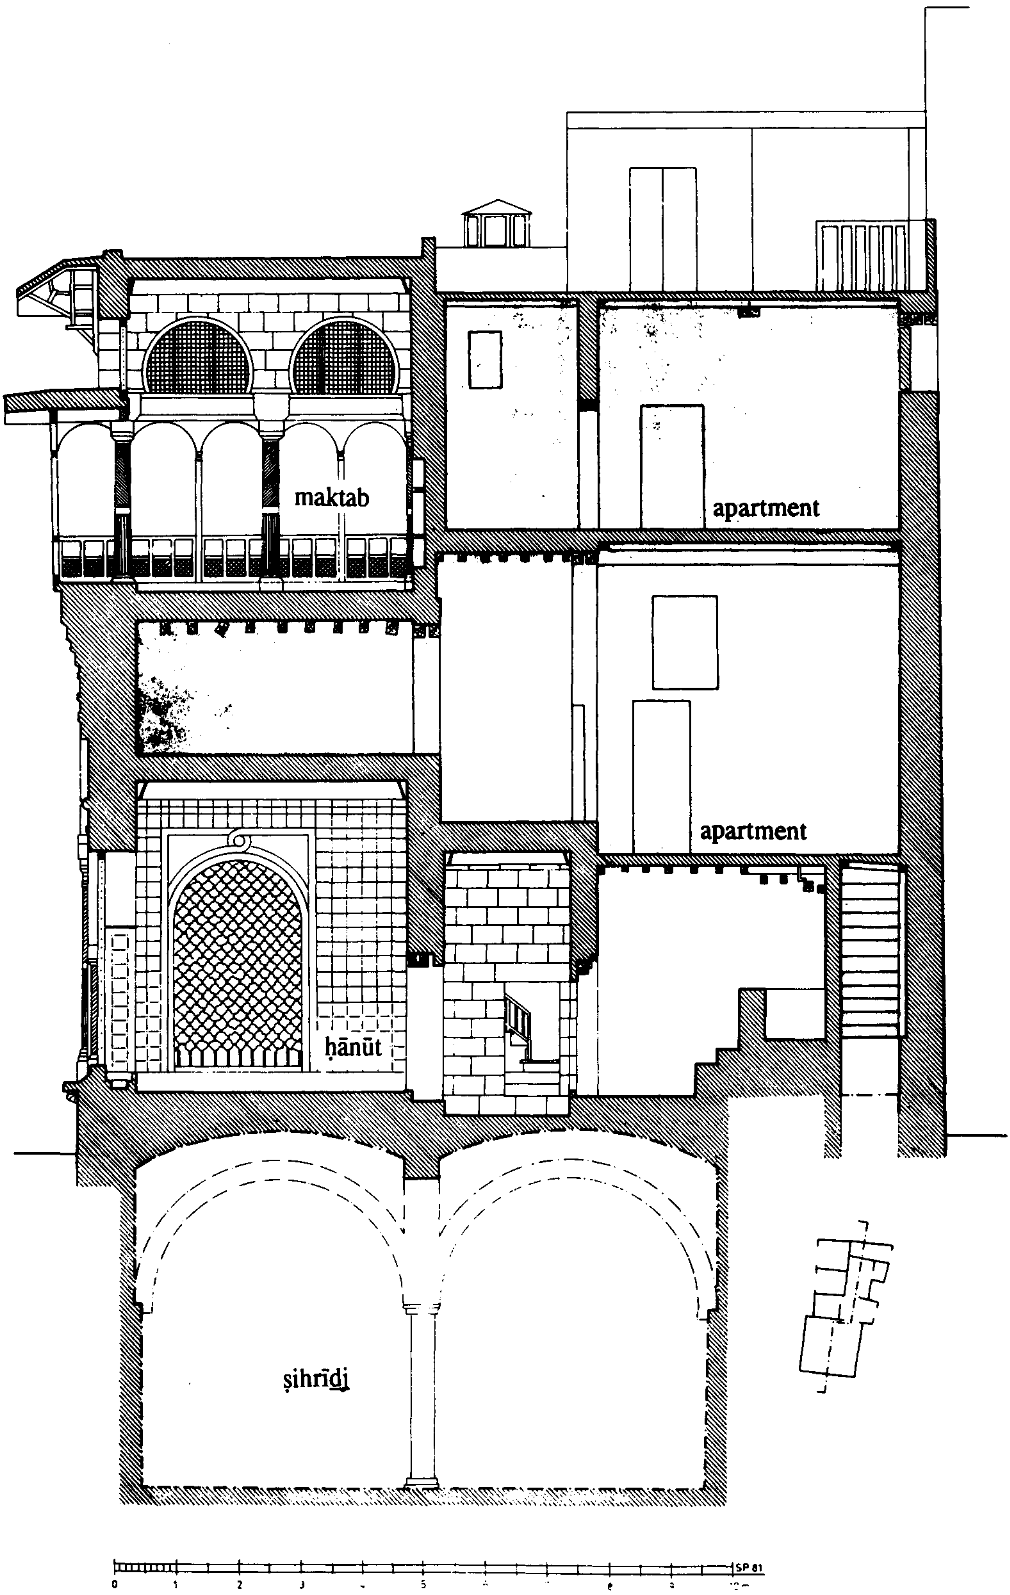

Fig. 1. The *sabīl* of ʿAbd al-Raḥmān Katkhudā in Cairo (1157/1744) (by Philip Speiser).

give to drink"). Already in the Almohad period, during the reign of al-Manṣūr, the city had 80 public fountains. Today 106 fountains survive, of which 93 are functioning. The earliest datable one is from 840/1436 (Betsch).

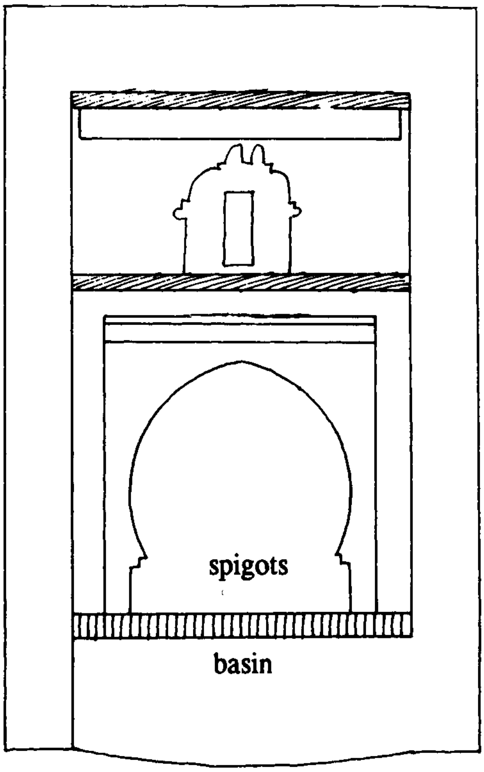

Fig. 2. The composition of a *sabīl* at Fās (by William Betsch).

The shape of the fountains of Fās show a persistent continuity over the centuries. The typical fountain is a mural structure which consists of a vertical rectangular panel including a recessed arch. This composition has been compared with that of a gate or a *miḥrāb* and associated with symbolism. At the lower part of the arch are the spigots from which the water flows down into a basin or *ṣundūḳ* protruding from the wall. The fountains are characterised by their faience mosaic decoration or *zallīdj*. Thousands of individually shaped elements cut from glazed ceramic tiles of several colours and cast into plaster or cement are combined to form geometric star designs of dazzling effect. Considering the white introverted architecture of the city, the fountains reveal themselves as aesthetic focal points.

3. Istanbul. Istanbul inherited from Constantinople the Byzantine system of aqueducts and pipes. In Istanbul there are two forms of *sabīl* fountains, the *sebīl* served by an attendant behind the grill, and the *česhme* which is a kind of self-service *sabīl* where the water is received from a tap above a basin. The water coming from the aqueducts through pipes was collected in a cistern located behind the façade on street level. In the early Ottoman period in Istanbul, the provision of water on a charitable basis was not very common, despite the widespread public kitchens. Public fountains were established only in the absence of alternative sources of water. J.M. Rogers has observed that the *waḳf* documents of great imperial foundations following the conquest of Istanbul did not include as a rule the provision of water for free public use. The *ṣiḳāyas* attached to religious foundations of the 10th/16th century were for the use of their own communities only. References to *siḳāyas* with which mosques were endowed indicate that their water was sold. The great complex of Süleymān the Magnificent in Istanbul had originally no public fountain until Sinān added one in the 1570s. Süleyman, however, following the example of the Mamlūk sultans, sponsored several *sabīls* in the Holy Cities and particularly in Jerusalem. Zubayda, the wife of Ḥārūn al-Rashīd, who became famous in Muslim history for aqueducting water to Mecca in a period of drought, seems to have established this tradition.

The *česhmes* of Istanbul, similar to the fountains of Fās, are mural fountains which consist of a recessed niche framed by a rectangle with a protruding basin, made of carved white marble. Their niches are trilobe, with *muḳarnas* or with a shell pattern. As in Fās, the resemblance with a gate or a *miḥrāb* can be noticed here. The *česhmes* of the 18th century are surmounted by a large crest filled with arabesques, similar to that on manuscripts. Many fountains combine a *sebīl* with a *česhme*. White marble is characteristic of Turkish water architecture.

In the late 10th/16th century, the shape of the Ottoman *sebīls* begins to acquire its characteristic features. *Sebīls* like that of Gazanfer Ağa (1599) in Istanbul were built as part of a religious or funerary complex in the shape of polygonal faceted structures with arched grill windows set between pilasters; the leaded domical roof had eaves. Goodwin sees in the late 10th/16th century the genesis of Ottoman water architecture, which reaches its apogee in the late tulip period [see LALE DEVRI] during the first third of the 12th/18th century, "an age of water". At that time, instead of the faceted façade of the *sebīl*, it becomes more curved and semi-circular and, when integrated into a tomb, both façades are combined, such as in the complexes of Hekimoğlu Ali Paşa (1147/1734) and Hacı Mehmet Emin Ağa (1152/1740). The marble of this period is carved with baroque foliation and garlands, flamboyant floral and fruit motifs combined with traditional patterns, which also characterise contemporary *česhmes*. The grills become intricate with lacy patterns.

The most famous water-house is that of Sultan Aḥmed III (1141/1728) built at the gate of the Topkapı Seray as a combination of four *sebīls* and four *česhmes*. Built of marble with a wooden roof that runs down into eaves, it consists of a central rectangular cistern with a *česhme* on each side. The *česhmes* are set within arched panels with polychrome voussoirs and are flanked by a pair of *muḳarnas* niches which include benches. The *sebīls* occupy the corners, each with three concave intricate grills between columns. Five wooden domes protrude from the roof, four at the corners and a central one. Gilded foundation inscriptions written as poems in *nastaᶜlīḳ* adorn the upper part of the building. Carved marble, paintings, polychrome voussoirs and tiles contribute to the lavish decoration.

The fountains of 19th century Turkey which stand independently in public spaces, such as that of ᶜAbd ül-Ḥamīd II at Istanbul (1310/1892), are characterised by their rectangular shape and rectilinear façades, which contrast with the shallow curves of the decorative arches and the volute designs. Their decoration follows European tradition.

ṢĀBIR B. ISMĀʿĪL AL-TIRMIDHĪ, Shihāb al-Dīn, usually known as **ADĪB ṢĀBIR** a Persian poet of the first half of the 6th/12th century.

His *dīwān*, which has been published twice (ed. ʿAlī Ḳawīm, Tehran 1331 *Sh*./1952-3, and ed. M.ʿA. Nāṣiḥ, Tehran 1343 *Sh*./1964), consists almost entirely of panegyrics praising the Saldjūḳ sultan Sandjar (511-52/1118-57), the Khwārazmshāh Atsïz (521-68/1127-72) and various persons at their respective courts, in particular Sandjar's *raʾīs-i Khurāsān*, Madjd al-Dīn ʿAlī b. Djaʿfar al-Musawī, the poet's principal patron. The rivalry between his two royal masters was the cause of his undoing. Djuwaynī says that Ṣābir, whom Sandjar had sent to Khwārazm with a message for Atsïz, discovered that the Khwārazmshāh had dispatched two men—Djuwaynī says that they were *malāḥida* (i.e. Ismāʿīlīs)—to assassinate the sultan. Ṣābir sent a secret message warning Sandjar of the plot and giving a description of the assassins, but Atsïz somehow found out about it and had Ṣābir drowned in the Oxus. Although Djuwaynī does not give the precise date of this incident, he does seem to imply that it was at some time between 538/1142-3 and 542/1147-8. Dawlatshāh (followed by others) repeats Djuwaynī's story, but gives the date of Ṣābir's death as 546/1151-2, which seems too late.

The most noticeable feature of Ṣābir's poetry is his dexterous use of artificial devices. ʿAwfī singles out a contrived poem dedicated to Madjd al-Dīn in which Ṣābir uses the words *sarw* (cyprus) and *yāḳūt* (hyacinth) in every verse of the first (amatory) section and then the words *āftāb* (sun) and *āsmān* (heaven) in every verse of the second (panegyric) section. He also composed not one, but several long poems in which every verse enumerates three things ("one thing is A, a second is B, a third is C") in its second *miṣrāʿ*, or again, a *ḳaṣīda* in which he does without the letter *alif*. It was for this sort of thing that he won the admiration of his contemporaries, for example that of the now much more famous Anwarī [*q.v.*], who says in one of his verses: 'At least I am as good as Sanāʾī, even if I am not like Ṣābir'.

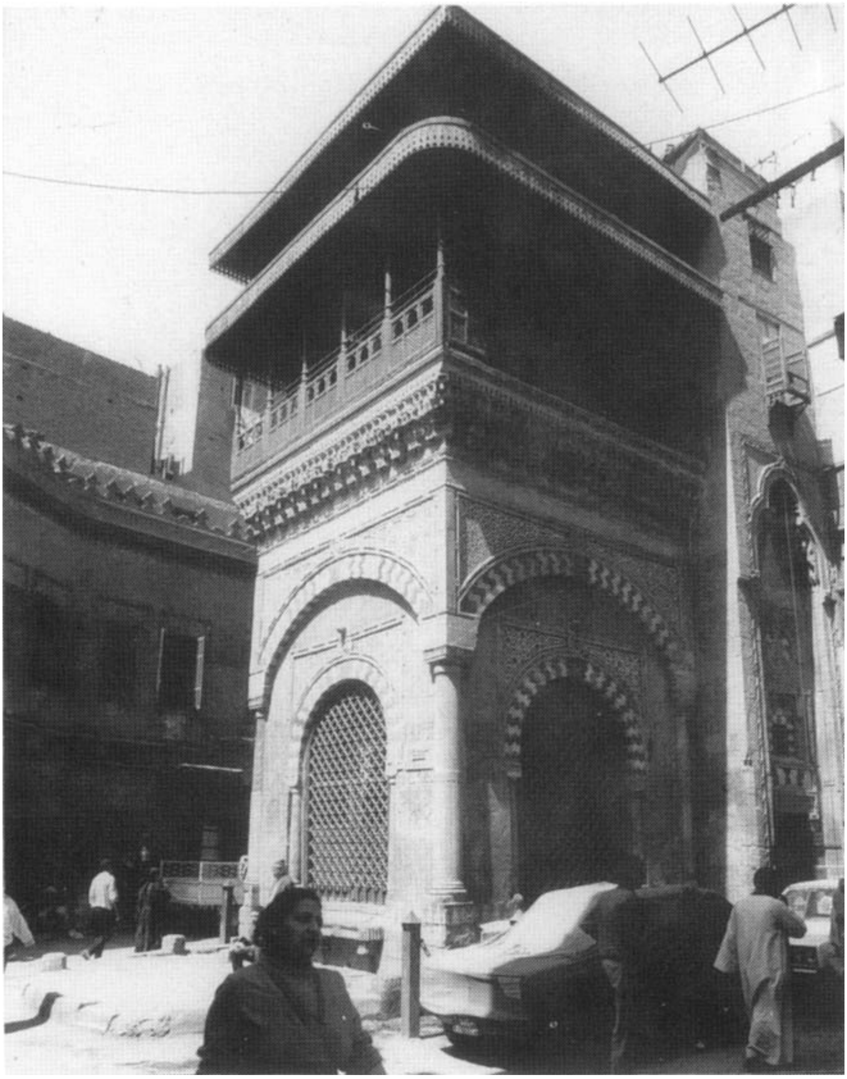
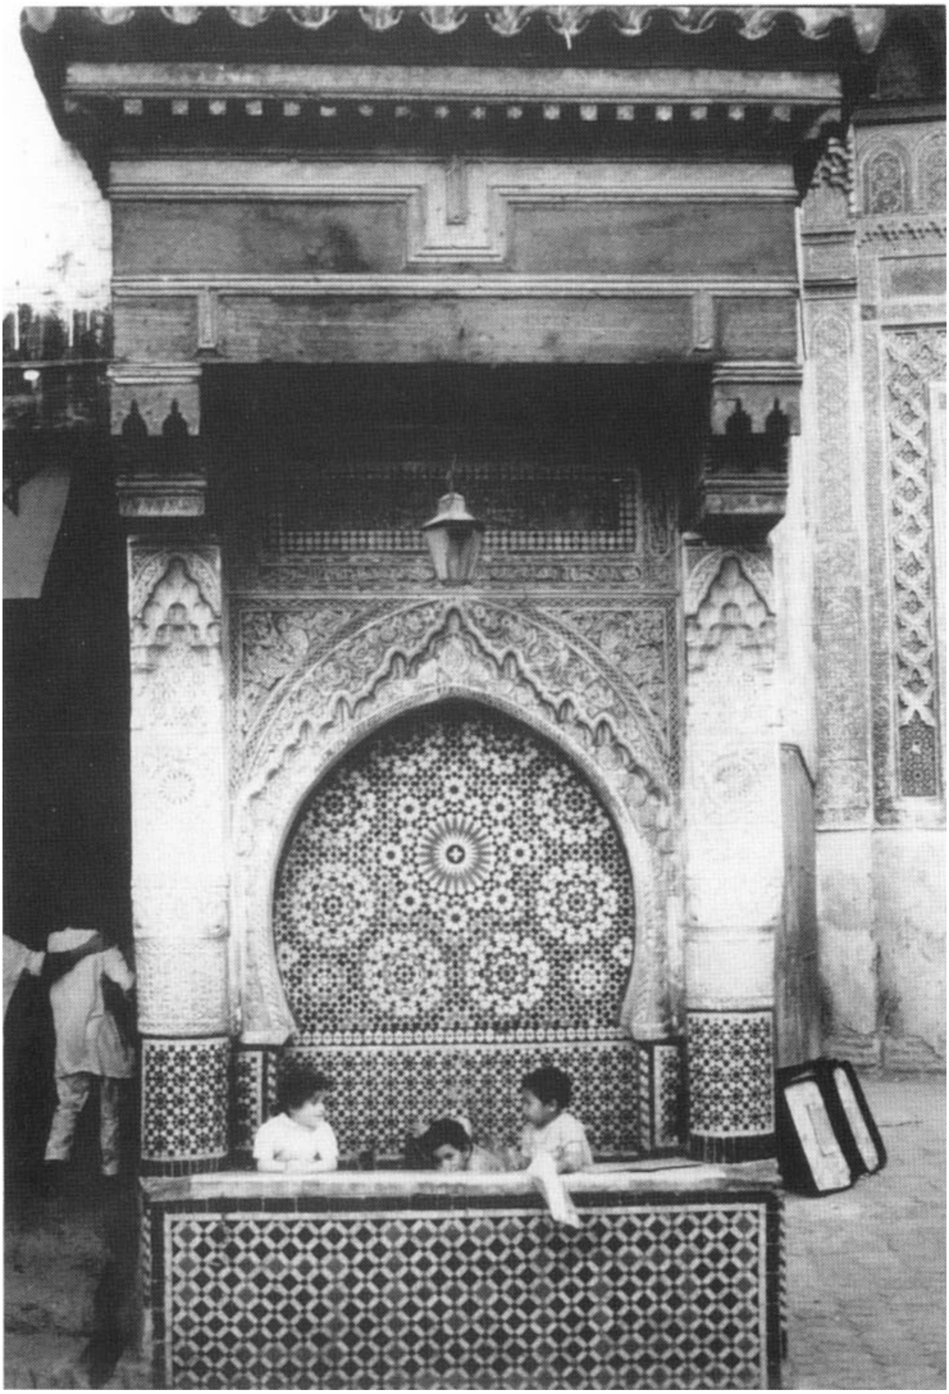
(F.C. DE BLOIS)

ṢĀBIR, MĪRZĀ ʿALĪ AKBAR (b. 1862 in Shemākha, d. 1911 in Bākū), Azerbaijani satirical poet and journalist.



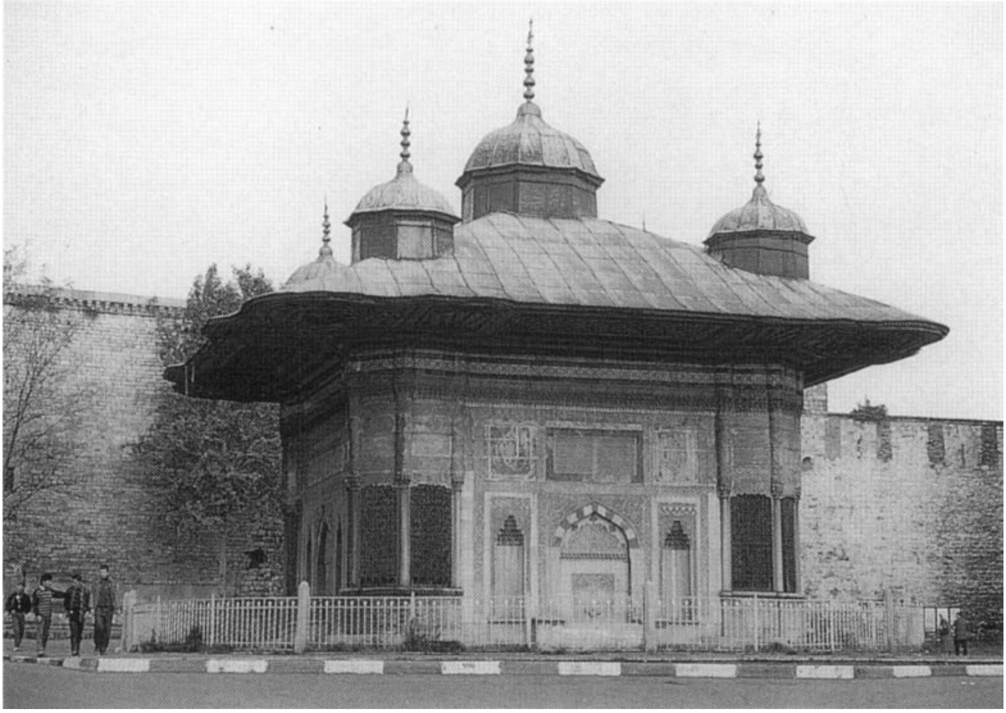
After the First Russian Revolution of 1905, a humorous and satirical literature grew up in Russian Ādharbaydjān, seen especially in the weekly journal *Mollā Naṣreddīn* founded at Tiflis in 1906 by Djelāl Meḥmed Ḳulī-zāde [see DJARĪDA. iv], which attacked the old literary forms, backwardness in education and religious fanaticism, achieving a circulation also in Turkey and Persian Ādharbaydjān. One of the writers in it was Ṣābir (who also sometimes used the pen-name Aghalar Güleyen, "he who laughs"), the most effective of the satirists on contemporary culture and political events, attacking *inter alia* both the Ottoman and Ḳādjār monarchies. After his death, his satirical poetry was collected in *Hop-hop-nāme* (Bākū 1912, repr. several times later).

Bibliography: Collected poetry in *Shiʿirler medjmūʿasī*, Bākū 1923, and subsequently in Cyrillic script in Moscow, Leningrad and Bākū. Of studies, see Ahmet Caferoğlu, in *PTF*, ii, 679-81, 690-6, 698, with specific studies on the poet noted in the bibl. there; J. Průšek (ed.), *Dict. of oriental literatures*. iii. *West Asia and North Africa*, London 1974, 163.
(ED.)



SABʿIYYA, "Seveners", a designation for those Shīʿī sects which recognise a series of seven Imāms. Unlike the name *Ithnā ʿashariyya* or "Twelvers" the term *Sabʿiyya* does not occur in mediaeval Arabic texts; it seems to have been coined by modern scholars by analogy with the first term. The name is often used to designate the Ismāʿīliyya [*q.v.*], but this is not correct, because neither the Bohora nor the Khōdja Ismāʿīlīs count seven Imāms. The term can be applied only to the earliest stage of the development of the Ismāʿīlī sect, during which the Ismāʿīlī propaganda proclaimed a line of seven Imāms, starting with al-Ḥasan b. ʿAlī b. Abī Ṭālib, and ending with Muḥammad b. Ismāʿīl b. Djaʿfar al-Ṣādiḳ whose return as the Mahdī was expected. The unity of the Ismāʿīlī movement was broken by the schism of the year 286/899 when the leader of *daʿwa*, the future Fāṭimid caliph al-Mahdī, claimed the ranks of *imām* and *mahdī*. His claim was rejected by the communities in ʿIrāḳ and al-Baḥrayn, which clung to the original doctrine, so that only these so-called Carmathian or "Ḳarmaṭī" communities preserved the old belief in a series of seven Imāms, whereas the "Fāṭimī" branch of the movement continued the line of Imāms beyond the seventh one; the actual leader of the Khōdja branch of Ismāʿīlism, Āghā Khān IV, is considered to be the 49th Imām. Given the inaccuracy of the artificial term, the name "Seveners" should best be avoided altogether.

Bibliography: See those for BOHORĀS; ISMĀʿĪLIYYA; ḲARMAṬĪ; KHŌDJA.
(H. HALM)



SABK-I, HINDĪ (P.), the Indian style, is the third term of a classification of Persian literature into three stylistic periods. The other terms, *sabk-i Khurāsānī* (initially also called *sabk-i Turkistānī*) and *sabk-i ʿIrāḳī*, refer respectively to the eastern and the western parts of mediaeval Persia. The assumption underlying this geographical terminology is that the shifts of the centre of literary activity from one area to another, which took place repeatedly since the 4th/10th century, were paralleled by a stylistic development, especially in poetry. Broadly speaking, this amounted to a gradual change from the rather simple and harmonious poetical idiom of earlier times to a much more intricate manner of writing, often qualified as "baroque" [see further ĪRĀN. vii.

The *sabīl* of ʿAbd al-Raḥmān Katkhudā in Cairo (1157/1744).

The fountain of al-Nadjdjārīn at Fās.

The *sabīl* of Sultan Aḥmed III in Istanbul (1141/1728).

Literature, at vol. IV, 60a]. For a long time Persian critics have interpreted this development as a decline, which reached its lowest level during the period of the Indian style. The appellation "Indian style" was derived from the fact that the features usually associated with this style were most conspicuous in the works of poets and writers who were attached to Indian courts during the Mug̲h̲al period. As the poets of the Ṣafawid court of Iṣfahān in the 17th and early 18th centuries wrote in a similar fashion, some modern Persian scholars have proposed to use the names *sabk-i Iṣfahānī* or *sabk-i Ṣafawī* instead.

Although a development of style as outlined by this classification cannot be denied, it is impossible to determine the chronological boundaries between the three periods with any precision. Only the end of the period of the Indian style can be dated approximately, and then only as far as Persia itself is concerned. In the middle of the 12th/18th century, poets in Iṣfahān and S̲h̲īrāz, notably Mus̲h̲tāḳ, Maftūn and Luṭf-ʿAlī Beg [*q.v.*] Ād̲h̲ar, began to criticise the excesses of the Indian style and to demand a return to what they regarded as the stylistic purety of early Persian poetry. This reaction, now known as the *bāzgas̲h̲t-i adabī* (the "literary return"), initiated a neo-classicism which dominated the writing of poetry in Persia well into the present century. It also influenced the outlook of Persian critics on the Indian style. This outlook is reflected, for instance, in the introduction to Riḍā Ḳulī K̲h̲ān Hidāyat's *Mad̲j̲maʿ al-fuṣaḥāʾ* (completed in 1288/1871), where the word *sabk* is already used in its modern sense although the geographical qualifications are not yet mentioned. Similar views were expressed in a letter on the subject written by Mīrzā Muḥammad Ḳazwīnī to E.G. Browne (*LHP*, iv, 26-8). This neo-classicist return did not affect, however, Persian poetry written in Afghanistan, Central Asia and, particularly, the Indian subcontinent, where the Indian style held its ground.

According to M.T. Bahār, the theory of the three styles came into being in the late 13th/19th century, when the question which one of the two early styles should be taken as a model for imitation was much debated. About 1880, literary critics at Mas̲h̲had, to which Bahār's father, the poet Ṣabūḥī, and the latter's teacher Nadīm Bās̲h̲ī belonged, seem to have taken a leading part in these discussions (cf. *Sabk-s̲h̲ināsī*, i, pp. *y-yb*; see also *Armag̲h̲ān*, xiii, 440 ff.).

It is less easy to determine the historical starting-point of the Indian style. Some modern scholars have maintained that its roots go back to the very beginnings of Indo-Persian poetry in the 7th/13th century; others have connected them to the rise of the Ṣafawid state in Persia (10th/16th century) and the exodus of Persian poets to the Indian courts which began in the course of the same century. Several names have been put forward as the initiators of these stylistic changes: among them are Fig̲h̲ānī [*q.v.*], who was attached to the courts of Harāt and Tabrīz during the transition between the Tīmūrid and the Ṣafawid dynasties, ʿUrfī [*q.v.*], a poet from S̲h̲īrāz who in the late 10th/16th century was one of the first Persians to make a career at the Mug̲h̲al court, and his contemporary the Indian-born Fayḍī [*q.v.*]. Even much earlier poets have been mentioned occasionally as predecessors. The only statement which can be made with any degree of certainty is that the special traits of the Indian style are noticeable since the beginning of the 11th/17th century in all the countries where Persian poetry was cultivated. Eventually, it also made a strong impact on the poetry in the Persian manner which was written in Turkish, Urdu and other Indo-Aryan languages.

Several attempts have been made to define the distinctive traits of Indian style poetry and to explain its appearance. The Indian scholar S̲h̲iblī Nuʿmānī [*q.v.*], in the third volume of his *S̲h̲iʿr al-ʿAd̲j̲am*, drew up a list of such features, which has been seminal for subsequent research. Although the classification of the three regional styles was still unknown to him, he did acknowledge the innovations in the style of the poets of the 10th/16th-11th/17th centuries. The prominence gained by the *g̲h̲azal* since the 7th/13th century (due mainly to the influence of Saʿdī, Amīr K̲h̲usraw Dihlawī and Ḥāfiẓ) was, according to S̲h̲iblī, of primary importance. An early new element was the addition of references to actual occurrences of an erotic nature to the usually abstract imagery of *g̲h̲azal* poetry, known as *wuḳūʿ-gūʾī*, "relating incidents". A remarkable example is the *D̲j̲alāliyya*, a cycle of *g̲h̲azals* written by Muḥtas̲h̲am-i Kās̲h̲ānī [*q.v.*] to celebrate a dancer he admired. The beloved was often identified as a young craftsman in the bazaar (*maʿs̲h̲ūḳ-i bāzārī*), especially in *s̲h̲ahrās̲h̲ūb* [*q.v.*] poetry, in which the beauty of the protagonist is described as "creating havoc in the town". The rise of this genre betrays a tendency towards realism noticeable also in the use of images taken from real life and of elements from popular speech, hitherto not regarded as suitable for the poetic idiom.

A second major trend is the conceptual complexity, affecting both imagery and themes, subsumed by S̲h̲iblī under the headings *k̲h̲iyāl-bāfī* ("the weaving of the imagination") and *maḍmūn-sāzī* ("the creation of concepts"). His observations were further developed by A. Bausani, who pointed out that the novelty of Indian style poetry was caused by the increasing disregard of the rule of the harmonious and associative choice of images ("das Prinzip der harmonischen oder beziehungsreichen Bildwahl", in the phrase of H. Ritter, cf. *Über die Bildersprache Niẓāmīs*, Berlin 1927, 25), which had disciplined the phantasy of the classical poet. This greater freedom resulted in the combination of rather incongruous images within the compass of a single verse as well as in a much greater density of expression. The intricate play of the imagination these poets allowed themselves went together with a pointed intellectualism. From the time of ʿUrfī onwards, philosophical themes became a common element added to the Persian *g̲h̲azal*, which was characterised already by its blend of anacreontism and mysticism. According to Bausani, the philosophical ideas expressed in this poetry were rather superficial because the main emphasis was put on the witticism of the expression itself. A cerebral attitude can also be observed in the frequent use of infinitives and abstract terms in a semi-allegorised mode. S̲h̲iblī mentioned the use of examples taken from common speech as a kind of proverbial argumentation added to a poetic statement (*mit̲h̲āliyya*). The Persian poet Ṣāʾib [*q.v.*] was particularly noted for this (see e.g. the specimens quoted by Browne, iv, 170-6).

Among the linguistic innovations, the formation of new compounds, a predilection for constructions based on participles rather than on finite verbs, and the extension of the semantic spectrum of words are particularly conspicuous (on this, see especially the monograph by W. Heinz). The syntax of the verse is not seldom unnatural, and this has become one of the most serious objections against the Indian style.

As a social factor promoting these changes, S̲h̲iblī pointed to the rise, about the same time, of the

mus͟hāʿaras [q.v.], gatherings of poets where the poetic skills could be sharpened in competitive improvisations. This replaced the earlier tradition of imitating the works of older poets mainly accessible through written sources.

Explanations for the rise of these innovations have been sought in various directions: the political and religious revolution in Persia brought about by the establishment of the Ṣafawid state, the different cultural conditions in India as well as structural changes in Persian society. These theories were discussed, and nearly all refuted, by E. Yarshater (278 ff.), who himself proposed that the mannerism of the Indian style would signal the end of classical poetry as a living artistic tradition. In recent years, Persian critics have emphasised that a distinction should be made between an early, moderate phase, culminating in the works of Ṣāʾib (d. 1088/1677-8), and a more extreme stage of the same stylistic trends, as they are exemplified especially in the works of later poets who lived outside Persia, like Nāṣir ʿAlī Sirhindī [q.v.] (d. 1108/1697) and Bīdil [q.v.] (d. 1133/1720) in India and S͟hawkat of Buk͟hārā (d. 1107/1695-6) in Central Asia. This view led to a reappraisal of the artistic merits of Ṣafawid literature [q.v.].

(J.T.P. de Bruijn)

SABK͟HA (a.), pl. *sibāk͟h*, the term used by the mediaeval Arabic geographers for salt marshes or lagoons and for the salt flats left by the evaporation of the water from such areas. Thus they employ it for describing the salt flats characteristic of parts of the Great Desert of central and eastern Persia (the present Das͟ht-i Kawīr and Das͟ht-i Lūṭ) and of the adjacent province of Sīstān (Ibn Ḥawḳal, ed. Kramers, 407, 415, tr. Kramers-Wiet, 397, 404; al-Muḳaddasī, 488; cf. A. Miquel, *La géographie humaine du monde musulman jusqu'au milieu du 11ᵉ siècle. iii. Le milieu naturelle*, Paris-The Hague 1980, 95).

In the Mag͟hrib, the form *sebk͟ha* is used to denote the salt lagoon, one of the characteristic features of the hydrography of North Africa and the Sahara, very common in the high plains, without communication with the sea. It is the terminus of a network of streams either above ground or subterranean, which have spread out and disappear in the ground; it is a shallow basin with well-marked contours sometimes delineated by steep sides. After rain, it is more or less completely filled with water impregnated with mineral substances which accumulate at the bottom of the basin. In periods of drought, the waters evaporate completely or partly and the floor is uncovered. The floor of the *sebk͟ha* is covered with saline incrustations, sometimes traversed by crevasses in which the crystals gather. The salt deposit sometimes covers mud, quicksands and dangerous quagmires.

This definition and description of the features of the *sebk͟ha* apply equally to the *s͟hoṭṭ*. An attempt has been made to establish a distinction between the two, the former term being applied to hollows which always remain more or less moist, the second to those whose evaporation is greater than the access of subterranean water or to those the floor of which looks like a plain losing itself in the horizon. There is no real foundation for this distinction. The two terms are employed indifferently in the same district. For example, we have in Orania the *sebk͟ha* of Oran and the *s͟hoṭṭ* G͟harliu and S͟harḳī, in the Sahara the *sebk͟ha* of Timimūn (Gurara), the *s͟hoṭṭ* of Southern Tunisia, the *sebk͟ha* of Wargla, of Siwa, etc.

(G. Yver*)

ṢABR (a.), usually rendered "patience, endurance". The significance of this conception can hardly be conveyed in a West European language by a single word, as may be seen from the following. According to the Arabic lexicographers, the root *ṣ-b-r*, of which *ṣabr* is the *nomen actionis*, means to restrain or bind; thence *ḳatalahu ṣabrᵃⁿ* "to bind and then slay someone". The slayer and the slain in this case are called *ṣābir* and *maṣbūr* respectively. The expression is applied, for example, to martyrs and prisoners of war put to death; in the *Ḥadīt͟h* often to animals that—contrary to the Muslim prohibition—are tortured to death (e.g. al-Buk͟hārī, *D͟habāʾiḥ*, *bāb* 25; Muslim, *Ṣayd*, trad. 58; Aḥmad b. Ḥanbal, *Musnad*, iii, 171). The word has a special technical application in the expression *yamīnu ṣabrⁱⁿ*, by which is meant an oath imposed by the public authorities and therefore taken unwillingly (e.g. al-Buk͟hārī, *Manāḳib al-Anṣār*, *bāb* 27; *Aymān*, *bāb* 17; Muslim, *Īmān*, trad. 176).

In the Ḳurʾān, derivations from the root *ṣ-b-r* frequently occur, in the first place with the general meaning of being patient. Muḥammad is warned to be patient like the Apostles of God before him (XXXVIII, 16; XLVI, 34; "for Allāh's threats are fulfilled", is added in XXX, 60). A double reward is promised to the patient (XXXIII, 113; XXVIII, 54; cf. XXV, 75). In XXXIX, 16, it is even said that the *ṣābirūn* shall receive their reward without *ḥisāb* (which in this case is explained as measure or limitation).

The conception is given a special application to the holy war (e.g. III, 140; VIII, 66); in such connections it can be translated by "endurance, tenacity". Form VIII is also used in almost the same sense, e.g. XIX, 66, "Serve him and persevere in his service". The third stem is also found (III, 200; see below).

The word is next found with the meaning resignation, e.g. in the sūra of Joseph (XII, 18) where Jacob, on hearing of the death of his son, says "[My best course is] fitting resignation" (*fa-ṣabrᵘⁿ d͟jamīlᵘⁿ*).

Sometimes *ṣabr* is associated with the *ṣalāt* (II, 42, 148). According to the commentators, it is in these passages synonymous with fasting, and they quote in support the name *s͟hahr al-ṣabr* given to the month of Ramaḍān [q.v.].

As an adjective, we find *ṣabbār* in the Ḳurʾān,

associated with *shakūr* (XIV, 5 etc.); cf. thereon al-Ṭabarī, *Tafsīr*, "It is well with the man who is resigned when misfortune afflicts him, grateful when gifts of grace become his"; and Muslim, *Zuhd*, trad. 64, "Wonderful is the attitude of the believer; everything is for the best with him; if something pleasant happens to him, he is thankful and this proves for the best with him; and if misfortune meets him, he is resigned and this again is for the best with him." The ideas of *ṣabr* and *shukr* are also associated in al-Ghazālī, see below.

The later development of the conception is, of course, also reflected in the commentaries on the Ḳurʾān; it is difficult to say in how far these interpretations are already inherent in the language of the Ḳurʾān. In any case, the conception *ṣabr*, in all its shades of meaning, is essentially Hellenistic in so far as it includes the ἀταραξία of the Stoic, the patience of the Christian and the self-control and renunciation of the ascetic; cf. below. In place of many other explanations of the commentators, we will give here only that of Fakhr al-Dīn al-Rāzī (*Mafātīḥ al-ghayb*, Cairo 1278, on III, 200). He distinguishes four kinds of *ṣabr*: (1) endurance in the laborious intellectual task of dealing with matters of dogma, e.g. in the doctrine of *tawḥīd, ʿadl, nubuwwa, maʿād* and disputed points; (2) endurance in completing operations one is bound or recommended by law to do; (3) steadfastness in refraining from forbidden activities; and (4) resignation in calamity, etc. *Muṣābara* is, according to him, the application of *ṣabr* to one's fellow-creature (like neighbours, People of the Book), refraining from revenge, the *amr bi'l-maʿrūf wa'l-nahy ʿani 'l-munkar*, etc.

The high value laid upon *ṣabr* is also seen in the fact that al-Ṣabūr is included among the beautiful names of God. According to the *Lisān* (s.v. *ṣ-b-r*), Ṣabūr is a synonym of *ḥalīm*, with the difference that the sinner need not fear any retribution from al-Ḥalīm, but he is not sure of such leniency from al-Ṣabūr. God's *ṣabr* is in the *Ḥadīth* increased to the highest degree in the saying that no one is more patient than He towards that which wounds His hearing (al-Bukhārī, *Tawḥīd, bāb* 3).

In the *Ḥadīth*, *ṣabr* is, in the first place, found in general connections, like, to him who practises *ṣabr* God will grant *ṣabr*, for *ṣabr* is the greatest charisma (al-Bukhārī, *Zakāt, bāb* 50; *Riḳāḳ, bāb* 20; Aḥmad b. Ḥanbal, iii, 93); in the *Ḥadīth* also, *ṣabr* is applied to endurance in the holy war. A man asked Muḥammad: "If I take part in the *Djihād* with my life and my property and I am killed *ṣabran* and resigned, rushing forward without fleeing, shall I enter Paradise?" And Muḥammad answered: "Yes". (Aḥmad b. Ḥanbal, iii, 325). The word is found in other passages in the sense of enduring, e.g. towards the public authorities, "after my death ye shall suffer things, but exercise *ṣabr* until ye meet me at the heavenly pool" (*ḥawḍ*) (al-Bukhārī, *Riḳāḳ, bāb* 53; *Fitan, bāb* 2; cf. *Aḥkām, bāb* 4; Muslim, *Imāra*, trads. 53, 56, etc.). The word here usually has the meaning of resignation, as in the oft-recurring saying, "The (true) *ṣabr* is revealed at the first blow (*innamā 'l-ṣabr ʿinda 'l-ṣadmati 'l-ūlā*, or *awwali ṣadmatin* or *awwali 'l-ṣadmati*, al-Bukhārī, *Djanāʾiz, bāb* 32, 43; Muslim, *Djanāʾiz*, trad. 15; Abū Dāwūd, *Djanāʾiz, bāb* 22, etc.).

Significant, in other respects also, is the story of the epileptic woman who asked Muḥammad for his *duʿāʾ* for her healing; he replied to her that, if she refrained from her request and exercised *ṣabr*, paradise would be her portion (al-Bukhārī, *Marḍā, bāb* 6; Muslim, *al-Birr wa 'l-ṣila*, trad. 54). The word is often found in this connection associated with the proper word for resignation, viz. *iḥtisāb* (e.g. al-Bukhārī, *Aymān, bāb* 9; Muslim, *Djanāʾiz*, trad. 11); with this should be compared the following *ḥadīth ḳudsī*, "If my servant is deprived of the light of both his eyes, I grant him paradise in compensation" (al-Bukhārī, *Marḍā, bāb* 67; Aḥmad b. Ḥanbal, iii, 283).

In conclusion, we may remark that in the canonical *Ḥadīth* the meaning renunciation is exceedingly rare, a meaning which receives so great an importance in ethico-ascetic mysticism (cf. what has already been said above on sūra II, 42, 148). *Bāb* 20 of al-Bukhārī's *Kitāb al-Riḳāḳ* (which, like the chapter *zuhd* in the other collections of traditions, represents the oldest stage of this tendency in Islam) has in the *tardjama*: ʿUmar said, "We have found the best of our life in *ṣabr*." Here we already can trace the Hellenistic sphere of thought for which renunciation was the kind of life fitting the true man, the wise man, the martyr.

What the Ḳurʾān and *Ḥadīth* say about *ṣabr* recurs in part again in ethico-mystical literature; but the word has here become, so to speak, a technical term and to a very high degree, as *ṣabr* is the cardinal virtue in this school of thought. As with other fundamental conceptions (see the series of definitions of Ṣūfī and Ṣūfism given by Nicholson in *JRAS* [1905]), we find numerous definitions of *ṣabr*, definitions which often point rather to fertility of imagination than give an exhaustive exposition of the idea, but are of great value for the light which they throw upon the subject like lightning flashes. Al-Ḳushayrī in his *Risāla*, ed. ʿA.H. Maḥmūd and M. Ibn al-Sharīf, Cairo 1385/1966, 397-404, gives the following collection: "The gulping down of bitterness without making a wry face" (al-Djunayd); "the refraining from unpermitted things, silence in suffering blows of fate, showing oneself rich when poverty settles in the courts of subsistence"; "steadfastness in fitting behaviour (*Ḥusn al-adab*) under blows of fate" (Ibn ʿAṭāʾ); "bowing before the blow without a sound or complaint"; "the *ṣabbār* is he who has accustomed himself to suddenly meeting with forbidden things" (Abū ʿUthmān); "*ṣabr* consists in welcoming illness as if it were health"; "steadfastness in God and meeting His blows with a good countenance and equanimity" (ʿAmr b. ʿUthmān); "steadfastness in the ordinances of the Book and of the Sunna" (al-Khawwāṣ); "the *ṣabr* of the mystics (literally, lovers) is more difficult than that of the ascetics" (Yaḥyā b. Muʿādh); "refraining from complaint" (Ruwaym); "seeking help with God" (Dhu 'l-Nūn); *ṣabr* is like its name i.e. [bitter] like aloes (*ṣabr*; see the next article) (Abū ʿAlī al-Daḳḳāḳ); "there are three kinds of *ṣabr*, *ṣabr* of the *mutaṣabbir*, of the *ṣābir* and of the *ṣabbār* (Abū ʿAbd Allāh b. Khafīf); "*ṣabr* is a steed that never stumbles" (ʿAlī b. Abī Ṭālib); and "*ṣabr* is not to distinguish between the condition of grace and that of trial, in peace of spirit in both; *taṣabbur* is calm under blows, while one feels the heavy trial" (Abū Muḥammad al-Djurayrī; cf. ἀταραξία).

Al-Ghazālī treats of *ṣabr* in Book II of the fourth part of the *Iḥyāʾ*, which describes the virtues that make blessed. We have seen that, already in the Ḳurʾān, *ṣabr* and *shukr* are found in association. Al-Ghazālī discusses the two conceptions in the second book separately, but in reality in close connection. He bases the combination, not on the Ḳurʾānic phraseology, but on the maxim "belief consists of two halves: the one *ṣabr* and the other *shukr*". This again goes back to the tradition "*ṣabr* is the half of belief" (cf. the traditions given above which also associate *ṣabr* and *shukr*).

Al-Ghazālī comprises the treatment of *ṣabr* under the following heads: (1) the excellence of *ṣabr*; (2) its

nature and conception; (3) *ṣabr*, the half of belief; (4) synonyms with reference to the object of *ṣabr*; (5) kinds of *ṣabr* as regards strength and weakness; (6) opinions regarding the necessity of *ṣabr* and how man can never dispense with *ṣabr*; and (7) the healthfulness of *ṣabr* and means of attaining it. This division is virtually adopted by Bar Hebraeus [see IBN AL-ʿIBRĪ] in his *Ethikon* for the *msaybrānūṯā* (see A.J. Wensinck, *Bar Hebraeus' Book of the Dove*, Leiden 1919, pp. cxvii-cxix).

Only the following out of these sections can be given here. *Ṣabr*, like all religious *maḳāmāt*, consists of three parts, *maʿrifa, ḥāl* and *ʿamal*. The *maʿārif* are like the tree, the *aḥwāl* the branches and the *aʿmāl* the fruits. Out of the three classes of beings, man alone may possess *ṣabr*. For the animals are entirely governed by their desires and impulses; the angels, on the other hand, are completely filled by their longing for the deity, so that no desire has power over them and as a result no *ṣabr* is necessary to overcome it. In man, on the contrary, two impulses (*bāʿit͟h*) are fighting, the impulse of desires and the impulse of religion; the former is kindled by Satan and the latter by the angels. *Ṣabr* means adherence to the religious as opposed to the sensual impulse.

Ṣabr is of two kinds: (a) the physical, like the endurance of physical ills, whether active, as in performing difficult tasks, or passive, as in suffering blows, etc.; this kind is laudable; and (b) the spiritual, like renunciation in face of natural impulses. According to its different objects, it is called by synonyms like *ʿiffa, ḍabṭ al-nafs, s͟hadjāʿa, ḥilm, saʿat al-ṣadr, kitmān al-sirr, zuhd* and *ḳanāʿa*. From this wide range of meanings, we can understand that Muḥammad, when asked, could answer, "*īmān* is *ṣabr*". This kind is absolutely laudable (*maḥmūd tāmm*).

As regards the greater or less strength of their *ṣabr*, three classes of individuals are distinguishable: (a) the very few in whom *ṣabr* has become a permanent condition; these are the *ṣiddīḳūn* and the *muḳarrabūn*; (b) those in whom animal impulses predominate; and (c) those in whom a continual struggle is going on between the two impulses; these are the *mudjāhidūn*; perhaps Allāh will heed them. One of the gnostics (says al-G͟hazālī) distinguishes three kinds of *ṣābirūn*: those who renounce desires, these are the *tāʾibūn*; those who submit to the divine decree, these are the *zāhidūn*; and those who delight in whatever God allows to come upon them, these are the *ṣiddīḳūn*.

In section VI, al-G͟hazālī shows how the believer requires *ṣabr* under all circumstances; (a) in health and prosperity; here the close connection between *ṣabr* and gratitude is seen; and (b) in all that does not belong to this category, as in the performance of legal obligations, in refraining from forbidden things and in whatever happens to a man against his will, either from his fellow-men or by God's decree.

As *ṣabr* is an indication of the struggle between the two impulses, its salutary effect consists in all that may strengthen the religious impulse and weaken the animal one. The weakening of the animal impulse is brought about by asceticism, by avoiding whatever increases this impulse, e.g. by withdrawal (*ʿazla*), or by the practice of what is permitted, e.g. marriage. The strengthening of the religious impulse is brought about (a) by the awakening of the desire for the fruits of *mudjāhada*, e.g. by means of the reading of the lives of saints or prophets; and (b) by gradually accustoming this impulse to the struggle with its antagonist, so that finally the consciousness of superiority becomes a delight.

(A.J. WENSINCK)

ṢABR (*ṣabir, ṣabur*) (A.) denotes the aloe, a species of the *Liliaceae*, which was widespread in the warm countries of the ancient world, mainly in Cyprus and on the mountains of Africa.

The leaves of many varieties provide fibres ("aloe-fibres") for spinning coarse cloths, and from the aloe's dark-brown wood a valued perfumery is won. Important was also the aloe drug, i.e. the juice pressed from the leaves, whose Greek name ἀλόη was borrowed by the Arab pharmacologists as *āluwī*. In the West, the name apparently was pronounced *ṣibar*, which survives in Spanish *acibar*. The most extensive descriptions of the plant and its drug are found in Ibn al-Bayṭār, *Djāmiʿ*, iii, 77-81 (tr. Leclerc no. 1388) and in al-Nuwayrī, *Nihāya*, xi, 304-7. According to them, the leaves of the plant resemble those of the sea onion (*is͟hḳīl*), which are wide and thick, bent back, covered with a sticky liquid and whose ends are thorny. Among the numerous varieties of the aloe, three are generally mentioned: *suḳuṭrī, ʿarabī* (*ḥaḍramī*), and *simindjānī* (the latter reading is uncertain; it is perhaps derived from Simindjān in Ṭuk͟hāristān). The first variety is considered to be the best and probably corresponds with the *Aloe Parryi* Baker, the *Aloe Socotrina*, which thrives in great quantities on the island of Socotra (Suḳuṭrā [*q.v.*]). The leaves, which are full of water, are squeezed, chopped up and pounded until the juice comes out. This is left to thicken, placed in a dish and exposed to the sun until it dries up. The juice resembles that of saffron, its scent that of myrh. The entire plant has a sharp odour and a very bitter taste. It has only one root. The drug was used above all as laxative, as an amarum or appetiser and as a choleretic; externally, it was applied on badly healing wounds, ulcers and burns; it was also used against inflamations of the eye, and as a means to improve bad breath.

(A. DIETRICH)

ṢABRA or SABRATHA, one of the three ancient cities (Leptis Magna = Lebda; Oea = Tripoli; and Sabratha or Sabrata = Ṣabra) which made up Tripolitania. Ṣabra Manṣūriyya [*q.v.*], another town

33 km/20 miles to the west of Tlemcen in Algeria bore (Ibn Khaldūn, *ʿIbar*, Beirut 1959, vii, 524), and still bears today, this same name, after having assumed that of Turenne in the colonial period. The homonomy here is fortuitous.

Ṣabrāṭa—now a tourist town and the centre of an archaeological zone along the littoral some 75 km/48 miles west of Tripoli and 35 km/20 miles west of Zuwāra—is a Tyrian foundation, or a Carthaginian one, dating from the 5th century B.C., of which imposing ruins remain.

In 22/642-3, ʿAmr b. al-ʿĀṣ, after having taken Tripoli, made a surprise attack on Sabratha, at that time in decline and inhabited by Berber Christians of the Nafūsa tribe [*q.v.*]. In 123/741, Ṣabra (or Sabrata according to the orthography of Ibn ʿAbd al-Ḥakam) was besieged by the Ṣufrī Berbers of the Zanāta tribe, and then relieved by the *amīr* of Tripoli. In 131/748-9, ʿAbd al-Raḥmān b. Ḥabīb, the master of Ḳayrawān, at that moment on bad terms with the caliphate, transferred the population and trade of Ṣabra to Nubāra, probably in consequence of a rebellion. This was almost certainly only a partial and temporary transfer. Towards the middle of the 3rd/9th century it was the "ancient statues in stone" which attracted al-Yaʿḳūbī's attention. Ibn Ḥawḳal noted that, at the time when he visited the Maghrib, in 340/951-2, a tax was levied on caravans which passed through the town. In the last quarter of the 4th/10th century, al-Muḳaddasī wrote that Ṣabra was a fortified town, surrounded by palm groves and orchards full of fig trees. In 403/1012-13 Ṣabra was at the centre of rebellions fomented by the Zanāta against the Zīrid *amīr* Bādīs. Towards the end of the 5th/11th century, al-Bakrī described it as a prosperous town, populated by Zuwāgha, who had taken the side of Ibn Khalaf against the last Rustamids [*q.v.*]. In the middle years of the 6th/12th century, al-Idrīsī merely mentions it, adding that it was, like all the other urban centres of the region, "a lifeless desert" (*khalāʾ balkaʿ*), having been devastated by the Arabs of the Banū Hilāl and given over to pillage by the Mirdās and Riyāḥ, as confirmed by Ibn Khaldūn. In Ṣafar 707/August 1307, al-Tidjānī noted that the biggest populated unit of the region through which he was passing was Zuwāgha, and that in its environs, by the sea coast, were to be found "the ruins of an ancient city known as Ṣabra, which may also be sometimes written with a *sīn*". In the mid-10th/16th century, Leo Africanus/al-Ḥasan b. Muḥammad al-Zayyātī no longer mentions Ṣabra. He merely mentions Zuwāra, describing it as a small town in full decay. It was in the neighbourhood of this town that there was held, in a tent, the conference of March-September 1893 between France and the Ottomans which delimited the Tunisian-Libyan frontier.

TALBI)

ṢABRA or AL-**MANṢŪRIYYA**, or also MADĪNAT ʿIZZ AL-ISLĀM, a royal city founded between 334 and 336/945-8, at half-a-mile to the southeast of Ḳayrawān, by the Fāṭimid caliph al-Manṣūr—whence its name—in order to commemorate his victory over the rebel Abū Yazīd [*q.v.*], on the very spot, so we are told, of a decisive battle.

The name. *Ṣabra* means "a very hard stone" (*LʿA*, Beirut 1955, iv, 441, 442). Like *ṣakhr* "rock", the term is attested as a personal name (al-Ṭabarī, index; al-Mālikī, *Riyāḍ*, Beirut 1983, i, 250) or as that of a clan (Kaḥḥāla, *Muʿdjam ḳabāʾil al-ʿArab*, Beirut 1968, ii, 631). As a toponym, Ṣabra probably designated a suburb or a stretch of land, in the proximity of Ḳayrawān, which derived its name from that of the occupiers of the place. The city founded on this spot, or near it, was officially called al-Manṣūriyya "the Victorious City", and it is this name which, until 438/1046-7 (i.e. till the Zīrids' break with the Fāṭimids in Cairo), appears exclusively on coins. To symbolise the rupture in relations, the city officially changed its name from 439/1047-8 onwards. After then, there appears either the original name Ṣabra (which had never completely disappeared out of everyday usage) or that of Madīnat ʿIzz al-Islām "City of the Glory of Islam". The Ḳāḍī al-Nuʿmān [*q.v.*], the first judge of the city founded by al-Manṣūr, in his *K. al-Madjālis* (ed. Tunis 1978, index), never calls it by anything but its official name al-Manṣūriyya. Other authors call it indifferently by one or the other of its names. The derivation of the name Ṣabra from the root *ṣ-b-r* "to endure", with reference to the contradictory exhortations to resistance addressed to the Shīʿī troops by al-Mansūr (al-Muḳaddasī, partial Fr. tr. Ch. Pellat, Algiers 1950, 16-17; Ibn Ḥammād, *Akhbār*, ed. and Fr. tr. Vonderheyden, Algiers-Paris 1927, 23-41), or, per contra, to the Khāridjite troops by Abū Yazīd (Abū Zakariyyāʾ, *K. al-Sīra*, Tunis 1985), 175, is, so far as one can see, an imagined, *post eventum* explanation.

The city's evolution. On Tuesday 19 Shawwāl 337/1 May 949 al-Manṣūr transferred the seat of his government to al-Manṣūriyya (Ibn Ḥawḳal, *K. Ṣūrat al-arḍ*, tr. Kramers-Wiet, 68). As with Baghdād, the city was round in plan—and this is confirmed by aerial photography—and the caliph's palace was in the centre. Its ramparts were pierced with four or five gates with iron fittings. The city had a copious supply of water and very soon developed greatly. Al-Manṣūr's successors in turn built numerous and luxurious palaces adorned with gardens and stretches of water, palaces whose foundations have been partially revealed by excavations. The city had 300 *ḥammāms* which belonged largely to private houses. After al-Muʿizz's departure for Cairo, his lieutenant in the Maghrib, Buluggīn, installed himself on Thursday, 11 Rabīʿ I 362/20 December 972 at al-Manṣūriyya, in the very palace which his sovereign had just left. This marked the beginning of the city's Zīrid period. Some decades later, in 405/1014-15, on the orders of Bādīs, merchants and artisans were officially transplanted from Ḳayrawān to al-Manṣūriyya (Ibn ʿIdhārī, *Bayān*, i, 261, see also i, 219-20, 241, 268, 276, 278,

291, 293-4). The resultant dissatisfaction in Ḳayrawān, now deprived of its economic role, was not perhaps unconnected with the revolt which broke out there in 407/1016 at the coming of al-Muʿizz b. Bādīs [*q.v.*] and which spread to al-Manṣūriyya, which was badly damaged. Finally, in 449/1057, under pressure from the Banū Hilāl, al-Muʿizz fled to al-Mahdiyya. Al-Manṣūriyya was then totally devastated, and, unlike Ḳayrawān, never rose again from its ruins. Al-Idrīsī, in the middle of the 6th/12th century, depicts it as ruinous and deserted: "One no longer meets any living soul there" (*Opus geographicum*, Naples-Rome 1984, iii, 284).

Over the ensuing centuries, the site was pillaged, and the excavations, begun in 1921, have only yielded a few remains: paving materials, sculpted plaques, pottery with geometric or life-like decorations, etc.

SABT (A.), the sabbath, and thus (*yawm al-*) *sabt*, Saturday (technically, Friday evening to Saturday evening); it is also suggested to mean "a week", that is from *sabt* to *sabt*, as well as a more general sense of a long period of time. The word has been the common designator of the day which follows *yawm al-djumʿa* [see DJUMʿA] since early Islamic times at least [see ZAMĀN]. Clearly related to the Aramaic word *shabbʿtā* and ultimately Hebrew *shabbāt*, the word was given an appropriately Islamic sense by the Ḳurʾān and later Muslim theological interpretation.

The Ḳurʾān associates Jews, the sabbath and not undertaking any work, in line with Jewish tradition. Ḳurʾān, IV, 154 indicates that the day of rest was imposed upon the Jews at Sinai. Muslim tradition elaborates this as a punishment for the Jewish refusal to worship on Friday, the appropriate holy day; Saturday would be accepted by God as long as the Jews ceased from any work on that day (see al-Ṭabarī, *Djāmiʿ al-bayān*, ed. Shākir, Cairo 1954-69, ii, 167-8). Opposing traditions are found (e.g. Muslim, *Ṣaḥīḥ*, *djumʿa*, 22) which support all of Friday, Saturday and Sunday as legitimate days of worship, however. Ḳurʾān, XVI, 124, speaks of disputes over the observance of the Sabbath, perhaps a remnant of Jewish-Christian debates. The breaking of the law of the sabbath is the focus of three passages, II, 65, IV, 47, and VII, 163, in which the word *sabt* is used twice plus once verbally, *yasbitūna*; these passages, which provided significant occasions for exegetical elaboration, speak of those who transgressed the Sabbath being transformed into "despised apes", *kirada khāsiʾīn* (II, 65, VII, 166; also see V, 60). Opinion varied as to whether this was to be understood literally or metaphorically, for example as something which happened to Jewish hearts. Modern scholarship has not reached a consensus on the origins of this story.

Muslim exegetical reflection on these passages started out with statements associating the sabbath, *yawm al-sabt*, and "resting", and with knowledge of the justification of that idea—that God rested on the seventh day of creation. However, while the Ḳurʾān confirms that there were six days of creation (VII, 54, X, 3, XI, 7, etc.), it rejects the idea that God rested from creation: "Weariness did not touch us" (L, 38), God says of himself. Thus the exegetical problem arose of how to explain that the seventh day of the week was called *sabt* without that implying a sense of "rest". The answer was found through derivation of the word *sabt* from *sabata* which was said to be restricted in its meaning to senses of "ceasing" or "being still", without conveying an implication of "rest"; the word *subāt* was still seen to have that meaning, however, as was necessary in XXV, 47, and LXXVIII, 9.

Muslim-Jewish polemic often focussed upon the accusation that the Jews entertained an anthropomorphic concept of God because of the notion of his "resting" from creation on the sabbath. For Muslims, *yawm al-djumʿa*, while it contained aspects of a day of rest in its celebration (a facet which has become more pronounced in modern times), was generally not seen as a holiday from work, any more than *yawm al-sabt* was.

(A. RIPPIN)

SABTA, CEUTA, a town of northern Morocco. It is situated 16 km/10 miles to the south of Gibraltar on the Moroccan coast, 60 km/38 miles to the north-west of Tetouan and 210 km/130 miles from Fās. Sabta has the form of a peninsula, ending in a small mountain (the Djabal al-Minā or Mt. Hacho, 193 m/633 feet), which has played the double role of a natural acropolis and a watch point. The isthmus of the peninsula, 60 m/197 feet in height, is attached to the mainland by a narrow strip of land, easily defensible. The old town had its counterpart in the Marīnid town, the Āfrāg [*q.v.*].

Explanations of the placename's etymology abound. Thus it is said that Sabta derived from the Latin *Septem Fratres*, which denotes the seven nearby hills;

most of the Arabic chronicles attribute its foundation to one Sabt, a descendant of Noah and eponymous hero, whose tomb, in the form of a tumulus (*al-Ḳabr al-shāṭṭ*) was still venerated at the beginning of the 9th/15th century. The Phoenician trading depot of Abyla and the Roman Iulia Traiecta have been situated there, but Rome does not seem to have attached much importance to the place (C. Posac Mon, *Estudios arqueología de Ceuta*, in *Actes du IXe Congrès*, Valladolid 1965). As successors to Rome, the Byzantines clashed with the Visigoths, who besieged Sabta in 534, but the Byzantines managed to occupy it, or to re-occupy it and, according to Procopius, "fortified, peopled and embellished it". The Emperor Justinian built it up into a strong fortress (F. Fita, *Ceuta wisigoda y byzantina durante el reino de Tuedes*, BRAH 1922).

The accounts of the conquest of al-Andalus bring into prominence Count Julian, the Visigothic governor, Byzantine Exarch or lord of the Ghumāra, according to the various chronicles (see Ibn ʿAbd al-Ḥakam, *Conquête de l'Afrique du Nord et de l'Espagne*, ed. and partial tr. A. Gateau, 2nd ed. Algiers 1947). It was a refuge for Arab forces during the Khāridjite rebellion, an Idrīsid principality (it was allegedly occupied by Idrīs I in 173/789-90), as the capital of the Banū ʿIṣām, who appear more as an independent dynasty than as Idrīsid governors, occupied by the Umayyads of Cordova in 319/931 and became a pawn in the struggle against the Fāṭimids. Al-Nāṣir proclaimed himself caliph and called himself "master of the two seas" after the conquest of the town. As a base for intervention in the Maghrib, it had strong ramparts and could gather in the populations of towns threatened or ruined (Nakūr al-Baṣra, Tāhart, etc.). The decline of the caliphate allowed the Ḥammūdids [*q.v.*] to establish a principality which included Tangier, Ceuta, Algeciras and Malaga. The town's mint coined gold pieces, the *mancus ceptimus*, which became widely current. The Ḥammūdids' lieutenant, Saḳḳūt al-Barghawāṭī, profited from the anarchy within al-Andalus to seize power and set up his own dynasty (al-Maḳḳarī, *Azhār*, i, 34; Ibn Khaldūn, *Prolegomena*, tr. Rosenthal, ii, 220; Vallvé Bermejo, *Saqūt al-Barghawāṭī rey de Ceuta*, in *al-And.* [1962], 119); he recognised the ʿAbbāsid caliph and challenged the ʿAbbādids of Seville for control of the Straits. During his reign (453-75/1061-83), the town was prosperous and enjoyed a lively intellectual life. It resisted the Almoravids, who were held up before Sabta for six years before taking it in 475/1083.

As the native town of ʿAlī b. Yūsuf, Sabta was favoured by the Lamtūna and profited from the political unity established to develop economic links with sub-Saharan Africa and the lands on the northern fringes of the Mediterranean. Its powerful *ḳāḍīs* controlled activities, including the muezzins of the Great Mosque (H. Ferhat, *Un nouveau texte sur la mosquée de Sabta*, in *Hespéris*, forthcoming). When the Almohads arrived, the *ḳāḍī* ʿIyāḍ b. Mūsā [*q.v.*] led the resistance, but the town had to surrender and the *ḳāḍī* was exiled (M. Bencherifa, *al-Taʿrīf bi 'l-Ḳāḍī ʿIyāḍ*, Rabat 1974, 47). Sabta became one of the most important governorships of the empire; with its arsenal and anchorage for the fleet and its change of masters, the town was always given to a prince of the dynasty (*Sayyid*).

From 629/1231-2, Almohad unity began to break up, with the secession of Ibn Hūd in al-Andalus and also that of the Ḥafṣids [*q.v.*]. The governor of Sabta, the Sayyid Abū Mūsā, rebelled and assumed the title of al-Muʾayyad. Besieged by al-Maʾmūn, he negotiated the handing-over of the town to Ibn Hūd, who gave it to the admiral al-Ghushtī. The latter was ejected by the populace, who handed power over to a rich merchant, Abu 'l-ʿAbbās al-Yanashtī, who now had to face a siege by the Genoese (Ibn al-ʿIdhārī, *Bayān*, iii, 307; al-Ḥimyarī, *al-Rawḍ al-miʿṭār*, Beirut 1975, 622; Ch. Dufourcq, *La question de Ceuta au XIIIe siècle*, in *Hespéris* [1955], 67; Di Tucci, *Documenti inediti sulla spedizione e sulla Mahona di Genovesi a Ceuta*, Genoa 1935, 273-340). Irritated by al-Yanashtī, who aspired to personal power, the Sabtīs returned to the bosom of the Almohads and accepted Ibn Khalāṣ, the caliph al-Rashīd's envoy. Ḥafṣid intervention in the Straits led to occupation of the town, which recognised Abū Zakariyyāʾ. After the latter's death, a coup d'état expelled the agents of Tunis and gave power to Abu 'l-Ḳāsim al-ʿAzafī, whose dynasty was to last until 720/1320, including some temporary hiatuses (J.D. Latham, *The rise of the ʿAzafids of Ceuta*, in *IOS*, ii [1972], 263-87; idem, *The later ʿAzafids*, in *ROMM*, xv-xvi [1973], 109-25; idem, *The strategic position and defence of Ceuta in the later Muslim period*, in *IQ* [1971], 189-204; and see ʿAZAFI, BANU'L-, in Suppl.). The Banu 'l-ʿAzafī instituted a consultative régime (*al-shūrā*) which preserved the town's autonomy whilst recognising the Almohad caliph.

As a bridge-head between the Saharan region and the Mediterranean, Sabta played a leading role in commercial exchanges and minted coins of excellent quality (J.J. Rodriguez-Lorente and T. b. Hafiz Ibrahim, *Numismatica de Ceuta musulmana*, Madrid 1987).

Taken by Granada in 705/1306, Sabta was sacked and its élites expelled. The inhabitants appealed to the Marīnids, who re-occupied it in 789/1387. Marīnid control, the loss of the Andalusian towns and a general regression in the region, weakened the town and its commerce; it was replaced regarding commerce into the interior by Genoese, Barcelonans and Majorcans established along the Atlantic coast of Morocco.

As the home of the geographer al-Idrīsī, of the *ḳāḍī* ʿIyāḍ and of Abu 'l-ʿAbbās al-Sabtī, Sabta played an important role as a centre of learning, and especially of *fiḳh*, *ḥadīth*, grammar and medicine (H. al-Wariaghli, *Shuyūkh al-ʿilm wa-mulūk al-dars fī Sabta*, Tetouan 1984; anon., *Bulghat al-umniyya wa-maḳṣad al-labīb*, Rabat 1984). The mystical tendency was seen in Ibn al-ʿArīf and the school of Almeria. Abu 'l-Ḥasan al-Shārī founded there the first *madrasa* in the Maghrib; al-ʿAzafī began there the *Mawlid*, a festival adopted officially by the Marīnids (*al-Durr al-Munaẓẓam*, ms.). If nothing now remains of the monuments of Sabta, Muḥammad al-Anṣārī describes at length the situation just after the town's fall (*Ikhtiṣār al-akhbār ʿammā kāna bi-thaghr Sabta...*, tr. F.A. Turki, in *Hespéris-Tamuda* [1982], 83).

The Portuguese seized Sabta in Djumādā II 818/August 1415. It was abandoned, also the village of Balyūnash, which had played a great role in its history, by its population. After the annexation of Portugal by Spain in 988/1580, Sabta was transferred to Spanish control, and despite numerous Moroccan attempts to regain it, Ceuta has always remained a Spanish *presidio* and a free zone.

After the Portuguese capture of Sabta in 818/1415, it was attacked by the *ḳāʾid* Ṣāliḥ, who led resistance in the district. Meanwhile, in 824/1421, a bishopric was created there. The quarters on the mainland were razed and the town, now reduced to the isthmus, provied with new fortifications. After the Portuguese check before Tangier in 860/1437, a treaty was sign-

ed, the return of Ceuta to Morocco was envisaged and Don Ferdinand sent as a hostage to guarantee the promise; but the Cortes refused to ratify it, and the prince died, as a martyr, at Fās in 847/1443. After the Battle of the Three Kings (986/1578), Spain seized Ceuta definitively. Nevertheless, the town was regularly attacked by neighbouring tribes and by the principality of Tetouan [see TIṬṬĀWĪN]. The siege decided upon by Mawlāy Ismāʿīl lasted from 1104/1693 to 1133/1721; that of 1180/1766 was ended by an ambiguous treaty, completed by the convention of 1188/1774 (J. Caillé, *Les accords de Sidi Mohammed Ben ʿAbdallah (1757-1790)*, Paris 1960). Between 1196/1782 and 1214/1799, agreements conceded the territory to the Spanish, provoking the anger of the aggrieved tribes. Ceuta suffered from a lack of water and always coveted the Bullone (Balyūnash) hills; a series of disputes between Spain and Morocco led to the war of Tetouan (1860). In 1912 the Protectorate Treaty, awarding the north of Morocco to Spain, marked the revival of Ceuta, whose trade developed thanks to its double military and commercial role. When Morocco became independent (March 1956), Ceuta became a *presidio* and a free zone. Profiting from the ending of the international status of Tangier, the town received an influx of travellers and commerce, and an important smuggling activity developed, making a strong mark on the whole region's economy.

(HALIMA FERHAT)

AL-**SABTĪ**, AḤMAD B. DJAʿFAR al-Khazradjī, Abu 'l-ʿAbbās, renowned Moroccan saint, born at Sabta (Ceuta) in 524/1130, not to be confused, in the text of Ibn Khaldūn (*Muḳaddima*), with a homonym who lived in a later period and was the inventor of a circular divinatory table known as the *zāʾiradja al-ʿālam*.

Two accounts afford a glimpse of his career, which was contemporaneous with that of the great saint of Tlemcen Abū Madyan al-Andalusī (520-94/1126-97): that of the *ḳāḍī* al-Tādilī and that of Ibn Ḥāmawayh, which is more concise, recounted by al-Maḳḳarī. Born into a modest family, he lost his father at a very early age and became an apprentice to a trader in textiles (*bazzāz*) of Sabta, a town which was then enjoying a high level of commercial and cultural prosperity. His principal teacher was Abū ʿAbd Allāh al-Fakhkhār, himself a disciple of the *ḳāḍī* ʿIyāḍ, one of the most eminent representatives of the Hispano-Maghribī Mālikī school of the period. At about sixteen years old, he left Sabta with a companion and made his way to Mount Gillīz where the Almohad army was encamped, commanded by ʿAbd al-Muʾmin who was laying siege to Marrakesh (540/1146). After the capture of the city, he established himself there in a *funduḳ* known by the name of *funduḳ Muḳbil*. He then taught grammar and arithmetic, for which he received payment. He also apparently enjoyed an allowance in his capacity as a member of the *ṭalabat al-ḥaḍar* (a category of teachers supported financially by the Almohad authorities) and established a considerable household. He rapidly gained popularity as a result of his generosity. His doctrine was simple, according to al-Tādilī, who knew and visited him: every principle contained in religion (*sharʿ*) may be reduced to the deprival and to the bestowal of the goods which one possesses. He insists on the religious duty of *zakāt*. Charity (*ṣadaḳa*) is the essential theme of his sermons and of his injunctions. He denounces avarice (*al-bukhl*) and parsimony (*al-shuḥḥ*) and preaches generosity (*al-ʿaṭāʾ*, *al-djūd*), and beneficence (*al-iḥsān*, quoting Ḳurʾānic verses to illustrate his purpose (IX, 34; X, 88; LIII, 33; LXVIII, 17; XCII, 5-10). His symbolic interpretation of prayer and of its various manifestations illustrates his doctrine of asceticism, since it signifies the sharing and the abandonment of all goods.

Of presentable appearance, always carefully groomed, he was furthermore admired for his eloquence and his knowledge of dogma and for the ease with which he succeeded in convincing the most sceptical. His conduct earned him the reputation of a pious man, having no wish to publicise his virtues and willing to accept criticism (the Oriental mystical tradition of the Malāmatiyya). The philosopher Ibn Rushd sent an observer to study his ideas and, on his return, concluded that "the entire existence of Abu 'l-ʿAbbās is in interaction with charity" and that "his doctrine is that of a philosopher of antiquity". He then resolved to meet the man in person and travelled for this purpose to Marrakesh, where he died and was initially buried, before being transferred to Cordova. Abu 'l-ʿAbbās died soon afterwards, in 601/1205. He was interred outside Bāb Taghzūt.

Significant similarities of circumstances and events in the lives of Abu 'l-ʿAbbās and of Abū Madyan are evident: their modest origins; their beginnings as youthful apprentices in the textile trade, a substantial element in the economy of North Africa at the time; their theological training concurrent with the exercise of their profession; the departure and the journey (*siyāḥa*) in search of their path (a major Ṣūfī theme); their installation in an important city where they became known for their teaching and their piety; the themes, repeated in all circumstances, of humility, of submission to the divine will (*tawakkul*) and of the renunciation of material goods, a doctrine making a synthesis of Mālikī orthodoxy and of oriental mysticism and adapted to the Maghribī soul; the interest of the Almohad authorities in their knowledge and their popularity; and the policy of enticement and control of scholars which led to their installation at Marrakesh. Finally, each became the patron saint of the town in which he was buried. But the originality of Abu 'l-ʿAbbās consists in his withdrawal from political life and in the fact that he claimed allegiance to no school or great master. He did not found a school either. He devoted his life to the defence and promulgation of values which were promoted in North Africa principally by the Ṣūfīs and which exerted influence on the Christian culture of the Middle Ages, represented among others by one of the originators of the concept of chivalry, the Arabic-speaking Majorcan Ramon Lull. In the 20th century

he still serves as a model for reformers (*muṣliḥūn*) who aspire towards moral rigour and social justice, such as Ibn al-Muwaḳḳit [*q.v.*].

Popular imagination has not been slow to transform the life of this pious individual into a legend, attended by an increasingly rich crop of miracles. His repute has extended throughout the Maghrib, benefiting initially by the unity imposed upon it by the Almohad empire. As an example of these miracles, he is supposed to have appeared at the side of the Muslim warriors at the time of the Battle of the Three Kings at al-Ḳaṣr al-Kabīr (Yawm al-Makhāzin), which ended with the defeat of the Portuguese, in 986/1578.

On the summit of Gillīz there is a *ḳubba* dedicated to him. In the same mountain there is a sacred cave in which he stayed during periods of meditation and which was approached by processions of townspeople appealing for rain. It was also in a cave that the Prophet took refuge, at the time of the emigration from Mecca to Medina, in the company of Abū Bakr (to whom the companion of Abu 'l-ʿAbbās, in the journey to Marrakesh, corresponds, Ḳurʾān, IX, 40), in the episode known as the *hidjra*.

Finally, while the sūra *al-Kahf* (XVIII), occupies an important place in Muslim liturgy, the cave represents, for the Ṣūfī who follows the sacred text of the Ḳurʾān to the letter, in a hostile world, the refuge of the sincere believer who awaits there the beneficence of the Lord (XVIII, 16).

Some well-known personalities have come, over the centuries, to invoke him or to seek protection or miraculous power associated with his sainthood (*baraka*): the illustrious Ibn al-Khaṭīb, Ibn Ḳunfudh of Constantine, the last king of Grenada Abū ʿAbd Allāh (Boabdil) and the writer from Timbuktu Aḥmad Bābā. At the beginning of the 17th century the Saʿdid sultan Abū Fāris Ibn Aḥmad al-Manṣūr ordered the restoration of his mausoleum and the building of a *madrasa* and the mosque which still exists. In the 18th century, his primacy was officially endorsed with the institution of the cycle of pilgrimage (*ziyāra*) to the seven patrons of Marrakesh (Sabʿatu ridjāl [*q.v.*]), as a counter-weight to that of the seven saints of Ragrāga, the latter probably being linked to the legend of the Seven Sleepers of Ephesus. The sultan Muḥammad b. ʿAbd Allāh (1171-1204/1757-90) had his *zāwiya* annexed to the town and constructed the mausoleum which still exists.

The peasant invokes him to make the rain fall or to protect a clutch of eggs. The farmer, to preserve his crop, makes a charitable gift of a portion of grain to the poor, in his name, in Morocco as in Algeria, or appeals to him to raise a wind from the west, which is advantageous for the winnowing of corn, or, like a seafarer, he asks for the quelling of a storm. In particular he is the patron of commerce in general, or travellers, of dealers in trimmings, of well-sinkers, of soap-makers, of operators of oil-presses and of healers of eyes. He is invoked at the time of a confinement. Charitable gifts of grain, fritters, fruit, meat or fish, made to the poor in his name, are often called *ʿabbāsiyya*. Similarly, in Algeria, the verb *ʿabbas* signifies "to go among the peasants to levy contributions of grain, butter, dried fruits etc...". A weekly pilgrimage takes place within his sanctuary (*ḥurm*), the majority of the participants being blind.

His radiant reputation in the Maghrib explains the presence of *ḳubbas* dedicated to him (Sidi Bel-Abbès, Ouargla, Djellida, etc.), as well as the formation and origin of certain family-names (Belabbas-Nabi, etc.), although the possibility of homonymy with local saints is not to be denied.

(H. BENCHENEB)

SABUKTIGĪN [see SEBÜKTIGIN].

ṢĀBŪN (A.), soap.

Prodest et sapo, Gallorum hoc inventum rutilandis capillis; fit ex sebo et cinere ... duobus modis, spissus ac liquidus, uterque apud Germanos maiore in usu viris quam feminis (Pliny, *Hist. nat.* 28, 191). According to this passage, soap is a Gallic invention but the word itself is of German origin. The Romans borrowed it in the form of *sapo*, the Greeks from the latter as σάπων, which in its turn found its way into Arabic as *ṣābūn*. The word denotes a mixture of fat or tallow and vegetable ashes, used to dye the hair red; it was brought on the market in solid or liquid form. In Spain, *ṣābūn* also indicates the lye obtained by leaving the ashes soak in water (*lakhshiyya* < old Castilian *lexía* < Lat. *lixivium*, see Dietrich, *Dioscurides triumphans*, no. I, 109; and *Vocabulista*, ed. Schiaparelli, 460). Widely-spread substitutes for soap as a cleansing agent were natron [see NAṬRŪN], salt won from the ashes of alkaline plants (potash [see AL-ḲILY]), and also pastes made from ashes and argillaceous earth (cf. E. Schmauderer, in *Technikgeschichte*, xxxiv [Düsseldorf 1967], 300-10), and other materials. The Egyptians, for making soap, used oil from the radish (*fudjl*), the rape (*saldjam*) and the lettuce (*khass*); soap made from these plants was white, red, yellow or green (Abdallatif, *Relation de l'Egypte*, tr. S. de Sacy, 311). According to Ibn Biklārish, *Mustaʿīnī* (ms. Naples, Bibl. Naz. III, F. 65, fol. 84b), *al-raḳḳī* (after Raḳḳa) is named as a well-known kind of coarse soap, similar to date-palm paste (*al-marham al-nakhlī*), from which lozenges are made in Damascus. Other kinds of soap, such as those from ʿIrāḳ and the Maghrib, are mentioned by al-Anṭākī, *Tadhkira*, Cairo 1371/1952, i, 221, who gives the most extensive details on soap altogether.

According to al-Anṭākī, *loc. cit.*, soap allegedly came into the Hermetic writings through a revelation, and is also said to be found in Hippocrates and Galen, partly among the compound drugs and partly among the simple ones. The best soap is said to be that made of clear olive oil, pure potash and good wax. In medicine, soap finds manifold applications, see e.g. Ibn al-Bayṭār, *Djāmiʿ*, Būlāḳ 1291, iii, 36-7; Ibn Rasūl al-Ghassānī, *Muʿtamad*, ed. M. al-Saḳḳā, 280-1. Soap softens hard ulcers and ripens them; and it loosens colic pains and removes scabs and psoriasis if the affected spots are rubbed with a piece of cloth soaked in soap. Mixed with salt in equal parts, soap removes itching and festering scabies. Boiled up with attar of roses and rubbed on ulcers on children's heads, soap dries the fluids. If left for seven days as a compress on vesicular tumours (*al-ḳurūḥ al-shahdiyya*, see Dozy, *Suppl.*, i, 793) and then washed away with hot water, soap is revealed as an excellent medicine. Mixed with henna and applied as a compress on freckles, it removes them, etc.

Arab geographers frequently mention places where soap is fabricated: Aleppo (Ibn Ḥawḳal[1], 177), Bālis on the Euphrates (*ibid.*, 180), Balkh and Tirmidh (Muḳaddasī, 342), Arradjān (*ibid.*, 425), Bust (*Ḥudūd al-ʿālam*, 110). For the import of soap into Egypt, see Subhi Labib, *Handelsgeschichte Ägyptens im Spätmittelalter*, Wiesbaden 1965, 39, 206, 239, 346, and for special applications of soap in chemistry, see M. Berthelot, *La chimie au moyen âge*, Paris 1893, i, 165, 215, ii, 185, 330.

(A. DIETRICH)

ṢĀBUNDJĪ, LOUIS, a person of the second rank in the *Nahḍa* [*q.v.*], born at Dayrak on 20 April 1833, died in Los Angeles, 24 April 1931. With an original first name John, and born a Syrian Catholic, he attended the seminary at Charfé and then the Pontifical College for Propaganda at Rome, where he was ordained priest in 1863 (he renounced his priestly orders in 1899). He taught Latin at the Syrian Protestant College and founded the journal *al-Naḥla* ("The Bee"), which he took up again in London in 1877. He became a British representative in Cairo, accompanied ʿUrābī Pasha [*q.v.*] into exile in Ceylon, served the ruler of Zanzibar and then served the Ottoman sultan in Istanbul. From 1909 onwards, he lived in the United States. This traveller and adventurer (*al-Ṭawāf ḥawla kurat al-arḍ*, Istanbul 1896, pp. 84), eternal lover (*Dīwān al-naḥla al-manẓūm fī khilāl al-riḥla*, Alexandria 1901, pp. 584) and opportunist, often showed his sympathy for Islam in the form expounded by Djamāl al-Dīn al-Afghānī [*q.v.*] (*K. al-Iktishāf al-thamīn li-iṭālat al-ʿumr miʾat min al-sinīn*, New York 1919, pp. 255). Ṣābundjī was a partisan of the naturalist school of evolutionism.

(J. FONTAINE)

SĀBŪR B. ARDAS̲H̲ĪR, Abū Naṣr Bahāʾ al-Dīn (330-416/942-1025), official and vizier of the Buyids in Fārs. Beginning his career in high office as deputy to S̲h̲araf al-Dawla's vizier Abū Manṣūr b. Ṣāliḥān, he subsequently became briefly vizier himself for the first time in 380/990 and for S̲h̲araf al-Dawla's successor in S̲h̲īrāz, Bahāʾ al-Dawla [*q.v.* in Suppl.]. He was vizier again in S̲h̲īrāz in D̲j̲umādā I 386/May-June 996, this time for over three years, and in 390/1000 in Bag̲h̲dād as deputy there for the vizier Abū ʿAlī al-Muwaffaḳ. Sābūr, although a native of S̲h̲īrāz, seems to have had estates or some power base in the Baṭāʾiḥ [see AL-BAṬĪḤA] or marshlands of Lower ʿIrāḳ, whither he frequently retired on his falls from office. His last years were spent in retirement, and he died in Bag̲h̲dād aged 86 lunar years.

Sābūr had the reputation of being a taciturn and exacting functionary, adept at extracting money for his masters, but he also achieved a lasting fame as the patron of scholars and littérateurs, and al-T̲h̲aʿālibī has a section on the poets of Bag̲h̲dād who praised him (al-Babbag̲h̲āʾ, Muḥammad b. Bulbul, Aḥmad b. ʿAlī al-Munad̲j̲d̲j̲im, etc.). He founded a *Dār al-ʿIlm* in the Bayn al-Sūrayn quarter of Bag̲h̲dād which reportedly had a library of 10,000 volumes but which was largely destroyed in the fighting in Bag̲h̲dād in 451/1059 between Arslan al-Basāsīrī and the Sald̲j̲ūḳ Ṭog̲h̲rïl Beg [*q.vv.*]; Sābūr himself was a proponent of the Zaydī S̲h̲īʿa, and appointed several Muʿtazilī professors at his foundation.

Bibliography: Hilāl al-Ṣābiʾ, *Historical remains*, ed. H.F. Amedroz, Leiden 1904, index; Ibn al-At̲h̲īr, ix; T̲h̲aʿālibī, *Yatīma*², iii, 129-36; Ibn K̲h̲allikān, ed. ʿAbbās, ii, 354-6 no. 255, tr. de Slane, i, 554-5; Ṣafadī, *Wāfī*, xv, ed. B. Radtke, Wiesbaden 1979, 71-4; H. Busse, *Chalif und Grosskönig, die Buyiden im Iraq (945-1055)*, Beirut-Wiesbaden 1969, 240, 510-13, 525-7 and index; C.E. Bosworth, *Ghars al-Niʿma b. Hilāl al-Ṣābiʾ's* Kitāb al-Hafawāt al-nādira *and Būyid history*, in A. Jones (ed.), *Arabicus Felix, luminosus britannicus, essays in honour of A.F.L. Beeston on his eightieth birthday*, Reading 1991, 139-40. (C.E. BOSWORTH)

SĀBŪR B. SAHL B. SĀBŪR, Christian physician and pharmacologist (d. 21 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 255/30 November 869).

Sābūr grew up in the Nestorian *milieu* of K̲h̲ūzistān [*q.v.*]. He must have been educated at the "Academia Hippocratica" in Gondēs̲h̲āpūr [*q.v.*], where he later held a position in the famous local hospital, and rose to be one of the leading physicians of his time. In Gondēs̲h̲āpūr he practised medicine and pharmacology until he was appointed court physician by the ʿAbbāsid caliph al-Mutawakkil [*q.v.*] and his successors. Sābūr died "as a Christian" (*naṣrāniyyan*), perhaps in Sāmarrāʾ [*q.v.*].

Though some of Sābūr's writings are lost, two works on dietetics are preserved (i.e. *Ḳuwa 'l-aṭʿima; al-As̲h̲riba*) and, more importantly, the small version of his main pharmacological work *al-Aḳrābād̲h̲īn* [*q.v.*] "The Dispensatory", a specialist's handbook on the preparation and application of compound drugs (*adwiya murakkaba*), which originally circulated in three different recensions. Together with ʿAlī b. Sahl Rabban al-Ṭabarī's [*q.v.*] *Firdaws al-ḥikma* and Yaʿḳūb b. Isḥāḳ al-Kindī's [*q.v.*] *al-Ik̲h̲tiyārāt*, Sābūr's dispensatory is a rare, hence important, witness of Arabic pharmacology in the 3rd/9th century.

Bibliography: *Fihrist*, 297; al-Ḳifṭī, *Taʾrīk̲h̲ al-Ḥukamāʾ*, ed. J. Lippert, Leipzig 1320/1903, 207; Ibn al-ʿIbrī, *Taʾrīk̲h̲ muk̲h̲taṣar al-duwal*, ed. A. Ṣāliḥānī, Beirut ²1958, 147; Ibn Abī Uṣaybiʿa, *ʿUyūn al-anbāʾ*, ed. A. Müller, 2 vols., Cairo-Königsberg 1882-4, i, 161; cf. O. Kahl, *Sābūr ibn Sahl's (d. 255/869) Dispensatorium parvum [al-Aqrābādhīn al-ṣaghīr]*, diss. Manchester 1992, 28, 48 ff. (with additional bio-bibliographical literature). (O. KAHL)

SABZ ʿALĪ, RAMAḌĀN ʿALĪ, a Nizārī Ismāʿīlī *dāʿī* of the 20th century, and an emissary of the Imām of the time, Sulṭān Muḥammad S̲h̲āh Ag̲h̲a K̲h̲ān III. He was born towards the end of the 19th century in Bombay into an established family of traders and was as a youth apprenticed with his uncle, a businessman in Gwādar. There he acquired an interest in learning more about Ismāʿīlī thought and began to deliver lectures on religious topics to members of the community.

He moved subsequently to Karachi to continue his business activities and became prominent in the community as a *wāʿiẓ* and a leader in social development programmes initiated by the Imām. He was also sent to promote the development of institutions in the newly settled Ismāʿīlī communities of Africa. His most noteworthy achievement was an extensive journey he undertook in 1923 as an emissary of the Imām to contact Central Asian Ismāʿīlī communities in the mountainous regions of the Pāmir (including parts of modern Afg̲h̲ānistān, Tād̲j̲īkistān and Sinkiang province in China), as well as the former principalities west of the Karakoram, Hunza and Čitrāl, in the northern areas of what is now Pākistān. He kept a diary in which he gave an account of his travels, sketching the hazardous terrain of the region, the location of various communities, often referring to the tumultuous changes affecting these areas after the 1917 Russian Revolution and the period of modernisation and European influence. After his return he continued to be an influential leader and a very effective preacher.

He died in 1938 and in recognition of his services was posthumously endowed with the title of *pīr* by the Imām.

Bibliography: An account of the journey based on Sabz ʿAlī's diary can be found in a Gud̲j̲arātī work, *Pīr Sabzāli ni Madhya Asianī mūsāfrī*, Bombay 1968. Biographical details are preserved in S. Abu Turabi, *Dharmnā dhwajdhārī*, Bombay 1981 (AZIM NANJI)

SABZAWĀR, the name for two towns of the eastern Iranian world.

1. Sabzawār in western K̲h̲urāsān was, together with K̲h̲usrūdjird, one of the two townships making up the administrative district of Bayhaḳ [*q.v.*], the name by which the whole district was generally known in mediaeval Islamic times. It lay in the cultivable zone on the northern rim of the Das̲h̲t-i Kawīr or Great Desert. Sabzawār itself is described in the *Ḥudūd al-ʿālam*, tr. 102, §23.2, as a small town and as the chef-lieu (*ḳaṣaba*) of a district; the Arabic geographers merely mention it as a stage along the roads of K̲h̲urāsān and as a *rūstāḳ* of Nīshāpūr. In Ḥamd Allāh Mustawfī's time (8th/14th century), Bayhaḳ was a flourishing district comprising 40 villages (*Nuzha*, 149-50, tr. 148). The Sabzawār district was in the middle years of that same century the centre of the Sarbadārids [*q.v.*], who dominated central K̲h̲urāsān during those years, and it is mentioned as the scene of fighting between the invading Özbegs and the Ṣafawids [*q.vv.*] in the later 10th/16th century.

The modern town of Sabzawār (lat. 36°13′ N., long. 52°38′ E.) lies on the highway connecting Tehran with Nīs̲h̲āpūr and Mas̲h̲had, and is ad-

ministratively the centre of a *bakhsh* or county within the province of Khurāsān; in *ca.* 1950 it had a population of 28,151 (Razmārā, *Farhang-i djughrāfiyā'-i Īrān-zamīn*, ix, 207-8), but 40 years later this had risen to 148,129 (*Preliminary results of the 1991 census*, Statistical Centre of Iran, Population Division).

Bibliography (in addition to references in the article): Le Strange, *The lands of the Eastern Caliphate*, 291; *EIr* art. *Bayhaq* (C.E. Bosworth); and see BAYHAĶ.

2. Sabzawār of Harāt (thus called to distinguish it from 1. above), the name by which the early medieval Islamic town of Isfizār or Asfizār in eastern Khurāsān was more recently called. It lay on the road connecting Sīstān with Harāt, and the mediaeval geographers connected it administratively as much with Sīstān as with Khurāsān. There were four small towns in the district of Isfizār; the region was agriculturally rich, with its lands irrigated by water from perennial streams running down from the mountains of Ghūr [*q.v.*] in central Afghānistān. The early historians mention it as the scene of violent Khāridjite activity, and the *Ḥudūd al-ʿālam* (372/982), tr. 104, § 23.29, comm. 327, describes the people of Isfizār as bellicose Khāridjites; however, by the time of Ḥamd Allāh Mustawfī, the region was strongly orthodox and Shāfiʿī.

Sabzawār of Harāt is now known as Shīndand, a town within the Farāh province of modern Afghānistān (lat. 33°18 ′ N., long. 62°08′ E.) and is on the modern highway connecting Harāt with Farāh and Ķandahār.

Bibliography: Le Strange, *Lands*, 412; L.W. Adamec, *Historical and political gazetteer of Afghanistan*. ii. *Farah and southwestern Afghanistan*, Graz 1973, 277-8; *EIr* art. Asfezār (C.E. Bosworth).

(C.E. Bosworth)

SABZAWĀRĪ, Ḥādjdj Mullā Hādī b. Ḥādjdj Mahdī (1212-95 or 1298/1797-1878 or 1881), Persian philosopher of the Ķādjār period, best-known for his commentary on, and revival of the ideas of Ṣadr al-Dīn al-Shīrāzī, Mullā Ṣadrā (d. 1050/1640 [*q.v.*]).

Born in Sabzawār to a landowning merchant family, Mullā Hādī studied Arabic language and grammar in his home city and *fiķh*, logic, mathematics and *ḥikma* in Mashhad. He then studied in Iṣfahān with such scholars as Mullā ʿAlī Nūrī (d. 1246/1830-1), the first of the Ķādjār-period scholars of Ṣadrā, and Nūrī's student Mullā Ismāʿīl. Sabzawārī returned to Khurāsān, performed the pilgrimage and married in Kirmān on the homeward journey. He taught for some years in Mashhad and then returned to Sabzawār, where he taught until his death.

Among his most famous works are his *Ghurar al-farā'id* or *Sharḥ-i manẓūma*, an Arabic philosophical poem on which he wrote his own commentary (the first part of which, on metaphysics, was published by M. Mohaghegh and T. Izutzu, Tehran 1969); *Isrār al-ḥikam* (published by H.M. Farzād, Tehran 1361), written at the request of Nāṣir al-Dīn Shah (d. 1313/1896 [*q.v.*]); a Persian *dīwān* written under the pen-name of *Isrār*; and commentaries on Ṣadrā's *al-Asfār* and *al-Shawāhid al-rubūbiyya* (the latter published together with Ṣadrā's original by S. Djalāl al-Dīn Ashtiyānī, Mashhad 1346, 1360) and on Rūmī's *Mathnawī*.

Bibliography: In addition to references in the article, see also Cl. Huart, *Hādī Sabzewārī*, in *EI*[1]; Muḥsin al-Amīn al-Ḥusaynī al-ʿĀmilī, *Aʿyān al-shīʿa*, Damascus 1961, l, 48-51; Mīrzā Muḥammad ʿAlī Mudarris, *Rayḥānat al-adab*, [2]Tabriz 1347/1968, ii, 422-7; S.H. Hillenbrand (eds.), *Qajar Iran, political, social and cultural change, 1800-1925*, Edinburgh 1983, 177-98.

(A.J. Newman)

ṢĀD, the fourteenth letter of the Arabic alphabet, transcribed /ṣ/, with the numerical value of 90, according to the eastern order [see ABDJAD]. In the Maghribī order /ṣ/ takes the place of /s/ (thus 60) and /ḍ/ the place of /ṣ/. For an explanation of this fact, similarly attested in a Thamudic abecedary, see M.C.A. Macdonald (in *Bibl.*).

Definition: an alveolar sibilant, voiceless and velarised ("emphatic") in articulation. As a phoneme /ṣ/ is defined by the oppositions /ṣ -s/,/ṣ -ṭ/; it is thus velarised and sibilant.

In Ķur'ānic recitation, or elevated style of recitation in general, the following assimilations occur: the /ṣ/ at the end of a word becomes assimilated to the /z/ at the beginning of the following word (-*ṣ z*-> -*z ẓ*), but the velarisation may be retained (-*ṣ z*->-*ẓ ẓ*-). Within a word, the /ṣ/ is partially assimilated to /z/ before /d/ immediately following it (-*ṣd*- > -*zd*-), but the velarisation may also be retained (-*ṣd*-> -*ẓd*-). A /z/ at the end of a word becomes assimilated to a /ṣ/ at the beginning of the following word (-*z ṣ*->-*ṣ ṣ*-). In the 8th form of the verb the sequence /-ṣt-/ becomes /-ṣṭ-/ by assimilation, carried further by some to complete coalescence, i.e., -ṣṣ- (e.g. *muṣṭabir* and *muṣṣabir*). In analogy to this, initial /t/ of the perfect suffixes, when following /ṣ/, is pronounced /ṭ/ by some (e.g. *faḥaṣṭu*); according to Sībawayh, it is better Arabic not to do so, because the /t/ suffixes of the perfect are variables indicating the subject, while the /t/ infix of the 8th form is stable throughout the paradigm.

An /s/ may be velarised to /ṣ/ in pronunciation, when preceding a /gh/, /kh/, /ķ/ or /ṭ/ in the same word (e.g. *ṣalakha* for *salakha*, *ṣāṭiʿ* for *sāṭiʿ*). This assimilation, though being only regressive and restricted to the four triggers, is nonetheless probably due to the spread of "emphasis" as a suprasegmental phonemic element throughout the word. That this phenomenon was more general than the orthoepists allow is shown by the spelling variants that are listed in the *ibdāl* works [*q.v.*], cf. pairs like *saʿūṭ*/*ṣaʿūṭ* and *sukhn*/*ṣukhn*, but also *ṭirs*/*ṭirṣ* and *khars*/*kharṣ* in Abu 'l-Ṭayyib al-Lughawī, *K. al-Ibdāl*, ii, 172-96.

For al-Khalīl, the *ṣād*, like the other sibilants (*sīn* and *zāy*), is pronounced with the point (*asala*) of the tongue, i.e., the tapering part (*mustadaķķ*) of its end (not the tip). The surviving fragments do not mention the other features of *ṣād* articulation. For Sībawayh, the sibilants (*ṣād*, *sīn*, and *zāy*) have their point of articulation "between the end (*ṭaraf*) of the tongue and a place slightly above (*fuwayķ*) the incisors (*thanāyā*)." In addition, the *ṣād* is characterised as "muffled" (*mahmūs*), "soft" (*rikhw*), and "covered" (*muṭbaķ*), which amounts to saying that it is "voiceless" (?), "non-occlusive", and "velarised". *Ṣād*, like all the sibilants, is characterised by a whistling sound (*ṣafīr*). Its "elevation" (*istiʿlā'*) prevents the vowel /a/ from inclining (*imāla*) towards /i/.

Sībawayh mentions two variants (*farʿ*) of *ṣād*: *ṣād* realised like *zāy* (*maṣdar*>*mazdar*, *yaṣduķu*>*yazduķu*) and *ṣād* realised like *sīn* (*ṣibgh*>*sibgh*), the first variation being the one which is alone considered to be good (*mustaḥsan*) in the recitation of the Ķur'ān and poetry.

In modern Arabic dialects, *ṣād* seems to be mostly stable. Due to the common spread of velarisation over whole words, original /s/ often becomes /ṣ/ (for historical attestations of this phenomenon, see Blau, *Christian Arabic*, 111-113 and n. 163); in the Judaeo-Arabic of Tafilalt this occurs also with /sh/ (*shaʿr* > *ṣʿr*, see *ZAL*, ix [1982], 40). Sporadic develarisation of /ṣ/ to /s/ is not uncommon: *ṣadr* > *sder* (in certain Maghribi dialects, see *ibid.* and Cantineau, 48), *ṣadaḳa* > *sadaʾ* (and other, but not all, derivatives of this root in Egyptian, see Hinds-Badawi, *A dictionary of Egyptian Arabic*, Beirut 1986, s.v., and Blau, *op. cit.*, 109-10). This develarised /ṣ/ is further voiced in the word *zghīr*/*zghayyir* "small", common in several dialects. Unconditioned deviations are attested for Hadramaut (/ẓ/, see Landberg, *Ḥaḍramoût*, 239), and for parts of North Yemen (a monophonemic /st/ as in *stabrin* for *ṣabr*, see Behnstedt, 7-9, 184-85).

In borrowings from other languages, /ṣ/ renders Middle Persian /č/ (as in *ṣandj* < *čang* and in names like *al-Ṣīn* < *Čīn*) and sporadically Greek /s/ (as in *liṣṣ* < *lēstēs*, *ḳamīṣ* < *kamision* [Latin *camisia*], *ḳayṣar* < *kaisar*).

In *Persian* and *Turkish*, *ṣād* in Arabic loanwords is pronounced /s/. Some genuine Persian words show irregular spelling with the grapheme /ṣ/, such as *ṣad* "100" and *shaṣt* "60". In Ottoman Turkish, *ṣād* is used to render /s/ in the vicinity of back vowels, whereas *sīn* denotes /s/ in front vowel words, as in *ṣoḳmaḳ* vs. *sökmek*.

(G. Troupeau, expanded by the Editors)

SAʿD b. ABĪ WAĶĶĀṢ (d. during Muʿāwiya's caliphate), a leading Companion of the Prophet and commander of the Arab armies during the conquest of ʿIrāḳ. His clan was the Banū Zuhra b. Kilāb of Ḳuraysh. His own *kunya* is given as Abū Isḥāḳ but he is also known as (and sometimes listed in biographical dictionaries under) Saʿd b. Mālik since his father's name was Mālik b. Wuhayb (or Uhayb) b. ʿAbd Manāf b. Zuhra. There does not seem to be any explanation why Mālik should have had the *kunya* Abū Waḳḳāṣ. A tradition says that Saʿd asked the Prophet who he was and received the answer, "You are Saʿd b. Mālik ... b. Zuhra and may the curse of God be upon whoever says otherwise". Since the Prophet's mother was also from the Banū Zuhra, the Prophet is said to have acknowledged Saʿd as his maternal uncle.

Saʿd is counted as one of the ten Companions to whom the Prophet promised entry into paradise. The entries devoted to him in the Sunnī biographical works consist largely of traditions reporting his early acceptance of Islam (he was the third, seventh or ninth to do so, at a time before prayer had become an obligation), his role regarding the revelation of certain Ḳurʾānic verses, his being the first to shed blood for Islam and the first to fire an arrow *fī sabīl Allah*, his guarding the Prophet during the night immediately after the *hidjra*, his participation in all of the battles of the Prophet, the fact that the Prophet said to him alone (or, according to another account, to him and to al-Zubayr), "May my mother and my father be a ransom for you", the Prophet's prayer to God that all of Saʿd's petitions would be granted, and other such details. In Shīʿī tradition, the Companions of the Prophet, including Saʿd, are generally viewed more negatively (see E. Kohlberg, *Some Zaydī views on the Companions of the Prophet*, in *BSOAS*, xxxix [1976], 91-98; idem, *Some Imāmī Shīʿī views on the ṣaḥāba*, in *JSAI*, v [1984], 143-75).

A group of traditions tells of the Prophet's visit to Saʿd, who was ill and apparently dying, in Mecca at a time after the *fatḥ* (the precise occasion is variantly given). These traditions focus partly on Saʿd's aversion to the prospect of death in a place from which he had made *hidjra* and partly upon a prophetic decision regarding the proportion of his estate which a Muslim may bequeath before death. For a detailed discussion, see R. Marsden Speight, *The will of Saʿd b. Abī Waqqāṣ: the growth of a tradition*, in *Isl.*, l (1973), 248-67; D.S. Powers, *The will of Saʿd b. Abī Waqqāṣ: a reassessment*, in *SI*, lviii (1983), 33-53.

Following the defeat of the Arabs at the battle of the Bridge, the caliph ʿUmar b. al-Khaṭṭāb [*q.v.*] is reported to have sent Saʿd in command of an army to central ʿIrāḳ. (Previously he had been ʿUmar's representative responsible for collecting the *ṣadaḳa* tax from the Hawāzin.) It was this army which defeated the Sāsānids at the battle of al-Ḳādisiyya [*q.v.*]. There is a report that Saʿd himself was ill at the time and took no part in the battle, and some sources cite verses critical of Saʿd which refer to his absence from the fighting. The victory of al-Ḳādisiyya led to the expulsion of the Sāsānids from ʿIrāḳ and the occupation by Saʿd of al-Madāʾin [*q.v.*], and was sealed by a further defeat inflicted on the Sāsānids at al-Djalūlāʾ [*q.v.*] by a force sent by Saʿd and commanded by his nephew Hāshim b. ʿUtba b. Abī Waḳḳāṣ. The chronology of these events is uncertain, but they are generally situated in the period 14-19/635-40 (for detailed discussion, see F.McG. Donner, *The early Islamic conquests*, Princeton 1981, 202-12).

The conquest of ʿIrāḳ was accompanied by the foundation of al-Kūfa [*q.v.*] as the garrison town for those forces which had been at al-Ḳādisiyya and subsequently quartered in al-Madāʾin. Although instructions for the founding of the new town are said to have come from the caliph ʿUmar himself, Saʿd is credited with responsibility for organising the settlement (*kawwafa al-Kūfa*), and he became its first governor. ʿUmar then removed him from office, apparently following complaints from the Kūfans. Prominent in the charges which are said to have been made against him was his failure to lead the prayer properly (*lā yuḥsinu 'l-ṣalāt*—some reports provide details), although accusations are also reported that he was unjust in his judgements, did not distribute spoils fairly, and failed to organise expeditions properly. Possibly also relevant here are reports about the undue elegance or luxury of Saʿd's residence in al-Kūfa, which ʿUmar is said to have found objectionable and caused to be burned. Some accounts indicate that Saʿd subsequently had further spells in authority over al-Kūfa under ʿUmar and possibly also ʿUthmān, but the details are uncertain.

In spite of his dismissal from the governorship of al-

Kūfa, it is widely reported that Saᶜd was named by ᶜUmar as one of the group of six Companions (the *shūrā*) which he appointed to choose his successor as caliph in 23/644 (see, however, al-Balādhurī, *Ansāb*, v, 21, where Saᶜd's membership of the *shūrā* is explicitly denied on the authority of al-Wāķidī ... Mūsā b. ᶜUķba and of al-Zuhrī). At the time of appointing him to the *shūrā*, according to a report often cited, ᶜUmar said that he had not removed Saᶜd from Kūfa because of any weakness or treachery, and that, if he was chosen as caliph, the choice should be accepted, and if not, then whoever was chosen should ask Saᶜd for advice.

The last important event in the early history of Islam in connexion with which Saᶜd is mentioned is the struggle between ᶜAlī b. Abī Ṭālib and Muᶜāwiya b. Abī Sufyān [*q.vv.*]. Saᶜd is said to have maintained a position of neutrality, in some reports responding to requests that he should take sides by saying, "Give me a sword which will distinguish between the *muʾmin* and the *kāfir*, and then I will do so". Sometimes this position of neutrality is presented as a sort of ascetic withdrawal. He is said to have refused to have put forward any claims to the caliphate for himself, although his status in Islam would have justified his doing so. There are contradictions within the sources as to whether he attended the "arbitration" court [see ADHRUḤ] or not. Some reports say that he did not give the *bayᶜa* to ᶜAlī following the murder of ᶜUthmān, and others that he eventually gave it to Muᶜāwiya after the end of the *fitna*, although he had earlier refused.

He is said to have spent the last period of his life in his residence (*ķaṣr*) at al-ᶜAķīķ near Medina, and upon his death was carried from there to Medina to be buried in the cemetery of al-Baķīᶜ. Marwān b. al-Ḥakam, the governor, prayed over him. Various dates between 50/670-1 and 58/677-8 are given for his death, and his age similarly varies from about 70 to over 80. It is likely that any memories of the historical Saᶜd b. Abī Waķķāṣ have been much elaborated and developed in the traditions, and the material on him probably reflects hagiographical, polemical, legal and other concerns, as well as the need for entertaining stories and speculation.

Bibliography: Material relating to Saᶜd, recycled, reworked and rearranged, is to be found in most of the forms of traditional Muslim literature, and only some of the more notable sources can be mentioned here. Among the biographical dictionaries, see Ibn Saᶜd, *Ṭabaķāt*, iii/1, 97-105; Ibn ᶜAsākir, *Taʾrīkh Madīnat Dimashķ*, lith., Dār al-Bashīr, ᶜAmmān n.d., vii, 132-80; Ibn Manẓūr, *Mukhtaṣar Taʾrīkh Dimashķ liʾbni ᶜAsākir*, Damascus 1985, ix, 250-72; Dhahabī, *Siyar aᶜlām al-nubalāʾ*, Beirut 1401/1981, i, 92-124; Mizzī, *Tahdhīb al-kamāl*, Beirut 1408/1987, x, 309-14 (the bibliography provided by the editor, Bashshār ᶜAwwār Maᶜrūf, at 309 n. 2, is valuable). Of the biographical collections devoted to those who were promised paradise, see al-Muḥibb al-Ṭabarī, *al-Riyāḍ al-naḍira*, Beirut 1405/1984, iv, 319-35 (*bāb* 8). For references to Saᶜd in *sīra, taʾrīkh* and *futūḥ* works, see the indexes to, e.g., Ibn Hishām, *Sīra;* Wāķidī, *Maghāzī*, ed. Marsden Jones, London 1966; Ibn Saᶜd, *Ṭabaķāt*, i and ii; Ṭabarī, *Taʾrīkh*; Yaᶜķūbī, *Taʾrīkh*; Balādhurī, *Futūḥ*. For Saᶜd's role as an "occasion of revelation", see the Ķurʾānic commentaries to VI, 52, VIII, 1, and XXXI, 15, in particular. For references to Saᶜd in the standard collections of *ḥadīth*, see s.v. Saᶜd b. Abī Waķķāṣ in A.J. Wensinck *et alii*, *Concordance et indices de la tradition musulmane*, viii, Leiden 1988, and (in English) A.J. Wensinck, *Handbook*. For the genealogical tradition, see Ibn al-Kalbī, *Djamhara*, tr. W. Caskel and G. Strenziok, index s.v. Saᶜd b. Mālik. In addition to those studies mentioned in the article, see L. Caetani, *Annali dell'Islam*, index (vol. vi) to vols. iii, iv and v; M.G. Morony, *Iraq after the Muslim conquest*, Princeton 1984, index. (G.R. HAWTING)

SAᶜD B. BAKR, BANŪ, a small Arab tribe, usually reckoned as part of the tribe or tribal group of Hawāzin [*q.v.*]. To a section of this tribe belonged Ḥalīma bint Abī Dhuʾayb, Muḥammad's wet-nurse. After the battle of Ḥunayn [*q.v.*] her daughter Shaymāʾ, who had been taken prisoner, obtained her release by proving to Muḥammad that she was his milk-sister [see also RAḌĀᶜ. 2]; and some of the men of the tribe, because they were Muḥammad's milk-brothers, were able to facilitate various negotiations. The tribe was apparently divided into several small sections. The group just mentioned fought against Muḥammad at Ḥunayn along with Hawāzin, but there were also others fighting on Muḥammad's side. Yet others supported him at the conquest of Mecca. The expedition to Fadak in 6/628 led by ᶜAlī against a group called only Banū Saᶜd was probably against the section of Saᶜd b. Bakr associated with Hawāzin; they were being punished for accepting Jewish bribes to give military help against Muḥammad.

Bibliography: W.M. Watt, *Muhammad at Medina*, Oxford 1956, 99 n. and index; Ibn Hishām, index; Wāķidī, ed. Marsden Jones, London 1966, index. (W. MONTGOMERY WATT)

SAᶜD B. MUᶜĀDH, chief of the clan of ᶜAbd al-Ashhal in Medina in succession to his father.

At the time of the *Hidjra* he seems to have been the strongest man in the tribe of al-Aws, of which his clan was a part. He had taken part in the fighting prior to the battle of Buᶜāth [*q.v.*] and been wounded. The leader of al-Aws at Buᶜāth, Ḥuḍayr b. Simāk, is reckoned to another clan, but his son, Usayd b. Ḥuḍayr, seems to have been second-in-command to Saᶜd in ᶜAbd al-Ashhal. Saᶜd and Usayd were both for a time opposed to Islam and wanted to stop its spread, but first Usayd and then Saᶜd were won over, and Saᶜd became probably the strongest supporter of Islam in Medina and made an important contribution to its wide acceptance. He did not, however, go with others to Mecca for the second meeting at al-ᶜAķaba [*q.v.*], though he is said to have made the pilgrimage to Mecca on the first occasion after the *Hidjra*. He was the most prominent of the Anṣār to join Muḥammad in the expedition which led to the battle of Badr [*q.v.*], and encouraged many others to participate. In the course of the battle, he made special arrangements for Muḥammad's safety. Three years later, when the Meccans were besieging Medina (the battle of the Khandaķ), the Jewish clan of Ķurayẓa [*q.v.*] was in secret negotiations with the enemy, and after the Meccan withdrawal, Muḥammad attacked them and they were forced to surrender unconditionally. Saᶜd b. Muᶜādh had been seriously wounded by an arrow, but at this point he was entrusted with deciding the fate of Ķurayẓa. This was because he was leader of al-Aws, and several sections of that tribe had been in alliance with Ķurayẓa. Though these pressed for leniency, Saᶜd's decision was that all the men should be put to death and the women and children sold as slaves; he presumably realised that allegiance to the Islamic community must override all former tribal and clan allegiances. Shortly afterwards he died, and Muḥammad seems to have felt his loss deeply, since he had done more than any other of the Anṣār to ensure the growth of Islam.

(W. MONTGOMERY WATT)

SAᶜD B. MUḤAMMAD [see ḤAYṢA BAYṢA].

SAᶜD B. ᶜUBĀDA, chief of the clan of Sāᶜida at Medina.

The clan appears to have been small since it is not mentioned in the fighting leading to the battle of Buᶜāth [*q.v.*], but it may have been more influential than its size warranted, perhaps because it was wealthy. Only two members of the clan were at the second meeting with Muḥammad at al-ᶜAḳaba [*q.v.*], but both were included among the *nuḳabāʾ* or representatives. One of these was Saᶜd b. ᶜUbāda, who had become a Muslim at an early date. Saᶜd was badly treated by some Meccans on his way back from al-ᶜAḳaba because they had heard something about "the pledge of war", but he eventually received the protection of other Meccans and was able to return to Medina. He appears to have been a wealthy man, because, when Muḥammad attacked the Jewish clan of al-Naḍīr [*q.v.*], he provided a tent and also a large quantity of dates for the army. On an expedition shortly before the conquest of Mecca, his son Ḳays is said to have purchased camels to be slaughtered as food for the army. Ibn Isḥāḳ says that Saᶜd was not at the battle of Badr [*q.v.*] because suffering from snake-bite, but al-Wāḳidī and others say he was present. The snake-bite was probably genuine and not an excuse, for Muḥammad seems to have trusted him fully. At this period, Saᶜd was probably the second most important man in the tribe of al-Khazradj after ᶜAbd Allāh b. Ubayy [*q.v.*], but the latter was never a whole-hearted supporter of Muḥammad, since before his arrival he had been hoping to become "king" of Medina. The struggle for power between Saᶜd and Ibn Ubayy led Saᶜd to give his fullest support to Muḥammad. In the "affair of the lie" against ᶜĀʾisha, shortly before the Khandaḳ attack on Medina, when Ibn Ubayy helped to spread the scandal, it eventually came to a showdown, with Muḥammad wanting to punish Ibn Ubayy. The tribe of al-Aws gave this full support, but Saᶜd opposed them on behalf of al-Khazradj and urged leniency. From this point onwards, Ibn Ubayy faded out and Saᶜd became leader of al-Khazradj, and after the death of Saᶜd b. Muᶜādh [*q.v.*] leader of the Anṣār as a whole. After the death of Muḥammad, the Anṣār met in the hall (*saḳīfa* [*q.v.*]) of his clan and might have made him Muḥammad's successor had not Abū Bakr and ᶜUmar intervened. He is then said to have settled in Syria, where he died a year or two later.

(W. MONTGOMERY WATT)

SAᶜD B. IBRĀHĪM ZAGHLŪL, Egyptian jurist and politician, from 1918 to his death in 1927 president of the Egyptian Wafd party and in 1924 Prime Minister.

Saᶜd Zaghlūl was born as the second son of Ibrāhīm Zaghlūl and his second wife Maryam in July 1858 (others say 1857, 1859 or 1860, discussed by Ramaḍān, *Mudhakkirāt*, i, 48 ff.). His father was a landowner in Abyāna near Fuwwa in the Lower Egyptian province of al-Gharbiyya. Besides the resident notable families Zayd and Ḥusām ad-Dīn, the Zaghālila belonged to the most prestigious and wealthy families of the village. Ibrāhīm Zaghlūl owned about 250 *faddāns* and acted as a village headman. He had inherited this position from his father Aḥmad, to whom the governor of the Buḥayra province, Muḥammad Fāḍil Pasha, had allocated about 230 *faddāns* in around 1840. Although several rumours claimed that the Zaghālila were of Maghribī origin and that they were originally Turks coming from Algeria, the family presumably belonged to those "new Egyptian notables" (then called *abnāʾ al-balad*) who gained fortunes and social power after 1750. It should be noted, however, that the Zaghālila originally were Mālikīs and that only later did Saᶜd Zaghlūl become a Shāfiᶜī. In contrast to this, many national historians have tried to present Zaghlūl as a son of a local peasant family in order to stress Zaghlūl's "Egyptiannness" as a true "son of the country". Saᶜd Zaghlūl also supported the mystification around his origins when in 1883, after having been arrested by British military forces, he claimed that he was not an Egyptian but a Moroccan citizen with a Sharīfian genealogy. Ibrāhīm Zaghlūl's position in the agrarian society enabled him to marry Maryam, the daughter of Shaykh ᶜAbduh Barakāt from Minyat Murshid near Fuwwa, in 1851-2. The Barakāt family also belonged to the new agrarian élite which came into power after having introduced the growing of rice under the régime of Muḥammad ᶜAlī. Ibrāhīm's first wife, Fāṭima, from a village family, gave birth to two daughters and five sons. Maryam's sons were: Faradj (Allāh), who died after having been born, Saᶜd (Allāh) and (Aḥmad) Fatḥī (Fatḥ Allāh, born in 1863). Just after Fatḥī's birth, Ibrāhīm died, and Saᶜd was left in the hands of his elder brother Shināwī, who was a member of the local administration. Like other family members, Saᶜd inherited a lot of 20 *faddāns* from his father's estate.

As was a common practice among wealthy peasant families in those days, Saᶜd, being the eldest son of Maryam was sent to al-Azhar, whereas Fatḥī was chosen to study at a *madrasa* to become a state official. Saᶜd went first to a local *kuttāb*, and after five years, in 1870, his half-brother Shināwī sent him to school in the nearby provincial town Dasūḳ where he had been appointed as the head of the district administration. Saᶜd apparently stayed in Dasūḳ for about three years, mainly occupied in studying *tadjwīd* [*q.v.*]. For a while, he joined his brother Fatḥī in Rashīd or Rosetta and took lessons from Shaykh Aḥmad Abū Rās, a specialist in law and grammar. In 1873, the fifteen-years old Saᶜd moved to Cairo to live on his own in the old city in order to pursue his studies at al-Azhar. There is reason to believe that Saᶜd abruptly broke with his past, as he did not join a *riwāḳ* and only once revisited his native village during the next 40 years.

In Cairo, Saᶜd presented himself as an Islamic scholar and proudly carried the title and the outfit of a *shaykh*, although he never received an *ᶜālimiyya* from al-Azhar. Instead of studying at the University, Saᶜd preferred to visit Djamāl ad-Dīn al-Afghānī's private salon, where he met Muḥammad ᶜAbduh, who was ten years older than he. Saᶜd became ᶜAbduh's *murīd* and regarded him as his true father and himself as ᶜAbduh's disciple. Both tried to present their relationship in the tradition of Ṣūfī brotherhood. For some years Saᶜd's life was closely bound up with ᶜAbduh's destiny. In 1880, Saᶜd suddenly broke off his studies at al-Azhar. Perhaps he hoped to get a position in the state administration; but ᶜAbduh made him a sub-editor of the journal *al-Waḳāʾiᶜ al-miṣriyya* in October 1880. In May 1882, his ambitions for a government career were satisfied. The *wakīl* of the Ministry of the Interior, Ḥusayn al-Daramallī, made him a *bāsh muᶜāwin* (secretary). A few days before the battle of at-

Tall al-Kabīr (13 September 1882), Saᶜd accepted a position at the Law Court of Djīza. This was his first opportunity to work as a jurist. Saᶜd could now change his outfit and become an Afandī. But in early October 1882 he resigned and was obviously considering following ᶜAbduh, who had left Egypt on 7 January 1883. But ᶜAbduh advised him to stay in Egypt; hence Saᶜd worked with his friend Ḥusayn Saḳar as a lawyer at the Djīza court. As British officials suspected him to be a member of an obscure "society of revenge", Saᶜd was arrested on 20 June 1883; he was released four months later as the accusation proved to be false. Already in February 1884, he resumed his work as a lawyer and kept this position for the next eight years.

When Muḥammad ᶜAbduh returned to Egypt in 1888, Saᶜd Zaghlūl again had an intercessor within the intellectual and cultural urban élites. ᶜAbduh invited him to join the famous salon of Princess Nazlī Fāḍil, who had been an ardent supporter of Aḥmad ᶜUrābī. Now, however, the salon became a most important place of British-Egyptian private diplomacy. Here, Zaghlūl met for the first time the Consul-General Evelyn Baring, later the 1st Earl of Cromer, and many influential journalists and politicians. In 1890, he had already become a great name; as gossip concerning Zaghlūl's liaison with Princess Nazlī was spreading, he gained public recognition within colonial society. Wilfred Scawen Blunt even suggested him to Cromer as a possible minister in an "Egyptian government" which should oust the traditional élites from power. Two years later, Saᶜd's lobbying proved to be a success. He was appointed as a Deputy Chief Judge at the Court of Appeal on 27 June 1892. From now on, Zaghlūl had a well-established position in the Egyptian upper class; but this was only the beginning of his rapid career. From 1892 to 1897, he went several times to Europe in order to study languages and law, and in 1897, he got a diploma in law from the University of Paris. Obviously, he considered himself as a political personality, since he now started to keep a diary which recorded day-by-day summaries of events and cases at the law court and which was meant as an aide-mémoire for future activities. Only in 1903 did he begin to use the diaries for private reminiscences. Zaghlūl's integration into the upper class was crowned when in November 1895 he became engaged to Ṣafiyya, a daughter of Muṣṭafā Fahmī (1840-1914), who had just been appointed (for the third time) as Prime Minister. Now, Zaghlūl was also accepted by the old "Turco-Circassian" élites, as Fahmī himself was of a Turkish origin, his father having come from Algeria to Egypt in the early thirties of the 19th century.

By 1896, when he married Ṣafiyya, Zaghlūl was a rich man. He possessed everything which was important in those days to become a politician: a position, money, reputation, a good marriage and a good knowledge of French and a bit of German. In 1902, the couple moved into a new house in Cairo which would later become a national gathering place. In addition, Zaghlūl bought a large estate in the district of Damanhūr. At that time, the public considered Zaghlūl as a friend of the British, a protégé of the Khedive, a supporter of ᶜAlī Yūsuf (1863-1913) and his journal *al-Muʾayyad*, and as a member of the ruling class. Having been an Afandī in his twenties, Zaghlūl, now being 41 years old, turned into a Pasha. But already at this stage, he was able to integrate within himself the three respective social codes of the Egyptian élites, presenting himself as the personification of an Egyptian identity.

The beginning of the colonial crisis in Egypt in 1905-6 deeply interfered with Saᶜd Zaghlūl's career. After the strike at the Law School in February 1906 and the famous Dinshawāy affair (13 June 1906), Cairo suddenly witnessed a growing public recognition of Muṣṭafā Kāmil's [*q.v.*] nationalist movement, which culminated in a gathering of the later members of the (third) National Party in Zaghlūl's house on 12 October 1906. The colonial consensus ended, and Saᶜd Zaghlūl had to choose either to join the ranks of the urban nationalists or to become a political member of the ruling élite. Cromer decided to promote an "Egyptianisation" of the cabinet by appointing Zaghlūl as the new Minister of Education on 28 October 1906. Obviously, however, Zaghlūl did not feel comfortable with his new position, as his ideas of reforming governmental institutions (here he proved to be more an Afandī than a Pasha) provoked several severe conflicts even with the Khedive. After having decided not to join the urban nationalist movement, Zaghlūl was dragged into the foundation of a new "People's Party" (*ḥizb al-umma*, 21 September 1907) which was sponsored by landlords like ᶜAlī Shaᶜrāwī, Aḥmad Luṭfī as-Sayyid, Muḥammad Maḥmūd, Ḥamd al-Bāsil and Ṭalᶜaṭ Ḥarb. Zaghlūl, who openly declared his mistrust of the urban national movement, continued as Minister of Education in a new cabinet formed by Buṭrus Ghālī in 1908. As a minister, Zaghlūl had only little sucess. As he tried to fulfil his role as a reform-minded Afandī, he clashed with the palace and the traditional structures of governmental institutions; in early 1910, he thought of retiring from politics as he did not see any progress for the nationalist constitutional movement. In addition, urban nationalists heavily attacked him for promoting nepotism, and others even made propaganda for Fatḥī Zaghlūl, that he should replace his brother in office. Fearing to be excluded from the nationalist public, he dismissed the idea of resigning. When on 23 October 1910 he became Minister of Justice, he had to approve the policy that nationalist journalists were to be tried by special courts originally installed to deal with brigands; even more, he had to accept the imprisonment of the leader of the National Party, Muḥammad Farīd [*q.v.*] (23 January 1911). This difficult situation finally led him to retire from office in March 1912; he was then busy looking for new support in party politics. He succesfully rallied for a seat in the new Legislative Assembly, which made him its Vice-President in January 1914. Although his political programme contained only a few suggestions concerning the reforms of the judicial and educational system, Zaghlūl soon gained a reputation of being the most able Egyptian public orator. Being a convinced constitutionalist, Zaghlūl highly esteemed the role of the Assembly as the nation's only political representation. The Assembly met in June 1914 for the last time before the outbreak of the War and the proclamation which made Egypt a British Protectorate. As usual, Saᶜd Zaghlūl left to Europe for the summer; this time, however, he stressed that he wanted to use the break to rethink his political career. In spite of his earlier quarrels with the Khedive ᶜAbbās II Ḥilmī [*q.v.*], Zaghlūl now backed him after his deposition. Personal problems and a career crisis may have added to the fact that Zaghlūl gradually changed his political attitude towards British rule in Egypt. In his view, Britain had now become an opponent of a true constitutional order in Egypt. Being unemployed and showing symptoms of an addiction to gambling, he had lost most of his fortune and riches. He was highly in debt. In order to avoid the gambling salons of

Cairo, he retired to his newly-built house in Masdjid Waṣīf. His political ambition continued to aim at reinvesting the Legislative Assembly, which had been prorogued in late 1914, with power. After the death of Sultan Ḥusayn Kāmil, the new Sultan Fuʾād declared on the occasion of the New Year 1336 (18 October 1917), that the Assembly would "soon" resume its work. This, the parallel discussions on a new Constitution and Woodrow Wilson's declaration on 8 January 1918, encouraged Zaghlūl to revive his role in the Legislative Assembly as the true representative of the Egyptian nation, and consequently with his position as Vice-President, he regarded himself as its best advocate. Meanwhile, the Egyptian landlords openly protested against the rigid measures taken by the British authorities in order to secure the logistics and supply of the army. They pressed Zaghlūl to intervene, but he only carefully presented the complaints to the Sultan and the British officials. Both sides wished to neutralise Zaghlūl. Fuʾād even expressed his thanks to him by suggesting that he should become a minister again. At his house in Masdjid Waṣīf, Zaghlūl now wanted to take advantage of the wrangling over his political future, and he received the most prominent leaders of the nationalist movement. He accepted the idea which Prince Ṭūsūn had promoted of sending a delegation (*wafd*) of the Assembly to the British High Commissioner in order to get permission to travel to Paris and to present Egypt's demand for independence to the Peace Conference. The idea was also favoured by the government; but the Prime Minister Ḥusayn Rushdī (1863-1928) and ʿAdlī Yegen (1864-1933) disputed the right of Zaghlūl to speak in the name of the nation. On 13 October 1918, Zaghlūl was deputed to see the High Commissioner Wingate with his political friends ʿAlī Shaʿrāwī and ʿAbd al-ʿAzīz Fahmī and to present a demand for self-determination. The British, however, declared that Zaghlūl was unrepresentative of the Egyptian nation and cold-shouldered the three nationalists. Consequently, the small group started a campaign and issued a circular in which seven members of the Assembly, with Zaghlūl as their "president", were vested with the power to negotiate for the "complete independence" of Egypt, and which should be signed by the members of the Assembly and by the "Egyptian people". This campaign paved the way for the restoration of the national movement, and already in December 1918, the pro-Zaghlūl agitation had reduced other political factions to silence. Even the Prime Minister Rushdī had to accept Zaghlūl's new power position and finally resigned on 1 March 1919, as the British authorities continued to refuse the Wafd's permission to leave for the Peace Conference. On 8 March 1919, after Lord Curzon had accepted resolute action against the nationalists, Zaghlūl, Muḥammad Maḥmūd, Ismāʿīl Ṣidḳī and Ḥamd al-Bāsil were arrested and exiled to Malta.

From afar, Zaghlūl monitored the manifold unrest in Egypt which reached its peak in March-April 1919. In accordance with his nationalist world view, he considered the revolts to be a firm expression of the people's will to make him the true and only representative of the nation. Finally, the British authorities also implicitly accepted this view, as they wanted to act within the legal framework of a protectorate which required a functioning "indigenous" government. On 7 April 1919, after the Egyptian élites had openly condemned the rebellions, the Special High Commissioner General Allenby released the four exiles and allowed them to leave for Paris with 11 others. Two days later, Rushdī formed a new government; but he soon had to resign again, as he was not able to accept the demands of state officials to recognise Zaghlūl as the nation's sole representative. Meanwhile, since the Wafdists regarded themselves as the only true expression of the Egyptians' political will, Zaghlūl's compatriots started to build up an efficient nationwide organisation which should be the nucleus of a future Egyptian administration.

Zaghlūl spent the next two years in Europe. After the British Protectorate in Egypt was recognised by the Peace Treaty of Paris (28 June 1919), the 15 Wafdists tried to mobilise the public opinion in their favour, but had only a limited success. They also tried to control the boycott of the Milner Mission, which had been formed in order to investigate the spring revolts. Zaghlūl and his delegation stayed in Europe till the end of March 1921. Having reached Cairo on the demand of ʿAdlī, who wanted to shift the responsibility for the negotiations with the British officials on to the President of the Wafd, Zaghlūl started his famous campaign favouring the complete independence of Egypt. It tried to find a political position between ʿAdlī and the court faction on the one side and the urban nationalists' activists on the other side. The British warned him several times not to exploit the freedom of press and speech by attacking the government. Zaghlūl, however, did not give in. On 23 December 1921, he was again arrested together with five other leaders of the Wafd (Muṣṭafā an-Naḥḥās, Markam ʿUbayd, Sinōt Ḥannā, Fatḥ Allāh Barakāt and ʿĀṭif Barakāt) and sent to Aden. They arrived at the Seychelles six days before the unilateral British declaration of Egypt's independence (15 March 1922). In September 1922, Zaghlūl was sent to Gibraltar, where he was told that he was no more a prisoner but a guest of the British Government. In April 1923, he was allowed to leave Gibraltar for wherever he wanted; as usual, Zaghlūl first went to France (Aix-les-Bains) for a summer course of treatment. He finally returned to Cairo on 17 September 1923 and was welcomed by a large crowd. This embarassed the Liberals, who thought that, after the last elections which had given them a comfortable majority and the fact that Zaghlūl had not had any direct control of the negotiations with the British, the general sentiment in favour of Zaghlūl had cooled down. The Wafd Party, though it had radically criticised the new constitution promulgated on 13 April 1923, soon prepared to run for the next year's elections and tried to exploit the return of the "Nation's prophet" as Zaghlūl was often now called. He pulled out all the stops, toured in the country, invited notables and afandīs, and addressed all kinds of social groups in many public meetings. The poll of January 1924 gave the Wafd a 90% majority, and Zaghlūl was called to form a government which became known as "the people's cabinet". He soon began to centralise the complex decision-making procedures in his own hands and tried to negotiate with the British administration the still unsolved questions concerning the Sudan and the Suez Canal. But the more he exercised direct rule over the Egyptian administration, the more Fuʾād, now King of Egypt, and the British officials mistrusted him. In public, Zaghlūl even became a potential candidate for the presidency of an Egyptian republic. The murder of the *Sirdār* Sir Lee Stack (19 November 1924) provided British officials with a pretext to get rid of the troublemaker. Five days later, Zaghlūl had to resign. Though he continued to play an important public role in Parliament, his deposition ruined his political career. He saw his

organisation turned into a political party accepting other parties as partners. Thus his hope of being the head of an organisation which should be the organic expression of the nation's will vanished. His contemporaries Atatürk and Riḍā Khān were to be more successful than he at becoming heads of state. In Egypt, however, the political public prevented an analogous development. In early summer 1927, his already shaken and poor health deteriorated, and on 23 August 1927 Zaghlūl died in Cairo of erysipelas.

Bibliography: Saᶜd Zaghlūl wrote very little. He published a booklet on Shāfiᶜī law, Cairo n.d. [*ca.* 1878]), a summary of Ibn Miskawayh on *inshā*ʾ and about 28 articles in Egyptian journals of the late seventies and early eighties of the 19th century. It is doubtful, however, whether he wrote them all personally or whether he edited articles of Muḥammad ᶜAbduh. The main sources of his political views are his diaries and some collections of his speeches. See his *Mudhakkirāt*, ed. ᶜAbd al-ᶜAẓīm Ramaḍān, i ff., Cairo 1987 ff. and collections of his speeches by Aḥmad Nasīb al-Sukkarī, Cairo 1923; Maḥmūd [Kāmil] Fuʾād, Cairo 1924; Muḥammad Ibrāhīm al-Djazīrī, Cairo 1927; and Maḥmūd Kāmil Fuʾād, Cairo 1927.

There are quite a lot of biographies in Arabic: by Muḥammad ᶜAbd al-Murshid Dāwūd, Cairo 1926; Aḥmad Fahmī Ḥāfiẓ, Cairo 1927; Karīm Thābit, Cairo 1929; ᶜAbduh Ḥasan al-Zayyāt, Cairo 1932; ᶜAbbās Maḥmūd al-ᶜAḳḳād, Cairo 1936; Ibrāhīm Rashād, Cairo 1937; Ḳadrī Ḳalᶜadjī, Beirut 1938; Yūsuf F. al-Naḥḥās, ᶜAbd al-ᶜAzīz Saᶜd, Cairo 1952; Ḥāmid al-Mulaydjī, Cairo 1954; Muḥammad Ibrāhīm al-Djazīrī, Cairo 1954; ᶜAbd al-Khāliḳ Lāshīn, Cairo 1974; idem, Beirut-Cairo 1975; Muḥammad Kāmil Salīm, Cairo 1975; idem, Cairo 1976; Ṭāriḳ al-Bishrī, Cairo 1977; Amīl Fahmī Shanūda, Cairo 1977; Muḥsin Muḥammad, Cairo 1983; ᶜAbbās Ḥāfiẓ, Cairo n.d.; Ḥamdān Sālim an-Naᶜnāᶜī, Damanhūr n.d.

Although there is a huge literature on the Egyptian nationalist movements in Western languages, there are hardly any biographies of Zaghlūl; cf. Fouad Yéghen, *Saad Zaghloul. Le "père du peuple" égyptien*, Paris 1927; for a short political account, see e.g. J.M. Ahmed, *The intellectual origins of Egyptian nationalism*, London 1960, 52-55, 113-17, and J. Berque, *L'Egypte. Impérialisme et révolution*, Paris 1967, 287-295. For his dealings with the British, see E. Kedourie, *Saᶜd Zaghlul and the British*, in idem, *The Chatham House version and other Middle Eastern studies*, London 1970, 82-159, shortened account in idem, *Politics in the Middle East*, Oxford 1992, 158-79. On Zaghlūl's role in the 1919 rebellions, see R. Schulze, *Die Rebellion der ägyptischen Fallahin 1919*, Berlin 1981. His place in the nationalist movements is discussed by *inter alii* I. Gershoni and J.P. Jankowski, *Egypt, Islam, and the Arabs. The search for Egyptian nationhood, 1900-1930*, New York 1986; M. Deeb, *Party politics in Egypt: the Wafd and its rivals, 1919-1939*, London 1979, and also within the frame of national historiography, ᶜAbd al-Raḥmān al-Rāfiᶜī, *Thawrat sana 1919*, 2 vols., Cairo 1946 and idem, *Fī aᶜḳāb al-thawra*, 3 vols., Cairo 1947-51.

(R. SCHULZE)

SAᶜD (I) B. **ZANGĪ**, ABŪ SHUDJĀᶜ ᶜIZZ AL-DĪN, Turkish Atabeg in Fārs of the Salghurid line [*q.v.*], reigned in Shīrāz from 599/1202-3 until most probably 623/1226.

On the death of his elder brother Takla/Tekele (Degele, etc.?) b. Zangī in 594/1198, Saᶜd claimed power in Fārs, but his claim was contested by his cousin Ṭoghrīl, the son of his father's elder brother Sunḳur, who had founded the dynasty. Ṭoghrīl retained the royal title for nine years, but throughout that period warfare between him and his cousin continued without a decisive result for either, the country was wasted and depopulated, none would till the ground, and famine and pestilence smote the people. At length, in 599/1202-3, Saᶜd captured his cousin and ascended the throne of Fārs (according to Mīrkhʷānd this happened in 593/1197, after Ṭoghrīl had been defeated by Takla), but at the beginning of his reign famine was so sore in the land that the strong slew and ate the weak, and even when the famine had abated the pestilence remained; but Saᶜd gradually restored prosperity to his people, and, having completed this task, conquered Kirmān from the Shabānkāra Kurds. In 614/1217-18 he invaded ᶜIrāḳ, but was taken prisoner by the army of the Khʷārazm-Shāh ᶜAlāʾ al-Dīn Muḥammad [*q.v.*], and in order to regain his freedom was obliged to pay a ransom of two-thirds of a year's revenue of his kingdom, to surrender Iṣṭakhr and Ashkūrān, and to agree to pay tribute annually. On his return to Shīrāz, his son Abū Bakr, who had occupied the throne during his captivity, opposed his restoration, and a battle was fought between father and son, in which Saᶜd was wounded in the eye with an arrow, but the citizens admitted him into the city by night, and he seized and imprisoned his son. When the Khʷārazm-Shāh Djalāl al-Dīn Mingburnu [*q.v.*] passed through Fārs on his return from India in 621/1224, he interceded for Abū Bakr, and succeeded in persuading Saᶜd to release him.

According to the most reliable sources, Saᶜd died in Dhu 'l-Ḳaᶜda 623/November 1226 and after a reign of 29 years was succeeded by his son Abū Bakr. Amongst his building works was a celebrated Masdjid-i Naw or Masdjid-i Atabegī in Shīrāz, completed in 615/1218 (see W. Barthold, *An historical geography of Iran*, Princeton 1984, 156). However, the poet Saᶜdī [*q.v.*] derived his *takhalluṣ* or nom-de-plume not from this Saᶜd (I) but from his son Abī Bakr b. Saᶜd (I) and grandson Saᶜd (II) b. Abī Bakr.

(T.W. HAIG-[C.E. BOSWORTH])

SAᶜD B. **ZAYD MANĀT** AL-**FIZR** is the name by which a large section of the tribe of Tamīm is named.

The curious cognomen *Fizr* or (according to al-Aṣmaᶜī, *Fazr*) has received no satisfactory explanation, and the philologist Abū Manṣūr al-Azharī asserts that he never met any person who could explain it. Some lexicographers explain it as meaning "more than one", others as "goats", but we may assume that Ibn Durayd is correct when he derives it from the verb *fazara* with the meaning "to split" and that *fizr* means "a chip or fragment". The Arab genealogists give the name of the common ancestor as Saᶜd b. Zayd Manāt b. Tamīm and relate tales to account for the curious name, which amount to the following: Saᶜd had much cattle which he ordered his sons, by different mothers, to take to pasture; they refused and he invited the kindred tribesmen of Mālik b. Zayd Manāt to come and rob the camels. Then when only goats remained, he gave his sons the same

order and they again refused to take them to pasturage. In his anger, he called Arabs of every tribe together (or, according to another version, took his animals to the fair of ᶜUkāẓ) and asked them to take each one goat as plunder (*intahaba*), but allowed no one to take more than one. Thus the goats were scattered all over the country, and this is said to be the origin of the proverb: "I shall not come to you till the goats of al-Fizr (are collected again into one herd)" (al-Maydānī, *Madjmaᶜ al-amthāl*, ed. ᶜAbd al-Ḥamīd, ²Cairo 1379/1959, ii, 212b = no 3496). The goats are probably imagined to have had the *wasm* or brandmark of his clan. The underlying idea appears to be that the divisions of this tribe were found scattered over the whole of Eastern Arabia. The tribe of Tamīm [*q.v.*] is early mentioned, and the genealogies in their case are more fictitious than with other tribes; all they can serve is to show which of the clans shortly before and after the introduction of Islam felt itself as possessing a certain relationship. The poet al-Aḍbaṭ b. Ḳurayᶜ says: "In every wādī are Saᶜd" (Ibn Ḳutayba, *Shiᶜr*, ed. Shākir, Cairo 1966, 382), possibly pointing to their wide distribution. Of the many subdivisions mentioned by geneaologists, only those derived through his sons Kaᶜb and al-Ḥārith appear to have had a claim to pure descent, while the descendants of the other sons, ᶜAbd Shams, Djusham, ᶜAwf, ᶜUwāfa and Mālik, were called the *Abnā*ʾ. There were doubts as to the purity of their descent; they were settled in Baḥrayn and had largely intermixed with the Persian settlers when this province was under Persian rule. They were, as regards numbers, perhaps the largest Arab tribe, and for this reason played an important part in the wars shortly before Islam and during the conquests, and many persons mentioned in the early times of Islam were members of the various clans of Saᶜd al-Fizr. They sided with ᶜAlī during the struggle for the caliphate and were most prominent during the unruly times in Khurāsān under the later Umayyads and appear to have settled in Persia in large numbers. Others emigrated to North Africa, and the Aghlabī rulers of Ifrīḳiya [see AGHLABIDS] claimed descent from them. The many subdivisions cannot be enumerated here, but it must be stated that the genealogists are far from unanimous in the affiliation of the various sections, and their names disappear early from history under the general name of Tamīm.

Importance may be attached to the tribe of Saᶜd al-Fizr and their nearest kindred clans for having spoken that Arabic which forms the basis of the classic Arabic of literature, as the earliest philologists seem to have framed the rules of Arabic grammar upon the dialect of Tamīm. This was no doubt on account of their widespread diffusion through which their dialect was understood in most parts of Arabia.

(F. KRENKOW*)

SAᶜD AL-DAWLA b. al-Ṣafī b. Hibat Allāh b. Muhadhdhib al-Dawla al-Abharī, Jewish physician and *wazīr* of the Īlkhān Arghūn [see ĪLKHĀNS]. His tenure of office lasted from Djumādā II 688/June 1289 until his murder in Rabīᶜ I 690/March 1291. His *ism* and date of birth are unknown. His rise to power must be seen against the background of a radical change of the Mongol political élite in domestic and foreign policies; i.e. from the pro-Islamic policy of the Īlkhān Aḥmad (680-3/1282-4) back to the anti-Islamic policy of the Īlkhāns after the defeat at ᶜAyn Djālūt [*q.v.*] on 25 Ramaḍān 658/ 3 September 1260. This policy was aimed at a Mongol-Christian/European alliance against the Mamlūks [*q.v.*] of Egypt and Syria. Under Aḥmad, a convert to Islam, who strove for a peaceful agreement with the Mamlūks (al-Maḳrīzī, *Sulūk*, i/3, 707-8, 717, 722-3), the pro-Islamic Mongol élite, together with the *amīr* Buḳa, worked with the *wazīr* Shams al-Dīn al-Djuwaynī [*q.v.*]. After the murder of the Īlkhān Aḥmad and the enthronement of Arghūn, the *amīr* Buḳa, who had changed loyalties shortly before the coup d'état, became the most powerful *amīr* in the realm. He tried to preserve the status quo between Mongols and Muslims, even though he could not prevent the fall and murder of the *wazīr* Shams al-Dīn al-Djuwaynī. This situation changed abruptly when Buḳa fell from power and was murdered, and Saᶜd al-Dawla immediately after rose to power in Djumādā II 688/June 1289 (Rashīd al-Dīn, iii, 208-16, 217). One month later, on 3 Radjab 688/23 July 1289 the whole Djuwaynī family was liquidated (*ibid.*, 218-19). Arghūn issued an edict prohibiting the employment of Muslim secretaries (Bar Hebraeus, ed. Budge, i, 484-5). This edict was countered by the Mamlūks with an edict in Shaᶜbān 689/August 1290 prohibiting the employment of Jewish and Christian secretaries (al-Maḳrīzī, *Sulūk*, i/3, 753). Saᶜd al-Dawla gave all the key positions in the administration to his family, relatives and co-believers. His internal policy aimed at an increase in taxes and a redistribution of funds to fill the treasury. In foreign policy he, together with the Īlkhān, aimed at an alliance with Pope Nicolas IV and the Christian powers of Europe in order to oust the Mamlūks from Syria. A Crusade was planned and eventual possession of Jerusalem by the Pope was envisaged; but nothing came of these plans. Meanwhile, the Mamlūk sultan Ḳalāwūn [*q.v.*] and his son and successor al-Ashraf Khalīl had expelled the Crusaders from the Syrian coast. Their last stronghold, ᶜAkkā [*q.v.*], fell in Rabīᶜ II 690/March 1291. Shortly before this, on 7 Rabīᶜ II 690/10 March 1291, Arghūn died, and five days before his death Saᶜd al-Dawla was murdered by his Mongol enemies. A persecution of the Jews began that could only be forcibly suppressed by the government.

Regarding Saᶜd al-Dawla's earlier career, he appears for the first time in 682/1283, when Sharaf al-Dīn Hārūn, from the Djuwaynī family, became governor of Baghdād and Saᶜd al-Dawla was dismissed from the supervision of the endowments of the Māristān al-ᶜAḍudī [see BĪMĀRISTĀN] there. In 683/1284 he became deputy (*nāʾib*) of the *shiḥna* in Baghdād and in 686/1287 the financial administrator (*malik*) of Baghdād. Nāṣir al-Dīn Ḳutlugh Shāh, a *mamlūk* of the Djuwaynī family, complained about him to the Īlkhān. Saᶜd al-Dawla was sent to the camp of the Īlkhān in his capacity as a physician, and became the private one of Arghūn (Ibn al-Fuwaṭī, 428, 433, 450). He won the ruler's confidence and was twice sent to Baghdād to check the finances, being in Djumādā I 687/June 1288 made supervisor of finances (*mushrif*) there, and in the same year a group of Jews from Tiflis came to Baghdād to oversee the

charitable endowments of the Muslims. This brought about a revolt there, and the group had to resign (Ibn al-Fuwaṭī, 454-5). Then in Djumādā II 688/June 1289 he was made *ṣāḥib dīwān al-mamālik*, i.e. *wazīr*, by Arghūn; numerous sources confirm his administrative skill and abilities in general.

(DOROTHEA KRAWULSKY)

SAᶜD AL-DAWLA [see ḤAMDĀNIDS].

SAᶜD AL-DĪN [see SAᶜDIYYA].

SAᶜD AL-DĪN AL-ḤAMMŪʾĪ (or al-Ḥamūʾī or al-Ḥamawī), MUḤAMMAD B. AL-MUʾAYYAD ... b. Ḥam(m)ūy(a) (or Ḥamawayh or Ḥamawiyya) AL-DJUWAYNĪ, famous Ṣūfī *shaykh* of the first half of the 7th/13th century; second cousin of the influential *Awlād al-Shaykh* [*q.v.*] and of another Saᶜd al-Dīn (b. Tādj al-Dīn, d. 674/1276); father of Ṣadr al-Dīn Ibrāhīm (644-722/1247-1322). Saᶜd al-Dīn b. al-Muʾayyad's contemporary Sibṭ Ibn al-Djawzī mentions (*Mirʾāt al-zamān*, Chicago 1907, 525) that news of the Shaykh's death in Khurāsān had reached him during the year 651, and that he is said to have died in 650 A.H. The latter year is accepted by many authorities, including Djāmī, who specifies that the Shaykh died on 10 Dhu ʾl-Ḥidjdja 650/11 February 1253 aged 63 (*Nafaḥāt al-uns*, Tehran 1370 A.H.S., 431 ff.). However, according to the biography written around 750 A.H. by his great-grandson Ghiyāth al-Dīn (summarised by M.T. Dānishpazhūh in *Farhang-i Īrānzamīn*, xiii [1344 A.H.S.], 298-310), as well as Khʷāfī's *Mudjmal-i Faṣīḥī* (Mashhad 1340 A.H.S., 268-9, 319), the precise dates for the Shaykh's birth and death are 23 Dhu ʾl-Ḥidjdja 586/12 January 1191 and 18 Dhu ʾl-Ḥidjdja 649/3 March 1252, respectively. On the other hand, equally precise but different dates (15 Djumādā I 588 to 12 Dhu ʾl-Ḥidjdja 649) are found in marginal notes of a manuscript dated 728 A.H. (Princeton, Garrett Collection, Mach no. 2753). Still other dates on record are mentioned by Köprülü-zāde Fuʾād, art. *Saᶜd al-Dīn al-Ḥamawī* in *EI¹*.

Saᶜd al-Dīn is primarily known in Ṣūfī history as a disciple of Nadjm al-Dīn al-Kubrā (d. 618/1221 in Khʷārazm). Kubrā wrote an *idjāza* for him, and is said to have "brothered" him with Sayf al-Dīn al-Bākharzī (d. 659/1261 or earlier in Bukhārā). A letter written to him by the latter may indeed indicate such ties with the then nascent Kubrawiyya; but hagiographic reports (such as *Manāḳib-i Awḥad al-Dīn-i Kirmānī*, Tehran 1347/1969, 96-105) suggesting similar ties to Kubrā's major disciple, Madjd al-Dīn al-Baghdādī (d. 3 Djumādā II 606/3 December 1209, for which date, see W. Shpall in *Folia Orientalia*, xxii [1981-4], 72), should be treated with caution. According to Ghiyāth al-Dīn's biography, Saᶜd al-Dīn had pursued theological studies in Khurāsān and, between 605 and 609 A.H., in Khʷārazm; but he joined Kubrā only in 616 or 617 A.H., having in the meantime (A.H. 616 according to the *Mudjmal-i Faṣīḥī*) travelled to Damascus, where he received his formal initiation into Ṣūfism from his father's cousin, the Shaykh al-Shuyūkh Ṣadr al-Dīn Abu ʾl-Ḥasan Muḥammad (d. 617/1220), and to Mecca, where he met Abū Ḥafṣ ᶜUmar al-Suhrawardī (d. 632/1234). Saᶜd al-Dīn himself, as quoted by Ḥaydar al-Āmulī (*Kitāb Naṣṣ al-nuṣūṣ*, Tehran-Paris 1975, 220-1), traced his Ṣūfī affiliation in two ways to Muḥammad b. Ḥamūya (d. 530/1135-6): (a) through direct spiritual association (in the way Muḥammad b. Ḥamūya himself was a "disciple of al-Khiḍr"); (b) through transmission of the *khirḳa* along the line of descent of the Syrian branch of his family (i.e. through Ṣadr al-Dīn Muḥammad).

In any case, some time after the Mongol sack of Khʷārazm, Saᶜd al-Dīn turned, again, to the Middle East, staying now for longer periods in Mecca and Damascus, and travelling widely until 640. During one of his stays in Damascus, he was undoubtedly in touch with Ibn ᶜArabī (d. 638/1240) and his circle, although it would appear that his real contact was the disciple Ṣadr al-Dīn al-Ḳūnawī (d. 673/1274) rather than the master himself (cf. Saᶜīd al-Dīn-i Farghānī, *Mashāriḳ al-darārī*, Mashhad 1357/1398, 128). Unlike Ibn ᶜArabī, Saᶜd al-Dīn evidently favoured the Ṣūfī practice of "listening to music" (*samāᶜ*; cf. Muʾayyid al-Dīn al-Djandī, *Sharḥ Fuṣūṣ al-ḥikam*, Mashhad 1361/1982, 107). Sibṭ Ibn al-Djawzī (*loc. cit.*) mentions that he lived with his followers on Mount Ḳāsiyūn and describes him as a holy man who shunned the rich, even his own cousins, despite great poverty, but says also that he enjoyed later in Khurāsān the favours of the "kings of the Tatars". The same source also points out that he spent the last week of his life by the tomb of Muḥammad b. Ḥamūya in Baḥrābād (near Djuwayn), and that he was buried there. According to Ghiyāth al-Dīn, he spent the last eight years of his life mainly in Āmul and various places in Khurāsān, including Baḥrābād, where he died during one of his visits.

It must have been during this last period in Khurāsān that ᶜAzīz-i Nasafī (d. *ca.* 700/1300) became his disciple. The latter, a prolific Persian author, popularised some of his master's esoteric ideas, particularly those concerning the unity of Being (*waḥdat al-wudjūd*) and the special status of the "saint" (*walī*). "Monistic" trends in Saᶜd al-Dīn's thought were also noted by Dhahabī (*Al-ᶜIbar*, Kuwayt 1960, v, 206). His peculiar ideas about *walāya* bear a certain affinity to gnostic Shīᶜism, although he belonged, like the rest of his family, to the Shāfiᶜī *madhhab*.

Unlike Nasafī's, Saᶜd al-Dīn's works were reputedly "difficult" due to his penchant for "*ḥurūfī*" speculations. Nasafī, *Kashf al-ḥaḳāʾiḳ*, Tehran 1344 *Sh.*/1965, 4, credits him with a total of 400 books, whereas Ghiyāth al-Dīn lists the titles of 32 otherwise unrecorded writings but mentions none of the works generally attributed to him (see e.g. Brockelmann, S II, 803). Among the latter, the Persian *Risālat al-Miṣbāḥ* has been published in 1983 with a useful introduction by N.M. Hirawī as *al-Miṣbāḥ fi ʾl-taṣawwuf* (Tehran 1362/1403).

SAᶜD AL-DĪN KĀSHGHARĪ (d. 860/1456), *shaykh* of the Nakshbandī Ṣūfī order in Harāt, best known as the preceptor of the poet and mystic ᶜAbd al-Raḥmān Djāmī (d. 898/1492 [*q.v.*]).

Kāshgharī's piety first showed itself, it is said, during the journeys on which as a child he used to accompany his father, a merchant of Kāshghar with *sayyid* ancestry. Thus when he was twelve years of age, he wept uncontrollably after listening to his father and his associates passionately haggling over the price of some goods for a whole morning. After completing the *madrasa* curriculum (the sources do not tell us where), Kāshgharī conceived an inclination to the Ṣūfī path, and travelling to Bukhārā he joined the circle of Niẓām al-Dīn Khāmūsh, initiatic heir to Bahāʾ al-Dīn Nakshband (d. 791/1391) by one intermediary, ᶜAlāʾ al-Dīn ᶜAṭṭār (d. 802/1400). Several years later, Kāshgharī set out from Bukhārā on the *ḥadjdj*, but as his master had predicted he was unable to proceed beyond Khurāsān. In Harāt, he made the acquaintance of Shaykh Zayn al-Dīn Khʷāfī (d. 838/1435) who appears to have attempted to recruit him into his own following, as well as Sayyid Ḳāsim-i Tabrīzī; Shaykh Bahāʾ al-Dīn ᶜUmar; and Mawlānā Abū Yazīd Pūrānī. It may have been on this journey that Kāshgharī decided to settle in Harāt; the episodic and staccato nature of the sources leave the matter unclear. It was, in any event, in Harāt that Kāshgharī spent the most influential years of his life, making the city the third chief centre of the Nakshbandiyya after Bukhārā and Samarḳand.

Despite possessing considerable wealth (inherited, perhaps, from his merchant father), Kāshgharī took up residence in the Madrasa-yi Ghiyāthiyya in Harāt, near the Masdjid-i Djāmiᶜ, and it was in that mosque, which he compared in its sanctity to the Masdjid al-Ḥarām in Mecca, that he met and discoursed with his devotees. These came to include many members of the cultural and literary élite of Herat, above all Djāmī, who was moved to become Kāshgharī's disciple by a dream in which the *shaykh* liberated him from the pangs of a profane love. Djāmī expressed his devotion to Kāshgharī not only in the pages he allotted him in *Nafaḥāt al-uns* (ed. Maḥmūd ᶜĀbidī, Tehran 1370 *sh.*/1991, 408-10) but also through a number of references to him in his *mathnawīs* (see e.g. *Silsilat al-dhahab*, in *Haft Awrang*, ed. Murtaḍā Mudarris Gīlānī, 3rd ed., Tehran 1361 *sh.*/1982, 164-6) and, most strikingly, the moving *tarkīb-band* in which he eulogised him (*Kullīyyāt*, ed. Shams Brelwī, repr. Tehran 1362 *sh.*/1983, 526-9). Kāshgharī's circle was, however, by no means exclusively aristocratic in its composition; it also included artisans such as Mīr Rangraz "the dyer".

Like his master Khāmūsh, Kāshgharī is said to have been in a near-constant state of ecstatic rapture (*ghalaba*); this would frequently overtake him while he was discoursing and cause him to bow his head and fall silent, creating in the uninitiated the impression that he had fallen asleep. He is also reported—again like his master—to have had the ability to manifest the divine attribute of wrath (*ḳahr*); however, he succeeded in containing this dangerous power. He does not appear to have left any writings, but sixteen of his sayings and discourses are recorded in Fakhr al-Dīn Wāᶜiẓ Kāshifī's *Rashaḥāt ᶜayn al-ḥayāt* (ed. Muᶜīniyān, i, 210-18). Some of these, aphoristic in nature, are reminiscent of utterances by Khʷādja ᶜAbd Allāh Anṣārī (d. 481/1089 [*q.v.*]), which may not be fortuitous, given Kāshgharī's acknowledgement of Anṣārī as the pre-eminent saint of Harāt. From other pronouncements of Kāshgharī may be deduced a familiarity with the concepts and terminology of Ibn ᶜArabī, whom Kāshgharī greatly admired, like other early Nakshbandīs (Hamid Algar, *Reflections of Ibn ᶜArabî in early Naqshbandî tradition*, in *Journal of the Muhyiddin Ibn ᶜArabi Society*, x [1991], 54-5).

Kāshgharī died while performing the midday prayer on 7 Djumādā I 860/12 May 1456, and was buried in the Khiyābān suburb of Harāt. The site soon acquired great sanctity, and several of his disciples, including Djāmī, were buried nearby. His tomb was nonetheless neglected during the disorders that came to mark the history of Harāt, and ultimately the headstone itself disappeared. The tomb was restored, and the headstone replaced, by Aḥmad Shah Durrānī [*q.v.*], who also constructed an *īwān* nearby. This *īwān* was rebuilt and provided with two minarets in the late 1950s by Muḥammad Ẓāhir Shāh, the last king of Afghānistān.

One of the devotees of Kāshgharī is said to have been told by the Prophet in a dream that Kāshgharī had advanced no fewer than thirty-two people to the rank of saintship (*wilāyat*), but none of these appears to have been clearly nominated as his successor. Djāmī was manifestly the most prominent of Kāshgharī's disciples, but being temperamentally averse to assuming the burdens of preceptorship, he encouraged the followers of Kāshgharī to gather, after his death, around Mawlānā Shams al-Dīn Muḥammad Rūdjī (d. 904-1499). Important, too, among the disciples of Kāshgharī was Mawlānā ᶜAlāʾ al-Dīn Maktabdār (d. 892/1487), several of whose devotees carried the Nakshbandiyya to places such as Ḳazwīn and Tabrīz in western Persia. In general, however, the initiatic lines descending from Kāshgharī faded out after two or three generations; it was his great contemporary, ᶜUbayd Allāh Aḥrār [*q.v.* in Suppl.] of Samarḳand, who proved more significant for the long-term transmission of the Nakshbandī order.

(HAMID ALGAR)

SAᶜD AL-DĪN KÖPEK b. Muḥammad, an im-

portant court official of two Saldjūḳ sultans of Rūm, Kayḳubād I and Kaykhusraw II. Köpek's place and date of birth are unknown. He is first mentioned as a *tardjumān* (Ibn Bībī, 146). Late in Kayḳubād's reign, Köpek had risen to become *amīr-i shikār* (master of the hunt) and *miᶜmār* (minister of works), entrusted with overseeing the construction of Kayḳubād's new palace at Ḳubādābād [*q.v.*] (*ibid.*, 147). Köpek himself erected in 633/1235 a large caravanserai, known as the Zazadin or Sadeddin Han, between Konya and Aksaray. Two extant inscriptions on its portals record the name *Köpek (k.w.b.k.) b. Muḥammad.*

After Kayḳubād's death in 634/1237, Köpek wielded considerable influence over his successor, Kaykhusraw II. Murders, aimed at consolidating Kaykhusraw's position, then followed. Köpek suddenly seized a Khwārazmian *amīr*, Kīrkhān, who died in prison (Bar Hebraeus, 403; Ibn Bībī, 201). Köpek then organised the murders of Kaykhusraw's two half-brothers and their mother (Ibn Bībī, 204). In 635/1238 Kaykhusraw sent Köpek to occupy Sumaysāṭ on his behalf. Returning home, Köpek killed off the last of the "old guard" state officials, Kaymarī and Kāmyār, who, like him, had served Kayḳubād (Ibn Bībī, 208). In 637/1240, Kaykhusraw eliminated Köpek, because he was a dangerous rival, who had "destroyed the pillars of the state, one by one" (*ibid.*). According to Ibn Bībī, who remains the principal, and often the sole source, for these events, the malevolent Köpek remained true to form, even in death: one of the spectators, assembled to gloat over Köpek's dismembered body, suspended in a cage from a gallows, was killed by the cage falling on him (*ibid.*, 209).

The blame for the murders in Kaykhusraw's reign could, of course, be apportioned differently. After all, Ibn Bībī, the court chronicler of the Rūm Saldjūḳs, is keen to exonerate Kaykhusraw from responsibility for all the deaths, save Köpek's.

(CAROLE HILLENBRAND)

SAᶜD AL-DĪN TAFTĀZĀNĪ [see AL-TAFTĀZĀNĪ].

SAᶜD WA-NAḤS (A.), literally, "the fortunate and the unfortunate".

These concepts are based on the influence exerted by the planets and the signs of the Zodiac on earthly events. The astrologers describe the stars as being either *saᶜd* or *naḥs*. Thus Jupiter, Venus and the Moon are said to be *saᶜd*, Saturn is *naḥs* and the Sun and Mercury are at times called one or the other. But this can vary as a function of their positions in the ecliptic and of their conjunctions (cf. Abū Maslama Muḥammad al-Madjrīṭī, *Ghāyat al-ḥakīm*, ed. H. Ritter, Leipzig 1933, 198 ff. = M. Plessner, *Picatrix*, London 1962, 209 ff.; *L'agriculture nabatéenne*, i, Damascus 1993, 10-12 et *passim*).

Starting out from these basic indications, the astrologers [see MUNADJDJIM] divided their art into two branches: natural astrology, consisting in the observation of the fortunate or unfortunate influence of the stars on the natural elements, whence arises meteorological divination [see ANWĀᵓ and MALĀḤIM]; and judicial or apotelesmatic divination, consisting in the observation of the influence of the stars on human destiny, whence arise genethlialogy (*mawālīd*) or the art of drawing omens from the position of the stars at a person's birth [see NUDJŪM, AḤKĀM AL-, 1.] and hemerology and menology [see IKHTIYĀRĀT], which consist in establishing the calendar of what is fortunate and what is unfortunate [see NUDJŪM, AḤKĀM AL-, 2.].

One should note that the name *saᶜd*, followed by a noun, is given to some stars and constellations (cf. P. Kunitzsch, *Über eine anwāᵓ-Tradition mit bisher unbekannten Sternnamen*, in *Beiträge zur Lexicographie des Klassischen Arabisch, Nr. 4*, in *Abh. der Bayerischen Akad. der Wiss.*, phil.-hist. Kl. (Munich 1983), Heft 5, 57; see this same author's arts. MANĀZIL and NUDJŪM]. This designation does not seem to have borne any divinatory significance.

Bibliography: Given in the article. On Saᶜd, the idol of the Banū Milkān, and Saᶜdān (τύχαι), see T. Fahd, *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, 147-50. (T. FAHD)

ṢAᶜDA, a town approximately 240 km/150 miles to the north of the chief town of the Yemen, Ṣanᶜāᵓ [*q.v.*], situated on the southern edge of the Ṣaᶜda plain, and the administrative capital of the province (*muḥāfaẓa*) of the same name. The town is about 1,800 m/5,904 ft. above sea level and in the 1986 census in the Yemen had a reported population of 24,245 persons. The inhabitants of the province numbered 323,110.

Although al-Hamdānī, 67, informs us that the town was called Djumāᶜ in pre-Islamic times, certain Sabaic inscriptions mention *hgrn ṢᶜDTm*, "the town Ṣaᶜda", together with reference to the predominant tribe of the area, Khawlān [*q.v.*] (Ja 658/11-13, A. Jamme, *Sabaean inscriptions from Maḥram Bilqīs*, Baltimore 1962, 163; Sharaf al-Dīn, 31/14-5; A.G. Lundin, *Sabeyskiy činovnik i diplomat III v.n.e*, in *Palestinskiy Sbornik*, xxv/88 (1974), 97; Ja 2109/7, A.F.L. Beeston, *Corpus des inscriptions et antiquités sud-arabes*, ii/1, Louvain 1986, 49-50). Al-Hamdānī also tells the anecdote of the origin of the name Ṣaᶜda. A weary Ḥidjāzī stopped for the night in the town and lay on his back contemplating the decorated ceiling which pleased him. Twice he exclaimed, "[Someone] has indeed raised it up (*ṣaᶜᶜada-hu, ṣaᶜᶜada-hu*)!" The town's fame for the manufacture of arrowheads is also mentioned by the 4th/10th century Yemeni scholar, who refers specifically to *niṣāl ṣaᶜdiyya/ṣāᶜidiyya*. Iron implements, particularly agricultural, of all kinds seem also to have been made in the town.

The 7th/13th century traveller to the Arabian Peninsula from the east, Ibn al-Mudjāwir [*q.v.*], reports in his *Taᵓrīkh al-Mustabṣir*, ed. O. Löfgren, Leiden 1951-4, 202-6, that the route north to Ṣaᶜda from Ṣanᶜāᵓ, originally an important trade and later pilgrim route, was 20 parasangs (on p. 232, the return journey is 19). The town was built in the pre-Islamic era by Shem, the son of Noah, he adds. The old town, however, did not survive and in the time of al-Hādī ilā 'l-Ḥaḳḳ, the first Zaydī imām (d. 298/911) a wealthy merchant who would take no expenses built a mosque, perhaps the mosque bearing al-Hādī's name still found in Ṣaᶜda to this day. A whole new town followed with markets, residences etc. Ibn al-Mudjāwir then goes on to describe the wall (*darb*), towers (*burūdj*) and gates, and the 11th/16th century Istanbul ms. contains a plan of the town which is reproduced in

Löfgren's edition, at p. 205. There were four towers: Darb al-ʿAtīḳ (E), Darb al-Ḳāḍī (N), Darb al-Ghuzz (?) (W), built in the time of the Ayyūbid Ṭughtakīn b. Ayyūb (d. 571/1175) and Darb al-Ḳāḍī Ibn Zaydān (S). The gates were Bāb ʿAlī b. Ḳāsim, Bāb Darb al-Ghuzz (?), Bāb Darb al-Ḳāḍī Ibn Zaydān, Bāb Ḥūth, presumably also a southern gate leading to the town of Ḥūth between Ṣaʿda and Ṣanʿāʾ, and Bāb Darb al-Imām. The latter tower was built, according to Ibn al-Mudjāwir, by the Zaydī imām al-Manṣūr bi'llāh ʿAbd Allāh b. Ḥamza (d. 613/1216). The town flourished, watered by rivers and springs, thus producing wheat and barley and abundant trees. Ibn al-Mudjāwir's final comment concerns the clothing of the local inhabitants; it is made of silk and cotton, he says, since the area is so hot.

The geographer Yāḳūt (d. 627/1229) refers (ed. Beirut, iii, 406) to Ṣaʿda as a province (*mikhlāf* [*q.v.*]), 60 parasangs from Ṣanʿāʾ. He continues that the town is a commercial centre, fertile, and in particular a centre of tanning, the latter facilitated by the abundance of acacia (*ḳaraẓ, Acacia Ehrenbergiana* Hayne) in the area, a plant used in the tanning process.

The town appears to have had very little significance in Islamic times prior to the arrival there in 284/897 of Yaḥyā b. al-Ḥusayn, the future first Zaydī imām al-Hādī ilā 'l-Ḥaḳḳ. However, isolated references are found in the chronicles prior to that date, e.g. the first mention of the town in Yaḥyā b. al-Ḥusayn's Zaydī chronicle, *Ghāyat al-amānī fī akhbār al-ḳuṭr al-Yamānī*, ed. Saʿīd ʿAbd al-Fattāḥ ʿĀshūr, Cairo 1968, 125, is under the year 130/748. It seems that the Ziyādids (203-*ca.* 409/818-*ca.* 1018), the Yuʿfirids (232-387/847-997) and the Ṣulayḥids (439-532/1047-1138) were all involved in the area, though never for lengthy periods. After 284/897, however, the town assumes major historical importance as the spiritual, and very frequently the political, capital of the Zaydī imāmate in the Yemen. It remains the spiritual capital to this day. When al-Hādī died in 298/910, he was buried in the mosque in Ṣaʿda which bore his name, as were two of his sons after him, al-Murtaḍā Muḥammad (d. 310/922) and al-Nāṣir Aḥmad (d. 324/935). The tomb and the mosque became particularly sacred among the Zaydīs.

Nowadays, one can still see the mud wall going back to the days of the Imām al-Mutawakkil Yaḥyā Sharaf al-Dīn (912-65/1506-57) and the five gates: Bāb al-Yaman (S), Bāb Nadjrān (N), Bāb al-Manṣūra, Bāb Djuʿrān and Bāb al-Salām. Caravanserais (sing. *samsara*), baths and irrigation works abound, and on a large tell in the town the citadel, called al-Ḳashla, is situated, built at the beginning of the second Ottoman occupation of the Yemen in the time of the Imām al-Manṣūr in the mid-13th/19th century. The major tribe in the area is Khawlān b. ʿAmr b. al-Ḥāf b. Ḳuḍāʿa and the province is divided into five sub-districts (sing. *nāḥiya*): Ṣuḥār, Djumāʿa, Khawlān, Rāziḥ (all of Khawlān b. ʿAmr) and Hamdān.

From the year 294/906 Ṣaʿda became the most important Zaydī mint-town in the Yemen.

(G.R. Smith)

ṢADĀ (a.), a term with many meanings, including those of thirst, voice, echo, and screech-owl in the sense of *hāma*, which denotes a bird charged with taking shape in the skull of someone who has been murdered, etc. (see the lexica).

It is this latter sense which interests us here. In effect, the pre-Islamic Arabs believed that after death, above all after a violent death, out of the blood of the skull (*hāma*) and parts of the body there arose a bird called *hāma* (or *hām*, the male owl; see Yāḳūt, *Buldān*, iii, 376), which returned to the tomb of the dead man until vengeance was exacted. This idea was not peculiar to the Arabs; according to F. Cumont (*Lux perpetua*, Paris 1949, 293), "the idea was in ancient times widespread amongst all the peoples of the Mediterranean basin that the essence or the essential being which gave life to a man escaped from the corpse in the form of a bird, above all, in the form of a bird of prey" (other refs. in T. Fahd, *Le panthéon de l'Arabie Centrale*, 3 n. 1).

Allusions to this belief are frequent in ancient poetry. One may cite, e.g., Ṭarafa b. al-ʿAbd, *Muʿallaḳa*, v. 61; ʿAbd Allāh b. Zayd al-Thaʿlabī of Ghaṭafān, in al-Buḥturī, *Ḥamāsa*, iii, 2, no. 93, 585; Abū Duʾād al-Iyādī, in *Aghānī*, xvi, 39; Ḳays b. ʿAṣim, in Ibn al-Athīr, i, 289-90; and Dhu 'l-Iṣbaʿ al-ʿAdwānī, in al-Nuwayrī, *Nihāya*, Cairo 1924, iii, 121. In general, these poets reproach the family of the murdered person for delaying avenging him, thus delaying the appeasing of his soul. Other poets refer to the echo (*ṣadā*) of a barking announcing a fire implying hospitality [see nār], as in the case of Murra b. Maḥkān, cited by al-Tibrīzī, in *Ḥamāsa*, 690; or else the echo indicating the way to someone lost, as in the case of ʿUtayba b. Buḥayr al-Māzinī and Abū Muḳbil, cited in *ibid.*, 685.

As for the historical and lexicographical sources, they reproduce the same notion set forth above, with slight variants (see esp. al-Shahrastānī, *Milal*, in the margins of Ibn Ḥazm, iii, 221; Masʿūdī, *Murūdj*, iii, 310-13 = §§ 1191-5; *Aghānī*, xvi, 96; al-Tibrīzī, in *Ḥamāsa*, 454; al-Damīrī, *Ḥayawān*, ii, 440, citing Mālik b. Anas).

The Prophet denied the existence of three things which formed part of the superstitions of the Djāhiliyya, saying, *lā ʿadwā wa-lā hāma wa-lā ṣafar* "there is no contagion, no death owl and no intestinal worms". People subsequently personified these three things and made them responsible, e.g., for contagion with a camel in contact with another there arises leprosy, or digestive and nervous disorders caused by a tapeworm. It is God, he affirms, who afflicts mankind by means of these ills (see *Concordance*, s.vv. al-Tibrīzī, in *Ḥamāsa*, 454; al-Shahrastānī, *loc. cit.*, al-Masʿūdī, *loc. cit.*; *LʿA*, s.vv.; al-Nuwayrī, *Nihāya*, ii, 119).

(T. Fahd)

ṢADAF (A.) (sing. *ṣadafa*) denotes two classes of molluscs: 1. Mussels (*Lamellibranchiata*); 2. Snails (*Gastropoda*), both including the mother-of-pearl. Pearls [see AL-DURR; LUʾLUʾ], originating from the excrescences in the interior of the pearl mussel (*ṣadaf al-durr, al-ṣadaf al-luʾluʾī*), are of great economic importance. To the edible mussels belong the oysters (*aṣṭūrū* < ὄστρειον) and, as a popular foodstuff, the common mussel, *Mytilus edulis L., Gr.* μύακες, which, from the ancient pharmacology of Dioscurides, came into the Arabic pharmacopoeias as *miyāḳis*. The same applies to the flat mussel, *Tellina planata*, Gr. τελλῖναι, Ar. *dillīnas*. The juice of mussels known as χῆμαι, Ar. *khīmī* (probably *Chana Lazarus* L.) is said to get the digestion going.

Among the snails, the most important are several varieties of the Murex species of the family of the Purpura (*ṣadaf furfūrā* or *ṣadaf al-firfīr*, Gr. πορφύρα). The hypobranchial gland, situated in their mantle cavity, secretes the costly purple dye. Ibn Djuldjul relates that this snail is found in the Algarve [see GHARB AL-ANDALUS] and near Algeciras [see AL-DJAZĪRA AL-KHAḌRĀʾ], and that only the Byzantine Emperor is entitled to wear purple. The horny shells of various water-snails, among which the Gr. ὄνυξ, Ar. *ūniḳs*, are valued because of their aroma; with regard to their claw-shaped feet, they are also called *aẓfār al-ṭīb* "aromatic claws". The interior of the Purpura and of the trumpet-snail (*Tritonium nodiferum* L., Gr. κήρυκες, Ar. *ṣadaf ḳīrūkis*), known as Gr. κιόνια, Ar. *kiyūniyā*, "columella", used to be burned for its etching power. The general term for snail in Arabic is in general *ḥalazūn*; in addition to this, the κοχλίας of Dioscurides was taken over as *kukhliyās* and explained by way of *ḳawḳan*, the usual term in Hispano-Arabic. Referring to the *K. al-Riḥla* of Ibn al-Rūmiyya, Ibn al-Bayṭār, *Djāmiʿ*, iii, 82, mentions a *ṣadaf al-bawāsīr* which, according to its name, was appropriate for the treatment of hemorrhoids; it was indigenous to the Red Sea coast. Ibn Hubal, *Mukhtārāt*, Ḥaydarābād 1396, 166, mentions a Babylonian and a Red Sea snail (*ṣadaf bābilī/ḳulzumī*).

In pharmaco-zoology, all varieties of mussels and snails are grouped together as *Limnaces*. Since Dioscurides, the burnt shells of various land and sea snails, mussels and oysters have been in use. Burned with salt in a pan, the shells proved to be a good dentifrice. With the ashes, ulcers could be cleansed and the healing of fresh wounds be quickened. The meat of the trumpet snail is tasty and digestible. Common mussels, when burned and mixed with honey, soften swollen eye-lids, remove obscuration of the pupils, etc.

Finally, the mother-of-pearl, the innermost layer of the shell of mussels and snails, acquires on the inside, through incident light, the well-known soft, iridescent colour, which has made it suitable and coveted for inlaid work and for making jewellery. The mother-of-pearl is called, *ʿirḳ (ʿurūḳ) al-luʾluʾ* "the veins of the pearl". On this, al-Dimashḳī, *Nukhbat al-dahr*, ed. Mehren 78, 6-8, tr. 90, remarks: "From the layers of the pearl mussel are won plates (*ṣafāʾiḥ*), which are similar to pearls and are called *ʿurūḳ al-luʾluʾ*. Each pearl is said to contain one hundred different layers, veined on two sides, which have stimulated poets, mystics and philosophers to use them as images".

Bibliography: The Greek names, mentioned in the article, are all found in Dioscurides, *De materia medica*, ed. M. Wellmann, Lib. II, chs. 4-9 (pp. 122-5); their Arabic renderings are accordingly found in the translation by Stephanos-Ḥunayn: *La "Materia médica" de Dioscórides*, ii, ed. Dubler and Terés, 1952-7, 128-31, and in Ibn al-Bayṭār, *Djāmiʿ*, iii, 81-2, tr. Leclerc, no. 1393; A. Dietrich, *Dioscurides triumphans*, Göttingen 1988, ii, 198-202; idem, *Die Dioscurides-Erklärung des Ibn al-Bayṭār*, Göttingen 1991, 92-4. For pearls in general, see AL-DURR and LUʾLUʾ.
(A. DIETRICH)

AL-ṢADAFĪ, ABŪ ʿALĪ ḤUSAYN B. MUḤAMMAD b. Fīrruh (from the Romance word *fiero*, i.e. *al-ḥadīd*) b. Muḥammad b. Ḥayyūn b. Sukkara/Sukkaruh al-Ṣadafī al-Saraḳusṭī, known commonly as Abū ʿAlī al-Ṣadafī or Ibn Sukkara, Muslim Spanish scholar and traditionist.

According to ʿIyāḍ, he was born in Saragossa around the year 454/1062. He studied in that town, among others, with Abu 'l-Walīd al-Bādjī [*q.v.*], in Valencia with al-ʿUdhrī and in Almería with Ibn Saʿdūn al-Ḳarawī and Ibn al-Murābiṭ. He travelled to the East on 1 Muḥarram 481/1088, performing the pilgrimage and searching for knowledge in Mahdiyya, Cairo, Mecca, Baṣra, Anbār, Wāsiṭ, Baghdād (where his stay lasted five years), Damascus (Ibn ʿAsākir mentioned him in his *Taʾrīkh Dimashḳ* because of his visit to the town), Alexandria and Tinnīs. Among his many teachers during his *riḥla*, two were Andalusians, Abū ʿAbd Allāh al-Ḥumaydī and al-Ṭurṭūshī [*q.v.*], as well as Ḥusayn b. ʿAlī al-Ṭabarī, Abū Yaʿlā al-Mālikī, Abu 'l-ʿAbbās al-Djurdjānī, Abu 'l-Faḍl Aḥmad b. al-Ḥasan b. Khayrūn, Abu 'l-Ṭāhir Aḥmad b. ʿAlī b. ʿUbayd Allāh b. Siwār (author of the *Kitāb al-Mustanīr fi 'l-ḳirāʾāt*), al-Mubārak b. ʿAbd al-Djabbār al-Ṣayrafī, Ṭirād b. Muḥammad al-Zaynabī and Aḥmad b. Yaḥyā b. al-Djārūd. With the Shāfiʿī Abū Bakr al-Shāshī he studied his *al-Taʿlīḳa al-kubrā fī masāʾil al-khilāf*. In Cairo, al-Ṣadafī obtained the *idjāza* from Abū Isḥāḳ al-Ḥabbāl, the most reputed traditionist of the time who had been forbidden to teach by the Fāṭimids. In Ṣafar 490/1096, al-Ṣadafī arrived in al-Andalus, settling in Murcia, where he taught in the *djāmiʿ* mosque, attracting students from all over the Peninsula. Although he was considered a competent expert in *ḳirāʾāt*, he excelled especially in the science of *ḥadīth*, not only because of the quality of his knowledge but also because of his "high" *isnāds* (i.e. the fact that his chains of transmission had very few links). His powerful memory apparently allowed him to learn by heart entire compilations of *ḥadīth*, remembering both *matn* and *isnād*. He himself copied some of those compilations, like al-Bukhārī's and Muslim's *Ṣaḥīḥ* which, together with al-Tirmidhī's *Muṣannaf*, constituted the basis of his teachings. It is said that the major part of the copies of al-Bukhārī's work in the Maghrib are either in the *riwāya* of al-Bādjī (from Abū Dharr), or in the *riwāya* of Ibn Sukkara (transmitted by Ibn Saʿāda). Al-Ṣadafī's own production was limited. Apart from a *Fahrasa*, it consists mainly of *ḥadīth* works: *Djuzʾ min ḥadīthihi ʿan shuyūkhihi al-baghdādiyyīn, Musalsalāt, Subāʿiyyāt* (collected by Abu 'l-Rabīʿ b. Sālim). Pons and al-Kattānī credit him with writing a work on the *shuyūkh* of his teacher Ibn al-Djārūd. But al-Ṣadafī was mostly a transmitter, and as such he plays an important role in ʿIyāḍ's *Ghunya* and in Ibn Khayr's *Fahrasa*. Apart from some works in the field of Ḳurʾānic sciences and ascetism, he transmitted mainly *ḥadīth* works by authors like Ibn Khayrūn, Abu 'l-Fawāris Ṭirād, Abū Bakr al-Barḳānī, Abū Nuʿaym, al-Ḥasan b. Sufyān al-Nasawī al-Shaybānī, Ibn Shāhīn, ʿAbd al-Ghanī al-Azdī, Abū ʿUbayd, al-Ḥasan b. ʿArafa, Abu 'l-Ḥusayn Ibn Bashrān, al-Ḥākim, al-Dāraḳuṭnī, al-Khaṭīb al-Baghdādī, Ibn al-Djārūd and Abū Bakr b. al-Anbārī. Many of these transmissions were of works on *ʿilm al-ridjāl* by authors like Ibn ʿAdī,

al-Bu**kh**ārī, al-Nasāʾī, al-Kalābā**dh**ī, Muslim, Abū Bakr al-Barḳānī and al-Bā**dj**ī, as well as *ḥadīth* collections. He is remembered as having recited some verses from Muḥammad b. ʿAlī al-Ṣūrī against those who attacked traditionists and *ʿilm al-ḥadīth*. As a Mālikī, he also transmitted *fiḳh* works of this school and some *fahāris* like those of Ibn **Kh**ayrūn, al-Bā**dj**ī, Ibn Saʿdūn and Ibn al-Ṭuyūrī. Al-Ṣadafī was one of the central figures of his generation in the transmission of *ʿilm*, as has been shown by Urvoy. Among his Andalusian pupils there were members of the Banū Saʿāda, his relatives by marriage (he was married to a daughter of Abū ʿImrān Mūsā b. Saʿāda) who inherited his books and documents. Al-Ṣadafī gave the *i**dj**āza* to Ibn Ba**sh**kuwāl, Ibn ʿAṭiyya and Abu 'l-Ṭāhir al-Silafī. Another pupil of his was Ḳāḍī ʿIyāḍ [*q.v.*], who studied with him in Ceuta and who wrote al-Ṣadafī's *Ma**sh**yakha*. Another *Muʿ**dj**am **sh**uyū**kh** al-Ṣadafī* was written by Ibn al-Dabbā**gh** al-Undī (d. 543/1148 or 546/1151). For his part, Ibn al-Abbār wrote the *Muʿ**dj**am* of al-Ṣadafī's pupils, edited by F. Codera.

Al-Ṣadafī's career as *ḳāḍī* in Murcia was short-lived on his own choice. Although both the people and the Almoravid ruler are depicted as desiring him to be judge and forcing him to accept the post in the year 505/1111, he did so reluctantly and soon decided to retire. His resignation was not accepted and he went into hiding in Almería, finally being allowed to devote himself to the propagation of *ʿilm* (see A.J. Wensinck, *The refused dignity*, in *A volume of oriental studies presented to E.G. Browne*, Cambridge 1922, 491 ff., on the recurrent motif of the scholars' refusal to be judges). The letter written by al-Ṣadafī to ʿAlī b. Yūsuf b. Tā**sh**ufīn explaining his refusal to be *ḳāḍī* has been preserved by Yāḳūt. He died a martyr in the battle of Cutanda in the frontier of al-Andalus in the year 514/1120, fighting as a volunteer against the Christians (see Noth's and Urvoy's articles on the meaning of the participation of scholars in *djihād*).

ṢADĀḲ, the equivalent of *mahr* [*q.v.*], dowry. Lane gives *ṣadāḳ*, with the alternative *ṣidāḳ* (noting that the former is more common but the latter more "chaste"), plurals *ṣuduḳ*, *ṣudḳ*, and *aṣdiḳa* as "the *mahr* of a woman". Amongst the other alternative forms given by Lane the most commonly found is *ṣaduḳa* (pl. *ṣaduḳāt*) and the form IV verb of the same root, *aṣdaḳa*, means to name or give a *ṣadāḳ* upon taking a woman in marriage. Al-**Dj**azīrī says that it is derived from *ṣidḳ* truth, honesty, sincerity as it is an indication of the husband's desire to marry by the giving of money; thus the literal meaning is the giving of money which indicates the desire to contract marriage. *Ṣadāḳ* is not found in this form in the Ḳurʾan, but only *ṣaduḳāt* (pl. of *ṣaduḳa*) in sūra IV, 4: "Give the women their *ṣaduḳāt* as a gift". Both *ṣadāḳ* and *ṣaduḳa* appear in *ḥadīth*. "**Dj**ābir says: the Prophet of God said: 'He who gives his wife in *ṣadāḳ* a handful of *sawīḳ* [*q.v.*] or dates shall be permitted' (i.e. the marriage shall be valid)." In the *Muwaṭṭaʾ*, Mālik uses *ṣadāḳ* rather than any of the synonyms.

ṢADAḲA (A.) has among its meanings that of voluntary alms, often referred to in Islamic literature as *ṣadaḳat al-taṭawwuʿ* "alms of spontaneity", or *ṣadaḳat al-nafl* "alms of supererogation", in distinction to obligatory alms, frequently also termed *ṣadaḳa*, but more commonly known as *zakāt* [*q.v.*]. Both *ṣadaḳa* and *zakāt* are considered by Muslim writers to be of purely Arabic derivation; alms being called *ṣadaḳa* as indicating the sincerity (*ṣidḳ*) of the almgiver's religious belief (e.g. Ibn al-ʿArabi, *Aḥkām al-Ḳurʾān*, ed. al-Bi**dj**āwī, Cairo 1387/1967, ii, 946-7; al-**Sh**irbīnī, *al-Iḳnāʿ*, Cairo i, 212; M. Hamidullah, *Introduction to Islam*, Paris 1388/1968, 68; Ibn ʿArabī, *al-Futūḥāt al-makkiyya*, Būlāk, repr. Beirut 1968, i, 548, followed by al-Zabīdī, *Itḥāf al-sāda al-muttaḳīn*, Cairo, iv, 163, derives it from *ṣadḳ*, as being hard on the soul), and *zakāt* with reference to the increase (*yazkū*) or purification (*zakī*) of the property from which they are given (e.g. Ibn Baṭṭāl al-Rakbī, *al-Naẓm al-mustaʿ**dh**ab*, on the margin of Abū Isḥāḳ al-**Sh**īrāzī, *al-Muha**dh**dhab*, Cairo, i, 140). Modern critical scholarship, however, regards both words as

borrowings, probably directly from Jewish usage (A. Jeffery, *The foreign vocabulary of the Qur'ān*, Baroda 1938, 153, 194). *Ṣadaḳa* reflects the Hebrew *ṣ'dāḳā*, which from its original meaning of righteousness developed the sense of alms given to the poor and is commonly used in this sense in Apocryphal and Rabbinic literature, if not already in the Hebrew Bible (cf. F. Rosenthal, *Sedaka, charity*, in *Hebrew Union College Annual*, xxiii/1 [1950-1], 411-414). *Zakāt* is derived from the Jewish Aramaic *zāḵhūthā*, not attested in classical Jewish sources in the sense of alms (Th. Nöldeke, *Neue Beiträge zur semitischen Sprachwissenschaft*, Strassburg 1910, 25, but see J. Horovitz, *Jewish proper names and derivatives in the Koran*, in *HUCA*, ii [1925], repr. Hildesheim 1964, 206 [62]), but which may have acquired this meaning through its common use as the Targumic rendering of *ṣ'daḳa* (H.J. Kasovsky, *Oṣar leshōn targūm Onkelos* (*Concordance*), Jerusalem 1933-40, revised ed. 1986, i, 156) in Biblical passages understood by post-Biblical Jews to refer to alms, an evolution that would parallel that of the Greek *eleēmosynē* (H. Balz and Schneider (eds.), *Exegetical dictionary of the New Testament*, Grand Rapids Mich. 1990, i, 428-9; but cf. G. Levi Della Vida, in *RSO*, iv/4 [1911-12], 1067-9). Modern Muslims have tended to find the claim of borrowing unconvincing (e.g. Yūsuf al-Ḳarḍāwī, *Fiḳh al-zakāt*, Beirut 1397/1977, i, 38-9 referring to *EI*¹). Borrowed in turn from Muslims, *ṣadaḳa* and its derivatives are found in the religious writings of Jews and Christians under Islam (e.g. Baḵhya b. Paḳūdā, *al-Hidāya ilā farā'iḍ al-ḳulūb*, ed. Yahuda, Leiden 1912, 211 (*al-ṣadaḳa wa 'l-zakāt*); Severus b. al-Muḳaffaʿ, *Miṣbāḥ al-ʿaḳl*, ed. Ebied and Young, Louvain 1975, 19). *Ṣadaḳa* is found as a male personal name for Muslims, starting from the second generation (Ibn Ḥadjar al-ʿAsḳalānī, *Tahdhīb al-tahdhīb*, iv, 414-9; A. Schimmel, *Islamic names*, Edinburgh 1989, 41; Brockelmann, S III, 765 (Ṣadaḳat Allāh)), and Jews (S.D. Goitein, *A Mediterranean society*, Berkeley 1967-93, ii, 576 n. 21, vi, 103-4; M. Steinschneider, *Die arabische Literatur der Juden*, Frankfurt 1902, 329, 331 (Samaritans)) and more recently as a Christian surname (G. Graf, *Geschichte der christlichen arabischen Literatur*, The Vatican, v, 138).

1. Ṣadaḳa *in the Ḳur'ān*. *Ṣadaḳa* and its related verbal forms (*taṣaddaḳa* and the assimilated *iṣṣaddaḳa*) are used 24 times in the Ḳur'ān. All of the passages except XII, 88, stem from the Medinan period (noted by Horovitz, 212 [68]), but the appearance of the plural form in the sense of alms (not a Jewish usage), the existence of the denominative verb *taṣaddaḳa*, to give alms (cf. Rosenthal, 423), and its usage in the extended sense of relinquishing a right (II, 280, V, 45, XII, 88) suggest that the history of *ṣadaḳa* in Arabic is pre-Islamic (cf. J. Obermann, *Islamic origins*, in N.A. Faris, ed., *The Arab heritage*, Princeton 1944, 109-10), a supposition supported by *ḥadīth* which depict the giving of *ṣadaḳa* as familiar to both Arabian Jews and pagans before Islam (al-ʿAynī, *ʿUmdat al-ḳārī*, Cairo 1308, viii, 302; A.J. Wensinck, *Muhammad and the Jews of Medina*, tr. W. Behn, Freiburg im Breisgau 1978, 101). *Ṣaduḳa*, which appears in Ḳur'ān, IV, 4, in the sense of the bride's payment, more commonly known as the *ṣadāḳ* or *mahr*, is of Arabic origin (J. Wellhausen, *Die Ehe bei den Arabern*, in *NGW Gött.*, xi [1893], 434; Rosenthal, 420-1; the variant *ṣadaḳa* is not well attested (cf. Abū Ḥayyān al-Andalusī, *al-Baḥr al-muḥīṭ*, Cairo 1329, iii, 166, not recorded) and appears to be a philologist's creation (cf. Ibn Ḵhālawayh, *Mukhtaṣar fī shawādhdh al-Ḳur'ān*, ed. Bergsträsser, Leipzig 1934, 24)). In the Ḳur'ān, but not the *ḥadīth*, *zakāt*, perhaps formed to rhyme with another Aramaic borrowing, *ṣalāt*, with which it is so frequently paired in the Ḳur'ān (A. Spitaler, *Die Schreibung des Typus ṣlwt im Koran*, in *WZKN*, lvi [1960], 217)), is used only in the singular, like the Hebrew *ṣedaḳa*, and has no denominative verb corresponding to its sense of giving alms (noted by W.M. Watt and A.T. Welch, *Der Islam*, Stuttgart 1980, i, 302, but cf. on the latter point Fr. Schulthess, in *ZA*, xxvi [1912], 153, and Horovitz, 206 [62]). *Zakāt* thus appears to have a shorter history as an Arabic word than *ṣadaḳa* and a more pronounced religious colouring, for only it, not *ṣadaḳa*, is used in the Kur'ān in connection with prophets before Muhammad (Watt and Welch, i, 302).

According to Arabic lexicographers *ṣadaḳa* is broader than *zakāt* and is used in the Ḳur'ān for both voluntary and obligatory alms. It thus happens that certain of the most important Ḳur'ānic provisions concerning *zakāt* are couched in terms of *ṣadaḳa* (e.g. IX, 60). In some cases, it is regarded as doubtful whether *ṣadaḳa* is being used to refer to voluntary alms or *zakāt* or both (e.g. II, 271). A similar uncertainty extends to verses which refer to "spending" (*infāḳ*) (e.g. II, 3) and "giving" (e.g. II, 177). To complicate matters, *zakāt* is on occasion, it is claimed, used to refer to voluntary alms (e.g. Ḳur'ān V, 55, al-Bayḍāwī, *Anwār al-tanzīl*, ed. Fleischer, Leipzig 1846-8, i, 263 (given by ʿAlī while praying); Ḳur'ān, XXX, 39; al-Djazā'irī, *Ḳalā'id al-durar*, al-Nadjaf n.d., i, 284).

It has been argued that the distinction between voluntary and obligatory *ṣadaḳa* is post-Ḳur'ānic (C. Snouck Hurgronje, *La Zakât*, in *Selected works*, ed. G.H. Bousquet and J. Schacht, Leiden 1957, 150-70 [*Verspr. Geschr.*, ii, 1-58]). But verses such as II, 177, which refers both to giving one's property to beggars, among others, and to the giving of *zakāt* and LVIII, 13, which enjoins those who have failed to give *ṣadaḳa* to give *zakāt*, indicate that the Kur'an does make a distinction between voluntary alms and *zakāt*, as does IX, 79, which speaks of "believers who give alms of their own accord (*muṭṭawwiʿīn*)" (cf. Ibn al-ʿArabī, *K. al-Ḳabas fī sharḥ Muwaṭṭa' Mālik*, ed. Walad Karīm, Beirut 1992, iii, 1191). According to the Islamic sources, voluntary almsgiving, already practiced in Mecca, predates *zakāt*, which was instituted in Medina (e.g. al-Bayḍāwī, *Anwār al-tanzīl*, on VI, 141; on the date of imposition of *zakāt*, see Hurgronje, *La Zakat*, 157; cf. ʿAlī al-Ḳārī, *Mirḳāt al-mafātīḥ*, Cairo 1309, ii, 409 (*zakāt* was imposed in Mecca and regulated in detail in Medina).

The Ḳur'ānic provisions understood to refer to *ṣadaḳa* in its sense of voluntary alms touch upon themes developed throughout the Islamic tradition. God is spoken of as accepting the alms of His servants (IX, 104). The giving of alms to the poor in secret is said to be preferable to giving openly (II, 271). The proper motivation and demeanour of the almsgiver are indispensable to the religious value of the act: "O believers, do not render your alms of no account by obligation and insult, like one who expends his property for the sake of appearance before the people while not believing in God and the Last Day" (II, 264). The expiatory function of almsgiving is already found in II, 196, which institutes fasting, almsgiving, and sacrifice as atonement for the pilgrim's premature shaving of the head, and more generally in II, 271. The "verse of *ṣadaḳa*" (*āyat al-ṣadaḳa*), IX, 103, taken by most interpreters to refer to *zakāt*, is understood by some to refer to the taking of alms as expiation from certain Anṣārī penitents. The "verse of audience" (*āyat al-munādjāt, āyat al-nadjwa*), LVIII, 12, enjoins,

or at least encourages, the giving of *ṣadaḳa* before an audience with the Prophet. It is believed to have been in effect only briefly before being abrogated by LVIII, 13 (al-Bayḍāwī, *Anwār al-tanzīl*, ii, 320, cf. al-Zamakhsharī, *al-Kashshāf*, Beirut, iv, 494).

Other Ḳur'ānic verses, although they do not use the term *ṣadaḳa*, figure prominently in later discussions. Several verses (II, 177, III, 92, LXXVI, 8) stress the significance of giving from what one loves. In II, 267, believers are told to give of the "good things" (*ṭayyibāt*) that they have acquired and not to seek out the bad things (*khabīth*) that they would not themselves gladly accept, a verse said to have been revealed when usurious income, now prohibited, was being given away as *ṣadaḳa*. The bountiful reward in store for one who gives "in the cause of God" (*fī sabīl Allāh*) (II, 261, seven-hundredfold) or "to seek God's pleasure" (*ibtighā' marḍāt Allāh*) (II, 265, twofold) is contrasted with the vanity of giving "in pursuit of the life of this world" (*al-ḥayāt al-dunyā*) (III, 117). "Who is it that will make God a goodly loan" (*ḳarḍ ḥasan*), so that He will increase it many times" (II, 245; cf. Proverbs, xix, 17) is said to have been revealed with reference to the Anṣārī Abu 'l-Daḥdāḥ, who gave an orchard of 600 palm trees as *ṣadaḳa* and was rewarded with one million orchards in the hereafter. Ḳur'ān LIX, 9 praises those "who prefer over themselves, even though they be in want," a passage understood to refer to the Medinan *Anṣār* who, setting an example of self-sacrifice (*īthār*), gave so generously to the *Muhādjirūn* (al-Baghawī, *Sharḥ al-sunna*, ed. al-Arnā'ūṭ, Damascus 1390/1400, repr. Beirut 1403/1983, vi, 181; al-Bayḍāwī, *Anwār al-tanzīl*, ii, 324). In other passages, however, the Ḳur'ān urges moderation in giving (VI, 141, cf. al-Bayḍāwī, *op. cit.*, i, 312; XXV, 67).

2. Ṣadaḳa *in* Ḥadīth. The subject of *ṣadaḳa* is dealt with in many *ḥadīth* (most easily accessible in ʿAlī al-Muttaḳī al-Hindī, *Kanz al-ʿummāl*, ed. Ḥayyānī and al-Saḳḳā, Aleppo 1391/1971, vi). Although *ṣadaḳa* is sometimes used for voluntary alms in explicit contrast to *zakāt*, its use in the sense of *zakāt* (found also in papyri (G. Khan, *Selected Arabic papyri*, Oxford 1992, i, 53)) remains frequent, with the result that in the classical collections of traditions, the *ḥadīth* dealing with voluntary almsgiving are often found in the chapters on *zakāt*. Mālik's *Muwaṭṭa'*, however, already has in addition a separate section on voluntary almsgiving (in the recension of Yaḥyā b. Yaḥyā al-Maṣmūdī, ed. Muḥammad Fu'ād ʿAbd al-Bāḳī, Cairo n.d., 615-18). In the interpretation of neither the *ḥadīth* nor the Ḳur'ān was agreement reached as to which sense of *ṣadaḳa* was to be presumed as intended in the absence of further evidence.

Beyond the ambiguity occasioned by the continued use of *ṣadaḳa* for *zakāt*, there is further uncertainty in the interpretation of some traditions created by the not infrequent use of *ṣadaḳa* in the sense of permanent alms (*ṣadaḳa djāriya*), i.e. the trust or *wakf* [*q.v.*] (on this use in papyri, see R.G. Khoury, *Chrestomathie de papyrologie arabe*, Leiden 1993, 132-3 (Christian)). Some even claimed that *ṣadaḳa* was used in the *ḥadīth* in the sense of the poll tax (*djizya*) [*q.v.*], a usage others rejected as confined to the Taghlib and other Christian Arab tribes (*ʿUmdat al-ḳārī*, ix, 4-5).

The references to *ṣadaḳa* in the *ḥadīth* are often of a homiletic character, stressing the excellence of alms given under one or another circumstance, whether that of the giver, the recipient, the time and place of the giving, or the gift (cf. al-Djazā'irī, *Ḳalā'id*, i, 309). Thus when asked what *ṣadaḳa* was best, the Prophet is reported to have answered: "the *ṣadaḳa* you give when you are still healthy and tight-fisted, fearing poverty and hoping for wealth (*Sharḥ al-sunna*, vi, 172-3; al-Tibrīzī, *Mishkāt al-maṣābīḥ*, tr. J. Robson, Lahore 1975, i, 395 (cf. Ḳur'ān, LXIII, 10)). The merit of almsgiving thus lies in the degree of self-denial (*mudjāhadat al-nafs*) (*Itḥāf al-sāda*, iv, 168) a point made more explicitly in the tradition that states that the best *ṣadaḳa* is that which the person with little can manage to give (*djuhd al-muḳill*) (Wensinck, *Handbook*, 20; *Mishkāt*, i, 411 (cf. Ḳur'ān, IX, 79)). Because it is not the monetary value of what of what is given that is paramount, *ṣadaḳa* consisting of a dirham that constitutes half the almsgiver's property is more meritorious than 100,000 dirhams given by a person of great wealth (al-Nasā'ī, *Sunan*, Cairo 1383/1964, v, 44; ʿAlī al-Ḳārī, *Sharḥ ʿayn al-ʿilm*, Cairo, i, 157). Alms given to a nearer neighbour is better than that given to one more distant. Giving alms to a relative is particularly meritorious, since one earns the rewards both for *ṣadaḳa* and for cultivating family ties. The reward for *ṣadaḳa* given on Friday is double that on other days of the week. Other traditions identify the best *ṣadaḳa* as that given in Ramaḍān. The reward for giving voluntary alms in secret is seventy times that of giving it publicly (al-Bayḍāwī, *Anwār al-tanzīl*, i, 138, on II, 271; *ʿUmdat al-ḳārī*, viii, 284). The place in which alms are given is also significant to its merit. A dirham given in Mecca, according to a Shīʿī tradition, merits a hundred-thousandfold reward, in Medina ten-thousandfold, in Kūfa one-thousandfold. "Whoever gives one dirham of *ṣadaḳa* in Jerusalem (*Bayt al-Maḳdis*) gains his ransom from hellfire, and whoever gives a loaf of bread there is like one who has given [the weight of] of the earth's mountains in gold" (al-Ḥasan al-Baṣrī). Of all that might be given as alms, water is pronounced to be best, and one who gives water to a thirsty Muslim will drink of the wine of Paradise.

The importance of giving *ṣadaḳa* to avert tribulations in this life and to avoid the punishment of hellfire in the hereafter is the topic of many *ḥadīth*s. "Whoever can protect himself against hellfire should do so, even if it should be with half a date". An angel is said to pray that the almsgiver be rewarded, while another angel prays for the destruction of the property of the one who withholds alms. Angels in the form of beggars sometimes come to test a family (al-Ḳāḍī al-Nuʿmān, *Daʿā'im al-Islām*, ed. Fayḍī, Cairo 1389/1969, ii, 333), and it was Jacob's failure to give alms to an unrecognised prophet in the guise of a beggar that led to the tragedy of Joseph (*ibid.*, ii, 333-4). Where one has nothing tangible to give, one can still utter a kindly word (cf. *Talmud Bavā Bathrā* 9b). Conduct meriting a reward is in fact frequently termed *ṣadaḳa* in the *ḥadīth*. Thus a man's lawful sexual intercourse is *ṣadaḳa*, as is giving assistance with the loading of a beast, and every step take toward prayer. Planting something from which a person, bird or animal later eats counts as *ṣadaḳa*. One who supports himself and his family is credited with *ṣadaḳa* (with proper intention; cf. *Kethubbōth*, 50a). In this extended sense, corresponding to a large degree with the Jewish *gemīlūth ḥasadīm*, "acts of loving kindness" (G.F. Moore, *Judaism*, Cambridge, Mass. 1927, ii, 171-4), even greeting another with a cheerful face is deemed *ṣadaḳa* (cf. *Avōth de-Rabbī Nathan*, xiii, 4). In short, every good deed is *ṣadaḳa* (*kullu maʿrūfin ṣadaḳa*). Not even affirmative action is required, for a Muslim whose property is stolen is credited with having given it as *ṣadaḳa*.

The continuity of Islamic teaching on *ṣadaḳa* with certain Jewish and Christian conceptions of almsgiv-

ing is evidenced by more than one tradition. "Alms averts a bad death (*mītat al-sūʾ*)" (*Kanz al-ʿummāl*, vi, 345, in many versions etc.; *maṣāriʿ al-sūʾ*, *Kanz al-ʿummāl*, vi, 406) reproduces Proverbs, x, 2, "righteousness (*ṣᵉdaḳa*) delivers from death," understood in the Talmud (*Bavā Baṯhrā* 10a) to refer to almsgiving delivering one from an unnatural death (*mīṯhā meshunnā*; cf. Targum ad loc. *mōṯhā bīshā*). The depiction of the giver of alms as dressed in an expanding coat of mail is reminiscent of Isa., lix, 17, "He put on righteousness (*ṣᵉdaḳa*) as a breastplate" which is taken in the Talmud (*Bavā Baṯhrā* 9b) as comparing the assembly of a coat of armour, chain by chain, with the growth of small acts of almsgiving to a considerable sum. Several *ḥadīth*s which stress the merit of secret almsgiving have exact Biblical parallels. "*Ṣadaḳa* in secret extinguishes the wrath of the Lord" renders Proverbs, xxi, 14, "a gift given in secret soothes anger" as interpreted in *Bavā Baṯhrā* 9b. Christ's exhortation "do not let your left hand know what your right hand is doing so that your giving may be in secret" (Matt., vi, 3,4) appears at the teaching of Muḥammad in several traditions (Wensinck, *Handbook*, 20; *Mishkāt*, i, 407; noted by Goldziher, *Muh. St.*, ii, 384, and L. Shaykhū, *al-Naṣrāniyya wa ādābuhā bayna ʿarab al-djāhiliyya*, Beirut 1923, ii/2, 319).

The model for generosity in almsgiving is provided by the Prophet Muḥammad, who is described in the *ḥadīth* as "the most generous of men, bestowing more good than the loosed wind". He made it a point to give with his own hand and derived more joy from giving than the poor to whom he gave. When asked for anything, he never said no. If he had nothing to give, he remained silent (to elicit others to speak on behalf of the beggar). He is said never to have delivered a sermon without mentioning *ṣadaḳa*.

The Prophet's wives were also known for their almsgiving, notably Zaynab bint Djaḥsh, the "longest in arm" (*ʿUmdat al-ḳārī*, viii, 282-3, others apply the tradition to Sawda), Zaynab bint Khuzayma al-Hilāliyya, already known before Islam as the "mother of the poor" (*umm al-masākīn*) for her almsgiving, and ʿĀʾisha (al-Ghazālī, *Iḥyāʾ ʿulūm al-dīn*, Cairo 1387/1967, i, 298), who insisted on returning any blessing bestowed upon her by those she had assisted with alms, thus setting an example of purity of motive (*ikhlāṣ*) in giving. Extraordinary generosity was exhibited by ʿUmar b. al-Khaṭṭāb, who, when the Prophet urged the giving of *ṣadaḳa*, hastened to give away half of what he owned, only to find that once again he was bested by Abū Bakr, who had given away all that he had. Another Companion, Abū Dharr al-Ghifārī [*q.v.*], popular among modern Muslims (M. Rodinson, *Islam and capitalism*, New York 1973, 25), is said to have regarded the best *ṣadaḳa* as the most unsparing. Abū Dharr was exiled by the caliph ʿUthmān upon the complaint of Muʿāwiya, then governor of Syria, for his controversial view that *zakāt* had not abrogated all other forms of obligatory *ṣadaḳa* and that the Ḳurʾānic condemnation of "those who hoard gold and silver and do not expend it in the way of God" (IX, 34) was not averted by the payment of *zakāt*.

According to the *ḥadīth*, the Prophet, himself so generous in giving *ṣadaḳa*, was scrupulous in not taking it, while accepting gifts intended as tokens of esteem (*hadiyya*) (cf. Ibn al-ʿArabī, *Aḥkām al-Ḳurʾān*, iii, 1449-50). It is agreed that the Prophet was prohibited from receiving *zakāt*, which, by cleansing the property and persons of those who pay it, acquires a taint of impurity, but opinions differ as to why the Prophet would not accept voluntary *ṣadaḳa*. Most, including Abū Ḥanīfa, Abū Yūsuf and Muḥammad al-Shaybānī, held that he was prohibited from taking it. Among the explanations offered for this prohibition are the indignity, inconsistent with the prophetic office, of accepting alms, the appearance of self-interest (*tuhma*) were the Prophet to accept *ṣadaḳa* while urging others to give it, and the meritoriousness of the Prophet's special deprivation. A minority of scholars, including al-Shāfiʿī (*al-Umm*, Cairo 1321-5, iii, 279), entertained the possibility that the Prophet was permitted to accept *ṣadaḳa* but refrained from doing so out of pious scruple. On either view, the Prophet would be free to use amenities, such as wells, dedicated to the use of public at large. The Prophet's declining to accept the *ṣadaḳa* is deemed to be one of the signs of his prophethood (*dalāʾil al-nubuwwa*), the recognition of which led Salmān al-Fārisī [*q.v.*] to embrace Islam. There is disagreement whether or not it constitutes a proof for other prophets as well.

Also characteristic of the Prophet, according to the majority of Muslims, but not Imāmī or Ismāʿīlī Shīʿīs, is that upon his death he left nothing to his heirs, all his property being *ṣadaḳa*, used here in a sense that includes the *waḳf* of his real property (Wensinck, *Handbook*, 162; cf. I. Hrbek, *Muḥammads Nachlass und die Aliden*, in *ArO*, xviii/3 [1950], 145-6). Here, too, the avoidance of an appearance of self-interest is cited in explanation (*ʿUmdat al-ḳārī*, xxiii, 232). According to most authorities, all other prophets were like Muḥammad in leaving no estate for their heirs, but al-Ḥasan al-Baṣrī argued on the basis of Ḳurʾān, XIX, 6, and XXVII, 16, that other prophets had left estates, and certain Baṣrans, including Ibn ʿUlayya (d. 218/833), understood the fact of Muhammad's having left no estate to represent one of the personal distinctions (*faḍīla*) granted him, rather than an incident of the prophetic office as such.

3. Ṣadaḳa *in Islamic law*. In addition to using *ṣadaḳa* for voluntary alms, Muslim jurists continue to use the word in a number of other meanings. As in the Ḳurʾān and *ḥadīth*, *ṣadaḳa* and *zakāt* are often used interchangeably for obligatory alms in legal literature, with which should be included the editorial matter of the *ḥadīth* collections (cf. the occasional doubling usage *al-zakāt wa ʾl-ṣadaḳāt* in al-Ḳāḍī al-Nuʿmān, *Daʿāʾim al-Islām*, i, 251 and *Taʾwīl al-daʿāʾim*, ed. al-Aʿẓamī, Cairo, ii, 124, 128). However, against the view that saw them as entirely equivalent (e.g. al-Māwardī, *al-Aḥkām al-sulṭāniyya*, Cairo 1386/1966, 113), others attempted to draw a distinction based on Ḳurʾānic usage between *zakāt*, which is to be given to the authorities (*ītāʾ al-zakāt*), and *ṣadaḳa*, which the authorities are directed to take (Ḳurʾān, IX, 103). On this view, which corresponds to the distinction between *ẓāhir* and *bāṭin* property [see ZAKĀT], *ṣadaḳa* is applicable to lifestock and crops, while *zakāt*, a special kind of *ṣadaḳa*, applies to such personal property (*amwāl*) as gold and silver. This usage, identified as that of certain Ḥanafīs, has left its traces, and a preference for using *ṣadaḳa* to refer to the tax on livestock can be noted elsewhere as well (e.g. Mālik, *al-Muwaṭṭaʾ*, 167-87). Although *ṣadaḳa* continues to be used for *waḳf*, an effort to reduce ambiguity can be observed in such expressions as *al-ṣadaḳāt al-mawḳūfāt*, *al-ṣadaḳāt al-muḥarramāt* (*al-Umm*, iii, 280-1), *al-ṣadaḳāt al-musabbala* (Ibn Muẓaffar, *K. al-Bayān al-shāfī*, Ṣanʿāʾ 1404/1984, i, 533 (Zaydī), and *ṣadaḳa muʾabbada* (Ibn al-Muṭahhar al-Ḥillī, *Īḍāḥ al-fawāʾid*, ed. al-Kirmanī, Ḳumm 1388, ii, 378). The use of *ṣadaḳa* to refer to expiatory penalties is also found (al-Tahānawī, *K. Kashshāf iṣṭilāḥāt al-funūn*, Calcutta 1862, i, 851).

Ṣadaḳa as a distinct juristic institution only partially

reflects the various forms of charitable giving known to Islam. For the jurist, *ṣadaḳa* falls under the general heading of charitable gifts (*birr*) or gratuitous transfers, *tabarruʿāt*. More specifically, it is treated as a species of gift, *hiba* "in the wider sense" (*bi 'l-maʿnā al-aʿamm*), that is, a gratuitous transfer of tangible property (also *ʿaṭiyya*). It is distinguished from other species of gift by the intention with which it is given, which must be to please God (*li-wad̲j̲h Allāh*) in the hope of a reward in the hereafter (*t̲h̲awāb al-āk̲h̲ira* (al-Sanʿānī..., Beirut 1405/1985. *Subul al-salām*, ii, 196) and not for any wordly purpose such as to acquire a gift from the donee, which would render it an ordinary gift (also termed *hiba*) or to honour the donee (*hadiyya*). It must, that is, constitute a *ḳurba*, an act performed as a means of coming closer to God. The significance of the donor's intention is evidenced by the Prophet's acceptance of gifts as *hadiyya* but not *ṣadaḳa*, a distinction also found in the form of an explicit prophetic tradition and reflected in the classification of gifts attributed to ʿAlī. Gifts of usufruct (*manfaʿa*) are by definition excluded from *ṣadaḳa*, and fall under the headings of license to consume (*ibāḥa, ḍiyāfa*), loan (*ʿāriya*) or trust (*waḳf*). The extent to which *ṣadaḳa* is separately treated in legal works varies from text to text, and even in those cases where there is a separate discussion of *ṣadaḳa*, some of the rules governing it are to be found in the chapters on gifts and *zakāt*, although it is not to be regarded as a recommended (*sunna*) form of *zakāt* (recommended *zakāt* is, however, known to Imāmī law, Abū D̲j̲aʿfar al-Ṭūsī, *al-Nihāya*, Beirut 1390/1970, 176).

Islamic law, by way of the *ḥadīt̲h̲*, has preserved only a few of the distinct forms of gift giving known to the Arabs, e.g. the *minḥa* or *manīḥa*, said to be the best kind of *ṣadaḳa*. With Islam there came a radically simpler set of distinctions (even the difference between *hiba* and *hadiyya* is a terminological innovation), in which *ṣadaḳa*, defined by its religious intention, held a special place. Not surprisingly there was a discernible tendency for those giving gifts to prefer the label *ṣadaḳa*, with its connotation of a pious motive, for their transactions, sometimes to the consternation of jurists and with consequences, such as irrevocability, that the donors may not have contemplated. Thus in several S̲h̲īʿī traditions D̲j̲aʿfar al-Ṣādiḳ is reported to have complained of an erroneous extension, unknown in the Prophet's day, of the term *ṣadaḳa* to ordinary gifts (al-Baḥrānī, *al-Ḥadāʾiḳ al-nāḍira*, ed. al-Irwānī, Beirut 1405/1985, xxii, 262-5; al-Kulaynī, *al-Kāfī*, ed. al-G̲h̲affārī, Tehran 1388-91, vii, 31; al-Ṭūsī, *al-Istibṣār*, ed. al-K̲h̲arsān, Tehran 1390, iv, 110; but cf. al-Ṭaḥāwī, *S̲h̲arḥ maʿānī al-āt̲h̲ār*, ii, 3-4 (*hiba* labelled *ṣadaḳa* in the Prophet's time).

While the giving of ordinary gifts is recommended (*mandūb ilayhi*), to give *ṣadaḳa* is especially recommended, and, on the basis of the many Ḳurʾānic verses and traditions enjoining it, is classified by later S̲h̲āfiʿīs as "strongly recommended" (*sunna muʾakkada*). Under certain circumstances, however, it may be prohibited to give *ṣadaḳa*, as for instance, when doing so would prejudice discharging one's obligation to support family members or pay off creditors, or when the giver knows or suspects that the *ṣadaḳa* will be used for an illegal purpose (*maʿṣiya*).

Even in such cases, however, the preferred view is that the donee acquires a good title. It is debated to what extent *ṣadaḳa* to a person in dire need is to be deemed obligatory. It is recommended that the gift of *ṣadaḳa* be accompanied by a supplication to God for its acceptance.

The rules governing the enforceability of the contract (*ʿaḳd*) of *ṣadaḳa* are essentially the same as those governing an ordinary gift, including the full legal capacity of the donor to enter into gratuitous transactions and the limitation on death-bed transactions [see HIBA]. However, some relaxation of the rules of gifts in their application to *ṣadaḳa* is occasionally to be noted. Thus most S̲h̲āfiʿīs in the case of *ṣadaḳa* dispense with the offer and acceptance (*al-īd̲j̲āb wa 'l-ḳabūl*) required by them for the validity of a gift. Although most jurists regard the taking of possession (*ḳabḍ, iḥrāz*) as just as essential to the enforceability of *ṣadaḳa* as of gifts, Isḥāḳ b. Rāhawayh made an exception of *ṣadaḳa*, as did al-S̲h̲āfiʿī for a time, and this is also reported of a number of early jurists (al-Sarak̲h̲sī, *al-Mabsūṭ*, Cairo 1324-31, xii, 48). The Mālikīs, starting from the enforceability in principle of an agreement to make a gift (possession being required to perfect the rights of the donee), go furthest in this direction. The declaration of a firm present intention, or indeed the present intention alone (*al-tabtīl bi 'l-niyya*), to give a particular person *ṣadaḳa*, according to the accepted (*mas̲h̲hūr*) teaching of Mālik, is enforceable against the donor, so that *ṣadaḳa*, like *ṣᵉdaḳa* in Jewish law (cf. Maimonides, *Mis̲h̲ne Torā, Hilk̲h̲ōt̲h̲ Mattenōt̲h̲ ʿAniyyim*, 8:1), is to this extent analysed as in the nature of a vow, rather than a contract. Along similar lines, *ṣadaḳa* intended for a particular person who cannot be found, according to some early authorities, including al-Ḥasan al-Baṣrī, must be given as *ṣadaḳa* to another (cf. *Talmud ʿArak̲h̲īm* 6a).

There is disagreement as to what extent the donor of *ṣadaḳa* can bind the donee by conditions attached to the gift. The S̲h̲āfiʿīs give effect to such conditions and hold that it is prohibited for the donee to use the *ṣadaḳa* otherwise than according to the terms of the gift. Ḥanafī, Ḥanbalī, Ẓāhirī, Twelver S̲h̲īʿī and Zaydī teaching, to the contrary, invalidates all terms and conditions inconsistent with an outright gift of the *ṣadaḳa* property (on the different Mālikī views, see al-Ḥattāb, *Mawāhib al-d̲j̲alīl*, Cairo 1329, vi, 50-1).

A vow (*nad̲h̲r*) to give *ṣadaḳa* is discouraged, since the maker of the vow may never discharge it or may do so grudgingly. A vow to give *ṣadaḳa* may be discharged before the time originally stated, and a vow to give a specific thing as *ṣadaḳa* may be discharged by giving its value. A vow to give *ṣadaḳa* to the wealthy is said to be invalid. Disagreement is reported as to the judicial enforceability of a vow such as "If I have sexual intercourse with my slave-girl, she is yours as *ṣadaḳa*," said by a husband to his wife, where the intention is clearly not charitable (*nad̲h̲r al-lad̲j̲ād̲j̲*).

Unlike *zakāt*, in which the nature and value of the property due is fixed by law (*muḳaddar*), the giver of *ṣadaḳa* is free to determine what and how much he will give. The traditions encouraging the giving of even such trivial things as half a date as *ṣadaḳa* indicate that the object of *ṣadaḳa*, unlike an ordinary gift, need have no market value. It is, however, more meritorious to give *ṣadaḳa* from one's best property, the giving of property that is adulterated or of poor quality being regarded as reprehensible (*makrūh*), and the giving of unlawful (*ḥarām*) property prohibited. Nonetheless, *ṣadaḳa* has functioned as a means of dealing with unsaleable merchandise (Ibn Farḥūn, *Tabṣirat al-ḥukkām*, on the margin of ʿUlays̲h̲. *Fatḥ al-ʿalī al-mālik*, Cairo, ii, 298 (adulterated milk and other substances; badly woven mantles to be shredded as rags for *ṣadaḳa* rather than burned) and the proceeds of illegal transactions (Ibn Hubayra, *al-Ifṣāḥ*, ed. al-Dabbās, Aleppo 1366/1947, 229 (a sale of grapes for winemaking); *Subul al-salām* iii, 14 (a prostitute's earnings); Ibn ʿAbd al-Barr, *al-Tamhīd*, repr. Lahore 1404/1983, ii,

23-4 (misappropriated booty); cf. Ibn Mufliḥ, *K. al-Furūʿ*, ed. Farrādj, Beirut 1388/1967, ii, 663-6 (difficult cases)). The solution of the Ṣūfī al-Fuḍayl b. ʿIyāḍ (d. 187/803), who simply threw away questionable money that had come into his hands, was regarded as unsatisfactory (*Iḥyāʾ*, ii, 166-8). In modern times, Muslims receiving payments of bank interest and insurance proceeds have been encouraged to rid themselves of these by giving them as *ṣadaḳa* (e.g. Dār al-Iftāʾ al-Miṣrī, *al-Fatāwā al-islāmiyya*, ix/28 [1403/1983], 3340, 3342).

Just as there is no minimum for *ṣadaḳa*, according to most jurists there is no maximum (al-Nawawī, *Sharḥ Muslim*, Cairo, vii, 125 quoting Ḳāḍī ʿIyāḍ; but cf. Ibn Ḥazm, *al-Muḥallā*, ix, 138 for a list of early jurists who rejected this). A Muslim of sound mind and body who is able to accept poverty is encouraged to dispose of all his property as *ṣadaḳa*, beyond narrow exemptions. Although there are Ḳurʾānic verses (VI, 41, XVII, 26, 29) and traditions calling for moderation in giving, other verses (II, 262, IX, 79, LIX, 9) and traditions set no such limit, and it was to these as well as to the practice of early Muslims, not to speak of the Prophet, that the majority of jurists looked. The tradition stating that the best *ṣadaḳa* was that which left a sufficiency (*ʿan ẓahr ghinā*), which the Ẓāhirī Ibn Ḥazm took as the only criterion for how much one might give (*al-Muḥallā*, ix, 136-42) was widely interpreted to mean "self sufficiency" (*ghinā al-nafs*), i.e. contentment. It is thus permitted to reduce oneself and one's family to penury if those affected are capable of enduring it without becoming a burden on society and without complaint; otherwise it is reprehensible to give away all of one's property, and subsequently to regret one's *ṣadaḳa* deprives it of its reward.

A minority of jurists set down specific limits on how much one might properly give: one-half, more commonly one-third, the proportion set down by Mālik, the Syrian jurists Makḥūl (d. 112/730) and al-Awzāʿī (d. 157/774), and the Zaydī Imām al-Hādī (d. 298/911) and recommended by al-Ṭabarī (d. 310/923), or one-fifth, one-seventh, or one-tenth (depending on wealth, attributed to Djābir b. Zayd (d. 93/712) (cf. one-fifth in *Talmud Kethubbōth* 50a).

Unlike *zakāt*, which is designated for specified classes of recipients, there are virtually no restrictions on those to whom *ṣadaḳa* may be given, and the giver is encouraged not to restrict his giving to one group, although the law, following the *ḥadīth*, does identify preferred donees such as relatives and neighbours (al-Nawawī, *al-Madjmūʿ*, Cairo, vi, 260: consensus that relatives are preferred to strangers). A mosque or other institution can be a recipient of *ṣadaḳa*, which is accepted on its behalf by its representative, who can be the donor himself.

Most jurists understand the prohibition against the receipt of *ṣadaḳa* by members of the family (*āl*) of Muḥammad (as variously defined) to apply only to obligatory *ṣadaḳa*, that is, *zakāt*, although the matter was much controverted, with Abū Ḥanīfa, Abū Yūsuf, and Muḥammad al-Shaybānī and Aḥmad b. Ḥanbal reported as having prohibited voluntary *ṣadaḳa* to them as well, which was also the view of Zayd b. ʿAlī, Ibn Ḥazm and a number of later jurists.

Although in popular usage *ṣadaḳa* was understood to refer to gifts to the poor, as may be gathered from lexicographical works, both general (*LA*, s.v. *ṣadaḳa*) and juridical (al-Nawawī, *Tahdhīb al-asmāʾ wa 'l-lughāt*, Cairo n.d., repr. Tehran, ii, 197, s.v. *hiba*; idem, *Taṣḥīḥ al-tarbih*, 93, s.v. *hiba*), the teaching of the jurists is unanimous that *ṣadaḳa*, unlike *zakāt* and the Jewish *ṣedaḳa*, may be given to the "wealthy" (*ghanī*) (as defined for *zakāt* or *zakāt al-fiṭra*). Traditions such as "give to one who asks even if he is mounted on a horse" (*al-Muwaṭṭaʾ*, 615), the practice of the early Muslims, and Ḳurʾān, XII, 88, are all cited in support of this doctrine. Nonetheless, the reward for giving to the needy is said to be seventy times that of giving to one not in need, and the greater merit (eighteenfold), according to a tradition, of making a loan as compared to giving *ṣadaḳa* (tenfold) is explained by the evident need of the borrower (cf. *Talmud Shabbath* 63a, and Rashi, *ad loc.*). In this spirit, the Shāfiʿī jurists distinguish between *ṣadaḳa* to the poor, which requires no intention of a heavenly reward on the part of the donor, and *ṣadaḳa* to the wealthy, which does.

A point of departure for a thorough-going distinction between *ṣadaḳa* to the poor and to the wealthy is found in the Ḥanafī tradition. Abū Ḥanīfa, who did not recognise the validity of gifts of an undivided share, did uphold a gift in the form of *ṣadaḳa* or *hiba* to two poor persons but not to two wealthy persons (al-Shaybānī, *al-Djāmiʿ al-ṣaghīr*, Karachi 1407/1987, 356). In the former case, it was explained, the poor donees represented the actual single recipient, God. Certain Ḥanafīs are reported to have generalised this teaching and to have recognised as *ṣadaḳa* only gifts to the poor, whether designated by the donor as *ṣadaḳa* or *hiba*, since the intention of giving to the poor can only be to gain a heavenly reward, unlike gifts to the wealthy, where a wordly motive is imputed, even when they are designated as *ṣadaḳa* (al-Sarakhsī, *al-Mabsūṭ*, xii, 92).

Ṣadaḳa, unlike *zakāt*, may be given to non-Muslims. The earlier prohibition, or popular sentiment of the early Muslims, against doing so is understood to have been abrogated by Ḳurʾān, II, 272, and the Prophet frequently gave *ṣadaḳa* to non-Muslims to bring them closer to Islam (Abu 'l-Hudā al-Ṣayyādī, *Ḍawʾ al-shams*, 1394/1974, ii, 94). The validity of such *ṣadaḳa* applies in the first instance to *dhimmīs*, Jews, Christians and Magians, but according to some jurists *ṣadaḳa* may also be given to enemy aliens (*ḥarbī*) who are related or allied to the Muslims or who are being held as prisoners or whose conversion is hoped for. Such *ṣadaḳa* is deemed meritorious. Non-Muslims are not, however, to be given portions of sacrificial animals (*uḍḥiyya*). Some Shīʿī jurists opposed giving *ṣadaḳa* to any non-Muslims or at least argued that *ṣadaḳa* to non-Muslims be given only in cases of need and only to the extent of that need, and there are Imāmī traditions that oppose the giving of *ṣadaḳa* to Sunnīs and Zaydīs.

The chief practical difference between *ṣadaḳa* and an ordinary gift lies in the almost universal recognition that a gift in the form of *ṣadaḳa* is not subject to revocation (*rudjūʿ*, *irtidjāʿ*, *iʿtiṣār*). While the jurists differ in the degree to which they recognise the revocability, however much disapproved, of ordinary gifts, they agree that *ṣadaḳa* is in principle irrevocable, although the Ḥanafīs regard the irrevocability of *ṣadaḳa* to a wealthy person, which they uphold, as contrary to strict legal reasoning (*istiḥsān*). Mālikī doctrine departs from this principle to the extent of upholding an express right of revocation reserved by a father or mother in a gift of *ṣadaḳa* to their children, a rule extended by some Mālikīs to *ṣadaḳa* between strangers, rendering the gift inalienable during the lifetime of the donor, and both al-Shāfiʿī and Aḥmad b. Ḥanbal are reported to have held that a father has a right to revoke *ṣadaḳa* to his child. The view of the Imāmī Abū Djaʿfar al-Ṭūsī (d. 459/1067) (*al-Mabsūṭ*, iii, 314) that *ṣadaḳa* and ordinary gifts were legally in-

distinguishable, even as regards revocability, was regarded as exceptional, and it was, in fact, argued by others that *ṣadaḳa*, being irrevocable, should not be classified as a species of gift (al-Tahānawī, *Kashshāf*, ii, 1449).

Various explanations are offered for the irrevocability of *ṣadaḳa*. One is that the donor's heavenly reward for *ṣadaḳa* provides moral consideration for the gift, and gifts for which consideration has been given are irrevocable. This explanation, characteristic of the Ḥanafīs (al-Sarakhsī, *al-Mabsūṭ*, xii, 58), for whom it is part of a general theory of irrevocability, is cited by others as well, but is open to criticism. It is also suggested that *ṣadaḳa* is irrevocable inasmuch as is given in the first instance to God, the obligation to whom is discharged by delivery to the poor person (al-Sarakhsī, *al-Mabsūṭ*, xii, 58; cf. al-Zurḳānī, *Sharḥ al-Muwaṭṭaʾ*, iv, 47 (irrevocable because for the sake of God)). Where the nature of the gift is disputed, the donee resisting revocation has the burden of proving that it is *ṣadaḳa*. Significantly, the rule of irrevocability was applied to gifts to the poor which were designated by their donors as ordinary gifts and not *ṣadaḳa*, but which were treated by the jurists, who looked to the substance, not the form, of the transaction, as within the scope of *ṣadaḳa*.

Closely related to the question of the irrevocability of *ṣadaḳa* was that of the re-acquisition of property given as *ṣadaḳa*. In a tradition the Prophet is reported to have told ʿUmar not to purchase a horse that he had previously given as *ṣadaḳa* and to have compared the person who goes back to his *ṣadaḳa* to a dog that returns to its vomit. For most jurists, re-acquisition by a voluntary act of the donor, such as purchase, gift or *ṣadaḳa*, is disapproved, but not passive re-acquisition by inheritance or a wife's re-acquisition as support of what she gave her husband as *ṣadaḳa*. For the Mālikīs, but not the Shāfiʿīs, the disapproval of re-acquisition extends to cases in which the property has passed through one or more intervening owners prior to its re-acquisition. A minority of jurists, including the Ẓāhirīs, regarded all instances of re-acquisition, even by inheritance, as prohibited. The disapproval of re-acquisition extends to obligatory *ṣadaḳa*, that is *zakāt*, and property given as expiation (*kaffāra*) or in discharge of a vow (*nadhr*), and to the enjoyment of the usufruct of what has been given, but not to *ṣadaḳa* intended for the public such as water for a mosque. The rule against re-acquisition (at least by purchase) is variously explained. According to one explanation, the donee in selling the *ṣadaḳa* to the donor will not feel free to bargain at arms' length, and the lower purchase price, coming as a consequence of the *ṣadaḳa*, will vitiate the original gift. A second explanation regards re-acquisition as compromising the "form" (*ṣūra*) of the *ṣadaḳa*, which requires completely divesting oneself of the gift. The Imāmī Muḥammad b. Idrīs al-Ḥillī (d. 598/1202) rejected the rules against re-acquisition as inconsistent with the donee's full right of ownership (*K. al-Sarāʾir*, Ḳumm 1410, iii, 174).

The acceptance of *ṣadaḳa* is subject to its own rules. Most consider acceptance under ordinary circumstances to be a "recommended" (*sunna*) act, obligatory only when the recipient is in the most dire need (*muḍṭarr*), and in such cases, the reward for taking may well exceed that for giving. A minority, including Ibn Ḥazm, require that a gift of *ṣadaḳa* be accepted, if only to be at once returned to the giver (*al-Muḥallā*, ix, 152-4).

Apart from a limited number of exceptions, including that of utter want, begging is prohibited, and even then the poor are encouraged to accept their fate without soliciting alms (cf. *Iḥyāʾ* i, 298), the poor who do so being preferred as recipients of *ṣadaḳa* to beggars (cf. Ḳurʾān, II, 273). In any case, if one is able, it is better to earn one's livelihood by the most menial tasks than to beg (to thus be able to give *ṣadaḳa*). Begging has its own etiquette. Importunate begging, begging in a mosque, and begging in the name of God are all disapproved, although in the latter case, according to some, the beggar invoking God's name should not be turned away empty-handed. It is forbidden for a person of sufficient means to beg as if in need and disapproved for him to put himself in the way of receiving alms. Otherwise, such a person may accept unsolicited alms.

4. *The practice of* ṣadaḳa. The giving of *ṣadaḳa* was and remains widespread among Muslims, encouraged as it is by many Ḳurʾānic verses and traditions. These indicate that the giving of *ṣadaḳa* serves a number of distinct functions. *Ṣadaḳa* acts, in the first place, as expiation for sins, and it is recommended that it be given immediately following any transgression (*maʿṣiya*) (*Iḥyāʾ*, i, 298, the advice of the legendary sage Luḳmān), for example, after intercourse with a menstruating woman. Voluntary almsgiving can thus make good shortcomings in the past payment of *zakāt*.

Closely related to the expiatory function of *ṣadaḳa* is its special role in affording protection against all manner of evils. According to a tradition, the *ṣadaḳa* that a Muslim gives wards off afflictions in this world, questioning in the grave, and punishment on Judgement Day (Ismāʿīl Ḥaḳḳī, *Tafsīr rūḥ al-bayān*, Istanbul 1911-25, i, 418). Accordingly, it is recommended to give *ṣadaḳa* at the start of each day as insurance against personal troubles (cf. Ḳurʾān, II, 274). The constant giving of little is said to please God more than the occasional giving of much. Although giving *ṣadaḳa* is recommended at all times, it is especially appropriate to give it upon significant occasions such as going to war or on a journey, and the tradition stating that "it is better for a man to give a dirham in alms while he is alive and healthy than one hundred dirhams when he is dying" did not prevent al-Ḥasan al-Baṣrī from teaching that "the most appropriate time for a man to give *ṣadaḳa* is his last day in this world and his first in the next" (al-ʿAbbās b. Aḥmad al-Ṣanʿānī, *Tatimmat al-rawḍ al-naḍīr*, with *al-Rawḍ al-naḍīr*, iv, 122-3).

The positive side of giving *ṣadaḳa* lies in the merit that accrues to the giver, greater according to some than that of *zakāt*. *Ṣadaḳa* is encouraged as a means of bringing down sustenance (*rizḳ*) from heaven. The giver of *ṣadaḳa* is promised a reward many times what he has given, from ten times for *ṣadaḳa* given to a healthy person, ninety for a blind or handicapped person, nine hundred times for a needy relative, one hundred thousand for parents, and nine hundred thousand for a scholar.

The merit of giving *ṣadaḳa* does not stop with the giver. "Cure your sick with *ṣadaḳa*," the Prophet is reported to have said. Nor is the benefit of *ṣadaḳa* limited to the living, for according to the *ḥadīth*, *ṣadaḳa* may be given in the name of deceased Muslims, especially by a child on behalf of a parent, and its reward will be presented to them on a platter of light (*ṭabaḳ min nūr*). Although the Muʿtazila are alleged to have denied the efficacy of alms in the name of the deceased, a consensus is claimed for it (al-Nawawī, *Sharḥ Muslim*, vii, 90; al-Zurḳānī, *Sharḥ al-Muwaṭṭaʾ*, iv, 56). The deceased is credited with the merit of having given the *ṣadaḳa*, a reward that does not diminish that of the giver.

In the giving of *ṣadaḳa* Muslims have found also a

means of moral edification. According to the Mālikī jurist Ibn Rāshid al-Ḳafṣī (d. 736/1336), the rationale (*ḥikma*) of the law of gifts is to purify the soul from the malady of avarice (*bukhl*) (*K. Lubāb al-lubāb*, Tunis 1346, 243), and *ṣadaḳa* embodies the virtue of generosity (*djūd, sakhāʾ*), a reflection of the generosity of God the "All-Giving" (*al-Wahhāb*). "The believer is obligated to instruct his child in generosity and charity just as he is obligated to instruct him in monotheistic doctrine and belief, for the love of this world is the source of all sin," according to Abū Manṣūr al-Māturīdī (Ibn Nudjaym ..., Cairo 1334/1915, *al-Baḥr al-rāʾiḳ*, vii, 284). The transformation of *ṣadaḳa* in the act of giving is depicted in a tradition in which *ṣadaḳa*, personified, addresses its giver: "I was little and you made me much, I was small and you made me great, I was your enemy and you made me your friend, I was perishable and you made me permanent, I was guarded and you made me your guard." On the other hand, the role of *ṣadaḳa* in the redistribution of wealth has tended to be neglected in the growing literature by modern Muslims on Islamic economics, which has understandably focused on *zakāt* (but cf. A. Qureshi, *The economic and social system of Islam*, Lahore 1979, 91-7).

The Ḳurʾān urges believers not to undo their charitable gifts with "obligation" (*mann*) and "insult" (*adhā*). "Kind speech and forgiveness," it teaches, "are better than *ṣadaḳa* followed by insult" (II, 263-4). The giver is forbidden to regard himself as having conferred a benefit on the taker, an attitude than can be exhibited in thought, word or conduct or to demean the taker in any fashion. *Mann* is deemed to be a grave sin (*kabīra*), although there is disagreement as to whether it entirely destroys the reward of the *ṣadaḳa* or merely diminishes it (on the Muʿtazilī teaching of the cancellation of good deeds by bad (*iḥbāṭ*), see M.J. McDermott, *The theology of al-Shaykh al-Mufīd*, Beirut 1978, 258-62). "Obligation" and "insult" can be avoided by giving one's *ṣadaḳa* in secret. The Ḳurʾānic recommendation of "kind speech" is respected by the use of stereotyped replies in turning down the requests of beggars (see e.g. M. Piamenta, *The Muslim conception of God and human welfare as reflected in everyday Arabic speech*, Leiden 1983, 65-6; C.A. Nallino, *L'Arabo parlato in Egitto*, Milan 1939, repr. 1978, 134), although some early Muslims, like the Prophet, are reported to have preferred silence.

5. Ṣadaḳa *in Ṣūfism and Shīʿī esotericism*. The giving and receiving of *ṣadaḳa* have a special place in Ṣūfism with its encouragement of self-imposed poverty. This had led Ṣūfīs to be distinguished as givers of *ṣadaḳa* and by virtue of their poverty as suitable recipients. There are reports of fabulous sums given away as *ṣadaḳa* by those seeking to elevate their spiritual state (Abū Naṣr al-Sarrādj, *Kitāb al-Lumaʿ*, ed. Nicholson, Leiden 1914, 158; Ibn al-Djawzī, *Talbīs Iblīs*, ed. al-Munīr, Cairo, 170). Such Ṣūfīs could claim the Prophet and Abū Bakr as their models. In the light of the prophetic tradition that the "upper hand [of the giver] is superior to the lower hand [of the recipient]", pious givers of *ṣadaḳa*, unwilling to assume an attitude of superiority, resorted to such devices as putting their hand below that of the poor person (*Iḥyāʾ*, i, 286) or throwing the gift on the ground (al-Ḳushayrī, *al-Risāla*, Cairo, 114).

Ṣūfīs differed in their attitudes toward the acceptance of *ṣadaḳa*. Some, not wishing to compete with the rest of the poor (being themselves spiritually wealthy) and to avoid being indebted to anyone other than God, studiously refrained from accepting *ṣadaḳa*. But Ibn Ḳutayba (d. 276/889) already critically notes a Ṣūfī interpretation that the upper hand in the prophetic tradition refers to the recipient (*Talbīs Iblīs*, 179). In accepting *ṣadaḳa* the poor Ṣūfīs were actually conferring a benefit on the giver (al-Hudjwīrī, *Kashf al-maḥdjūb*, tr. Nicholson, Leiden 1914, 316-17 (rejecting the interpretation of the literalist *ahl-i ḥashw*; cf. *Lev. Rabbā* 34:8), and the Ḳurʾānic reference to God accepting *ṣadaḳāt* (IX, 104) and the tradition that the All-Merciful accepts *ṣadaḳa* in His right hand encouraged the view that the actual giver of *ṣadaḳa* was God (*Kashf al-maḥdjūb*, 316-317; *Iḥyāʾ*, i, 285; anon., *K. Adab al-mulūk fī bayān ḥaḳāʾiḳ al-taṣawwuf*, ed. Radtke, Beirut 1991, 41), a view said to have been cited by wealthy Ṣūfīs in justification of their abusive amassing of fortunes from alms (*Talbīs Iblīs*, 179). Al-Djunayd (d. 298/910 [*q.v.*]), who was among those who regarded it as better to take *ṣadaḳa* than *zakāt* (*Iḥyāʾ*, i, 302), strongly approved the practice of preferring the poor Ṣūfīs as recipients. The humiliation of begging was, in addition, imposed by some Ṣūfī masters on their novices as a form of spiritual discipline.

The influential Andalusian Ṣūfī Ibn ʿArabī (d. 638/1240) offered novel interpretations, at once paradoxical and harmonising, of *ṣadaḳa*. The superiority of voluntary alms to the obligatory *zakāt* is expounded on the basis of a metaphysical analysis of obligation (*Futūḥāt*, i, 590-1), but from another point of view the superiority of *zakāt* is upheld (*ibid.*, i, 587). The "upper" and "lower" hands of the tradition are both the "hands" of God, understood as different divine attributes bestowing mercy. The virtues of secret and public giving, properly understood, are such that both should be practiced (they are same for the gnostic or *ʿārif*). But the high point of the influence of *ṣadaḳa* upon Ṣūfī thought probably came with his predecessor Abu 'l-ʿAbbās al-Sabtī (d. 601/1205), whose entire teaching revolved around *ṣadaḳa*, the other institutions of Islam and even the nature of existence being interpreted in its light (al-Tādilī, *Akhbār Abī 'l-ʿAbbās al-Sabtī*, with his *al-Tashawwuf ilā ridjāl al-taṣawwuf*, Rabat 1404/1984, 453-4; C. Addas, *The quest for the red sulphur*, Cambridge 1993, 176-7).

The Shīʿī tradition of esoteric interpretation (*taʾwīl*) did not ignore *ṣadaḳa*. The giving of *ṣadaḳa* is taken as representative of the various forms of assistance that could be offered to the Imām of the Twelver Shīʿīs and his followers. The givers of *ṣadaḳa* mentioned in the Ḳurʾān are the Imāms, who bestow guidance. For the Fāṭimid Chief Justice al-Nuʿmān b. Muhammad (d. 363/957), voluntary *ṣadaḳa* symbolises the volunteered esoteric knowledge, in the form of admonition and exhortation, that those of higher ranks bestow on those below them (*Taʾwīl al-daʿāʾim*, ii, 94, iii, 63).

ṢADAḲA, BANŪ, a name sometimes given in the mediaeval Arabic sources to the princes of the Mazyadids or Banū Mazyad [*q.v.*] in central ʿIrāḳ. The name derives from the most famous member of the line, Ṣadaḳa (I) b. Manṣūr (479-501/1086-1108 [*q.v.*]).

Bibliography: See that to MAZYAD, BANŪ. (ED.)

ṢADAḲA B. MANṢŪR B. DUBAYS B. ʿALĪ B. MAZYAD, SAYF AL-DAWLA ABU 'L-ḤASAN AL-ASADĪ, ruler of al-Ḥilla of the Arab line of Mazyadids [see MAZYAD, BANŪ]. After the death of his father in 479/1086-7, Ṣadaḳa was recognised by the Saldjūḳ sultan Malik Shāh as lord of the territory on the left bank of the Tigris. During the fighting between sultan Berk-yaruḳ and his brother Muḥammad, Ṣadaḳa was at first on the side of the former, but when Berk-yaruḳ's vizier, al-Aʿazz Abu 'l-Maḥāsin al-Dihistānī, demanded a large sum of money from him in 494/1100-1 and finally threatened him with war, Ṣadaḳa abandoned Berk-yaruḳ and had the *khuṭba* read in the name of Muḥammad. The sultan then tried to win him back by peaceful means; but Ṣadaḳa demanded that the vizier should be handed over to him, and as Berk-yaruḳ could not grant this, the negotiations fell through. Instead of agreeing with Berk-yaruḳ, Ṣadaḳa drove the sultan's governor out of Kūfa and himself occupied the town. In the following year al-Ḥilla [*q.v.*] was founded; previously, the Banū Mazyad had lived in tents.

When Gümüshtekin al-Ḳayṣarī by Berk-yaruḳ's orders appeared in Baghdād in the middle of Rabīʿ I 496/end of December 1102, Īlghāzī b. Artuḳ, Muḥammad's governor there, made an alliance with Ṣadaḳa. In the meanwhile, the caliph al-Mustaẓhir had Berk-yaruḳ again proclaimed sultan; nevertheless, Ṣadaḳa still declined to acknowledge his suzerainty. Soon afterwards Berk-yaruḳ's name was again dropped from the *khuṭba* and the *imām*s confined themselves for the time being to praying for the caliph only without mentioning by name either of the two contending sultans. But the war continued; by Rabīʿ II 496/January 1103, Gümüshtekin had to evacuate Baghdād and, as he was unable to hold out in Wāsiṭ either, Muḥammad was again recognised as sultan in both cities. Ṣadaḳa then extended his power over a great part of the ʿIrāḳ; in the same year, he took the town of Hīt [*q.v.*] on the Euphrates, which Berk-yaruḳ had granted as a fief to one of his followers, and appointed his cousin Thābit b. Kāmil governor of it. In Shawwāl 497/June-July 1104, Wāsiṭ met the same fate and here Muhadhdhib al-Dawla al-Saʿīd b. Abi 'l-Khayr was appointed governor. Next came the turn of Baṣra, which had fallen into the hands of the Saldjūḳ Ismāʿīl b. Arslāndjīḳ during the war between Berk-yaruḳ and his brothers. It was not till after the death of Berk-yaruḳ that sultan Muḥammad was able to think of dislodging Ismāʿīl from it and in 499/1105-6 he asked Ṣadaḳa to fight him. In Djumādā I of the same year/January-February 1106, Ṣadaḳa took the field against Ismāʿīl, who was soon forced to surrender, whereupon Ṣadaḳa appointed one of his grandfather Dubays's *mamlūk*s named Altūntāsh to govern Baṣra. But as the latter was very soon surprised and captured by Bedouin bandits, the sultan himself appointed another governor in his place. In Ṣafar 500/October 1106, Kayḳubādh b. Hazārasp al-Daylamī, lord of Takrīt [*q.v.*], had also to yield. After the death of Berk-yaruḳ, Muḥammad had sent the *amīr* Aḳsunḳur al-Bursuḳī [*q.v.*] to Takrīt to occupy the town. As Kayḳubādh would not obey, he was besieged. After several months had passed, he saw the impossibility of holding out any longer, and sent to Ṣadaḳa and surrendered the city to him. Warrām b. Abī Firās was then appointed governor of Takrīt. But Muḥammad could not always look on quietly while Ṣadaḳa's power kept growing, especially as the latter never had any scruples about affording shelter to anyone who had fallen into disgrace with the sultan. When Abū Dulaf Surkhāb b. Kaykhusraw, lord of Sāwa [*q.v.*], took refuge with him and Ṣadaḳa refused to hand him over, long negotiations between Ṣadaḳa and the sultan only resulted in an open breach between suzerain and vassal. The sultan set out in person from Baghdād with a large army, and in the fierce battle which was fought (according to the most usual statement) in the latter half of Radjab 501/beginning of March 1108, Ṣadaḳa was killed at the age of fifty-nine. Like his ancestors, he bore the title *Malik al-ʿArab*; the highest praise is given him by Arab poets and historians for his virtues, notably his liberality and readiness to give assistance, and he is rightly described by A. Müller (*Der Islam im Morgen- und Abendland*, ii, 122) as "a true Bedouin, brave, stubborn and wily".

AL-**SAʿDĀN**[i], "the two lucky (planets)", a technical term in astrology referring to the two beneficent planets Jupiter and Venus. On the opposite, Saturn and Mars are *al-naḥsān*[i], "the two unlucky, maleficent (planets)"; cf. al-Khʷārazmī, *Mafātīḥ al-ʿulūm*, ed. van Vloten, 228-9. In more detail, al-Bīrūnī, *K. al-Tafhīm li-awāʾil ṣināʿat al-tandjīm*, ed. and tr. R.R. Wright, London 1934, §§ 381-2, in the explanation of the "natures" (*ṭibāʿ*) of the planets, describes Saturn as *al-naḥs al-akbar*, and Mars as *al-naḥs al-aṣghar*, i.e. the greater and the lesser evil, and, correspondingly, Jupiter as *al-saʿd al-akbar* and Venus as *al-saʿd al-aṣghar*, i.e. the greater and the lesser luck. This division goes back to Ptolemy, *Tetrabiblos* i, 5 (on the ἀγαθοποιοί, beneficent, and κακοποιοί, maleficent, planets, according to the teachings of "the ancients", οἱ παλαιοί), and is based on the mixture of the four humours—warm, cool, dry, humid—in each planet. Mercury, according to Ptolemy, is ambivalent; when associated with another planet, it reinforces its power, either beneficent or maleficent; al-Bīrūnī (*loc. cit.*) adds that Mercury, when standing alone, is inclined to beneficence. Cf. also A. Bouché-Leclerc, *L'astrologie grecque*, Paris 1899, 101; J. Ruska, AL-SAʿDĀN in *EI*[1].

AL-**SĀDĀT**, ANWAR, Egyptian statesman (1918-81).

He was born into a poor family in the Egyptian village of Mīt Abū Kōm, 60 km/40 miles north of Cairo. His father was a civil servant who had to support his wife and thirteen children. Sādāt spent his first seven years in his village, where he was left in the

care of his grandmother while his parents were working in Sūdān (his mother was Sudanese). He went to the village school and thoroughly enjoyed his life amongst the local peasants. He later claimed that his early experiences gave him a deep understanding of the Egyptian peasant's mentality and of his deep roots in the countryside. He considered the *fallāḥ* to be the foundation of society and the guardian of its traditions. When in power, he enjoyed return visits to his village in order to re-establish contact with ordinary people.

In 1925 he moved with his father to Cairo, where he went to secondary school in 1930. In 1936 he just managed to pass his General Certificate of Education. Perhaps more importantly, he was drawn into the political atmosphere of street demonstrations against the British presence and of calls for evacuation and independence. This was the background of a number of young Egyptians at the time, among them ʿAbd al-Nāṣir [*q.v.* in Suppl.], who were later to play an active role in politics. Like ʿAbd al-Nāṣir, al-Sādāt entered the Military Academy, newly-open to sons of lower class families and previously the preserve of the upper classes.

He graduated as an army officer in 1938 and was sent with ʿAbd al-Nāṣir to Manḳābād in Upper Egypt. The two of them, with one or two others, formed a group of disgruntled soldiers who were eventually to form the core of the Free Officers. Al-Sādāt was transferred to Cairo, where the circle of officers dedicated to the overthrow of the régime gradually expanded. ʿAbd al-Nāṣir was the real leader of the group, although al-Sādāt in his memoirs tended to exaggerate the centrality of his own role. In his *Revolt on the Nile* (London 1957) he glorified ʿAbd al-Nāṣir as the leader of the movement. In his autobiography *In search of identity* (London 1978), he put himself at the centre and was much more critical of ʿAbd al-Nāṣir. Unbiased accounts would place al-Sādāt very much in the secondary role.

During the second World War, al-Sādāt showed distinct pro-Nazi sympathies in the belief that Germany would be victorious and give Egypt her independence. He was arrested by the British for dubious activities, tried by an Anglo-Egyptian court and imprisoned until October 1944. He escaped from jail and was on the run until the end of the war.

After the war, he did not go back to the army but was active on the fringes of political violence and terrorism. He admitted to being implicated in the assassination of Amīn ʿUthmān, the former Minister of Finance, in January 1946. He was re-arrested and tried only in 1948, when he was released without conviction. He then drifted into business and journalism without any great success. Surprisingly, he did not take part, with ʿAbd al-Nāṣir and his comrades, in the 1948 war in Palestine which had such a deep effect on their thinking about the future of Egypt. However, al-Sādāt's lack of success in business led him to rejoin the army as a captain in 1950, when he met again ʿAbd al-Nāṣir and ʿAbd al-Ḥakīm ʿĀmir. They joined together in planning the 1952 coup, although ʿAbd al-Nāṣir did not quite trust al-Sādāt, who had suspect links with al-Ikhwān al-Muslimūn [*q.v.*] and even with the palace. He was thus not given a leading role in the coup. On 21 July 1952 he was chosen to read a prepared statement on the radio announcing the coup and the army takeover.

From then on until ʿAbd al-Nāṣir's death, al-Sādāt was a faithful son of the revolution; some would say, a trimmer. He certainly worked loyally in ʿAbd al-Nāṣir's shadow and was at times mocked for his assiduous, self-effacing sycophancy. Once again, al-Sādāt provided two versions of his life with ʿAbd al-Nāṣir. In *My son, this is your uncle Gamal* (Cairo n.d.), published during ʿAbd al-Nāṣir's lifetime, he provided an extravagantly eulogistic picture of his master who could do no wrong and who was the only person who could lead Egypt to a bright future. In his later autobiography, he blamed ʿAbd al-Nāṣir for his dictatorial attitude, his unwillingness to heed advice and for having led Egypt into numerous disastrous situations, the Suez crisis, the Yemen war and the 1967 Israeli defeat.

Al-Sādāt held a number of posts under ʿAbd al-Nāṣir none of any great significance. He edited the newspaper *al-Djumhūriyya*, where he was able to express his own rather extravagant views. In 1962 ʿAbd al-Nāṣir appointed him Secretary-General of the Constituent Assembly with the task of drafting the National Charter. Al-Sādāt was later to claim that this document was merely a front to show that, ostensibly, ʿAbd al-Nāṣir was interested in the common man.

Al-Sādāt's most important role was to lead Egypt into one of the greatest setbacks. In 1962 ʿAbd al-Nāṣir sent him to Yemen to advise on whether Egypt should intervene in the struggle between Royalists and Republicans. Al-Sādāt wrongly reported that the Royalists could soon be defeated and that Egypt should send troops to support the Republicans. ʿAbd al-Nāṣir allowed himself to be dragged into a quagmire of fighting until 1967. Al-Sādāt was discredited and receded into the background for a time.

ʿAbd al-Nāṣir's prestige fell to its lowest ebb with the defeat in 1967 in the Six-Day War against Israel. He stayed on as President, tired and ill, and in 1969 he appointed al-Sādāt his deputy in an ostensible attempt to share the responsibilities of office. To what al-Sādāt owed this elevation, other than his total loyalty to ʿAbd al-Nāṣir, is not clear. However, when ʿAbd al-Nāṣir died in September 1970, al-Sādāt was there, ready to take over.

Emerging from the shadows, he quickly showed himself to be his own man, with policies radically different from those of his predecessor. He especially chafed under three of ʿAbd al-Nāṣir's bequests—the close ties with the Soviet Union, socialism and the Israeli occupation of the Sinai. He immediately made moves to lessen the burdens of socialism with his "revolution of rectification" and by opening the economy to Western investment, the *infitāḥ*. His relationship with the Soviets was uneasy from the first, and he surprised the world when he ordered all Soviet military experts to leave the country in July 1972. He had, however, to replace Russian aid, and, against all previous wisdom, he turned to the West and, in particular, to the Americans. He became popular in the West, the moderate after ʿAbd al-Nāṣir, who seemed to forgive and to forget all his past criticism of Britain and the United States.

He then turned to the real enemy, Israel, and after months of careful military planning on the morning of 6 October 1973 he launched an attack across the Suez Canal against Israeli fortifications. The Israelis were taken completely by surprise, but after fierce battles they were able to cross the Canal and surround the Egyptian army. The battle ended in a stalemate, but al-Sādāt had shown that Egyptians could plan and fight successfully and it gave him a new basis on which to negotiate. It gave him popularity in Egypt, and he was able to bring the Americans into the search for peace. Henry Kissinger helped to bring about a disengagement; the Israelis moved back across the

Canal, which was reopened for the first time since 1967.

At home, al-Sādāt was facing severe economic problems. He wanted peace with Israel in order to pursue economic development in an atmosphere of stability and security which would encourage foreign investment. A big drain on the budget were the large subsidies on basic foodstuffs and other items. To try to obtain loans from the World Bank (which disliked subsidies), al-Sādāt agreed to withdraw subsidies from several items. The result was immediate and shocking. In January 1977 rioting broke out all over the country. There were many deaths and the army had to be brought in to restore order. Al-Sādāt was stunned. He restored the subsidies and looked around for scapegoats. He blamed the Left and the Marxists, and arrested hundreds of them. It was the beginning of a gradual decline in his popularity. He overreacted as he felt threatened, and introduced stricter censorship and declared a state of emergency.

He had to look abroad for ways of regaining some of his popularity. He felt the peace process was stalled again, and stunned the world by making a dramatic visit to Jerusalem in November 1977 to present his case to the enemy. In a speech to the Knesset he made clear his conditions for a stable peace. The Israelis made no commitments immediately, and it needed the intervention of President Jimmy Carter to bring the two sides closer together during meetings at Camp David in March 1979. A peace treaty was signed between Egypt and Israel by which Israel agreed to withdraw from Sinai, diplomatic and trade relations were to be established and Israeli ships were to be allowed to use the Suez Canal.

The rest of the Arab world believed that al-Sādāt had betrayed the Palestinian cause, since the Israeli Prime-Minister, Menachem Begin, had made no concessions at all to the Palestinians. Egypt was expelled from the Arab League and opposition to the treaty was widespread in Egypt itself. The more extreme Muslim religious groups were very bitter in their opposition. They also believed that al-Sādāt had sold the country to the West, and to the United States in particular. They preached revenge against the traitor, and one group, *Dj̲ihād*, put its message into practice when they assassinated al-Sādāt in October 1981 during a parade to celebrate the October crossing of the Canal.

Al-Sādāt was in many ways a leader who had the courage to bring in radical new policies, but he allowed himself to be carried away with his popularity in the West. At the same time he was viewed with deepening indifference or hostility by his own people and hated by other Arabs. Corruption spread around him, while he retreated into an isolation of utter self-confidence and an unwillingness to tolerate any criticism or opposition. His killers claimed that they had complete justification in ridding Egypt of a corrupt tyrant.

(D. HOPWOOD)

SADD AL-D̲H̲ARĀʾIʿ (A.), a term of Islamic law, literally, closing off the means that can lead to evil.

The concept is based on the S̲h̲arīʿa's tendency to prevent evil (*darʾ al-mafāsid*) and a legal maxim states that it has preference over achieving good (*dj̲alb al-maṣāliḥ*). *Sadd al-d̲h̲arāʾiʿ* is viewed as a continuation of *maṣlaḥa mursala* rather than an independent source. Despite this, *sadd al-d̲h̲arāʾiʿ* is often included in the books of law as an alternative legal source. Said to be based on the Ḳurʾān and *sunna*, it represents a mechanism devised by Mālikī jurists to resolve loopholes in the law. The practical function of *sadd al-d̲h̲arāʾiʿ* is to prevent improper usage of a legal means to achieve an illegal end. However, unlike *maṣlaḥa* and *ʿurf, sadd al-d̲h̲arāʾiʿ* is probably the only source of Islamic law to be presented in a negative form. Some scholars, including Muḥammad Abū Zahra, have attempted to study it from a positive angle by focusing on *d̲h̲arāʾiʿ* alone. This, however, would appear to deprive the source of an essential dimension in favour of a preconceived proviso to prevent a prohibited action. As Ibn al-Ḳayyim states in his *Iʿlām*, "when objectives cannot be reached without certain means, these means become a part of these objectives and are treated as the objectives themselves".

Sadd al-d̲h̲arāʾiʿ does not target what is good, but what is evil or leads to evil. Muslim lawyers use the "likelihood" of an evil result to prohibit the action that could lead to it. They differentiate between three frequencies, rare, frequent and imminent, although imminent is only labelled as such by assuming the occurrence of the result on the basis of circumstance. An example of a rare (*nādir*) occurrence is planting vines. Although vines could be used to produce alcohol, planting them is not prohibited, since they have many advantages that outweigh the small chance of harm. Selling the grapes to a person known to make wine would be prohibited. In that case, the chance of a harmful result is *kat̲h̲īr* (frequent) and should be prevented. The third category is based on the intention of the person rather than the possible outcome. Due to the significance of the intention, the four schools vary in how often they refer to *sadd al-d̲h̲arāʾiʿ*, with the Ḥanbalī and Mālikī schools referring to it most frequently. This is largely caused by their different methodology in establishing the intention of a person. The Imām al-S̲h̲afiʿī did not give a share of the inheritance to a wife divorced during her husband's last illness. Al-S̲h̲afiʿī argued that "there is no proof that her husband divorced her merely to prevent her inheriting". The Ḥanafī school, like the Malikī and Ḥanbalī, refers to the circumstances to find the proof. The fact that the man pronounced the divorce during his last illness is an indication that he did so to prevent his wife's inheriting. This unjust intention is thus blocked by giving her her share of the inheritance in spite of her divorce.

(M.Y. IZZI DIEN)

AL-SAʿDĪ, ʿABD AL-RAḤMĀN B. ʿABD ALLĀH b. ʿImrān, chronicler of Timbuktu, b. 30 Ramaḍān 1004/28 May 1594, d. after 1065/1655-56. His father's male line was traced to the Banū Saʿd, though the family had been settled in Timbuktu for several generations. Nothing is known of his youth, but in 1036/1626-7 he became *imām* of the Sankore mosque of Bena near Jenne. In mid-life he was employed by the administration of the Bās̲h̲alik of Timbuktu (an

institution which owed its origins to the occupation of the area by the forces of the Saᶜdian sultan al-Manṣūr al-Dhahabī in 999/1591), especially in the administration of Jenne and the Masina region of the Inland Niger Delta. In 1056/1646 he became chief secretary to the Bāshalik in Timbuktu.

His chief claim to fame is his history of Timbuktu and the Middle Niger, simply entitled *Taʾrīkh al-Sūdān*. This work, in 35 chapters, is mainly concerned with the history of the Songhay empire from the mid-9th/15th century until 1591 and the history of the Bāshalik of Timbuktu from that date down to 1655. The latter period occupies about half of the work. The early chapters are devoted to brief histories of earlier Songhay dynasties, of imperial Mali and of the Tuareg, and to biographies of the scholars and saints of both Timbuktu and Jenne. His acknowledged sources are few. For the 11th/17th century, he relies mainly on personal knowledge, evidently supported by notes (there are several chapters of obituaries and noteworthy events), and on records of the Bāshalik; for earlier periods he rarely mentions his sources, other than "trustworthy persons" or "one of my colleagues". He does, however, cite Ibn Baṭṭūṭa, the anonymous *al-Ḥulal al-mawshiyya* and, for some of the biographies of Timbuktu scholars, the biographical dictionary of Aḥmad Bābā al-Tinbuktī (d. 1036/1627 [*q.v.*]), *Kifāyat al-muḥtādj* (a supplement to Ibn Farḥūn's *al-Dībādj al-mudhahhab*). The *Taʾrīkh al-Sūdān* is a prime source for the history of the Middle Niger from the mid-15th to the mid-17th century, our only other chronicle being the *Taʾrīkh al-fattāsh* of Ibn al-Mukhtār (based on Maḥmūd Kaᶜti) which effectively stops at 1001/1593.

Bibliography: *al-Ṭālib* Muḥammad b. Abī Bakr al-Burtulī, *Fatḥ al-Shakūr fī maᶜrifat aᶜyān ᶜulamāʾ al-Takrūr*, ed. Muḥ. Ibrāhīm al-Kattānī and Muḥ. Ḥadjdjī, Beirut 1401/1981, 176; Muḥammad b. Muḥammad Makhlūf, *Shadjarat al-nūr al-zakiyya*, Cairo 1341/1930-1, no. 1198; Brockelmann, S II, 717; J. Lippert, in *MSOS, Afr.*, ii (1899), 244-53; Ch. Monteil, *Notes sur le Tarikh Es-Soudan*, ed. V. Monteil, in *BIFAN*, xxvii (1965), 479-530. The *Taʾrīkh al-Sūdān* was ed. and tr. into French by O. Houdas, Paris 1898-1900, repr. 1966, and is the source for the little we know about al-Saᶜdī's life. An annotated English translation is being prepared by the writer of this article. (J.O. Hunwick)

SAᶜDĪ, Abū ᶜAbd Allāh Musharrif al-Dīn b. Muṣliḥ Saᶜdī, known as Shaykh Saᶜdi, poet and prose writer of the 7th/13th century, is one of the most renowned authors of Persia.

He was born in Shīrāz early in the 7th/13th century, probably between 610-15/1213-19, and died in the same city on 27 Dhu 'l-Ḥidjdja 691/9 December 1292. More perhaps than any other Persian writer who preceeded him, or of his own period, Saᶜdī refers to himself constantly and in highly specific terms throughout the course of his writings; from shortly after his death until the present century elaborate biographies of the poet have been inferred from these references (the fullest and best known being that of Henri Massé, Paris 1919). More recent scholarship on the period and a greater awareness of the sophistication of medieval authors' constructed authorial personae has called many of these details in doubt. The virtual certainty that some are poetic inventions (for example, his capture by Europeans and subsequent deliverance by ransom (*Gulistān*, Book 2, anecdote 32), his unmasking of a fraudulent Brahmin at the Hindu temple in Somnāth (*Bustān*, Book 8, anecdote 8), his claim to have seen someone "in the west" be borne across water on his prayer-mat (*Bustān*, Book 3, anecdote 15)), has caused the authenticity of the remainder to become questionable, with the result that few facts can be deduced with certainty about the poet's life. We are left with the paradoxical situation of knowing very little about an author whose life and personality are considered to be familiar to all students of Persian literature. Among the stories which Saᶜdī recounts about himself which may or may not be true are that he was orphaned at an early age, that he studied and subsequently taught at the Niẓāmiyya college in Baghdād, that al-Suhrawardī and Ibn al-Djawzī were his teachers, that he was married at least twice (once in the Yemen, once to the daughter of the individual who, he claimed, ransomed him from the Europeans), and that he travelled extensively throughout the *dār al-Islām* and beyond. His work reveals a mastery of traditional Islamic education and a general intellectual sophistication that could well have been gained in an institution such as the Baghdād Niẓāmiyya. One claim can be accepted with little doubt; his writings imply wide knowledge of the world beyond Persia, and extensive travels clearly played a part in his life (he frequently admonishes his audience to treat travellers well), though whether he ever ventured into either Hindu areas in the East or Christian areas in the West is more problematic. With characteristic humour, Saᶜdī cautions his audience not to believe travellers' tales (*Gulistān*, Book 1, anecdote 32) since they are often exaggerations or outright lies, and as his most insistently presented persona in his works is that of a traveller, this should be taken as a warning when considering the truth of many of his statements. As to his being orphaned at an early age, it is true that Saᶜdī does show strong sympathy for orphans in his works. As with the admonitions to treat travellers benignly, the sentiment could well have traditional Islamic, rather than personal, causes, but Saᶜdī's concern does seem unusually strong and is perhaps drawn from personal experience. The anecdotes about his marriages are both incidental to his making moral points; both are placed in relatively distant lands (Syria, the Yemen—it is noticeable that Saᶜdī's stories seem to become less reliable as their provenance gets further from Shīrāz) and are probably to be regarded as fictions. His sexual preferences would seem to have been for young males (Southgate 1984) (no doubt poetic convention played a role, but here too his concern is so insistently presented as to make it seem at least partly personal) and this too perhaps makes the stories of his two marriages slightly less probable, though marriage for reasons that had nothing to do with sexual preference was of course expected of adult Muslims. The reference to al-Suhrawardī does not occur in the earliest mss. of the *Bustān*, besides which Saᶜdī was, as G.M. Wickens has remarked (*Morals pointed and tales adorned*, Leiden 1974, 267) "a great name-dropper", which makes the statement dubious. Some authors, however, e.g. Zarrīnkūb (1988, 175) consider that the reference may have been a later addition to the *Bustān* by Saᶜdī himself, as he lived almost forty years after the poem was first completed, and that it records an authentic incident in the poet's life. His claim to have been a pupil of the theologian Ibn al-Djawzi (*Gulistān*, Book 2, anecdote 20) has been doubted on the compelling grounds that Ibn al-Djawzī was dead before Saᶜdī's birth, but the statement is more credible if we accept that it was al-Djawzī's less illustrious grandson who was Saᶜdī's teacher (Ṣafā, iii, 1987, 594). Saᶜdī was also said to have met his great contemporary the Ṣūfī poet Mawlānā Djalāl al-Dīn Rūmī [*q.v.*], and a

passage in a perhaps apocryphal treatise (*risāla*) attributed to Saᶜdī suggests that he met the historian D̲juwaynī (author of the *Taʾrīk̲h̲-i D̲jahān-gus̲h̲āy*) and D̲juwaynī's brother, chief of the Il-K̲h̲ānid civil service in Persia. There seems no particular reason to credit these anecdotes (stories of meetings between well known contemporaries being a common invention); the meeting with the D̲juwaynī brothers is the more likely as Saᶜdī wrote panegyrics to both of them, but this need not imply actual contact so much as a wish for patronage.

It is in examining the identity of Saᶜdī's patrons and dedicatees that the most reliable information about his life and the world in which he lived can be gained. At least fifteen historical personages were either the subject of panegyrics by Saᶜdī or had works by him dedicated to them. His first datable work, completed after his youthful travels and his return to S̲h̲irāz, was the *Bustān* (655/1257) which he dedicated to the local Salg̲h̲urid atabeg Abū Bakr b. Saᶜd b. Zangī; the *Gulistān*, completed a year later, was dedicated to this ruler's son, Saᶜd b. Abī Bakr b. Saᶜd [see SALG̲H̲URIDS]. The poet's *tak̲h̲alluṣ* or pen-name of Saᶜdī is taken either from the latter, or from his grandfather Saᶜd b. Zangī. (Both derivations present problems; the grandfather died in 623/1226 when Saᶜdī in all probability was still an adolescent; the grandson ruled for only twelve days. The adoption of the *tak̲h̲alluṣ* may have been made in honour of the grandson while he was still heir presumptive.) Abū Bakr b. Saᶜd ruled as atabeg for over thirty years, and managed to persuade the Mongols, who were busy devastating the north of Persia and ᶜIrāḳ, to leave him and S̲h̲īrāz in relative peace. Though his son ruled for a mere twelve days (one of Saᶜdī's most affecting public poems is an elegy on his death in the strophic form known as *tard̲j̲īᶜ-band*), the succession stayed within the same ruling house until 662/1264, and Saᶜdī continued to write panegyrics to its members. In a sense, the control of S̲h̲īrāz may be said to have stayed for a little longer under the control of the house of Saᶜd, as a granddaughter of Abū Bakr b. Saᶜd married Mengütemür, a son of the Mongol conqueror Hülegü, and she assumed the governorship, at least nominally, of Fārs. The very complex and dangerous political allegiances of the time are reflected in the list of dedicatees of Saᶜdī's poems. On the one side we have an elegy by him on the death of the last ᶜAbbāsid caliph (killed by the Mongols during their sack of Bag̲h̲dād in 656/1258; Abū Bakr b. Saᶜd immediately travelled to the Mongol court and offered his congratulations, probably as a means of keeping Hülegü away from Fārs), and panegyrics on Sald̲j̲ūḳ S̲h̲āh, the last independent Salg̲h̲urid ruler of Fārs; on the other there is a panegyric on the murderer of both men, Hülegü, as well as panegyrics on various Mongol appointees to the government of Fārs, and to Ābis̲h̲ K̲h̲ātūn, granddaughter of Abū Bakr b. Saᶜd and wife of Hülegü's son Mengütemür. As Ābis̲h̲ K̲h̲ātūn and Saᶜdī both certainly knew, survival at this period depended on accommodation, and Saᶜdī's multiple allegiances, as evidenced by his panegyrics, are but the literary equivalent to the political manoeuvrings of his masters. Saᶜdī has received some blame for his apparent readiness to praise whoever might be in power in Fārs, but the practice was expected and such expediency was both prudent and commonplace (the D̲juwaynī brothers, and their brilliant civil, scholarly and literary work done under Mongol patronage, are another case in point). Further, some of his public poems (e.g. his elegy on the death of the last ᶜAbbāsid caliph) cannot have been written with the hope of gain and could have been construed as politically risky. Saᶜdī himself claimed it was indigence that drove him to write panegyrics, and it may also be pointed out that his works in this form frequently consist of moral advice rather than undiluted and incredible praise. Despite the censure sometimes accorded them, his panegyrics contain very fine passages (e.g. the verses to the Mongol *ṣāḥib dīwān* (head of the chancery) D̲juwaynī, beginning *kudām bāg̲h̲ bi-dīdar-i dūstān mānad*).

Saᶜdī's works include the long (*ca.* 4,100 couplets) poem in *mat̲h̲nawī* form, the *Bustān*, the prosimetrum (*maḳāma*) the *Gulistān*, panegyrics (*ḳaṣāʾid*) on various prominent men of his time, a small number of panegyric elegies (*mart̲h̲iyāt*), numerous lyric poems (*g̲h̲azaliyyāt*), a number of shorter epigrammatic poems (*ḳiṭᶜāt* and *rubāʾiyyāt*) and a small collection of obscene pieces (*k̲h̲abīt̲h̲āt/hazaliyyāt*). He also wrote a small number of poems (mainly *ḳaṣāʾid*) in Arabic. Six prose treatises (*risālāt*) are also attributed to Saᶜdī, though the attribution of at least some of these is doubtful. Of these treatises the most interesting is the fifth, the *Naṣīḥat-i mulūk*, a brief mirror for princes. A second *mat̲h̲nawī*, the *Pand-nāma* ("Book of advice") is now regarded as spurious. Saᶜdī's writings were edited by one Bīsītūn within thirty years of his death, and the mss. tradition derives from Bīsītūn's work. The many modern editions (a number of which omit the obscene pieces) of his collected works (*kulliyyāt*) are based on the recension prepared by Muḥammad ᶜAlī Furūg̲h̲ī in the early 1950s.

Saᶜdī's fame rests chiefly on the *Bustān*, the *Gulistān* and his *g̲h̲azals*. The *Bustān* and the *Gulistān* are both collections of moralising anecdotes, arranged according to subject matter in books (ten in the case of the *Bustān*, eight in the case of the *Gulistān*). Since both works have been frequently imitated, their formal innovations may not at first be apparent. As a collection of moral tales in verse, rather than a continuous narrative, with a Ṣūfī tinge but without the explicit programmatic Ṣūfism of Sanāʾī's, ᶜAṭṭār's or Rūmī's works, the *Būstan* is unlike any significant previous poem in Persian literature. Similarly, the mixture of prose and verse presented in the *Gulistān*, if not the first instance of its kind in Persian (ᶜAbd Allāh Anṣārī's religious treatises, with their occasional interposed verses, are a previously existing example), immediately makes the genre central to Persian literary history and elevates it to a new level of sophistication.

In order to understand the social and political background against which the works were composed, it is only necessary to point out that the *Gulistān* was completed in the same year as the sack of Bag̲h̲dād and the extinction of the ᶜAbbāsid caliphate by the Mongols. Accommodation with those in power, a preternatural awareness of the vicissitudes of fortune, an extreme wariness of personal and political enemies, the frequent necessity to mask one's true feelings, and the advice to be content with even indigent survival, far from centres of power and influence, are themes that are repeatedly stressed by the author. The epithet "Machiavellian" which has sometimes been applied to Saᶜdī as a reproach is in many ways a valid characterisation, in that both Machiavelli and Saᶜdī, writing in turbulent and potentially disastrous political circumstances, strove to provide advice that would ensure their audience's successful negotiation of an exceptionally risky and faction-ridden world. The crucial difference is that, whereas Machiavelli writes directly to and for a central actor in such political upheavals, Saᶜdī's intended audience, despite his dedication of both works to powerful if provincial

rulers, would seem to be much more those on the sidelines of major events, hoping to survive by luck and their wits. Further, in Saᶜdī's case, to this "Machiavellian" preoccupation with survival must be added a strong sympathy for the vulnerable and weak, especially if they are in any way ill-treated (it is very noticeable for example how often children figure in Saᶜdī's anecdotes, more perhaps than in the writings of any comparable figure in Persian literature), and a constantly reiterated plea for tolerance, perhaps the result of the poet's travels (but see below), the most famous example of which is the poem beginning *banī ādam aᶜḍā-yi yak paykarand* ("the children of Adam are members of one body..." (*Gulistān*, Book 1, anecdote 10).

The moralising tenor of Saᶜdī's writing in the *Bustān* and *Gulistān* on the one hand, and the works' attention to sheer survival on the other, may appear to be contradictory elements. It is undeniable that there is occasionally a sense of strain between the two concerns, but the poet's attempts to integrate them constitute a significant part of the distinctive flavour of the two works, and their immense popularity may perhaps be traced largely to this combination of goals. Although Saᶜdī's extreme facility in the writing of metrical aphorisms has led to many of his lines passing into the common stock of proverbial moral exhortation, the cumulative effect of the anecdotes in both the *Bustān* and the *Gulistān* is not that of an inflexible, internally coherent and absolute ethical system. Occasionally, the moral with which a story closes seems to have little to do with the story itself; anecdotes that offer contradictory moral advice can appear in close proximity (e.g. anecdote 17 of Book 1 of the *Bustān* recommends honesty when dealing with oppressive rulers; anecdote 19 of the same book recommends dissembling prudence when dealing with oppressive rulers) and, similarly, contradictory moral aphorisms are not uncommon (e.g. anecdote 20 of Book 2 of the *Bustān* ends with the advice to return evil with good; anecdote 26 of the same book ends with the statement that oppression of an oppressor is appropriate justice). The dilemma of whether to treat well enemies who may later have it in their power to harm you is one that Saᶜdī very frequently refers to, and anecdotes can be found supportive of both: on the one hand, the wisdom of pre-emptive draconian punishment and, on the other, the meliorating effects of timely mercy. That this relativism is at least to some extent deliberate is suggested by the books' structure; in the seventh books of both the *Bustān* and the *Gulistān*, there are long passages that imply the impossibility of absolute standards when dealing with fallible humanity. In the *Bustān*, the passage in question is that on calumny (towards the end of Book 7), in which it is stated, with typical humorous exasperation on Saᶜdī's part, that no course of action can meet with universal approval. Relativism is even more apparent in the last very lengthy anecdote of Book 7 of the *Gulistān*; here Saᶜdī presents a debate between himself and a *darwīsh* on the relative merits of poverty and wealth; the debate is inconclusive and the two take their question to a religious judge, who admonishes each of them to take account of the truth of the other's arguments and to be reconciled to one another. This conclusion, that moral conclusions are elusive (and that mutual respect and tolerance are preferable to disruptive ethical absolutism) can be gleaned from both the *Gulistān* and *Bustān*, if the anecdotes are taken as balancing and even occasionally contradicting each other rather than singly.

Saᶜdī's innovations, or refinements and organisation of previously extant elements, are no less apparent in his *ghazals*. The form had existed at least since the time of Sanāʾī (i.e. for approximately a century) before being taken up by him [see GHAZAL, ii], but it is with Saᶜdī that it achieves its "classical" perfection (which was to be reshaped and even, in the terms Saᶜdī had established it, disintegrated by Saᶜdī's fellow townsman Ḥāfiẓ [*q.v.*] in the following century). In Saᶜdī's hands, the *ghazal* becomes a lyric unified by tone and subject matter and by his poetic trademark, the (relative) simplicity of his language and its extraordinarily mellifluous elegance. The convention of placing one's *takhalluṣ*, in the penultimate or last line of the *ghazal* became standard with Saᶜdī, though he did not originate the practice. In his hands the *ghazal* achieves its final emancipation from the language of the *ḳaṣīda* (from which it originated), in that the rhetoric no longer addresses itself to public praise with the concomitant expectations of remote allusiveness and arcane corruscation (as for example, in the *ḳaṣīdas* of Khāḳānī and Anwarī [*q.vv.*]); the emotional tenor has become inward and private rather than brilliant and public, and this inwardness is confirmed by the substitution of the poet's own *takhalluṣ* as the culminating moment of the poem, rather than a reference to the public object of praise as was conventional in the *ḳaṣīda*. The indeterminacy of the addressee (a beloved, God, or a patron) of the *ghazal*, again a feature of the form before Saᶜdī's time, is treated with increased subtlety. The inferiority of the speaker to the addressee, axiomatic in the *ḳaṣīda*, is transformed from a political statement into an avowed simplicity of heart which, while certainly conventional, opens the way to finely nuanced adumbrations of personal, private emotional experience (although the possibility that some of Saᶜdī's *ghazals* are political statements under the guise of personal erotic/mystical complaint has also been suggested). Saᶜdī's *ghazals* are divided into four groups: *ṭayyibāt* ("noble, pleasant"— this is by far the largest group); *badāyiᶜ* ("rarities"); *khawātīm* ("seals, final"); and *ḳadīm* ("ancient"). It is not known whether the groupings are the poet's own. Though the *Bustān* and *Gulistān* are profoundly admired in Persia, their fame is second to that of the *ghazals*, which are considered Saᶜdī's greatest achievement. Perhaps because of the relatively easier task presented by the translation of narrative as against lyric work, the *Bustān* and *Gulistān* have in general been admired more than the *ghazals* in the West.

The achievement of Saᶜdī is by any reckoning very great, and his work has been a major formative influence on subsequent writing in Persian. In his writings all trace of a sense of the marginality, or purely local preoccupations, of Persian culture vis-à-vis Islam as a whole has disappeared. This may in part be due to the profound shock of the Mongol invasions, which must at first have appeared to call in question the very survival of the *dār al-Islām* in the East; in the ensuing chaos, the culture of hitherto relatively peripheral areas flourished. One such area was Fārs, where Islamic culture continued more or less undisturbed. (The "coming of age" of Persian as a language of international Islamic culture at this time is also evidenced by Saᶜdī's contemporary Rūmī in Turkey and the slightly younger Amīr Khusraw [*q.v.*] in India.) It is also undoubtedly due to the breadth of Saᶜdī's own sympathies and knowledge. This breadth of sympathy is further apparent in the "democratisation" of Saᶜdī's subject matter; previous poets (e.g. ᶜAṭṭār), who had looked beyond the court for subject matter, had done so largely for Ṣūfī reasons; Saᶜdī seems to do

so from pure human sympathy, from a sense of the validity of life at any social level in and for itself. On a par with this is the relative simplification, and thus greater accessibility for a more various audience, of his language when we compare it with that of many of the court poets who preceeded him. Such wide sympathies have led to Saᶜdī being seen as a kind of universal deist (Emerson) or a "humanist" by some western commentators (Yohannan 1987), but there are clear limits to Saᶜdī's sympathies and these should not be overlooked. They are defined with few exceptions by the boundaries of Islam, and are operative within the *sharīᶜa*, hardly beyond it. His writings contain disparaging references to Jews (especially), to Christians and to Hindus (the anecdote concerning the Hindu temple at Somnāth (*Bustān*, Book 8) is such a farrago of misinformation as to make one suspect that it is a deliberate joke, but even if this is so, the joke is hardly one that will appeal now). A notable exception to this tendency is the anecdote (*Bustān*, Book 2, anecdote 1) that has Abraham reproved by God for acting inhospitably to a Zoroastrian (this can, however, be seen as an example of a general unwillingness, discernible in the works of many mediaeval Persian authors, to disparage the customs and civilisation of pre-Islamic Persia, rather than as an indiscriminate tolerance of non-Muslims). Even within Islam, Saᶜdī's sympathies clearly stopped short of being extended to blacks, and certain of his remarks about women have been seen by some as verging on misogyny (the penultimate story of Book 1 of the *Gulistān* is evidence of an at least temporary violent contempt for both blacks and women). Much of this must undoubtedly be attributed to the time in which Saᶜdī was writing, in that he was merely repeating the common prejudices of his age and culture (and part of the shock registered at such moments in Saᶜdī is because he seems so sympathetic to the disadvantaged and/or unfamiliar elsewhere), but there were other Persian writers of his period, and previous periods, who did not indulge in such gratuitously disparaging language to the same extent. ᶜAṭṭār and, in general, Rūmī are examples. That these poets were exclusively Ṣūfī authors is significant; their sense of the illusoriness of the physical world, and therefore of the irrelevance of its categories for judging people's true worth, is not shared by Saᶜdī, whose world-view accepts the validity of common-sense categories within which the earth is considered as a place of tangible reality, happiness and suffering. Saᶜdī's Ṣūfism (he apparently ended his days as a member of a Ṣūfī foundation in Shīrāz) would seem to be close to the "practical" Ṣūfism of al-Ghazālī; that is, it is a way of living in and dealing with the world rather than of renouncing it. Ṣūfism for Saᶜdī is a means of surviving with dignity, and relatively uncompromised, in a dangerous and morally dubious environment. It is linked to notions of retirement from strife rather than the passionate search for transcendence which we find in Saᶜdī's contemporary Rūmī.

One of the most interesting aspects of Saᶜdī's writings is his insistence on his own persona as a presence in his works and thus in his audience's mind. This has led to him being one of the most "known" of Persian authors, in that his readers feel aware of his character to an extent that is true of hardly any other Persian writer from the middle ages. He presents himself as widely travelled, of such ready sympathy that he can be intimate with both the powerful and the weak, almost always ready to intercede on behalf of the disadvantaged, tolerant, a peacemaker and a man who hates slander, pious but not bigoted, simple-hearted with the simple but also canny enough to see through hypocrisy and deception. Occasional stories against himself lend verisimilitude, but they are always placed in his childhood or youth, with the implication that he has now learned better. He is also insistent on his own fame, recounting stories of how he has heard his works recited as far away as India. Much of this must surely be taken as the deliberate creation of an authorial persona. It is, for example, similar to the persona created by the English mediaeval writer Chaucer, and probably for the same reasons; both poets present themselves as charming raconteurs—wise, attractive, avuncular companions, men with broad sympathies who have seen the world but still basically share the plain man's "common sense" world-view. This cosmopolitan, compassionate, shrewd persona is to be regarded chiefly as an advertisement for the work. Significant here, too, is Saᶜdī's strong sense of humour and his previously-noted warning that travellers are liars; Saᶜdī's presentation of himself is a brilliant literary device that he undertakes with every sign of relish at his undoubted skill; it is perhaps the greatest of his literary triumphs.

Perhaps in part because of their self-consciously "international" and unprovincial interests, Saᶜdī's writings were highly influential as models not only in Persia itself but also in Turkey of the Saldjūḳs and the *beylik*s and subsequently in the Ottoman empire. Similarly, in Mughal India, his works quickly achieved great fame, and his *ghazal*s were imitated by Persian-speaking Indian poets within his own lifetime or shortly afterwards. Generally speaking, in countries that have at different periods looked to Persia as a cultural model, he is thought of as the archetypal Persian author, and his works have been a fundamental part of the educational curriculum of those wishing to become acquainted with Persian belle-lettres. His popularity in the Ottoman empire and Mughal India led to his name being known in the West at a relatively early period. French, German and Latin translations of parts of his oeuvre appeared in the mid-7th century, and Gentius brought out an edition of the *Gulistān*, with a Latin translation, in Amsterdam in 1651. The benevolence of Saᶜdī's usual sentiments and his frequent advocacy of irenic tolerance made him particularly attractive to Enlightenment authors, and Voltaire pretended, tongue in cheek, that his *Zadig* was a translation from Saᶜdī. In Germany Herder, and in England Sir William Jones, were both enthusiastic advocates of Saᶜdī's work. In America, Benjamin Franklin borrowed an anecdote from the *Bustān* (that of Abraham and the Zoroastrian) "on account of the importance of the moral, well worth being made known to all mankind", and Emerson saw the poet in more or less the same light—i.e. as an Oriental version of a pragmatic Enlightenment deist. By the mid-19th century, Saᶜdī had been more extensively translated into European languages than any other Persian author, with the possible exception of Ḥāfiẓ.

SAᶜDIDS, Saᶜdians, a Sharīfian dynasty which ruled in Morocco from the mid-10th/16th century to *ca.* 1070/1659. The Saᶜdids or Saᶜdians or Banū Saᶜd, make their appearance in the history of Morocco at the beginning of the 10/16th century, at the time when the last ruling dynasty of Berber origin, the Banū Waṭṭās [see waṭṭāsids], was in decline. The Banū Saᶜd claimed to have come originally from Yanbuᶜ in the Tihāma of the Ḥidjāz and to be descendants of the Prophet; whatever their origin, they bore the title of *sharīf*.

Since the 8th/14th century, they had lived in the central valley of the Darᶜa, at Tagmaddart. In the following century they established themselves in the Sūs at Tidsi. The first of the Saᶜdids to play a role in the internal politics of Morocco was called Abū ᶜAbd Allāh Muḥammad b. ᶜAbd al-Raḥman al-Ḳāʾim bi-amr Allāh. He was a saintly man, a disciple of al-Djazūlī [*q.v.*], who enjoyed genuine prestige among the neighbouring tribes. In 916/1510 he was appointed war-leader and campaigned against the Portuguese, formally established at Agadir [*q.v.*] since 919/1513 (in reality since 1505). In 917/1511, he had named his eldest son Aḥmad al-Aᶜradj governor of the Sūs; two years later he appointed him his successor. On his death in 923/1517-18, at Afūghāl in the Ḥāḥa, two of his sons shared the political power which he had built up: al-Aᶜradj governed to the north of the Atlas, the younger, Maḥammad al-Shaykh, in the Sūs. These two *sharīfs* were the real founders of the Saᶜdian dynasty, the first Sharīfian dynasty to take power in Morocco.

The two principal objectives of these princes were the struggle against the Christians, in this case the Portuguese, and the conquest of northern Morocco, in other words the eviction of the Waṭṭāsids. In 929/1523 hostilities were declared between them and the *amīr* of Fās, Muḥammad al-Burtugālī. Then in 930/1524 the two *sharīfs* took possession of Marrākush, assassinating the *amīr* of the Hintāṭa, al-Nāsir Bū Shentūf, who was in occupation of the town, and al-Aᶜradj became the head of the new state, established *de facto*, with Marrākush as its capital. The tomb of al-Djazūlī, which had been at Afūghāl, was transferred there; thus the city became a venerated site. On two occasions the successor of Muḥammad al-Burtugālī, Mawlāy Aḥmad al-Waṭṭāsī, attempted to attack Marrākush, but without success, and in 916/1530 Waṭṭāsids and Saᶜdians established a frontier between their two "kingdoms", running from Umm al-Rabīᶜ to Wād al-ᶜAbīd. Six years later, the Waṭṭāsid army was routed by that of the *sharīfs* and in 1537, the latter took possession of Tafilālt, part of the territory belonging to the Waṭṭāsids.

The *sharīfs* also pursued the struggle against the Portuguese, and in 948/1541 Agadir, or Santa-Cruz do Cap de Cúe, was taken by Mawlāy Maḥammad. This victory led to a rift between the two Saᶜdian brothers, when Mawlāy Maḥammad refused to share the booty seized from the Portuguese fortress. The younger imprisoned his elder brother, and then in 949/1542 an accord was signed between them. In spite of this apparent reconciliation, a violent quarrel took place between the two princes in 950/1543, and al-Aᶜradj was exiled with his entire family to the Tafilālt; Mawlāy Maḥammad was thus able to occupy Marrākush.

Sole master of the Saᶜdian lands, Mawlāy Muḥammad renewed the struggle against the Banū Waṭṭās of Fās; in 1545, near *Wādī* Derna, he succeeded in taking prisoner Aḥmad al-Waṭṭāsī. Set free two years later, the latter ceded Miknās, the Gharb and the Habṭ to the Saᶜdian. The same year, 953/1547, the *sharīf* laid siege to Fās, a siege which lasted until January 1549, at which date Fās fell, and Mawlāy Maḥammad became the sole ruler of Morocco. As for Aḥmad al-Waṭṭāsi, he was sent to Marrākush. One of the first consequences of this defeat was the abandonment by the Portuguese of their fortresses at Arzila/Aṣīla and at al-Ḳaṣr al-ṣaghīr.

At the same time that the Saᶜdids were undertaking the conquest of Morocco, the Ottoman power established at Algiers was attempted to advance towards the west. Between the two new powers in the Maghrib lay an ancient "kingdom", Tlemcen, ruled by an enfeebled dynasty, the Banū Zayyān or ᶜAbd al-Wādids [*q.v.*]: the conquest of Tlemcen seemed a necessity both to the Ottomans and to the Saᶜdians. On 23 Djumādā I 957/9 June 1550, a Sharīfian army commanded by one of the sons of Mawlāy Maḥammad, Mawlāy al-Ḥarrān, entered Tlemcen. It did not stay there long, since a large proportion of the Moroccan troops had to be transferred to the Tafilālt in order to fight against Aḥmad al-Aᶜradj, who had rebelled against his younger brother. In the summer of the same year, when the Saᶜdian garrison, left in the Zayyānid capital under the command of two of the sons of al-Shaykh, was attacked by the Pasha of Algiers, it was unable to resist, and in February 1551 the Algerian army took possession of Tlemcen, which remained henceforward under Ottoman control, the Moulouya/Malwiyya serving as a frontier between Morocco and the Algerian regency.

However, the Waṭṭāsids had not lost hope of regaining power: an uncle of the prince defeated in 956/1549, Abū Ḥassūn, who had for some time found refuge in Spain, succeeded with the aid of the Algerians in defeating the Sharīfians under the walls of Fās, which he entered on 14 Ṣafar 962/7 January 1554. He even allied himself to al-Aᶜradj and to the latter's son, Zaydān, who had succeeded in making themselves masters of the Tafilālt. And if a message addressed by Abū Ḥassūn to his new ally had not been intercepted by Mawlāy Maḥammad al-Shaykh—with the result that the defeat of his son Mawlāy ᶜAbd Allāh was transformed into victory—the Waṭṭāsid would probably have been able to regain the Moroccan throne. But al-Aᶜradj and Zaydān surrendered, and al-Shaykh was enabled to renew the offensive against Abū Ḥassūn, who succumbed to a fatal lance-blow at Musallama on 15 Shawwāl 961/13 September 1554. On this occasion, the Saᶜdians became the undisputed masters of Morocco.

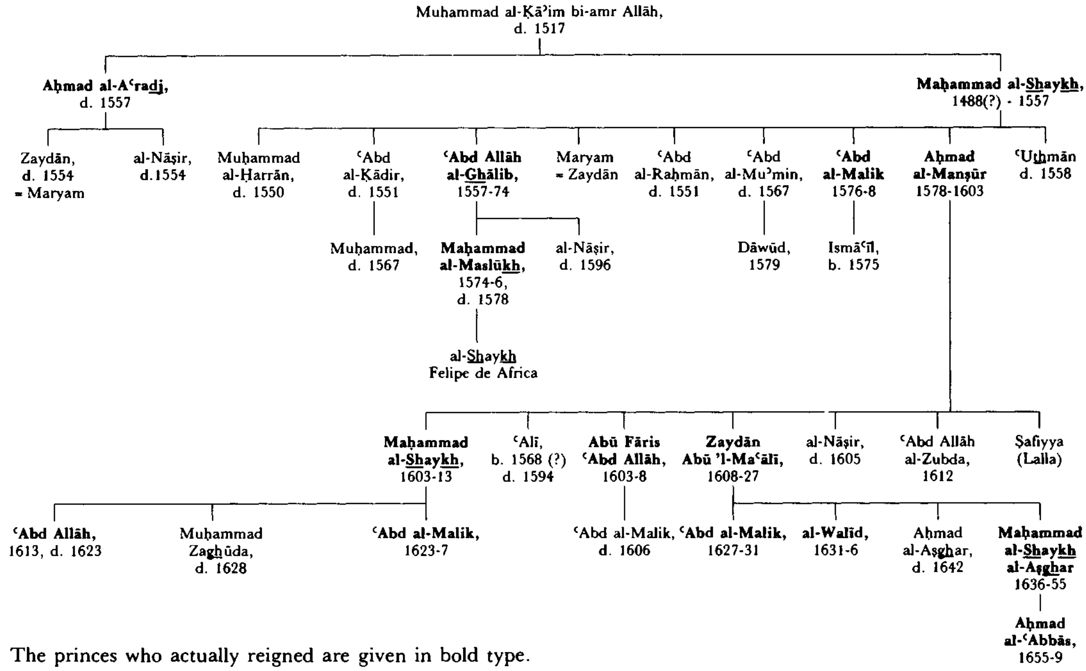
Three years later, on 29 Dhu 'l-Ḳaᶜda 964/23 October 1557, Mawlāy Maḥammad was assassinated by a member of his Turkish bodyguard, Ṣalāḥ b. Kyāhya. Shortly before this, the other *sharīf*, al-Aᶜradj, imprisoned in Marrākush, had been executed by the governor of the town, along with seven of his sons and grandsons. The senior branch of the Saᶜdids was thus eliminated and the succession of the *sharīf* Mawlāy Maḥammad fell to his son, Mawlāy ᶜAbd Allāh al-Ghālib bi'llāh. At the start of his reign, which was marked by an anti-Turkish policy, three of his

brothers advanced as far as Algiers, and two of them even reached Istanbul. In 965/1558, the new sovereign succeeded in defeating the Turko-Ottomans of Algiers near Wādī 'l-Laban and invading the Regency. He attempted, without success, to forge an alliance with the king of Navarre, Antoine de Bourbon. On the other hand, he succeeded in establishing peaceful relations with Spain, which earned him the hostility of the marabouts whose influence was increasing throughout the Maghrib. He also sought to deprive the Portuguese of Mazagan, their last fortress, but failed. Mawlāy ᶜAbd Allāh died in 981/1574, and his son Mawlāy Maḥammad, already governor of Fās, was recognised as sovereign without hindrance. But another Saᶜdid prince was a pretender to the Moroccan throne, Mawlāy ᶜAbd al-Malik, one of the brothers of the late *sharīf*, who from 1557 onward was conspiring with the Ottoman Sultan to obtain military and financial support. Two years after the death of his brother, Mawlāy ᶜAbd al-Malik, with a Turko-Algerian force, supplemented by Arab contigents, defeated his nephew at al-Rukn and entered Fās on 10 Dhu 'l-Ḥidjdja 983/11 March 1576. As for Mawlāy Maḥammad, he reached Marrākush, and then, following a further defeat at the hands of his uncle, he took refuge in the Sūs. Subsequently, with the help of the king of Spain, he made his way to Peñon de Vélez.

While the uncle had been aided by the Ottomans, the nephew ultimately obtained the aid of the Christian princes, especially that of the king of Portugal, Don Sebastian, who dreamed of conquering Morocco. In Djumādā I 986/July 1578, a substantial Christian army set out in support of Mawlāy Maḥammad. The clash between this army and that of Mawlāy ᶜAbd al-Malik took place on 4 August near the Wādī Mekhāzen; the two Moroccan pretenders and the king of Portugal died in the combat. This battle, the so-called Battle of the Three Kings, had vast repercussions in Europe as in Morocco, where it aroused a veritable surge of national consciousness. The victor was another brother of Mawlāy ᶜAbd Allāh, Mawlāy Aḥmad, who became sultan. His reign was one of the most significant in the entire history of Morocco, as well as one of the longest, since it lasted until 1012/1603.

Having reorganised the country, Mawlāy Aḥmad established diplomatic relations with the Ottoman empire, as well as with Christian nations including Spain, Portugal and England; in 993/1585 English merchants founded the Barbary Company which enjoyed free and exclusive trade with Morocco for twelve years. But the major achievement of the reign was the conquest of the western Sūdān; contacts between the Songhay of the loop of the Niger and Morocco had begun in the 5th/11th century. In the 10th/16th century, the salt-pans of Tegheza, between Timbuktu and Marrākush, were coveted by the Moroccans, and in 986/1578 Mawlāy Aḥmad asked Askia Dāwūd, the ruler of the Songhay, to allow him the exploitation of these salt-pans for a year. Three years later, the Saᶜdian *sharīf* ordered the occupation of Touat and the Gourara, and in 992/1584 sent to the western Sūdān a first expedition, which was a disastrous failure. The conquest of Sūdān was decided upon and in 1591 the Pasha Djūdar, commanding the Sharīfian troops, entered first Gao and then Timbuktu. In 994/1596 the Moroccans occupied the loop of the Niger from Koukya to Djenna; the western Sūdān came under Saᶜdian domination, and every year, tribute of Sudanese gold was paid to Marrākush. Dissension between the sons of Mawlāy Aḥmad, henceforward to be known as al-Manṣūr al-Dhahabī, cast a cloud over the end of the reign of the *sharīf*, who died of the plague on 17 Rabīᶜ I/25 August 1603.

During his lifetime, Mawlāy Aḥmad had given some of his sons a degree of administrative responsibility. Following his death, the princes Zaydān and Abū Fāris had themselves declared sultans, at Fās and at Marrākush respectively. A third brother, Maḥammad al-Shaykh al-Ma'mūn, who had been imprisoned by his father for rebellion, succeeded in defeating his brother Zaydān at al-Mouata and being proclaimed in his turn as sovereign at Fās (1604), while Mawlāy Zaydān gained control of the Sūs; the fratricidal struggles which were to lead to the dissolution of the dynasty had begun.



A fourth prince soon claimed his share of the "kingdom", sc. Mawlāy ᶜAbd Allāh, a son of al-Ma'mūn who, in 1015/1606, succeeded in establishing himself at Marrākush. All these struggles devastated the country and destitution was rife. Al-Ma'mūn, whose power was gradually ebbing away, attempted to obtain the support of Tuscany, then appealed to Spain for help, where he was obliged to take refuge in March 1608 as Mawlāy Zaydān had regained power in Marrākush and was threatening Fās. The following year, in the hope of gaining the support of the government of Philip III, king of Spain, the *sharīf* al-Ma'mūn signed a treaty according to which he guaranteed, in exchange for military aid, to cede to him the port of Larache/al-ᶜArā'ish [*q.v.*], which Spain had long coveted, lest it be occupied by the Ottoman fleet. On 20 November 1610 Spanish troops commanded by the Marquis of San Germán took possession of Larache, the port and the town. But instead of helping Mawlāy Muḥammad al-Ma'mūn, this action lost him every chance of returning to his throne. He was assassinated in 1022/1613 at Fadjdj al-Fāras.

In 1018/1609, the above-mentioned prince Mawlāy ᶜAbd Allāh, had had his uncle Abū Fāris strangled. He was thus able to succeed his father at Fās, but the kingdom of Fās was no more than a much-reduced territory. Despite the agitations of one of his brothers, Mawlāy Zaghūda, and despite the total anarchy existing in Fās, the reign of Mawlāy ᶜAbd Allāh lasted until his death in 1032/1623. After him another of his brothers, Mawlāy ᶜAbd al-Malik, ruled nominally in Fās for four years, but the descendants of al-Ma'mūn were no longer in a position to exert real power.

After the cession of Larache to the Spanish, the only Saᶜdian prince considered to be a legitimate sovereign was Mawlāy Zaydān. While the descendants of Mawlāy Muḥammad al-Shaykh tried to maintain their position at Fās, Zaydān established his capital at Marrākush and was recognised by foreign powers as sultan of Morocco. In 1021/1612 he was subjected to the attacks of a religious leader, Abū Maḥallī [*q.v.* in Suppl.], who had declared holy war against the Saᶜdids, and who even succeeded in entering Marrākush. Mawlāy Zaydān was obliged to flee to Ṣāfī [*q.v.*], whence he attempted to leave Morocco with his retinue, and seventy-three cases of Arabic books. These cases were loaded on a French ship which was intercepted and impounded by the Spanish, who declared it to be legitimate war-booty; the Arabic volumes thus remained in the possession of the Spanish, and were later deposited in the Escurial.

The state of anarchy which pervaded the country enabled various religious chiefs or marabouts to make themselves more or less independent of the ailing central power. Those of the Sūs did not pose a real threat

Genealogical table of the Sa^cdid Sh̲urafāʾ

The princes who actually reigned are given in bold type.

to the dynasty, but those of northern Morocco put the government of the *sh̲arīf*s in danger; the arrival of the Moriscos, especially following their expulsion from Spain (1609-10), and their occupation of Rabat which they declared an independent republic, as well as the agitation of a "marabout", al-ʿAyyās̲h̲ī, in the region of Salā and then at Salā itself, ultimately rendered Mawlāy Zaydān's authority purely theoretical in the north of Morocco.

The *sh̲arīf* Zaydān died in 1036/1627, and his successor was his eldest son Mawlāy ʿAbd al-Malik, who reigned only four years: he was assassinated on 6 Sh̲aʿbān 1040/10 March 1631. The treaty which he had negotiated with France was signed by his brother Muḥammad al-Walīd, on 20 Ṣafar 1041/17 September 1631. Al-Walīd, assassinated in turn, was succeeded by a third son of Mawlāy Zaydān, Mawlāy Maḥammad al-Sh̲ayk̲h̲ al-Aṣg̲h̲ar. The latter succeeded in maintaining control over Morocco, or rather over the region of Marrāku̲sh̲, until 1065/1654; he faced opposition from another maraboutic power, the Dilāʾiyya of the central Atlas [see DILĀʾ in Suppl.]. The last Saʿdian sovereign was the son of al-Sh̲ayk̲h̲, Aḥmad al-ʿAbbās, who inherited a thoroughly decadent kingdom. After his assassination in 1069/1659, Morocco became the object of contention between the *sh̲urafāʾ* of the Tafilālt, the ʿAlawīs, and the Dilāʾiyya of the Atlas. The last-named were decisively defeated in 1079/1668, and the Saʿdid *sh̲urafāʾ* were succeeded by the ʿAlawī *sh̲urafāʾ* [see ʿALAWĪS].

If the last Saʿdid princes were characters without much depth, and were in many cases debauched, the first *sh̲arīf*s were outstanding statesmen who encouraged the cultural and artistic life of the country. Although very little remains of the palace of Aḥmad al-Manṣūr, the Badīʿ of Marrāku̲sh̲, various religious monuments from the Saʿdian period have been preserved in this town: the great mosques of Bāb Dukkāla and of Mouassin, the tomb of al-Dj̲azūlī, the Ben Yūsuf *madrasa*, and above all the mausoleums of the *sh̲arīf*s, Ḳubūr al-As̲h̲rāf. At Fās, the Saʿdians built little, but to them are owed the two pavilions at the extremities of the court of the mosque of al-Ḳarawiyyīn, as well as the *basātīn*, the northern Burdj̲ and the southern Burdj̲ built by Aḥmad al-Manṣūr in 1582.

Until the death of this sultan, the economic situation was such that there were periods of considerable prosperity; the relations of Saʿdian Morocco with European countries facilitated the export of various products such as textiles, horses, wheat, saltpetre, and especially sugar, principally to England (cultivation of the sugar-cane had appeared in Morocco in the 3rd/9th century, and disappeared shortly after the death of Aḥmad al-Manṣūr). It is also to the credit of the Saʿdid *sh̲urafāʾ* that they presided over the birth of a genuine feeling of national consciousness, which resisted any attempt at domination by Christians or Ottomans.

(CHANTAL DE LA VÉRONNE)

ṢĀDIḲ HIDĀYAT [see HIDĀYAT, ṢĀDIḲ].

ṢĀDİḲ RIFʿAT PASHA, MEḤMED, Ottoman statesman and diplomat (1807-57). He was born in Istanbul, the only son of a very wealthy family. His father was Ḥādjdjī ʿAlī Bey, the governor of the Ottoman cannon foundries (*Ṭopkhāne*). Ṣādiḳ Rifʿat received an education in the palace school, serving his final year in the *Enderūn-i Humāyūn Khazīne Odasi* (the imperial treasury). Thereafter, he was placed in the correspondence department (*Mektūbī Ḳalemi*) of the Grand Vizierate, as an assistant clerk. In 1824 he was promoted to the rank of *khwādja* (master) and in 1828 he became a junior clerk in the office of incoming correspondence.

He attracted the attention of Sulṭan Mahmūd II [*q.v.*] when accompanying the latter on his tour of Edirne and Gelibolu. He also joined the entourage of Pertew Pasha [*q.v.*], whose protégé he became, just like his more famous contemporary Muṣṭafā Reshīd [*q.v.*]. In 1834 he succeeded Reshid in the position of assistant-receiver (*Āmedī Wekīli*). Next year, Ṣādiḳ Rifʿat was appointed Ottoman ambassador to Vienna, where he gained the friendship of the Austrian chancellor Prince Metternich, but struck Joseph von Hammer as a novice in diplomacy. During his stay in Vienna, he wrote a memorandum on the "circumstances of Europe" (*Awrupā aḥwālīna dāʾir risāle*, 1837) in which he pointed out the importance of security of life and property and of rational bureaucratic practices, and advocated devoting more attention to trade and industry. According to Ṣādiḳ Rifʿat, the old Ottoman condescension towards people engaged in trade should end and productivity should be made a central aim of the Ottoman government. The ideas put forward in the memorandum resembled the provisions of the Anglo-Ottoman trade treaty of Balta Limānī of 1838 and of the famous Gülkhāne edict which issued in the *Tanẓīmāt* reforms in 1839.

In 1840, Ṣādiḳ Rifʿat, now under-secretary of state at the Foreign Office, led a mission to Egypt. Shortly after, he was appointed as under-secretary of state at the office of the Grand Vizier. In 1841, he was promoted to the rank of vizier and served as foreign secretary for nine months, the first of four separate tenures of that post (the others being in 1843-5, 1848 and 1853), always for short periods of time. In the same year he joined the *Medjlis-i Wālā-yi Aḥkām-i ʿAdliyye* (Exalted Council for Judicial Ordinances), the main consultative body of the early *Tanẓīmāt* era. After a second stint as ambassador to Austria (1842-3) and his second term as foreign secretary, he rejoined the council and became its chairman (with a seat in the cabinet) in 1845. He was to serve as chairman of the council three more times, in 1848-9, 1850 and 1853-4, after which he joined the newly established *Medjlis-i ʿĀlī-yi Tanẓīmāt* (High Council for Reforms). In between he served as finance minister for three months in 1848, and as minister of state for three months in 1850. In the latter year he also joined the Learned Society (*Endjümen-i Dānish*).

Ṣādiḳ Rifʿat Pasha was a close associate of Reshīd Pasha and a member of the inner circle of reformers all through the 1830s, 1840s and 1850s. He was a strong supporter of the secularisation of the legal and educational systems and, like Reshīd, ʿAlī and Fuʾād Pashas, both preached and practiced the simplification of the Ottoman chancery style. Against the expectations of many of his contemporaries, he never attained the Grand Vizierate.

Ṣādiḳ Rifʿat Pasha died on 11 January 1857 and was buried in Eyyūb. He left a daughter (who was married to a son of Muṣṭafā Reshīd Pasha, Aḥmed Djelāl Pasha) and a son, Meḥmed Raʾūf Pasha, who edited and published a number of his father's memoranda under the title *Muntakhabāt-i āthār-i Rifʿat* (Selected Writings of Rifʿat). Another small work, called *Risāle-yi akhlāḳ* (Treatise on morals) was for some time used in Ottoman schools.

(E.J. ZÜRCHER)

ṢADĪḲĪ (the transcription often used by Indian numismatists of what should correctly be ṢIDDĪḲĪ), the name given by Tīpū Sulṭān of Mysore [see MAHISUR] to a gold coin of the value of two pagodas (Port. *pardao*, the name of a gold coin long current in South India in pre-modern times and for which various etymologies have been propounded; see Yule-Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, 652-7, 672-8), weighing 106 grains (= 6.87 gr). The name Ṣiddīḳī derives from the epithet borne by the first caliph Abū Bakr [*q.v.*] al-Ṣiddīḳ, in accordance with Tīpū's custom of naming the denominations of his coins after the first caliphs and the Shīʿī imāms.

(J. ALLAN*)

AL-**ṢĀDIḲIYYA**, AL-MADRASA, in Tunisian Arabic eṣ-Ṣādḳiyya, in French, le Collège Sadiki, a prestigious educational establishment, founded by a decree of Muḥammad al-Ṣādiḳ Bey [*q.v.*] of Tunis on 5 Dhu 'l-Ḥidjdja 1291/13 January 1875 on the advice of the reforming minister Khayr al-Dīn [*q.v.*].

Its foundation marked the culmination of a period of reflection by the reforming élite in Tunisia which, from the middle of the 19th century, opened its eyes to the modern world, was disturbed at the social, cultural and economic backwardness of the country, and had the curiosity to make itself familiar with the sciences of the West. It took into account the fact that all reform, political or administrative, would necessarily involve the updating of teaching methods, the development of the programme of studies and its extension to as great a number as possible of pupils.

The foundation statue of the Ṣādiḳiyya envisaged a double objective: (1) conservation, "revivification" (*iḥyā*ʾ) and renovation (*tad̲j̲dīd*) of the Arabo-Muslim cultural inheritance; and (2) an opening-up to the new world, in its various cultural forms: the mastery of foreign languages as a basic means of communication, and an initiation into the exact sciences and their manifold applications.

The foundation statue of the Ṣādiḳiyya

The College is meant for young Muslim Tunisians (art. 29); instruction there is free (art. 31). There are to be two categories of pupils (resident ones with bursaries, those with half-bursaries and those living externally). Three levels of instruction are envisaged: (1) Primary, in which is to be taught reading and writing, Ḳurʾān recitation, Prophetic tradition and the usual manuals of Islamic studies (*mutūn*); (2) Second level, in which the legal science of the *s̲h̲arīʿa* are to be taught; and (3) (and here are the innovations) the teaching of the exact and modern sciences (mathematics, inc. algebra, geometry, mensuration, engineering); cosmography; geography; natural sciences (the elements of medicine, vertinary science, botany, zoology, mineralogy, agriculture and chemistry); political science and legislation; and, in a word, "everything not prohibited by the *s̲h̲arʿ*, which it is necessary to make available to the Muslim community so that it may organise services of public value" (art. 25).

This third level was to take seven years. Art. 23 envisages the possibility for graduates of "continuing their studies" for a further seven years at the most. This last rule was in effect used in order to send certain pupils to France, Turkey and England; from 1878 to 1881 a dozen students followed courses at the Lycée Saint-Louis in Paris.

Installation of the Ṣādiḳiyya

The effective inauguration of the Ṣādiḳiyya took place on 20 Muḥarram 1292/27 February 1875. The "new school" was at that time installed in Tunis in a former barracks in the rue Ezzenaidya (*al-zanāʾidiyya* "the armourers"), baptised under the French Protectorate as the rue de l'Eglise, and is situated at the present in no. 55 in the rue D̲j̲āmiʿ al-Zaytūna. In 1897, the College was moved to a new building, in Arabo-Mag̲h̲ribī style, dominating the hill over the Ḳaṣba, and which gave place to the Administration of the Habous (*ḥubūs, awḳāf*) and then to an annexe of the National Library (Periodicals Service).

Financial arrangements

In order to provide the College with an assured and autonomous budget, K̲h̲ayr al-Dīn allotted to it the greater part of the properties of the former chief minister, Muṣṭafā K̲h̲aznadār [*q.v.*], confiscated by the state. These comprised enormous rural estates, olive groves, building plots in Tunis itself (Tunis-Marine) and in its outskirts (La Goulette, La Marsa, etc.), and houses and shops in the city centre. "By a decree of 10 March 1875, the properties forming the endowment of the Ṣādiḳi College were made into an habous (*ḥubus*) as property held in mainmort, of a religious nature and inalienable. Under the able administration of Muḥammad al-ʿĀrif, the College's finances rapidly prospered". These habous were valued in 1906 at about 20 million francs.

However, from the beginning of the Protectorate, the speculations of European colons, supported by the French administration, allowed, by means of a legal fiction or ruse (*ḥīla*), the disastrous exchange (*ʿiwaḍ*) of the rich properties of the North (*ca.* 4,000 ha) against rents "of enzel" (*inzāl* [*q.v.* in Suppl.]) or permanent lease), which could be subsequently bought out for the future payment of twenty annual payments.

Practical arrangements and their variations

A decree of 28 March 1906 (2 Ṣafar 1324) fixed the number of resident pupils of the College at 40, whilst that of the half-bursary holders was not to exceed 100.

These pupils were admitted after a competitive examination embracing the whole of Tunisia. A certificate of elementary primary studies was required of all candidates, whose age had to be (on the 31 December of the year of the competition) between 12 and 15. Between 1906 and 1929 the total number of pupils was 625. In comparison, one may note that in 1905, there were at the Lycée Carnot 846 pupils, including 44 Tunisian Muslims. It was not till the 1930s, under the direction of Gabriel Mérat, that numbers passed the peak of 160. But it was above all under the direction of a former pupil of the College, the first Tunisian who had surmounted the barrier of the competition for agregation in Arabic language and literature, Muḥammad ʿAṭiyya, that its evolution became spectacular. The number of pupils admitted to the entrance competition passed, in 1951, the maximum of 305. The effective total was multiplied by ten, and the prodigious efforts of the director were crowned by the building, on a plot of land belonging to the Crown demesnes, of an annexe to the College, the Lycée K̲h̲aznadār, to which the internal and part of the external students were transferred.

The syllabuses and their successive reform

It was political considerations which usually determined the changes in teaching programmes. Thus it was that, at the beginning of the Protectorate from 1882, the French Minister-Resident Paul Cambon understood the services which the College could render to the new administration. Under the direction of Delmas, in 1892, the secondary education syllabus was modified: kept at a level below that of the lycées, in the scientific field, instruction took on above all a practical and professional aspect. Special courses in literary, administrative and legal translation were introduced there in the light of the certificate and higher diploma in Arabic required for entry into the public service (decree of 1888). The first graduates of the Ṣādiḳiyya were caught up by the administration, which dangled before the eyes of the youth an assured position and treatment. The Ṣādiḳiyya ceased to be basically a place for shaping the learned education of Tunisian youth, but became a "nursery" for officials of the Protectorate administration, a "producer of white-collar workers".

After 1934, the director ʿAṭiyya, going back to the spirit of the College's founder and the letter of its foundation statue (respect for and preservation of the national heritage, with an opening on to the modern world), brought the syllabuses up to the scientific level required by the baccalauréat and assured Arabic language and literature of an adequate role. He diversified studies and, at the second level of instruction, increased the number of specialised sections corresponding to the different series of the baccalauréat:

Section A: classical literature (Latin and Greek introduced for the first time, whence, eventually, were formed cadres for the archaeological service and teachers of the history of ancient Tunisia).

Section B: Sciences plus languages (English, then Italian and German).

Section C: Latin plus sciences.

Section D (crowned by the sole Diploma of completed studies), an education on an administrative (legislative) and legal (elements of law and Islamic jurisprudence) basis.

An innovation should be noted. The director of the Ṣādiḳiyya could admit, as an option at the oral examination for the baccalauréat, questions on Arab-

Islamic philosophy (al-Fārābī, the Ikhwān al-Ṣafāʾ, Ibn Sīnā, Ibn Khaldūn, etc.).

The success of the Ṣādiḳiyya encouraged an increasing demand from Tunisians for it to be extended to other establishments. After 1944, the Direction of Public Instruction decided to create, on the same model, classes which were described as "Ṣādiḳian" and then "Tunisian" in a number of lycées and colleges: the College Aaloui, the Lycées of Sousse and Sfax and even, under pressure from the Union of Tunisian employees in Public Education, at the Lycée Carnot in Tunis and, for Muslim girls, at the Lycée Louis-René Millet in the rue du Pacha in Tunis.

In 1955, the numbers of participants in the "Tunisian" classes reached 6,000. Studies there were crowned by the "Diploma of Ṣādiḳian studies", which was replaced, after Independence in 1957, by that of the "Tunisian baccalauréat".

Finally, one should mention the indelible impact which the Ṣādiḳiyya has had on Tunisian society, quite apart from its role in the domain of education. "By bringing together on the same benches, in the same refectory and dormitory, children from all classes of this society, Sadiki went on to create the democratic education of youth ... Thanks to the possibility of boarding there, provincials and country-dwellers, hitherto disdained (as *āfāḳīs*) by the children of the capital, found themselves in contact with each other, and learned to know and love each other" (Ali Bach Hamba, 1906).

A mixing-together of youth from all social levels, a free comradeship and close solidarity of feeling, an atmosphere of hard work and a strong feeling of responsibility and duty, have characterised the atmosphere of the Ṣādiḳiyya right up to the present day.

ṢĀDIN (A.), in early Arabia, the guardian of a shrine (abstract noun, *sidāna*).

The root *s - d - n* contains the sense of "veil, curtain", which puts *sādin* on a level with *ḥādjib*, the first term denoting the guardian of a shrine, and the second, the "door-keeper" of a palace, hence "chamberlain". The *ḥādjib* acts under the orders of someone else, whereas the *sādin* acts on his own initiative (*LʿA*, xvii, 69, citing Ibn Barrī). However, the two terms may be found juxtaposed, e.g. in Ibn Hishām, who says, "The Arabs possessed, as well as the Kaʿba, *tawāghīt* which were shrines (*buyūt*: cf. Fahd, *La divination arabe*, 132 ff.) which they used to venerate just as they venerated the Kaʿba; these sanctuaries had *sadana* and *ḥudjdjāb*" (*Sīra*, 55, l. 10). According to him, the personnel of the cult could be reduced to the *sādin* and the *ḥādjib*. The site of the cult itself is called *bayt al-masdan* in a verse attributed to Ruʾba b. al-ʿAdjdjādj (*loc. cit.*, l. 11). For al-Djāḥiẓ, *sādin* belongs to the Djāhiliyya; it is replaced by *ḥādjib* (*Ḥayawān*, i, 160 ult.). Amongst the offices created by Ḳuṣayy [*q.v.*] figures that of the *ḥidjāba* "guardianship of the Kaʿba".

As well as his function as guardian of a shrine, the *sādin* watched over the offerings made to the divinities and practised belomancy [see AL-ISTIḲSĀM BI 'L-AZLĀM]. This was the situation regarding the custodian of the Kaʿba; he shook up the divinatory arrows in the god Hubal's [*q.v.*] quiver.

The *sādin* appears thus in the sources concerning primitive Islam, when Arabian paganism was in full decadence. Going further back and placing him the context of the surrounding Semitic world, one notes that there was both a complementariness and a rivalry between the *sādin* and the *kāhin*. The first had a mantic and augural role, the second, an oracular and ecstatic one. But it often happened that the two were in rivalry and trespassed on each other's territory; also, the absence of one enabled the other to exercise both functions.

SAʿDIYYA, a Ṣūfī *ṭarīḳa* [*q.v.*] and family lineage particularly Syrian and Shāfiʿī in identity, still active today, that grew to prominence also in Ottoman Egypt, Turkey and the Balkans. Notable aspects of the Saʿdiyya are their distinctive rituals and their role in the social history of Damascus. The eponymous founder is Saʿd al-Dīn al-Shaybānī al-Djibāwī (hereafter "Saʿd"). His dates remain uncertain, but most probably fall in the 7-8th/13th-14th centuries. To the extent to which any *ṭarīḳa* may be characterised, the Saʿdiyya is marked by the practice of *khawāriḳ al-ʿādāt* (deeds transcending the natural order, such as healing, spectacles involving body piercing, *ḍarb al-ṣilāḥ*, and, best known, the *dawsa* [*q.v.*], the *shaykh* riding horseback over a "living carpet" of men) and by wide appeal among the middle and lower classes. Few *ʿulamāʾ* appear in the Saʿdī *silsila* and the biographical compendia of notables and *ʿulamāʾ* are ambivalent about Saʿdī activities.

Through successful business and generous extension of their inherited *baraka*, many Damascene Saʿdīs became extremely wealthy and offered a safe haven of hospitality for Ottoman dignitaries at their main *zāwiya* in the tempestuous Mīdān quarter. The order has been fraught with an unusually high level of competitive struggles over the *mashaykha* of the family, the Ṣūfī order and its *awḳāf*. Because the order by and large is hereditary in leadership, family connections predominate over acquired knowledge and training. The Saʿdīs are a good example of the outcome of the combination of saintliness, Ṣūfī organisation and wealth in the Ottoman world.

The encyclopaedic Ṣūfī *silsila* collections of the 11-13/17-19th centuries do not feature the Saʿdiyya prominently. Al-Ḳushāshī (d. 1071/1661), al-ʿUdjaymī (d. 1113/1702) and al-Sanūsī (d. 1276/1859) seem unconcerned with the order, but Murtaḍā al-Zabīdī (d. 1205/1790) received the Saʿdī *ṭarīḳa* from the Damascene Aḥmad al-Manīnī (d. 1173/1759) and gives a second *sanad* following the familiar Djunaydī/Imāmī line (*ʿIḳd al-djawhar fi 'l-dhikr wa-ṭuruḳ al-ilbās wa 'l-talḳīn*, ms. Dār al-Kutub al-Miṣriyya, *taṣawwuf*, 3, 332, p. 58). Kamāl al-Dīn al-Ḥarīrī (d. 1299/1882) presents four *silsilas*, only one of which he received in a personal encounter (*Tibyān wasāʾil al-ḥaḳāʾiḳ fī bayān salāsil al-ṭarāʾiḳ*, ms. Fātiḥ Ibrāhīm 431, ii, fols. 129a-138a). This line, of his Aleppan *shaykh* Muḥammad b. Yāsīn (d. 1292/1875), can be collated with al-Muḥibbī and other sources to form a reasonably reliable *silsila* (*Tibyān*, ii, fols. 130b-131b; *Khulāṣa*, i, 34-5).

1. The founder. The hagiography of Saʿd, eponym of the *ṭarīḳa*, serves a symbolic function for the order. Historical details about him are scant as is literary production by members of the *ṭarīḳa*. A 20th-century Saʿdī *awrād* work puts his birth in Mecca in 460/1067 and his death in Djibā in the Ḥawrān (Golan, see al-Māliḥ, i, 144-5). The year 621, closer

to Margoliouth's 700/1300 reckoning (*EI*[1]), as a death date is more probable (al-Ḥarīrī, iii, 132, and al-Ziriklī, iii, 84-5) but, based on other members of the *silsila*, al-Nabhānī would place Saʿd in the Mamlūk 8th/14th century (*Djāmiʿ karāmāt*, ii, 91). D'Ohsson gives the date of death as 736/1335 (*Tableau général*, iv, 623), which fits with al-Wāsiṭī's comments (see below). Along with al-Ḥarīrī's *ʿĀbiḳ al-sādāt al-adabiyya fī ṭarīḳ al-sādāt al-Saʿdiyya* are two other *manāḳib* works, by Abū Ṭayyib al-ʿIzzī, and Shams al-Dīn Saʿd al-Ḥalabī (see Ḥilmī, 269-70). Al-Muḥibbī's account of Saʿd's transformation into a Ṣūfī *shaykh* is the earliest found (i, 153).

The father of Saʿd al-Dīn, Yūnus al-Shaybānī, is traced genealogically by the Egyptians to Idrīs I, the conqueror of the Maghrib, and, through him and Saʿd's mother, Saʿd is considered both Ḥasanī and Ḥusaynī (al-Khuḍarī, *al-Wafāʾ bi 'l-ʿahd*, 168-9). The Banū Shayba [*q.v.*] have the right to drape the Kaʿba, and in a poem attributed to Saʿd he speaks of being from the "protectors of the Kaʿba" (al-Ḥarīrī, ii, fol. 123b; Abāẓa and al-Ḥāfiẓ, n. 2, 505). He claims, as well, to be the "*shaykh* of each *ṭarīḳa*" as the direct *murīd* of the Prophet. This meeting with the Prophet is the climax of Saʿd's conversion story. The young rebellious son of Yūnus had left Damascus for a life of highway robbery in the Ḥawrān. Either the Prophet alone, or with Abū Bakr and ʿAlī, or with all the "ten promised Paradise"pose as victims of Saʿd al-Dīn on the road. When the answer for Saʿd's demand for goods and money is the first horseman's recital of Ḳurʾān, LVII, 16 "Has not the time come for the hearts of those who believe to turn humbly to the remembrance of God (*dhikr Allāh*)?" Saʿd goes into ecstasy and falls unconscious. The Prophet moistens some dates in his mouth and feeds them to a now-repentant Saʿd. The leader of the *djinn* is revealed, Saʿd takes *ʿahd* from him, returns obediently to his father and God and thence to Djiba, where he dies after establishing a *ṭarīḳa* (al-Muḥibbī, i, 35; al-Witrī, in Bīṭār, i, 12-15; al-Ḥarīrī, ii, fol. 129b). Further *karāmāt* of Saʿd are enumerated in *al-Wafāʾ*, 171-5.

2. *Ṭarīḳa* origins. European sources usually consider the Saʿdiyya to be a Syrian branch of the Rifāʿiyya (Le Chatelier, 214; Depont and Coppolani, 575; Bliss, 245; Gibb and Bowen, ii, 197). Trimingham makes the point by using al-Wāsiṭī's mention of the *khirka Saʿdiyya* in his work on the Rifāʿīs, *Tiryāḳ al-muḥibbīn*, written *ca.* 720/1320 (*The Sūfi orders in Islam*, 73). In fact, al-Wāsiṭī simply lists the Saʿdiyya along with five other Djunaydī *ṭuruḳ* (*Tiryāḳ*, 48-9). Lane's note that the Saʿdiyya is a "celebrated sect of the Rifāʿees" reflects, perhaps, the similarity in practices between the two: loud *dhikr, ḍarb al-ṣilāḥ*, power over snakes, and ingesting live coals and glass (*Manners and customs*..., 222). It is true that the two orders are popular in the same *milieus*. The connection between the orders, however, seems to be traceable to a careful manipulation of Saʿd's spiritual lineage. The Syrian Rifāʿī Abu 'l-Hudā al-Ṣayyādī, Sultan ʿAbd al-Ḥamīd II's Ṣūfī advisor, championed his *ṭarīḳa*. In a work ascribed to his Baghdādī Rifāʿī *shaykh* Muḥammad al-Rawwās (see introd., al-Ṣayyādī, *al-Ṭarīḳa al-Rifāʿiyya*), Saʿd al-Dīn has a father named Mazīd, an intimate *khalīfa* of Aḥmad al-Rifāʿī [see RIFĀʿIYYA] (Yūnus al-Shaybānī is depicted as Saʿd's pious grandfather, *Ṭayy al-sidjill*, 384). He is said to have been initiated by the Rifāʿī saint in 555/1160 outside Damascus. Aḥmad breathed into his mouth and declared "Mazīd, all that is ours is yours" (al-Witrī, cited by al-Bīṭār, i, 14). According to this version of Saʿd's life, after his miraculous conversion, Mazīd clothed Saʿd in his Rifāʿī *khirḳa*, the only one Saʿd wore throughout his life. Several of the European accounts mention Abu 'l-Hudā as their source for *ṭarīḳa* backgrounds (e.g. Depont and Coppolani, where Saʿd is "raised by" Aḥmad al-Rifāʿī, 327, 330). If Abu 'l-Hudā had, indeed, worked to quash Arab nationalism and to have his brand of Arab Sufism the imperial favorite (Abu Manneh, 148 and *passim*), he was clever to subsume the popular Syrian *ḳuṭb* under his own, Rifāʿī, banner. The Saʿdīs, on their part, often have their *ṣāḥib al-ṭarīḳa* born long before Aḥmad al-Rifāʿī (as noted by Le Chatelier in the late 19th century, 211). ʿAlī Mubārak, writing around the same time as Abu 'l-Hudā, states that the Saʿdiyya are independent of al-Rifāʿī (*Khiṭaṭ*, iii, 129). Ḥarīrī, a devoted Rifāʿī, does not link Saʿd to al-Rifāʿī. Any real ties between the two orders remain to be established.

3. History of the *Ṭarīḳa* in Syria. The first Saʿdī for whom we have contemporary accounts is Ḥasan al-Djibāwī (d. 910 or 914), who came from the Ḥawrān to Damascus in the late Mamlūk period. "The women and most of the common folk believed he could cure insanity" by the thaumaturgic qualities of the *basmallah* (al-Nuʿaymī, *al-Dāris*, ii, 221-2), attributed to Saʿd's association with the *djinn*. A *madjdhūb* named Khamīs (or Khalīl, d. 912/1506) is reported by al-Ghazzī as bringing Ḥasan to the Mīdān Fawkānī district of Ḳubaybāt, where he roofed over the unfinished (and unoccupied) tomb of the *nāʾib* Īnāl al-Djākmī for his residence and *zāwiya* (*Kawākib*, i, 191; Wulzinger, 101). From Ṣāliḥiyya ʿAli b. Maymūn (d. 917/1511) took to criticising the obeisance Khamīs required of those who came into Ḥasan's presence, but was later chastened for his ill manners. Ḥasan's son and successor Ḥusayn (d. 926/1519) is the first to display what became a Saʿdī trademark—he served both the spiritually needy and the worldly rulers of Damascus with lavish hospitality at the Saʿdī home (al-Ghazzī, citing Ibn Ṭūlūn [d. 953/1546], *Kawākib*, i, 185). Aḥmad b. Ḥusayn (d. 963/1555) continued the *ṭarīḳa* tradition by holding *ḥalaḳāt al-dhikr* ("free of reprehensible acts and beardless boys"), writing amulets and treating all, *amīr* and *faḳīr*, to banquets at the *zāwiya* (*op. cit.*, ii, 103-4). Saʿd al-Dīn "al-Aṣghar" (d. 986/1578) renovated the *zāwiya* in 964 and was one of only two *aʿyān* mentioned at the inaugural *khuṭba* at the Sulaymāniyya in 967 (iii, 157). It is worth noting that the Saʿdīs never switched from the Shāfiʿī to the Ottoman Ḥanafī *madhhab*.

One of many inner-*ṭarīḳa* struggles occurred among the wealthy Aleppan Saʿdīs, whose *zāwiya* stood outside Bāb al-Naṣr. They held a large *dhikr*, mainly with *fallāḥī* participants, at the Umayyad Mosques of Aleppo. Sh. Abu 'l-Wafāʾ (d. 1010/1601) was reported to the Damascene Sh. Saʿd al-Dīn by a slighted Aleppan for being guilty of sexual misconduct. Saʿd al-Dīn was convinced to strip the *khilāfa* from Abu 'l-Wafāʾ and to confer it on one ʿAbd al-Raḥīm in a written document, which neither Abu 'l-Wafāʾ nor his disciples obeyed. Thus two competing circles of Saʿdī *dhikr* took place in the mosque. The scandal, according to al-Muḥibbī, was not Abu 'l-Wafāʾ's violent temper or profligacy (Margoliouth, *EI*[1]) but the climate of *fitna* in the mosque as the two groups hurled abuse at each other during *dhikr*, such that people came to hate both sides (*Khulāṣa*, i, 152-4). Saʿd al-Dīn's son Muḥammad came to Aleppo, bemoaned his father's involvement in the affair and ordered the two groups to separate places in the mosque. Abu 'l-Wafāʾ's brother and successor Aḥmad (d. 1034/1624), a pious and humble man,

avoided conflict with ^cAbd al-Raḥīm's *fuḳarā'* (al-Muḥibbī, i, 298-9).

A bitter struggle between the brothers Ibrāhīm (d. 1008/1599) and Muḥammad b. Muḥammad (d. 1020/1611) led to the former's being ousted from heading the Sa^cdī *dhikr* at the Umayyad Mosque and from the family complex in Ḳubaybāt (al-Būrīnī, i, 305-6). Muḥammad held control of *mashyakhat Banī Sa^cd al-Dīn* and *sadjdjādat al-ṭarīḳ* for 35 years in Damascus. Holdings in agricultural and commercial properties, along with continuous gifts, made him one of the wealthiest men of his time (al-Muḥibbī, iv, 160-1). Ottoman rulers were frequent visitors at the *zāwiya*, and Muḥammad was invited to their homes. Guests describe the daily elaborate four-part ritual at the *zāwiya* of offering rare coffees, sweets, savories and perfumes (al-Ghazzī, *Luṭf al-samar*, 56-61). In a telling scene in 1118/1706, Ibn Kannān points out that while most of the great *^culamā'* (including the three local *muftīs*) witnessed Muḥammad al-^cImādī's ceremonial first *dars* at the Sulaymāniyya, the Ottoman Ḳāḍī ^cĀrif was absent that day; he was at the shrine of Sayyida Zaynab with a Sa^cdī *shaykh* in the company of a crowd of men and women (*Ḥawādith*, 104-5).

A second Sa^cdī *zāwiya*, in Shāghūr, was headed by Abu 'l-Wafā' Ibrāhīm (d. 1170/1756). Received by three Ottoman sultans in Istanbul, he established *zāwiyas* and appointed *khalīfas*, probably for the first time outside the hereditary line, in Anatolia, Egypt and Aleppo. The new order was the Sa^cdiyya-Wafā'iyya (Ḥilmī, 270, not to be confused with the Egyptian Shādhiliyya-Wafā'iyya). For years the *mutawallī* of the Umayyad Mosque *awḳāf*, this Abu 'l-Wafā' appears faultless in the book of the Ḳubaybātī al-Budayrī (who calls him "our *shaykh*," *Ḥawādith*, 192-3; cf. Ibn Kannān, 430) but foppish in al-Murādī (for dragging his robes of state through the *sūḳ* and eating delicacies in common coffeehouses, *Silk*, i, 41-2). Abu 'l-Wafā' is remembered for having turned over supervision of the Umayyad *awḳāf* to two Ottoman functionaries, who, after paying him a monthly stipend, spent the remaining vast income on themselves. In 1160/1747 Abu 'l-Wafā' led supplicants to Sayyida Zaynab to pray for relief from the plague of locusts that year. The day culminated with his *dawsa* in front of the governor's palace (al-Budayrī, 91). The following year he intervened between imperial forces (*ḳabī ḳūl*) and a coalition of residents and local troops (*yerliyya*) in Mīdān. Treated with respect by the rebels, Abu 'l-Wafā' nevertheless seems closer to the eventually victorious government powers (al-Budayrī 117-8, 131). The Shāghūr *zāwiya*, in Zaḳāḳ al-Shaykh, is today called "Masdjid al-Zāwiya" (al-^cUlabī, 419-20; cf. Aḥmad al-Sa^cdī's minaret inscription catalogued by Khālid Mu^cādh, dated 1187/1773-4).

Sa^cdī involvement in clashes between the central authorities and the Mīdān continued throughout the Ottoman era. Centred in the midst of this important commercial quarter, known for recalcitrance, the Ṣūfī family may, at times, have stood for localist sentiment (Schilcher, 18-9), but, more often than not, displayed a prudent pro-imperial stance. (It should be noted that Sultans Maḥmūd I, ^cAbd al-Medjīd and ^cAbd al-Ḥamīd II financed renovations at the Djibā Sa^cdī shrine; De Jong, *Les confréries ... Machreq arabe*, 212.)

^cAbd Allāh al-Čatadjī, who later was called "Conqueror of Damascus" by the Porte, began his term as governor in 1171/1757-8 by marshaling all non-Damascene soldiery, along with the Ḳābī Ḳūl, to crush the Yerliyya and the population of Mīdān (for his pilgrimage route victories, see al-Barzandjī, *al-Nafḥ al-farajī fī 'l-fatḥ al-djatadjī*, ms. Asas 8724). His troops looted over 20,000 homes and businesses, molested women and girls, killing young and old indiscriminately along their way to the southern end of Bāb Allāh. "The worst calamity since Tīmūr", proclaimed al-Budayrī (213-15), the people emerging after the call of 'All's well' "looking like the living dead" (Mikhā'īl al-Dimashḳī, n. 1, 215 of al-Budayrī). After ^cAbd Allāh called off the plunder, he ordered the loot be deposited in sanctuary mosque sites. The most precious goods were put in the Sa^cdī *zāwiya* in Mīdān; they mysteriously disappeared (*ibid.*; Budayrī is ambiguous about the circumstances).

Under the Egyptian occupation (1831-9), the Sa^cdī compound clearly served as a refuge for resisting factions. To punish the Mīdānīs for sheltering a fugitive, an Egyptian contingent raided the *zāwiya* and captured twenty men for exile or execution (cf. *Mudhakkirāt ... ḥamlat Ibrāhīm Bāshā*, 64-5). The *shaykh* at the time could have been Khalīl al-Sa^cdī (d. 1264/1847), whom Turkish pilgrims sought (Bīṭār, i, 592; Shaṭṭī, 115-16) or Ibrāhīm b. Muṣṭafā al-Sa^cdī (d. 1282/1865, Bīṭār's father-in-law, *Ḥilya*, i, 12-15).

A Sa^cdī sub-order, the Taghlibiyya, is traced either to a brother (Hilāl, in Shaṭṭī, 301) or son (Muḥammad al-Sādis, in Ḥilmī, 270) of Sa^cd al-Dīn. Noted for the *dawsa* and other *karāmāt*, their most famous *shaykh* was ^cAbd al-Ḳādir al-Taghlibī (d. 1135/1722). A great Ḥanbalī scholar, he took over Abu 'l-Mawāhib b. ^cAbd al-Bāḳī's *fiḳh* lessons at the Umayyad mosque and was known for writing amulets for the ill (*Silk*, iii, 58; al-Shaṭṭī, 301). The Taghāliba use the *nisba* al-Shaybānī for their branch (cf. *Idjāza fī 'l-ṭarīḳa al-Shaybāniyya al-Sa^cdiyya*, ms. Asad 9485; al-Shaṭṭī, 218-19). *Dhikr* was held at the ^cAmāra home (al-Ḥarīrī, i, 211; Bīṭār, ii, 1135). The Taghlibī house is now under the Ministry of Awḳāf, but a diminished *dhikr* takes place in a nearby location.

In addition to the Mīdān and Shāghūr centres, in 1282/1865 Muḥammad b. Amīn (d. 1285/1868) endowed his Ḳaymarī home as a Sa^cdī *zāwiya*. He then traveled to Istanbul to win control of all the Djibā *awḳāf*. His son Ibrāhīm held the *mashyakha* for 50 years, gathering *^culamā'* and rulers to himself (al-Ḥiṣnī, 832; al-Shaṭṭī, 248-9). Disputes over revenues put this family at odds with the leadership at Djibā, where all residents are considered descendants of Sa^cd (De Jong, *op. cit.*, 213). A visitor still encounters ecstatic *ḥaḍras* at the shrine, attached to a large modern mosque, with musical accompaniment and body piercing. Families camp out, hoping for a cure from the *walī* for mentally disturbed relatives.

The Ḳaymarī *zāwiya* received a hair of the Prophet from Sultan ^cAbd al-Ḥamīd. The relic is still brought out on Mi^crādj night as the Sa^cdī genealogy is presented to the President (or his representative) for his signature. Well into the 1960s, the Sa^cdiyya were hosts for the main Ramaḍān *dhikr* celebrations (Kayyāl, 107-9), but they no longer accept initiates in Damascus. De Jong notes active Sa^cdīs in Aleppo, Ḥamā, Ḥimṣ and the Ḥawrān (*op. cit.*, 212-13). The Sa^cdīs, as a native Syrian Ṣūfī family, continued to inspire reverence, especially in Mīdān. When the "fresh" corpse of Ḥasan al-Djibāwī was moved recently, witnesses saw crowds take away handfuls of the sweet-smelling soil from the grave. At contemporary Ḳādirī *dhikrs* in Damascus, Sa^cd is called upon as one of four great *ḳuṭbs*.

4. Egypt. According to Egyptian Sa^cdī accounts, the order came to Cairo with Yūnus, one of nine sons of Sa^cd al-Dīn, who is credited with beginning the *dawsa* (*al-Wafā'*, 170-1; cf. ^cAlī Mubārak, ii, 71-2).

Saʿdī conflation between the elder, holy Yūnus al-Shaybānī and this son seems possible. The Fāṭimid dome over the Saʿdī shrine at Bāb al-Naṣr has been positively identified as that of Badr al-Djamāli, *amīr al-djuyūsh* under al-Mustanṣir (r. 427-87/1036-94; Raghib, *Le mausolee*..., 307), so the Saʿdīs in Cairo, also, are located in a pre-established tomb. Al-Maḳrīzī (d. 845/1441) does not mention Saʿdīs at the *turba* of al-Djamali; the propagator of the *ṭarīḳa* in Egypt would have been a much later descendant (*Khiṭaṭ*, i, 364). The first *shaykh* of the Damascene line to be buried at the Bāb al-Naṣr site, after Yūnus, is Aḥmad al-Saʿdī (d. 12th/18th century), but earlier generations emigrated from Syria and were buried elsewhere. Although ʿAbd al-Ghanī al-Nābulusī (d. 1143/1731) praised the Syrian Saʿdiyya in a poem (al-Ḥarīrī, ii, fols. 131a-b), he did not visit the Djibā tomb, and when he happened by chance upon a Saʿdī *dhikr* at the Ḥākim Mosque in Cairo, he participated without enthusiasm (in 1105/1693, *Ḥaḳīḳa*, 263, 423). Al-Djabartī, in describing events of the French invasion in 1218/1798, mentions the Saʿdiyya as joining with the ulema at al-Azhar to pray for deliverance (*ʿAdjāʾib*, iv, 291-2). The Cairene *mashyakha* passed two times to matrilineal descendants (to the Munzalāwīs, *khaṭībs* at the Ḥusayn Mosque, and to the Khuḍarīs).

The Saʿdīs, because of the *dawsa*, are central in the story of state regulation of Egyptian *ṭuruḳ*. Banned in 1881 by the Khedive Tawfīḳ, the prohibition seems to have been more the result of European than Muslim reformist pressure (its loss is bemoaned by McPherson, who blames secular modernism and "Americanism", *Moulids*, 26-8, 56, 264; see de Jong, *Ṭuruq*, 96-8). There is little doubt that the Saʿdīs' position weakened. In 1289/1872 they were at the head of ʿAlī al-Bakrī's convention of *mashāyikh*. In 1905, Saʿdiyya are placed last in the ranks of the official *ṭuruḳ* processions (*op. cit.*, 67, 214). In modern times, Sh. Ḥamūda al-Khuḍarī proclaimed that music in the *dhikr* is not allowed "in the houses of God" and that all dance and self-mutilation are not allowed. The current *shaykh*, ʿAlī b. Ḥamūda al-Khuḍarī, presides over mild *ḥaḍras* during the Saʿdī night in Ramaḍān at the Ḥusayn Mosque (under the aegis of Dr. Abu 'l-Wafāʾ al-Taftazānī, *shaykh mashāyikh al-ṭuruḳ*, see *Taṣawwuf al-Islāmī*, February 1994, 73). Sh. ʿAlī claims authority over the Saʿdīs "in all Islamic lands" from the Bāb al-Naṣr *zāwiya*. The *ṭarīḳa* is one of the most popular in Upper Egypt. In 1984 N. Biegman photographed Saʿdī *dawsas* in Abul Qumsan, where the chief of police, obeying instructions given him in a dream, allows all Ṣūfī practices (*Egypt*, 14, 160-4). The restraining influence of urban society has restricted Saʿdī practice both in Syria and Egypt.

5. Turkey. The earliest spread of the Saʿdiyya dates most likely from Abu 'l-Wafāʾ al-Shāghūrī's Turkish visits in the 12th/18th century. Gölpınarlı adds two other transmissions: by Sh. ʿAbd al-Salām (d. 1165/1751) and by Sh ʿOthmān from Kastamonu (*Mezhepler ve tarikatler*, 203-4). We have information about Saʿdī *tekkes* in Istanbul, but the fluidity of *ṭarīḳa* identity at *tekkes* should be kept in mind (Kreiser, *Dervish living*, 51). Of the 259 opportunities to attend different *dhikrs* each week in 19th-century Istanbul, 26 are Saʿdī (greater numbers of Khalwatī, Ḳādirī, Naḳshbandī and Rifāʿī gatherings are listed, *Tekkiye risalesi*, ms. Berlin or. 2792, 1-17). The last official survey of Istanbul *tekkes* mentions 25 Saʿdī *tekkes*, concentrated mainly along the Golden Horn (*Medjmūʿa-yi tekāyā*, publ. 1307/1889, cited in *İA*, art. *Istanbul*). S. Anderson and Brown come close to this figure for the turn of the 20th century (*Dervish orders*, 53-61, and *Dervishes*, 478-80, respectively). Dhākir Shükrī Ef.'s compilation of 1400 Ṣūfī *shaykhs* serving 159 Istanbul *tekkes* from the 10th-14th centuries A.H. includes only fourteen Saʿdīs (out of a total of 349 figures whose *ṭarīḳa* affiliation is stated, *Die Istanbuler Derwischkonvente*, 109-13). Evidence suggests that the Ottoman state attempted to institutionalise the orders in Turkey on the Mewlevī and Bektāshī "mother *zāwiya*" model. The same year in which Muḥammad ʿAlī gave Muḥammad al-Bakrī leadership over the Egyptian *ṭuruḳ* (1812), Sultan Maḥmūd II ordered all Saʿdī *tekkes* to recognise the ʿAbdül-Selām as their *āsitāne* (Kreiser, *Notes ... Turquie*, 56. For other regulating moves before the abolition of the *ṭuruḳ* in 1925, see Kara, *Tekkeler ve zaviyeler*, 255-84).

6. The Balkans. Depont and Coppolani noted Saʿdī centres in several Libyan locations and in the Ḥidjāz (*Les confreries religieuses*, 331-2), and de Jong mentions a Sudanese branch of the Egyptian Saʿdiyya (*Ṭuruq*, n. 218, 178) but the most important implantation of the order outside Syria, Egypt and Turkey occurred in the Balkans, where it continues today. A strong connection existed between local Saʿdī leaders there and the Damascene Saʿdīs, who issued *khilāfātnāmes* to the *āsitānes* in Djakovica and Prizren (Popovics, *Une texte*..., 339). Dates for their arrival are uncertain, but by the 18th century Saʿdī *tekkes* were established in Kosovo, Macedonia, Southern Serbia and in Belgrade (Popovic, *op. cit.*, 342). In 1947 they joined with eight other orders, representing between 60 and 100 *tekkes*, to form an organisation distinct from the official Sunnī community (known as ZIDRA, *Zajednica islamskih derviških redova Alije u SFRJ*, former Yugoslavia, cf. Popovic, *Contemporary situation*, 244-5).

A similar body was founded in Albania in 1936, called the "Divine Light" (*Drita Hyjnore*, *op. cit.*, n. 19, 250). The founder of the Saʿdiyya-ʿĀdjiziyya in Albania, Adjize Baba (from Bushat) was initiated into the order by Abu 'l-Wafāʾ al-Shāghūrī in Istanbul. He constructed the first Saʿdī *tekke* in Djakovica in 1111/1699 (Norton, *Islam*..., 245; Clayer, *L'Albanie*, 163-70). The order may have been introduced earlier, in Tepelen, by Demir Han, a semi-legendary figure from the Crimea. Claimed also by the Bektāshīs, he received the Saʿdī *ṭarīḳa* at the Djibā shrine in Syria. Ewliyā Čelebi does not mention a Saʿdī *tekke* on his visit to Tepelen in 1081/1670; Demir Han probably belongs to a later period (*ibid.*).

Finally, it may be noted that in the popular imagination the Saʿdiyya are linked with the Banū Saʿd, the tribe of the Prophet's wet-nurse Ḥalīma, whose milk was so abundant "she gave more than she could have hoped for" (*al-Wafāʾ*, 164-5). It is not surprising, then, that in addition to other healing talents, al-Murādī points out the Saʿdīs' ability to bolster poor milk supply by passing their hands over a mother's garments (*Silk*, iv, 221).

(BARBARA VON SCHLEGELL)

SĀDJ (A.) (Aramaic *shāghā*, from Skr. *saka-*) is the teak tree, *Tectona grandis* L., of the family of the *Verbenaceae*.

This tree, indigenous to the Indian subcontinent and to South-East Asia, is above all coveted for its hard and extraordinarily durable wood and is of particular importance for ship-building and furniture industry. The tree and its qualities are described in detail by the Arabic authors. *Sādj* is the highest tree in the world; it towers high into the air (*yaʿlū fī 'l-hawāʾ* [var. *'l-samāʾ*]) and has such a width that a multitude of people find a place in its shadow. The wood does not alter even in the advanced age of the tree; it does not decay, nor is it eaten by worms. Its leaves are the elephants' favourite food. They are longer and wider than those of the banana tree (*al-mawz*), and so people wrap themselves in a leaf for protection against the rain. The form of the leaves resembles that of Daylamī shields (*al-tirās al-daylamiyya*). The wood is of a red colour, occasionally turning to black, has a pleasant scent like that of the walnut tree (*al-djawz*) and is therefore used in ʿIrāḳ, and especially in Baghdād, for house building. From its fruits, which have the size of areca nuts, a thick, blackish oil, the so-called teak oil (*duhn al-sādj*), is won. The secretion from the pouch of the musk deer [see MISK] is adulterated with teak oil by dribbling the latter into the pouch. The teak oil disappears completely in the musk and can no more be separated from it nor is it discernible any more; on the other hand, the teak oil increases the weight of the pouch. Only if the musk, when dried and pulverised, does not stick to the object with which it has been pulverised, is it unaltered; if it does stick, it has been adulterated with teak oil.

The most important healing powers ascribed to *sādj* are the following. If the wood, after burning, is extinguished with the juice of the horned poppy (*Glaucium corniculatum* L., *Papaveraceae*) and the remainder crushed and sieved, the powder thus obtained strengthens the pupils if rubbed on the eyes, and it helps against ulcers on the eyelids. If wood dust, obtained by abrading a piece of teak wood on a stone, is mixed with rose water, it heals the eyes and removes headaches. Mixed with water, the dust helps against purulent and bleeding ulcers and dissolves them. *Sādj* oil helps against fever and thirst, and, if taken with honey water, removes heat from the abdomen and stimulates hair growth.

SADJʿ (A.), originally, the formal expression of the oracular pronouncement.

1. As magical utterances in pre-Islamic Arabian usage.

Here, *sadjʿ* was the rhythmical style practised by the Arab *kāhins* [*q.v.*] and *kāhinas* [see AL-KĀHINA], a style intermediate between that of the versified oracular utterances of the Sibylls and Pythians and that of the prose utterances of Apollo (see P. Amandry, *La mantique apollinienne à Delphes. Essai sur le fonctionnement de l'oracle*, diss. Paris 1950, 15). These utterances are "formulated in short, rhymed phrases, with rhythmical cadences and the use of an obscure, archaising, bizarre and cabalistic vocabulary" (Fahd, *La divination arabe*, 152). Some have sought to see in them an imitation of the repeated, jerky and monotonous cooing of a pigeon or dove (*TʿA*, v, 370, ll. 13 ff.) or the drawn-out and monotonous moaning of a camel (*ibid.*, ll. 10 ff.).

In origin, *sadjʿ* denoted the *kāhin*'s entry into a trance, the oracular utterance issuing from this state,

and then the stylistic form of this utterance (details in Fahd, *op. cit.*, 152 ff.). "The fact that it was most often practised by the *kāhinas* (cf. *ibid.*, 98-102), that it was used in magical formulae of cursing, prayers of deprecation and charms, and that it was believed to be understood by the djinn and animals (Lammens, *Le culte des Bétyles et les processions religieuses chez les Arabes pré-islamites*, in *BIFAO*, xvii [1919-20], 50), shows that its usage goes back to far antiquity. A Sumerian origin for it is not excluded, since *shugītu*, fem. of *shegu* (Akk. and Hebr. *sh-g-ᶜ*, Ar. *s-dj-ᶜ*), borrowed from Sumerian, designates the hierodule (Bezold, *Babyl.-Assyr. Glossar*, 265), who had to act as oracle in the temple where she officiated" (Fahd, *op. cit.*, 152).

According to I. Goldziher, *sadjᶜ* formed the prehistory of Arabic poetic metre, since *radjaz* [*q.v.*], the oldest meter of Arabic prosody, is nothing but "ein rhythmisch discipliniertes *sağᶜ*" (*Abhandl. zur arab. Philologie*, i, 76; the same opinion by Wellhausen, *Reste*, ²135 n. 3), whilst Landberg (*La langue arabe et ses dialectes*, Leiden 1905, 7112) rejected this view and thought that *radjaz* and *sadjᶜ* were equally ancient (cf. A. Musil, *The manners and customs of the Rwala Bedouins*, New York 1928, 403 ff.). Concerning the connection of *radjaz* and its derivatives *r-dj-s* and *n-dj-s* with the pagan cult, see Fahd, *op. cit.*, 153 ff.

In origin, *sadjᶜ* and *radjaz* must have designated approximately the same idea, sc. the state of ecstasy, the oracular pronouncement which ensued and its formal expression. But gradually, *radjaz* took on a more specialised meaning, sc. that of the oracular utterance of war. Henceforth, *radjaz* was gradually removed from the functions of the *kāhin* and came to approach more closely those of the *shāᶜir* [*q.v.*], two functions primitively combined in one person (see Goldziher, *Die Ğinnen der Dichter*, in *ZDMG*, xlv [1891], 685 ff.; and KĀHIN: Muḥammad considered as *kāhin* and *shāᶜir*), but progressively differentiated, since their respective sources of inspiration grew more diverse. It is in this sense that one can say that *radjaz* was the origin of secular poetry, whereas *sadjᶜ* remained the mode of expression of the diviner, who was always as conservative as the priest with whom he was often identified.

The sources for the first centuries of Islam have preserved for us a large number of oracular pronouncements in *sadjᶜ*, attributed by tradition to the pre-Islamic *kāhins* and *kāhinas*. They are generally considered by critics as "more or less successful pastiches" (R. Blachère, *Introd. au Coran*, 178 n. 242); however, they are taken as pieces of linguistic evidence. Blachère continues, "In effect, these are apocrypha, but capable of evoking compositions now disappeared for ever" (*HLA*, ii, 189-90). And further on, he adds that one might ask oneself whether these apocryphal oracular sayings do not reflect, more than one thinks, the ancient "prophecies" of the *kāhins*, addressing their tribe in a clumsy and unpolished language (192). Nöldeke avoided pronouncing on their ancientness, at the same time allowing this to emerge clearly (*G des Q*, i, 75 n. 1). Wellhausen wrote that the oldest sūras of the Ḳurʾān were the most important pieces of evidence for the style of the *kāhins* (*Reste*², 137 n. 4). Fück averred that the feature of rhyme in the ecstatic outpourings of the ancient diviners was above that of the common language, and this was the same for the Ḳurʾān (*ᶜArabīya*, Fr. tr. Paris 1955, 129-30).

References to these oracular sayings are collected together in Fahd, *op. cit.*, 159 1; their themes have been briefly enumerated by Wellhausen, *op. cit.*, 135, see also Nöldeke, *loc. cit.*). Wellhausen brings out the following features, often borrowed from procedures attested in the Ḳurʾān. The *kuhhān* have the custom of covering themselves at the time of their visions, whence the name Dhu 'l-Khimār "the man with the veiling" given to some of them. They use the poetic form *sadjᶜ*, short, parallel phrases, of which four to six are held together by a single rhyme. He wrote that "das *sağᶜ* ist ohne Zweifel die älteste Form der Poesie, entsprechend dem hebräischen Parallelismus der Glieder" (i, 135 n. 3). They are often themselves surprised in the face of their strange visions and utterances (*mā adrāka*), a formula cited 13 times in the Ḳurʾān but not attested in non-Ḳurʾānic oracular pronouncements. They begin with formulae of swearing, and swear by the sun (XCI, 1), the moon (CXI, 1; LXXIV, 32; LXXXIV, 18) and the stars (LIII, 1; LXXXVI, 1-2), by the evening (LXXXIV, 16; CIII, 1) and the morning (LXXXIX, 1; LXXIV, 34; XCI, 1; XCIII, 1), by the clouds (LI, 2 ?) and the winds (LI, 2; LXXVII, 1 ff. ?), by the mountains (XCV, 1 (Yāḳūt, *Buldān*, i, 911); XCV, 2; LII, 1) and the rivers (LI, 3 ?), by the plants (XC, 1) and animals (C, 1 ff. ?) by the woodpecker (?) and the pigeon (?), by the wolf and the frog (see al-Ṭabarī, i, 1933-4). Nöldeke only enumerates the sites and edges of the roads, animals (?) and birds (?), the day (XCI, 3; XCII, 2) and the night (CXXIV, 33; LXXXIV, 17; XCI, 4; XCII, 1-2), the light and the darkness, the sun, moon and stars, the heavens (LI, 7; LXXXV, 1; LXXXVI, 1, 11; XCI, 5) and the earth (LXXXVI, 12; XCI, 6).

The two authors give shape to the model of the Arabic oracular utterance on the basis of the ancient sūras of the Ḳurʾān, in so far as they are convinced that Muḥammad utilised the style of the inspired persons of Arabia, whose roots go back to the ancient Semitic past. It should, however, be noted that there are some Ḳurʾānic sayings which are marked by the cosmogonic, eschatological and prophetic ideas of monotheism, such as XXXVII, 1 ff.; LII, 1 ff. (cf. XXXVI, 1; XXXVIII, 1; XLIII, 2; XLIV, 2; L, 1); LXVIII, 1; LXXIV, 102; LXXXV, 2; XCI, 7; LI, 1 ff.; LXXVII, 1 ff.; LXXIX, 1 ff.; C, 1 ff.).

There was, consequently, an adaptation in the Ḳurʾān of the oracular saying to the exigencies of the new concepts which it had to express, a process of adaptation made all the more inevitable by the fact that the Prophet aimed at freeing himself from all the compromising forms of paganism in order to place in relief the originality of his own message and its transcendence.

From this fact, one can say that, although its vision of the created universe, whose witness it invokes solemnly, is expressed by the stylistic forms of divination, their spirit and terminology—which must have undergone substantial changes—do not permit us to discern the primitive model which must certainly have been much more sober and poorer in ideas; likewise, in the eyes of the nomads, the image of its inspirer must have been sketchy and the idea which they formed of themselves must have been feeble.

There is an analysis of some oracular utterances representative of the genre in *La divination arabe*, 162 ff.: one of ᶜAmr b. Luḥayy, two of Ṭarīfa, one of the *kāhina* of the Iyād, one of the *kāhin* of the B. Asad, one of the *kāhina* of the B. Ghanm, and those of the legendary Shiḳḳ and Saṭīḥ.

It should finally be noted that the oracular utterance which, in the preceding cases, is spoken through a human intermediary, supported implicitly or explicitly by a spirit, can also be heard without any such intermediary, either by a simple voice crying in

the night—the case of the *hātif* [*q.v.*]—or through an idol—this is ventriloquism, cf. Fahd, *op. cit.*, 171-4—or by the summoning of the spirits of the dead—sc. necromancy [see ISTINZĀL]—or, finally, by the interpretation of the behaviour of living or inanimate objects—this is cleromancy [see FAʾL, ʿIYĀFA, ḲIYĀFA] oneiromancy [see RUʾYĀ] and all similar procedures [see DJAFR, FIRĀSA, ḤURŪF, IKHTILĀDJ, KAFF, KATIF, KHAṬṬ, ḲURʿA and MAYSIR]. All these forms arising out of the oracular utterances can be found attested in the traditional literature.

Bibliography: this article is essentially taken from Fahd, *op. cit.*, Paris 1987, 140-76, where can be found details and references. (T. FAHD)

2. Outside *kahāna* before Islam.

Other uses of rhymed sayings refer to weather phenomena. There are two genres. One is represented by a closed corpus of astrometeorological sayings of the Bedouins, the *nawʾ* adages [see ANWĀʾ], which form a kind of a farmer's calender. They relate the heliacal rising of a star, or group of stars, to certain weather changes and activities connected with them. Characteristically, they start with *idhā ṭalaʿa* [*'l-nadjm*], "when [the Pleiades] rise," and usually consist of between four and six cola rhyming with the name of the star(s). The oldest preserved book on the *anwāʾ* is Ibn Ḳutayba (d. 276/889 [*q.v.*]), *K. al-Anwāʾ*, ed. M. Ḥamīdullāh and Ch. Pellat, Ḥaydarābād-Deccan 1375/1956; here the sayings are introduced with *yaḳūlu sādjiʿu 'l-ʿarab*, "the rhymer of the Arabs/Bedouins says," or, more freely, "a rhymed folk-saying is the following."

The other genre is descriptions of clouds and rain in what one might call Bedouin ornate prose. It is mostly characterised by "strophic" *sadjʿ*, i.e. a change of the rhyme after two, three, or four cola. Typical is also a liberal use of recherché archaic vocabulary. Ibn Durayd (d. 321/933 [*q.v.*]) says at the beginning of his *K. Waṣf al-maṭar wa 'l-saḥāb*, ed. ʿIzz al-Dīn al-Tanūkhī, Damascus 1382/1963: "This is a book in which we have gathered together what the Bedouins (*ʿarab*) before and under Islam have said in the way of rain and cloud description." Some of the specimens collected in his book are clearly Islamic (e.g. at 30-1), others leave the impression of lexical études; but given the enormous importance of spotting rain and pasture, there is nothing inherently unlikely in stylised reports in somewhat hieratic language already before Islam.

Bibliography (in addition to references given in the article): C. Pellat, *Dictons rimés*, anwāʾ *et mansions lunaires chez les Arabes*, in *Arabica*, ii (1955), 17-41. (W.P. HEINRICHS)

3. In Arabic literature of the Islamic period.

Since pre-Islamic times, the word *sadjʿ* in the sense of "to recite or speak with assonances, using cadenced and elaborate language", has denoted a type of more or less rhythmical prose of which the principal characteristic is the use of rhythmic units which are generally quite short (from 4 to 10 syllables, on average), terminated by a clausula. These units are grouped sequentially on a common rhyme. The rhymed or assonanced clausula at the end of each rhythmic unit constitutes the essential element of *sadjʿ*, which is appropriately translated as "rhymed and rhythmic prose". It seems that this mode of expression pre-dates free prose and even metrical poetry, with which it has numerous aspects in common, but from which it is distinguished by the absence of metre and of a single rhyme. In the opinion of some scholars, this stylistic form could have been the origin of metrical and prosodic poetry.

A. *Principal phases in the evolution of* sadjʿ

The origins of sadjʿ *in literature*

Although no doubt apocryphal or corrupt, some examples of pre-Islamic rhymed and rhythmic prose have been preserved. They consist for the most part of proverbs, maxims, stories and legends (R. Blachère, *HLA*, ii, 190). Here there are also found formulas chanted communally on the occasion of the Pilgrimage to Mecca (see *EI*[1], TALBIYA; M. Gaudefroy-Demombynes, *Le pèlerinage à la Mekke*, Paris 1923, 179-80). *Sadjʿ* had, furthermore, close links with magic; for these, see section 1, above. Also, the group of men who led the pre-Islamic Arab tribe often included among its members an eminent orator (*khaṭīb*), who should not be confused with the *kāhin*, although the same person might be both soothsayer and *khaṭīb*.

When he was not a poet himself, "the orator played a role analogous to that of the poet, in acting as the spokesman of the tribe in embassies, gatherings and fairs, also in arousing through his oratory the tribal sentiment of the members of his group" (Ch. Pellat, *Langue et littérature arabes*, 58). A semi-legendary individual, Ḳuss b. Sāʿida al-Iyādī [*q.v.*], was considered the greatest orator of the Djāhiliyya [*q.v.*] (al-Djāḥiẓ, *Bayān*, i, 52). His eloquence became proverbial, so that there were expressions such as *ablagh min Ḳuss* ("more eloquent than Ḳuss") (al-Maydānī, *Madjmaʿ*, i, 117-18). The Prophet Muḥammad, during his adolescence, is supposed to have encountered him delivering a sermon (*khuṭba*) while mounted on his camel at ʿUkāẓ. Then, some years later, the Prophet is said to have had occasion to recite in public a passage from this speech, which is no doubt apocryphal but is famous nonetheless, and which begins thus: *ayyuhā 'l-nās / idjtamiʿū / wa-smaʿū / wa-ʿū /. Man ʿāsha māt / wa-man māta fāt / wa-kullu mā huwa āt*[in] *āt* (*Bayān*, i, 52, 308-9) ("O [good] people/gather [around me] / hear / and ponder / Every living being is mortal / he who dies belongs [for ever] to the past / and everything which [must] come to pass will [assuredly] come to pass").

Connections of sadjʿ *with the Ḳurʾān*

Form and stylistic refinement play a very important role in the Ḳurʾān, of which one of the principal characteristics is assonance. It is striking to ascertain to what extent this monument of the Arabic language is akin to rhymed and rhythmic prose which—without being used there systematically—nevertheless constitutes its most remarkable artistic peculiarity. The sūra "The Men" (*al-Nās*, CXIV), for example, consists of eight very short rhythmic units. By means of examples of this type, the Ḳurʾān fully legitimised *sadjʿ*.

However, instead of profiting from this providential legitimisation, of developing and expanding, rhymed prose, contrary to all expectation, encountered a certain reticence on the part of a large number of the disciples of the new religion. Thus, in spite of this evident kinship and probably on account of it, *sadjʿ* was to experience a net decline and suffer a long eclipse. Although the reasons for this discredit are not entirely clear, it is possible to identify some of the factors responsible. It is known, first of all, that the Prophet Muḥammad was accused on numerous occasions by his adversaries of being a common soothsayer, and that some of them were intent on comparing the revealed text to the vaticinations of the *kuhhān* of the *Djāhiliyya*. On the other hand, the Muslims of the time dissociated themselves from this mode of expression which, in their view, was still too

closely linked to magic and to certain practices belonging to paganism (al-Djāḥiẓ, *Bayān*, i, 289-90).

Furthermore, the decline of rhymed and rhythmic prose was a logical consequence of the dogma of the "inimitability" of the Ḳurʾānic text (*iʿdjaz al-Ḳurʾān*), a principle respected by the entire community. However, in spite of this suspicious attitude towards *sadjʿ*, the latter was never completely banned. It succeeded in surviving, for almost two centuries, especially in the oral form. Muḥammad's oration at the time of the Farewell Pilgrimage in 10/631 belongs within the framework of this oratorical genre which, subsequently, was to enjoy considerable success. After the death of the Prophet, the orators (*al-khuṭabāʾ*) spoke in *sadjʿ* before the first four caliphs without exposing themselves thereby to the least criticism (*Bayān*, i, 290) (but it should nevertheless be noted that, since at that time, many orators used *sadjʿ*-less prose, the authenticity of speeches in *sadjʿ* is very much in question).

Under the Umayyads, the multiplicity of politico-religious parties was a factor favourable to the development of the oratorical art, skilfully cultivated by political figures who knew how to make an impression on audiences who remained in spite of everything very partial to *sadjʿ*. Around the mosques, the tellers of edifying stories (*ḳuṣṣāṣ*, pl. of *ḳaṣṣ* [*q.v.*]) charmed the crowds, telling them edifying stories (*ḳiṣṣa* [*q.v.*]) in seductive language (Pellat, *Le milieu baṣrien*, 108 ff.).

Another resounding speech was that which was delivered by al-Ḥadjdjadj b. Yūsuf [*q.v.*], the new governor of ʿIrāḳ, on arriving in Kūfa in 75/694 (*Bayān*, ii, 138-40; M. Messadi, *Essai sur le rythme*, 117). Of untypical violence, the harangues of al-Ḥadjdjādj were full of threats designed to intimidate all those who opposed the central power of Damascus. In a general fashion, the expansion of Islam played a capital role in the development of the oratorical art.

Official and progressive rehabilitation of sadjʿ

Under the reign of the Umayyad caliph ʿAbd al-Malik (65-85/685-705), Arabic was finally established as the administrative language of the Arabo-Muslim empire. In gradual stages, a specialised bureaucracy came into being. Scribes distinguished themselves in the epistolary genre, official and private. The most eminent among them, ʿAbd al-Ḥamīd b. Yaḥyā, nicknamed al-Kātib (d. 133/750 [*q.v.*]), created the administrative style which was, at the outset, a sort of moderately rhymed and ornate prose. In a well-known epistle (*risāla* [*q.v.*]), he established the rules of the profession of the *kātib* [*q.v.*] and authorised to some extent a more or less discreet return to *sadjʿ*, which progressively becomes fashionable again through the expedients of the administration and of the chancellery.

Ibn al-Muḳaffaʿ (d. *ca.* 140/757 [*q.v.*]), a disciple of ʿAbd al-Ḥamīd, followed the latter's example in composing manuals to be used by scribes. Subsequently, he attempted to extend the use of this elegant but relatively sober style to texts of a more literary nature. This is what he did in his adaptation in Arabic of the Indian fables known by the title of *Kalīla wa-Dimna* [*q.v.*], which is considered one of the first books written in literary prose. The successful experiment was followed up and amplified by a number of authors of the 3rd/9th century and most notably by al-Djāḥiẓ. This author played a primary role in the rehabilitation of *sadjʿ*. He contributed to this by adopting attitudes in favour of rhymed and rhythmic prose, which he defended on numerous occasions in his work and in the *Bayān* in particular (i, 287-91, iii, 29). But the best homage which he rendered to *sadjʿ* consisted in the fact that he practised it himself "with the flexibility, the intelligence and the sense of proportion which appear in all his prose and which give it its subtle and rare quality" (Messadi, *Essai*, 159).

The defeat of the modernist trend and the appearance of the neo-classical movement, which engendered a certain lassitude with regard to ancient poetry, seem to have had the effect of impelling a large number of writers of the 3rd/9th century towards the more free and more varied rhythms of *sadjʿ*.

From the 4th/10th century onward, *sadjʿ* enjoyed immense success. Little by little, it invaded all domains of literature. "It would seem that the basis of this invasion is to be sought in the high respect accorded to the works of poets by the unanimous opinion of the educated classes. Becoming the substance of literature, a fully harmonious prose... represents, in the eyes of people in love with poetry, a Cinderella figure. Her simplicity seems to them like poverty, and in order to improve her condition, they reckon it appropriate to adorn her with at least one of the ornaments of her sister and rival, this being rhyme" (W. Marçais, *La langue arabe*).

In this period, the use of *sadjʿ* became generalised, in the first instance among the secretaries of the administration who adopted the habit of furnishing their texts with rhetorical artifices and literary reminiscencies.

The eminent vizier of the Būyid princes, al-Ṣāḥib Ibn ʿAbbad (326-85/938-95 [*q.v.*]), left a collection of letters of great value. The writer and philosopher Abū Ḥayyān al-Tawḥīdī (d. after 400/1009 [*q.v.*]) is often compared to al-Djāḥiẓ for his style, of which one of the essential characteristics was the use of a *sadjʿ* which was both erudite and simple. Badīʿ al-Zamān al-Hamadhānī (357-97/968-1007 [*q.v.*]) was one of the most illustrious epistolary stylists of the 4th/10th century. After being the protegé of al-Ṣāḥib Ibn ʿAbbād, he went to seek his fortune at Nishāpūr. A collection of his letters in artistic prose has been preserved. There was in fact a veritable explosion at this time of ornate prose, seen further in the *rasāʾil* (collections of which have also been preserved) by Abū Isḥāḳ Ibrāhīm b. Hilāl al-Ṣābiʾ, Abū Bakr al-Khʷārazmī, Ibn al-ʿAmīd and Ḳābūs b. Wushmagīr. It was even used for the writing of history, seen in al-ʿUtbī's *al-Taʾrīkh al-Yamīnī*. Another major name emerges from the host of letter-writers of the later centuries, this being al-Ḳāḍī al-Fāḍil (529-96/1135-1200 [*q.v.*]) who was for a long time the secretary of administration and then associate and vizier of Ṣalāḥ al-Dīn; and he had an equally illustrious "competitor" in Ḍiyāʾ al-Dīn Ibn al-Athīr and his collection of *rasāʾil*, likewise published. The few specimens of his official writings which have been preserved are characterised by the almost systematic use of rhyme, a highly-affected style which tends to be somewhat wearisome, an abundance of metaphors and of rhetorical devices. This style was to serve as a model in the chancelleries of later periods.

The maḳāma [*q.v.*]

Al-Hamadhānī's masterpiece is his collection of "sessions" which are stories characterised by the use of rhymed and rhythmic prose, sometimes blended with verse, and by the presence of two imaginary persons, the hero and the narrator. In his *maḳāmāt*, al-Hamadhānī did not use *sadjʿ* in a systematic manner. He resorted to free prose, for example, in the transitions or when he wanted to quicken the pace of the narrative. In any case, "he remains perfectly the

master of his thought; the rhythmic units designed to convey the idea are constructed according to its terms, the idea is not at all dependent on them" (R. Blachère, *Séances*, 36).

The principal successor to al-Hamadhānī was a grammarian of Baṣra, al-Ḥarīrī (446-516/1054-1112 [*q.v.*]), who not only gave the "session" its classic and definitive form, but also, and more significantly, composed the finest monument of *sadj*^c which the Arabs possess. Al-Ḥarīrī is considered by many Arab critics an incomparable stylist. The interest and the originality of the narrative do not interest him greatly. His principal concern is the style, the rhetoric and the verbal acrobatics which often constitute an end in themselves. The work of al-Ḥarīrī notably includes two texts in which each word begins, in one with *s*, in the other with *sh*. Unlike al-Hamadhānī, al-Ḥarīrī excluded from his "sessions" any passages in free prose. In his work, the use of *sadj*^c was systematic. The rhythmic units, with subtle and complicated rhymes, were arranged in impeccable sequences.

This work immediately enjoyed an unparallelled and durable vogue (Yāḳūt, *Irshād*, xvi, 267). But the writers of later times were interested only in the artifices of rhetoric and verbal felicities. Furthermore, this literary genre, so original at the outset, was very soon diverted from its initial aim to serve the most diverse purposes. It ultimately came to be confused with the genre of the *risāla*, from which it was originally distinct. By gradual stages, the word *maḳāma* served "to denote any rhetorical exercise in rhymed prose and not in verse, whatever the motive which inspires it... Any motive whatsoever is considered valid, and this composition, laden to the point of asphyxia with all the sophistications of language, of erudition and of pedantry, such that it becomes indecipherable, is called indiscriminately *risāla* or *maḳāma*" (F. de la Granja, *Maqāmas y risālas andaluzas*, xiv).

Sadj^c *in the so-called period of decadence*

The use of *sadj*^c became obligatory. Whatever the subject addressed, history, geography or medicine, the prose-writers of the so-called period of decadence invariably resorted to this mode of expression, which offered them the advantage of concealing a poverty of ideas and, in any case, of enhancing the quality of a text.

The style of the chancellery remained indelibly marked by the method of the Ḳāḍī al-Fāḍil. The rhymed units were stretched and all the figures of *badī*^c [*q.v.*] pressed into service. Historians wrote their works in rhymed prose. For example, al-Khafādjī (979-1069/1571-1659), author of a collection of biographies, resorted to this mode which does not in principle spare any discipline. Numerous "sessions" composed after the manner of al-Ḥarīrī deal with subjects as diverse as love, wine, religion or Ṣūfism. The sonorous words, redundant forms and affectedness ultimately deprived these exercises in verbal acrobatics of any genuine literary worth.

Sadj^c *since the* Nahḍa [*q.v.*]

In the 19th century, in the period of the *Nahḍa* (renaissance), the attractions of *sadj*^c were as potent as ever. With the aim of serving the Arabic language, defending its purity and restoring its prestige, Nāṣīf al-Yāzidjī (1215-88/1800-71 [see AL-YĀZIDJĪ]) composed sixty *maḳāmāt*, with commentary by himself, collected under the title *Madjma*^c *al-baḥrayn* ("confluence of the two seas"). He chose this structure, with its long and distinguished pedigree, because it seemed to him ideal for his purpose. Other authors of the 19th century followed the example of al-Yāzidjī, but usually in a less systematic manner.

At the beginning of this century, Muḥammad al-Muwayliḥī (1868-1930 [*q.v.*]) tried, for his part, to revive the genre in his novel *Ḥadīth ^cĪsā b. Hishām*, where the name of the narrator is borrowed from the "sessions" of al-Hamadhānī (H. Pérès, *Les origines d'un roman célèbre de la littérature arabe*). This book, which is primarily a satire on contemporary morals, was composed in a very free rhymed and rhythmic prose. Consequently, this author's concern for form never obscured his concern for substance. Al-Muwayliḥī's approach proves clearly that he did not confine himself to imitating the "sessions" of al-Hamadhānī. The inspiration of the latter is undeniable, but it was used to create a work which is firmly located in the social and cultural reality of his time. Thus his *Ḥadīth ^cĪsā b. Hishām* represents a synthesis between the classical *maḳāma* and the modern novel.

Although this work is generally considered to be the first monument of the Arabic literature of the 20th century, and although it has inspired a number of imitations and has been the object of numerous studies, further proofs of its undeniable success, there is nonetheless a sense in which it arrived a little too late. It appeared at a time when rhymed prose was beginning to be considered obsolete and archaic, so that al-Muwayliḥī's novel is a kind of swansong of the genre.

However, it is important to avoid giving the impression that, even today, there has been a complete abandonment of *sadj*^c. It should not be forgotten that the latter is in current and constant use in the mosques. On the other hand, having learned by heart in their youth a certain amount of poetry, a few texts in artistic prose and, most important of all, the Ḳur^ʾān, partially or in total, Arab writers are unable to avoid submitting to an influence which is often unconscious. While generally expressing themselves in free prose, these authors rarely resist the temptation to adorn their style with Ḳur^ʾānic reminiscences, "with some clausulas, with some alliterations, which give the work a scent of archaism which is not at all disagreeable" (Ch. Pellat, *Langue et littérature arabes*, 205).

B. *The technique of* sadj^c

The structure of the Arabic language has without doubt favoured the emergence of *sadj*^c and its considerable development, from the *Djāhiliyya* to the present day. The great variety of morphological themes of the same syllabic structure and of identical or similar rhythm constitutes an inexhaustible supply of clausulas rich in rhyme for lovers of assonance and of verbal sonority. Thus the pattern *fi^cāl^un* is common to a singular such as *kitāb^un* ("book"), *^citāb^un* ("reproach") or to a plural such as *kilāb^un* ("dogs"). Similarly, the patterns *ḥamrā^ʾu* ("red") and *shu^carā^ʾu* ("poets") offer at the end identical cadences (Blachère, *HLA*, ii, 189).

I. *External characteristics of* sadj^c

(1) *The arithmetical rhythm*

A text written in *sadj*^c is articulated in members of a sentence, the length of which remains within the limit beyond which breath is exceeded. The exigencies of breath, in this context, are important since rhymed prose—like poetry—is intended to be recited before an audience, aloud and having regard to a form of delivery which should be neither too fast nor too slow. Nevertheless, the composer of artistic prose has a fairly wide margin of manoeuvre at his disposal. His rhythmic units can, in fact, be limited to two or three

syllables, just as they can be extended to comprise 13 or 14. The hemistich, the rhythmic unit of verse, which like *sadj^c* is subject to the requirements of breath, comprises from 8 to 15 syllables, according to the length of the metre in question. For this reason there is a tendency to recite the line, not in its entirety and in a single breath, which is difficult, but hemistich by hemistich (Messadi, *Essai*, 17).

In his *Mathal al-sā'ir* (i, 257-8), Ibn al-Athīr distinguished between two types of *sadj^c*: a short type and a long. The unit of measure which he used to determine the average length of each of these two types of *sadj^c* is not the syllable but the word, which leads him draw very approximative conclusions. In fact, he defined the short *sadj^c* as that where each rhythmic unit could comprise from two to a maximum of ten words. Beyond this limit, there begins the long *sadj^c*, the members of which may be moderately long (11 to 15 words), long (15 to 20 words), and very long (20 words and more). Ibn al-Athīr stressed his own preference for the short *sadj^c*, stating that the fewer words there are in each of the parts of the couplet, so much the better (*ibid.*, i, 257).

The rhythmic units being often coupled with clausulas on the same rhyme, the couplets thus constituted can be perfect or unequal. They are perfect when their two members are equal. Ibn al-Athīr considered this type of *sadj^c* as that "which occupies the most noble rank, on account of the equilibrium which characterises it" (*ibid.*, i, 255). But too much equilibrium and regularity engender a monotony and lassitude, which often spoil the rhymed prose of al-Ḥarīrī but which al-Hamadhānī was able to avoid by means of the rhythmic variety of his style. On the other hand, to perfect couplets, Badī^c al-Zamān preferred unequal couplets, of which the first member is longer than the second. This category of couplet has the advantage of conforming to the requirements of breath, demanding less effort in the second, shorter member, than in the first, longer member. Ibn al-Athīr, on the other hand, had no regard for this latter type of combination; for, he explained, being shorter than the first, the second member "then resembles a thing so mutilated that the listener remains tense like one who stumbles, falling short of an objective which he seeks to attain" (*ibid.*, i, 257). This point of view is diametrically opposed to that of M. Messadi, which is hardly surprising, given that it was the *maḳāmāt* of al-Hamadhānī which served as the basic text for Messadi's study of *sadj^c* and that, as mentioned above, al-Hamadhānī had a predilection for couplets in which the first member was longer than the second. The very rare exceptions to this rule, in the work of Badī^c al-Zamān, are generally justified by the sense (cf. Messadi, *Essai*, 23-4).

The third and final category of couplet is that where the second member is longer than the first. It seems that this is less common and less appreciated than the other two. In any case, couplets of this type are rare in the "sessions" of al-Hamadhānī who was, no doubt, obliged to avoid them because they contradicted the requirements of breathing. In this regard, Ibn al-Athīr adopted a more equivocal position. He reckoned, in fact, that unequal couplets with longer final member were acceptable so long as the latter was not "of such a length as to detract excessively from equilibrium" (*Mathal*, i, 255).

If, in *sadj^c*, the couplet is the rule, often the rhythmic units are arranged in groups of three, four or more, on a single rhyme, and contain a perceptibly equal number of syllables. In many cases also, one or more free members, not linked by a single rhyme, succeed, for some reason or another, a series of coupled elements. Such an unexpected independent member, abruptly interrupting the cadence, can be refreshing. "It facilitates, by the relaxation thus obtained, the repetition of the cadence" (Messadi, *Essai*, 28).

While al-Hamadhānī resorted very frequently to free members, which represent approximately a quarter of his *sadj^c*, al-Ḥarīrī avoided them, thus excluding free prose entirely from his *maḳāmāt* but thereby rendering his style rigid and monotonous.

(2) *The rhyme*

To avoid confusion between the rhyme of verse (*ḳāfiya* [*q.v.*]), and that of *sadj^c*, the Arab rhetoricians refer to the latter by the name of *fāṣila, ḳarīna, sadj^c* or *sadj^ca*, which they define as "the correspondence of words in a position of rhyme through an identical [final] consonant" (al-^cAskarī, *Ṣinā^catayn*, 262; Ibn al-Athīr, *Mathal*, i, 210). Rather more prolixly, Ibn Wahb al-Kātib gives the following definition: "The *sadj^c* (rhyme) in prose is similar to the *ḳāfiya* (rhyme) in poetry" (*al-Burhān*, 208-9). Rhyme is one of the essential components of the rhythm of *sadj^c*. It constitutes the most apparent phonetic link between two or more rhythmic units, and permits "the prominent setting of the periodicity which is the distinguishing mark of sonant rhythm" (Messadi, 29). It is this which "regulates the cadence and marks the measure", thus separating, like a frontier, the rhythmic members of a text in *sadj^c*.

The richness of the rhyme can be very variable. It is sometimes reduced to the final consonant, then comprising only a single consonantal and a single vocalic element. But more complex combinations exist, formed of two or three corresponding consonantal and vocalic elements, or even more. In the "session" of the Fazāra of al-Hamadhānī, for example, there is a pair of consecutive clausulas in which *nadjībat^{an}* rhymes with *djanībat^{an}*. One might mention also that the rhyme in the pausal form in prose is in contradistinction from the rhyme in poetry (at least, in most cases) which has a vocalic element after the *rawī* (*ḳāfiya muṭlaḳa*), i.e. *kitāb* vs. *kitābū*.

Being the most striking external characteristic of *sadj^c*, rhyme gradually comes to be seen as the fundamental element. Inferior composers of rhymed prose, especially from the 5th/11th century onward, tended to accord it too much importance, seeing it as identical with *sadj^c* itself. However, despite appearances, rhyme plays a considerably more modest role. Admittedly, it brings to rhythmic prose the component of timbre and contributes to the regulation of the cadence of the *sadj^c* by fixing the limit which separates the rhythmic groupings, but it has no influence at all over the formation and the structuring of the latter.

II. *Internal structures of* sadj^c

While the poet is subject to the double constraint of metre and of single rhyme, the writer in *sadj^c* enjoys far greater freedom since, in principle, only rhyme is expected of him. Totally unforeseeable at the outset, the internal rhythm of the phrase depends on the talent of the writer himself. The first grouping of a couplet or of a series is always spontaneous and absolutely free, while the construction of the second is determined by that of the first, and should reflect it in a more or less faithful manner. Thus, unlike in poetry, the rhythmic unit in *sadj^c* is the whole couplet and not the clausula alone, like the hemistich with regard to verse.

Sometimes the two members of the couplet present identical phonetic patterns. The symmetrical correspondences of long and of short syllables are then perfect. Here, for example, is a couplet with numerically equal panels:

yuḏh̲ību 'l-s̲h̲iʿra wa 'l-s̲h̲iʿru yuḏh̲ībuh // wa-yadʿu 'l-siḥra wa 'l-siḥru yud̲j̲ību̲h

⏑ – – – ⏑ – – ⏑ ⏑ – – ⏑ – – – ⏑ – – ⏑ ⏑– –

"He (sc. the pre-Islamic poet Zuhayr b. Abī Sulmā) melts poetry and poetry melts him // He calls upon the enchantment and enchantment replies to him" (al-Hamad̲h̲ānī, *Séance poétique*, i, 11). This rigorous type of correspondences is quite rare, partial correspondences being more common (Messadi, *Essai*, 47-51).

In order to improve or to consolidate the rhythmic quality of *sad̲j̲ʿ*, recourse was often made to the resources of *badīʿ* and, in particular, to *d̲j̲inās* or *tad̲j̲nīs* [*q.v.*], or alliteration, which can involve either the words placed in the interior of the clausula or the rhyming words. This latter category of *d̲j̲inās* is the more common. It is in fact to be expected that, in the majority of cases, alliteration should appear only in rhyme "since *sad̲j̲ʿ* is rhymed and by definition the rhyme is a reflection of timbre" (in this regard, the remarks made by Messadi concerning the *Maḳāmāt* of al-Hamad̲h̲ānī apply most often to *sad̲j̲ʿ* in general; see his *Essai*, 70-2).

The interplay of short and long syllables (open and closed) determines the rhythmic style of a text in *sad̲j̲ʿ* or, indeed, in verse. In fact, "the predominance and/or a felicitous distribution of long open syllables (type *mā*) are the specific generators of a musical and singing style". On the other hand, when the themes addressed are those of threat, reprimand or military valour, and the style demanded is energetic and stern, the rhythm is then marked by a net predominance of long closed syllables (type *man*). When the proportion of short syllables is raised to the highest point, this signifies in principle that the style is amorphous and that the rhythm lacks contrast (*ibid.*, 97 ff.).

Besides phonetic coupling, another element engenders and regulates the rhythm also: this is semantic parallelism. The groupings which rhyme together are very often closely linked by a relationship of sense. Al-D̲j̲āḥiẓ, who did not seek out rhyme at any price, resorted on the contrary to the coupling of ideas as well as to parallel balance, as a way of improving the rhythm. In a passage of the *Kitāb al-Ḥayawān* (i, 41), he wrote, for example: *wa 'l-kitābu wiʿāʾun muliʾa ʿilman / wa-ẓarfun ḥus̲h̲iya ẓurfan*... ("The book is a receptacle full of knowledge / a vessel replete with precious objects...").

Seeking to exploit to the maximum this rhythmic procedure, the writers of rhymed prose fell, little by little, into a sterile verbal automatism, consisting of repeating the same idea in different forms solely for the sake of balance. Showing himself very stern in this respect, Ibn al-At̲h̲īr condemned these unproductive repetitions, which he found too widespread in the works of eminent prosewriters, such as the Ṣāḥib Ibn ʿAbbād, al-Ḥarīrī and others besides (*al-Mat̲h̲al al-sāʾir*, i, 214-15). Good *sad̲j̲ʿ*, according to him, is that in which there is neither artifice (*takalluf*) nor violence (*taʿassuf*) done to the idea or to its expression for the requirements of the rhyme or of the rhythm (*ibid.*, i, 213).

Bibliography: Examples of *sad̲j̲ʿ* are disseminated among the works of numerous authors, in particular Ibn His̲h̲ām, Ṭabarī, Masʿūdī, etc. See also D̲j̲āḥiẓ, *Bayān*, Cairo 1948, i, 21, 280, 284-306; ʿAskarī, *K. al-Ṣināʿatayn*, Cairo 1952, 260-5; Ibn Wahb al-Kātib, *al-Burhān fī wud̲j̲ūh al-bayān*, ed. (AFIF BEN ABDESSELEM)

SAD̲J̲ĀḤ (i.e. Sad̲j̲āḥ[i]), Umm Ṣādir bint Aws b. Ḥiḳḳ b. Usāma, or bint al-Ḥārit̲h̲ b. Suwayd b. ʿUḳfān, prophetess and soothsayer, one of several prophets and tribal leaders who sprang up in Arabia shortly before and during the *Ridda* [*q.v.* in Suppl.], the risings undertaken after the Prophet's death to throw off the political and military supremacy in Arabia of Medina. The genealogy, which her history proves to be the true one, shows that she belonged to the Banū Tamīm. On her mother's side she was related to the Tag̲h̲lib, a tribe which comprised many Christians. She was a Christian herself, or at least had learnt much concerning Christianity from her relatives. Next to nothing is known concerning the import of her revelations and doctrines; she delivered her messages from a *minbar*, in rhymed prose, and was attended by a *muʾad̲h̲d̲h̲in* and a *ḥād̲j̲ib*. Her name, or one of her names, for God was "the Lord of the clouds" (*rabb al-saḥāb*).

Sad̲j̲āḥ came to the fore in 11/632-3, after Muḥammad's death. One account of her exploits describes her as a Tag̲h̲lib upstart, who had arrived from Mesopotamia at the head of a band of followers belonging to Rabīʿa, Tag̲h̲lib, the Banu 'l-Namir, the Banū Iyād and the Banū S̲h̲aybān; she found the Tamīm divided, in consequence of the Prophet's death, by deep internal strife between apostates, Muslims and those who wavered between revolt and allegiance to Medina, and succeeded in converting by her revelations and uniting under her command both branches of Ḥanẓala (the Banū Mālik and the Banū Yarbūʿ), which she intended to lead against Medina. The extent of her influence on the Tamīm seems, however, to have been much greater than this version, intended to minimise their share in the *Ridda*, would have us believe. The prophetess was no outsider, she really belonged to the Tamīm, as the end of her career implies, and had gained, probably for some time before Muḥammad's death, the support of her whole tribe, whose conversion to Islam had been mainly a matter of expediency, easily shaken off.

Sad̲j̲āḥ's forces began by attacking the confedera-

tion of the Ribāb, in obedience to one of her revelations, but were severely beaten. Repairing to al-Nibādj (in Yamāma) they suffered a second defeat at the hands of the Banū ʿAmr, and Sadjāḥ had to promise that she would leave the territory of the Tamīm. Followed by the Yarbūʿ, she decided to join the prophet Musaylima [*q.v.*], who still controlled most of Yamāma, in order to unite their fortunes or to restore her own. Their encounter happened at al-Amwāh or at Hadjr. Musaylima was menaced by the Muslim army, and the neighbouring tribes threatened to shake off his authority, so that the arrival of a vanquished, ambitious and desperate colleague, accompanied by many armed followers, proved a trying, indeed a dangerous visitation. There is no reliable account of the meeting: according to one version, the strange couple came to an understanding, recognised each other's mission and decided to unify their two religions and their worldly interests; they were actually married, and the prophetess stayed by Musaylima to the hour of his tragic death. Al-Ṭabarī preserves obscene and very probably fictitious details concerning this union, which must have been rather a political alliance than a lustful orgy; the wedding, according to these legends, was celebrated in the same walled garden where Musaylima was to meet his death.

Other accounts of the meeting are that Musaylima, after having married Sadjāḥ, cast her off, and that she returned to her people; a third version does not mention the marriage, and says that the prophet tried to persuade his rival and would-be ally to attack the Muslims, hoping thus to get rid of her; on her refusal he offered, if she consented to depart, half the year's crops of Yamāma; she declined to go unless he promised half of the next year's harvest as well, set off with the first part of the booty, and left her representatives with Musaylima to wait for the rest, repairing to her kinsfolk. The second part of the ransom was never collected, as Musaylima was vanquished and massacred by Khālid before the next harvest.

Whatever the outcome of Sadjāḥ's relations with Musaylima, her own career was either merged into his, or cut short by repulse, and we hear nothing more of her mission. According to all accounts, she went back to her native tribe, and lived obscurely amongst them. On Ibn al-Kalbī's authority we learn that she embraced Islam when her family decided to settle in Baṣra, which had become the principal centre of the Tamīm under the Umayyads, lived and died there a Muslim, and was buried with the customary prayers and ceremonies.

(V. VACCA*)

AL-**SADJĀWANDĪ**, ABŪ ʿABD ALLĀH (Abu 'l-Faḍl, Abū Djaʿfar) MUḤAMMAD (Aḥmad) b. Abī Yazīd Ṭayfūr al-Sadjāwandī al-Ghaznawī al-Muḳriʾ al-Mufassir al-Naḥwī al-Lughawī, an innovative Ḳurʾān reader and philologist, died 560/1165 (?).

He lived and worked in Sadj/g/kāwand, a small village half-way to the east of the route from Kābul to Ghaznī in the vicinity of Sayyidābād, dominated by a high-lying citadel, now in ruins, called Takht-i or Shār-i (Shahr-i) Djamshīd. On the foot of this mount is placed the mausoleum of Khʷādja Aḥmad (Muḥammad). Here, even today, the Shaykh is revered as a great and popular Ḳurʾān reader. His system of five, or seven, kinds of pauses in recitation of the Ḳurʾān (1. *lāzim* = *m*, 2. *muṭlaḳ* = *ṭ*, 3. *djāʾiz* = *dj*, 4. *mudjawwaz li-wadjhⁱⁿ* = *z*, 5. *muraḳhkhaṣ ḍarūratᵃⁿ* = *ḍ*, and 6. *ḳad ḳīla* = *ḳ*, 7. *lā* = *l*) has found broad acceptance not only in the East but it is also substantially adopted in the official Cairo edition of the Ḳurʾān (*Gesch. des Qor.*, iii, 236-7).

The manuscripts of his *K. al-Wuḳūf* or *al-Waḳf* or *al-Waḳf wa 'l-ibtidāʾ* are numerous. These are differentiated into: (a) a complete or "greater" book, (b) a brief or "shorter" book, often commented and glossed by others, and (c) compendia on this topic by later compilers who follow al-Sadjāwandī's system, also in verses (Garrett 2067, 1). The "greater" as well as the "shorter" *waḳf* book should have originated from his *K. ʿAyn al-tafsīr*, which has not been discovered until today. According to the somewhat younger Ibn al-Ḳifṭī [*q.v.*] (*Inbāh*, iii, 153), al-Sadjāwandī in this commentary on the Ḳurʾān treated also *ḳirāʾāt*, *naḥw*, *lugha*, *shawāhid*, etc. His son Abū Naṣr (Abū Djaʿfar ?) Aḥmad—father and son are sometimes confused—excerpted and presumably modified his father's work under the title *K. Insān al-ʿayn*. Under several other titles attributed to the father dealing with specific themes seem to be hidden other excerpts and adaptations of his main work, for example on syntax and etymology, on strange words and morphology (e.g. Mashhad, Gawhar Shād, iii [1367/1988], 1617 no. 1161).

(R. SELLHEIM)

AL-**SADJĀWANDĪ**, SIRĀDJ AL-DĪN ABŪ ṬĀHIR MUḤAMMAD b. Muḥammad (Maḥmūd) b. ʿAbd al-Rashīd, Ḥanafī jurist, *flor. ca.* 600/1023. Nothing is known about his life. His *K. al-Farāʾiḍ*, known as *al-Farāʾiḍ al-Sirādjiyya* or simply *al-Sirādjiyya*, on the law of inheritance, was and still is regarded as the standard work in this field. It has been commented upon, glossed, excerpted, shortened and augmented, also in Persian and Turkish, versified (most recently in Cairo 1386/1949; Mushār, 793), repeatedly printed, also in Eng. tr. (repr. New Delhi 1981). The author himself composed a detailed commentary on it. His *K. al-Tadjnīs fi 'l-ḥisāb* or *al-Tadjnīs fi 'l-masāʾil al-ḥisābiyya*, at first probably a part of his primary work, has also been glossed by others. How far his alleged *Kitāb fi 'l-Djabr wa 'l-muḳābala* (perhaps an enlarged version of his *Tadjnīs*?) has to be included here, is not certain (R. Şeşen, *Nawādir*, ii [1400/1980], 75-6).

Allāh [*q.v.*]); M.ʿA. Mudarris, *Rayḥānat al-adab*², Tabrīz 1347/1968, ii, 443. (R. SELLHEIM)

SADJDA (A.) "bowing down", the name of two Ḳurʾānic sūras (XXXII, also called *tanzīl al-sadjda*, and XLI, more commonly called *fuṣṣilat* or *ḥā-mīm*) and within the technical phrase *sadjdat* (or *sidjdat*, or plural *sudjūd*) *al-tilāwa*, in reference to the 14 Ḳurʾānic passages (variant traditions suggest 16, 15, 11, 10, or 4 passages) which require a ritual of bowing to be performed at the end of their recitation. The passages are marked in the margin of the Ḳurʾān text, usually with the word *al-sadjda*. The practice is generally considered *wādjib* "required", in the Ḥanafī *madhhab*, and is declared *mustaḥabb* "desirable", in the other schools.

All but one of the Ḳurʾānic *sadjda* passages make direct reference to the act of bowing, although by no means has every possible passage become the focus of this attention (the root *s-dj-d* is used 64 times in the Ḳurʾān, not including the 28 times the word *masdjid*/*masādjid* is used). The passages vary in their suggestions regarding the practice. Some are direct commands to perform it: XXII, 77, "O you who believe, perform the prostration and bow down" (but it is primarily the Shāfiʿī tradition which implements bowing here and sometimes omits it at XXII, 18, thus maintaining a total of 14 verses of *sudjūd*); XLI, 37-8, which indicates that God should be bowed down to, not the sun and the moon; LIII, 62, "So bow down to God and worship" (this verse is not included in some versions of the Mālikī tradition of *sudjūd*); and XCVI, 19, "Bow down and approach (God)" (not included in the Mālikī tradition). The command is expressed negatively in LXXXIV, 20-1, "What is with those who do not believe? When the Ḳurʾān is read to them, they do not bow down" (again, not included in the Mālikī tradition).

Less than commands but suggestive of Muslim practice are passages which speak of the past: XVII, 107-09, which speaks of those who "given the knowledge before you (Muḥammad), when it is recited to them, fall on their faces, bowing down"; XIX, 58, which describes the patriarchs who bowed when the signs/verses of the Merciful were recited; and XXXVIII, 24, "[David] asked forgiveness of his Lord and fell down in prostration and repented." In this one instance the word *sadjda* is not used in the verse but *rākiʿ*; probably as a result, *sadjda* is not required for this verse according to some jurists especially in the Shāfiʿī school (who do then, however, maintain a total of 14 *sudjūd* by including both XXII, 18 and XXII, 77).

Others passages invite a response, such that bowing may be interpreted as a prayerful affirmation, a statement which says "Yes, I do", or suggests affirmation of group membership by saying "I am one of those" or, indeed, "I am not one of those": VII, 206, "Those who are near to your Lord ... bow down to him"; XIII, 15, "All who are in the heavens and the earth bow down to God"; XVI, 49-50, "Everything in the heavens and everything on the earth ... bows down to God"; XXII, 18, "Do you not see that all who are in the heavens and all who are on the earth ... bow down to God?"; XXV, 60, "Shall we bow down to that which you command us?"; XXVII, 25-6, "They do not bow down to God, the one who brings out the hidden in the heavens and the earth"; and XXXII, 15, which suggests that those who bow down when they hear God's signs/verses gain paradise. Some variation in the precise verse ending at which the *sadjda* should be done is to be noted; performing a bowing at the end of *sūra* XV is also mentioned in some sources.

After any one of those passages is recited, whether in the context of *ṣalāt* or *tadjwīd* in general, the following ritual will be observed, although the precise details vary between the legal schools: the *takbīr* is pronounced, a prostration is performed such that the forehead touches the ground, words of praise or supplication appropriate to the verse in question are uttered, and the *takbīr* is uttered again upon rising. Performing these acts requires the state of ritual purity associated with prayer.

Among the oldest datable sources dealing with bowing during Ḳurʾān recitation is Abū ʿUbayd (d. 224/838), *Faḍāʾil al-Ḳurʾān*, Beirut 1991, 66, where the practice in relationship to Ḳurʾān XIX, 58 (not XXXII, 15 as in the printed text) is mentioned; the emphasis of the chapter in this book, however, falls on weeping (*bukāʾ*) during recitation, a practice which in later texts (e.g. al-Nawawī (d. 676/1278 [*q.v.*]), *al-Tibyān*) tends to be overwhelmed by the more formalised bowing. In ʿAbd Allāh b. Wahb (d. 197/812), *al-Djāmiʿ*, ed. M. Muranyi, Wiesbaden 1992, 62-78, *sadjda* is treated fully, in a manner similar to later *ḥadīth* collections.

The *ḥadīth* books are replete with references to bowing in recitation and the practice of the bowings in the various passages may be established through their testimony. Much of the *ḥadīth* material reflects a debate over whether the practice was actually required or simply meritorious. Later jurists discussed many additional aspects of this practice, including what to do when one hears somebody else reciting a verse which requires *sadjda* and whether (and in which context) the *sadjda* could be delayed.

SADJDJĀD ḤUSAYN, SAYYID [see HIDJĀʾ. iv. Urdu].

SADJDJĀDA (A., pl. *sadjādjid*, *sadjādjīd*, *sawādjid*), the carpet on which the *ṣalāt* [*q.v.*] is performed. The word is found neither in the Ḳurʾān nor in the canonical Ḥadīth; the occasional use of a floor-covering of some kind was, however, known at quite an early period.

1. Early tradition. In the Ḥadīth [*q.v.*] we are often told how Muḥammad and his followers performed the *ṣalāt* on the floor of the mosque in Medina after a heavy shower of rain, so that their noses and heads came in contact with the mud (e.g. al-Bukhārī, *Adhān*, *bābs* 135, 151; Muslim, *Ṣiyām*, trads. 214-16, 218, etc.). At the time when such traditions arose, the use of some form of carpet was not so general that their origin can be dated so far back as the time of the Prophet. In a series of traditions, the saying is put into Muḥammad's mouth that it was his privilege, in contrast with the other prophets, that the earth was for him *masdjid wa-ṭahūr* (e.g. al-Bukhārī, *Tayammum*, *bāb* 1; *Ṣalāt*, *bāb* 56, etc.). Al-Tirmidhī, *Ṣalāt*, *bāb* 130, also tells us that some *faḳīhs* prefer the *ṣalāt* upon the bare earth.

The canonical Ḥadīth gives us the following picture: Muḥammad performs the *ṣalāt* on his own garment, protecting his arms against the heat of the soil during prostration with one of its sleeves, his knees with one end of his robes and his forehead with the *ʿimāma* (turban) or the *ḳalansuwa* (cap) [see LIBĀS. (i).

The central and eastern Arab lands]; (al-Bukhārī, *Ṣalāt, bābs* 22, 23; Muslim, *Masādjid*, trad. 191; Aḥmad b. Ḥanbal, *Musnad*, i, 320). Al-Bukhārī, *Ṣalāt, bāb* 22, tells us that Muḥammad performed the *ṣalāt* on his *firāsh* (quilt).

The Ḥadīth also informs us that the *ṣalāt* was performed on mats; e.g. al-Tirmidhī, *Ṣalāt, bāb* 131, where a *bisāṭ* [*q.v.* in Suppl.] is mentioned; also Ibn Mādja, *Iḳāmat al-ṣalawāt, bāb* 63; Aḥmad b. Ḥanbal, i, 232; iii, 160, 171, 184, 212; also a *ḥaṣīr* (a mat the length of a man), e.g. al-Bukhārī, *Ṣalāt, bāb* 20; Aḥmad b. Ḥanbal, iii, 52, 59, 130 ff., 145, 149, 164, 179, 184 ff., 190, 226, 291. This tradition is also found in Muslim, *Masādjid*, trad. 266. It is evident from Abu Dāwūd, *Ṣalāt, bāb* 91, that at the end of the 3rd/9th century, dressed skins of animals (*farwa maṣbūgha*) [see FARWA] were already being used.

We also frequently find it mentioned that Muḥammad performed the *ṣalāt* on a *khumra* (al-Bukhārī, *Ṣalāt, bāb* 21; Muslim, *Masādjid*, trad. 270; al-Tirmidhī, *Ṣalāt, bāb* 129; Aḥmad b. Ḥanbal, i, 269, 308 ff., 320, 358, ii, 91 ff., 98; al-Nasāʾī, *Masādjid, bāb* 43; Ibn Saʿd, i/2, 160). According to Muḥammad b. ʿAbd Allāh al-ʿAlawī's marginal glosses to Ibn Mādja, *Iḳāma, bābs* 63, 64, the *khumra* afforded just sufficient room for the prostration (see above).

The word *sadjdjāda* is found a century after the conclusion of the canonical Ḥadīth literature. Al-Djawharī, *Ṣaḥāḥ*, explains it to be synonymous with *khumra*. Dozy, *Suppl.*, quotes passages from Ibn Baṭṭūṭa, who mentions among the customs of a certain *zāwiya* in Cairo that the whole congregation went to the mosque on a Friday, where a servant laid his *sadjdjāda* ready for each one (i, 73, cf. 72). The same traveller tells us something similar regarding Māllī (*i.e.* Mali [*q.v.*]) where everyone sends his servant with his *sadjdjāda* to the mosque, to lay it ready in his place. He adds that they were made out of the leaves of a palm-like tree (iv, 422).

Some early traditions survived until this century. In Mecca, everyone in the great mosque performs the *ṣalāt* on a *sadjdjāda*, usually a small carpet just large enough for the *sudjūd* [*q.v.*]. After use it is rolled up and carried off on the shoulder. In place of a carpet, a towel is sometimes used, for example the one used to dry oneself after the *wuḍūʾ* [*q.v.*].

In Morocco, the common people do not make any use of the *sadjdjāda*; the middle classes favour small felt carpets (*lăbda*), just large enough for performing the *sudjūd*. *Lăbdas* are especially used by *faḳīhs* and have almost become one of their distinctive marks. They fold them and bear them under their arm in an ostentatious way wherever they go; certain *faḳīhs* refuse to sit down on anything other than their *lăbda*. In Algeria, the *sadjdjāda* is rarely used, except among the heads of *ṭarīḳas* and various marabouts; here, it usually consists of the skins of goats or gazelles. The common people ascribe miraculous powers to these skins.

In Egypt, *sadjdjādas* used until the early 20th century to be imported from the carpet-weaving districts of Asia Minor, and were used only by the rich. Persons of the lower orders often perform the *ṣalāt* upon the bare ground; they seldom immediately wipe off the dust which adheres to the nose and forehead, regarding it as auspicious to retain traces of the *sudjūd*.

In the former Dutch East Indies (now Indonesia), long narrow mats and carpets were formerly placed on the floor of the mosque before the beginning of the services. After the service these were rolled up and laid aside (Snouke Hurgronje, *Verspr. Geschr.*, iv/2, 366).

The *sadjdjāda* has assumed special significance in the religious societies and in the dervish orders (see 3. below).

A whole series of mystical interpretations is associated with the *sadjdjāda* or *bisāṭ*. References are found to the *sadjdjāda* of the paths of salvation, and the profession of *tawḥīd* is called the *sadjdjāda* of the faith.

2. Surviving examples. The distinguishing iconography of the *sadjdjāda* as familiar today is the large central *miḥrāb* [*q.v.*], the arch of which is placed to one end of the rug; the field may be plain or decorated. The rug is surrounded by a series of decorative borders. When spread in a mosque, the *miḥrāb* is laid pointing towards the *ḳibla* [*q.v.*] wall; for private prayer in the home, the *miḥrāb* is similarly laid pointing in the direction of Mecca. In early *sadjdjādas*, a representation of a mosque lamp is sometimes placed within the arch of the *miḥrāb*; by the early 13th/19th century, the lamp was often replaced by a bouquet of flowers. Sometimes a pair of candlesticks flank the *miḥrāb*; in later periods, two columns of flowers may be found. Sometimes a short text from the Ḳurʾān is woven at the head of the *miḥrāb*. For communal family prayers, a *ṣaff* (row), a long rug with a row of *miḥrābs* side by side, may be used. In Turkey, the *sadjdjāda* was known as *namāzlïḳ* (T.); in Persia, as *djā-yi namāz* (P.)

A few rare *sadjdjādas* in museum and private collections are attributed to the 10th-11th/16th-17th centuries, but the majority of "antique" *sadjdjādas* date from the 12th-13th/18th-19th centuries. A few earlier representations of *sadjdjāda* survive in Persian miniatures. A manuscript of Balʿamī's translation of al-Ṭabarī's *Taʾrīkh*, painted in Shirāz about the second quarter of the 8th/14th century, now in the Freer Gallery, Washington D.C., contains a miniature of Muḥammad seated upon a *sadjdjāda*, in conversation with Abū Bakr and ʿAlī. The *sadjdjāda* is here interpreted as a seat of honour, and a kind of spiritual throne. Similarly, a miniature in the *Miʿrādj-nāma* from Harāt, dated 840/1436, now in the Bibliothèque Nationale, Paris, depicts Muḥammad with an aureole around his head to indicate his spiritual authority, seated upon a *sadjdjāda*. To the left are Adam, Noah and David; to the right, Abraham, Moses and Jesus. Representations of the *ṣalāt* being performed are rare, but a Mughal miniature of the early 11th/17th century, in the Staatliche Museen, Berlin, depicts Djahāngīr and his son in prayer upon two *sadjdjādas*; the courtiers share a large *bisāṭ*.

Turkey has for centuries been famous for the production of pile carpets. When weaving a *sadjdjāda*, the weaver uses the finest materials within his means, and his best workmanship. Turkey adheres to strict Islamic artistic tenets, wherein the representation of living creatures is forbidden. Turkish designs thus have a balanced formal structure, though the decoration is very rich, incorporating flowers with geometrical ornament. The most famous centres for the weaving of *sadjdjādas* are Gördes (Ghiordes) and Kula.

The artistic tenets of Islam are less rigidly interpreted in Persia, where animals and birds often appear upon secular carpets. *Sadjdjādas* are more graceful in style than in Turkey; but though the *miḥrāb* may have more naturalistic elegance, and the lamp and floral ornament more realism, when weaving a *sadjdjāda* the injunction against representing living creatures is observed. The *miḥrāb* is sometimes filled with the traditional "Tree of Life", or with a large flowering plant. A particularly rich *sadjdjāda* may be woven with warp and weft, or even pile, of silk.

In both Turkey and Persia, the rural people and the

nomadic tribes practise rug-weaving, including *sadjdjādas*. The designs are bold, colourful and often profusely ornamented with geometrical and stylised motifs. In addition to pile rugs, tapestry-woven rugs (*kilim*) are woven. The *miḥrāb* of the *sadjdjāda* is often very simply delineated, and usually of angular form.

The rugs and *sadjdjādas* of the Caucasus have been little known until the 13th/19th century. The *sadjdjādas* have distinctive geometrical ornament, and stylised motifs of local tradition; many *sadjdjādas* are *kilim*-woven.

The normal floor-mat in India is the *darī*, a flat-woven pile-less rug of thick cotton. In the hot season, a light floorspread of fine cotton, painted and printed, was practical. The art of pile-carpet weaving was not introduced until the reign of Akbar (963-1014/1556-1605) [see MUGHALS. 8. (a) Carpets]. Thereafter pile-woven carpets and *sadjdjādas* following closely the style of Eastern Persia were used only by the wealthy. Henry Cousens, examining the Djāmiʿ Masdjid at Bīdjāpūr [*q.v.*] for the ASI (Imperial Series of Reports, xxxvii [1916], 59 and plate XXIV), records several long mats with rows of *miḥrābs* for communal worship. Two or three are very simple and may be *darīs*. The rugs are undated, but may be 12th/18th or 13th/19th century. Other *darī*-woven *sadjdjādas*, of attractive simplicity, from the 13th/19th century, survive in museum collections.

A few rare cotton *sadjdjādas* survive, made in the region of Burhānpūr, Khāndesh, in the 12th/18th century. The design is restrained and dignified, the *miḥrāb* and the borders being ornamented with fine painted and printed floral meanders; a particularly Indian feature is the conventional representation of the domed minarets of a *masdjid* rising from the sides of the *miḥrāb* (Irwin and Hall [1971], 26 and plate 8). Printed cotton *sadjdjādas* made in the late 13th/19th century at Masulipatam, at very small cost for the ordinary people, survive in museum collections.

(A.J. WENSINCK-[MARGARET HALL])

3. In mysticism. Here, the meanings of this term are derivative from its principal function, i.e. a place upon which one prostrates him/herself in prayer. The peculiarity of its Ṣūfī usage is determined by its intimate association with such critical notions of Ṣūfism as "sainthood" (*wilāya* [*q.v.*]) and mystical "gnosis" (*maʿrifa* [*q.v.*]). In other words, if the praying person happens to be a holy and righteous "friend of God" (*walī* [*q.v.*]) or a gnostic possessed of God's sublime mysteries (*ʿārif*), the adherents of Ṣūfism often view him/her as imparting to the prayer mat some of his/her supernatural powers. It is out of the intricate alliance of all-Islamic and mystical beliefs that a distinctly mystical sense of this term has eventually crystallised.

As a symbol and attribute of piety, *sadjdjāda* was appropriated by the Ṣūfīs immediately after its introduction into the religious life of the Muslim community in the early 4th/10th (H. Landolt, *Gedanken zum islamischen Gebetsteppich*, in *Festschrift Alfred Bühler*, ed. C.A. Schmitz and R. Wildhaber, Basel 1965, 244, 247). A prayer mat, for instance, played an important role in an episode included in the collection of stories that depict the ordeal of al-Ḥallādj [*q.v.*], the celebrated Ṣūfī martyr of Baghdād (see *Akhbār al-Ḥallāj. Texte ancien relatif à la predication ... du mystique musulman al-Ḥosayn b. Manṣōur al-Ḥallāj*, ed., annot., and trans. by L. Massignon and P. Kraus, Paris 1936). In this episode, al-Ḥallādj's inadvertent discovery of the Supreme Name of God that was written on a piece of paper stuck under al-Djunayd's [*q.v.*] *sadjdjāda* led to an ominous encounter between the two Ṣūfī masters. In the course of the quarrel that ensued, al-Djunayd predicted the ghastly details of al-Ḥallādj's impending execution (Massignon, *Passion of al-Ḥallāj, mystic and martyr of Islam*, Princeton 1982, ii, 452). References to the prayer mat as a distinctive mark of the authentic Ṣūfī appear in the classic Ṣūfī manual of Abū Naṣr al-Sarrādj al-Ṭūsī [*q.v.*] and his contemporaries (*K. al-Lumaʿ fī 'l-taṣawwuf*, ed. R.A. Nicholson, London-Leiden 1914, 201; Landolt, *op. cit.*, 247). Somewhat later, in his "Rule for Ṣūfī novices" (*Ādāb al-murīdīn*, tr. F. Meier as *Ein Knigge für Sufis*, in *RSO*, xxxii [1957], 485-524) the noted Persian mystic Nadjm al-Dīn al-Kubrā [*q.v.*] listed the *sadjdjāda* among such recognisable Ṣūfī paraphernalia as the patched mantle (*murakkaʿ* [*q.v.*]), the belt (*āstīn*), the staff (*ʿaṣā*), the turban (*dastār*), the leather bowl (*rakwa*), and, finally, the inevitable Ṣūfī robe (*khirka* [*q.v.*]). To each of these typical Ṣūfī items al-Kubrā attributes a symbolic meaning. Thus he describes the *sadjdjāda* as "the carpet of the proximity to God (*kurb*)" upon which His faithful servant "has set the foot of worship" (Meier, *op. cit.*, 508). In a passage based on the work of the earlier Ḥanbalī mystic ʿAbd Allāh al-Anṣārī [*q.v.*] of Harāt, al-Kubrā specifies the proper position to be assumed by a Ṣūfī beginner, when he installs himself on a *sadjdjāda*: he should sit with his hands and legs crossed, his face turned in the direction of Mecca; his thighs and private parts ought to be decently covered. While on his prayer carpet the Ṣūfī is not allowed to blow his nose, spit, or scratch himself. Nor should he converse loudly with those around him and gesticulate. Rather, he should focus his thoughts on God alone in an attempt to grasp what God expects him to do in each particular moment, and then act accordingly. All this, according to al-Kubrā, constitutes "the rules of the *sadjdjāda*." (Meier, *op. cit.*, 509-10). H. Landolt interprets al-Kubrā's instructions as an indication of the special significance that Ṣūfī theorists accorded to the prayer carpet. According to Landolt, it is more than a spot upon which the ritual prayer is performed; in the Ṣūfī tradition the *sadjdjāda* becomes a privileged spiritual space where direct contact with God is effected, i.e. an arena of mystical meditation *par excellence* (*op. cit.*, 247; cf. A. Ferrier, *Initiation au décor rituel du tapis de prière*, in *Connaissance des arts*, Paris [March 1959], 58, 61). This may be true. However, for all intents and pur-

poses, the prayer rug has become neither an unmistakeable sign nor an exclusive prerogative of the Ṣūfī *shaykh*. Rather, most Muslims considered it to be a symbol of righteousness and an important, albeit optional, condition of ritual purity not necessarily restricted to the realm of Islamic mysticism (see e.g. E.W. Lane, *Manners and customs of the modern Egyptians*, London-New York 1966, 73). This may explain why Ibn al-Djawzī [*q.v.*], the Ḥanbalī legist who undertook an exhaustive critique of contemporary Ṣūfī thought and practice, tellingly omits the prayer rug from his discussion of the Ṣūfī "excesses" and exotic "innovations" such as living in isolated lodges (*ribāṭ* [*q.v.*]), donning exotic clothes (*muraḳḳaʿ*, *khirḳa*), making light of the ablutions and the prayer, encouraging voluntary poverty and begging, indulging in disgraceful musical sessions and dances, etc. (*Talbīs Iblīs*, ed. Muḥammad ʿAlī Abū 'l-ʿAbbās, Cairo 1990, 145-340). This probably indicates that, in Ibn al-Djawzī's time at least, the *sadjdjāda* was not regarded as an exclusive feature of Ṣūfī life style. In modern times, too, the prayer rug does not figure among the usual accessories of some contemporary mystical fraternities of Persia, i.e. the Dhahabiyya, Khāksār, Niʿmatullāhiyya, which have been meticulously described by R. Gramlich (*Die schiitischen Derwischorden Persiens. Dritte Teil: Brauchtum und Riten*, Wiesbaden 1981, 3-12). Yet, the Ottoman traveller Ewliyā Čelebī (d. 1093/1682) in his description of a pilgrimage to the Bektāshī shrine at ʿUthmāndjīḳ (Anatolia) mentions that visitors (mostly members of the Bektāshī order) were given a *khirḳa*, a *sadjdjāda*, a standard, a drum, a staff, and a *tādj* "as symbols of dervishship" (q. in J.R. Brown, *The dervishes, or Oriental mysticism*, ed. H.A. Rose, repr. London 1968, 214, 201; cf., however, *idem*, 176-93, where the *sadjdjāda* is not listed among the usual personal belongings of the Bektāshī dervish). Hence, as we can see, the status of the *sadjdjāda* vis-à-vis Ṣūfism is somewhat tenuous. On some occasions it surely can be viewed as a hallmark of the Muslim mystic. Nonetheless, one cannot unreservedly link it to the Ṣūfī piety and way of living in contrast, for instance, to such distinct Ṣūfī accesories as the *muraḳḳaʿ* (and/or the *khirḳa*), the *tādj* [*q.v.*], the rosary (*subḥa*) worn on the neck, the *kashkūl* [*q.v.*], etc. (see Gramlich, *op. cit.*, 3-12; cf. Brown, *op. cit.*, 178-92).

This uncertainty notwithstanding, with the rise of organised Ṣūfism and the concomitant development of the notion of *wilāya* from the 7/13th centuries onwards, the mystical connotations of the *sadjdjāda* became more strongly pronounced. In numerous oral and written accounts of Ṣūfī miracles (*karāmāt* [*q.v.*]), which circulated widely among diverse Muslim audiences, prayer carpets (or, sometimes, simple sheep and goat skins used for the same purposes) miraculously transport their holy owners, the Ṣūfī saints and marabouts, from one place to the other, a usual destination being Mecca. Again, the theme of "the flying carpet" was not confined exclusively to the mystical tradition. On the contrary, it has become a constantly recurring motif of Middle Eastern literature and folklore. According to one such legend, the last Baghdād caliph used a flying prayer mat in order to escape from the city besieged by the Mongols (Ferrier, *op. cit.*, 58). A person who, in the popular imagination, was closely bound with the motif of "the flying carpet" is the Ḳurʾānic Sulaymān. His magic silk carpet was delivered to him from Paradise (by either God or the Devil). With his throne installed on the carpet, Sulaymān was able to travel far and wide driven by winds which he controlled at will (Landolt, *op. cit.*, 252). Another Ḳurʾānic prophet, Adam, is said to be have received his *sadjdjāda* from the angel Djibrīl, who had made it from the skins of the sheep of Paradise.

In contrast to popular lore that evinces particular fascination with the magic properties inherent in the *sadjdjāda*, Ṣūfī writers tend to emphasise that, whatever thaumaturgic qualities it may possess result from the sanctifying presence of the Ṣūfī *walī*, whose divinely given "grace" (*baraka* [*q.v.*]) miraculously transforms everything around him. When a Ṣūfī saint spreads his shabby prayer rug above the waves (Landolt, *op. cit.*, 253) or performs his supererogatory prayers standing on the mat suspended in the air (Ibn ʿArabī, *al-Futūḥāt al-makkiyya*, Cairo 1329, i, 186; tr. in R.W.J. Austin, *Sufis of Andalusia*, Oxford 1971, 28-9), one realises that it is the saint, not his *sadjdjāda*, that makes such wondrous things possible. In the case of Ibn ʿArabī's narrative, the ordinariness of the prayer mat is intentionally stressed in order to throw into relief the supernatural powers that the presence of God's friend conveys to it. It is noteworthy that in both cases the flying rugs are brought into play with a view to persuading some sceptical, rationalist onlookers who doubted the reality of the miracles ascribed to the Ṣūfī saints.

In keeping with a widespread Ṣūfī belief that was shared by the generality of Muslims, the blessing and the beneficial grace of the *walī* pervade all things and individuals that have come into direct contact with him/her. Such miracle-working grace does not cease with the *walī* 's death. It is thought to be inherited by his/her progeny. On the other hand, it is also immortalised in the *walī*'s shrine as well as his/her personal effects. Both symbolise the saint's invisible presence among his/her relatives and followers. This helps to explain why such vestiges often become objects of veneration similar to that enjoyed by the relics of the Christian saints. It is against the background of this belief that one should view the concepts of the *shaykh* [*walī*] *al-sadjdjāda* and its Persian analogue *sadjdjāda-nishīn*, meaning "the prayer rug sitter" (see e.g. H.A.R. Gibb, *Muhammedanism: an historical survey*, 2Oxford 1968, 152). These terms were normally applied to leaders of Ṣūfī communities or heads of holy lineages [see SHARĪF] who fell heir to the spiritual authority and blessing of a revered saintly founder (see F. Meier, *Abū Saʿīd-i Abū l-Ḫayr (357-440/967-1049). Wirklichkeit und Legende*, Leiden-Tehran-Liège 1976, 438-67, esp. 458). By extension, the entire mystical "path" initiated by a founding saint was regarded as his/her *sadjdjāda*. It can, therefore, be treated as another synonym of *ṭarīḳa* [*q.v.*], *silsila* [*q.v.*], and *khilāfa* [*q.v.*, section 3], i.e. of the terms applied to various Ṣūfī organisations.

This usage became particularly prominent in Egypt and, to a lesser extent, in North Africa, whereas in the East it appears only sporadically, and does not carry the precise technical meaning ascribed to it in Western Islam (for such occasional usage, see e.g. H.R. Roemer, *Staatsschreiben der Timuridenzeit. Das Šaraf-nāma des ʿAbdallāh Marwarīd in kritischer Auswegung*, Wiesbaden 1952, 64, 158). In Egypt, the phrase *mashāyikh [shaykh] al-sadjdjāda* (and its correlate *arbāb al-sadjādjīd*), as technical terms used in official documents, do not seem to have gained wide currency before the end of the 11th/17th century. Both terms were applied to the leaders of Egypt's major Ṣūfī *ṭuruḳ* and *ṭuruḳ*-linked institutions, i.e. *zāwiya* [*q.v.*], *takiyya*, and popular Ṣūfī shrines. The term *arbāb al-sadjādjīd*, however, seems to have been reserved for the four family-based mystical associations, namely those

which traced themselves back to the Rightly-Guided Caliphs and the Companions. According to F. de Jong, these four were essentially family groups turned *ṭuruḳ*. They were: *al-Bakriyya* (descending from Abū Bakr al-Siddīḳ), *al-ʿInāniyya* (ʿUmar b. al-Khaṭṭāb), *al-Khudayriyya* (al-Zubayr b. al-ʿAwwām), and *al-Wafāʾiyya* (ʿAlī b. Abī Ṭālib) (*Ṭuruq and Ṭuruq-linked institutions in nineteenth century Egypt*, Leiden 1978, 13-14). Of the leaders of these family *ṭuruḳ*, the *shaykh al-sadjdjāda al-bakriyya* was to assume special importance when in 1227/1812, in a drive to secure better state control over the Egyptian religious establishment, the Viceroy of Egypt Muḥammad ʿAlī [*q.v.*] invested the holder of that office with authority over all mystical communities (*ṭawāʾif al-fuḳarāʾ al-ṣūfiyya*) as well as the Ṣūfī shrines and lodges of that country (al-Djabartī, *ʿAdjāʾib al-āthār*, Cairo 1297, iv, 165; for a tr. of Muḥammad ʿAlī's *firmān*, see de Jong, *op. cit.*, 192-3). For almost a century the holders of this office endeavoured, with varying success, to steer a middle course between the assertive temporal rulers and the restive leadership of Egyptian mystical associations who were anxious to preserve their independence vis-à-vis the Egyptian government (the policies pursued by the incumbents of the *al-sadjdjāda al-bakriyya* from 1227/1812 until 1321/1903 are analysed in de Jong, *op. cit.*). In the 19th and early 20th centuries, the leaders of the newly-founded Egyptian *ṭuruḳ* had to obtain the title of the *shaykh al-sadjdjāda* from the current holder of the Bakriyya "prayer mat", whose hereditary office was called *shaykh mashāyikh al-ṭuruḳ al-ṣufiyya*. Only after the latter's approval were they recognised by both the government and the Ṣūfī establishment of Egypt represented by the so-called "Ṣūfī Council" (*al-madjlis al-ṣūfī*). The latter, in turn, was always presided over by the *shaykh al-sadjdjāda al-bakriyya* (*ibid.*, 132-46, *et passim*; P. Kahle, *Zur Organisation der Derwischorden in Egypten*, in *Isl.*, vi [1916], 152-3; for a recent example of a newly-founded brotherhood seeking such an approval, see M. Gilsenan, *Saint and Sufi in modern Egypt*, Oxford 1973, 36, where the discussion centres on the rise and subsequent functioning of a modern *ṭarīḳa* called *al-ḥāmidiyya shādhiliyya*). In modern Egyptian usage, the central office of a Ṣūfī order, which today appears to be a rather bureaucratised and centralised institution, is called *bayt al-sadjdjāda* (dial. *beit al-siggāda*). It serves as the residence and the office of the order's *shaykh* or his senior aide (*wakīl*). These, in turn, are assisted by a group of the lesser officials known as *khulafāʾ* and *nuḳabāʾ al-sadjdjāda* (*ibid.*, 81). Deputies of the head of an order in a particular area (*khulafāʾ*), regularly send detailed reports on their activities to the *bayt al-sadjdjāda* with a view to keeping its leadership abreast of the developments at the lower levels of the brotherhood (Gilsenan, *op. cit.*, 82, 99, 101, etc.).

A *sadjdjāda* together with banners, drums, cymbals, staffs and a decorated litter are among the most valued regalia of the Egyptian brotherhood. Its guardianship is entrusted to one of the *shaykh's* closest associates, one named *naḳīb al-sadjdjāda par excellence*, in contradistinction to the ordinary *nuḳabāʾ* who run the brotherhood's regional cells on behalf of the regional deputy, i.e. *khalīfa*, a person appointed directly by the *shaykh al-sadjdjāda* (Kahle, *op. cit.*, 164). Yet, unlike the other items listed above, the prayer rug does not seem to play any role in the imposing annual festivities organised by each important Egyptian *ṭarīḳa* (sc. the *mawlid* [*q.v.*]). The *sadjdjāda*, however, comes to the fore in the elaborate ceremonies during which new *khulafāʾ* and *nuḳabāʾ* are introduced into the office respectively by the *shaykh al-sadjdjāda* and the *khalīfa* of a regional Ṣūfī lodge. After this ceremony, the new *khalīfa* buys a simple prayer rug that becomes a symbol of his changed status within the brotherhood (*ibid.*, 157).

The deputy's *sadjdjāda* is normally used in the famous ceremony of "ligature", or "binding the girdle" *shadd*, which was widely practiced by both Ṣūfī associations and some craft guilds (*aṣnāf*; sing. *ṣinf* [*q.v.*]) of the Muslim Middle East. The *shadd* ceremony normally takes place in a *bayt al-sadjdjāda*, a regional *zāwiya*, or, in the case of the *ṣinf*, in a guild's headquarters. The novice who seeks to join a guild or a *ṭarīḳa*—the same applies to the would-be *naḳīb*—enters the circle of dervishes or initiated artisans, where he is solemnly girdled by the *khalīfa* (or the guild's elder), while he is standing on the *sadjdjāda*. The latter on such occasions is referred to as "the carpet of the Truth" (*bisāṭ al-ḥaḳḳ*), or "the carpet of God" (*bisāṭ Allāh*), i.e. the terms indicative of divine presence. This formal initiation, which is seen by its participants as "binding" of a new member (*mashdūd*) to a mystical brotherhood or a fraternity of artisans, is followed by a repast shared by the brethren, who are sitting on the carpet of initiation (H. Thorning, *Beiträge zur Kenntnis des islamischen Vereinswesens auf Grund von "Basṭ madad et-taufīq"*, Berlin 1913, 101-64, 255-67, *et passim*; Kahle, *op. cit.*, 163-67; cf. Brown, *Dervishes*, 173-7; for similar practices in the modern Persian Ṣūfī associations, see Gramlich, *Die Schiitischen Derwischorden, passim*).

Similar initiatory rites are attested for the Ṣūfī *ṭuruḳ* of Anatolia and Persia. Here, however, a sheep-skin (Turk. *pūst, post*) normally replaces the *sadjdjāda* in the *shadd* and similar ceremonies. In Bektāshī lodges (*takiya*) the *posts*, which may be twelve in number but are usually four (J.K. Birge, *The Bektashi order of dervishes*, London-Hartford, Conn. 1937, 178-80; cf. Brown, *op. cit.*, 186-90), symbolise the perpetual presence of the *imāms* and the saints (mostly the order's founding fathers and outstanding *khulafāʾ*), who are especially revered by the Bektāshiyya [*q.v.*]. Among them are the sheep-skins that personify ʿAlī b. Abī Ṭālib, Sayyid ʿAlī Sulṭān, Hādjdjī Bektāsh, Ḳayghusuz Abdāl, Bālīm Sulṭān, al-Khaḍir, etc. In the course of the initiatory ceremony, both the head of the lodge (*bāba* [*q.v.*] or *murshid* [*q.v.*]) and the novice (*ṭālib*) prostrate themselves before these sheep-skins to show reverence to their invisible owners (Birge, *op. cit.*, 181-2). The Bektāshiyya go even further in treating the first four of the above-mentioned *posts* as seats of God and his angels. On the other hand, some Bektāshī theories interpreted these *posts* as symbols of the four major stages of the mystical path: *sharīʿa, ṭarīḳa, ḥaḳīḳa, maʿrifa* (Brown, *Dervishes*, 201-2; cf. Gramlich, *Die Schiitischen Derwischorden*, 83-4). The overriding importance of the *post* for this Turkish Ṣūfī order is further attested by a special Bektāshī prayer attached to it (Brown, *op. cit.*, 202). Characteristically, it revolves around the theme of the primordial covenant (*mīthāḳ* [*q.v.*]) between God and humankind, which is enshrined in the famous Ḳurʾānic phrase (VII, 172), "Am I not your Lord?" (*a-lastu bi-rabbikum*) (Gramlich, *op. cit.*, 95-6).

In the light of the foregoing, one may venture a guess that the ceremony of initiation into a brotherhood or a guild was deemed to replicate this pre-eternal event as described in the Ḳurʾān and refined in numerous mystical commentaries (see e.g. G. Böwering, *The mystical vision of existence in Classical Islam*, Berlin 1980, *passim*), only this time the novice, by repeating special oath-formulas, pledged allegiance not only to God but to his new spiritual family also.

Within the framework of this imposing pageant, the *sadjdjāda* or the *post* served as token representation of the highest witnesses to the novice's oath, i.e. God and his elect saints.

The sheep-skin belonging to the Ṣūfī leader plays a significant role in the exotic "spiritual concerts" of another Anatolian brotherhood, the Mawlawiyya [*q.v.*]. The Mawlawī dervishes treat it simultaneously as the seat of the spiritual pole of the universe (*ḳuṭb* [*q.v.*]), the throne of God, and a paradise on earth. It is not surprising therefore that this *post* enjoys special esteem among the members of this mystical association. Its centrality for the Mawlawī outlook is reflected in their colourful mystical performances as described by H. Ritter (*Der Reigen der "Tanzenden Derwische"*, in *Zeitschr. für vergleichende Musikwissenschaft*, Berlin, i/2 [1933], 28-40; M. Molé, *La danse extatique en Islam*, in *Sources orientales 6. Les danses sacrées,* Paris 1963, 247-50, 263, 268, etc.; cf. Landolt, *op. cit.*, 249).

Like their Turkish colleagues, modern Persian dervishes have used a *post* rather than a *sadjdjāda* in their initiatory rites, which otherwise follow the pattern of the Egyptian *ṭuruḳ* described above (Gramlich, *op. cit.*, 76-7 *et passim*). This fact, however, does not change the essence of the rite that logically flows from the mystical doctrine of *wilāya*. This doctrine, in turn, goes back to the pre-Islamic past (for an attempt to trace its origin to shamanism, Manicheanism and Buddhism, see Landolt, *op. cit.*, 249, 251-2).

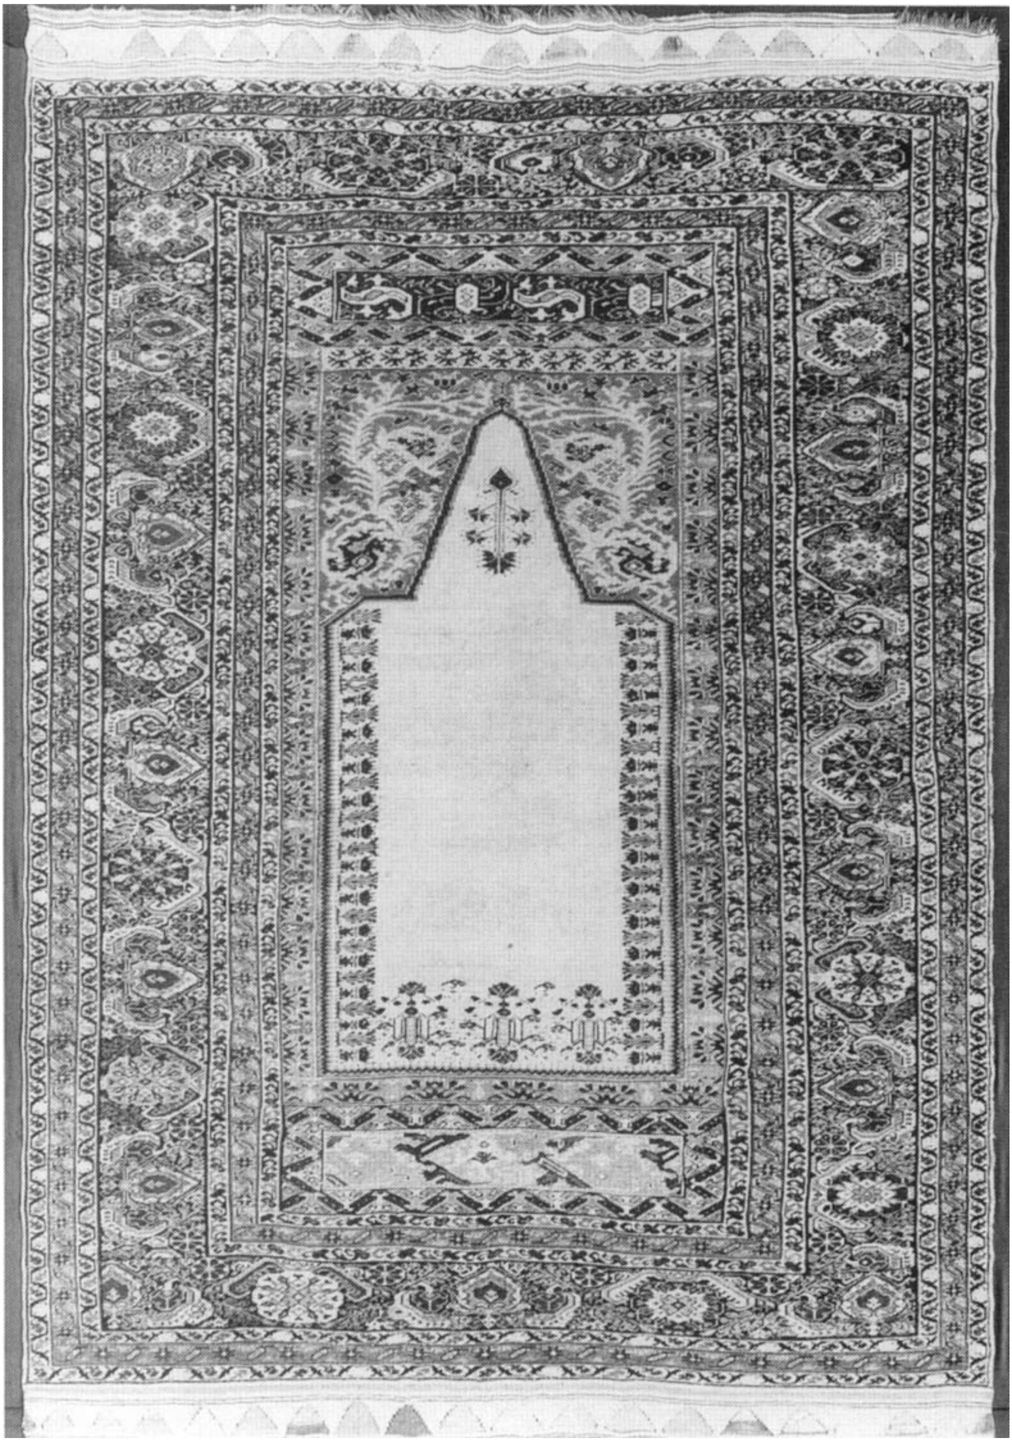
(A. Knysh)

SĀDJIDS, a line of military commanders who governed the northwestern provinces of the caliphate (Ādharbāydjān, Arrān and Armenia) in the later 3rd/9th and early 4th/10th centuries on behalf of the ʿAbbāsids.



The Sādjids were just some of several commanders, originally from the Iranian East and Central Asia, who came westwards to serve in the early ʿAbbāsid armies. The family seems to have originated in Ushrūsana [*q.v.*] on the middle Syr Darya in Transoxania, the region where the Afshīns [*q.v.*] were hereditary princes until at least the end of the 3rd/9th century, and was probably of Soghdian stock; by the time the family came to prominence in Islamic history, however, it had become culturally Arabicised to a considerable extent.

Abu 'l-Sādj Dēwdād (I) b. Yūsuf Dēwdasht fought in the Afshīn Ḥaydar's army against the anti-ʿAbbāsid rebel Bābak al-Khurramī [*q.v.*] (al-Ṭabarī, iii, 1222) and then with Ṭāhirid forces in Ṭabaristān against the rebel Māzyār [see ḲĀRINIDS] (*ibid.*, iii, 1276). Al-Muʿtazz later appointed him governor of Aleppo and Ḳinnasrīn, and as *ṣāḥib al-shurṭa* or police commander in Baghdād he was deeply involved in the strife involving the caliphs and their Turkish guards in Baghdād and Sāmarrā. In 261/875 he was appointed governor of Khūzistān, but when in the next year the Ṣaffārid Yaʿḳūb b. al-Layth [*q.v.*] prepared to march into ʿIrāḳ against the ʿAbbāsids, Abu 'l-Sādj Dēwdād joined Yaʿḳūb and took part in the battle near Dayr al-ʿĀḳūl [*q.v.*]; hence his estates and properties in ʿIrāḳ were confiscated by al-Muwaffaḳ. He nevertheless stayed faithful to the Ṣaffārids, and died at Djundīshābūr in the service of ʿAmr b. al-Layth [*q.v.*] in 266/879 (al-Ṭabarī, iii, 1937).

His two sons, Muḥammad and Yūsuf, remained, however, in the ʿAbbāsid service. Abū ʿUbayd Allāh or Abu 'l-Musāfir Muḥammad was active in the 880s in operations against rebels in the Ḥidjāz, and acted as the representative of the Ṣaffārid ʿAmr b. al-Layth [*q.v.*] in the Holy Cities. On the death of the governor of Egypt and Syria Aḥmad b. Ṭūlūn [*q.v.*] in 270/884, he accompanied the caliphal expedition against the latter's son Khumārawayh [*q.v.*] led by the general Isḥāḳ b. Kundādjik of Mawṣil, now appointed governor of Egypt and Syria, and took part in the tragicomic "Battle of the Mills". He subsequently quarrelled with Isḥāḳ and in the late 880s fought with him in the Mawṣil region. In 276/889-90, however, al-Muwaffaḳ appointed Muḥammad governor of Ādharbāydjān, the province which from this time onwards became the power-base of the Sādjid family. In 280/893 he acquired Marāgha [*q.v.*] from the local rebel ʿAbd Allāh b. al-Ḥasan al-Hamdānī, and was thus involved in warfare with the Armenian Bagratid ruler Smbat (in Arabic, Sunbāṭ) I, temporarily occupying Nakhčiwān and Dwīn [*q.vv.*]. He now felt strong enough to rebel against his ʿAbbāsid master, and it may have been at this point that he assumed the ancient Iranian title of Afshīn (see above), which appears on a dirham of his minted at Bardhaʿa [*q.v.*] in Arrān in 285/898. But he soon made peace again with al-Muʿtaḍid, was confirmed in his governorship and renewed operations against Smbat, penetrating to Ḳarṣ and Tiflis [*q.vv.*] and into Vaspurakan, then ruled by the Ardzrunid prince Sargis Ashot (Arabic, Ashūṭ) I. Muḥammad died of plague in Bardhaʿa in Rabīʿ I 288/March 901.

The army of Ādharbāydjān placed Muḥammad's son Dēwdād (II) in the governorship at Marāgha, but Dēwdād was soon forced out (Shaʿbān 288/July-August 901) by his uncle Abu 'l-Ḳāsim Yūsuf. Yūsuf transferred his capital to Ardabīl [*q.v.*]. He insisted on maintaining the direct Sādjid suzerainty over Smbat in Armenia, despite the latter's attempts to place himself directly under the caliph al-Muktafī in Baghdād and his seeking aid from the ʿAbbāsid against Yūsuf. However, on the accession of al-Muḳtadir Yūsuf's governorship of Ādharbāydjān, Arrān and Armenia was confirmed. Now with the authority of the caliph behind him, and with the powerful support within Baghdād of the vizier Ibn al-Furāt [*q.v.*], Yūsuf invaded Armenia and conducted a campaign of violence and devastation there, capturing Smbat and then in 301/914 executing him, but by *ca.* 304/917 recognising the rival Armenian dynasty of the Ardzrunids as his vassals in Dwīn.

Yūsuf now turned his attention to northern Persia and conquered Zandjān, Abhar, Ḳazwīn and Rayy from the governor on behalf of the Sāmānids Muḥammad b. ʿAlī Ṣuʿlūk, but his relations with al-Muḳtadir deteriorated and the caliph sent against his insubordinate servant an army under his commander-in-chief Muʾnis al-Muẓaffar [*q.v.*], who defeated Yūsuf in 307-919, capturing him and bringing him back to Baghdād for a spell of three years' imprisonment. On his release in 310/922, he was appointed governor of Ādharbāydjān, Rayy and northern Djibāl province, securing Ādharbāydjān and then Rayy and Hamadhān. In 314/926 the caliph recalled him and appointed him to command an army to be sent against the Ḳarāmiṭa [see ḲARMAṬĪ] in Lower ʿIrāḳ, but he was defeated near Kūfa by the Ḳarmaṭī leader Abū Ṭāhir al-Djannābī and killed (Dhu 'l-Ḥidjdja 315/February 928). It does not seem that it was at this point that some of Yūsuf's Turkish troops entered the caliphal service in Baghdād, to form there a special regiment of the Sādjiyya. This unit is mentioned previously (e.g. by Miskawayh, *Tadjārib al-umam*, in *Eclipse of the ʿAbbasid caliphate*, i, 116, tr. iv, 130, year 311/923-4), and Ibn Khallikān, ed. ʿAbbās, ii, 250-1, vi, 415, tr. de Slane, i, 500, iv, 315, cf. iv, 334 n. 11,

Sadjdjāda. (*Namāzlîk*) (T.), from Gördes, Turkey, 18th century.

Sadjdjāda. (*Djā-yi-namāz*) (P.), from Kirmān, Persia, 18th century.
(*By courtesy of the Board of Trustees of the Victoria & Albert Museum*).

expressly states that *al-adjnād al-Sādjiyya* in Baghdād were named after Abu 'l-Sādj Dēwdād (I), i.e. they were already in existence in the late 3rd/9th century (as noted by Canard, *Akhbâr ar-Râḍî billâh*, Algiers 1946, 49 n. 3).

After Yūsuf's death, his nephew Abu 'l-Musāfir Fatḥ b. Muḥammad Afshīn was made governor of Ādharbāydjān, but was in Shaʿbān 317/September 929 poisoned in Ardabīl by one of his slaves, so that the short line of Sādjid governors in northwestern Persia ended, and the province henceforth fell into the hands of various Kurdish and then Daylamī military adventurers. The Sādjid family did not die out totally; a son of Abu 'l-Musāfir Fatḥ's, Abu 'l-Faradj, was also a commander of the ʿAbbāsids in the mid-4th/10th century.

The Sādjid governorship over Arrān and Armenia was important for the extension of Arab control over the Armenian kingdoms there, particularly under Yūsuf b. Abi 'l-Sādj [see further, ARMĪNIYA, at I, 637]. But the Sādjids did not form an independent line of rulers in northwestern Persia, any more than did the Ṭāhirids in Khurāsān before them (even though the increasing enfeeblement of the caliphate after 295/908 made any bid for such independence more feasible), hence they are not to be equated with such an explicitly anti-ʿAbbāsid power as the Ṣaffārids on the eastern fringes of the caliphate; it was only after the end of Sādjid rule in Ādharbāydjān and eastern Transcaucasia that those regions came under native Iranian rather than Arab control. The dīnārs and dirhams minted by the Sādjids in Ādharbāydjān, Arrān, Armenia and, briefly, at Rayy (year 312/924-5, see G.C. Miles, *The numismatic history of Rayy*, New York 1938, 139-41) all acknowledge fully the ʿAbbāsid caliph as suzerain.

Genealogical table of the Sādjids

Yūsuf Dēwdasht
- 1. Abu 'l-Sādj Dēwdād (I)
  - 2. Muḥammad
    - 3. Dēwdād (II)
    - 5. Fatḥ
  - 4. Yūsuf

(C.E. BOSWORTH)

ṢADR (A.), "chest, breast, bosom" (pl. *ṣudūr*), a peculiarly Arabic word, not attested in other Semitic languages, except as a borrowing from Arabic. Its semantic connection with other derivatives of the root *ṣ-d-r* within Arabic is unclear; it may be derived from the basic notion of the verb *ṣadara*, i.e. "to come up, move upward and outward, from the waterhole" (opposite: *warada*). Most concretely, it refers to the chest as part of the body, and as such is dealt with in the lexicographical monographs on the human body called *Khalḳ al-insān* (al-Aṣmaʿī, 214-18; Thābit b. Abī Thābit, 244-54; cf. also Ibn Sīdah, *al-Mukhaṣṣaṣ*, i, 19-24). *Ṣadr* may refer to the breast of all animals, or to that of humans only. In the latter case it is contrasted with e.g. the *kirkira* of the camel-stallion, the *labān* of the horse, the *zawr* of the lion, the *djuʾdjuʾ* of the bird, etc. (see al-Thaʿālibī, *Fiḳh al-lugha*, 109: *taḳsīm al-ṣudūr*), but the lexicographers are not unanimous in their definitions of these words (e.g. al-Aṣmaʿī, *Khalḳ al-insān*, 216, l. 12, equates *zawr* and *djuʾdjuʾ* with *ṣadr*). From the noun *ṣadr* the usual two body-part verbs may be derived: *ṣadara* "to hit, wound the chest" and *ṣudira* "to suffer from a chest ailment."

Bibliography: Aṣmaʿī, *K. Khalḳ al-insān*, ed. A. Haffner, in *Texte zur arabischen Lexikographie*, Leipzig 1905 [Arabic title page: Beirut 1903], 158-232; Thābit b. Abī Thābit, *Khalḳ al-insān*, ed. ʿA.A. Farrādj, Kuwait 1955; Ibn Sīdah, *al-Mukhaṣṣaṣ*, repr. Beirut n.d.; Thaʿālibī, *Fiḳh al-lugha*, ed. L. Cheikho, repr. Tripoli and Tunis 1981.

The *ṣadr*, like "bosom," is also the seat of emotions and convictions, and interestingly this is the only sense in which it occurs in the Ḳurʾān (with the possible exception of sūra XXII, 46; see, however, below). In the singular (but, strangely, never in the plural) it is consistently connected with the idea of "constriction" (root *ḍ-y-ḳ*, cf. XI 12; XV, 97; XXVI, 13; also root *ḥ-r-dj*, cf. VI, 125; VII, 2) or "dilatation" (root *sh-r-ḥ*, cf. VI, 125; XVI, 106; XX, 25; XXXIX, 22; XCIV, 1) to express anxiety, grief, and rejection vs. serenity, joy, and acceptance. The plural *ṣudūr* is mostly used in conjunction with the idea of thoughts and feelings that are hidden in them (roots *kh-f-y*, see III, 29; III, 118; XI, 5; XL, 19, and *k-n-n*, see XXVII, 74; XXVIII, 69), but which God knows nonetheless; this is particularly expressed in the refrain-like formula *inna 'llāha ʿalīm^un bi-dhāti 'l-ṣudūr* "God knows well what ails [their] bosoms" [Arberry: "God knows the thoughts in their breasts"] (III, 119, among others). In two places the *ṣudūr* are closely connected with the *ḳulūb*, "hearts," (XXII, 46: *wa-lākin taʿmā l-ḳulūbu 'llatī fī 'l-ṣudūr* "but blind are the hearts within the breasts," and III, 154: *li-yabtaliya 'llāhu mā fī ṣudūrikum wa-li-yumaḥḥiṣa mā fī ḳulūbikum* "and that God might try what was in your breasts, and that he might prove what was in your hearts").

The early mystics, intent on formulating the internal stages of religious experience, availed themselves of some of these passages from the Ḳurʾān and defined *ṣadr* as one of the inner organs involved [see also ḲALB]. It is especially sūra XXXIX, 22 (*a-fa-man sharaḥa llāhu ṣadrahū li-l-islāmi* "Is he whose breast God has expanded unto Islam...") which prompted Abu 'l-Ḥusayn al-Nūrī (d. 295/907 [*q.v.*]) to establish a parallelism between *ṣadr* as the seat of *islām* and—moving inward and upward—between *ḳalb*, *fuʾād*, and *lubb*, all Ḳurʾānic terms, as the respective seats of *īmān*, *maʿrifa*, and *tawḥīd* (*Maḳāmāt al-ḳulūb*, 130, cf. P. Nwyia, *Exégèse coranique*, 321, who also points to a similar terminology in the *Tafsīr* attributed to Djaʿfar al-Ṣādiḳ (d. 148/765 [*q.v.*]), where the parallelisms are: *ṣadr* and submission (*taslīm*), *ḳalb* and certitude (*yaḳīn*), *fuʾād* and contemplation (*naẓar*), the *ḍamīr* and the secret (*sirr*), and the *nafs* as the refuge of all good and evil; *ḍamīr* not being Ḳurʾānic, al-Nūrī stays closer to the Ḳurʾān). A similar scheme is proposed by al-Ḥakīm al-Tirmidhī (d. after 318/930) in his *K. fī Bayān al-farḳ bayn al-ṣadr wa 'l-ḳalb wa 'l-fuʾād wa 'l-lubb*, 33-47, 79-83 (tr. 28-36, 244-5). He offers several analogies to characterise the relationship of the four parts of the heart (note that *ḳalb* has two meanings,

one comprehensive and one specific), of which the following two may be quoted:

Heart	Almond	Sacred Precinct
ṣadr	outer shell	the *ḥaram*
ḳalb	inner shell	city of Mecca
fuʾād	kernel	Great Mosque
lubb	oil inside kernel	Kaʿba

The *ṣadr* is called thus, because it is the outer part (*ṣadr*) of the heart and its first station. In another work, al-Ḥakīm al-Tirmid̲h̲ī uses an interpretation of the Light Verse (XXIV, 35) to explain the function of the heart and equates the *ṣadr* with the niche (*mis̲h̲kāt*; see *K. al-Aʿḍāʾ wa 'l-nafs*, 85).

Similar divisions remain popular with later writers, although the term *ṣadr* is not always included, while other terms may be added (relevant sections tr. and discussed by Sachiko Murata, *The Tao of Islam*, 292-9 and ff.). Al-Tirmid̲h̲ī's scheme is taken up again, with certain alterations, in the Persian Ḳurʾānic commentary of Ras̲h̲īd al-Dīn Maybudī (wrote 520/1126 [*q.v.*]), who replaces the *lubb* by *s̲h̲ag̲h̲āf* and, rather than *maʿrifa* and *tawḥīd*, assigns the two functions of *mus̲h̲āhadat-i Ḥaḳḳ* and *ʿis̲h̲ḳ* to *fuʾād* and *s̲h̲ag̲h̲āf* (*Kashf al-asrār*, viii, 411-12; cf. Murata, *op. cit.*, 296-7).

The *ṣadr* is described in a number of metaphorical ways as the place in which the internal dramas of good and evil are staged. According to one passage in al-Ḥakīm al-Tirmid̲h̲ī, the heart is the home of faith, the soul is the home of passions. Between them is a wide space called *ṣadr*, from which emanate (*ṣadara*) the orders executed by external organs. Both heart and soul have an opening leading to that place. Through that of the heart the light of faith would shoot into the *ṣadr*, as the fire and smoke of passion would shoot into the breast through the opening of the *nafs*. Whichever triumphs over the other brings about obedience or disobedience. "Et telle est toute l'histoire du cœur et de l'âme" (P. Nwyia, *op. cit.*, 279, summarising a passage from the *Masāʾil*). For other descriptions, in al-Tirmid̲h̲ī's work, of the struggle in the *ṣadr* between heart and soul, see *al-Furūḳ wa-manʿ al-tarāduf, apud* P. Nwyia, *op. cit.*, 122; *Bayān al-farḳ*, 40-7; *K̲h̲atm al-awliyāʾ*, 130-1; B. Radtke, *Al-Ḥakīm at-Tirmiḏī*, Freiburg 1980, 58-71 and index).

A strangely generalised use of the term *ṣadr* appears in *al-Futūḥāt al-Makkiyya* of Ibn al-ʿArabī (d. 638/1240 [*q.v.*]). Here the *ṣadr* is presented as a universal feature of creation; each thing can boast of one. Knowledge of it is among the loftiest knowledge on the Path, since the world and each genus is according to the shape of man (microcosm), who is the last created thing. Man alone is according to the Divine shape, externally and internally, and God has made for him a *ṣadr*. Between Him and man there are *ṣudūr* whose number only God knows (ii, 652). This is followed by an enumeration of twenty-seven *ṣudūr*, after which Ibn al-ʿArabī adds that every *ṣadr* has a *ḳalb* and, as long as the *ḳalb* remains in the *ṣadr*, it is blind (cf. sūra XXII, 46), because the *ṣadr* is a veil upon it. If God wills to make it seeing, it goes out from its *ṣadr* and thus sees. E.g. the causes (*asbāb*) are the *ṣudūr* of the existent things, and the existent things are like hearts. As long as an existent thing looks at its cause from which it emerges (*ṣadara*), it is blind to seeing God as the one who made it existent (ii, 652-3).

Ḥikmat, Tehran 1331-9/1952-60; Ibn al-ʿArabī, *al-Futūḥāt al-Makkiyya*, Cairo 1911.

In everyday life, the idea of the *ṣadr* being the container of something hidden is expressed in the proverb *ṣadruka awsaʿu li-sirrik(a)* "Your bosom is wide enough for your secret" admonishing a person to keep his secret to himself (al-Maydānī, *Mad̲j̲maʿ al-amt̲h̲āl*, ed. Muḥammad Muḥyi 'l-Dīn ʿAbd al-Ḥamīd, 2 vols., ²Cairo 1379/1959, i, 396a).

In a figurative sense, *ṣadr* means any "first, front, or upper part" of a thing. A number of technical meanings result.

(a) In prosody *ṣadr* has two unrelated meanings. One refers to the first foot of a verse, as opposed to *ʿad̲j̲uz*, the last foot. This latter is also known as *ḍarb*; this, however, defines it as the last foot of the second hemistich as opposed to the last foot of the first hemistich, the *ʿarūḍ*. The structure of a complete line in terms of characteristic elements (*arkān*) is the following: *ṣadr*-[*has̲h̲w*]-*ʿarūḍ*/*ibtidāʾ*-[*has̲h̲w*]-*ʿad̲j̲uz* (*ḍarb*) (see al-Sakkākī, *Miftāḥ*, 523-4; Freytag, *Darstellung*, 117-120; Elwell-Sutton, *The Persian metres*, 40). *Ḥas̲h̲w* feet occur, of course, only if the hemistich consists of more than the initial and the final foot, i.e. in *musaddas* and *mut̲h̲amman* lines. The terms *ṣadr* and *ʿad̲j̲uz* are often also loosely applied to the entire first and second hemistich, respectively (see Lane, s.v.). This has influenced their use in the technical term *radd al-ʿad̲j̲uz ʿala 'l-ṣadr*, referring to the rhetorical figure of anticipating the rhyme word in the first half (at times even the beginning of the second half) of the line (see G.E. von Grunebaum, who compares the *epanadiplosis* of classical rhetoric, *Tenth-century document*, 32 n. 247, 116; G. Kanazi, *Studies*, 56-7; note that, while *ʿad̲j̲uz* is still used in its narrow sense of rhyme foot, *ṣadr* has acquired the broader meaning).

Bibliography: Sakkākī, *Miftāḥ al-ʿulūm*, ed. Nuʿaym Zarzūr, Beirut 1403/1983; G.W. Freytag, *Darstellung der arabischen Verskunst*, Bonn 1830; L.P. Elwell-Sutton, *The Persian metres*, Cambridge 1976; G.E. von Grunebaum, *A tenth-century document of Arab literary theory and criticism. The sections on poetry in al-Bâqillânî's Iʿjâz al-Qur'ân*, Chicago 1950, repr. 1974; G. Kanazi, *Studies in the Kitāb aṣ-Ṣināʿatayn of Abū Hilāl al-ʿAskarī*, Leiden 1989.

The other meaning of *ṣadr* in prosody occurs in the context of the phenomenon called *muʿāḳaba*, i.e. the obligatory alternation of the shortening of two adjacent cords [see SABAB]. Thus in the *ramal* metre, the foot *fāʿilātun* may have its first cord *fā-* shortened, thus *faʿilātun*, only if the last cord *-tun* of the preceding foot is not shortened; this case is called *ṣadr*. Or it may have the last cord *-tun* shortened, thus *fāʿilātu*, but only if the first cord *fā-* of the following foot is not shortened; this case is called *ʿad̲j̲uz*. Or, finally, it may have both its first and its last cord shortened, thus *faʿilātu*, but only if the preceding and following cords are not shortened; this case is called *ṭarafān* or, more logically, *d̲h̲u 'l-ṭarafayn* (the latter in al-Sakkākī, *Miftāḥ*, 527). These phenomena occur in the metres *madīd, ramal, k̲h̲afīf* and *mud̲j̲tat̲h̲t̲h̲* (Ibn Ras̲h̲īḳ, *al-ʿUmda*, i, 149). The apparent reason for their existence is to avoid a sequence of four moving letters.

Bibliography: Sakkākī (see above); Ibn Ras̲h̲īḳ,

al-ʿUmda fī ṣināʿat al-shiʿr wa-ādābih wa-naḳdih, ed. M.M. ʿAbd al-Ḥamīd, 2 vols., ³Cairo 1383/1963-4; Freytag, Darstellung (see above), 108.

(b) In epistolography and the composing of texts in general, the term ṣadr refers to the introductory formulae of letters and prefaces in books (the latter also taṣdīr). For an extensive disquisition on ṣudūr in epistles, including the way one alludes to the main topic already in the taḥmīd and how one moves (takhalluṣ) from the ṣadr to the actual topic (gharaḍ), see al-Kalāʿī, Iḥkām ṣanʿat al-kalām, ed. Muḥ. Riḍwān al-Dāya, Beirut 1966, 58-72. Ṣadr is used in the "old translation" of Aristotle's Rhetoric as one of the terms to render προοίμιον, the exordium or proem, of a speech (see M.C. Lyons, *Aristotle's* Ars Rhetorica. *The Arabic version*, ii, *Glossary*, Cambridge 1982, 123-4, 226). This remains the rendition of choice with the later philosophers. Ibn Sīnā compares the proem which leads into the speech with clearing one's throat before the call to prayer and with warbling on a reed instrument before playing the actual piece (*al-Shifāʾ*, *al-Manṭiḳ*, 8. *al-Khaṭāba*, ed. M.S. Sālim, Cairo 1373/1954, 237, ll. 12-24). In books, the *ṣadr* may mean a non-technical "beginning, first part", but may also refer to preliminary remarks that precede the actual "introduction." Thus al-Ghazālī, in his *al-Mustaṣfā min ʿilm al-uṣūl*, Būlāḳ 1322, prefixes the following introductory materials to his book: 1. the *taḥmīd* (2-3); 2. the *khuṭba* (after *ammā baʿd*), mainly in *sadjʿ*, with general remarks about reason and knowledge, as well as some autobiographical indications, ending with the titling of the book (3-4); 3. the *ṣadr al-kitāb*, expressly so called, dealing with the definition, the hierarchical status, and the internal structure of *uṣūl al-fiḳh*, as also with the reason for the introduction (4-10); and 4. the *muḳaddima*, "introduction," again expressly so named, in which the author presents an outline of logic and epistemology (10-55). Derived from this *ṣadr* is the verb *ṣaddara kitābahū* (*LʿA*), cf. al-Fārābī's introductory epistle to his work on the Organon, the *Risāla ṣuddira bihā 'l-kitāb*, ed. Rafīḳ al-ʿAdjam, in *al-Manṭiḳ ʿind al-Fārābī*, Beirut 1985, i, 55-62. Again, this *ṣadr* contains general notions indicating the status of logic, such as logic vs. grammar, syllogistic vs. non-syllogistic crafts, review of the five syllogistic crafts, overview of Organon and of philosophy in general, and basic ideas about "concept," "proposition," and "definition."

Bibliography: Given in the text.

(c) From the expression *ṣadr al-madjlis*, the upper or front part of the assembly, i.e. "the place/seat of honour," the term *ṣadr* for an outstanding person is synecdochically derived (cf. *kāna ṣadr^an fi 'l-farāʾiḍ wa 'l-ḥisāb*, "he was an eminent expert in inheritance computations and arithmetic," Dozy, s.v.). This has developed into an academic and an administrative sense. For the latter, i.e. the terms *ṣadr* and *ṣadr al-ṣudūr* for the head of the religious administration in post-Mongol Iran and *ṣadr-i aʿẓam* for the grand vizier in the Ottoman empire, see below. In the academic sense, it is mostly applied to a professor in *adab* and mostly in the derived forms *muṣaddar* and *mutaṣaddir*. The respective verbs, *ṣaddara* and *taṣaddara*, mean "to appoint s.o. a professor" and "to be appointed" or "to set o.s. up as a professor," the latter often with the implication of insufficient preparation (see G. Makdisi, *The rise of colleges*, Edinburgh 1981, 203-6, and, particularly, idem, *The rise of humanism*, Edinburgh 1990, 277-9).

Bibliography: Given in the text.

(W.P. Heinrichs)

ṢADR (A.), used in a personal sense, with an extended meaning from Arabic "breast" > "foremost, leading part of a thing", denotes an eminent or superior person or *primus inter pares*, whence its use for a chief, president or minister; cf. the Ottoman Turkish Grand Vizier's title *ṣadr-i aʿẓam* [*q.v.*]. The title was especially used in the Persian world for a high religious dignitary whose function (*ṣadārat, ṣidārat*) was concerned essentially with the administration of religious affairs. In the first mentions of the title and in the structural evolution of the office in the post-Il Khānid period, the titles and prerogatives of the *ṣadr* evolved considerably, and despite lacuna in our sources of information, their evolution can be traced chronologically, as described below.

(J. Calmard)

1. In Transoxania.
2. In the period from the Il-Khānids to the Tīmūrids.
3. The Tīmūrid and Turkmen periods.
4. In the Ṣafawid period.
5. In Mughal India.

1. In Transoxania.

In the cities and towns of Transoxania, the Islamic religious institution, by Ḳarakhānid and Saldjūḳ times predominantly Ḥanafī in *madhhab*, came to enjoy a special position of religious, social and often administrative power *vis-à-vis* the Ḳarakhānids [see ilek-khāns] and subsequent incoming Turkish dynasties. The members of this institution who held office as *imām* and *raʾīs* [*q.vv.*] also came to enjoy the title of *ṣadr*; such *ṣadrs* were to be found, e.g., in Samarḳand, Khudjand, Özkend, Almalīḳ, etc. They were especially influential in Bukhārā, where the Burhānī ones (see below) were further dignified by an intensive form of the title, that of *ṣadr al-ṣudūr*.

Already during the Sāmānid period there is mentioned (e.g. by the local historian Muḥammad b. Aḥmad al-Bukhārī al-Ghundjār, d. 412/1021, cf. Barthold, *Turkestan*³, 15, and by al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, i, 243-6) the family of the Ismāʿīlīs, who held religious and civic power in Bukhārā. After them there came in 5th/11th century the Ṣaffārīs. In addition to their religious and civic authority, such families were clearly economically powerful also, doubtless possessing urban property and/or rural estates; hence in the assertion of what they took to be their spiritual rights, and probably in defence of their property also, they frequently clashed with the temporal holders of power. Thus the Ḳarakhānid ruler Shams al-Mulk Naṣr b. Tamghač Khān Ibrāhīm in 461/1069 executed the *imām* and *ṣadr* Ismāʿīl b. Abī Naṣr al-Ṣaffār because he had, according to al-Samʿānī, exhorted the Khān to observe the ordinances of religion and to eschew forbidden things (*ibid.*, viii, 318; cf. Barthold, *op. cit.*, 316, 320).

This willingness to challenge the secular authorities and, if needs be, to suffer for it, was the mark of succeeding religious leaders in Bukhārā, above all, of the next, and particularly celebrated, line of *ṣadrs*, who now, as noted above, bore the more exalted title of *ṣadr al-ṣudūr*, sc. the family of Burhān; all but the founder appear in the sources with the additional designation of *al-Shahīd* "Martyr", having found death at the hands of the Ḳarakhānids or Ḳara Khitay [*q.v.*]. The Āl-i Burhān acquired its name from the fact that virtually all of them bore the *laḳab* or honorific title of Burhān al-Dīn "Proof of Religion" or Burhān al-Milla wa 'l-Dīn. The family traced its *nasab* back to the Arab tribes of Khurāsān in the Umayyad period, and seems always to have retained some connection with the city of Marw. Its history has, however, to be pieced together from scattered mentions in the historical sources for the Ḳarakhānid,

Saldjūḳ and succeeding periods and from the *Kitāb-i Mullāzāda* or *K.-i Mazārāt-i Bukhārā* by the Tīmūrid author Muʿīn al-Fuḳarāʾ [see AḤMAD B. MUḤAMMAD, MUʿĪN AL-FUḲARĀʾ, in Suppl.]

When the Saldjūḳ sultan Sandjar [*q.v.*] came to Transoxania in 495/1102, he apparently deposed the reigning *raʾīs* and *imām* of Bukhārā, Abū Isḥāḳ Ibrāhīm al-Ṣaffārī, and replaced him by the Ḥanafī scholar ʿAbd al-ʿAzīz b. ʿUmar Māza, who assumed the title of *ṣadr*. There now began the period of dominance, lasting for nearly a century and a half, of the Āl-i Burhān. Linked to Sandjar by marriage, they became, like the Ḳarakhānids, immediate vassals of the Saldjūḳs, until ʿAbd al-ʿAzīz's son Ḥusām al-Dīn ʿUmar was killed by the pagan Ḳara Khitāy after Sandjar's disastrous defeat at the battle of the Ḳaṭwān Steppe in 536/1141. However, the Burhānīs made their peace with the Gur Khān and were acknowledged as representatives of the Ḳara Khitay in Bukhārā, collecting the land-tax there for the rulers. When the Khwāram-Shāh Tekish appeared at Bukhārā in 578/1182, they likewise accommodated themselves to the new, in practice, temporary, régime. It was apparently to the *ṣadr* ʿAbd al-ʿAzīz (II) b. Muḥammad (d. 593/1196-7) that Muḥammad b. Ẓufar, the epitomiser of Narshakhī's *Taʾrīkh-i Bukhārā*, dedicated his local history. The Burhānīs continued to dominate civic life in Bukhārā under the restored Ḳarakhānids and Ḳara Khitay, and Muḥammad (II) b. Aḥmad (d. 616/1219) was renowned for his wealth and arrogance." We also know of eulogistic Persian poetry addressed to them by such authors as the satirist Sūzanī (d. ?569/1173-4 [*q.v.*]) and Shamsī-yi Aʿradj Bukhārī (*flor. ca.* 1200 AD) (see F. de Blois, *Persian literature*, v/2, 427, 432).

The end of Burhānī dominance came with the outbreak at Bukhārā of the popular movement led by the vendor of shields Maḥmūd Ṭārābī (636/1238-9), and the last Burhānī, Aḥmad (II) b. Muḥammad, was reduced by Ṭārābī to the status of *khalīfa* or deputy of a new *ṣadr al-ṣudūr*, hence preferred to flee and to take refuge with the Ḳara Khitay. But by now, these last were being hard pressed by the Mongols, and were not strong enough to replace Aḥmad in his former glory.

In his place, a new family took over the *ṣadāra* of Bukhārā. The Ḥanafī *faḳīh* Shams al-Dīn Muḥammad b. Aḥmad al-Maḥbūbī was Ṭārābī's candidate, and there now began a line of *ṣudūr* as long-lived and as influential as the Āl-i Burhān, that of the Āl-i Maḥbūb, who inherited from their predecessors the additional form of the title, *ṣadr-i djahān*. The Maḥbūbīs, like the Burhānīs, traced their ancestry back to the Arabs of the time of the Prophet, and they likewise at times employed the *laḳab* of Burhān al-Dīn. Already in the 6th/12th century they had produced notable Ḥanafī scholars, such as the theologian Aḥmad b. ʿUbayd Allāh al-Maḥbūbī (546-630/1151-1232), and in the next century or so members of the family continued to write many textbooks of Ḥanafī *fiḳh* which became standard. They are mentioned in the sources until the middle of the 8th/14th century, for Ibn Baṭṭūṭa met at Bukhārā in 733/1333 the Ṣadr al-Sharīʿa, probably ʿUbayd Allāh b. Masʿūd al-Maḥbūbī (*Riḥla*, iii, 28, tr. Gibb, iii, 554, apparently mis-identified in n. 56), who was famed as a legal scholar (see Brockelmann, II², 277-8, S II, 300-1); but thereafter, they fade from historical mention.

Bibliography: Barthold, *EI*¹ art. *Burhān* (outdated); C.E. Bosworth, *EIr* art. *Āl-e Borhān*; O. Pritsak, *Āl-i Burhān*, in *Isl.*, xxx (1952), 81-96 (incs. detailed bibliographical information and attempted chronologies of the Burhānī and Maḥbūbī families, with a genealogical table of the former).

(C.E. BOSWORTH)

2. In the period from the Il-Khānids to the Tīmūrids.

Apart from uses of *ṣadr* and its compounds in Transoxania, one finds that, under the Il-Khānids, the *laḳab* of *ṣadr-i djahān* was given to the vizier of Gaykhatu (690-4/1291-5), Ṣadr al-Dīn Aḥmad Khālidī Zandjānī, apparently as an honorific title (see Dihkhudā, *Lughat-nāma*, *s.v.*, citing Khwāndamīr, *Ḥabīb al-siyar*, and the *Dastūr al-wuzarāʾ*). It was also the title of Mīr Ṣadr-i Djahān Pihānī, an envoy of the Mughals to ʿAbd Allāh Khān Özbeg (see Riazul Islam, *Indo-Persian relations* ..., Tehran 1970, 54; idem, *A Calendar of documents on Indo-Persian relations (1500-1750)*, Tehran and Karachi 1979-82, ii, 212, 214).

Since we have no precise indications on the function of the *ṣadārat* before the second half of the 8th/14th century, it has been incorrectly thought that it was a Tīmūrid creation (R.M. Savory, *The principal offices of the Ṣafawid state during the reign of Tahmāsp I (930-84/1524-76)*, in *BSOAS*, xxiv [1961], 103, also in his *Studies on the history of Ṣafawid Iran*, Variorum, London 1987) or even a Ṣafawid one (K. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 117; idem and H.R. Idris, *Regierung und Verwaltung des Vordern Orients in islamische Zeit*, Hb der Or. Leiden-Köln 1979, 46-7; criticisms by G. Herrmann, *Zur Entstehung des Ṣadr-Amtes*, in U. Haarmann and P. Bachmann, *Die islamische Welt zwischen Mittelalter und Neuzeit. Festschrift für Hans Robert Roemer*, Beirut-Wiesbaden 1979, 278, 282). A detailed study of the chancery literature (*inshāʾ*) and of official documents shows that there was no nomination of *ṣadrs* under the Djalāyirids [*q.v.*]. The highest magisterial function in Islam was at that time exercised by the *ḳāḍī ʾl-ḳuḍāt*, with other religious affairs being the responsibility of the chief vizier or other officials like the *ḥākim-i dīwān-i awḳāf-i mamālik* (analysis of the *Dastūr al-kātib*; cf. Roemer, *Staatsschreiben der Timuridenzeit. Das Šaraf-nāmä des ʿAbdallāh Marwārīd in kritischer Auswertung*, Wiesbaden 1952, 142, and Herrmann, *op. cit.*, 284-5). Under the Muẓaffarids [*q.v.*], the highest religious dignitary was also still the *ḳāḍī ʾl-ḳuḍāt*. The combination of the terms (but not of distinct functions) of *wizārat* and *ṣadārat* is attested under the Karts [*q.v.*] or Kurts of Harāt, with the bestowing of the *wizārat* on Shaykh Muʿīn al-Dīn Djāmī (J. Aubin, *Le khanat de Čaġatai et le Khorassan (1334-1380)*, in *Turcica*, viii [1976], 30; Herrmann, *op. cit.*, 294). The first document which we possess on the specific appointment to an office of *ṣadr* concerns Muʿīn al-Dīn's eldest son, Ḍiyāʾ al-Dīn Yūsuf (*manshūr* of Rabīʿ II 782/July-August 1380; see Aubin, *op. cit.*, 51; the document is ed., tr. and commented upon by Herrmann, *op. cit.*, 287 ff.). Tīmūr considered himself as a disciple of Ḍiyāʾ al-Dīn, who took part in the five-years' war and died at Tabrīz in 797/1394-5. His brother Shihāb al-Dīn ʿUmar was linked with Mīrān Shāh, the prince who held the appanage of Khurāsān (Aubin, *op. cit.*, 53). The office of *ṣadārat* attributed to Ḍiyāʾ al-Dīn encompassed the direction of affairs concerning all the religious dignitaries (*imāms*, *sayyids*, *shaykhs*, *ḳāḍīs*, *khaṭībs*, *muḥtasibs*, *amīns* "and other religious authorities") of the city of Harāt and its dependent districts. All decisions concerning judicial sentences, teaching, the leadership of the worship, the *khuṭba*, the supervision of weights and measures (*iḥtisāb*), the administration of the *awḳāf*, the inspectorship of finance (*ishrāf*) and

activities of the treasury (*bayt al-māl*), as well as nominations, distributions, appointments and participations of all religious dignitaries and theological students, had to be submitted for his approval.

3. The Tīmūrid and Turkmen periods.

Despite Tīmūr's devotion to Ḍiyāʾ al-Dīn, the mention of three persons bearing the title of *ṣadr* (after their *ism*) in his reign does not clearly show that they occupied the actual functions of *ṣadārat* (Herrmann, *Zur Entstehung des Ṣadr-Amtes*, 293-4). This is, on the other hand, attested under his son Shāh Rukh (807-50/1405-47). The office is even attributed at one and the same time to several persons in Harāt (at the court's chancery) and in the provinces in the princes' appanages (*ibid.*, 280 ff.; on the provincial *ṣadrs* under Shāh Rukh, see Aubin, *Deux sayyids de Bam au XVe siècle. Contribution à l'histoire timouride*, in *Abh. der Akad. der Wiss. und der Lit. zu Mainz*, geistes- u. sozialwiss. Kl. [1956], no. 7, 398). This practice becomes the rule under Ḥusayn Bayḳara (875-912/1470-1506). During his reign, the revenues from *awḳāf* which, like other grants and favours enjoyed complete fiscal immunity, became so important that it was necessary to appoint several *ṣadrs* at the same time in order to supervise these revenues (Khwāndamīr, Tehran 1333, iv, 321; cf. M. Subtelny, *Centralizing reform and its opponents in the late Timurid period*, in *Iranian Studies*, xxi/1-2 [1988], 126). However, in 910/1504-5, Ḥusayn Bayḳara appointed a *ṣadr* whose functions were especially attached to the ruler's service (*mansab-i ṣadārat-i khāṣṣayi humāyūn*, Khwāndamīr, iv, 327; Hermann, *op. cit.*, 282). The fact that the office could be held by several dignitaries at the same time leads one to suppose that there was a hierarchy amongst the various *ṣadrs*. But the mention of a chief *ṣadr* (*ṣadr al-ṣudūr*) only appears once, in a late Tīmūrid document, which seems to indicate the provisional or exceptional character of the office (*ibid.*). The *ṣadr*'s department (*sarkār-i ṣadārat* or *dīwān-i ṣadārat*) occupied the third place in the Tīmūrid administration after the *dīwān-i tuwāčī* and the *dīwān-i māl*. The financial support for the *ṣadrs*, made up of allowances (*ʿulūfa*) and gratuities (*inʿām*) came from a specific tax (*rasm al-ṣadārat* or *sahm al-ṣadārat*) raised as a percentage on *waḳf* revenues (*ibid.*, 283-4).

As for the social origins of the *ṣadrs*, a strong tendency for the post to remain within one family, leading to hereditary control over the office, has been noted (Roemer, *Staatsschreiben der Timuridenzeit*, 143-6; Herrmann, *op. cit.*, 281). Although they were the superiors of the *sayyids*, it was only occasionally that they stemmed from this last group. Among the forty *ṣadrs* mentioned by Khwāndamīr for Ḥusayn Bayḳara's reign, there are only three descendants of the Prophet (iv, 321-8; cf. Herrmann, *ibid.*). Some *ṣadrs* were accused of corruption during this reign. A dispute between the descendants of Aḥmad-i Djām and of ʿAbd Allāh Anṣārī provoked the intervention of the Naḳshbandī *shaykh* Khwādja Aḥrār [*q.v.* in Suppl.] (J. Paul, *Die politische und soziale Bedeutung der Naqšbandiyya in Mittelasien im 15. Jahrhundert*, Berlin 1991, 57-8).

As well as the supervision of the religious leaders and of the *awḳāf* mentioned above for the Kart *ṣadr*, the Tīmūrid *ṣadr* was more explicitly charged with supervising and administering the application of the *Sharīʿa* as head of judicial authority in the state (Roemer, *op. cit.*, 143-6). This prerogative appears also in the Aḳ Ḳoyunlu state, in which one finds the *ṣadr al-sharīʿat* (J.E. Woods, *The Aqquyunlu. Clan, confederation, empire*, Minneapolis and Chicago 1976, 11). The reform-minded minister of the Aḳ Ḳonyunlu sultan Yaʿḳūb, the *Ḳāḍī* ʿĪsā Sāwadjī, held both the civil and religious functions with the rank of *ṣadr* (V. Minorsky, *Turkmenica II. The Aq-qoyunlu and land reform*, in *BSOAS*, xvii [1955], 451-8; Aubin, *Etudes safavides. I. Šāh Ismāʿīl et les notables de l'Iraq Persan*, in *JESHO*, ii [1959], 48-9; Woods, *op. cit.*, 156-7). In general, under the Turkmen Ḳara and Aḳ Ḳoyunlu the *ṣadr* held the highest religious office (Roemer, *op. cit.*, 14304).

For documents concerning the Ṣafawid *ṣadrs*, see Schimkoreit, *op. cit.*, index. Some documents issued by these *ṣadrs* or concerning them have been published by H. Mudarrisī Ṭabāṭabāʾī, *Mithāl-hā-yi ṣudūr-i ṣafawī*, Ḳum 1353/1974. (J. Calmard)

4. In the Ṣafawid period.

The complex of religious institutions inherited by the Ṣafawid administration consisted basically of mosques, religious colleges (*madrasa*), religious endowments (*awḳāf*), and the offices of *ḳāḍī* and *shaykh al-islām*. These were controlled by the state through the office of *ṣadr*, the most important religous position in the realm and one which, in pre-Ṣafawid Persia, had tended to be hereditary in nature (see 2. above). The main function of the *ṣadr* was to supervise and administer the *awḳāf* and the distribution of their revenues to students and scholars and also to charity, hence the full title *ṣadr al-mawḳūfāt*. However, with the advent of Shāh Ismāʿīl I (r. 907-30/1501-24 [*q.v.*]), the nature and function of the office of *ṣadr* changed considerably. Faced with the problem of how to reconcile the "men of the sword", the Turcoman military élite which had propelled him to power, with the "men of the pen", the Persian bureaucrats on whom he depended for the efficient functioning of his state, Ismāʿīl made the *ṣadr* a political appointee. In so far as this arrangement gave the *ṣadr* political influence, he built a bridge between the largely Persian ranks of the *ʿulamāʾ* and the political branch of the administration, dominated during the early Ṣafawid period by *Ḳizilbāsh* military commanders. Although the propagation of religious doctrine and the establishment of doctrinal conformity and uniformity were not the primary function of the *ṣadr*, some scholars believe that for a time he had also to supervise the imposition of Twelver Shīʿism and root out heresy and Sunnism. By the time of Ismāʿīl's death, however, doctrinal uniformity had been largely achieved, and the

energies of the *ṣadr* were devoted once more to the preservation of the religious status quo, and especially to the administration of the *awḳāf*.

It is clear that although the Persian "clerical estate" from which the appointees to the *ṣadārat* were initially taken was essential to the smooth running of the nascent Ṣafawid administration, it was unable to provide the theological and legal backbone for the new Twelver S̲h̲īʿī establishment: of the ten *ṣadrs* under S̲h̲āh Ṭahmāsp I, for example, only one was versed in Twelver S̲h̲īʿī jurisprudence, while the S̲h̲īʿism of the other nine was open to question. Consequently, S̲h̲āh Ismāʿīl and his successors imported Twelver S̲h̲īʿī scholars from Baḥrayn, ʿIrāḳ and the Lebanon. The immigrant jurists, experts in Twelver *fiḳh* and *kalām*, began to fill the posts of *s̲h̲ayk̲h̲ al-islām, ḳāḍī, ḥākim-i s̲h̲arʿ* and *mudarris*, gradually, as the power of the Arab *mud̲j̲tahids* increased, the power of the *ṣadr* began to wane.

The position of the *ṣadr* was further weakened when, during the reign of S̲h̲āh Sulaymān, the *ṣadārat* was divided into a "crown" (*k̲h̲āṣṣa*) and a "state" (*mamālik* or *ʿāmma*) branch. As the division suggests, the *ṣadr-i k̲h̲āṣṣa* was responsible for the administration of the royal endowments, while the *ṣadr-i mamālik* was entrusted with the endowments of private persons.

The *ṣadr-i k̲h̲āṣṣa*, who enjoyed a higher rank than his colleague, continued to oversee the religious institution in general; according to the *Tad̲h̲kirat al-mulūk*, one of the prerogatives of his post was "the leadership ... of all the [persons] called sayyid, ʿulamā, mudarris, Shaykh al-Islām, pīsh-namāz, qāḍī, mutavallī, ḥāfiẓ and the rest of the servants of the sacred tombs, schools, mosques and shrines" (tr. Minorsky, English text, 42). Sitting jointly with the Dīwān-begī, the *ṣadr-i k̲h̲āṣṣa* would try the major crimes at a weekly tribunal held in the *kes̲h̲ik-k̲h̲āna*. Appointment of *s̲h̲arīʿa* judges for the rest of the kingdom was also a function of the *ṣadārat*, and it is here that the sources on late Ṣafawid Persia are clear on the demarcation of duties between the *k̲h̲āṣṣa* and the *mamālik* branches: the *ṣadr-i k̲h̲āṣṣa* appointed the judges of provinces under the royal *k̲h̲āṣṣa* and especially those lying in the neighbourhood of the capital Iṣfahān, while the *ṣadr-i mamālik* appointed the judges in the rest of the provinces, such as K̲h̲urāsān and Fārs.

The *ṣadr* was to remain one of the highest and most coveted positions in the Ṣafawid administrative hierarchy until the demise of the dynasty. At state functions, the *ṣadr-i k̲h̲āṣṣa* would be seated at the king's left hand, and it was not uncommon for the incumbent to marry into royalty and build up vast estates and considerable wealth of his own. As a locus of religious and political power, however, by the reign of S̲h̲āh Sulaymān the *ṣadr* was a spent force, eclipsed by the *s̲h̲aykh al-islām* and, during the reign of Sulaymān's successor, S̲h̲āh, Sulṭān Ḥusayn, by the *mullābās̲h̲ī*.

5. In Mug̲h̲al India.

Here the *ṣadr* was a provincial (*ṣūba*) level officer in charge of land-grants in the Mug̲h̲al Empire. The *ṣadr al-ṣudūr* was a central minister, who was given this title when the Empire was divided into *ṣūbas* by Akbar in 988/1580. Besides controlling land-grants (*madad-i maʿās̲h̲*) and cash-grants (*waẓīfa*), the *ṣadr al-ṣudūr* also recommended appointments of *ḳāḍīs* or judges and *muftīs*, or interpreters of law and customs, though he had himself no judicial functions. The provincial *ṣadrs* were his subordinates, and below them there were local *ṣadrs* (*ṣadr-i d̲j̲uzw*) and *mutawallīs* (managers of land-grants). Like the *ṣadrs*, the *ṣadr al-ṣudūr* was usually a Muslim theologian, since most land-grants were conferred upon theologians and scholars. He could, however, be an officer in regular service (holder of *manṣab* [*q.v.*]) as well, receiving his own salary through the award of *manṣab*, rather than land-grant. From Akbar's time onwards, non-Muslim divines and religious institutions also began to receive land-grants, and a rigorous procedure of verification was established in which the *ṣadr al-ṣudūr*'s department played an important role. The *ṣadr al-ṣudūr*'s office was held, like that of other ministers, at the Emperor's pleasure, but tended to be of longer duration except during the last years of Akbar, when after the dismissal of the most powerful of these ministers, S̲h̲ayk̲h̲ ʿAbd al-Nabī, 987/1579-80, the incumbents changed quite frequently. Whereas Īrānīs dominated other ministerial offices in the Mug̲h̲al Empire, the office of *ṣadr al-ṣudūr* remained largely (though not entirely) the preserve of Indian Muslims and Tūrānīs, possibly because a Sunnī religious orientation was generally expected here.

Bibliography: The bulk of our information comes from Mug̲h̲al revenue-grant documents largely unpublished, for a calender of these see *Mughal documents (1526-1627)*, ed. S.A.I. Tirmizi, New Delhi 1989. The standard official statement on the office and its functioning is to be found in Abu 'l-Faḍl, *Āʾīn-i Akbarī*, ed. H. Blochmann, Calcutta 1867-77, i. See also Ibn Hasan, *The central structure of the Mughal Empire and its practical working up to the year 1657*, Oxford 1936; M. Athar Ali, *The apparatus of empire, awards of ranks, offices and titles to the Mughal nobility, 1574-1658*; Oxford 1985; Rafat M. Bilgrami, *Religious and quasi-religious departments of the Mughal period (1556-1707)*, New Delhi 1984.

(M. ATHAR ALI)

ṢADR-I AʿẒAM (T.) (commonly *ṣadr aʿẓam*), strictly "the greatest of the high dignitaries", that is, the Grand Vizier, a title which, in the Ottoman Empire, was used synonymously with *wezīr-i aʿẓam* from the mid-10th/16th century; its first use in this sense occurs in the *Āṣāf-nāme* of Lütfī Pas̲h̲a [*q.v.*], himself a holder of the office 946-8/1539-41.

Earlier, in the late 8th/14th century, *ṣadr* had been used to refer to the highest official *ʿulemāʾ*, the *ḳāḍī ʿaskers* [*q.v.*], who were promoted to serve as viziers. Later, because the vizier came to operate as military commander in the absence of the sultan, he was appointed, early in the 9th/15th century, from the ranks of the commanders (*ümerāʾ*). Even then the term *ṣadr* continued to be employed in its original general sense of "prominent, high *ʿulemāʾ* dignitary" and, as such, was the common title of the two *ḳāḍī ʿaskers*, sc. the *ṣadr* of Rumeli and of Anatolia (*Rumeli ṣadrī, Anadolu ṣadrī*), and even, though less often, for the *s̲h̲eyk̲h̲ ül-islām* as *ṣadr-ī fetwā*. Inasmuch as many of the *ümerāʾ*, and especially, a majority of the highest ranking *ümerāʾ* beys, were of slave and *dews̲h̲irme* [*q.v.*] origin, the functional shift in the vizierate from the *ʿulemāʾ* to the *ümerāʾ* also implied an ethnic shift away from the Turkish-Muslim-born to those of slave-*dews̲h̲irme* origin, especially (but not exclusively) from the imperial household. As such, this shift was a prominent feature in the exaltation of the sultan in the polity. When the number of viziers or *ümerāʾ* commanders to serve in the imperial council (*dīwān-ī humāyūn* [*q.v.*])

was increased first to three and later to five in the 9th/15th century, the chief vizier was distinguished from the others and called the "first" or "greatest" (*wezīr-i ewwel* or *ekber* or *aʿẓam*; see further, WAZĪR).

The *ṣadr aʿẓam*, upon appointment directly by the sultan as absolute deputy (*wekīl-i muṭlaḳ*), was given the sultan's golden signet (*tug̲h̲ra*) ring which he carried with him at all times worn around his neck on a silk cord; thus *ṣāḥib-i mühr* (holder of the seal) was another term used for him. However, the reference in the *ḳānūn-nāme* [*q.v.*] of Meḥemmed II [*q.v.*] specified the Grand Vizier as the "head of the *wüzerāʾ* and *ümerāʾ*", implying that his authority was limited to military-administrative matters (and did not extend to *ʿulemāʾ* affairs and appointments), in spite of the statement, practically in the same breath, that he is the "absolute deputy in all matters" (*d̲j̲ümle umūruñ wekīl-i muṭlaḳīdīr*). Neither was his position vs. the *defterdār* (chief of the treasury [*q.v.*]) clear-cut; the latter was independent in his own sphere in his capacity as the minister of the sultan's own treasury (*mālīmīn wekīli*, "the deputy for my treasury") although the Grand Vizier was named his *nāẓīr* or supervisor (*Ḳānūn-nāme-yi āl-i ʿOt̲h̲mān*, ed. Meḥmed ʿĀrif, in *TOEM*, Suppl. [1330 A.H.], 10). Even in the late 10th/16th century, when the sultan's treasury had become, for all practical purposes, the state treasury, a *defterdār* accused of corruption was not tried by the imperial council on the grounds that he was directly responsible to the sultan.

From the time of Meḥemmed II, the sultan stopped routinely attending meetings of the imperial council and, from the mid-10th/16th century, he was hardly even present; he left it to the *ṣadr aʿẓam*, as the deputy, to chair the proceedings. After the council meeting, the *ṣadr aʿẓam* would report in person to the sultan by reading a *telk̲h̲īṣ* (précis) of the most important matters discussed. Sometime during the reign of Murād III [*q.v.*], instead of reading the *telk̲h̲īṣ* face-to-face with the sultan, the *ṣadr aʿẓam* was required to send in his *telk̲h̲īṣ* and await written instructions, especially on appointments (for examples of *telk̲h̲īṣ* and analysis of its significance, cf. Cengiz Orhonlu, *Telhisler*, Istanbul 1970 and Suraiya Faroqhi, *Das telḫīs, eine aktenkundlische Studie*, in *Isl.*, xlv [1969], 96-116).

This change allowed the inner circle of the palace, rather than the vizier, to have the sultan's ear and influence decisions. Consequently, in the first half of the 11th/17th century the *istiḳlāl* (independence) of the vizier, that is, independence of action free from undue influence of persons close to the ruler—his mother the dowager sultan (*wālide sulṭān*) or his consort (*k̲h̲āṣṣeki*) or companions (*muṣāḥib*)—emerged as one of the most important political issues in the affairs of the empire. Naʿīmā [*q.v.*] claims that in 1066/1656, at a moment of internal and external crisis, Köprülü [*q.v.*] Meḥmed Pas̲h̲a accepted the grand vizierate only after the young sultan Meḥemmed IV [*q.v.*] and his mother Turk̲h̲ān Sulṭān agreed to his conditions of absolute independence in affairs of state (for an analysis of this appointment, cf. M. Kunt, *Naʾima, Köprülü, and the grand vezirate*, in *Boğaziçi Üniversitesi Dergisi—Hümaniter Bilimler*, i [1973], 57-63). The sultan and the dowager were so pleased with the old vizier's competent and wise service that, on his death five years later, he was succeeded in office by his son. Indeed, the Köprülü household supplied no less than seven Grand Viziers in the next half century, providing, after the D̲j̲andārlī [*q.v.*] family of the late 8th/14th to mid 9th/15th century, a second case of a vizierial dynasty (see also İ.H. Uzunçarşılı, *Çandarlı vezir ailesi*, Ankara 1974). It is in this period of restoration of vizierial authority that the *ḳānūn-nāme* of Tewḳi-ʿī ʿAbd ul-Raḥmān Pas̲h̲a (1087/1676-7, published in *MTM*, i/3 [1331], 506 ff.) speaks of very comprehensive and far-reaching duties and powers of the office, without the limitations and the constraints of the two-centuries earlier *ḳānūn-nāme* of Meḥemmed II. Barely 20 years later, however, a particularly ambitious *s̲h̲eyk̲h̲ ül-islām*, Feyḍ Allāh Efendi, with the full support of the reigning sultan, Muṣṭafa II [*q.v.*], attempted to dominate the Grand Vizier: this was one of the causes of the rebellion and constitutional crisis of 1115/1703.

In 1837, at the height of Maḥmūd II's [*q.v.*] programme of political restructuring, the title *ṣadr aʿẓam* was converted to *bas̲h̲wekīl*, chief minister, while at the same time the deliberative function of the imperial council was divided among several new councils. These measures served to reduce both the position of the vizier as absolute deputy and the independence and centrality of government: the ruler and his palace once again became the focus of political as well as administrative life. Maḥmūd II died soon afterwards, in 1839, and the forceful K̲h̲üsrew Pas̲h̲a took over power, restoring both the title and the authority of *ṣadr aʿẓam*, at the accession of the young and diffident ʿAbd al-Med̲j̲īd [*q.v.*]. In the early years of ʿAbd al-Ḥamīd II's [*q.v.*] reign, there were two more, equally unsuccessful, attempts to change the title to *bas̲h̲wekīl*: this time, however, the impetus came not from the sultan but from reformist ministers, for the purpose of establishing the principle of a government sharing collective responsibility to parliament. In the event, even after the constitution was restored in 1908, *ṣadr aʿẓam* remained the title for the chief minister until the end of the sultanate, though now he was responsible to parliament (for an analysis of the grand vizier's position during the transformation of governmental and administrative institutions in the reform period, see C.V. Findley, *Bureaucratic reform in the Ottoman Empire*, Princeton 1980, 141, 153, 240 ff.).

Bibliography: In addition to items mentioned in the text, see Pakalın, s.vv. *Sadrazam* and *Vezir*, providing extensive details and comments; the most comprehensive discussion is in İ.H. Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâtı*, Ankara 1948, 111-79; both the *Osmanlı tarihi* sponsored by the Türk Tarih Kurumu (authors, Uzunçarşılı and E.Z. Karal), 7 vols., Ankara 1948-59, and İ.H. Danişmend's *İzahlı Osmanlı tarihi kronolojisi*, 4 vols., Istanbul 1947-55, include lists and brief biographical sketches of all grand viziers; Gibb and Bowen, especially i/1, 107-37, is still useful; for an excellent study of the palace of Süleymān the Magnificent's famous vizier Ibrāhīm Pas̲h̲a [*q.v.*], see Nurhan Atasoy, *İbrahim Paşa Sarayı*, Istanbul 1972; the closest we have to a biographical study of a grand vizier is R. Dankoff's translation of relevant passages in Evliya Çelebi, *The intimate life of an Ottoman statesman, Melek Ahmed Pasha (1588-1662)*, New York 1991. (M. KUNT)

ṢADR AL-DĪN [see MULLĀ ṢADRĀ S̲H̲ĪRĀZĪ].

ṢADR AL-DĪN ARDABĪLĪ (S̲h̲aykh Ṣadr al-Milla wa 'l-Dīn Mūsā), second son of Ṣafī al-Dīn Ardabīlī [*q.v.*], born 1 S̲h̲awwāl 704/26 April 1305 (S̲h̲aykh Ḥusayn b. Abdāl Zāhidī, *Silsilat al-nasab-i Ṣafawiyya*, Iranschähr Publications no. 6, Berlin 1924-5, 39). Designated by his father as his successor and vicegerent (*k̲h̲alīfa wa nāʾib-munāb*), Ṣadr al-Dīn assumed the leadership of the Ṣafawid Order in 735/1334. He expanded the Ṣafawid mausoleum complex at Ardabīl, adding rooms for private meditation (*k̲h̲alwat-k̲h̲āna*), a residence for Ḳurʾān-readers (*dār al-ḥuffāẓ*), and a room (*čīnī-k̲h̲āna*) which later housed

Shah ʿAbbās I's *waḳf* of porcelain to the shrine (see J.A. Pope, *Chinese porcelains from the Ardebil Shrine*, Washington 1956).

Although the powerful Mongol *amīr* Čūbān [see ČŪBĀNIDS] had professed to be a disciple (*murīd*) of Shaykh Ṣafī al-Dīn (Sharaf al-Dīn Bidlīsī, *Sharaf-nāma*, éd. V. Véliaminov-Zernof, 2 vols., St. Petersburg 1860-2, ii, 132-3), Amīr Čūbān's son, Malik Ashraf, possibly alarmed by Ṣadr al-Dīn's growing political influence, threw him into jail at Tabrīz. He released him after three months, but again tried to seize him; this time Ṣadr al-Dīn escaped to Gīlān. When Djānī Beg Maḥmūd, ruler of the Blue Horde of Western Ḳipčāḳ (742-58/1341-57) [see BATUʾIDS] overthrew Malik Ashraf and put him to death in 758/1357, Ṣadr al-Dīn returned to Ardabīl, but Djānī Beg's promise to allot all Ṣafawid lands to the Shaykh in the form of a *soyūrghāl* had not been enacted before Djānī Beg's death (*Silsilat al-nasab*, 42-3); see also B. Spuler, *The Muslim world*, ii, *The Mongol period*, Leiden 1960, 54-5, and J.B. van Loon, *Taʾrīkh-i Shaykh Uways*, The Hague 1954, 11).

Ṣadr al-Dīn died in 794/1391-2, and was buried in the Ardabīl sanctuary (*Silsilat al-nasab*, 45). He left three sons: Khʷādja ʿAlī (who succeeded him as head of the Ṣafawid Order); Shihāb al-Dīn and Djamāl al-Dīn (*ibid.*, 40).

Bibliography: Given in the text.

(R.M. SAVORY)

ṢADR AL-**DĪN ʿAYNĪ**, Russian form SADRIDDIN AYNI, one of the leading figures in the 20th century cultural life of Central Asia and in Tadjik literature (1878-1954).

He began as a representative of the reform movement amongst the Muslims of Imperial Russia, that of the Djadīdīds [see DJADĪD]. A formal education at the traditional *madrasas* of Bukhārā left him intellectually unsatisfied. In the early part of his career he was a talented poet in both Tadjik and Uzbek, but after 1905 he became increasingly involved in the social and educational aspects of Djadīdism. In 1917 he espoused the cause of the revolutionary movements and, eventually, that of the Bolsheviks, and when in 1920 the Tadjik S.S.R. was set up, he held leading positions in its cultural life, becoming the first President of the Tadjik Academy of Sciences and retaining this office until his death. He now turned from poetry to prose-writing in a wide variety of fields—literary criticism, history and novels in both Tadjik and Uzbek, culminating in his unfinished memoirs (*Yād-dāsht-hā*/*Yod-dosht-ho*, 4 vols., Stalinabad 1949-54). He is thus the dominant figure in the prose of socialist realism, as also in the moulding of modern Tadjik literature in general.

Western Asia and North Africa*, London 1974, 24-5; Bečka, *Sadridin Ayni, father of modern Tajik culture*, Naples 1980; K. Hitchins, in E. Yarshater (ed.), *Persian literature*, Albany 1988, 457-60, 462-3, 467-8. (ED.)

ṢADR AL-**DĪN** MUḤAMMAD B. ISḤĀḲ B. MUḤAMMAD B. YŪNUS AL-**ḲŪNAWĪ** (b. 605/1207, d. 16 Muḥarram 673/22 July 1274), disciple of Ibn al-ʿArabī [*q.v.*] and author of influential works on theoretical Ṣūfism.

Ibn al-ʿArabī met Madjd al-Dīn Isḥāḳ al-Rūmī, Ḳūnawī's father, in Mecca in 600/1203 and subsequently travelled with him to Anatolia. A source from the late 7th/13th century tells us that after Madjd al-Dīn's death, Ibn al-ʿArabī married his widow and adopted his son Ṣadr al-Dīn (B. Furūzānfar, *Manāḳib-i Awḥad al-Dīn ... Kirmānī*, Tehran 1347/1968, 84); the fact that Ḳūnawī himself never mentions this is not surprising, given his extreme reticence concerning personal matters. The same source (85) tells us that Ibn al-ʿArabī entrusted Ṣadr al-Dīn for a time to the guidance of his friend Shaykh Awḥad al-Dīn Kirmānī (d. 635/1238), and this is confirmed by a manuscript letter in which Ḳūnawī says that he was Kirmānī's companion for two years, travelling with him as far as Shīrāz (Chittick, *Faith and practice of Islam*, Albany 1992, 261). By the time he was twenty, Ḳūnawī appears among the listeners to Ibn al-ʿArabī's works in a *samāʿ* dated 626/1229 (O. Yahia, *Histoire et classification de l'œuvre d'Ibn ʿArabī*, Damascus 1964, 141). He seems to have remained with his *shaykh* until the latter's death in 638/1240; his name is recorded in many *samāʿ*s deriving from this period. Presumably, the *fatḥ kullī*, or total unveiling of the invisible world, that he mentions as occurring in Damascus (*al-Nafaḥāt al-ilāhiyya*, 12) occurred at this time.

Ḳūnawī was teaching, probably in Konya, by the year 643/1245-6, when he led a group of scholars to Cairo and taught Ibn al-Fāriḍ's *Tāʾiyya* on the way [see SAʿĪD AL-DĪN FARGHĀNĪ]. Little can be gleaned about his life from his works other than occasional references to instances in which he gained visionary knowledge. Thus, for example, on the night of 17 Shawwāl 653/19 November 1255, Ibn al-ʿArabī appeared to him and confirmed that he was his preeminent disciple, even greater than his son Saʿd al-Dīn (*al-Nafaḥāt al-ilāhiyya*, 152-3; partial Persian tr. in Djāmī, *Nafaḥāt al-uns*, ed. Tawḥīdīpūr, Tehran 1336/1957, 556-7). Ḳūnawī reports that he did not receive oral explanation from Ibn al-ʿArabī concerning most of his works, but instead gained knowledge of them through God's effusion (*al-Fukūk*, ed. Khʷādjawī, 240). In his *Manāḳib al-ʿārifīn* (ed. T. Yazıcı, Ankara 1959), Aflākī recounts several anecdotes showing that Ḳūnawī had a highly favourable view of Rūmī, and he contrasts Rūmī's simplicity with the sumptuous scholarly trappings of Ḳūnawī's circle (e.g. 95-6). Among Ḳūnawī's important students were ʿAfīf al-Dīn al-Tilimsānī, Fakhr al-Dīn ʿIrāḳī, Saʿīd al-Dīn Farghānī [*q.vv.*], and Muʾayyid al-Dīn Djandī (d. *ca.* 700/1300), author of the most influential commentary on Ibn al-ʿArabī's *Fuṣūṣ al-ḥikam*. Farghānī is especially important because his *Mashāriḳ al-darārī* represents summaries of Ḳūnawī's teachings far more detailed than any of Ḳūnawī's own works. The scientist and philosopher Ḳuṭb al-Dīn Shīrāzī [*q.v.*] studied parts of *Djāmiʿ al-uṣūl fī aḥādīth al-rasūl* by Madjd al-Dīn Ibn al-Athīr with him in the year 673 (H. Ritter, *Autographs in Turkish libraries*, in *Oriens*, vi [1953], 63-90).

The works ascribed to Ḳūnawī can be divided into those that are unquestionably authentic and those concerning which some doubts remain. The most important works in the first category are the following:

1. *Iʿdjāz al-bayān fī tafsīr umm al-ḳurʾān* or *Tafsīr al-fātiḥa* (published as *Iʿdjāz al-bayān*, Ḥaydarābād-Deccan 1949; and as *al-Tafsīr al-ṣūfī li ʾl-Ḳurʾān*, ed. ʿA. Aḥmad ʿAṭāʾ, Cairo 1969). Both printed editions leave out the author's rather extensive marginal notes. This is Ḳūnawī's longest and perhaps most important work.

2. *Sharḥ al-ḥadīth al-arbaʿīn* (ed. H.K. Yılmaz, *Tasavvufî hadîs şerhleri ve Konevînin kırk hadîs şerhi*, Istanbul 1990). Ḳūnawī died after commenting on only 29 *ḥadīth*s. The commentary on *ḥadīth*s nos. 21-2 is extensive and provides important elucidations of Ḳūnawī's teachings on imagination and other matters.

3. *Sharḥ al-asmā᾽ al-ḥusnā*. A relatively concise explanation of the ninety-nine names of God and their traces on the human level.

4. *al-Fukūk* or *Fakk al-khutūm* (ed. M. Khwādjawī, Tehran 1413/1992; printed on the margin of Kāshānī, *Sharḥ manāzil al-sā᾽irīn*, Tehran 1315/1897-8). A short commentary on the essential themes of Ibn al-ʿArabī's *Fuṣūṣ al-ḥikam*, focusing on the implications of the chapter headings.

5. *Miftāḥ al-ghayb* (published on the margin of Muḥammad al-Fanārī, *Miṣbāḥ al-ins bayn al-ma᾽ḳūl wa 'l-manḳūl fī sharḥ miftāḥ ghayb al-djamʿ wa 'l-wudjūd*, Tehran 1323/1905; partial ed. and French tr. S. Ruspoli, *La clé du monde suprasensible*, diss., Paris IV 1978). This has always been considered Ḳūnawī's key work; it was taught in Persian *madrasas* after students had mastered the most difficult texts in philosophy. At least nine commentaries have been written on it, mostly in Turkey. One of the more interesting is by 'Abd Allāh Mullā Ilāhī, written in Persian at the command of Meḥemmed II Fātiḥ; the author makes several asides to the ruler in the midst of the text, indicating that he was expecting him to read it (see Chittick, *Sultan Burhān al-Dīn's Sufi correspondence*, in *WZKM*, lxxiii [1981], 37-8).

6. *al-Nafaḥāt al-ilāhiyya* (Tehran 1316/1898), a series of about fifty "inspired breaths", along with other miscellaneous texts including at least 17 letters written to various friends and disciples. Many of the passages refer to Ḳūnawī's visionary experiences.

7. *al-Nuṣūṣ* (ed. S.Dj. Āshtiyānī, Tehran 1362/1983; appended to Kāshānī, *Sharḥ manāzil al-sā᾽irīn, ed. cit.*; and appended to Ibn Turka, *Tamhīd al-ḳawāʿid*, Tehran 1315/1897-8). A collection of 21 texts that pertain exclusively to the "station of perfection"; the longest (no. 20), which is taken from the first section of *Miftāḥ al-ghayb*, is perhaps Ḳūnawī's most comprehensive exposition of the doctrine that later came to be known as *waḥdat al-wudjūd*.

8-9. *al-Mufāwaḍāt* (forthcoming critical ed. by Gudrun Schubert). A correspondence initiated by Ḳūnawī with Naṣīr al-Dīn Ṭūsī [*q.v.*]. Ḳūnawī's first treatise, *al-Mufṣiḥa ʿan muntahā 'l-afkār wa-sabab ikhtilāf al-umam*, addresses the weakness of human reason and poses a series of questions for Ṭūsī; a good portion of the introductory material is drawn from the beginning of *Iʿdjāz al-bayān*. His second treatise, *al-Hādiya*, responds to Ṭūsī's replies (for details on the contents, see Chittick, *Mysticism vs. philosophy in earlier Islamic history: the al-Ṭūsī, al-Qūnawī correspondence*, in *Religious Studies*, xvii [1981], 87-104).

Minor works include the following: 10. *al-Ilmāʿ bi-baʿḍ kulliyyāt asrār al-samāʿ*. A long letter to ʿAfīf al-Dīn al-Tilimsānī describing how, when Ḳūnawī was circumambulating the Kaʿba, the meaning of certain verses he had heard suddenly became clear to him. 11. *Nafthat al-maṣdūr wa-tuḥfat al-shakūr*, or *Rashḥ al-bāl bi-sharḥ al-ḥāl*, containing about 50 pages of intimate mystical prayers. This work was sent by mistake to Ṭūsī along with work no. 8, and he offered polite criticism of it in his response. 12. *al-Risāla al-hādiya al-murshidiyya*, also called *al-Risāla al-tawadjdjuhiyya* and *Risālat al-tawadjdjuh al-atamm*. This short work, of which a Persian translation was prepared during Ḳūnawī's lifetime, provides practical instructions concerning the remembrance of God (French tr. M. Valsan, *L'épître sur l'orientation parfaite*, in *Études traditionnelles*, lxvii [1966], 241-68). 13. *Waṣiyya*. A short last will, which mentions among other things Ḳūnawī's close relationship with Ibn al-ʿArabī and Awḥad al-Dīn Kirmānī. Ḳūnawī advises his disciples to avoid theoretical issues and concentrate on the practical instructions provided in work no. 12. His books on philosophy should be sold and the remaining books made into an endowment, and his own writings should be given to ʿAfīf al-Dīn. A second version adds the names of four people to whom money should be given and tells his daughter Sakīna that she should be careful to observe her ritual obligations (tr. of the first version in Chittick, *The Last Will and Testament of Ibn ʿArabī's foremost disciple and some notes on its author*, in *Sophia Perennis*, iv/1 [1978], 43-58; text of second in Ergin, *Sadraddīn al-Qunawi ve eserleri*, 82-3). Several letters and brief Persian treatises are also extant.

Works of questionable attribution include the following (for others of less likely authenticity, see Brockelmann, G I², 585-6, S I, 807-8): 1. *Mir᾽āt al-ʿārifīn fī multamas Zayn al-ʿĀbidīn*. A relatively short discussion of cosmology in Ḳūnawī's characteristic style. Text and English tr. in S.H. Askari, *Reflection of the awakened*, London 1981. 2. *Taḥrīr al-bayān fī taḳrīr shuʿab al-īmān*. This and the following work, both relatively short, are attributed to Ḳūnawī in some manuscripts and reflect his style and concerns. 3. *Marātib al-taḳwā*. 4. *Kitāb al-Lumʿa al-nūrāniyya fī ḥall mushkilāt al-shadjarat al-nuʿmāniyya*. Commentary on a diagram that Ibn al-ʿArabī is said to have drawn up to illustrate the general direction of future events in Egypt [see MALḤAMA]. 5. *Tabṣirat al-mubtadī wa-tadhkirat al-muntahī*. A Persian work that is most likely by one Naṣīr or Nāṣir al-Dīn (tr. in Chittick, *Faith and practice of Islam*, Albany 1992; discussion of authorship at 255-62).

In contrast to Ibn al-ʿArabī, Ḳūnawī focuses on a relatively small number of issues, thereby singling them out as the most essential teachings of his master. His mode of exposition is in no way indebted to Ibn al-ʿArabī or to anyone else (a point he sometimes stresses e.g. *Iʿdjāz*, 147; *Nuṣūṣ*, 22). His major themes are perhaps best summarised in the last section of *Miftāḥ al-ghayb*, in which he proposes a series of questions that he then sets out to answer (282-3): What is the reality of the human being? From what, in what, and how did he come into existence? Who brought him into existence and why? What is the goal of his existence? Briefly, Ḳūnawī answers these questions by describing the modes in which *wudjūd* may and may not be known, the manner in which existent things are differentiated within *wudjūd* through the influence of the divine names, and the way in which the perfect human being (*al-insān al-kāmil*) brings *wudjūd* to full fruition. His essential point is that only the perfect human being manifests all divine names in perfect balance and equilibrium, thereby standing at the centre point of the circle of *wudjūd* and not coming under the influence of any specific attributes. Every other created thing manifests specific names of God and is dominated by either oneness or manyness. Although this theme is also found in Ibn al-ʿArabī's writings, it is not so clearly presented as the key doctrine. Ibn al-ʿArabī roots his teachings in the Ḳur᾽ān and the *Ḥadīth*, but Ḳūnawī employs a more abstract vocabulary that is much more reminiscent of texts on philosophy, and he highlights a number of technical terms that play no special role in Ibn al-ʿArabī's teachings, even though they become basic points of discussion in later works. These include *al-ḥaḍarā al-ilāhiyya al-khams, kamāl al-djalā᾽ wa 'l-istidjlā᾽, iʿtidāl*, and *taʿayyun* (for an outline of Ḳūnawī's teachings, see the introduction to Chittick and P.L. Wilson, *Fakhruddin ʿIrāqī: Divine flashes*, New York 1982). The key term *waḥdat al-wudjūd*, although found in at least one passage of Ḳūnawī's works, has no special technical significance for him. In the works of Farghānī based

on Ḳūnawī's lectures, the term is used in a way that is not picked up by later authors (see Chittick, *Rūmī and* waḥdat al-wujūd, in *The heritage of Rumi*, ed. A. Banani and G. Sabagh, Cambridge, forthcoming).

Ḳūnawī's importance needs to be understood in light of Ibn al-ʿArabī's pervasive influence on the schools of theoretical Ṣūfism, philosophy and *kalām*. Djāmī had already recognised that Ḳūnawī was the primary interpreter of Ibn al-ʿArabī's teachings (*Nafaḥāt al-uns*, 556). In effect, the later intellectual tradition read Ibn al-ʿArabī's works according to the interpretation of Ḳūnawī and his immediate disciples. His role is symbolised by the correspondence he initiated with Ṭūsī. In the Persian letter that accompanies *al-Hādiya*, Ḳūnawī explains that he initiated the correspondence in order to combine the rational approach of the philosophers with the "unveiling" (*kashf*) of the Verifiers. In the correspondence, Ḳūnawī reveals himself as thoroughly familiar with Avicenna's writings and with Ṭūsī's commentary on Avicenna's *al-Ishārāt wa 'l-tanbīhāt*; his philosophical bent, in any case, is already obvious in other writings. Far more than Ibn al-ʿArabī, he employs clear and reasoned argumentation to demonstrate his conclusions, even if he also depends explicitly upon mystical intuition. Largely because of the themes that Ḳūnawī establishes in *al-Fukūk* and in the oral teachings that are reflected in the works of his students, the mainstream of Ibn al-ʿArabī's school of thought came to stress certain dimensions of the master's teachings that are not necessarily central to his own writings. This explains Michel Chodkiewicz's remark that Ḳūnawī "a donné à la doctrine de son maître une formulation philosophique sans doute nécessaire mais dont le systématisme a engendré bien des malentendus" (*Épître sur l'Unicité Absolue*, Paris 1982, 26).

(W.C. Chittick)

ṢADR AL-DĪN MŪSĀ, the son and successor of Shaykh Ṣafī al-Dīn Ardabīlī [*q.v.*] and the founder at Ardabīl of the Ṣafawī order which stemmed from Shaykh Zāhid Gīlānī (d. 700/1301). Shaykh Ṣadr al-Dīn was born in 704/1305 from Ṣafī al-Dīn's second marriage with Bībī Fāṭima, daughter of Shaykh Zāhid, and died in 794/1391-2, according to the *Silsilat al-nasab-i ṣafawiyya*, hence dying aged 90 having directed the Ṣafawī order for 59 years. Although the hagio-biographical and historical sources concerning him have to be treated with caution, they allow us to trace the essential features of his long career as head of the order.

After the death of his eldest brother Muḥyī al-Dīn in 724/1324-5, Ṣadr al-Dīn replaced him in his function as *khalīfa*, and replaced his father, as his spiritual and material heir, when the latter fell ill before his death, although it seems that Ṣafī al-Dīn's sons were at odds with each other, above all regarding their father's material legacy. Being then 30, Ṣadr al-Dīn achieved the succession without any overt opposition, and at a point when, after the Il Khān Abū Saʿīd's death (736/1335), the Mongol clan of the Čopans/Čubāns of the Sulduz tribe were disputing over the succession with the Djalāyir tribe, and Ardabīl, the *dār al-irshād* of the Ṣafawiyya, changed hands several times. Originally favoured by the Čopanid Malik Ashraf, he fell out with him and had to flee from Ardabīl with his *khalīfas* and *murīds* to Gīlān; it was the protection of the Khān of Ḳîpčaḳ, Djānī Beg Maḥmūd, of the Golden Horde, who gave protection to Ṣadr al-Dīn and the Ṣafawiyya. When the Djalāyirids led by Uways secured control over Ādharbaydjān in 761/1361, the situation of the order improved. Uways allotted Ardabīl as a *soyurghal* [*q.v.*] to his son Aḥmad, and the latter confirmed and renewed in a *farmān* the established fiscal privileges and revenues of Ṣadr al-Dīn and the order (document of 773/1372 ed. by Massé, Ḳazwīnī, Bayānī, etc.). Despite the influence and respect which Ṣadr al-Dīn enjoyed, the hagio-biographical sources and the documents do not show that he claimed the title of *sayyid* or that he was considered as such during his lifetime, although there were later falsifications allegedly proving an ʿAlid descent for the Ṣafawids, one of the bases of their claim to dynastic legitimacy.

After his eldest brother's death, Ṣadr al-Dīn is presented as the closest and most favoured of Ṣafī al-Dīn's sons, with other sons relegated to the second rank. He was certainly influential on the material plane, and it is with him that the family's ambitions in acquiring extensive estates and other landed property take shape. Only a small part of these were constituted as *wakf* proper, the remainder being acquired in full personal ownership (*milk*) or in the shape of family *wakf* and transmissible to the family's descendants. These acquisitions were purchased from the *amīrs* or from other Turco-Mongol and Mongol nobles, and from other notables; sometimes they were obtained by questionable means, and this gave rise to litigation and conflicts, in particular between the Djuwaynī and Ṣafawī families. As well as the revenues accruing from his direction (*tawliya*) of these sources of wealth, Ṣadr al-Dīn must have had a substantial personal fortune, especially as his mother died soon after his father, as did his brother Abū Saʿīd and his two halfbrothers ʿAlāʾ al-Dīn and Sharaf al-Dīn. His properties in the region of Ardabīl included villages and shops, and some of these were acquired to the detriment of local notable families. His sons Shihāb al-Dīn and Ḍiyāʾ al-Dīn were equally active in amassing properties. Apparently through a sense of politics as much as by family sentiment, Ṣadr al-Dīn extended his care and control over the whole of the Ṣafawī family.

With these riches, Ṣadr al-Dīn contributed extensively to the growth of the Ardabīl shrine, which became a complex worthy of the order's prestige and importance. The construction of Ṣafī al-Dīn's tomb, completed towards 1344, is said to have taken ten years. The *Dār al-Ḥuffāẓ* was built on the site of a demolished *zāwiya*, and the building (or perhaps reconstruction?) of various buildings, whose original functions are uncertain, is attributed to him, including one called a *čīnī-khāna* in Shāh ʿAbbās I's time, a *čilla-khāna* and a *shahīd-gāh*.

With the respect behind him of the Mongol and Turkmen authorities, Ṣadr al-Dīn continued his father's work for the extension of the Ṣafawiyya order, in particular, by sending out *khalīfas* to places like Georgia. The most famous of these *khalīfas*, a controversial figure on account of his heterodox, Ḥurūfī

doctrines [see ḤURŪFIYYA] was Shāh Ḳāsim al-Anwār [see ḲĀSIM-I ANWĀR], his envoy to Khurāsān, who also had links with Shāh Niʿmat Allāh [see NIʿMAT-ALLĀHIYYA]. According to an apparently late tradition, Ṣadr al-Dīn is said to have made the pilgrimage in 770/1368-9 and to have brought back from his visit to the Prophet's tomb in Medina a banner allegedly belonging to Fāṭima and two tambourines used ritually at Ardabīl. He is said to have asked the *Sharīf* of Mecca for his genealogical tree. But as with his father and other Ṣafawī *shaykhs*, he has left no work behind for us to get an idea of the range of his knowledge. Like his father, too, Ṣadr al-Dīn was a mediocre theologian but endowed with great charisma and famed for his Ṣūfī teaching. This fame seems to have gone beyond the Turco-Persian world, for his contemporary Ibn Khaldūn [*q.v.*] honours him with the title of *shaykh al-shuyūkh* (*ʿIbar*, Beirut 1951, v, 1171).

On his return from the Pilgrimage, Ṣadr al-Dīn is said to have appointed his eldest son Khʷādja ʿAlī as his *khalīfa* and *nāʾib* and to have entrusted to him before his death the spiritual direction and teaching of his disciples (*sadjdjāda-yi irshād wa tarbiyat-i ʿibād*). It seems nevertheless that another son, Shihāb al-Dīn, acted as *shaykh* of the Ṣafawiyya for some time after his father's death, according to some documents. There may conceivably have been more division between *irshād* and *tawliyat*. Whatever the case, it was, according to the official Ṣafawid version, Khʷādja ʿAlī who, probably because of his influence and "meetings" with Tīmūr, was considered as his father's successor after the latter's death in 794/1391-2. Ṣadr al-Dīn was buried at Ardabīl near his father.

ṢADR AL-ṢUDŪR [see ṢADR].

SADRĀTA, a place in Algeria, founded in 296/908 at 8 km/5 miles to the south-west of Wardjilān (Ouargla) in the territory of the confederation of *ḳṣūr* of the Isedrāten, by the last Rustamid Imām, after the destruction of the principality of Tāhart [*q.v.*] by the Fāṭimids. Its fame is linked with the history of the Ibāḍī communities of the Maghrib. An Ibāḍī scholar, Abū Yaʿḳūb Yūsuf b. Ibrāhīm al-Sadrātī al-Wardjilānī (d. 570/1174-5) compiled there the *musnad* of al-Rabīʿ b. Ḥabīb, based essentially on the tradition of Abū ʿUbayda (ed. Masḳaṭ 1325/1908 under the title of *al-Djāmiʿ al-ṣaḥīḥ*).

The town was razed to the ground in 467/1074, and its people took refuge in Ouargla and in the Mzāb.

Bibliography: See those to IBĀḌIYYA, MZĀB, WARGLA, to which should be added ʿU.R. Kaḥḥāla, *Muʾallifīn*, xiii, 267; Ch. Pellat, *Le milieu baṣrien*, 214. (ED.)

AL-ṢAFĀ (A.), literally "hard, smooth stone", whence also "tract of stony ground".

1. Al-Ṣafā is the name of a mound at Mecca which now rises barely above the level of the ground and which, together with the slightly higher, similar eminence of al-Marwa, plays an important role in the ceremonies or *manāsik* of the Meccan Pilgrimage. The names al-Ṣafā and al-Marwa (this last also sometimes qualified, e.g. by the local historian al-Azraḳī [*q.v.*], as *al-Bayḍāʾ* "the white") both mean "the stone(s)" (see al-Ṭabarī, *Tafsīr*, *ad* sūra II, 153/158). The twin hillocks mark the beginning and conclusion of the course taken by the pilgrims (the *muʿtamir* performing the *ʿumra* and the *ḥādjdj* performing the *ḥadjdj*), sc. the *masʿā* or *masīl*, whose traversing forms the *saʿy* [*q.v.*], the prelude to the *ḥadjdj* proper.

According to tradition (see e.g. al-Bukhārī, *Anbiyāʾ*, *bāb* 9), the *saʿy* between the two hillocks commemorates the fact that Hādjar ran backwards and forwards seven times between these two eminences to look for a spring for her thirsty son. It is certain that cults were located at al-Ṣafā and al-Marwa, even in the pre-Islamic period. According to most traditions, there were two stone idols there, Isāf on al-Ṣafā and Nāʾila on al-Marwa, which the pagan Arabs on their *saʿy* used to touch. On the origin of these images, the following story is given in the commentary of al-Nīsābūrī on sūra II, 153/158, and al-Shāfiʿī gives his approval to it: Isāf and Nāʾila were guilty of indecent conduct in the Kaʿba and were therefore turned into stones, which were placed on the two pieces of raised ground al-Ṣafā and al-Marwa to be a warning to all. In course of time, the origin of the stone figures was forgotten and people began to pay them divine worship [see further, ISĀF WA-NĀʾILA]. According to another tradition, there were copper images there (cf. Snouck Hurgronje, *Het Mekkaansche Feest*, 26); according to a third story, demons lived on the two hills who shrieked at night (given in al-Ṭabarī, *Tafsīr*).

Fahd, *Le panthéon de l'Arabie centrale à la veille de l'Hégire*, Paris 1968, 105 ff., 165-6, 210. See also ḤADJDJ; MAKKA; SAʿY. (B. JOEL*)

2. It is further the name of a volcanic region of *ca.* 55 × 25 km to the south-east of Damascus. It is trapezoid and runs north-west/south-east, to the south of the Dīrat al-Tulūl and north-east of Djabal al-ʿArab (Djabal al-Durūz or Djabal Ḥawrān). It forms the southern and south-eastern borders respectively of Mardj Rāhiṭ and Mardj al-Ṣuffar [*q.vv.*], the scenes of several notable battles in the Islamic period.

The name has sometimes, incorrectly, been extended to cover the whole *ḥarra*, or basalt desert, east of Djabal al-ʿArab, particularly in connection with the misnamed "Safaitic" inscriptions [*q.v.*].

The Ṣafā proper is composed of three distinct volcanic cones, Tulūl Raghayla (873 m), Tulūl al-Ḍurs (or Ḍarāʾir or Ḍahīr) (860 m) and Tulūl al-Ṣafā (741 m), the first two being separated from the third by a depression, between one and five km wide, known as Miftāḥ al-Ghayla.

The whole area is covered with the twisted and uneven lava flows from extensive volcanic eruptions in the Holocene, which have suffered very little erosion. Movement within the massif is consequently extremely difficult and there is only one track across it, all others running around its edges.

The lack of erosion means that there is very little

soil, and vegetation is limited to a few small, scattered areas free of rocks. However, there is a forest of pistachio trees spread over a dozen km on the southwestern edge of the Tulūl al-Ṣafā.

With the exception of the Miftāḥ al-Ghayla, the interior of the Ṣafā is too barren and too difficult of access to attract settlement, or even the attentions of nomads. However, it is bordered on all sides, except the north, by fertile silt-filled depressions, such as the Ruḥba, which are fed by the seasonal floods from Djabal al-ʿArab. These depressions are known as *riḥāb* (sing. *raḥaba*) and are not, as some writers assume, *ḳiʿān* (sing. *ḳāʿ*), of which the soil is sterile. Some of the water from the winter floods passes into underground channels and some runs on to the *riḥāb*, forming lakes which can last for several months. This compensates to some extent for the low rainfall in this area (mean 100 mm p.a., with considerable variations).

The availability of water, together with the fertility of the soil, has attracted nomads to these *riḥāb* from the Epipalaeolithic onwards. Traces of prehistoric campsites, and graffiti by nomads of the Hellenistic and Roman periods [see SAFAITIC] have been found in large numbers near the *riḥāb* on the eastern and southwestern edges of the Ṣafā, while, in the 19th century, Wetzstein (30-1) describes the Ghayāth section of the Ahl al-Djabal sowing grain on the Ruḥba.

The semi-nomadic tribes known as ʿArab al-Ṣafā (Dussaud and Macler, 52-3) are not in fact resident in the Ṣafā but spend most of their time in the Ḥarra of Wādī Rādjil, the basalt desert to the south-east of it.

On present knowledge, sedentary occupation seems to have been restricted to the edges of the Ṣafā and to have occurred only in the Early Bronze Age (e.g. Khirbat al-Ḍabʿ), and the Byzantine/Umayyad period (e.g. Khirbat al-Bayḍāʾ [*q.v.*]).

[F. BRAEMER and M.C.A. MACDONALD]

ṢAFAD, a small city surrounding the ruins of a once impressive fortress in the hilly region of northern Palestine, 40 km east of ʿAkkā [*q.v.*] and 20 km north of Ṭabariyya [*q.v.*]. The fortress is situated at the summit of a hill *ca.* 840 m high, and enjoys a fine view of the surrounding area, including the Sea of Galilee to the east. In the Crusader period, Ṣafad was an important Templar stronghold; in the Mamlūk period it served as the capital of a province (*mamlaka*), while under the Ottomans it was the centre of a *sandjaḳ* [*q.v.*]. Today it is the principal town of the upper Galilee region in the State of Israel, and is noted—as in the Middle Ages—for its mild and salubrious climate in the spring and summer (see al-ʿUthmānī, ed. B. Lewis in *BSOAS*, xv [1954], 480).

The name Ṣafad derives from Hebr. Ṣefat < root *ṣ-f-h* "to look, observe, watch", appropriate for the splendid view afforded by its location. Sefat is not mentioned in the Old Testament, but has been identified with the Sepph or Seph of Josephus' *Jewish wars*, ii, ch. 20, § 6. Its location is mentioned in the Jerusalem Talmud as one of the mountain tops on which bonfires were lit to announce the new moon and festivals.

Little is known of Ṣafad in the early Islamic period, i.e. until the coming of the Frankish Crusaders in 1099. Yāḳūt, *Buldān*, ed. Beirut, iii, 412, has virtually no information about the town, and wrongly locates it in the mountains near Ḥimṣ, an indication of its relative obscurity even in the early 7th/13th century. According to Ibn Shaddād, *Aʿlāḳ*, ed. Dahhān, 146, Ṣafad was originally a *tall* on which was found an inhabited village under Burdj al-Yatīm, evidently referring to the future Frankish keep (or the main tower of the inner ward). The Arabic *nisba* al-Ṣafadī is found in a document from the Cairo Geniza, dating from the first half of the 5th/11th century, as is the Hebrew parallel Ha-Ṣefatī in another, almost contemporary document; whether this indicates a Jewish community in the town is a moot point (cf. M. Gil, *A history of Palestine*, 634-1099, Cambridge 1992, 213-14).

The Arab historians state that the Franks built the first fortress at Ṣafad in 495/1101-2, having taken the town in the initial conquest of the country. In 1140 it was apparently renovated (or perhaps built) by King Fulk, and served as a refuge for Baldwin in 1157 after his defeat north of the Sea of Galilee by Nūr al-Dīn [*q.v.*]; and eleven years later, it was transferred to the Knights Templar, since the local lord could no longer afford to keep it up (S. Runciman, *Hist. of the Crusades*, Cambridge 1954, ii, 343, 376; R.C. Smail, *Crusading warfare (1097-1193)*, Cambridge 1956, 102). After the Muslim victory of Ḥiṭṭīn [*q.v.*] in 583/1187, Ayyūbid troops kept the fortress under observation, but it was not till the next year that Ṣalāḥ al-Dīn was able to undertake the conquest of Ṣafad; it surrendered in Shawwāl 584/December 1187 after a fierce six weeks' siege, and the garrison received *amān* and departed for Tyre (M.C. Lyons and D.E.P. Jackson, *Saladin*, Cambridge 1982, 141, 145, 285-6, 291; J. Prawer, *Hist. du royaume latin de Jérusalem*, Paris 1969-70, i, 560, 562; J. Riley-Smith, in Ibn Furāt, *Ayyubids, Mamelukes and Crusaders*, tr. U. and M.C. Lyons, Cambridge 1971, ii, 213).

Ṣalāḥ al-Dīn initially gave Ṣafad and Ṭabariyya as an *iḳṭāʿ* [*q.v.*] to one of his commanders, but in the early years of the 7th/13th century, al-Malik al-ʿĀdil's son al-Malik al-Muʿaẓẓam ʿĪsā [*q.v.*] resumed control over these towns, and in 617/1219-20 razed the fortress, fearing an attack by the Franks, who had scored initial successes in Egypt. Then 638/1240 al-Malik al-Ṣāliḥ Ismāʿīl of Damascus, seeking a defensive alliance with the Crusaders against al-Malik al-Ṣāliḥ Ayyūb of Egypt, turned over to the Franks his possessions in Galilee and southern Lebanon, including Ṣafad, whose fortress the Templars now restored (see R.S. Humphreys, *From Saladin to the Mongols*, Albany 1977, 78, 142-3, 266-8; Prawer, *Histoire*, ii, 154-5, 166 and n., 279-80, 286). The restoration work was initiated by Benedict d'Alignan, bishop of Marseilles, and took two-and-a-half years at an immense cost; its annual upkeep was reportedly 40,000 bezants and its peacetime garrison 1,700, which in wartime swelled to 2,200.

The main strategic value of Ṣafad was that it offered the Crusaders an excellent observation point over the Ṭabariyya-Toron road, and more significantly, the Damascus-ʿAkkā road, particularly the important Jacob's Ford (Djisr Banāt Yaʿḳūb [*q.v.*], Vadum Jacob) over the Jordan River, which is only 12 km away. Thus the fortress would gain early warning of approaching Muslim troops, be they raiders or invaders, and notify the other Frankish centres so that an appropriate response could be made. It is dubious whether the garrison of Ṣafad had any real control over these routes, particularly if the Muslims were out in any force, but it certainly served as a symbol of

Frankish power in the area. The fortress was the administrative and economic centre for the area, in which some 260 villages were supposed to be found; this figure would seem to be referring to the Galilee as a whole and not just the immediate hinterland of the town. In the 12th century, at least, there was located there a court of burgesses, indicating a large Frankish presence.

For the Muslims, Frankish Safad was a continual nuisance, and the Mamlūk sultan Baybars (658-76/1260-75 [*q.v.*]) soon set his sights on Ṣafad. In summer 664/1266 he began a six weeks' siege until the garrison, weakened by dissensions, surrendered under *amān*, which did not however allow them to take out arms and property; in fact, the sultan broke this *amān* and had almost the whole garrison killed (the Arabic sources are at pains to justify the sultan's evident rupture of the *amān*) (see P. Thorau, *The Lion of Egypt*, tr. P.M. Holt, London 1992, 168-70, 183-4 nn. 61-3; Prawer, *Histoire*, ii, 470-4). Baybars set about repairing the fortress, and Ṣafad was made the administrative centre of a new province, with new civilian buildings, including a mosque, markets, caravanserais and baths (see L.A. Mayer and J. Pinkerfeld, *Some principal Muslim religious buildings in Israel*, Jerusalem 1950, 44-6).

Geographers of the next century or so, including al-Dimas͟hḳī and al-ʿUmarī, describe Ṣafad as quite prosperous, although it was evidently something of a backwater intellectually. The chronicles give little information about events and conditions there, but like the province as a whole, it probably suffered decline from the time of the Black Death (*ca.* 749/1348) onwards. When the Ottomans took over Syria, the Mamlūk province of Ṣafad was transformed into a *sand͟jaḳ*, part of the larger *wilāyet*/*eyālet* or *beylerbeylik* of Damascus. Thanks to the relatively systematic tax registers of the Ottoman authorities in the first decades of their rule over Palestine, we have some idea of demographic and economic trends in the district and town. Ottoman rule brought more stability and a consequent prosperity and population increase to both the town and its rural hinterland; by 963/1555-6 there were about 280 villages, mainly Muslim but with a few Muslim-Christian and Muslim-Jewish ones, in the *sand͟jaḳ* (see H. Rhode, *The administration and population of the Sancak of Ṣafad in the sixteenth century*, diss. Columbia Univ. 1979, unpubl.; idem, *The geography of the sixteenth-century Sancak of Ṣafad*, in *Archivum Ottomanicum*, x [1985], 179-218; B. Lewis, in *BSOAS*, xvi [1954], 469-501; W.-D. Hütteroth and K. Abdulfattah, *Historical geography of Palestine, Transjordan and southern Syria in the late 16th century*, Erlangen 1977, 175-94). The town, in particular, prospered through the textile industry, having abundant water and accessibility to ports, hence to supplies of wool, and to markets, and also benefiting from an influx of Jewish craftsmen from the Iberian peninsula. There seems to have been a Jewish presence in Ṣafad since the 11th century, and eventually, the Sephardis and other newcomers outnumbered the indigenous "Arabised" (*mustaʿribūn*) Jews there. All this brought a rich spiritual life, so that in the 16th century Ṣafad was a major centre of Jewish mysticism, and the first printing shop of any kind in Syria originated in Ṣafad when a Hebrew printing press was established in 1563. There was some decline in the town's fortunes in the later 16th century, but in the 1670s Ewliyā Čelebi (*Seyāḥat-nāme*, ix, Istanbul 1935, 438-41, tr. in *QDAP*, iv [1935], 158-61) still found there three caravanserais, several mosques, seven *zāwiyas* and six public baths (see Lewis, *Notes and documents from the Turkish archives*, Jerusalem 1952, 5-7; Rhode, *op. cit.*, 167-9; A. Cohen and Lewis, *Population and revenue in the towns of Palestine in the sixteenth century*, Princeton 1978, 19-30).

By the early 17th century, Ṣafad had reverted to the status of a small town, and had come under the control of the Druze *amīr* Fak͟hr al-Dīn Maʿn [*q.v.*] of the Lebanon, with his rule subsequently recognised by the Ottoman authorities. In the later 18th century, Ṣafad revived somewhat, probably because of the relatively more stable government provided by the local leaders Ẓāhir (or Ḍāhir) al-ʿUmar (d. 1775) who hailed from Ṣafad, and Aḥmad al-D͟jazzār Pas͟ha (d. 1805 [*q.v.* in Suppl.])., and some fresh Jewish immigration began to take place (see C.-F. Volney, *Travels through Syria and Egypt in the years 1783, 1784 and 1785*, 2nd ed. London 1788, ii, 230-1; P.M. Holt, *Egypt and the Fertile Crescent 1516-1922*, London 1966, 117, 124; Cohen, *Palestine in the 18th century*, Jerusalem 1973, passim, esp. 119-28). Under Ibrāhīm Pas͟ha's governorship of Syria (1831-40 [*q.v.*], Ṣafad became the commercial centre of Galilee, but suffered from natural disasters like earthquakes and pestilence until some prosperity began to return in the later 19th century. In 1880 Ṣafad became the seat of a *ḳaḍāʾ* in the *sand͟jaḳ* of ʿAkkā in the *wilāyet* of Beirut. S͟hems al-Dīn Sāmī, in his *Ḳāmūs al-ʿālam*, iv, Istanbul 1311/1894, gave the population for the *ḳaḍāʾ* of Ṣafad as 21,313, of whom 13,971 were Muslims, but a more reliable figure for the actual town is probably that of the 1922 census under the British Mandate (Ṣafad was captured by Allenby's forces in September 1918): 8,760, of whom 5,431 were Muslims, 2,986 Jews and 343 Christians. Under the Mandate, the population gradually grew; at the time of the 1948 war, the total population was 12,000, of whom some 2,000 were Jews. After fierce fighting, Jewish forces gained control of Ṣafad; the Arab populations, some of which had left during the fighting, almost completely abandoned the town (see B. Morris, *The birth of the Palestinian refugee problem 1947-8*, Cambridge 1987, 102-5). At the last census, in 1983, the town's population was 15,853, of whom 379 were Muslims.

Little now remains of the fortress of Ṣafad, already ruined in Ewliyā's time. It suffered much from earthquakes, and the remains were largely used as a quarry for building by the locals. Some excavations have been done by Israeli archaeologists, but the area is now covered with trees and is a park.

(R. Amitai-Preiss)

AL-ṢAFADĪ, al-Ḥasan b. Abī Muḥammad ʿAbd Allāh al-Hāshimī, appears to have been a minor government official during the early reign of the Egyptian Sulṭan al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*]. In any event, we know that in the year 694/1294-5 he was appointed by the *wazīr* Ibn al-Khalīlī to head a mission to al-Fāḳūs in Sharḳiyya province charged with cultivating the crown lands there. While on this mission, al-Ṣafadī reports on a grisly case of cannibalism that he observed at first hand during this famine year, a report which is characteristic of the anecdotal style of his only extant work. This book, *Nuzhat al-mālik wa 'l mamlūk fī mukhtaṣar sīrat man waliya Miṣr min al-mulūk* is a short history of Egypt that ends with the year 711/1311-12 or perhaps as late as 714/1314. From a statement in the British Library manuscript (Add. 233326), it appears that al-Ṣafadī composed the history in the year 716/1316. The earlier part of the work begins with the natural and other advantages of Egypt and gives a succinct account of the earlier rulers consisting mainly of anecdotes, but the chief interest lies in the portion which deals with the Turkish or Baḥrī sultans, in particular al-Malik al-Nāṣir Muḥammad. Even here, however, al-Ṣafadī records very little information which cannot be found in other sources. The B.L. ms., written for the Egyptian caliph al-Mutawakkil, proceeds to record events down to 795/1393, but these were obviously added later by another writer. Two other manuscripts of *Nuzhat al-mālik* are preserved in the B.N., Paris mss. 1706 and 1931, 22. The latter bears the erroneous title of *Faḍāʾil Miṣr*.

Bibliography: Brockelmann, S II, 34; D.P. Little, *An introduction to Mamlūk historiography*, Wiesbaden 1970, 38-9.

(F. Krenkow-[D.P. Little])

AL-ṢAFADĪ, Ṣalāḥ al-Dīn Khalīl b. Aybak, Abu 'l-Ṣafāʾ al-Albakī (696-764/1297-1363), philologist, literary critic and littérateur, biographer, and all-round humanist.

Ṣafad was his family's home, and he was born there. His father, al-Amīr ʿIzz al-Dīn Aybak (b. ʿAbd Allāh!) was of Turkic origin; the *nisba* al-Albakī, after some *mamlūk amīr* named Albakī, seems to have belonged to him. From the apparent absence of any mention of him by his son, we may conclude that al-Ṣafadī considered him undistinguished. Relations with his father may also have been strained, if the statement known from Ibn Ḥadjar that his father showed no concern for his professional religious-legal studies until he was twenty was correctly transmitted. The additional indication that he previously studied on his own would seem confirmed by the impression that no early teachers of his are noted. However, he was obviously very gifted. When he went to Damascus as a young man aged twenty and had his first meeting with Ibn Taymiyya [*q.v.*] in 717/1317 or 718/1318, he displayed great knowledge as he proudly and repeatedly recalls (*Wāfī*, vii, 20-22; *Ghayth*, ii, 14; *Aʿyān*, i, 67); his choice of the controversial Ibn Taymiyya seems strange and may have been looked upon with disapproval by his family. He soon established ties, often of friendship, with the great scholars and writers of the age in Syria and Egypt such as Ibn Nubāta, Abū Ḥayyān al-Gharnāṭī, Ibn Sayyid al-Nās, and Ibn Faḍl Allāh al-ʿUmarī [*q.vv.*] among many others. His relationship, both professional and personal, with the older al-Dhahabī and the younger Tādj al-Dīn al-Subkī would appear to have been particularly close. Al-Subkī claims him as a Shāfiʿī, but in the cosmopolitan climate of Damascus and Cairo, it was natural for him to be acquainted with representatives of most Muslim and non-Muslim legal and religious groups of the time.

His abilities as a stylist and calligrapher opened up opportunities in government service. The positions he held, sometimes combined, depended on their importance for location; in roughly ascending order, they were *kātib al-dardj, al-dast, al-inshāʾ* and *al-sirr*, and also *wakīl al-khizāna*, which he was again at the time of his death. An occasional reference by contemporaries to him as *al-ḳāḍī* must have been merely honorary (Ibn Kathīr, *Bidāya*, xiv, 302; al-Subkī, ix, 160). In the 720s/1320s, his official duties brought him to his home town Ṣafad, to Aleppo (between 723/1323 and 726/1326), and, toward the end of the decade, also briefly to al-Raḥba (Raḥbat Mālik b. Tawḳ), but the capital cities of Damascus and Cairo were the centres of his activities. He shuttled back and forth between them, keeping up his intellectual contacts wherever he went and possibly spending more time on his scholarly work than his government employment. The year 755/1354 is attested as that of his pilgrimage undertaken together with the poet Muḥammad b. Yūsuf b. ʿAbd Allāh al-Khayyāṭ (*Aʿyān*, iii, 242); one of his works, *Ḥaḳīḳat al-madjāz ilā 'l-Ḥidjāz*, appears to have centred on it (listed in Ibn Taghrībirdī, *Manhal*, 244, l. 5, cf. the quotations in ʿAbd al-Ḳādir b. Muḥammad al-Djazīrī, *Durar al-fawāʾid*, 453 ff. [Cairo 1384], referred to by van Ess, in *Isl.*, liv, 250, n. 1). He also travelled widely in Syria on lecture tours which led him, for instance, to Aleppo in 759/1358 (*samāʿ* in *Taṣḥīḥ al-taṣḥīf*). Most of his time, however, was spent in Damascus where during one of the periodic outbreaks of the plague, his energetic activities came to an unexpected end in the night of Saturday to Sunday, 10 Shawwāl 764/23 July 1363.

He had a younger brother, Abū Isḥāḳ Djamāl al-Dīn Ibrāhīm, who died on 4 Djumādā II 742/15 November 1341. He devoted to him an emotional obituary notice that included many of his verses on his death (*Wāfī*, v, 330-7). From *samāʿ*s in his works, we know the names of two sons, both named Muḥammad (Abū ʿAbd Allāh and Abū Bakr), and two daughters, one of them named Fāṭima (Bonebakker, *Some early definitions*, 65 ff.; *Wāfī*, i, introd., p. *djīm*; al-Munadjdjid [ed.], *Umarāʾ Dimashk*, pl. 3; *Taṣḥīḥ al-taṣḥīf*, at end of first ms., etc.).

His numerous works provide an enormous amount of varied information. They are uniformly instructive and consistently entertaining. Moreover, they are characterised by sound scholarly method and, to all appearances, even a good measure of originality. He himself spoke of 300 volumes of his own composition (al-Subkī, x, 5) or, more plausibly, of 50 volumes and 500 volumes copied (Ibn al-ʿImād, *Shadharāt*). His copying activity is attested already from 718/1318 for a manuscript of Ibn Nubāta's *Khuṭab*, according to the Princeton *Catalogue of the Garrett collection*, no. 1907 (298B); his own copy of one of his sources, Ibn Khallikān, is preserved in ms. Gotha 1731 (Pertsch, iii, 319). An unusual number of autographs of his own works is preserved, as is often duly noted by scholars and editors, see e.g. H. Ritter, in *RSO*, xii (1929-30), 79-88, and R. Sellheim, *Materialien zur arabischen Literaturgeschichte*, Wiesbaden 1976-87, i, 200-1, pl. 30, ii, 111; they require comprehensive study, together with autograph *samāʿ*s and *idjāzas*. The preservation of so many autographs, the large number of preserved manuscripts, which still await a world-wide census,

and the long chain of commentaries and imitations show the high esteem in which his work was held.

His concern with linguistic problems is evident throughout his literary production. It also led to the composition of long treatises such as *Taṣḥīḥ al-taṣḥīf wa-taḥrīr al-taḥrīf* on misspellings and misreadings (facs. of two mss. published in Frankfurt a/M 1985). The announced edition of *Ghawāmiḍ al-Ṣiḥāḥ* of al-Djawharī may not yet have appeared. Much more central is his seminal work on literary criticism, although by the nature of the enterprise, it is often debatable. Recognition as models of the genre was accorded to his commentaries on Ḍiyāʾ al-Dīn Ibn al-Athīr's *al-Mathal al-sāʾir*, entitled *Nuṣrat al-thāʾir*, a severely critical effort (ed. M.ʿA. Sulṭānī, Damascus 1972); on Ibn Zaydūn's *Risāla*, entitled *Tamām al-mutūn* (ed. M. Abu 'l-Faḍl Ibrāhīm, Cairo 1389/1969); and on al-Ṭughrāʾī's *Lāmiyyat al-ʿAdjam*, entitled *al-Ghayth al-musadjdjam* (sometimes *alladhi 'nsadjam*) (Cairo 1305 [cited here], Beirut 1395/1975, cf. Rosenthal, in *Oriens*, xxvii-xxviii [1981], 179-81). Individual rhetorical figures are treated in *Djinān al-djinās* (ed. Samīr Ḥusayn Ḥalabī, Beirut 1407/1987; although not an autograph, ms. Chester Beatty 3103 is dated in his lifetime [752/1351]) and *Faḍl al-khitām ʿan al-tawriya wa 'l-istikhdām* (ed. al-Muḥammadī ʿAbd al-ʿAzīz al-Ḥinnāwī, Cairo 1399/1979, see S.A. Bonebakker, *Some early definitions of the tawriya and Ṣafadī's Faḍḍ al-Xitām*, The Hague and Paris 1966).

His extensive poetical production is noted first for 718/1318 (*Ghayth*, ii, 4). His *muwashshaḥāt* make up part of his *Tawshīʿ al-tawshīḥ* (ed. Albert Ḥabīb Muṭlaḳ, Beirut? 1966. The title is correctly listed in Ibn Taghrībirdī, *Manhal*, but distorted to *Tawshīḥ al-tarshīḥ* in Ibn Ḥadjar). Epigrams were collected by him in *al-Rawḍ al-bāsim* and *al-Ḥusn al-ṣarīḥ fī miʾat malīḥ*. Explanations of old verses are said to be the subject of *Ikhtirāʿ al-khurāʿ*. A *maḳāma* on the pangs of love, *Lawʿat al-shākī wa-damʿat al-bākī*, has been printed frequently. His artistic prose in letters and documents appears to have been preserved in his *Munshaʾāt*, whose relationship, if any, to *Ikhtibār al-Ikhtiyār* in ms. Chester Beatty 5183, dated 753/1352, remains to be investigated. Further material of this sort in *Dīwān al-fuḳahāʾ* (ms. Vienna 389) and *Alḥān al-sawādjiʿ bayn al-bādiʾ wa 'l-murādjiʿ* (so correctly in Berlin Ahlwardt 8631 and Princeton Yahuda Collection, Mach 4368). Much of his poetry and artistic prose, both literary and official, is found dispersed throughout his works as well as some of the biographical literature.

Specialised treatises on subjects such as eyes, tears, riddles, and the valuable scholarly monograph on the numeral seven (70, 700, etc.), entitled *Ṭard al-sabʿ ʿan sard al-sabʿ*, which can also be read in al-Suyūṭī's commentary *ʿAyn al-nabʿ*, or the above-mentioned *Ḥaḳīḳat al-madjāz ilā 'l-Ḥidjāz*, probably inspired by the example of Ibn Faḍl Allāh al-ʿUmarī and containing much of his occasional poetry, fall basically in the *adab* category, and so does his vast *Tadhkira*, which will yield further information on his literary production and interests, cf. e.g. A.J. Arberry's description of the content of ms. Chester Beatty 3861 in *IQ*, vi (1961), 107-17.

His great biographical collections possess lasting usefulness and have remained indispensable for scholars. The publication of the massive *al-Wāfī bi 'l-wafayāt* has been due to the initiative of H. Ritter. The first volume appeared in his *Bibliotheca Islamica* in 1931 (repr. 1962). Publication was resumed in 1949, with twenty-two volumes edited by different scholars having appeared by 1993; its introduction was translated by É. Amar in *JA*, x/17-19 (1911-12). The *Wāfī* is alphabetically arranged according to the names of the biographees, as is *Aʿyān al-ʿaṣr wa-aʿwān al-naṣr* that deals *in extenso* with individuals from his own lifetime (3-vol. facs., Frankfurt a/M 1410/1990). For his sources, see Little and van Ess (in *Bibl.*). Specialised biographies of the blind and the one-eyed are, respectively, *Nakt al-himyān fī nukat al-ʿumyān* (ed. A. Zakī, Cairo 1329/1911, cf. F. Malti-Douglas, in *Cahiers d'onomastique arabe* [1979], 7-19, and eadem, in *The Islamic world. Essays in honor of Bernard Lewis*, Princeton 1989, 211-37), and the later and much shorter *al-Shuʿūr bi 'l-ʿūr* (ed. ʿAbd al-Razzāḳ Ḥusayn, ʿAmmān 1409/1988). His general historical knowledge was often put to good use by him, as e.g. in *Tamām al-mutūn*. His *Umarāʾ Dimashḳ* was published by Ṣalāḥ al-Dīn al-Munadjdjid from the *Tadhkira* (Damascus 1374/1955).

Expectedly, pseudo-attributions do exist and remain largely uninvestigated. Al-Ṣafadī could presumably have dealt with the theory and practice of music, but the *Risāla fī ʿilm al-mūsīḳā* published as his by ʿAbd al-Madjīd Diyāb and Ghaṭṭās ʿAbd al-Malik Khashaba (Cairo 1411/1991) is clearly not by him, cf. A. Shiloah, *The theory of music in Arabic writings*, Munich 1979, 276, 304-6. The even more striking attribution of a commentary on the *djafr* treatise *al-Shadjara al-Nuʿmāniyya fi 'l-dawla al-ʿUthmāniyya* supposedly by Ibn ʿArabī, which exists in numerous manuscripts, is only rarely marked by modern bibliographers as spurious, cf., for instance, ms. Berlin, Ahlwardt 4216, as against Princeton, Yahuda collection, Mach 5133; T. Fahd, *La divination arabe*, Strasbourg 1966, 226-7. A collection of stories and geographical data entitled *Madjmaʿ al-ḥisān wa-fawākih al-djinān* in ms. Yale Landberg 516 = Cat. Nemoy 469 is likewise wrongly ascribed to him.

Bibliography: While the autobiographical sketch mentioned by Ibn al-ʿImād has not yet been recovered, Ṣafadī's habit of frequently indicating the place and date of receiving information provides much biographical detail. This has been successfully exploited by D.P. Little, *al-Ṣafadī as biographer of his contemporaries*, in *Essays on Islamic civilization presented to Niyazi Berkes*, Leiden 1976, 109-20, mainly based on *Aʿyān*, and, in greater detail, J. van Ess, *Ṣafadī-Splitter*, in *Isl.*, liii (1976), 242-66, liv (1977), 77-108. Already his contemporaries, such as Dhahabī, in *al-Muʿdjam al-mukhtaṣṣ*, al-Ṭāʾif 1408/1988, 91-2, mentioned him as he did them, but the formal biographical notices are very limited as to the factual data they contain; if some are lengthy, this is due to ample quotations from his literary production. See, for instance, Muḥammad b. ʿAlī al-Ḥusaynī, *Dhayl al-ʿIbar*, iv, 203, in the Beirut 1405/1985 edition of Dhahabī, *ʿIbar*; Ibn Kathīr, *Bidāya*, xiv, 303; Ibn Rāfiʿ, *Wafayāt*, Beirut 1402/1982, ii, 268-270; Tādj al-Dīn al-Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, x, 5-32; Ibn Ḥadjar, *Durar*, ii, 87-8; Ibn Ḳāḍī Shuhba, *Ṭabaḳāt al-Shāfiʿiyya*, ed. al-Ḥāfiẓ ʿAbd al-ʿAlīm Khān, Beirut 1407/1987, iii, 89-90; Ibn Taghrībirdī, *al-Manhal al-ṣāfī*, Cairo 1980—, v, 241-257, with a good list of titles of Ṣafadī's works, and idem, *Nudjūm*, Cairo, xi, 19-21; Ibn al-ʿImād, *Shadharāt*, vi, 200-1. See, further, Brockelmann, II², 39-41, S II, 27-9. F. Krenkow, in *EI*¹, s.v., and the introductions of modern editions are basically uncritical. Cf. also M. ʿA. Sulṭānī, *al-Naḳd al-adabī fi 'l-ḳarn al-thāmin al-hidjrī bayn al-Ṣafadī wa-muʿāṣirīh*, Damascus 1394/1974. For a reconsideration of his sources, see D. Krawulsky, in *wāfī*, xvii, 704-14.

(F. ROSENTHAL)

ṢAFAITIC is the modern name given to a group

of graffiti in a North Arabian language, expressed in a variety of the South Semitic script. They are found mainly on rocks in the deserts of southern Syria, north-eastern Jordan and northern Saudi Arabia, with isolated finds in ʿIrāḳ, Lebanon and at Pompeii (see M.C.A. Macdonald in *Syria*, lxx [1993], 304-5 for references), and their distribution and content show that they were written almost exclusively by nomads. They are conventionally dated between the 1st century B.C. and the 4th century A.D.

While the majority consist of the author's name and between one and 17 generations of his genealogy, a significant number also contain statements describing his actions or emotions, or events of which he was aware. Many also contain prayers to a variety of deities, and a considerable number refer to adjacent rock-drawings. This was the only period in which literacy has been widespread among the nomads of the Syro-Arabian desert—there are inscriptions by men, women and slaves [*fty*]—and these texts (and most of the Thamudic [*q.v.*] graffiti) are therefore the only surviving first-hand records of their way-of-life, before the pre-Islamic poetry. They are thus of considerable importance since they contain historical, linguistic and palaeo-ethnographic information which is not available from any other source. For a discussion of the phenomenon of literacy among these nomads, see Macdonald, *op. cit.*, 382-8.

The inscriptions were first discovered in 1857 near the eastern edge of the Ṣafā [*q.v.*] in southern Syria, and continue to be known by the 19th-century misnomer "Ṣafaitic", despite the fact that none have even been found within the Ṣafā itself (see *ibid.*, 305-10). More were discovered in 1860, and by 1901 the script had been deciphered. Throughout the 20th century a handful of expeditions have recorded vast numbers of these texts, and by the 1990s over 20,000 had been found in the limited number of areas which have been searched. There are clearly scores of thousands still awaiting discovery.

The Ṣafaitic alphabet belongs to the North Arabian branch of the South Semitic script. The palaeographical development, and the exact relationships within and between the North and South Arabian branches of this script are still disputed (see B. Sass, *Studia alphabetica*, Freiburg 1991, 28-93, and Macdonald in *Anchor Bible dictionary*, New York 1992, iii, 418-19 with script table). The Safaitic script appears to have been used solely for graffiti and to have been spread informally rather than in schools (idem, in *Syria*, lxx [1993], 382-8). Gemination of consonants is not represented, and, in contrast to Lihyanite [see LIḤYĀN], *matres lectionis* are not used, nor is there any notation of diphthongs (if they existed). Writing is continuous and without word-dividers and can be in any direction.

The language of the Ṣafaitic graffiti belongs to the group known as "North Arabian". Safaitic, together with Lihyanite/Dedanite, the different types of Thamudic, and Hasaitic, form a sub-group, known as "Frühnordarabisch", which is most obviously distinguished by its use of the definite article *h-/hn-*, in contrast to the other sub-group (which includes pre-Islamic and later Arabic), which uses *al-* (see W.W. Müller, in W. Fischer (ed.), *Grundriss der arabischen Philologie*, Wiesbaden 1982, i, 17-36). For descriptions of the grammar, see E. Littmann, *Safaïtic inscriptions*, Leiden 1943, pp. xii-xxiv, and Müller, in *Procs. of the Seminar for Arabian Studies*, x [1980] 68-72.

The nature and number of the Ṣafaitic inscriptions have produced an extraordinarily rich onomasticon (see Müller, *op. cit.*, 72-3 for a brief survey). Affiliation to a social group is expressed by taking the lineage back to the eponymous ancestor, or to one of his immediate descendants, or by use of the *nisba* (*h-ḍfy* "the Ḍayfite") or by use of the phrase *ḏ̲h̲ ʾl* at the end of the genealogy (*ḏ̲h̲ʾl ḍf* "of the tribe of Ḍayf"). However, the word *ʾl* (cf. Ar. *ʾāl*) is used of all social groups from immediate family to tribe, and even of peoples such as the Romans. On tribes, see Lankester Harding, in *al-Abḥāt̲h̲*, xxii (1969), 3-25, and Macdonald, in *Syria*, lxx (1993), 352-67.

There is no trace of Christianity or Islam in the Ṣafaitic inscriptions. Prayers are offered to a number of deities among which the commonest are *Lt* (variants (?) *ʾlt* (as in Nabataean and Palmyrene), and in theophoric names *h-ʾlt*, presumably equivalent to the *hn-ʾlt* in the 5th century B.C. Aramaic inscriptions on bowls found at Tell al-Mask̲h̲ūṭa in Egypt, one of which is by a king of Ḳēdār (Rabinowitz, in *JNES*, xv [1956] 1-9 and xviii [1959] 154-5), the *Alilat* of Herodotus 3:8, and Arabic al-Lāt [*q.v.*]); *Lh* (variants (?) *ʾlh* and *h-ʾlh*); *Rḍw/Rḍy*—apparently variants of the same name, for a deity of uncertain sex, but probably male and to be identified with *Ruldaiu* mentioned in the Assyrian Annals, *Orotalt* in Herodotus 3:8, *Arṣû* at Palmyra (see J.T. Milik, *Dédicaces faites par des dieux*, Paris 1972, 49) and *Ruḍan* of Ibn al-Kalbī, *K. al-Aṣnām*, Cairo 1914, 30-1; *Bʿls¹mn* (the great Aramaean sky god, whose name usually appears in Ṣafaitic as a direct loan from Aramaic *Baʿals̲h̲amīn*, though occasionally it is found as a calque in the form *Bʿls¹my*); *Ds²r* (a loan from Nabataean *Dws̲h̲rʾ*, Dus̲h̲ara, but with variants *ds²ry*, *ḏ̲h̲s²r*, and the etymologically correct *ḏ̲h̲s²ry* (cf. *D̲h̲u ʾl-S̲h̲arā* [*q.v.*]), which is, naturally, the common form in the Thamudic E texts of southern Jordan); *S²ʿ-h-qm* (equivalent to Nabataean *S̲h̲yʿ-ʾl-qwm*) "the companion [or "succour", cf. Syriac *sûyāʿā*] of the group"; and *Yt̲h̲ʿ* (see Macdonald, in *Anchor Bible dictionary*, iii, 422). Invocations are also made to the *Gd* (i.e. *Tyche* or "Fortune") of the two major tribal groups, thus *Gd-Ḍf* and *Gd-ʿwḏ̲h̲*.

Any of these deities can be invoked singly or together and there is no discernible difference in the requests made to them. By far the commonest is for security (*s¹lm*), but there are numerous prayers for relief (*rwḥ*) from privation, freedom from want (*g̲h̲nyt*), booty (*g̲h̲nmt*), etc., as well as curses on those who damage the inscriptions or drawings and, less often, blessings on those who leave them intact. Other religious expressions include *ʿwḏ̲h̲ b hʾlh* ("and he sought protection in *h-ʾlh*" (WH 3923, re-read by Macdonald in M. Ibrahim (ed.) *Arabian studies in honour of Mahmoud Ghul*, Wiesbaden 1989, 65-6) which is paralleled by *ʿwḏ̲h̲ b rḍy* (WH 390). A number of other deities are attested in Ṣafaitic only in theophoric names, *Mnt* (cf. Nabataean *Mnwtw*, Arabic *Manāt* [*q.v.*]), *h-ʿzy* (cf. Nabataean *ʾl-ʿzʾ* and Arabic *al-ʿUzzā* [*q.v.*]), and, most common of all, *ʾl* (*ʾĪl*).

Of religious practice we have virtually no hint. The supposed Ṣafaitic evidence for pilgrimage to the temple of *Baʿals̲h̲amīn* (LP 350) is based on a misreading (see Macdonald, in *Syria*, lxx [1993], 315, n. 75 and 366, n. 414), though another text (CSNS 424) which refers to *Bʿls¹mn* as "the god of Sīʿʿ", suggests that the author knew of his famous temple at that place. Inscriptions mentioning sacrifice (*ḏ̲h̲bḥ*) are usually found in groups, and seldom specify either the victim or the deity, though two texts (C 4358 and 4360) say their authors sacrificed to *Bʿls¹mn* and the authors of two others (unpublished) refer to a high place or altar (*ṣmd*) on which they sacrificed a camel (*ḏ̲h̲bḥ gml ʿlh*).

Some texts record the building of a cairn (*rgm*) over

the dead (though cairns were often used for other purposes as well), a practice maintained by the modern inhabitants of the area, the Ahl al-Djabal (on "Ṣafaitic" cairns, see Macdonald, in Zaghloul *et alii*, *Studies in the history and archaeology of Jordan. IV*, Amman 1992, 303-7, and references there; on modern cairns, see W. and F. Lancaster in *Arabian Archaeology and Epigraphy*, iv [1993], 151-69). Some Ṣafaitic texts also refer to a *baliyya* [*q.v.*], or camel left to die at the grave of its master, a pre-Islamic practice described by Islamic writers, and which is also mentioned in an unpublished Nabataean inscription from southern Jordan, which was found associated with a burial of this type. Large numbers of texts are concerned with mourning (*wgm, ndm, wlh*, etc.) and a belief in a personified Death or Fate (*Manā/Mana*ⁿ, *Manāyā*), paralleled in the pre-Islamic poetry, is suggested by the phrase "humbled by Fate" (*rghm mny*), which is often used of the dead.

It is clear from these texts that their authors were aware of events beyond the desert. Herod the Great and his successors appear to be mentioned several times, as are (unspecified) Roman emperors (*ḳṣr*) and at least one Nabataean king (see Macdonald, in *Syria*, lxx [1993], 323-46, and in *Trade, contact, and the movement of peoples in the Eastern Mediterranean. Studies in honour of J. Basil Hennessy*, Sydney 1994) and there are a number of (mainly enigmatic) references to the Romans (*Rm*), the Nabataeans (*Nbṭ*), possibly the Ituraeans (*Yẓr*), and the Persians (*Mdhy*). Unfortunately, in most cases it is impossible to identify the exact events referred to. There are also indications that some of the nomads were recruited into auxiliary units of the Roman army (see Macdonald, in *Syria*, lxx [1993], 368-77). The Ṣafaitic inscriptions provide no evidence of a "nomadic threat" to the Roman provinces of Syria and Arabia.

These graffiti provide a picture of the daily life of their authors which shows them to have been fully nomadic, rather than sedentaries or semi-nomads, as has sometimes been suggested (see discussion in Macdonald, in *op. cit.*, 311-22). They were mixed pastoralists, migrating annually with their herds, both of camels and of sheep and goats, between the *ḥarra* (or basalt desert) of southern Syria and north-eastern Jordan, and the *ḥamād* (which they called *mdbr*), in what is now western ʿIrāḳ and northern Saʿūdi Arabia (see Macdonald, in *JRAS*, 3rd series, vol. ii [1992], 1-11, and in *AAE*, iii [1992], 27-30). Many record returning to the same campsites [*dr*] year after year (*ʿm f ʿm*) and the sadness they felt on finding the traces (*ʾthr*) of friends or relatives—a commonplace of nomadic life elevated to an artistic convention in pre-Islamic poetry. Relatively few mention raiding (*ghzz*), which is sometimes supposed to have taken up most of a nomad's time, but it clearly played a part in both the culture and the economy. There are rock drawings showing raids (Macdonald, in *AAE*, i [1990], 24-28) and many other activities, especially hunting and fighting both on horseback and on foot. It is clear from these drawings that these nomads used the North Arabian (*shadād*) camel-saddle but, contrary to a common misapprehension, there is no evidence that these, or any other, North Arabian nomads ever fought from camel-back (see Macdonald in *Archaeology and the rise of Islam*, Special number of *Antiquity* [1995], and in *ZDPV*, cvii [1991], 103). Other entertainment was provided by singing and dancing girls (*ḳnt*, or simply *ghlmt*) who are also depicted in the drawings with bare breasts and swinging tasselled belts.

"*South Ṣafaitic*". E. Knauf has proposed that some of the texts labelled by Winnett "Thamudic E" (later, inappropriately, "Tabuki Thamudic") should be reclassified as "South Ṣafaitic" on the grounds that in style and onomastic content they had more in common with Ṣafaitic than with other forms of Thamudic (Knauf, in *Annual Dept. of Antiquities, Jordan*, xxvii [1983] 587-96). However, the fundamental work on these inscriptions by G.M.H. King has shown that they form a clearly definable group, related to, but distinct from, Ṣafaitic, and that they cannot be divided in the way Knauf suggests (see her *Early North Arabian Thamudic E*, diss. London 1990, in preparation for publication). It is therefore preferable to retain the old neutral label, "Thamudic E", rather than "Tabuki Thamudic" (only a small minority of the texts have been found near Tabuk) or "South Ṣafaitic", which blurs important distinctions. As would be expected, there are a handful of texts which seem to display features of both Ṣafaitic and Thamudic E and these are generally known as "Mixed texts" (see THAMUDIC and Macdonald, in *ADAJ*, xxiv [1980] 188).

Bibliography: In addition to works cited in the text, see for bibliographies, W.G. Oxtoby, *Some inscriptions of the Safaitic Bedouin*, New Haven 1968, and V.A. Clark, *A study of new Safaitic inscriptions from Jordan*, diss. available from University Microfilms International Ann Arbor 1979 [= CSNS].

General surveys: M.C.A. Macdonald, in *Anchor Bible dictionary*, New York 1992, iii, 418-23 (with script table and examples of texts) (N.B. the section on "South Ṣafaitic" should be corrected by reference to the present article), and W.W. Müller, in *PSAS* (1980), 67-74 and the works of Oxtoby and Clark mentioned above. For a detailed discussion of the historical content of the texts, see Macdonald in *Syria*, lxx (1993), 303-408.

Major collections: *Corpus inscriptionum semiticarum, pars v*, Paris 1950-1 [= C], E. Littmann, *Safaitic inscriptions*, Leiden 1943 [= LP] which contain texts mainly from Syria; F.V. Winnett, *Safaitic inscriptions from Jordan*, Toronto 1957, idem and G. Lankester Harding, *Inscriptions from Fifty Safaitic cairns*, Toronto 1978 [= WH], and the works of Oxtoby and Clark cited above, which contain texts from Jordan. Several thousand texts recorded in Jordan by Macdonald, King and Clark are in preparation. Safaitic inscriptions from northern Saudi Arabia are published by A. Jamme, in F. Altheim and R. Stiehl, *Christentum am Roten Meer*, Berlin 1971, i, 41-109, 611-37, and idem, in *Oriens Antiquus*, vi (1967), 189-213, and ix (1970), 129-32 (the interpretations in these three works should be treated with caution). Finally, G. Lankester Harding, *An index and concordance of pre-Islamic Arabian names and inscriptions*, Toronto 1971, is still an indispensable tool.

(M.C.A. MACDONALD)

SAFĀḲUS, conventional European form SFAX, a town of Tunisia, on the eastern coast to the north of the Gulf of Gabès.

The historical study of the towns of Tunisia poses a series of problems, the approaches to which are far from uniform, given the sparseness of information. The urban societies did not preserve the pieces of evidence, above all, the written ones, concerning their own past nor did they transmit them intact to us. Given these lacunae, stretching over a long period of centuries, historical information is necessarily laconic and disparate.

There was nothing which destined Sfax to become a great regional centre. In order to achieve this, the

Muslims did not mark down the site of Taenea, an important settlement some 12 km/7 miles to the south, despite the 83 ha extent of its site, but chose instead the obscure and modest Taparura for constructing their town. The reasons for this are not clear, although the strategic value of the site was not negligible, being on the sea-coast and at the meeting-point of the classical Africa Vetus and Byzacene, in effect, on the border between central Tunisia—studied by Jean Despois—and southern Tunisia. Hence from this position, Sfax was to play the role of a town situated at the crossroads of routes.

There was a general spurt of town-building in Ifrīḳiya as far back as the 3rd/9th century, in which Sfax played a part, but the processes of change and transition from Antiquity to the Middle Ages, are hidden from us, and archaeological excavations, hardly yet begun, have not provided any decisive information. Nevertheless, the orthagonal character of the Medina of Sfax and the alignments visible in its environs, lead one to recall the typical Roman layout. But one has to have recource to the information of the Arabic historical tradition, with all the attendant risks.

Origins.

An unusual fact, hence notable, is that, on the model of Tunis and Kairouan, Sfax had—if belatedly—its own historian, Maḥmūd b. Saʿīd Maḳdīsh al-Safāḳusī (d. at Kairouan in 1227/1813), author of the *Nuzhat al-anẓār fī ʿadjāʾib al-tawārīkh wa 'l-akhbār*, a compilation in which the author traces the history of his natal town from the Islamic conquest to the reign of Ḥammūda Pasha (1196-1229/1782-1814) (ed. Ali Zouari and M. Mahfoudh, Beirut 1988). It appears from the historical schema, which he reflects, that the original town had a military function but soon acquired a commercial one. The actual layout of the town and its buildings speedily reflected this process. It seems to have begun with a *ḳṣar* or *burdj* or *maḥris*) called the *Burdj al-aḥmar*, on the site of the modern casbah, and in the neighbourhood of the *zāwiya* of Sīdī Djabla. Did this begin as a simple *ribāṭ* or strong-point and then became a *ribāṭ-maḥris* surrounded by an agricultural-artisanal agglomeration? This particular *burdj* was in fact merely one of several (Buṭriya, Lawza, Inshīla, Maḥris ʿAlī, etc.), numerous in the area and amongst which Ḳṣar Ziyād (35 km/20 miles to the north) was notable. Or was it a centre for fighters for the faith, an instructional centre for religious education, or a staging-post for the *barīd* [*q.v.*] before becoming a commercial centre? Whatever the case, the first nucleus of population was one of *murābiṭun*, to which two groups of fishermen (the *Aʿshāsh* and the *Nwāwla*) were to join. The hinterland had a dense network of villages (*ḳurā*). The sources all agree that trade by land and by sea was the main cause for the evolution of the town.

Urban evolution.

As a mark of its success, Sfax seems to have acquired its first and last fortifications towards the time of Ibrāhīm Aḥmad b. al-Aghlab, between 246/860 and 249/863. The guiding spirit here was its future *ḳāḍī*, the *faḳīh* ʿAlī b. Sālim, a disciple of the Imām Saḥnūn [*q.v.*]. The space enclosed by these walls remained unchanged till the 12th/18th century. It took the form of a quadrilateral 600 m by 400 m, hence covering 24 ha (Sousse, 32 ha; Monastir, 28 ha). The fact that it was only slightly set back from the sea, with a shallow continental shelf there, provided, moreover, a good warning period in case of external attack. The great mosque presumably dated from that same period. It had numerous rebuildings and extensions (e.g. in 379/989 and 479/1086) and only assumed its final form, the one which we now know, in the years between 1183/1759 and 1197/1783. Restricted within its ramparts, the town soon became cramped, but it was not until 1189/1775 that the laying-out of a suburb, *rbāṭ*, near the eastern gate called the Bāb Bḥar, was allowed. It was also provided with a *funduḳ* (1778) and, a little later, a mosque (between 1779 and 1785). The population would have reached saturation point if it has not been for the epidemic of 1199/1785, claiming 15,000 victims, which checked the town's progress. The development process, over a millennium, of the internal lay-out of the town ended up, towards the mid-19th century, in a repertoire of buildings made up of 83 mosques and various oratories, 72 *zāwiyas*, 2,066 houses, 19 oil presses, 35 mills, as many ovens for bread-making, and 12 *burdjs*. With such an array of buildings, Sfax took second place only after the capital Tunis, which had 8,000-9,000 houses. Water was scarce, hence streams had to be utilised, and three basins, as well as domestic and private cisterns, were constructed: the first, the Nāṣiriyya, goes back to the beginning of the 7th/13th century, and the other two date from 1188/1774.

Political history.

Although comparatively important, given the scale of the country, Sfax never assumed a political importance commensurate with its commercial one. Often coveted by outside powers, which often passed it by, it was never subject to any domination except a commercial one. Ḥammū b. Malīl assumed independent power there in 451/1059 when Zīrid power was in decline. After several fruitless attempts, Tamīm only managed to recover it in 493/1099-1100. It rebelled in 504/1110-11 against its Zīrid governor Abu 'l-Futūḥ. It took the side of the Almohad ʿAbd al-Muʾmin, the master of Ifrīḳiya, in 552/1160 before passing into the hands of the Majorcan Yaḥyā Ibn Ghāniya. It was seized for short periods by the rebels Ibn Abī ʿUmāra (681/1282) and the Banū Makkī (757/1356). It declared for the Ottoman Turks during the period of Ḥafṣid decline in the 10th/16th century, but only reluctantly. In effect autonomous, a *djamāʿa* took the leading political role there. Even Shābbī Sīdī ʿArfa (948/1542) was unable to bring it within his control, though his warriors seized Darghūth. When Kairouan fell to the latter in 964/1557, a *raʾīs* called Abū ʿAbd Allāh al-Makkānī was master of Sfax. It was attached to Tripoli and only restored to the *sandjaḳ* of Tunis in 996/1588.

However, the people of Sfax were not lacking in initiative when they managed to escape from the domination of their elites or acted in concert with them. Despite its trade, and perhaps connected with it, Sfax was none the less a corsair centre. For this reason, George of Antioch gave control of it to Roger II of Siciliy. Mastered in 538/1143 but occupied in 543/1148, it only broke free in 551/1156. It was caught up in the policies of Venice and Malta, and local tradition preserves the memory of a naval victory at Rās al-Makhbiz in 1160/1747. Venetian attempts at an occupation (1200/1786 and 1205/1791) failed. Ships of Sfax asking permission to go out raiding represented 15% of all requests made between 1212/1797 and 1213/1798. These ships all belonged to the *ḳāʾid* of the town Maḥmūd Djallūlī. This involvement in the activism of the *djihād* gave the town an aptitude for resistance, seen at the time of the revolt of 1281/1864 and the insurrection of 1298/1881, although at the instigation of the neighbouring tribe of the Methelith.

Economic life.

The town's commerce flourished thanks to its in-

habitants' spirit of enterprise, with a trade orientated towards the Levant. The establishment of the Protectorate dealt a blow to this, but the local people have been recovering their economic enterprise since Independence.

Cultivation of the olive has been known from the 3rd/9th century, and after a period of decline under the Hafsids, recovered in the 11th/17th century; a survey in 1852 enumerated 110,518 trees in the area to the north of the town. These were progressively replaced by almond trees from 1910 onwards. But olive cultivation in the whole of the Sfax region enjoyed an immense increase under the Protectorate, with a large injection of French capital, with 350,000 trees just after 1881, 5,159,829 in 1951 and 6,100.000 in 1972. This monoculture was not without its dangers, and potential difficulties were ony regulated by the creation in Sfax in 1930 of a special Office for Oil, which was to play a leading role in marketing and commerce. Whereas there were only 19 oil-pressing establishments in the mid-19th century, there were some 250 counted in 1972.

The economy of the town of Sfax itself rests on both artisanal production and on service industries (the latter comprising 37% of all enterprises in 1980). As well as the dominant position of olive production, their had been an industrial transformation from the phosphate production of the Gafsa basin. Trade, however, has been the traditional chief activity of the populace of Sfax; tourism has not taken root there. The local commercial mentality expresses itself in private capitalism, not unlike that of the people of Djarba [*q.v.*].

Population.

This is difficult to evaluate because of the diaspora, rural emigration and, above all, because of administrative boundary changes. The municipality, created in 1884, had 54,800 people in 1946. The Medina alone had 16,700 in 1954, compared with 130,000 for the rest of the agglomeration. The population tripled between 1936 and 1966, and reached 275,000 *ca* 1975. The town grew in consequence, at the expense of the Rbāt, the Frankish quarter, razed after the bombardments of 1943, of the surrounding *sabkhas* and even of the nearby sea, whilst the surrounding orchards and gardens, *djināns*, have now completely disappeared. The urban area continues to grow in an anarchic and uncontrolled fashion. Even the medina has been affected by the invasiveness of commercial and artisanal activities spreading out from the *sūķs* and altering the ancient pattern of residential usage. There has also been threats of flooding and of atmospheric pollution. The safeguarding of the historic areas and rehabilitation of residential quarters will require official intervention, and is bound up with a public debate on the nature and characteristic of the towns of Tunisia, their pasts and their presents.

SAFAR, (a.) "journey", "travel".

1. In law.

In Islamic law, travelling permits certain mitigations in the carrying out of ritual duties. This applies to three topics: 1. ritual purity: according to most schools, a traveller may extend the period during which he is allowed to perform the minor ritual ablution (*wuḍūʾ* [*q.v.*]) by rubbing his foot-covering instead of washing his feet, from one to three days; 2. ritual prayer (*ṣalāt* [*q.v.*]): a traveller is permitted to shorten (*ķaṣr*) the *ṣalāt*s with four *rakʿa*s [*q.v.*], i.e. the *ṣalāt al-ẓuhr*, the *ṣalāt al-ʿaṣr*, and the *ṣalāt al-ʿishāʾ*, to two *rakʿa*s, and, according to most schools, to combine (*djamʿ*) the *ṣalāt al-ẓuhr* with the *ṣalāt al-ʿaṣr*, and the *ṣalāt al-maghrib* with the *salāt al-ʿishāʾ*; 3. fasting: a traveller is permitted, or according to some, obliged to break the fast of Ramaḍān, but must later make up for the days not fasted. A journey has to satisfy certain requirements in order to allow these mitigations. It has to be undertaken with the intention to cover a certain minimum distance (*masāfat al-ķaṣr*). Most schools define it as 16 *farsakh*s, which modern jurists equate with *ca.* 82 km. The Shīʿīs mention a distance of 24 *mīl*s, i.e. *ca.* 48 km. According on the Ḥanafīs, this distance is three days' travelling with an average speed. The Ẓāhirīs, however, acting on the obvious meaning of the word *safar* in Ķurʾān and *ḥadīth*, hold that any journey permits these mitigations. According to most schools, the aim of the journey is important. The Ḥanbalīs assert that only journeys with a religious purpose, such as performing the *ḥadjdj* or *djihād*, count in this respect, whereas the Shāfiʿīs, Mālikīs and Shīʿīs hold that the journey must have a lawful aim. According to the Ḥanafīs, the aim of the journey is irrelevant.

2. In Islamic life.

See for this, funduķ; khān; riḥla; tidjāra. For envoys and ambassadors, see elči; safīr.2. For the pilgrims to Mecca, see ḥadjdj.iii.A. To the *Bibls.* of these articles, add I.R. Netton (ed.), *Golden roads. Migration, pilgrimage and travel in mediaeval and modern Islam*, London 1993.

ṢAFAR, name of the second month of the Islamic year, also called *Ṣ al-khayr* or *Ṣ al-muẓaffar* because of its being considered to be unlucky (C. Snouck Hurgronje, *The Atchehnese*, i, 206; idem, *Mekka*, ii, 56). The Muslim Tigrē tribes pronounce the name Shafar, the Achehnese Thapa. According to Wellhausen, in the old Arabian year, Ṣafar comprised a period of two months in which al-Muḥarram (which name, according to this scholar is a Muslim innovation) was included. As a matter of fact, tradition reports that the early Arabians called al-Muḥarram Ṣafar and considered an *ʿumra* during the months of the Ḥadjdj as a practice of an extremely reprehensible nature. They embodied this view in the following saying: *Idhā baraʾā ʾl-dabar wa-ʿafā ʾl-athar wa ʾnsalakha Ṣafar ḥallati ʾl-ʿumra li-man iʿtamar*, i.e. "When the

wounded backs of camels are healed and the vestiges [of the pilgrims] are obliterated and Ṣafar has passed, then the ʿUmra is allowed for those who undertake it."

Wellhausen, *Reste arabischen Heidentums*², 95; Bukhārī, *Ḥadjdj*, *bāb* 34; *Manāḳib al-Anṣār*, *bāb* 26 and Ḳasṭallānī's commentary. See also AL-MUḤARRAM. (A.J. WENSINCK)

ṢAFAR (common spelling, Sfar), Muḥammad al-Bashīr a leading figure in the early Tunisian reformist ("evolutionist") and Young Tunisian movements, of Turkish parentage (1865-1917).

Born at Tūnis as the third son of Brigadier-General (*amīr liwāʾ*) Muṣṭafā Ṣafar, he received a strict education, attended first a Ḳurʾānic school and then the élitist Ṣādiḳī [*q.v.*] College from its inception (1875). His excellent record won him the favour of its founder, Khayr al-Dīn Pasha [*q.v.*] and a scholarship to Paris. Having lost it a year later owing to the diversion of the school's endowments by Khayr al-Dīn's successor, he entered government service (1882), where he rose in seven years to the position of head of the Accountancy department (*raʾīs ḳism al-muḥāsabāt*) of the General Administration, concurrently running and teaching a new Ṣādiḳī branch. More significant were his subseqent roles as (a) founder member of, and contributor to, the semi-official, moderately Islamic, Arabic weekly, *al-Ḥāḍira* ("the Capital", first issue 2 August 1888); (b) co-founder and president of the Khaldūniyya Association (opened 5 May 1897 [*q.v.*]), where he also gave courses in history which fostered national consciousness, won him a following among students of the Zaytūna [*q.v.*] and helped bring about a Ṣādiḳī-Zaytūnī alliance. One of his disciples was the future leader of the Algerian Salafiyya [*q.v.*], Ibn Bādīs [*q.v.*]; (c) president of the Beylical Ḥabūs Council (*djamʿiyyat al-aḥbās* or *al-awḳāf*, in the mid-1890s). In this capacity, he won particular popularity for the renovation of the Tūnis hospice (*takiyya*, 1905) and for his resistance to *colon* pressure for acquisition of *ḥabūs* lands (see INZĀL and B.D. Cannon, *The Beylical Habus Council and suburban development: Tunis, 1881-1914*, in *The Maghreb Review*, viii/5-6 [1983], 32-39 (important)], which made him obnoxious to the *colon* lobby and its chief, de Carnières; (d) co-founder and moving spirit of the "Ṣādiḳī Alumni Association", which became the main element of the Young Tunisian Party (1907). His ideology derived from a variety of sources: the Near Eastern *Nahḍa* [*q.v.*], Islamic modernism (Shaykh ʿAbduh) and reformism [see IṢLĀḤ], and Egyptian nationalism (Muṣṭafā Kāmil, Muḥammad Farīd [*q.vv.*]) on one hand, and French civilisation and liberalism on the other. After 1910 the Young Tunisians took on a marked Pan-Islamic (i.e. pro-Ottoman) colouring; al-Bashīr Ṣafar himself was regarded by the Resident-General Alapetite (in 1912) as "the agent of Pan-Islam in Tunisia" (A.H. Green, *The Tunisian Ulama, 1873-1915*, Leiden 1978, 203). Initially, his attitude regarding the Protectorate was that of close collaboration, but inasmuch as the latter yielded to *colon* pressure, it shifted to an oppositional stance, highlighted by his "*takiyya* speech" (24 March 1906) and his report on *ḥabūs* in Tunisia, presented to the North African Congress (Paris, 6-8 October 1908) (texts in C. Khairallah, *Le Mouvement jeune-tunisien*, Tunis 1957, 65-8, 110-17). Shortly before, in order to satisfy the *colons* without overtly antagonising the Tunisians, Ṣafar was appointed governor (*ḳāʾid*) of Sousse province (1908), which removed him from the capital, the control of the *ḥabūs* and the Khaldūniyya. It also precluded his involvement in Young-Tunisian militancy during the Zaytūna student strike (1910) and the tram boycott (1912). While other leaders (Bāsh-Ḥānba, al-Thaʿālibī, etc.) were arrested and exiled, al-Bashīr Ṣafar remained in his post until his death in 1917. Six months earlier, he sent to U. Blanc, Secretary-General of the Protectorate, a vibrant message of loyalty and appreciation of what France had done for the Tunisians (text in *Afrique française*, xxvii/6 [1917], 338B). Nevertheless, his lifelong dedication to the advancement of his people and the defence of its interests earned him a place of honour in the annals of the Tunisian national movement and the title "Father of the modern Tunisian renaissance" (*Abu 'l-nahḍa al-tūnusiyya al-ḥadītha*, H. Thāmir, *Hādhihi Tūnis*, Cairo 1948, 83).

ṢAFAWIDS, a dynasty which ruled in Persia as sovereigns 907-1135/1501-1722, as *fainéants* 1142-8/1729-36, and thereafter, existed as pretenders to the throne up to 1186/1773.

I. Dynastic, political and military history.

The establishment of the Ṣafawid state in 907/1501 by Shāh Ismāʿīl I [*q.v.*] (initially ruler of Ādharbāydjān only) marks an important turning-point in Persian history. In the first place, the Ṣafawids restored Persian sovereignty over the whole of the area traditionally regarded as the heartlands of Persia for the first time since the Arab conquest of Persia eight and a half centuries previously. During the whole of that time, only once, during what Minorsky termed "the Iranian intermezzo" (334-447/945-1055), did a dynasty of Persian origin prevail over much of Iran [see BUWAYHIDS]; for the rest, Persia was ruled by a succession of Arab caliphs, and Turkish and Mongol sultans and khāns. Secondly, Shāh Ismāʿīl I declared that the Ithnā ʿAsharī form of Shīʿī Islam was to be the official religion of the new state. This was the first time in the history of Islam that a major Islamic state had taken this step. Ismāʿīl's motives in making this decision were probably a combination of religious conviction and the desire to provide the nascent Ṣafawid state with an ideology which would differentiate it from its powerful neighbour, the Sunnī Ottoman empire. At all events, the policy had

far-reaching consequences, because it introduced into the Persian body politic the potential for conflict between "the turban and the crown", between the shahs, representing "secular" government, and the *mudjtahids*, whose dream was theocratic government. This conflict, always latent, emerged into the open from time to time during the Ḳādjār period, and finally burst forth with cataclysmic force in the Islamic Revolution of 1979.

(i) *The origins of the Ṣafawids.*

The origins of the Ṣafawid family are shrouded in some mystery, and the mystery is compounded by falsifications which were perpetrated, probably during the reign of Ismāʿīl I and certainly during that of Ṭahmāsp I [*q.v.*], in order to produce an "official" Ṣafawid genealogy [see ṢAFĪ AL-DĪN ARDABĪLĪ, *Bibliography*]. Petrushevskii thinks that the fabrication of the "official" Ṣafawid genealogy occurred even earlier, at the beginning of the 8th/14th century (see B. Nikitine, *Essai d'analyse du Ṣafvat al-ṣafā*, in *JA* [1957], 386). There seems now to be a consensus among scholars that the Ṣafawid family hailed from Persian Kurdistān, and later moved to Ādharbaydjān, finally settling in the 5th/11th century at Ardabīl. There, they lived an uneventful life, gradually acquiring a reputation for piety which attracted to them disciples (*murīd*), but it is only with the birth of Shaykh Ṣafī al-Dīn in 650/1252-3, the eponymous founder of the Ṣafawiyya or Ṣafawid order, that Ṣafawid history really begins.

(ii) *The development of the Ṣafawid order (700-907/1301-1501).*

In 700/1301, Ṣafī al-Dīn assumed the leadership of a local Ṣūfī order in Gīlān, and, under him and his successor, Ṣadr al-Dīn Mūsā [see ṢADR AL-DĪN ARDABĪLĪ], the order was transformed into a religious movement which conducted its propaganda (*daʿwa*) throughout Persia, Syria and Asia Minor. As yet there was no sign of the militant Shīʿism which became a feature of the movement later; indeed, Ṣafī al-Dīn himself was apparently a Sunnī of the Shāfiʿī school. However, the order was beginning to have a political impact, judging by the fact that it attracted the hostility of the Mongol *amīr* Malik Ashraf. We have few details of the development of the order under Khwādja ʿAlī (794-832/1391-2 to 1429) and Ibrāhīm (832-51/1429-47). It is tempting to see the esoteric doctrine of the Ṣafawid order assuming a Shīʿī character under the leadership of Khwādja ʿAlī (see, for example, W. Hinz, *Irans Aufstieg zum Nationalstaat im fünfzehnten Jahrhundert*, Berlin and Leipzig 1936, 23; and E.G. Browne, in *JRAS* [July 1921], 407, quoted in V. Minorsky's review of Hinz's book in *Deutsche Literaturzeitung*, xxiii [1937], 954). In the opinion of H.R. Roemer, however, although Shīʿī elements are always present in Folk Islam, "it cannot be proved conclusively that any of the ancestors of Ismāʿīl "had abjured the Sunna and turned Shīʿī" (*The Safavid period*, in *Camb. hist. Iran*, vi, Cambridge 1986, 196-7). At all events, there is no doubt that the Ṣafawid order, like many other religious movements that flourished in Anatolia from the 7th-10th/13th-16th centuries, was the direct beneficiary of the destruction by Hülegü of the Sunnī caliphate in 656/1258, and of the policy of the Mongol Īl-Khāns of tolerance toward all religious faiths, which facilitated the spread of heterodoxy generally. While not going as far as to endorse Henri Corbin's famous dictum that "True Shiʿism is the same as Taṣavvuf, and similarly, genuine and real Taṣavvuf cannot be anything other than Shiʿism" (quoted in M.M. Mazzaoui, *The origins of the Ṣafawids*, Wiesbaden 1972, 83 and n. 2), M.F. Köprülü seems correct in saying that, during that period, "Le Soufisme est en faveur, mais l'hétérodoxie recrute facilement des adepts" (L. Bouvat's tr., quoted in Mazzaoui, 57).

When Shaykh Djunayd [*q.v.*] assumed the leadership of the Ṣafawid order in 951/1447-8, the history of the Ṣafawid movement entered a new phase. Not only did he possess religious authority; he also sought material power (*salṭanat-i ṣūrī*) (Khwūrshāh b. Ḳubād al-Ḥusaynī, *Tārīkh-i Īlčī-yi Niẓāmshāh*, B.L. ms. Add. 23,513, fol. 445b). The most powerful ruler in Persia at the time, the Ḳara Ḳoyunlu Djahānshāh [*q.v.*], felt threatened (Amīn b. Aḥmad Rāzī, *Haft iḳlīm*, B.L. ms. Add. 16,734, fol. 516a), and ordered Djunayd to disperse his forces and leave Ardabīl; otherwise, Ardabīl would be destroyed (B.L. ms. Or. 3248, fol. 19a). Djunayd fled, and eventually found asylum with Djahānshāh's rival, the Aḳ Ḳoyunlu *amīr* Uzun Ḥasan [see AḲ ḲOYUNLU] in Diyār Bakr. In 864/ 1460, Djunayd was killed during a foray into Shīrwān, and his son Ḥaydar [*q.v.*] succeeded him as head of the Ṣafawiyya. Initially, Ḥaydar continued the alliance with the Aḳ Ḳoyunlu and cemented it by marrying Uzun Ḥasan's daughter. After Uzun Ḥasan's death, however, his son Yaʿḳūb in his turn felt threatened by growing Ṣafawid power, and allied himself with the Shīrwānshāh to defeat and kill Ḥaydar in 893/1488. Ṣafawid supporters were now distinguished by the distinctive headgear (*tādj*) of twelve gores, denoting the twelve Ithnā ʿAsharī Imāms, surmounted by a red spike; this *tādj* is said to have been revealed to Ḥaydar in a dream by the Imām ʿAlī, and the wearing of it caused the Ottomans to dub Ṣafawid supporters *ḳizilbash* [*q.v.*] or "redheads"; this derisory appelation was adopted by the Ṣafawids as a mark of pride. Halil Inalcik has noted that, already in the 8th/14th century, Turcoman warriors wore a red cap known as *ḳizil börk*.

After the death of Ḥaydar, the Ṣūfīs of the Ṣafawid order gathered round his son ʿAlī at Ardabīl. The Aḳ Ḳoyunlu sultan Yaʿḳūb, now thoroughly alarmed, seized ʿAlī, his two younger brothers Ibrāhīm and Ismāʿīl, and their mother, and confined them in the fortress of Iṣṭakhr in Fārs. He is said to have spared the lives of the brothers only out of consideration for their mother, Ḥalīma Begī Āghā known as ʿĀlamshāh Begum, who was his own sister (B.L. ms. Or. 3248, fol. 24a). In the struggle for power which followed the death of Yaʿḳūb in 896/1490, one of the contenders, Rustam, released the Ṣafawid brothers from jail after four-and-a-half years (898/1493) and, with the assistance of their followers, defeated his main rival Bāysunḳur. He soon realised that the political aspirations of the Ṣafawids constituted a danger to himself; he re-arrested ʿAlī and his brothers, and planned to kill ʿAlī, and his followers at Tabrīz and Ardabīl. ʿAlī escaped from Rustam's camp, and made for Ardabīl, but was overtaken and killed by Aḳ Ḳoyunlu troops.

According to Ṣafawid "official history", ʿAlī, before he died, designated his younger brother, Ismāʿīl, to succeed him. However, A.H. Morton, in a paper given at the 2nd Safavid Round Table, held at Cambridge 8-11 September 1993, raised some important questions based on new evidence: why was Ismāʿīl given precedence over his elder brother Ibrāhīm, who might normally have been expected to succeed as leader of the Ṣafawid order? Did Ibrāhīm in fact succeed ʿAlī, and did Ibrāhīm's early death make it easier for Ṣafawid historians to "edit him out" of official Ṣafawid history? And, finally, does the passing over of Ibrāhīm in favour of Ismāʿīl mark a division in Ṣafawid ideology between Ibrāhīm,

representing Ṣūfī quietism, and Ismāʿīl, representing militant S̲h̲īʿī g̲h̲uluww or extremism? At all events, Ismāʿīl made his way to Gīlān, where he was given sanctuary at Lāhīd̲j̲ān by the local ruler Kār Kiyā Mīrzā ʿAlī. Rustam prepared to invade Gīlān, but was prevented from doing so by further dynastic feuds between rival Aḳ Ḳoyunlu chiefs.

Prima facie, one might have expected that the Ṣafawid revolutionary movement, for such it had become, would have petered out after suffering what would normally have been the devastating loss of not one but three leaders within the space of 34 years. The fact that it did not underlines the extraordinary effectiveness of the Ṣafawid *daʿwa*, particularly among the Turcoman tribesmen of eastern Anatolia and Syria. There were three principal elements which together made up what Minorsky called the "dynamic ideology of the Ṣafawid movement" (*Tad̲h̲kirat al-mulūk*, translated and explained by V. Minorsky, E.J.W. Gibb Memorial Series, N.S. XVI, London 1943, 23). First, the Ṣūfī disciples (*murīds*) of the Ṣafawīd order owed unquestioning obedience to their *murs̲h̲id-i kāmil* [see MURS̲H̲ID], the head of the order, who was their spiritual director. Second, the apotheosis of the Ṣafawid leader as a living emanation of the godhead. Already in the time of D̲j̲unayd the Ṣafawid *murīds* "openly called" their leader "God (*ilāh*), and his son, Son of God (ibn Allāh) ... in his praise they said 'he is the Living One, there is no God but he'" (Mazzaoui, *op. cit.*, 73). The poems of S̲h̲ah Ismāʿīl, composed in the Ād̲h̲arī dialect of Turkish under the pen-name of K̲h̲aṭāʾī [see ISMĀʿĪL I. 2], are unequivocal on the subject of Ismāʿīl's divinity (see R.M. Savory, *Some reflections on totalitarian tendencies in the Ṣafawid state*, in *Studies on the history of Ṣafawid Iran*, Variorum Reprints, London 1987, X, 231-2). Such a deviant doctrine placed the Ṣafawids squarely in the camp of the *g̲h̲ulāt* [*q.v.*], or S̲h̲īʿī extremists, such as the Ahl-i Ḥaḳḳ [*q.v.*]. The third element of the Ṣafawid *daʿwa*, which assumed greater importance after the establishment of the Ṣafawid dynasty as the s̲h̲āhs strove to give legitimacy to their rule, was their claim to be the representatives on earth of the Twelfth Imām or Mahdī of the It̲h̲nā ʿAs̲h̲arīs. In making this claim, they were of course usurping the traditional role of the *mud̲j̲tahids*.

Taken together, these three elements of the Ṣafawid *daʿwa* produced a heady brew which could readily be translated into direct action, and, in the summer of 905/1499, Ismāʿīl left Lāhid̲j̲ān for Ardabīl to make his bid for power. By the time he reached Ardabīl, 1,500 followers from Syria and Anatolia had joined him (Ḥasan Rūmlū, *Aḥsan al-tawārīk̲h̲*, ed. G.N. Seddon, Baroda 1931, 25-6). From there, he sent heralds (*d̲j̲ārčiyān*) and couriers (*musriʿān*) to summon more supporters from those areas and also from Ād̲h̲arbāyd̲j̲ān and ʿIrāḳ-i ʿAd̲j̲am [see D̲J̲IBĀL] to a rendezvous at Arzind̲j̲ān [see ERZIND̲J̲ĀN], on the high road between Aḳ S̲h̲ehir and Erzerum [*q.v.*]. His choice of rendezvous clearly indicates where the focal point of his support lay. By the summer of 906/1500, 7,000 *ḳizilbās̲h̲* had rallied to him; they came from the Ustād̲j̲lū, S̲h̲āmlū, Rūmlū, Takkalū, D̲h̲u 'l-Ḳadar, Afs̲h̲ār, Ḳād̲j̲ār and Warsāḳ tribes. Leading his troops on a punitive expedition against the S̲h̲īrwāns̲h̲āh [*q.v.*], he exacted revenge for the deaths of his father Ḥaydar and his grand-father D̲j̲unayd in S̲h̲īrwān; Ismāʿīl then marched south into Ād̲h̲arbāyd̲j̲ān. On the plain of S̲h̲arūr near Nak̲h̲čiwān, he decisively defeated a force of 30,000 Aḳ Ḳoyunlu under Alwand, and shortly afterwards (summer of 906-7/1501; see Erika Glassen, *Die frühen Safawiden nach Qāżī Aḥmad Qumī*, Freiburg i, Br. 1970, 85) entered Tabrīz. Coins were minted in his name; the *k̲h̲uṭba* was read in the name of the Twelve Imāms, and the Imāmī rite was proclaimed the true religion (K̲h̲ʷāndamīr, *Ḥabīb al-siyar*, Tehran n.d., iv, 467). Although masters initially only of Ād̲h̲arbāyd̲j̲ān, and despite the fact that Alwand was mustering fresh forces; that another Aḳ Ḳoyunlu prince, Murād, was still in possession of Fārs and ʿIrāḳ-i ʿAd̲j̲am; and that the Tīmūrids still controlled K̲h̲urāsān, the Ṣafawids had in fact won the struggle for power in Persia which had been going on for nearly a century since the death of Tīmūr in 807/1405.

(iii). *The establishment of the Ṣafawid state.*

Since Ismāʿīl I was only seven years old in 900/1494 when his brother ʿAlī was killed in battle with Aḳ Ḳoyunlu troops, and was barely fourteen years old at the time of his accession, it is obvious that the momentum of the Ṣafawid revolutionary movement during that crucial decade was maintained by others. The sources term the men responsible the *ahl-i ik̲h̲tiṣāṣ*, a small group of about seven *ḳizilbās̲h̲* chiefs who were singled out by their special devotion to their leader and who had a special relationship with him. They were charged not only with protecting the person of the young leader but also with planning the final stages of the Ṣafawid revolution.

The first decade of the 10th/16th century was spent by S̲h̲āh Ismāʿīl in extending Ṣafawid rule over the rest of Persia [see ISMĀʿĪL I], and also over Bag̲h̲dād and the province of ʿIrāḳ-i ʿArab, which was wrested from Aḳ Ḳoyunlu control in 914/1508. In 917/1511 Ismāʿīl despatched a *ḳizilbās̲h̲* expeditionary force to Transoxania to assist the Tīmūrid Ẓahīr al-Dīn Bābur [see BĀBUR] in recovering his ancestral dominions from the S̲h̲ībānī Özbegs. The combined Ṣafawid and Timūrid force occupied Samarḳand, where Bābur made good his promise, in return for Ṣafawid help, to have Ismāʿīl's name inserted in the *k̲h̲uṭba* and coins minted in his name (*Aḥsan al-tawārīk̲h̲*, 127), but "the numismatic evidence for this is equivocal" [see BĀBUR, and its *Bibliography*]. Bābur, having also occupied Buk̲h̲ārā, sent the *ḳizilbās̲h̲* troops home, whereupon the Özbegs promptly counter-attacked and drove him out of Buk̲h̲ārā. Further Ṣafawid assistance from the governor of Balk̲h̲ temporarily stabilised the situation, but in 918/1512 a Ṣafawid force under the *wakīl* Amīr Nad̲j̲m was annihilated by the Özbegs after many of the *ḳizilbās̲h̲* had mutinied against their Persian commander (see Savory, *The political murder of Mīrzā Salmān*, in *Studies on the history of Ṣafawid Iran*, xv, 186-7). This defeat put an end to Ṣafawid aspirations to extend their influence into Transoxania, and, for most of the Ṣafawid period, the problem of the defence of the northeastern frontier against nomad invasions remained largely unsolved.

On the north-western frontier, Ṣafawid expansionism was a major factor in precipitating war with the Ottomans, a war which soon threatened the very existence of the nascent Ṣafawid state. Not surprisingly, the Sunnī Ottomans were alarmed by the vigorous propagation of the militantly S̲h̲īʿī Ṣafawid *daʿwa* in areas of eastern Anatolia and in the region of the Taurus mountains, which constituted an indeterminate frontier between the Ottoman empire and the Mamlūk state. Even more alarming for the Ottomans was the great success of this *daʿwa* among the Turcoman tribes, and the recruitment of significant numbers of these tribesmen into the Ṣafawid army. In 907-8/1502 the Ottoman sultan Bāyezīd II [*q.v.*] deported large numbers of S̲h̲īʿīs from Anatolia to the Morea, and he strengthened his garrisons on the

eastern frontier after Ismāʿīl overran Diyār Bakr and large areas of Kurdistān in 913/1507-8. In 916/1510, after his great victory at Marw over the Özbegs, Ismāʿīl sent the head of the Özbeg leader, Muḥammad Shībānī Khān, to Bāyezīd III. The following year, 917/1511, when a major Shīʿī revolt broke out in Tekke, and at the same time civil war erupted between Bāyezīd and two of his sons, Selīm and Aḥmed, Shāh Ismāʿīl sought to turn the situation to his advantage. His scheme to mobilise support for Murād, son of Aḥmed, came to nothing, but a Ṣafawid force under Nūr ʿAlī Khalīfa Rūmlū carried fire and sword as far as Tūkāt, where the *khuṭba* was read in the name of Ismāʿīl, and defeated a large Ottoman force under Sinān Pasha. Meanwhile, Bāyezīd II had been forced to abdicate in favour of his son Selīm on 7 Ṣafar 918/24 April 1512. At once, Selīm set about mustering a huge army of 200,000 men for the invasion of Persia, and, as an initial measure, "proscribed Shiʿism in his dominions and massacred all its adherents on whom he could lay hands" (H.A.R. Gibb and H. Bowen, *Islamic society and the West*, i/2, Oxford 1957, 189). Marching by easy stages across Anatolia into Ādharbāydjān, Selim reached Čāldirān [*q.v.*] on 1 Radjab 920/22 August 1514, where a battle was fought the following day (see M.J. McCaffrey, *Čālderān*, in *Encyclopaedia Iranica*, v, 656-8; Naṣr Allāh Falsafī, *Djang-i Čāldiran*, in *Madjalla-yi Dānishkada-yi Adabiyyāt-i Dānishgāh-i Tihrān*, i/2 [1953-4], 50-127). The Ṣafawid army was heavily defeated. Most sources say that the Ottomans outnumbered the Ṣafawid forces two to one, but the Ottoman artillery and handguns, of which as yet the Ṣafawids had little experience [see BĀRŪD. v], were the decisive factor. After their victory, the Ottomans entered Tabrīz, the Ṣafawid capital, but recalcitrant Janissaries thwarted Selīm's plan to winter there and complete the conquest of Persia the following year, and he withdrew eight days later, on 23 Radjab 920/13 September 1514.

The consequences of the defeat at Čāldirān were both material and psychological. In terms of territory, the result was the annexation by the Ottomans of the regions of Diyār Bakr, Marʿash and Albistān. In terms of casualties, many high-ranking *ḳizilbāsh amīrs*, and three prominent members of the *ʿulamāʾ*, were killed. Psychologically, the defeat destroyed Ismāʿīl's belief in his invincibility, based on his pretensions to divine status. During the last ten years of his life, despite serious losses on the eastern frontier (Balkh: 922/1516-17; Ḳandahār [*q.v.*]: 928/1522), and the near-loss of Harat in 927/1520 and 930/1523, Ismāʿīl never again took the field in person; furthermore, he gave less personal attention to state affairs. The defeat also fundamentally altered the relationship between Ismāʿīl as *murshid-i kāmil* and the *ḳizilbāsh*, his *murīds*. The habitual rivalries between the *ḳizilbāsh* tribes, which had been temporarily sublimated into the dynamic ideology of the Ṣafawid *daʿwa*, resurfaced in virulent form immediately after the death of Ismāʿīl, and led to ten years of civil war that rent the fabric of the Ṣafawid state (930-40/1524-33).

The administrative structure of the Ṣafawid state under Ismāʿīl I was essentially a Turco-Persian condominium. From the beginning there was tension (initially creative) between the *ḳizilbāsh* who, since their military prowess had achieved political power for the Ṣafawids, considered that the principal offices of state should be their perquisite, and the Persians, who in the main staffed the ranks of the bureaucracy and the religious establishment. Friction was inevitable because, as Minorsky put it, the *ḳizilbāsh* "were not party to the national Persian tradition. Like oil and water, the Turcomans and the Persians did not mix freely, and the dual character of the population profoundly affected both the military and civil administration" (*Tadhkirat al-mulūk*, 188). Each faction saw the other in terms of racial stereotypes (see Savory, *The Qizilbash, education and the arts*, in *Studies on the History of Ṣafawid Iran*, XVI, 168 ff.). The Persians saw the *ḳizilbāsh* as fighting men of only moderate intelligence. The *ḳizilbāsh* considered the Persians effete, and referred to them by the pejorative term "Tādjīk", i.e. non-Turk. Ismāʿīl attempted to reduce the friction by creating a new office of *wakīl-i nafs-i nafīs-i humāyūn*, who was to be the *alter ego* of the Shāh [see DĪWĀN. iv], superior in rank both to the *wazīr*, the head of the bureaucracy, and the *amīr al-umarāʾ*, the commander-in-chief of the *ḳizilbāsh* forces (see *EIr*, art. *Amīr al-Omarāʾ*. ii. Safavid usage). The weakness of this plan was that the appointee to the new office had to be either a Turk or a Tādjīk, and the antipathy between the two groups was, if anything, exacerbated rather than mitigated. The other administrative change made by Ismāʿīl I was to make the *ṣadr*, who had been the head of the religious institution in Aḳ Ḳoyunlu and Tīmūrid administrations, a political appointee. The idea was that the *ṣadr* would be answerable to the Shāh for the good behaviour of the *mudjtahids*, who resented the usurpation by the Shāh of their prerogative to be the representatives on earth of the Mahdī [*q.v.*], and who might feel inclined to challenge this presumption. This stratagem, too, was far from being an unqualified success.

(iv) *Internal discord and external enemies: the Ṣafawid state from 930/1524 to 996/1588.*

Ṭahmāsp, who succeeded in father Ismāʿīl I in 930/1524, was at the time ten years and three months old; he was the ward of a *ḳizilbāsh amīr* who saw himself as the *de facto* ruler of the state [see *EIr*, art. *Dīv Solṭān*]. For almost ten years rival *ḳizilbāsh* factions fought for control of the state (see Savory, *The principal offices of the Safawid state during the reign of Ṭahmāsp (930-84/1524-76)*, in *Studies on the history of Ṣafawid Iran*, V, 65-71). Eventually, Ṭahmāsp reasserted his authority to such good purpose that he ended up by reigning for 52 years, the longest reign in Persian history. Ṭahmāsp has been paid scant attention by historians. Perhaps his unattractive character has deterred them from making a major study of him. He is portrayed as a religious bigot (cf. e.g. the Jenkinson episode (Savory, *Iran under the Safavids*, 111-12), and the celebrated visit to Persia in 951/1544 of the fugitive Mughal Emperor Humāyūn [*q.v.*] (see also MUGHALS. 2. External relations, and Savory, *op. cit.*, 66); as avaricious (*Narrative of the Most Noble Vincentio d'Alessandri, ambassador to the King of Persia for the Most Illustrious Republic of Venice*, in *A narrative of Italian travels in Persia in the fifteenth and sixteenth centuries*, Hakluyt Society, London 1873, 217-19); *A chronicle of the Carmelites in Persia*, 2 vols., London 1939, i, 54); and as capable of ordering particularly sadistic punishments in an age in which cruel punishments were commonplace (see, for example, *Aḥsan al-tawārikh*, 274, 285, 356). Apparently a debauchee in his youth, Ṭahmasp made a public act of repentance (*tawba*) at the age of twenty, and subsequently not only rigorously prohibited the drinking of wine and other alcoholic beverages, and the use of hashish, but placed severe restrictions on singing and the playing of musical instruments. Furthermore, he ordered that the considerable revenues accruing to the treasury from gambling casinos, taverns and brothels be expunged from the account-books (*ibid.*, 246, 489).

D'Alessandri's charge that Ṭahmāsp was "a man of very little courage" (*op. cit.*, 216) must be rejected (see Savory, *op. cit.*, 57-8). In the course of his reign, the Özbegs launched five major attacks on Khurāsān, and the Ottomans, under their most powerful sultan Süleyman II, made four major invasions of Persia. It is true that Persia lost territory (Baghdād in 942/1535), and that Ṭahmāsp was forced to move the Ṣafawid capital from Tabrīz to Ḳazwīn in 955/1548 (L. Lockhart, *Persian cities*, London 1960, 69; A.K.S. Lambton, in ḲAZWĪN, gives 962/1555), but, with the meagre resources available to him, he successfully fought a series of wars on two fronts (Savory, *op. cit.*, 58 ff.), and, in 962/1555, he was successful in negotiating with the Ottomans the Treaty of Amasya on terms not unfavourable to Persia; peace remained unbroken for the remainder of Ṭahmāsp's reign (see *EIr*, i, 928: AMASYA; N. Itzkowitz, *Ottoman empire and Islamic tradition*, New York 1972, 35-6; S.J. Shaw, *History of the Ottoman empire and modern Turkey*, 2 vols., Cambridge 1976, i, 109).

Although it was Shāh ʿAbbās I who accelerated the process of converting the Ṣafawid state from a Turco-Persian condominium into a multi-cultural society, it was Ṭahmāsp who began it by introducing new ethnic elements from the Caucasus region, namely, Armenians, Georgians and Circassians, and by recruiting members of these groups into Ṣafawid service. Such recruits were called *ghulāmān-i khāṣṣa-yi sharīfa* [see GHULĀM. ii, Persia], an obvious analogy with the Ottoman *ḳapï ḳullarï*. After the death of Ṭahmāsp in 984/1576, the struggle for a dominant position in the state was no longer only between the two "founding nations", Turcomans and Tādjīks, but was a three-cornered fight for power involving ambitious members of the new Caucasian factions. This fight was complicated greatly by the emergence of the *ḥaram* as an important source of political power, as Circassian and Georgian mothers of royal princes intrigued to secure the succession of their particular sons. From the time of Djunayd onwards, all Ṣafawid leaders had had Turcoman mothers. After the death of Ṭahmāsp, however, because neither of the "*ḳizilbāsh*" candidates, the mentally unstable Ismāʿīl and the purblind Sulṭān Muḥammad Khudābanda, was suitable as a ruler, one *ḳizilbāsh* tribe, the Ustādjlūs, threw its support behind Ṭahmāsp's third son, Ḥaydar, whose mother was a Georgian. The majority of the *ḳizilbāsh* saw the prospect of a ruler strongly supported by the Georgian faction as a threat to their own pre-eminence, and assassinated Ḥaydar; they then placed on the throne first, Ismāʿīl II (984-5/1576-7), and then Sulṭān Muḥammad Shāh (985-96/1578-88).

The history of the Ṣafawid state prior to the accession of ʿAbbās I (*q.v.*; see also *EIr*, art. *ʿAbbās I*) is an evolutionary phase, during which attempts were made to deal with certain basic problems posed by the establishment of the state. An attempt was made to incorporate the original Ṣūfī organisation of the Ṣafawid order in the state. An attempt was made to prevent the *ḳizilbāsh* from acquiring a dominant position in the state at the expense of the Tādjīks or Persians. Both failed. As a result of the first failure, there was a marked movement away from the theocratic form of government of the early Ṣafawid state toward a greater separation of spiritual and temporal powers. The second failure led to the introduction of elements which were neither Turcoman nor Persian, but Caucasian Christian, as a sort of "third force" to offset the influence of the other two.

The pre-ʿAbbās period was one in which the functions of the principal officers of state were not precisely defined, and the boundary between the political establishment and the religious establishment was not clearly demarcated. For example, one finds a military officer, the *amīr al-umarāʾ*, exercising a considerable measure of political authority, and one finds *ṣadrs* and other religious officials holding military rank and leading troops into battle; the *ṣadr* himself, as already noted, was a political appointee. One must beware, therefore, of using terms like "civil", "military", "religious", and the like, in any precise sense. By the end of the reign of Ṭahmāsp, the power of the *ṣadr* had declined. This was due in part to the division of the office into that of *ṣadr-i ʿāmma* and *ṣadr-i khāṣṣa*, and in part to the fact that one of the *ṣadr*'s important functions in the early Ṣafawid state, namely, the imposition of Ithnā ʿAsharī uniformity throughout Persia, had largely been achieved by the end of the reign of Ismāʿīl I. With the gradual abandonment of the concept of *wakīl* as the *alter ego* of the shāh, the importance of the *wazīr* as the head of the bureaucracy increased and, by the time of ʿAbbās I, the *wazīr* had emerged as one of the most powerful officers of state.

(v) *The Ṣafawid state at the height of its power under Shāh ʿAbbās I (996-1038/1588-1629).*

The *ḳizilbāsh* inter-tribal rivalry, the succession struggles, and the attempt by a Tādjīk faction to end *ḳizilbāsh* dominance, went on for eleven years after the death of Ṭahmāsp, and so weakened the ability of the state to resist its external enemies that the Ottomans made inroads in Ādharbāydjān and the Özbegs in Khurāsān: the citadel at Tabrīz had been in Ottoman hands since 993/1585; Harāt had fallen to the Özbegs in the spring of 996/1588. When ʿAbbās, the third son of Sulṭān Muḥammad Shāh, was placed on the throne in 996/1588, the prospects for the survival of the Ṣafawid state were as bleak as they had been in 920/1514 after the battle of Čāldirān. The events of ʿAbbās's youth had made him determined to make himself independent of the untrustworthy *ḳizilbāsh* tribes; yet he could not dispense entirely with their fighting qualities. His solution was to raise a standing army, itself an innovation in Persia, from the ranks of the *ghulāms*. The new regiments would be paid from the royal treasury, and would be loyal to him personally, and not to a tribal chief; they included regiments of musketeers [see BĀRŪD. v. The Ṣafawids]. The reorganisation of the army necessitated a reduction in the number of provinces under *ḳizilbāsh* administration (*mamālik*), in which the greater part of the revenue was consumed locally, and an increase in the number of provinces under direct royal administration (*khāṣṣa*), the revenues from which accrued to the royal treasury. *Ghulāms* were not only recruited for military service but were appointed to positions within the royal household and the *khāṣṣa* administration. These policies set in train a social and political revolution. Minorsky has calculated that, by the end of the reign of ʿAbbās I, about one-fifth of the high-ranking *amīrs* were *ghulāms* (*Tadhkirat al-mulūk*, 17-18); by 1007/1598, only ten years after the accession of ʿAbbās I, an Armenian from Georgia had risen to the position of commander-in-chief of all the Ṣafawid armed forces (see *EIr*, art. *Allāhverdī Khan*). The changed social and political basis of the Ṣafawid state was naturally reflected in its administrative structure. The offices of *wakīl* and *amīr al-umarāʾ*, relevant to the period of *ḳizilbāsh* domination, fell into disuse. The *ḳūrčībāshī*, or commander of the élite corps of *ḳūrčīs* [see ḲŪRČĪ] continued to be listed among the principal officers of state, but his importance, too, declined *pari passu* with the decline of the *ḳizilbāsh*. Instead, we hear of a new officer, the *sipāhsālār*, or

commander-in-chief of all troops, *ḳizilbāsh* and non-*ḳizilbāsh*. The commanders of the two of the new regiments in the reorganised army, the *ḳullar-āḳāsi*, or commander of the *ghulāms*, and the *tufangčī-āḳāsi*, or commander of the musketeers, join the highest echelons of the administration. The growing centralisation of the bureaucracy resulted in the increased status of the *wazīr*, who now boasted such titles as *iʿtimād al-dawla* ("trusty support of the state") or *ṣadr-i aʿẓam* ("exalted seat of honour").

The new army could not be organised and trained overnight, and it was ten years before ʿAbbās felt ready to take the field. In the meantime, he had been forced to sign a treaty by which he ceded to the Ottomans large areas of Ṣafawid territory, including Ādharbāydjān, Ḳarabāgh, Gandja, Ḳarādja-dāgh, Georgia, and parts of Luristān and Kurdistān; in the east, the Özbegs overran the province of Sīstān, and in 998-9/1590 the Mughals recaptured Ḳandahār, which had been in Ṣafawid hands since 965/1558. The tide began to turn in 1007/1598, when ʿAbbās scored a signal victory over the Özbegs and recaptured Harāt, but the Özbegs remained a formidable enemy, and in 1011/1602 a Ṣafawid army was forced to retreat from Balkh with heavy losses. In 1012/1603 ʿAbbās launched a series of major offensives against the Ottomans in the north-west. Tabrīz was recaptured, and the Ottomans were pushed back behind the river Aras. By 1016/1607, the last Ottoman soldier had been expelled from Ṣafawid territory as defined by the Treaty of Amasya in 962/1555, and in 1033/1624 the Ṣafawids recaptured Baghdād.

The reputation of ʿAbbās I does not rest solely on his military and political achievements. His reign is notable for a remarkable flowering of the arts, both fine and applied. It is also notable for a major exercise in urban planning, when ʿAbbās I in 1007/1598 transferred the capital from Ḳazwīn to Iṣfahān, and proceeded to lay out an entirely new city cheek by jowl with the ancient one. The focus of the new city was the great Maydān-i Naḳsh-i Djahān, 507 m in length and 158 m in width; the Čahār Bāgh avenue (see *EIr*, art. *Č(ah)ār-bāğ-e Eṣfahān*) started at a point near the Maydān and ran south for more than two miles, crossed the Zāyanda-rūd by the Allāhverdī Khān bridge, and ended at the pleasure gardens known as Hazār-djarīb.

The economic prosperity of Persia also increased dramatically under ʿAbbās I. The new capital, Iṣfahān, became a thriving metropolis, and Western diplomatic representatives began to make their way to it. The primary objective of all European diplomats was the development of trade (see 2. Economic and commercial history). The secondary purpose of envoys from Roman Catholic countries was the furtherance of the interests of the various religious Orders operating in Persia: Dominicans, Franciscans, Augustinians, Carmelites, Jesuits and Capuchins. The first envoy who was not a member of a religious Order was Don García de Silva y Figueroa, ambassador from King Philip III of Spain, who arrived at Iṣfahān in 1025/1617; next, after ʿAbbās I had enlisted the aid of ships of the English East India Company to expel the Portuguese from Hormuz in 1031/1622, was the first official English ambassador to the Persian court, Sir Dodmore Cotton; finally, in 1076/1665, Louis XIV of France followed suit, and sent two envoys to Persia.

(vi) *The decline and fall of the Ṣafawids (1038-1135/1629-1722).*

Chardin's well-known dictum: "When this great prince (Shāh ʿAbbās I) ceased to live, Persia ceased to prosper!", though exaggerated, contains within it a kernel of truth. Shāh Ṣafī, the grandson and successor of ʿAbbās I (1038-52/1629-42), seemed intent only on maintaining his own position by putting to death or blinding possible rivals such as princes of the Ṣafawid house and powerful officers of state such as the *ḳūrčībāshī*. In 1047-8/1637-8 two important cities, Baghdād and Ḳandahār, were lost. Ṣafī's son and successor, ʿAbbās II (1052-77/1642-66), was a more able ruler, resembling his great-grandfather ʿAbbās I in his administrative skill and powers of military leadership. He was less able to withstand pressure from the religious leaders, however, and although Christians continued to enjoy considerable freedom of worship, ʿAbbās I's policy of religious tolerance was breached by ʿAbbās II's treatment of Jews. In fact, it was becoming clear that many of the policies put in place by ʿAbbās I could be maintained only by a ruler endowed with his outstanding abilities. It is the tragedy of the reign of ʿAbbās I that, by his own act, he made it unlikely that his successors would be of similar calibre. To begin with, he followed the traditional Ṣafawid practice of appointing the royal princes to provincial governorates, where they were placed in the care of a *ḳizilbāsh* chief who held the title of *lala* [*q.v.* in Suppl.] "guardian" or "tutor". The *lala* was responsible not only for his ward's physical well-being, but also for training him in statecraft. Thus in 999/1590-1 ʿAbbās I appointed his eldest son, Muḥammad Bāḳir Mīrzā, governor of Hamadān and *amīr al-umarāʾ* of the province (Iskandar Beg Munshī, *Tārīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, text, ed. Īradj Afshār, 2 vols., Tehran 1334-5 *Sh*./1955-6, i, 440, tr. Savory, 2 vols., Boulder, Col. 1978, ii, 614). In 1024/1614, however, his son was murdered, probably with the Shāh's connivance, on suspicion of plotting against him (*ibid.*, text, ii, 883-4, tr., ii, 1098-9). From then on, the royal princes were closely confined in the *ḥaram*, where their only companions were their tutors, the court eunuchs, and the women of the *ḥaram*. The new policy bore obvious similarities to the Ottoman *ḳafes* ("cage") system, which was introduced slightly earlier, during the reign of Selīm II (974-82/1566-74) (see Shaw, *History of the Ottoman empire and modern Turkey*, i, 179). Shaw notes that the new system resulted in increased political power for the women of the harem, and introduced the "sultanate of the women", which lasted well into the 11th/17th century. In Ṣafawid Persia, there was a similar result. Chardin calls the *ḥaram* "un Conseil privé, qui l'emporte d'ordinaire par dessus tout, et qui donne la loi à tout" (*Voyages du Chevalier Chardin en Perse et autres lieux de l'Orient*, ed. Langlès, Paris 1811, 10 vols., v, 240). Moreover, the new policy failed in its essential purpose, namely, to prevent treasonable behaviour or the suspicion of treason on the part of the royal princes. On the contrary, once confined to the *ḥaram*, they became the centre of intrigue to a far greater extent than had previously been the case. This led ʿAbbās to blind his sons Sulṭān Muḥammad Mīrzā in 1030/1620-1 (Iskandar Beg, text, ii, 965, tr., ii, 1187), and Imām Ḳulī Mīrzā in 1036/1626-7 (*ibid.*, text, ii, 1064, tr., ii, 1288); two other sons had died young of natural causes, and so ʿAbbas had left himself without an heir.

The third factor in the decline of the Ṣafawids was the inordinate extension of the policy, begun under ʿAbbās I and continued under his successors, of converting *mamālik* to *khāṣṣa* provinces. By the end of the reign of ʿAbbās I, only those frontier provinces in which an instant response to enemy invasion was essential, remained in the hands of *ḳizilbāsh* gover-

nors. This process had two undesirable effects: first, the military strength of the Ṣafawid state was weakened. Whether or not the *g͟hulām* troops were as good fighting material as their *ḳizilbās͟h* predecessors is debatable, but, when the overall number of men in the army was allowed to decline, the consequences were predictable; second, the administration of the *k͟hāṣṣa* provinces, by officials who were royal bailiffs or intendants and were little more than tax-farmers, was more oppressive than that of *ḳizilbās͟h* governors of *mamālik* provinces. As Minorsky says, Chardin, "in his paragraph on the Khāṣṣa, ... has unmasked one of the basic evils of administration which contributed to the fall of the dynasty" (*Tad͟hkirat al-mulūk*, 26). The extent to which Ṣafawid military power had declined was dramatically demonstrated in 1135/1722, when a small band of marauding Afg͟hāns succeeded in starving the Ṣafawid capital into surrender.

Under the last two Ṣafawid s͟hāhs, Sulaymān (1077-1105/1666-94) and Sulṭān Ḥusayn (1105-35/1694-1722), the pace of decline accelerated. Both were weak and pliable rulers, products of the *ḥaram* system. Sulaymān, an alcoholic, had little interest in affairs of state. His son, S͟hāh Sulṭān Ḥusayn, was no better, and his derisive nickname "Mullā Ḥusayn" is significant. Unrestrained by the authority of the ruler, the "privy council" of the women of the *ḥaram* and the court eunuchs usurped power at the centre of the ruling institution. Equally serious was the emergence of the *mud͟jtahids* and other religious leaders as a powerful political force. The political role of the *ṣadr* was assumed first by the *s͟haykh al-islām*, and then, after the accession of Sulṭān Ḥusayn Mīrzā, by a new official called the *mullābās͟hī*. There was an outpouring of works on It͟hnā ʿAs͟harī theology, jurisprudence and tradition and, as S͟hīʿī orthodoxy became more rigidly formalised, there was increasing persecution of heretics. Ṣūfīs, who had brought the Ṣafawids to power, were now a principal target of the *mud͟htahids*, one of whom even acquired the soubriquet of *ṣūfī-kus͟h* or "Ṣūfī-slayer" (see Browne, *LHP*, iv, 386 ff.). ʿAbbās I's policy of religious tolerance, which had been responsible for much of the economic prosperity of Persia during his reign, was abandoned. Not only did the usual targets, Christians and Jews, suffer as a result, but philosophers and non-conformist Muslims as well (D. Morgan, *Medieval Persia 1040-1797*, London and New York 1988, 149). The upsurge of religious intolerance resulting from the increased power of the *ʿulamāʾ* also had economic consequences (see section II), and this factor must be added to Minorsky's "more conspicuous factors" (*Tad͟hkirat al-mulūk*, 23) for Ṣafawid decline.

In 1121/1709 Mīr Ways, chief of the G͟halzay Afg͟hāns [see G͟HALZAYS], hitherto a vassal of the Ṣafawids, rebelled and occupied Ḳandahar, and this was followed by the revolt of the Abdālī [*q.v.*] Afg͟hāns. Mīr Ways's successor, Maḥmūd, subdued the Abdālīs and, in 1131/1719, led a force across the Das͟ht-i Lūṭ and entered Kirmān unopposed. Thus encouraged, he returned two years later with a larger force, and marched on Iṣfahān. Vacillation on the part of the S͟hāh, treachery within the ranks of Ṣafawid officials at Iṣfahān, and the pathetically weak state of the Ṣafawid army, enabled Maḥmūd to rout a mainly scratch Ṣafawid force at Gulnābād near Iṣfahān on 20 D͟jumādā I 1134/8 March 1722. Maḥmūd, his force too small to carry the city by storm, starved it into surrender six months later; on 1 Muḥarram 1135/12 October 1722 Sulṭān Ḥusayn S͟hāh surrendered unconditionally, and handed over the crown to Maḥmūd.

(vii) *The Afg͟hān interregnum 1135-42/1722-29; Ṣafawid* rois-fainéants *(1135-48/1722-36); the end of the Ṣafawid dynasty.*

The third son of S͟hāh Sulṭān Ḥusayn, Ṭahmāsp Mīrzā, had escaped from Iṣfahān during the Afg͟hān siege, and had proclaimed himself S͟hāh at Ḳazwīn on 30 Muḥarram 1135/10 November 1722 with the title of Ṭahmāsp II, but was driven out by the Afg͟hāns and took refuge at Tabrīz. An uprising of the townspeople of Ḳazwīn against the Afg͟hāns precipitated the slaughter by Maḥmūd at Iṣfahān of Persian government officials, members of the nobility, and about 3,000 *ḳizilbas͟h* guards. In 1137/1725 a report that S͟hāh Sultān Ḥusayn's second son, Ṣafī Mīrzā, had escaped from Iṣfahān caused Maḥmūd to put to death at least eighteen members of the Ṣafawid royal family. Shortly afterwards, Maḥmūd was overthrown by his cousin As͟hraf, who was proclaimed S͟hāh on 12 S͟haʿbān 1137/26 April 1725. The Afg͟hān writ only ran in central and south-eastern Persia, and As͟hraf's efforts to seize Ṭahmāsp II failed. The strife in Persia tempted Tsar Peter the Great to occupy Darband and Bākū in 1135/1723, and in 1138-9/1726 the Ottomans also took advantage of the situation and once again invaded Ād͟harbāyd͟jān; this invasion led As͟hraf to execute S͟hāh Sulṭān Ḥusayn. In 1140/1727 As͟hraf was forced to negotiate peace with the Ottomans and to recognise as Ottoman territory large areas of Persian Kurdistān, Ād͟harbāyd͟jan, Ḳarabāg͟h and Georgia. In 1139/1726 Ṭahmāsp II was joined by Nādir K͟hān Afs͟hār [see NĀDIR S͟HĀH AFS͟HĀR], who dubbed himself Ṭahmāsp Ḳulī K͟hān and claimed that his goal was the restoration of the Ṣafawid monarchy. After winning a number of victories over the rival Ḳād͟jārs and their Turcoman allies in K͟hurāsān, and over the Abdālīs, Nādir routed As͟hraf, entered Iṣfahān on 16 D͟jumādā I 1142/7 December 1730, and placed Ṭahmāsp II on the throne.

After five years of campaigning (1142-48/1730-35), Nādir regained all Persian territory lost to the Ottomans (see Shaw, *op. cit.*, 238-9, 243), and peace was negotiated on the basis of a reversion to the frontiers laid down in the Treaty of Zuhāb in 1049/1639. Nādir's campaigns against the Russians were equally successful. By the terms of the Treaty of Ras͟ht (4 Shaʿbān 1144/1 February 1732), Russia returned all Persian territory south of the river Kūra, and by the Treaty of Gand͟ja (28 D͟hu 'l-Ḥid͟jd͟ja 1147/21 May 1735), Russia surrendered Bākū and Darband.

On 17 Rabīʿ I 1145/7 September 1732, Nādir deposed Ṭahmāsp II, and placed the latter's son on the throne with the title of ʿAbbās III. Four years later, Nādir abandoned the pretence of restoring the Ṣafawid monarchy, deposed ʿAbbās III, and had himself crowned S͟hāh on 24 S͟hawwāl 1148/8 March 1736 as the first ruler of the new Afs͟hārid dynasty. During Nādir's absence in India, his son Riḍā Ḳulī K͟hān had Ṭahmāsp II and ʿAbbās III put to death in 1152/1740, together with ʿAbbās's younger brother Ismāʿīl (L. Lockhart, *Nadir Shah*, London 1938, 177-8, 180). The accession of Nādir S͟hāh brought to an end more than two centuries of Ṣafawid rule, which had existed in name only since 1135/1722, but Ṣafawid pretenders, who first made their appearance during the reign of the Afg͟hān As͟hraf, continued to manifest themselves as late as 1187/1773, under the Zands (see J.R. Perry, *The last Safawids*, in *Iran JIBPS*, ix [1971], 59-69).

II. Economic and commercial history; trade relations with Europe.

(i) *European attempts to develop trade with Ṣafawid Persia.*

Trade has a way of ignoring national boundaries and the wishes of political leaders. Thus it was that, when the capture of Constantinople by the Ottomans in 857/1453 put an end to the trade of the Republic of Venice in the Black Sea, the Venetians found a temporary gap in the Ottoman defences in Ḳaramān, and continued to trade with the Aḳ Ḳoyunlu ruler Uzun Ḥasan via this route. The decisive defeat of Uzun Ḥasan by the Ottomans on the Upper Euphrates in 878/1473, and the final incorporation of Ḳaramān into the Ottoman empire in 880/1475, sealed off this line of communication with Iran. In 1488, however, the Portuguese sea-captain Bartolomeu Dias rounded the Cape of Good Hope, thus outflanking the Ottoman empire and also the Italian city-states of Venice and Genoa, and opening up the possibility of trade with Persia via the Persian Gulf. In 913/1507, less than a decade after Vasco da Gama had reached India, the Portuguese, under the command of Afonso de Albuquerque, arrived in the Persian Gulf. The Portuguese Viceroy at once saw the great strategic and commercial importance of Hormuz [see HURMŪZ], and in 921/1515 he returned and occupied the city, thus establishing the first European foothold on Ṣafawid territory. For the Portuguese, although the vassal (*titulado*) King of Hormuz had, by the Treaty of Mīnāb (929-30/1523) granted them *inter alia* a site for the construction of a factory, the most lucrative aspect of their occupation of Hormuz was control of the customs.

The English, conceding control of the Persian Gulf to the Portuguese for more than a century, attempted to turn the northern flank of the Ottoman empire by opening up a trade route to Russia and Persia via the hazardous sea route north of Scandinavia to Archangel. The first English joint-stock company formed for this purpose, in 1553, was called "The Mysterie and Companie of the Merchant Adventurers for the Discoverie of Regions, Dominions, Islands and Places unknown", and had Sebastian Cabot as its Governor. The Company was successively named "The Muscovy Company" and "The Russia Company". In 964-5/1557, Anthony Jenkinson and two other merchants reached Astra<u>kh</u>ān, and crossed the Caspian Sea to Bu<u>kh</u>ārā. Four years later, Jenkinson returned, and this time crossed the Caspian and landed on Ṣafawid territory in <u>Sh</u>īrwān. On 23 Rabīʿ I 970/20 November 1562, he was received in audience by <u>Sh</u>āh Ṭahmāsp, and delivered to him a letter from Elizabeth I, in which the Queen desired "to treate of friendship, and free passage of our Merchants and people, to repaire and traffique within his dominions, for to bring in our commodities, and to carry away theirs to the honour of both princes, the mutual commoditie of both Realmes, and wealth of the Subjects" (Anthony Jenkinson, *Early voyages and travels to Russia and Persia*, Hakluyt Society, 1st Series, nos. lxxii-lxxiii, 2 vols., London 1886, i, 147). Although <u>Sh</u>āh Ṭahmāsp dismissed Jenkinson with the remark "Oh thou unbeleever, we have no neede to have friendship with the unbelievers", the <u>Sh</u>āh's brother-in-law, ʿAbd Allāh <u>Kh</u>ān Ustā<u>dj</u>lū, governor of <u>Sh</u>īrwān, granted important trading privileges to the Muscovy Company; but the dangers of the sea-route to the White Sea, and attacks by bandits in the Volga region, caused the Company to abandon this route in 988-9/1581.

In the same year, English merchants tried to gain access to the Persian market by the overland route from the eastern Mediterranean across Syria and Mesopotamia. John Newberie, having reached Hormuz on the Persian Gulf by this overland route, persuaded the merchants of the recently formed Levant Company to interest themselves in trade with Persia, and in 996-7/1583 he returned to Persia hoping to open a factory at Hormuz. He and his fellow-merchants were seized by the Portuguese commandant as heretics and spies, and sent to Goa to stand trial; they were subsequently released. In 1008-9/1600 John Mildenhall, a London merchant, again took the overland route to Persia, and went on to India, but English attempts to open up trade with Persia by the overland route from the Levant proved no more successful than their attempts to use the sea route north of Scandinavia.

By 988-9/1581, the Portuguese had fought off a challenge to their supremacy in the Persian Gulf from the Ottomans (see Savory, *The history of the Persian Gulf*, in A.J. Cottrell (ed.), *The Persian Gulf states*, Baltimore and London 1980, 23-4), but a new challenge faced them from the merchants of the English East India Company, founded in 1008-9/1600. On 12 Ramaḍān 1024/5 October 1615, two merchants of this Company, Richard Steele and John Crowther, obtained a *farmān* from <u>Sh</u>āh ʿAbbās I which ordered the <u>Sh</u>āh's subjects "to kindly receive and entertaine the English Frankes or Nation, at what time any of their ships or shipping shall arrive ate Jasques (<u>Dj</u>āsk), or any other of the Ports in our Kingdome: to conduct them and their Merchandise to what place or places they themselves desire: and that you shall see them safely defended about our Coasts, from any other Frank or Franks whatsoever" (Samuel Purchas, *Hakluytus Posthumus or Purchas his pilgrim(e)s*, 20 vols., Glasgow 1905-71, iv, 279). The following year Edward Connock arrived at <u>Dj</u>āsk to open a factory, and was cordially received by ʿAbbās I, who granted the Company further privileges. This second *farmān* does not appear to be extant, but the gist of it is probably contained in the *farmān* of <u>Sh</u>āh Ṣafī dated 1038/1629, which *inter alia* gave English merchants the right to buy and sell freely in Persia; moreover, the English ambassador, when appointed, was empowered to appoint agents and factors in Persia (Sir Arnold T. Wilson, *The Persian Gulf: an historical sketch from the earliest times to the beginning of the twentieth century*, Oxford 1928, 139). In 1027-8/1618 ʿAbbās I agreed not to export any silk to Spain or Portugal, or to Europe via Ottoman territory. He also promised to supply the English East India Company with a quantity of silk annually at a fixed rate, and to allow this silk to be exported from Persia free of duty. Portugal did not give up its monopoly of Persian Gulf trade without a fight, but a strong Portuguese squadron under Ruy Freyre de Andrade was defeated in two naval battles off <u>Dj</u>āsk in Muḥarram-Rabīʿ I 1030/December-January 1621. These victories paved the way for the combined operation in 1031/1622 in which Ṣafawid troops, transported by ships of the English East India Company, dislodged the Portuguese from Hormuz.

English ascendancy was short-lived. The formation of the Dutch East India Company in 1602 signalled the determination of the Dutch to challenge both England and Portugal for control of the East Indies spice and pepper trade, and within a few years they were challenging the position of England in the Persian Gulf as well. In 1031/1622, under the terms of the agreement with ʿAbbās I, the English East India Company was to receive one-half of all customs dues levied on merchandise passing through Bandar ʿAbbās, but the Dutch refused to pay. On the accession of Ṣafī I in 1038/1629, the Dutch outmanoeuvred the English and obtained important privileges from

the Shāh. They founded a factory at Bandar ʿAbbās, and rapidly established a monopoly of the spice trade between Persia and the East Indies. In 1055/1645 they obtained from ʿAbbās II a licence to buy silk anywhere in Persia and export it free of customs duty. The English, who succeeded in getting their privileges renewed by Shāh Ṣafī only in 1042/1632, were fighting a losing battle. They started to move their factory from Bandar ʿAbbās to Baṣra, but a Dutch squadron sailed to Baṣra and destroyed it. In the second half of the 11th/17th century, the Dutch reigned supreme in the Persian Gulf. The third European East India Company, the French, came late to the field (1074-5/1664), but succeeded in obtaining from ʿAbbās II trading privileges similar to those already granted to the English and Dutch, including the right to open a factory at Bandar ʿAbbās. The overthrow of the Ṣafawids in 1135/1722 and the consequent insecurity in Persia militated against the operations of European merchants there, and at the same time the growth of piracy in the Persian Gulf threatened the safety of European vessels. By 1142-3/1730, most European countries trading with Persia were operating at a loss.

(ii) *Persia's domestic and foreign trade.*

The bases of the Ṣafawid domestic economy were agriculture and pastoralism, and, as formerly under the Saldjūḳs and the Mongols, there was a dichotomy between the settled rural life of the peasants and the semi-nomadic life of the pastoralists. In addition, there was an ethnic dichotomy. The Turcoman tribes "were cattle-breeders and lived apart from the surrounding population. They migrated from winter to summer quarters. They were organised in clans and obeyed their own chieftains" (A.K.S. Lambton, *Landlord and peasant in Persia*, Oxford 1953, 106). The Persian peasants tilled the land and were subject to a system of land-tenure which had changed little since Sāsānid times.

The Ṣafawid period saw the development of a money economy and the growth of economic prosperity which reached its highest point during the reign of ʿAbbās I and declined thereafter. ʿAbbās I, by his building of roads, and even more by the construction of numerous bridges and caravanserais along the main routes, provided the infrastructure essential to the development of trade. The stationing of road-guards (*rāhdārān*) at key points, besides providing useful revenue in the form of tolls, ensured, according to the testimony of European travellers, a degree of safety and security for travellers and caravans which exceeded that obtaining in neighbouring countries. Security declined under the weak Shāhs Sulaymān and Sulṭān Ḥusayn (J. Emerson, *Ex Oriente Lux: some European sources on the economic structure of Persia between about 1630 and 1690*, Cambridge Ph.D. thesis 1969, unpubl., 218).

An important feature of the domestic economy under ʿAbbās I was the royal workshops (*buyūtāt-i khāṣṣa-yi sharīfa*), which numbered 32 at the time of Chardin and 33 in 1138-9/1726 (*Tadhkirat al-mulūk*, 30), and employed some 5,000 skilled artisans and craftsmen. This system has been criticised as "state capitalism" (Banani, Keywānī), and ʿAbbās I's policy of making the silk trade a royal monopoly is said to have stifled the entrepreneurial spirit of Persian merchants. European travellers, however, attest to the flourishing state of the bazaars in Ḳazwīn, Iṣfahān and Shīrāz, and it is doubtful whether Persian merchants could have survived European competition in the silk trade without state support. Indeed, they lacked sufficient capital to sustain trade on a large scale at all (R.W. Ferrier, *Trade from mid-14th century to the end of the Safavid period*, in *Camb. hist. Iran*, vi, 484).

Domestic trade alone could not have raised the Ṣafawid state to the level of prosperity to which ʿAbbās I aspired, and he devoted much effort to the development of international trade. In this effort, Jews and Indians played an important role as brokers, and Armenians as providers of international credit. ʿAbbās I created a new suburb of Djulfā [*q.v.* in Suppl.] at Iṣfahān, and transferred there several thousand Armenian families from Djulfā in Ādharbāydjān. They were allowed to practise their Christian faith without harassment by the state (the Shāh even made a donation toward the cost of the Armenian cathedral), and ʿAbbās I, by granting them the privilege of being represented by an Armenian mayor (*kalāntar* [*q.v.*]), made them virtually an autonomous community (again, Ottoman parallels should be borne in mind [see MILLET]. The Armenian merchants prospered, and travelled throughout Europe in pursuit of commerce. Much of their wealth derived from the silk trade, the organisation of which "must be regarded as one of ʿAbbās's great organizational achievements" (N. Steensgaard, *The Asian trade revolution of the seventeenth century*, Chicago 1973, 381). English merchants who tried to force down the Shāh's price by buying silk on the free market found themselves unable to do so (*ibid.*, 377). Persian ambassadors accredited to European capitals were customarily required to include in their baggage some bales of silk; this rule applied even to ambassadors who were Europeans. With the accession of Shāh Ṣafī (1038/1629), the royal monopoly on silk was broken, and money was diverted from the royal coffers to the pockets of Armenian merchants. For a time, Dutch merchants who, unlike the English East India Company factors, were not reluctant to co-operate with the Armenians, turned a profit by buying silk privately. In desperation, the English East India Company offered the Armenians in 1099-1100/1688 the status of "honorary Englishmen" (Ferrier, *The Armenians and the East India Company in Persia in the seventeenth and early eighteenth century*, in *Economic History Review*, 2nd series, xxi [1973], 50), but it was too late; the Armenians preferred the security of the Aleppo route, in co-operation with the Levant Company, to the hazards of the sea-route from the Persian Gulf (hostilities between the Ottomans and the Ṣafawids had militated against the use of overland routes to Mediterranean ports, but the Treaty of Zuhāb (1049/1639) ushered in a long period of peace between the two, and the overland routes once more became attractive). The English East India Company was no longer able to compete in the silk trade, and stopped buying Persian silk after 1049-50/1640 when silk prices in Europe slumped (J. Foran, *Fragile resistance: social transformation in Iran from 1500 to the Revolution*, Westview Press 1993, 65). In any case, by about 1059-60/1650 Bengal silk had become a cheaper source of supply for the East India Companies. In general, however, the patterns of trade established with Europe in the 1620s were maintained until 1722. The average value of Persia's exports in the 11th/17th century, of which silk constituted a major part, was between £ 1-2 million sterling (*ibid.*, 69). Carpets never constituted a large part of Ṣafawid exports. Carpet workshops existed at Iṣfahān, Kāshān and Kirmān, and Shāh ʿAbbās I, like his grandfather Shāh Ṭahmāsp I, was personally interested in developing the carpet-weaving industry. It was quicker, easier and cheaper for Europeans to import carpets from Turkey than from Persia during the long periods when the Ottomans and Ṣafawids

were at war. Ṣafawid carpets were exported to Mug̲h̲al India, to the Portuguese colony at Goa, and to Indonesia, mostly shipped by the Dutch East India Company; some of these found their way to the Netherlands and the London market. The Ṣafawids transformed a "simple produit artisanal des régions rurales" into "art digne de la cour et des palais princiers" (Nadereh Aram-Zanganeh, *Le tapis persan aux XVI^e et XVII^e siècles: contribution à une sociologie de l'art persan*, Lausanne 1984, 12), but the luxury carpet trade, depending as it did on royal patronage, declined after the overthrow of the Ṣafawids (see Savory, in *EIr*, art. *Carpets*. i. Introductory survey, iv, 834-9).

Both internal and external factors contributed to the decline of the Persian economy after the time of ʿAbbās II, and by the end of the 11th/17th century the balance of trade had turned against Persia. Silk production probably declined; and Persia began to import large quantities of cloth from India for which it had to pay cash. Furthermore, the Dutch drained large quantities of gold and silver from Persia as payment for spices (Foran, 67-9). The merchants with the greatest reserves of cash were the Armenians; the royal treasury tended to hoard the best coins, and in addition Indian moneylenders and Armenian merchants tended to take the better coins out of circulation or out of the country altogether. The result was a considerable degree of debasement of the currency. Nevertheless, there was little inflationary pressure on the economy until the Afg̲h̲ān occupation in 1135/1722, when it became a significant factor. Finally, the collapse of ʿAbbās I's multicultural state with its policy of religious tolerance caused serious harm to the economy. The increased political influence of the *ʿulamāʾ* in the last half-century of Ṣafawid rule (the persecution of Jews under ʿAbbās II was an earlier portent of things to come) led to persecution of Armenian and Hindu merchants and the forcible conversion of Jews and Zoroastrians to Islam. Many Zoroastrians fled to the Kirmān area, where they welcomed the Afg̲h̲āns as "liberators". From 1131-2/1719 onwards, there were uprisings among non-S̲h̲īʿī minorities in S̲h̲īrwān, Kurdistān, K̲h̲ūzistān and Balūčistān (Foran, 75 ff.). The dynastic struggles which followed the assassination of Nādir S̲h̲āh in 1160/1747 did still further damage to the economy, and, despite some improvement in trade in Fārs under the Zands, a Select Committee appointed by the Court of Directors of the English East India Company concluded in the 1780s that "the comparison between the past and present state of Persia, in every respect, will be found truly deplorable" (see C. Issawi (ed.), *The economic history of Iran 1800-1914*, Chicago 1971, 86).

Bibliography: In order to keep the bibliography within manageable limits, it has been restricted to a few selected works which are not cited in the text. Some recent publications have also been included. The works are listed under the various topics discussed in the text. (R.M. Savory)

III. Literature.

It is still difficult to assess properly the effects of the Ṣafawid conquest on the cultural life of Persia. There can be no doubt about the importance of the Ṣafawid period to the history of Persian art. During the first half of the 16th century, the arts of the book flourished like never before. Calligraphy and book-painting benefited greatly from the patronage of the ruling dynasty and there was an equal interest in architecture, exemplified in particular by the magnificent buildings which were erected in Iṣfahān in the course of the 17th century. Philosophy also reached a high point of development in the works of Mullā Ṣadr al-Dīn al-S̲h̲īrāzī [*q.v.*] and other members of his school. Literature, however, fared less well, according to a generally held view. The founding of the Ṣafawid state, with all its momentous consequences for the social structure of the country and its religious life, allegedly brought the golden age of Persian literature to an end. From there on, a time of decline set in, which was not only poor in new heights of literary art but actually led to stagnation and a deterioration of style.

One of the factors which helped to create this negative view on Ṣafawid literature was the change of literary taste in Persia which occurred about the middle of the 18th century, shortly after the Ṣafawid period had come to a close. This brought about a strong condemnation of the excesses to which the Indian style [see sabk-i hindī] in Persian poetry had led and a "return" (*bāzgas̲h̲t*) to the standards of earlier styles. As a result, a neo-classicist view of post-Tīmūrid literature was established which not only left its mark on Persian literary criticism until the present day, but also had a great impact on evaluations by Western scholars. Only recently a more positive ap-

preciation of the Indian style is emerging. This seems however not yet to have led to a proper distinction between Ṣafawid literature and the Indian style, notwithstanding the fact that the latter did not have an effect on the poets of Persia until the second half of the rule of the Ṣafawids (see, for instance, E. Yarshater's essay *The Indian or Ṣafavid style: progress or decline?*). As a matter of fact, the 16th century constitutes a separate chapter in the history of Persian literature. The *tadhkira* writers of the period provide us with a lively picture of the literary scene in Ṣafawid Persia which is marked by a series of innovations quite distinct from those which later on became characteristic of the Indian style. Valuable collections of material on this period are available now in the works of Dh. Ṣafā and A. Gulčīn-i Maʿānī.

Furthermore, the impact on literature of the religious revolution brought about by the Ṣafawids tends to be overrated. The active support of the dynasty to the spread of Shīʿism in a country which was still overwhelmingly Sunnī, was even said to have caused a "Shiʿite standardisation of literature" (Rypka, 292). The well-known injunction of Shāh Ṭahmāsp I to the poet Muḥtasham [*q.v.*], to celebrate the Family of the Prophet in his poems rather than praise the secular ruler, is often quoted out of context. It has been given the significance of a radical turn from the traditions of court patronage by the Ṣafawid dynasty as a whole, whereas it probably only points to a personal change of heart of one monarch, which temporarily brought to an end a period of exceptionally lavish patronage to the arts during the first half of the 16th century. It is, on the other hand, evident that a very substantial part of the poems and prose works produced in this period could be labelled either secular or mystical, but do not carry specifically Shīʿī characteristics.

The Ṣafawids, both the shāhs and the other members of the royal house, were well-educated and often participated personally in artistic and literary pursuits. Already Ismāʿīl I (reigned 907-30/1501-24) resumed the traditional function of royal patronage, which had been fulfilled so brilliantly by two of his predecessors in the late 9th/15th century: the Tīmūrid Ḥusayn Bayḳārā (d. 912/1506) at Harāt and the Aḳ-Ḳoyunlu sultan Yaʿḳūb (d. 896/1490) at Tabrīz. In 917/1511, during his campaign in Khurāsān, Ismāʿīl took the time for a visit to Djām, where the aged poet Hātifī [*q.v.*] lived, to ask him tc celebrate the Ṣafawid victory with an historical epic on the lines of his famous *Ẓafar-nāma* on the life of Tīmūr Lang. Although this poem remained unfinished, it set an example for similar *mathnawīs* in the heroic style of the *Shāh-nāma* written later on for the Ṣafawid Shāhs. Poems of this kind were composed, for instance, by Ḳāsimī Gunābādī (d. 982/1574?) for Ismāʿīl and Ṭahmāsp. The same poet also wrote a *Kār-nāma* on the former Shāh's performance as a polo player. The *ghazal* poet Ṣāʾib [*q.v.*] celebrated ʿAbbās II's conquest of Ḳandahār in 1059/1649-50 in an *ʿAbbās-nāma* (cf. Rieu, ii, 694).

Such martial panegyrics did not exhaust Ismāʿīl's interest in literature. Ahlī of Shīrāz (d. 942/1535), who had been a distinguished poet of the Aḳ-Ḳoyunlu, dedicated to him the romantic poem *Siḥr-i ḥalāl*, a work of great rhetorical artistry. Other officials and courtiers joined in this patronage, notably Ismāʿīl's *wakīl* Yār Aḥmad Khūzānī, better known as Nadjm-i Thānī (d. 918/1512). Among the poets attached to Ismāʿīl's court were Ummīdī (d. 925/1519 or 930/1523-4), who left a small number of panegyrics and religious *ḳaṣīdas*, Lisānī (d. 940/1533-4) and Wāḥidī (d. 942/1535). The Shāh himself, under the pen name Khaṭāʾī [see ISMĀʿĪL I. 2], wrote Turkish poetry, remarkable for its daring statements of extreme *ḳizilbāsh* doctrines.

More conspicuous yet was the interest Ṭahmāsp I (930-84/1524-76) took in literature and the arts during the first twenty years of his reign. His patronage was matched by the *wakīl* Ḳāḍī Djihān and the Shāh's brother Sām Mīrzā (923-74/1517-67 [*q.v.*]). The latter left the most valuable record of early Ṣafawid literature in a *tadhkira* entitled *Tuḥfa-yi Sāmī*. Prominent among the many court poets of his reign were the *wakīl*'s son Sharaf Djihān (d. 968/1560), the satirist Ḥayratī (d. 961/1553), Ḍamīrī (d. after 985/1578), and ʿAbdī Bēg Nawīdī (d. 988/1580). After Ṭahmāsp lost his interest in patronage, about 951/1544-5, the support of the central court to literature remained drastically reduced for several decades. This attitude had two noticeable consequences: the aforementioned emphasis on religious poetry, as exemplified in the works of Muḥtasham (d. 996/1587), and the beginning of the exodus of poets and artists to Indian courts.

This emigration of literary talent, in which also many artists and scholars took part, began in the late 16th century and continued up to the reign of the Mughal Emperor Awrangzīb (1068-1118/1658-1707), should be seen against the background of the internationalisation of Persian civilisation, which reached its height during this period. This phenomenon encompassed most of the Islamic lands in Asia, in particular the Indian subcontinent, Uzbek Central Asia and the Ottoman Empire, but India was by far the most important. A great demand for poets from Persia arose which could not be matched by the often wavering patronage of the Ṣafawids. As it appears from biographical sources, the motivations to travel to India were quite varied. Ghazālī of Mashhad (d. in Gudjārāt 980/1572), one of the first to leave Persia, fled from Shīrāz after he had been accused of heresy (*ilḥād*). Others had run into difficulties with their patrons at home, or were allured by the prospect of fame and riches to be won at the Indian courts.

Patronage in Ṣafawid Persia was not restricted to the court of the Shāh. Especially during the first century of Ṣafawid rule, the courts of provincial governors, usually also members of the royal house, made a significant contribution. At Hamadān, Ṭahmāsp's brother Bahrām Shāh supported his own circle of poets, whereas Mashhad unter the rule of the latter's son Ibrāhīm Mīrzā (964-76/1556-68) gained renown as an artistic centre compensating, temporarily at least, for the lack of interest at the Shāh's court. Here poets like Thanāʾī (d. Lahore 995 or 996/1586), Maylī of Harāt (d. in India 984/1576) and Walī Dasht-Bayāḍī (d. 1001/1592-3) flourished, as well as some of the most important painters and calligraphers. The more remote provincial court at Yazd under Mīr-Mīrān Ghiyāth al-Dīn patronised the poet Waḥshī [*q.v.*] of Bāfḳ (d. 991/1583). Outside the courts other cities were the scene of a lively pursuit of letters, e.g. Shīrāz, where ʿUrfī [*q.v.*] (d. in India 999/1590-1) spent his early years, and Kāshān, the hometown of Muḥtasham. It was not unusual for poets to stay away from the court while still writing panegyrics for the rulers. From Baghdād, Fuḍūlī (d. 970/1562-3 or 963/1556 [*q.v.*]), who is best known for his poems in Azeri Turkish, paid homage to the Ṣafawids until that city was taken over by the Ottomans. Muḥtasham sent his poems to Indian courts but never travelled there himself. Increasingly, it seems, poetry began to become a private matter, as for instance in the case of

Saḥābī of Astarābād (d. 1010/1601-2 [*q.v.*]), the master of the *rubāʿī* of this period, who lived for many years as a recluse near the shrine of Nadjaf.

Up to a certain extent, court poetry revived under ʿAbbās I (996-1038/1588-1629), first at Ḳazwīn, and since 1598 at Iṣfahān. The position of a *malik al-shuʿarāʾ* [*q.v.*] was filled by Ruknā Masīḥ (d. 1066/1655 or 1070/1659-60), and then by Shifāʾī (d. 1037/1627). They both also served the Shāh as physicians. In 1006/1597 Masīḥ went to India after he had been accused of giving too little attention to his patron's health. Discontent with the situation of the poets at the court of Iṣfahān was expressed by Kawtharī of Hamadān (d. after 1015/1606) when in a poem dedicated to Shāh ʿAbbās he made a reference to the lavish patronage offered at the courts of India (ʿAbdu'l Ghani, ii, 168-71). On the other hand, it is reported that the poet Shānī received his weight in gold as a reward for a single felicitous line in honour of the Imām ʿAlī (*ibid.*, ii, 163). Among the poets at ʿAbbās' court were further Fārigh (*fl. ca.* 1000/1591), Kamālī (d. 1020/1611-2), and Zulālī of Khʷānsār (d. 1024/1615).

A last period of great literary activity at the court of Iṣfahān were the reigns of Ṣafī I (1038-52/1629-42) and ʿAbbās's II (1052-77/1642-66). This was the time of Djalāl al-Dīn Asīr [*q.v.*] (d. 1049/1639-40), Ḳudsī (d. 1056/1646-7), Amānī of Māzandarān (d. 1061/1651) and Faṣīḥī (d. *ca.* 1080/1670), but above all of Ṣāʾib (d. 1088/1677-8 [*q.v.*]), the greatest poet of Ṣafawid literature.

The *ghazal* continued to be the principal poetic form, but the poets of the 16th century tried to renew its rather soulless and abstract features by developing a new style called already by contemporary writers *wuḳūʿ-gūʾī* or *zabān-i wuḳūʿ*. By this they meant the fashion to introduce references to actual experiences of love and incidents occurring in the relationship of lovers and their beloveds. Although the motives they used were usually conventional (most of them belonged to the tradition of *taghazzul* from the earliest period onwards), they succeeded in creating an elegant lyricism, written in a simple language, often close to everyday speech, and an unadorned style. Bābā Fighānī [*q.v.*] is frequently mentioned as a predecessor of his trend, one of the earliest representatives of which was Sharīf Djihān. The *wuḳūʿ* style generated a number of subsidiary genres, like the one called *wā-sūkht*, the theme of which was the lover's turning away from the beloved (cf. Gulčīn-i Maʿānī, *Wuḳūʿ*, 681-8), and *ḳaḍā wa ḳadar*, on erotic incidents which exhibit the workings of fate. Towards the end of the 16th century, a much more ingenious idiom began to develop: it was characterised by the search for new and unusual imagery and a sophisticated use of the traditional motifs. In the 17th century, Ṣāʾib brought the *ghazal* back to a more abstract level, without adding much to its stock of themes and motives. Recently, his poetry, marked by the frequent use of proverbial illustration (*irsāl-i mathal*), has been revalued by Persian critics as an acceptable form of the Indian style, to which the term "style of Iṣfahān" is applied.

The *ḳaṣīda* was still occasionally used for courtly panegyrics, but far more often as a medium for *manḳabat* poetry, i.e. hymns praising the Prophet and the Imāms. Stanzaic poems became extremely popular for Shīʿī elegies, like the famous *dawāzdah-band* of Muḥtasham. As a secular form of love poetry, expanded patterns known as *musaddas* and *murabbaʿ* were put into currency, especially by Waḥshī; some of these poems have survived as popular songs.

Mystical *rubāʿīs* were written in great numbers, as is evident from the anthologies compiled in this period. Intricate rhetorical artifices, which had come into fashion already during the Tīmūrid period, continued to be used in topical quatrains, especially in chronograms. The quatrain was also frequently used for poems featuring young craftsmen, known as *shahrangīz* [*q.v.*] or *shahrāshūb*. This genre was introduced at the court of Ṭahmāsp by Lisānī and Wāḥidī.

Many poets attempted to compose a *khamsa* [*q.v.*] after Niẓāmī's example, or even a *sabʿa* on the lines of Djāmī [*q.v.*]. Various new subjects for narrative poetry were introduced: they were either taken from ancient lore (eg. the love between Sultan Maḥmūd and his slave Ayāz), or they were newly invented as allegories. Outstanding *mathnawī* poets were ʿAbdī Bēg Nawīdī, who also wrote a work in imitation of Saʿdī's *Būstān*, Zulālī, whose *Maḥmūd wa Ayāz* became very popular, and Shifāʾī, the author of *Namakdān-i ḥaḳīḳat*, in the style of Sanāʾī. Short *mathnawīs* usually dealt with themes related to the *wuḳūʿ-gūʾī* as it was fashionable in *ghazals*. Most court poets produced a *Sāḳī-nāma*, based on motives derived from anacreontic verse, which could be either devoted to panegyrics or to mysticism.

Among the prose works written in Ṣafawid Persia, the *tadhkiras* took a prominent place. They were written according to the principles of this genre, which had been established in the late Tīmūrid period by Dawlatshāh and ʿAlī Shīr Nawāʾī [*q.vv.*]. The latter's work provided the model for *Madjmaʿ al-khawāṣṣ*, written in Čaghatāy Turkish by the painter and poet Ṣādiḳī Bēg [see further MUKHTĀRĀT. 2. In Persian literature]. The *tadhkiras* are also valuable sources of critical judgments on contemporary poetry. Among the historical works written under the Ṣafawids, Ḥasan Bēg Rūmlū's *Aḥsan al-tawārīkh* (985/1577) and Iskandar Munshī's [*q.v.*] *Taʾrīkh-i ʿālamārā-yi ʿAbbāsī* (1038/1628-9) deserve special mention. The *Tadhkira-yi Shāh Ṭahmāsp* is a contribution to historiography made by the Shāh himself on the basis of a speech delivered to Ottoman ambassadors at his court in 969/1562. In the religious sciences, including the flourishing school of Shīʿī philosophy, Arabic remained the common linguistic medium. However, several remarkable works were written in Persian as well, e.g. the *Djāmiʿ-i ʿAbbāsī* by Bahāʾ al-Dīn ʿĀmilī [*q.v.*], on religious law and various related subjects, and the theological treatise *Gawhar-i murād* by ʿMullā ʿAbd al-Razzāḳ Lāhīdjī [*q.v.*], one of the pupils of Mullā Ṣadrā, and a long series of theological writings by Muḥammad Bāḳir Madjlisī-yi Thānī [*q.v.*].

Persian literature of the Ṣafawid period has been dealt with also elsewhere in this Encyclopaedia: see Vol. IV, ĪRĀN. vii—Literature, 68a-69b, and, as far as contemporaneous Indo-Persian literature is concerned, Vol. VII, MUGHALS. 10. Literature, 340b-344a; on the most important stylistic trend of the period [see SABK-I HINDĪ].

IV. Religion, philosophy and science.

As for all pre-modern societies so Ṣafawid-period developments in both "high"/"élite" and "low"/"popular" religious discourse, philosophical inquiry and certain areas of scientific theory and practice are most usefully understood in terms of the association of their practitioners with the patronage, 'lines of interest', links or influence of different segments of society. Because of a continuity with immediately preceding social formations, developments in the discourses of these disciplines tended to be enriched and enhanced rather than to suffer breaks with the pre-Ṣafawid heritage. More often than not the written legacy of these disciplines is dominated by the producers of "high"/"élite" discourse, i.e. the literate few, usually protégés of the socio-economic and political élite. So limited was their number that the same few names frequently appear as practitioners in different disciplines. "Popular" expression in these disciplines is also visible in this period, however, in the religious and medical realms in particular. Indeed, such was the extent of "popular" antipathy of various non-élite, social groups to some "high"/"élite" practitioners and their sponsors among the political and socio-economic élite, that only the continuous support of the latter insured the survival, if not the triumph, of their protégés and their contributions in their own time sufficient to provide some legacy for the future.

I. *Religious trends*

The importance of such links of association and the extent of "popular" animosity toward élite practitioners and their court patrons is particularly evident in the religious discourse of the period.

There had been S̲h̲īʿī communities scattered throughout Persia since the disappearance of the Twelfth Imām in 260/873-4. The establishment of Twelver S̲h̲īʿism by S̲h̲āh Ismāʿīl I [*q.v.*] in 907/1501-2, at the Ṣafawid capture of Tabrīz, portended a repeat of the short-lived conversion to the faith of the Il-K̲h̲ānid Sultan Öld̲j̲eytu (d. 716/1316 [*q.v.*]) an "event" which must later have appeared to stem more from *Realpolitik* than from genuine conviction. Indeed, in the first century of the Ṣafawids, the court's identification with, and efforts to patronise and promulgate, the faith met with limited success in Ṣafawid territory and won little credibility within the Twelver community itself and, in fact, exacerbated existing differences between and among the Ak̲h̲bāriyya and the Uṣūliyya [*q.vv.*]

Ismāʿīl's interest in the faith had no basis in the history of the Ṣafawid Ṣūfī order. Initially, the order had comprised mainly S̲h̲āfiʿī Sunnīs, had maintained an attitude of political quietism and had claimed no special relationship to any member of the Prophet's family [see 1. above]. Following an influx of peasants and tribal nomads the order became a militantly messianic movement under S̲h̲aykh Ḥaydar (d. 851/1447) and S̲h̲aykh D̲j̲unayd (d. 893/1488) [*q.vv.*]. During Ismāʿīl's reign members of the Ḳïzïl-Bās̲h̲ [*q.v.*] élite evinced little interest in the details of the doctrines and practices of the newly established faith. Ṣafawid religious discourse simply appended extremist Twelver interpretations to similarly radical representations of other religious traditions in order to legitimise the divine nature of the ruler and his mission: Ismāʿīl depicted himself variously as "Jesus, son of Mary", various pre-Islamic Persian epic figures, as well as *al-imām al-ʿādil al-kāmil* ("the just, the perfect Imām"), the latter title being a reference both to a just secular ruler and, in Twelver terminology, to the Hidden Imām himself. Such allusions encouraged the reverence among the lower-ranking Ḳïzïl-Bās̲h̲ warriors required to fuel the constant struggle against such of the order's enemies as the Sunnī Özbegs and Ottomans, rival S̲h̲īʿī elements such as the Mus̲h̲aʿs̲h̲aʿ [*q.v.*], and, throughout the period, competing Ṣūfī messianic movements, whose social origins and religious inclinations often approximated those of the Ṣafawids (Newman, *The myth*, 68-76).

If the Ṣafawids' commitment to orthodox Twelver S̲h̲īʿism seemed problematic, so was the existence of the Ṣafawid polity itself. The constant wars between the Ḳïzïl-Bās̲h̲ and their opponents and the Ṣafawids' repeated losses of territory to both the Özbegs and the Ottomans throughout this period, only underscored the fragility of the Ṣafawid experiment.

For Arab Twelver clerics resident outside Ṣafawid territory, a special, additional source of aggravation was the open association with and services rendered to Ṣafawid S̲h̲īʿīsm by ʿAlī b. al-Ḥusayn al-Karakī (d. 940/1534 [*q.v.*]) beginning soon after Ismāʿīl's profession of faith, as well as the compensation for these which al-Karakī received in land and cash.

In the D̲j̲abal ʿĀmil region of Lebanon, both well-established and such younger scholars as S̲h̲ayk̲h̲ Zayn al-Dīn b. ʿAlī, called al-S̲h̲ahīd al-T̲h̲ānī (the second martyr) (d. 965/1557), and his student and associate al-Ḥusayn b. ʿAbd al-Ṣamad (d. 984/1576) expressed their disapproval of Ṣafawid S̲h̲īʿism and of al-Karakī by shunning all Ṣafawid entanglements and territory, even though both al-Karakī and S̲h̲ayk̲h̲ Zayn al-Dīn were proponents of the Uṣūliyya tendency within Twelver S̲h̲īʿism.

By this period, owing expecially to the contributions of such scholars as D̲j̲aʿfar b. al-Ḥasan al-Muḥaḳḳiḳ al-Ḥillī (d. 676/1277) and al-Ḥasan b. Yūsuf al-ʿAllāma al-Ḥillī (d. 726/1325) [*q.vv.*] who had "converted" Öld̲j̲eytu, the Uṣūliyya had stressed the application of subjective disciplines and rationalist principles—including *id̲j̲tihād* [*q.v.*]—to the Twelver-accepted revelation, and the authorisation of *al-faḳīh al-d̲j̲āmiʿ li-s̲h̲arāʾiṭ al-iftāʾ* ("the legist whose study of those disciplines and principles permitted him to issue a *fatwā*") to undertake in the period of occultation (*g̲h̲ayba* [*q.v.*]) many practical activities reserved for the Imām during his presence, based on the Imām's designation of the *faḳīh* as his *nāʾib* (deputy). The Uṣūliyya also divided the community into the unschooled *ʿāmmī* (lay believer) and the *mud̲j̲tahid* [*q.v.*], requiring the former to practice *taḳlīd* [*q.v.*] of the latter's legal ruling and accept his authority over other matters of doctrine and practice within the community. In addition, the Uṣūliyya permitted to the *faḳīh* a wide scope of interaction with the secular political establishment, especially insofar it might protect or further the interests of the community. Al-Karakī initially argued that his involvement with the court was permitted by virtue of his being *nāʾib* to *al-imām al-ʿādil*, an implicit acceptance of Ismāʿīl's claims to the imāmate. Criticised on this point, al-Karakī advanced the concept of *niyāba ʿāmma* ("general delegation of the Imām's authority"), identified *al-faḳīh al-d̲j̲āmiʿ li 'l-s̲h̲arāʾiṭ* as *nāʾib ʿāmm* ("general deputy") of the Imām, and justified his involvement with the court as that permitted between the *nāʾib ʿāmm/faḳīh* and *al-d̲j̲āʾir* (the tyrannous ruler)

as leader of a non-Twelver political institution.

The open criticism of al-Karakī's association with the court by such clerics from the Gulf and the Shīʿī shrine cities in Arab ʿIrāḳ as Ibrāhīm b. Sulaymān al-Ḳaṭīfī (d. after 945/1539) pointed to the presence of anti-Uṣūlī, Akhbārī-style polemic in the community during the first Ṣafawid century. In exchanges with al-Karakī, al-Ḳaṭīfī, for example, promoted the definition of *al-djāʾir* of such earlier Akhbārīs as Muḥammad b. ʿAlī, al-Shaykh al-Ṣadūḳ (d. 381/991-2 [see IBN BĀBAWAYH]), as a false claimant to the imāmate—implicitly denouncing Ismāʿīl as such—and rejected the *niyāba* of the *faḳīh* and thereby the latter's role in such practical activities as the collection and distribution of *zakāt* and the leadership of Friday prayer. Where al-Karakī's support derived primarily from the court, elements of al-Ḳaṭīfī's critique clearly enjoyed the support of both certain Arab ʿIrāḳī Twelver clerics and of the local poor and artisanal sections of the ʿIrāḳī Shīʿa. The resentment of these "popular" classes derived at least partly from their having been taxed to pay for a tour of the area by Ismāʿīl, accompanied by al-Karakī, after the Ṣafawids' capture of Baghdād in 914/1508.

The widespread censure of al-Karakī forced his permanent relocation to the court. There the intra-Ḳîzîl-Bāsh civil war following Ismāʿīl's death encouraged factions at court to support the challenge of several Persian clerics and the *ṣadr* Niʿmat Allāh al-Ḥillī (d. 940/1533)—a student of al-Karakī and the first genuine Twelver cleric to hold the post—to the latter's ruling that the *faḳīh/nāʾib* might lead the Friday prayer, a challenge also supported by al-Ḳaṭīfī. Al-Ḥillī's co-*ṣadr* Ghiyāth al-Dīn Manṣūr b. Muḥammad al-Dashtakī (d. 948/1541) criticised specific instances of al-Karakī's exercise of power (see also below, subsections II and III. ii. on philosophy and astronomy).

Al-Karakī's triumph in these contests—al-Ḥillī was banished, al-Ḳaṭīfī admonished, al-Dashtakī dismissed, another student of al-Karakī was appointed *ṣadr*, and in 939/1532 a *firmān* was issued declaring al-Karakī *nāʾib al-Imām* and granting him authority over the polity's religious affairs and the faith's propagation—was, however, more apparent than real. Court support for al-Karakī owed more to the efforts of the ascendant Shamlū to hand over responsibility for the spiritual sphere to a cleric of proven loyalty, freeing themselves to consolidate their own position at the centre of the Ḳîzîl-Bāsh coalition; indeed, given the terminology of the *firmān*, al-Karakī was perhaps directed to compose the *firmān* himself. Beyond lip-service, the political élite paid little interest to the faith. Moreover, the *firmān*'s charge to al-Karakī to further promulgate the faith within the realm suggested that Twelver Shīʿism had failed to expand significantly the number of its adherents in Ṣafawid territory.

Indeed, internal and external forces opposed to al-Karakī, if not also Ṣafawid Shīʿism itself, only flourished. The former, as represented by al-Ḥillī, continued to grow stronger in such a way that, although a student of al-Karakī became *ṣadr* sometime after al-Karakī's death, Friday prayer services were discontinued in Ṣafawid territory. Within the larger Twelver community regionally, al-Ḳaṭīfī's sniping persisted, as did the Lebanese clerics' open boycott of Ṣafawid Shīʿism and disavowal of al-Karakī's association therewith. These clerics experienced little harassment from Sunnī Ottoman authorities. Zayn al-Dīn's sudden execution by the Ottomans in 965/1557—at which al-Ḥusayn fled to Ṣafawid territory with his young son, Shaykh Bahāʾī (d. 1030/1621) al-ʿĀmilī [*q.v.*, and see below, subsections II and III]—failed to spark any mass migration of Arab Twelver clerics from Ottoman to Ṣafawid territory. Al-Ḥusayn himself, though he accepted court positions and remuneration, later left Ṣafawid territory and disavowed his own Ṣafawid associations.

The continuing losses by the Ṣafawids of substantial territories to the Ottomans, beginning a year after al-Karakī's death in 941/1534 (including Baghdād and the shrine cities), the 962/1555 treaty formalising those losses, the chaos that further shook the "empire" at the death of Ṭahmāsp, and the effort to re-establish Sunnism under Ismāʿīl II (984/1576-7 [*q.v.*]) only pointed to the imminent demise of the Ṣafawid experiment and underlined the precarious position of the faith in Ṣafawid hands. Indeed, pockets of Persian Sunnism, e.g. in Ḳazwīn, remained viable over the entire period.

Prominent Twelver Uṣūlī scholars continued their boycott of Ṣafawid Shīʿism in the latter part of the century. Neither Zayn al-Dīn's son al-Ḥasan (d. 1011/1602-3), aged seven at his father's death, or his relative and associate Sayyid Muḥammad b. ʿAlī (d. 1009/1600)—authors of the important *Maʿālim al-dīn* and *Madārik al-aḥkām* respectively—were removed from Ottoman territory. Both studied with al-Ḥusayn b. ʿAbd al-Ṣamad in the Lebanon and in ʿIrāḳ with the Persian clerics ʿAbd Allāh al-Yazdī (d. 981/1573) and Aḥmad b. Muḥammad al-Ardabīlī (d. 993/1585, author of the influential *Madjmaʿ al-fāʾida* and *Zubdat al-bayān*), both of whom had abandoned Ṣafawid territory. Both also later forsook plans for a pilgrimage to Mashhad for fear ʿAbbās I [*q.v.*] would press them into his service.

The existence of significant Twelver communities located at and around the shrine cities of ʿIrāḳ, as well as the Gulf and the Lebanon, as alternative points of focus and independent bases for the community, facilitated both the Uṣūlī and Akhbārī critiques of Ṣafawid Shīʿism in general and the manner in which al-Karakī had cast his lot with Ṣafawid Shīʿism in particular.

In the 11th/17th century, however, in a gradually improving politico-military atmosphere, the patronage of the court and the Ṣafawid political and socio-economic élite was directed to the establishment of Twelver centres in Persia. The development of these as alternatives to the educational centres and shrines located in Ottoman territory, especially those of ʿIrāḳ—captured in 1033/1623-4 but lost to the Ottomans in 1048/1638 and never retaken—and Mecca and Medina, complemented Ṣafawid efforts to develop Persian centres of commerce and trade and stem the outflow of precious metals. Attention to economic considerations grew with rising expenditures and falling revenues over the century, particularly after the accession of ʿAbbās II in 1052/1642 (Matthee, *Politics and trade*, esp. 218-77, and 239, citing the 17th-century account of Tavernier; idem, *The career of Mohammed Beg*).

ʿAbbās I designated Iṣfahān as the new Ṣafawid capital and he, later shāhs, and associates of the court, made important additions to older buildings and founded new mosques and schools in the city; by late in the century, it contained more than 150 mosques and 48 religious schools. The court and its associates also contributed directly to the enhancement of Ḳum [*q.v.*], location of the tomb of Fāṭima, sister of the eighth Imām, as an educational centre and pilgrimage site; later shāhs were buried in precincts adjacent to the shrine itself. ʿAbbās I's famous walk from Iṣfahān to Mashhad, burial place of the eighth Imām, typified

efforts made to enhance the fame of that city and its shrine.

Many individual clerics were often direct recipients of the patronage which these programmes involved. As part of his massive building programme in Iṣfahān, ʿAbbās built a school for ʿAbd Allāh al-Shushtarī (d. 1021/1612-13), who had come to Persia from Nadjaf, where he had studied with al-Ardabīlī. ʿAbbās built a mosque for Luṭf Allāh al-Maysī (d. 1032/1622-3), grandson of a Lebanese cleric who had avoided the court. Shaykh Bahāʾī, who had served as *Shaykh al-Islām* in Harāt and composed his *Zubdat al-uṣūl*, an important work of Uṣūlī jurisprudence, was appointed to the same post in Iṣfahān, took an active role in the capital's building programme and also undertook domestic political missions for ʿAbbās, managing the shāh's constitution of his estates as *wakf*.

As these clerics' close connection with the court paralleled that of al-Karakī, so many observed and built on his Uṣūlī pronouncements. All staunchly supported the conduct of Friday prayer service during the occultation, for example. Mīr Dāmād (d. 1040/1630-1 [see AL-DĀMĀD and below, subsections II and III. i])—whose father was son-in-law to al-Karakī, and who had studied under students of al-Shahīd al-Thānī, including the father of Shaykh Bahāʾī, and was a close associate of the courts of both ʿAbbās I and Ṣafī—using the concept of general delegation of authority, stated that the individual in possession of *al-niyāba al-ʿāmma* was to lead that prayer, and defined the latter as the *mudjtahid/fakīh* who had attained *sharāʾiṭ al-iftāʾ*. Shaykh Bahāʾī supported an active role for the *fakīh* in the collection and distribution of the *zakāt* and *khums*, following similar rulings by earlier Uṣūlī clerics. Their court connections affirmed these clerics' concomitant endorsement of the *fakīh*'s associating with the established political institution, and legitimised the court's claim to a special, indeed exclusive, relationship with the faith itself.

These Persian centres and clerics increasingly became a focus for the region's Twelver community, attracting both Persian and Arab students and producing many of the most prominent scholars of the later 11th/17th century. Thus among Shaykh Bahāʾī's students were Ṣadr al-Dīn Muḥammad al-Shīrāzī (d. 1050/1640 [see MULLĀ ṢADRĀ, and also below]), Muḥammad Taḳī al-Madjlisī (d. 1070/1659 [*q.v.*]), Muḥammad Bāḳir al-Sabzawārī (d. 1090/1679), Muḥsin Fayḍ al-Kāshānī (d. 1091/1680 [*q.v.* and see below, subsections II and III. i]) and Mīrzā Rāfiʿ al-Dīn Nāʾinī (d. 1099/1688). Many of this generation of scholars also both supported, and enjoyed good relations with, the court and approved of the expanded role of the *fakīh* during the occultation. Thus Sabzawārī—a proponent of *al-niyāba al-ʿāmma* and teacher at al-Shushtarī's school—officiated at, and Nāʾinī attended, the *djulūs* or accession ceremony of Shāh Sulayman. Muḥammad Taḳī al-Madjlisī was Friday prayer leader in Iṣfahān and his son the noted cleric Muḥammad Bāḳir (d. 1111/1699), following in the footsteps of his father's teacher Shaykh Bahāʾī, was appointed the capital's *Shaykh al-Islām* by Shāh Sulaymān; his famous, massive *ḥadīth* compilation, the *Biḥār al-anwār*, was assembled with court assistance (Kohlberg, *Beḥār al-Anwār*). Like the Madjlisī family, which included such later eminent Uṣūlī scholars as Muḥammad Bāḳir b. Muḥammad Akmal al-Bihbahānī, al-Waḥīd (d. 1205/1791 [*q.v.*]), the Marʿashī [*q.v.*] family, forebearers of the present-day Marʿashī-Nadjafī family, also had important court connections in this period. These included marriage with the family of ʿAbbās I, appointment to the position of *ṣadr*, and the designation by ʿAbbās II of one of their number, Khalīfa Sulṭān (d. 1065/1655), himself a noted cleric, to the vizierate.

The relations between this second-generation of Persian-based Twelver clerics and the court continued to legitimise the Ṣafawid's public, and exclusive, claim to a special association with the faith, although these claims were expressed in less extreme terms than in the previous century. Muḥammad Bāḳir al-Madjlisī, for example, in an essay reflective of the continued, but more restrained, nature of this affiliation, argued that Ismāʿīl's appearance portended the impending re-appearance of the Mahdī himself (Babayan, *The waning*, 182-5, 189-91). The same clerics were also actively involved in the domestic propagation of the faith. Al-Shushtarī's school was built in the heart of the bazaar, for example. Fayḍ al-Kāshānī, his associate and friend Muḥammad Taḳī al-Madjlisī, and his son Muḥammad Bāḳir, were among those who wrote numerous Persian-language tracts on the most basic doctrines and practices of the faith.

As the faith established and broadened its foothold in the country, so the disputes over matters of doctrine and practice, and the relation between the clergy and the state, found expression in Ṣafawid territory as well. The Uṣūliyya/Akhbāriyya dispute, which turned on this combination of arguments, was given new life in Persia following the accession of ʿAbbās I with the open association of such of the Uṣūlīs as Shaykh Bahāʾī and Mīr Dāmād with the court. By later in the century, the dispute had flourished to such an extent that among the ever-larger number of Twelver clerics resident in Persia factions within each tendency became discrete. Extreme Uṣūlīs asserted the falseness of the Ṣafawid association with the faith, and argued for direct clerical rule. The Uṣūlīs and the moderate Akhbārīs (*mudjtahid-muḥaddith*), however, agreed on the authority of the *fakīh* as *djāmiʿ sharāʾiṭ al-idjtihād* over matters of doctrine and practice and permission for him to interact with the established political institution. This latter group included Muḥammad Amīn al-Astarābādī (d. 1030/1640) (often identified as the "founder" of the Akhbārī school, see Kohlberg, *Astarabadi*) and such higher-ranking, court-connected scholars at Iṣfahān and provincial centres as Muḥammad Taḳī al-Madjlisī, Khalīl al-Ḳazwīnī (d. 1088/1677), Fayḍ al-Kāshānī, Muḥammad Ṭāhir b. Muḥammad Ḥusayn al-Shīrāzī al-Ḳummī (d. 1098/1687, and *Shaykh al-Islām* in Ḳum during the reign of Shāh Sulaymān) and Muḥammad b. al-Ḥasan al-Ḥurr al-ʿĀmilī (d. 1104/1693 [*q.v.*]) (who came to Persia, settled in Mashhad, and was there appointed *Shaykh al-Islām*.

By contrast, the radical Akhbārīs (*muḥaddith*) were particularly a force in the provincial and smaller centres of the faith inside Ṣafawid Persia, such as Mashhad, and peripheral regions outside Ṣafawid territory, where they were more likely strong among lower-ranking urban clerics and recent immigrants to the cities. Unschooled in, and rejecting the validity of recourse to the rationalist legal sciences, these clerics relied solely on the *ḥadīth* of the Imāms in all matters of doctrine and practice; some rejected the Ḳurʾān itself as evidence (Newman, *The nature of the Akhbārī/Uṣūlī dispute*).

Religious orthodoxy did not always win the day among all segments of the "lay" community. "Popular" religious practices and customs, of which the court and its clerical protégés disapproved and tried to suppress or control, remained widespread.

Coffee-houses, for example, were a ubiquitous feature of the country, particularly in the second Ṣafawid century owing to the rapid urbanisation of such cities as Iṣfahān in this period [see ḲAHWA]. These were patronised by all classes of people, but especially by such of the "lower" orders as artists, poets, tellers of religious stories, scholars, musicians and Ṣūfīs. When the court perceived its interests were threatened, it enlisted the clergy to crack down on these and other "popular" pastimes and activities. The "purge" of 939/1523 coincided with the "victory" of al-Karakī over his opponents, for example (Rumlū, 113). In the second Ṣafawid century, as the economic hardships of the mid-century encouraged the court to develop indigenous religious centres, the court capitalised on clerical orthodoxy to check any coffee-house based dissent and to focus popular attention on minority merchants as prominent, subordinate, actors in the country's economic life. ᶜAbbās I feared the overtly political nature of coffee-house conversations, and assigned clerics to monitor activities in coffee-houses and to preach sermons on Islamic law or lead prayers. ᶜAbbās II's vizier Khalīfa Sulṭān launched a widespread, if also temporary, suppression of certain coffee-house excesses, wine-drinking and prostitution, and a similarly shortlived effort to convert the country's Jews—like that undertaken by ᶜAbbās I—and to restrict certain activities of Armenian merchants (Matthee, *Coffee in Safavid Iran*, esp. 26-30; idem, *The career of Muḥammed Beg*, 27-9; Āl-e Dāwūd, *Coffeehouse*, 1-2; Babayan, *The waning*, 255-6).

Also problematic were Ṣūfī influences rivalling the paramountcy of the Ṣafawid Ṣūfī order and the associated hegemonic position of the Uṣūlī clerical establishment. These challenges frequently involved elements of rural and urban *ṭarīḳa* Ṣūfism and became especially ominous when linked with messianic revivals among both rival and intra-Ḳizil-Bāsh tribal movements. The various phases of the Nuḳṭawiyya [*q.v.*] "heresy" typified these connections and the resultant Ṣafawid concern, especially the Nuḳṭawī rebellion against ᶜAbbās I in 1002/1593, in which both members of the Ḳizil-Bāsh confederation and disaffected urban elements were implicated (Babayan, *op. cit.*, 46-7; Amoretti, *Religion*, 644-6). The *khurūdj* of Darwīsh Riḍā in 1040/1631 was particularly threatening for its messianic overtones and the support the latter engendered among some Ṣafawid *oymaḳs* (Babayan, *op. cit.*, 103-4). The urbanisation trends of the second Ṣafawid century further encouraged the rise of urban-based lower-class/"popular" Ṣūfī movements.

The Uṣūlī/Akhbārī polemic intersected with the broader concern with Ṣūfī influence. Members of each *madhhab* denounced Ṣūfī orders and their "heretical" practices, but imputing "low" Ṣūfī tendencies especially became a device of the lower-ranking, or otherwise peripheralised, clerics with which to assault the small number of court-supported Uṣūlī and moderate Akhbārī clerics and their associates. These were a small group, often conveniently related by ties of family and education, whose interests in aspects of élite/"high" philosophical or gnostic inquiry were as exclusivist and élitest in doctrine and practice as their jurisprudence. These denunciations were especially frequent during the second Ṣafawid century, coinciding with court efforts to combat such Ṣūfī-oriented movements as the Nuḳṭawīs and that of Darwīsh Riḍā, the still-strong Ṣūfī proclivities among the Ḳizil-Bāsh and the Ṣūfī influence in the rapidly expanding urban centres, including e.g. Iṣfahān. Such criticism won sufficiently widespread appeal to help force the resignation of Shaykh Bahāʾī as *Shaykh al-Islām* in Iṣfahān. Bahāʾī's student Mullā Ṣadrā Shīrāzī was likewise charged with Ṣūfī inclinations; Rahman (*The philosophy of Mullā Ṣadrā*, 2-3) has suggested that Ṣadrā's disagreement with his teacher Mīr Dāmād and his subsequent repudiation of such concepts as *waḥdat al-wudjūd*, as in his *Ṭarḥ al-kawnayn*, can at least be partly explained as the result of such attacks. Ṣadrā's only Persian-language prose work, *Sih aṣl*, was a defence against allegations of Ṣūfī tendencies.

The interest of Fayḍ al-Kāshānī—a student of Bahāʾī, Mīr Dāmād, and Ṣadrā, and the latter's son-in-law—in Akhbārism was at least partly defensive, stemming from a growing appreciation of the potential and real attacks against him for his court and family connections and his own philosophical interests. In fact, Fayḍ accepted enough of Uṣūlī doctrine—arguing that the command of the shāh was sufficient justification for the performance of Friday prayer, leading Friday prayer in Iṣfahān and ruling that the *faḳīh*, based on *al-niyāba*, ought to oversee the collection and distribution of *al-khums*—to qualify him as a *mudjtahid-muḥaddith*; his philosophical proclivities similarly tended to the "high", exclusive gnosticism of his teachers. Sabzawārī was also attacked for his purported Ṣūfī tendencies.

Later in the century, Muḥammad Bāḳir al-Madjlisī, another associate of the court and *Shaykh al-Islām* of the capital, was forced into a posthumous defence of his father Muḥammad Taḳī—like Fayḍ al-Kāshānī a *mudjtahid-muḥaddith* with philosophical tendencies—against charges that the former was a Ṣūfī. His own disclaimer of interest in and his censure of Ṣūfism and philosophy, and also his work with Twelver *ḥadīth*, at least partly stemmed from concern lest he be subjected to similar attacks from the same quarters. Nevertheless, al-Madjlisī exhibited some interest in Islamic esoterica, and his essay on the Jews *Ṣawāᶜiḳ al-Yahūd* is a balanced, if stern, discussion of the general duties enjoined on the *ahl al-dhimma*, in which he stated that some prohibitions were without legal foundation and in which he permitted Muslim rulers a wide latitude in implementing any or all of them.

If widespread approval for anti-Uṣūlī polemics increased such "discretion" in Uṣūlī discourse, the court's backing for its clerical supporters nevertheless assured their dominance of key religious institutions, and thus the material wherewithal to continue their intellectual activity throughout the period. By later in the Ṣafawid period, the Persian centres of the faith were on a par with, if they had not eclipsed, the ᶜIrāḳī shrines, and developments in the Uṣūlī and Akhbārī traditions in this period enabled the faith to weather its disestablishment following the fall of the Ṣafawid house. Akhbārīs fled to the ᶜIrāḳī shrine cities at the time of the Afghān invasion and were eventually defeated as a force within the community by al-Waḥīd al-Bihbahānī (Cole, *Shīᶜī clerics*, esp. 15-23).

Crucial to and further cementing this Uṣūlī triumph, however, was the Ṣafawid-period articulation of concepts enhancing clerical authority within the community. The final formalisation of the concept of *al-mudjtahid al-muṭlaḳ*, for example, facilitated further differentiation in the clerical hierarchy and the subsequent evolution of such concepts as *mardjaᶜ-i taḳlīd* (the source of emulation) [*q.v.*], the rankings of *ḥudjdjat al-islām* [see ḤUDJDJA] and *ayātullāh* [*q.v.* in Suppl.] and, eventually, the principle of government by an expert in jurisprudence, or *wilāyat-i faḳīh*. The Uṣūlīs' recovery of control over the Persian Shīᶜī religious institution—the schools, shrines and mosques—and Ḳādjār patronage of the faith, on the

Ṣafawid model, provided the clergy with resources to maintain and eventually activate these concepts in spite of, if not also as much because of, the hostility of the various established political institutions and their ubiquitous foreign backers.

II. *Philosophy in the Ṣafawid period*

The written legacy of the practitioners of "high" philosophical and rationalist religious discussion identifies them as members of the same tiny, scholarly class who traditionally served and identified with the agenda of the established political institution. The conditional nature of court interest and support, the inherent tendency to restrict the scope for inquiry permitted the untrained, and the extent to which the scope and style of their inquiry was determined by the preceding discourse, were thus as much features of "high" philosophical inquiry as the "high" religious one. As leading Uṣūlī scholars, these philosophers also participated in the teaching and training of future generations of Shīʿī philosophers, thus enhancing the reputation of the Persian centres of education and study as well as creating a new class of clerics whose interests were linked with those of the political and socio-economic élite.

That the careers and scholarly agenda of the "high"/"élite" philosophers of the Ṣafawid and earlier periods were more similar than not, is evident from examining figures who lived through both. Djalāl al-Dīn Muḥammad Dawānī (830/1426-908/1502-03 [*q.v.*]), for example, was based in Shīrāz and studied with students of al-Sharīf al-Djurdjānī (d. 816/1413 [*q.v.*]) and teachers of Ibn Hadjar al-ʿAsḳalānī (d. 852/1449 [*q.v.*]). Dawānī enjoyed the patronage of and served the region's pre-Ṣafawid political establishments, including the Tīmūrid Abū Saʿīd (d. 873/1469 [*q.v.*]) and the Ottoman sultan Bāyezīd II (d. 918/1512 [*q.v.*]).

Although his philosophical contributions have yet to receive detailed, comparative attention, Dawānī appears to have been primarily a reviver of aspects of the Illuminationist tradition, while remaining loyal to the rationalist aspects of Ibn Sīnā's thought (Rahman, *The philosophy of Mullā Ṣadrā*, 9). Like Suhrawardī (d. 578/1191 [*q.v.*, and see also ISHRĀḲ and ISHRĀḲIYYŪN]), Dawānī maintained that existence had one reality and no multiplicity. Like Naṣīr al-Dīn al-Ṭūsī (d. 672/1274 [see AL-ṬŪSĪ]), Dawānī's cosmology involved the gradual unfolding of intellects, spheres, elements, and kingdoms. The active intellect—which he identified with the original essence of the Prophet—bridges the gap between heaven and earth. The revolutions of the spheres, by nature stationary but changeable in quality, control the material world and create new situations wherein the active intellect engendered a new form to reflect itself in the mirror of elemental matter. In this way, the intellect passes through the various states of matter and finally appears in man in the form of acquired intellect, eventually re-acquiring its original form of unity of collective potential. This circular process he termed *ḥarakat-i waḍāʿī*. The motions in the process are in fact the shadows of motion proceeding from God's desire for self-manifestation; the mystics term this the flashing of Self upon Self. In his metaphysical *al-Zawra*, Dawānī elevated mysticism above philosophy, even as he asserted both had the same goal, because mysticism benefitted from divine grace and so was free from doubt and uncertainty and thus nearer to prophethood.

At the same time, some of his works clearly reflect his other role as a royal scribe, the career for which he was probably as well, if not better, known at court. His works in this genre, written for royal benefactors, included a description of a military review in Fārs entitled *ʿArḍ-nāma*, and his contribution to the "mirror for princes" genre *Akhlāḳ-i djalālī*. Indeed, he also dedicated to his royal patrons his Ishrāḳī-style commentary *Shawākil al-nūr* on the *Hayākal al-nūr* of Suhrawardī.

Although later sources contend that he was a Shīʿī practising *taḳiyya* prior to the rise of Ismāʿīl, Dawānī's Sunnī proclivities were unequivocal in his early works. Even after the Ṣafawid occupation of Tabrīz, he is said to have rejected Ismāʿīl's messianic claims. The court functionary's traditional capacity for adjustment was evident, however, in Dawānī's almost perfunctorily Shīʿī work *Nūr al-hidāya*, probably composed as the Ṣafawids approached Shīrāz, where he died before the city's capture. Dawānī's student Djamāl al-Dīn al-Astarābādī (d. 931/1524-5) was the sixth Ṣafawid *ṣadr* but, like his teacher, was more comfortable with philosophical disputes than the tenets of the newly established faith (Newman, *The myth,* 75 n. 24).

Dawānī clashed with his contemporary Ṣadr al-Dīn Muḥammad Dashtakī (d. 903/1498), another "high" philosopher associated with both the Tīmūrid and Ṣafawid courts, both in treatises and also in glosses on works by al-Ṭūsī and Suhrawardī. Ṣadr al-Dīn's son Ghiyāth al-Dīn Manṣūr (see also the preceding section) continued the anti-Dawānī polemic after the death of the original protagonists. Although the details are still poorly understood, the disagreement involved points of debate well within the tradition of Islamic "high" philosophy to date. Dawānī, like Suhrawardī, argued e.g. that existence had but one, single reality, where Ghiyāth al-Dīn argued there was no existence at all.

Like Dawānī and his own father, Ghiyāth al-Dīn was as much a court protégé and functionary as other Shīrāzī philosophers in the tradition of Ḳutb al-Dīn al-Shīrāzī [*q.v.*; see also below, subsection III. ii], himself a student of al-Ṭūsī. Ghiyāth al-Dīn maintained good relations with Bāyezīd II, and served as vizier to the Tīmūrid Sultan Ḥusayn Bayḳara (r. 874-911/1469-1506 [*q.v.*]). Although for the Ṣafawids the religio-political proclivities of both Dashtakīs were less important than their status as court functionaries, later Ṣafawid and post-Ṣafawid biographers claimed that Ṣadr al-Dīn Muḥammad was the first openly Shīʿī member of the family. Shāh Ismāʿīl reportedly called on Ghiyāth al-Dīn to undertake repairs to al-Ṭūsī's observatory at Marāgha [*q.v.*] (see also below, subsection III. ii), and in 936/1529 Ṭahmāsp appointed him co-*ṣadr* with al-Ḥillī. Ghiyāth al-Dīn's challenge to al-Karakī coincided with, if it did not support, that of al-Ḥillī and certain tribal elements (see above). At his dismissal, Ghiyāth al-Dīn returned to Shīrāz's Manṣūriyya school.

Members of Nasr and Corbin's "Iṣfahān School of Philosophy"—Shaykh Bahāʾī, Mīr Dāmād, Mullā Ṣadrā, Fayḍ al-Kāshānī, Mīr Findiriskī (d. 1050/1640 [*q.v.* in Suppl.]) and ʿAbd al-Razzāḳ al-Lāhidjī (d. 1072/1662 [*q.v.*])—the "high" philosophers of the second Ṣafawid century, were similarly close associates of the court, but with clear-cut allegiance to the basic tenets of Uṣūlī Shīʿism. Like Ghiyāth al-Dīn, their fortunes varied with broader socio-religious and political trends. Like him also, they served the court also as scribes. However, spurred on by the interest of Nasr and Corbin, analysis has revealed they advanced important contributions to Islamic philosophy.

Nasr and Corbin distinguished Mīr Dāmād—student of both Shaykh Bahāʾī and the latter's

father—as the outstanding figure of Ṣafawid-period philosophy. Subsequent Persian evaluations have only echoed this assessment, according him such titles as *Sayyid al-ḥukamā᾽* ("Master of the wise men"), *Sayyid al-falāsifa* ("Master of the philosophers"), and *muᶜallim-i thālith* ("the third teacher", after Aristotle and al-Fārābī [*q.v.*]).

Mīr Dāmād's contribution to Uṣūlī doctrine and practice has been noted. His philosophical accomplishment was to build on the interpretations of Suhrawardī—whose notion of the principality of essence (*iṣālat al-māhiyya*) over existence (*wudjūd*) he accepted—and Dawānī and to revive Ibn Sīnā's metaphysics and transform it from a purely rational, abstract system of thought into a spiritual reality through the application of Ishrāḳī principles within a Shīᶜī framework. His preoccupation with issues of time and the relation between the eternal (*ḳidam*) and the created (*ḥudūth*) produced his most famous philosophical contribution, the concept of *ḥudūth-i dahrī* ("origination, or creation, in perpetuity"). The latter distinguished three, separate and distinguishable levels of being and postulated a middle level (*dahr*) between the immutable world (*sarmad*) and the changing world (*zamān*), in which the two are related and through which the eternal, unchanging reality manifests itself in the world. Mīr Dāmād's merging of Avicennan philosophy with Suhrawardī's illuminationism within a Shīᶜī construct informed the thought of later Ṣafawid-period philosophers, including that of his students Mullā Ṣadrā, Mīr Dāmād's son-in-law Sayyid Aḥmad ᶜAlawī and Mullā Shamsā Gīlānī (d. 1098/1686-7). The latter, especially, continued Mīr Dāmād's efforts to harmonise aspects of the contributions of Ibn Sīnā and Suhrawardī.

Ṣadr al-Dīn Muḥammad Shīrāzī was born *ca.* 980/1571 to an aristocratic Shīrāzī family. In Iṣfahān he studied the Twelver Shīᶜī religious sciences with Shaykh Bahā᾽ī and the rationalist, philosophical disciplines with Mīr Dāmād, spent more than a decade in Kahak near Ḳum, after which he was invited by ᶜAbbās II to return to Shīrāz to teach. He spent the last thirty years of his life teaching at the city's Khān school—built for him by Allāhwardī Khān, the governor of Fārs—during which time he completed many of his best-known works.

Ṣadrā's thought built on that of Mīr Dāmād in order to integrate Ibn Sīnā's thought with Ishrāḳī interpretations through a Twelver Shīᶜī framework. Initially, Ṣadrā agreed with Mīr Dāmād and Suhrawardī on the principality of essence, while existence was an unreal mental, phenomonological derivative. Eventually, however, as he made clear in his *magnum opus al-Asfār al-arbaᶜa*, written when he was nearly sixty, he agreed with Ibn Sīnā's understanding of the principality of existence (*iṣālat al-wudjūd*) over essence, even as he accepted the notion that existence, while a single reality (thus following Dāwānī and Mīr Dāmād), manifested itself luminously in different degrees and stages (Rahman, *The philosophy*, 1-3; Nasr, *Three Muslim sages*, 67).

Ṣadrā also came to reject Mīr Dāmād's *ḥudūth-i dahrī*, on the grounds that the objects which become manifest in the *dahrī* level of existence are but individual forms and do not represent species as did Platonic forms. In this, he accepted aspects of Suhrawardī's doctrine of Lord of the Species (Rahman, *ibid.*, 47-8).

Ṣadrā's debt to Suhrawardī also manifested itself in his adherence to the notion of "trans-substantial motion" (*al-ḥaraka al-djawhariyya*). Ibn Sīnā had rejected this concept and denied the reality of "Platonic ideas". As Ṣadrā held that a single reality revealed itself in varying degrees and stages and upheld the notion of Platonic ideas of archetypes of things which became manifest in the world, *al-ḥaraka al-djawhariyya* became the means by which the substance of these changed and evolved to a stage where they achieved immutability. Likewise, man himself can achieve this state. Indeed, for Ṣadrā the goal of *ḥikma* is precisely the realisation of this status. Thus trans-substantial motion is for Ṣadrā both a point of metaphysics and of natural philosophy.

Ṣadrā's doctrines also included many of the basic principles of gnosis as formulated by Ibn al-ᶜArabī [*q.v.*], as Ṣadrā understood the necessity for a relationship between mystical experience and logical thinking. In harmonising philosophy and gnosis, Mullā Ṣadrā was building on the work of Islamic thinkers from the 6th/12th to the 10th/16th century, including Ḳutb al-Dīn Shīrāzī, al-Djurdjānī, Ḥaydar Āmulī, Radjab Bursī, Ibn Turka Iṣfahānī, Ibn Abī Djumhūr Aḥsā᾽ī [*q.v.* in Suppl.] and Mīr Dāmād himself. However, unlike some of these earlier scholars, Ṣadrā grounded his reconciliation of these two traditions of inquiry firmly in the revelation of Twelver Shīᶜism.

Of note is the fact that Ṣadrā composed nearly all of his works in Arabic, reflecting the fact that his intended audience was based in the exceedingly tiny class of highly sophisticated, mainly religious thinkers of the time. In his own time, the influence of Ṣadrā's thought was quite limited, though links to Akhbārī and Shaykhī thought have been suggested (Morris, *The wisdom*, 49). In the Ḳādjār period, Ṣadrā's contributions were re-activated by Mullā Hādī Sabzawārī (d. 1295/1878 or 1298/1880-1 [*q.v.*]).

Ṣadrā's students included his son-in-law Fayḍ al-Kāshānī and al-Lāhidjī, another son-in-law, who himself taught Muḥammad b. Saᶜīd Ḳummī, Ḳāḍī Saᶜīd Ḳummī (d. 1103/1691). In addition to being a judge, Ḳummī was also a physician and a gnostic, even as he, like the earlier generation of Iṣfahān School members, worked solidly within the framework of Twelver Shīᶜism. Indeed, as summarised by Corbin, at the hands of Mīr Dāmād, Ṣadrā and Ḳāḍī Saᶜīd Ḳummī "Ishrāḳī Avicennism became the Shīᶜite philosophy" (*Creative imagination*, 23).

It has been suggested that Mīr Findiriskī was also a student of Mullā Ṣadrā. Mīr Findiriskī was a prominent figure both at court and among such of his contemporaries as Mīr Dāmād and Shaykh Bahā᾽ī, involved himself in some Ṣūfī practices, lived a simple, ascetic lifestyle, travelled to India several times and was familiar with aspects of Hinduism as well as with such of the occult sciences as alchemy. If he studied with Ṣadrā, his own "high" gnostic interests manifested themselves in a closer affiliation with Ibn Sīnā and included a denial of Ṣadrā's notion of trans-substantial motion. Among his students were Mullā Rāfiᶜā Gīlānī (d. 1082/1671-2), the Uṣūlī jurisprudent Muḥammed Bāḳir Sabzawārī (see the preceding section), the jurisprudent and philosopher Āghā Ḥusayn Khᵂānsārī (d. 1080/1669-70), and Radjab ᶜAlī Tabrīzī (d. 1080/1669-70). The latter, also an opponent of trans-substantial motion, taught Ḳāḍī Saᶜīd Ḳummī.

The prolonged attack against the "high" scholasticism practised by these philosophers and like-minded religious scholars in the second Ṣafawid century is discussed in the preceding section.

III. *Science and society in the Ṣafawid period*

As the patrons and practitioners of "high" philoso-

phy and "high" religious discourse were drawn from the court and its small, learned coterie, so the legacy of Ṣafawid-period science, broadly construed, is initially understood with reference to the careers and contributions of those literate few who enjoyed the backing of both the central and provincial courts. Indeed, some of the small number of masters of "high" religious and philosophical inquiry attained proficiency in certain scientific disciplines. Evidence of "popular" theories and practices is available, however, especially, for example, in medicine.

i. *Medicine in the Ṣafawid period*

That Persian society as a whole was aware of and affected by issues of illness and wellness is amply attested. The court chronicles report plague (*ṭāʿūn* [*q.v.*]) in Ardabīl in 981/1573 (Ḳummī, i, 587), plague and cholera (*wabāʾ*) in Tabrīz in 988/1580 (*ibid.*, ii, 713), plague in Ḳum and Khurāsān the next year (*ibid.*, ii, 723), plague and cholera in Ḳazwīn in 1001/1592-3 (Munshī, ii, 631-2), and plague in Ādharbaydjān and then Ḳazwīn in 1033/1623-4 (*ibid.*, ii, 1243). In 1095/1684 cholera struck Rasht and spread to Ardabīl the following year. In 1097/1686 cholera also struck Tabrīz and Māzandarān (Khātūnābādī, 538).

The court and its associates were themselves directly affected by illness in this period. Ismāʿīl died in 930/1524 from an illness which "skilful physicians" could not cure (Ḳummī, i, 153). Ṭahmāsp fell ill in 967/1559 for two months (Khātūnābādī, 481). Again, in 982/1574 he fell ill from a "burning fever" (*tab-i muḥarraḳ*), an event leading to a *fitna* at court (Ḳummī, i, 588). He was cured, but died of another illness two years later; in that instance one attending physician was executed for his treasonously unsuccessful efforts (*ibid.*, i, 600). Muḥammad Khudābanda had an eye problem which Elgood put down to "corneal opacity" due to an attempt to blind him in his youth (Elgood, 61). ʿAbbās I fell ill on numerous occasions, from fever during a visit to Mashhad in 1008/1599-1600 (Munshī, ii, 783), in 1029/1619-20 from an illness which affected many at court (*ibid.*, ii, 1176), and again in 1037/1628 from a fever which eventually killed him (*ibid.*, ii, 1297-8). Illness felled ʿAbbās II.

Of the court literati, some of whose names have been mentioned above, Ghiyāth al-Dīn Manṣūr Dashtakī had such a fear of syphilis (*ātishak*) that he refused to shake hands (Ḳummī, i, 296-7; Elgood, 24). The 1001/1592-3 plague and cholera which struck Ḳazwīn killed Ḥusayn al-Karakī al-ʿĀmilī, who had served as Ardabīl's *Shaykh al-Islām* and was grandson of ʿAlī al-Karakī (Munshī, ii, 631-2). Mīr Dāmād was afflicted with scabies (*djarab*), and then "hectic fever" (*ḥummā-yi diḳḳ*) (Elgood, 40). This is not to mention the numerous instances of dysentery (which struck Muḥammad Khudābanda in his last days), smallpox, strokes and fevers, and unnamed illnesses which afflicted and killed those favoured by the court chroniclers.

The different medical theories and practices to which the court and its associates subscribed reveal the availability in society both of the traditional components of Islamic medicine—Galenic/humoural theory, prophetic medicine, and folk medicine and magic (Dols; *Ṭibb al-aʾimma*, vii-xxiii; Savage-Smith, *Islamic medicine*)—and other explanations of illness and wellness.

Many of the individual medical practitioners and medical families best-known in the contemporary and later sources were among the small number of associates of the central and provincial courts, and most were adherents of Galenic [see DJALĪNŪS] medicine. The early Ṣafawid-period physician Bahāʾ al-Dawla (d. *ca.* 912/1507), like Ghiyāth al-Dīn Dashtakī, served the Tīmūrid Ḥusayn Bayḳara. Masʿūd b. Maḥmūd Kāshī (d. 946/1539), "the Galen of the time", was physician to Ṭahmāsp (Rumlū, 134; Ḳummī, i, 293). His medical "dynasty" included his two sons ʿImād al-Dīn and Kamāl al-Dīn Ḥusayn (d. 953/1546), the son of the latter, Nūr al-Dīn (d. 970/1562), who also served Ṭahmāsp, and the son of the former, Muḥammad Bāḳir, who served ʿAbbās I and wrote a well-known essay on ophthalmology. Both Shaykh Bahāʾī and Mīr Dāmād studied under and taught several court physicians. Bahāʾī, for example, taught Ḳāḍī b. Kāshif al-Dīn Ḥamawī (see also below, subsection ii), who had also studied with ʿImād al-Dīn and later sought and received a ruling from Bahāʾī to administer wine to Mīr Dāmād for his scabies and hectic fever, a cure which was successful. He wrote an essay on this point for ʿAbbās I, and another treatise for ʿAbbās II. Ḥamawī's father had come from Yazd to serve ʿAbbās I as a physician, and his son, also a physician, later emigrated to India. The surgeon Ḥakīm Muḥammad enjoyed the patronage of Shāh Ṣafī. Muḥammad Bāḳir ʿAlī Khān, author of a works on cardiac drugs, fevers and gynaecology, served Shāh Sulaymān and Sultan Ḥusayn. Mīr Muḥammad Zamān wrote the famous pharmocopoeia *Tuḥfat al-muʾminīn* for Sulaymān; his father had also served the court. Ḳāḍī Saʿīd Ḳummī (on whom see the preceding section) was also a physician (for a list of court-connected physicians, see Munshī, i, 263-6).

The medical writers in this tradition were familiar with the great medical compendia of the Islamic Galenic medical tradition, including those of al-Rāzī, Ibn Sīnā, al-Djurdjānī, and the late 8th/14th Shīrāzī medical writer Manṣūr b. Muḥammad, called Ibn Ilyās, but are perhaps better known for separate monographs on specific, practical medical issues, many of which were written for their royal patrons. Bahāʾ al-Dawla's *magnum opus Khulāsat al-tadjārib* was arranged like al-Rāzī's *al-Ḥāwī*. ʿImād al-Dīn composed a general medical work in the style of the older books, but also an essay on the china root (*čūb-i čīnī*)—this being acknowledged as a universal cure, and which ʿImād stated cured infertility, opium addiction, baldness, rheumatism and haemorrhoids—and one on the bezoar stone. His essay on syphilis is said to have caused Ghiyāth al-Dīn Dashtakī's fear of the illness (Elgood, 52-3, 24). In addition to his essay on alcohol, Ḥamawī also wrote an essay on the china root, tea and coffee for ʿAbbās II (Elgood, 39-40). Muḥammad Bāḳir b. ʿImād al-Dīn wrote an essay for ʿAbbās I on ophthalmology during the later's Tabrīz campaign; in fact, probably owing to the circumstances of its composition, it also covers wounds, ulcers and syphilis (Elgood, 69). Ḥakīm Muḥammad's work on surgery was dedicated to Shāh Ṣafī, and included chapters on pre- and post-operative procedures. This work suggests that most surgery was for accidents and wounds; the few operations of choice included castration and circumcision. The author devoted several pages to descriptions of surgical instruments, and a section to anaesthetics (Elgood, s.v., and esp. 153-4). A large number of pharmacopoeias [see AḲRĀBĀDHĪN] were written in this period, including the *Ṭibb-i shifāʾī* of Muẓaffar b. Muḥammad al-Ḥusaynī al-Shifāʾī (d. 974/1556), the basis for the French work of 1681, the *Pharmacopoeia persica* of Father Angelus (Elgood, 33-4).

Although belonging to the Galenic tradition, these writers were not themselves unobservant or uncritical.

Elgood, himself a practising physician, credited Bahāʾ al-Dawla with the first accounts of whooping cough decades before the European account (Elgood, 279-80, xiv). He also commended Bahāʾ's awareness of raised blood pressure during pregnancy (270-1). The surgeon Ḥakīm Muḥammad stressed the necessity of cleaning surgical knives between uses, perhaps, so Elgood suggested, having observed the problem of implanting diseased cells from one patient to another (160). Ḥakīm Muḥammad also noted the tendency for cancer of the breast to reappear elsewhere in the body after a mastectomy (*ibid.*, 188, 231).

Indeed, women's illnesses and matters of pregnancy and fertility were frequently addressed in both medical textbooks and monographs. The latter included the essay of Murtaḍā Ḳulī Khān b. Ḥasan Shamlū—not a medical practitioner at all, but one-time civil governor of Ḳum—dedicated to Shāh Sulaymān and titled *Khirḳa-yi khānum dar ʿilm-i ṭibb* ("Women's rags on the science of medicine"), and that of Shāh Sulṭān Ḥusayn's court physician, *Mirʾāt al-djamāl* ("Mirror of beauty"). Such writings, some of whose material derived from earlier medical and religious writings, covered such matters as birth control and abortion, morning sickness, breast feeding and early childhood illnesses.

Given the occasional, spectacular lack of success of these court physicians with their most important patient/patron, and probably also due to the shāhs' tribal backgrounds, the court was also sympathetic to non-Galenic theories and practices.

Prophetic medicine was also a source of medical understanding. Among the Shīʿa, in particular, there was a tradition of medicine based on the *ḥadīth* of the Imāms and thus amenable to easy memorisation. As early as the 3rd/9th century collection *Ṭibb al-aʾimma*, this Shīʿī medical tradition included elements of the Galenic tradition, but also cited the Imāms' advice on preventive medicine, abstention from certain foods, cupping and cauterisation, the use of particular blends of herbs and spices, and statements involving "magic" and warnings about and prayers to counter the evil eye (*Ṭibb al-aʾimma*, Preface). In his anatomical treatise Ibn Ilyās, although not a Shīʿī, accorded equal weight to the prophetic and Galenic medical traditions. In the Ṣafawid period, ʿAlī Afḍal Ḳāṭiʿ included citations from earlier prophetic traditions in his *Ḳarābidīn* (Elgood, 36-8). Muḥammad Bāḳir al-Madjlisī devoted a portion of his *Biḥār al-anwār* to medicine, including a Galenic-style discussion of human anatomy followed by chapters of medical statements credited to the Imāms drawn from such early sources as *Ṭibb al-aʾimma*. As al-Madjlisī's compilation was the product of the Uṣūlī/court effort to promulgate its vision of orthodoxy throughout Ṣafawid territory, however, the inclusion of a medical section also suggests an effort to challenge less orthodox—perhaps especially, for example, Sunnī-based, or radical Akhbārī—prophetic medical traditions.

Evidence of other sources of medical theories and customs of the semi-literate and especially the illiterate classes (the bulk of the population in Ṣafawid Persia) can also be inferred. Pre-Ṣafawid medical texts often included citations of Persian-language medical verses on a variety of subjects. The anatomical treatise of Ibn Ilyās, *Tashrīḥ-i Manṣūrī*, cited verse often using the formal Arabic anatomical terminology similar to the medical verse of Ibn Sīnā, already available in Persian. In style, however, Ibn Ilyās's citations resemble the little-known Persian verse of the 3rd/9th century Persian physician Ḥakīm Maysarī (*Dānish-nāma dar ʿilm-i pazishkī*, ed. B. Zandjānī, Tehran 1344 Sh./1987). The scanning and rhyming schemes of such verse facilitated its memorisation, and might have been especially useful for the semi-literate practitioners with whom the bulk of the population was most likely to come into contact.

Ṣafawid-period medical writers continued this tradition. In the early 10th/16th century, Yūsuf b. Muḥammad of Harāt composed several works of medical verse, including a versified discussion of illnesses which an individual far from any doctor might have to treat himself. ʿAlī Afḍal Ḳāṭiʿ, author of the pharmacopoeia *Ḳarābidīn*, quoted some medical verse (Elgood, 18, 113-15, 117). Ibn Ilyās's anatomy, with its medical verse, was also much copied in this period.

Other traditions of medical explanation were also available. Celestial events, including the appearance of a fiery comet in 1027/1617-18, for example, were blamed for subsequent wars and uprisings in Europe and the Ottoman empire, widespread pestilence in Gīlān and Māzandarān (predicted by astrologers after the comet's appearance), an earthquake in Khurāsān in 1028/1618-19, the death of many commoners and nobles, and, together with the terrible heat of Māzandarān, predicted by the same astrologers, the illness of ʿAbbās himself the next year (Munshī, ii, 1162-8, 1176). Shaykh Bahāʾī's death in 1030/1620-1 came after hearing a voice during prayers at the tomb of Bābā Rukn al-Dīn Iṣfahānī. After this incident he "prepared himself for death"; as he predicted, three months later he fell ill and died (Munshī, ii, 1189-90).

Aware of their own limitations and of the challenges of other traditions, the court-based medical practitioners did practice some medical pluralism. Bahāʾ al-Dawla prescribed certain incantations in the case of plague, and magic before surgery in the case of certain instances of the urethra being blocked (Elgood, 173-4, 179). Ḥakīm Muḥammad, although generally disavowing all sorts of magic, charms, and the evil eye, noted certain bone fractures required divine intervention (Elgood, xvi). The court's interest in astrology is also clear, as recounted above. Indeed, sometimes rulers consulted its practitioners about the suggestions of the Galenic practitioners (Minorsky, 57-8, 128).

The court was keenly aware of the importance of public welfare generally to the stability of the broader socio-political fabric. In response to the 910/1505 famine and inflation, for example, Ismāʿīl ordered the sale of grain, and eventually also the execution of the responsible official owing to his poor response to the crisis (Rumlū, 36). ʿAbbās I, following an earthquake that struck Shīrwān [*q.v.*] while he and his party were in the region, ordered court phlebotomists to bleed the injured after which, it was reported, they "revived a little" (Munshī, i, 928-9).

The court also took practical measures to secure the flow and quality control of health services in particular. In the second Ṣafawid century, "physicians, including druggists and perfume-sellers (*ʿaṭṭārān*)"—probably including such individuals as the opium seller, the seller of henna, and the seller of musk and perfume, and perhaps the surgeon (*djarrāḥ*), the stitcher (*bakhya-dūz*) (Keyvani, 263-4) and perhaps also the eye specialist (*kaḥḥāl*) (Elgood, 56, 63)—comprised one of the thirty-three main guilds in Iṣfahān, each of which would have been headed by a *bāshī* (Keyvani, 49-50). Some of these professions apparently had well-defined ranks: the surgeon rank comprised the master surgeon (*ustād*), the bone-setter (*mudjabbir*), and the barber (*salmānī*) who, however, was considered of lower-status and did not have a shop in the bazaar

(Elgood, 56, 140-1, 145-6; Keyvani, 50-3). The barber could perform cupping as well as bleeding, and circumcision, which could also be done by a *mullā* or *ḳāḍī*. The richer the patient the more likely a professional was employed e.g. the master surgeon, for such tasks (Elgood, 126-8, 140, 146).

The court's purpose in maintaining an administrative apparatus for the guilds was both to maintain quality control and to organise these crafts for its own use. The court met its needs from the bazaar where some of these practitioners maintained stalls (Keyvani, 63-4, 240). To insure immediate access, however, the court also maintained sections within the royal workshops for such groups as "druggists and perfumers" (*ʿaṭṭār khāna*) (Keyvani, 169-70; Minorsky, 100, 128) and, when on the move, maintained its own band of phlebotomists. The shāh's private barber (*khāṣṣa-tarāsh*) oversaw such groups as bloodletters (*faṣṣādān*) and circumcisers (*khatna-kārān*) (Elgood, 143; Keyvani, 55-6). Some of these bazaar-based practitioners were probably among those who gravitated toward the growing urban-based Ṣūfī orders of the day (Keyvani, 205-11).

The Ṣafawids were more interested in and exercised greater control over guilds than had Tīmūrids (Keyvani, 63). Indeed, sometime in the 11th/17th century, the court established the post of *Ḥakīm-bāshī* ("chief doctor"), combining the position of the shāh's personal physician—in which he was assisted by the *ʿAṭṭār-bāshī* ("chief pharmacist")—with the position of chief of the entire profession. He also designated a physician for any member of the court requesting one (Minorsky, 57, 128).

Such earlier medical writers as al-Djurdjānī spoke with respect of the importance and role of midwives (Elgood, 205-7, 219-20, 227-8, 266-7, 281). Keyvani (177) noted the preponderance of Jews among Iṣfahān's midwives. He also cited the presence of Jewish druggists and observed that the Armenian community possessed an apparently parallel system of craft guilds, including medical practitioners (180-1).

The court also realised the importance of providing for the basic needs of the poorest urban elements, less able to afford access to the bazaar, especially during times of famine or economic crises. European visitors and Persian sources mention hospitals in such cities as Iṣfahān (Munshī, ii, 1295; Elgood, 29), Tabrīz (where Chardin saw three, Elgood, 29), Ardabīl (again seen by Chardin, Elgood, 29), Kazwīn (*ibid.*), and Yazd (*ibid.*), and the shrine at Mashhad (*ibid.*). The travellers' descriptions suggest, however, that some of these were either, or as much, a food distribution centre or else *sharbat-khāna* (dispensary), the latter like that headed by Ḥakīm Yār ʿAlī Ṭihrānī, and used especially to treat the poor and indigent, during the reign of Ṭahmāsp (Munshī, i, 265; Elgood, 32, Ḳummī, i, 605 n. 16).

The Ṣafawid élite also maintained the traditional interest in aspects of veterinary sciences, horses and falcons in particular, and the literati responded to this interest. Muṣliḥ al-Dīn Lārī (d. 980/1571), a student of Ghiyāth al-Dīn Dashtakī and later minister at the court in India of Humāyūn (d. 963/1556) and then guest of the Ottoman sultan Selīm II (d. 982/1574), composed an essay on *bayṭarī* (the veterinary sciences). The noted court-associate and *mudjtahid-muḥaddith* jurisprudent Fayḍ al-Kāshānī was among those who authored essays on horses, for example, his being entitled *Waṣf al-khayl* (Rumlū, 197; Ḳummī, 580; Sādjdjādī, *Dām-pazishkī*).

ii. *Astronomy and associated sciences*

The concern of the court, and indeed that of several segments of Persian society, with the divinatory sciences has already been noted. This interest manifested itself in support for "orthodox" and "less orthodox" practices and individuals.

Like their predecessors, the Ṣafawids paid the customary attention to *ʿilm al-hayʾa* [*q.v.*] or astronomy. The chief practitioners upon whom they called were drawn from the same small circle of scholars/court functionaries. Thus Ismāʿīl I summoned Ghiyāth al-Dīn Dashtakī from Shīrāz to undertake repairs to the observatory at Marāgha founded by Naṣīr al-Dīn al-Ṭūsī. The project, part of an extended effort to compile a set of star tables along the lines completed under earlier rulers, was envisioned as requiring a period of thirty years of observation, and so was abandoned, probably as a result of the same politico-military pressures which prompted the issuance of the *firmān* to al-Karakī. Dashtakī also wrote an essay *al-Safīr fī ʿilm al-hayʾa* ("The ambassador on the science of astronomy"), in which he both introduced and criticised aspects of Ptolemaic astronomy, including that practised by al-Ṭūsī (in particular, features of al-Ṭūsī's famous "Couple") and Ḳuṭb al-Dīn Shīrāzī, and referred to two other, still unlocated, studies of his own on the "reform" of this school of astronomy (Rumlū, 303-4; Ḳummī, i, 296; Newman, *Dashtakī, Ghiyāth al-Dīn*; Saliba, 93-4). Indeed, the nominal reason for his clash with al-Karakī was disagreement with the latter's calculations of the direction of the *ḳibla* [*q.v.*] in mosques throughout Ṣafawid territory. Later scholars opposed to al-Karakī's association with the court, including Shaykh Zayn al-Dīn and al-Ḥusayn b. ʿAbd al-Ṣamad, expressed their disapproval of that association by refusing to pray in the directions of the *ḳibla* specified by al-Karakī (Newman, *The myth*, 99-101, 105). Ṭahmāsp envisioned construction of an observatory at Iṣfahān as part of an effort to compile observational records (*zīdj*), but this project also never developed (Winter, 588).

Numerous astronomical manuals were written in this period. In the next century, for example, the jurisprudent/philosopher Shaykh Bahāʾī contributed to this tradition with his *Tashrīḥ al-aflāk*. Not surprisingly, opposition to Bahāʾī also manifested itself in this arena as well. *Tashrīḥ al-aflāk* contained a vigorous defence of the science of astronomy itself (Saliba, 95-6), suggesting that the forces conspiring against him as a representative of the court-supported traditions of Uṣūlī jurisprudence and "high" philosophical inquiry linked these with other "high" scientific disciplines. Indeed, his *al-Ḥabl al-matīn*, completed *ca.* 1007/1597, was at least partly written as a defence of astronomy generally, but also specifically of al-Karakī's *ḳibla* ruling of the previous century, to the point that Bahāʾī downplayed his own father's criticisms of al-Karakī's calculations (Newman, *Towards a reconsideration*, 180-5).

A contemporary commentator on Bahāʾī's *Tashrīḥ al-aflāk*, Muḥammad Ṣadr al-Dīn al-Ḥusaynī, also addressed issues in Ptolemaic astronomy and their solutions (Saliba, 97-8). Bahāʾī's student Ḳāḍī b. Kāshif al-Dīn Ḥamawī (see above, subsection i), a physician, also wrote an astronomical handbook (Winter, 592).

The court and its associates were also active patrons of makers of astrolabes [see ASṬURLĀB] and celestial globes. The traveller Chardin gave a detailed description of astrolabe construction in this period (Winter, 596-9; Savage-Smith, *Islamicate celestial globes*, 45-9, 74, 80). An early modern European celestial map brought to Ṣafawid Persia by Chardin's contemporary J.-B. Tavernier was probably the basis for astrolabe plates produced in Yazd which incorporated

the latest European discoveries; the subsequent influence of these plates appears to have been negligible, however (Savage-Smith, *Celestial mapping*, 65-8). Shaykh Bahāʾī, again, dedicated a short essay on the astrolabe to a minister of ʿAbbās I (Winter, 592).

Divinatory methods considered less orthodox today also appear to have enjoyed official support. Djalāl al-Dīn Muḥammad b. ʿAbd Allāh Yazdī, author of the court chronicle *Tārīkh-i ʿAbbāsī* and chief astronomer to ʿAbbās I, also composed an essay on *raml* (geomancy) for Khān Aḥmad al-Ḥusaynī, ruler of Gīlān.

Related to the work in the astronomical sciences was that done in *ʿilm al-ḥiṣāb* [*q.v.*] or mathematics. Not surprisingly, perhaps, such close associates of the court as Shaykh Bahāʾī were among those who composed essays in this field.

iii. *Military technology*

Patterns of developments in military technology are similarly explicable in relation to the larger Persian social formation and the Ṣafawid politico-military achievement itself.

Firearms were available and used in Persia from the 9th/15th century and cannon were used by the Ṣafawid armies in their sieges of Anatolian cities of the Ottoman empire. The Ṣafawid interest in the new technology was spurred on by the Čāldirān defeat in 920/1514. Ṣafawid shāhs received both firearms and cannon from the Tsars and requested both of these from Tuscany and the Pope. ʿAbbās I received arquebuses from Russia, Venice and England, the latter after the East Indian Company established relations with the court (Matthee, *Firearms*). There are frequent references to musketeers (*tufangčīs*) and artillery (*tūpkhāna*) in the late Ṣafawid administrative manual *Tadhkirat al-mulūk*, and one of the 33 main guilds of Iṣfahān was that of "armourers", comprising makers of bows and arrows as well as makers of rifle stocks, rifles and gunpowder (Keyvani, 50).

Nevertheless, muskets and arquebuses, cannon and siege artillery, never achieved widespread use in Ṣafawid armies. The mounted warriors of these armies spurned use of the former, "clumsy, cumbersome, and quite ineffective", noisy form of weaponry, the more so as the Ṣafawid infantry, the main employer of these weapons, was recruited from the peasantry and the poorer, probably urban, classes. Even the new *ghulām* [*q.v.*] corps, ostensibly introduced to undercut the power and prestige of the Ḳizil-Bāsh forces, under-utilised these weapons, by contrast with such similar formations as the Ottoman Jannisaries, and a similar Russian contingent, who were trained in and equipped with the latest technology (Matthee, *op. cit.*).

Especially in comparison with Persia's Ottoman and Mughal neighbours, the general lack of wheeled transport and the Persian physical environment—e.g. the lack of navigable waterways—hindered the widespread incorporation of heavy field and siege artillery, although it was clearly available. The mining of ingredients crucial for the production of canon and gunpowder—sulphur, saltpetre, charcoal and such metals as iron, copper and tin—was extremely difficult in this period. Heavy artillery also was of little use to Persian military strategy, which was based on the ambush and a scorched earth policy and not on open confrontation with the enemy (*ibid.*).

Siege artillery was little used by the Ṣafawid armies for a variety of reasons. In this period, rulers left many cities unwalled or did not maintain city walls, devoting attention instead to the citadels within the cities. The extension of Ṣafawid power kept Persia's cities safe from internal threats and protected the interior ones from external threats. Moreover, the continued importance of the Ḳizil-Bāsh in Persian society ensured that non-urbanised regions, the steppes in particular, were the subject of comparably greater attention.

Finally, the Ṣafawids' main enemies on the north and east, particularly the Özbegs, Afghans and Balūč, utilised firearms less than the Ṣafawids themselves, thus providing little impetus for the Ṣafawids to change their military tactics. Unwieldy artillery was of little use in battles involving mounted cavalry. The Balūč and Afghān advance into Ṣafawid territory, culminating in the capture of Iṣfahān in 1135/1722, was accomplished mainly without firearms. It was starvation which finally forced the city's surrender to the invaders, and not the few mounted guns which did appear there (Matthee, *Firearms*; and see further on the whole topic, BĀRŪD. v. The Ṣafawids).

V. Arts and architecture.

The period of more than two centuries (907-1145/1501-1732) from the advent of Shāh Ismāᶜīl I to the demise of the last Ṣafawid rulers is marked by significant changes in Persian patronage, taste, and aesthetics and by the powerful role of political and religious ideology in shaping the arts. While royal patrons, like Ṭahmāsp I and ᶜAbbās I, who had long reigns in which to imprint their strong personal tastes on the arts, exerted great influence, there is abundant evidence documenting the increasing importance of sub-royal patronage and non-aristocratic patronage of the arts. As always, family ties were important in landing commissions and appointments at court, and intermarriage among artists' families was extensive: the 10th/16th-century calligrapher Muḥibb ᶜAlī, for instance, was the son of the royal scribe Rustam ᶜAlī and the grand-nephew of Bihzād [*q.v.*] and the cousin of the notable painter Muẓaffar ᶜAlī. Signed or reliably ascribed works of art and architecture became far more plentiful than in earlier times, as did overt displays of connoisseurship and proud references to impressive collections of precious books, not only illustrated manuscripts but also sumptuous albums (*muraḳḳaᶜ* [*q.v.*]) that included fragments of larger works, admired single-page calligraphies, paintings, and drawings, and occasional examples of the work of foreign artists: around 977/1570 prince Ibrāhīm assembled an album of paintings and drawings by Bihzād and several albums of calligraphies by Mīr ᶜAlī Harawī that were as much esteemed as a great illustrated manuscript. These changes imply a more pronounced artistic self-consciousmess and worldly appreciation of the arts than in Il-Khānid or Tīmūrid Persia, as do the numerous lengthy accounts of the arts written by individuals like the painters Dūst Muḥammad and Ṣādiḳī Bek, the calligrapher Sulṭān ᶜAlī, and the art-loving officials Iskandar Munshī and Ḳāḍī Aḥmad. The latter writer takes special paints to establish a particularly Ṣafawid theoretical base for the visual arts that gives equal weight and propriety to painting and calligraphy: thus ᶜAlī b. Abī Ṭālib is credited with being the master of the two *ḳalams*, the reed of the scribe and the brush of the painter, so that ᶜAlī, as the first Muslim painter, ranks in importance with the renowned Mānī, the legendary pre-Islamic Iranian painter. The centrality of ᶜAlī is likewise evident in the earliest buildings constructed under Ṣafawid patronage and pervades the finest architectural inscriptions in Iṣfahān a century later: the state ideology that separated Shīᶜī Persia from rival Sunnī Ottoman, Uzbek and Mughal domains pervades its arts. A profitable art trade brought European prints and printed books to Persia and took the work of some Ṣafawid painters to wealthy patrons in India, while Persian ceramics were purchased by European merchants for sale at home. The European presence in Ṣafawid Persia included not only diplomats, merchants, travellers and missionaries but also artists, and western European influence and an increasingly strong sense of naturalism are notable in the pictorial arts in the last century of Ṣafawid rule.

Ismāᶜīl I. Adherence to ᶜAlī and mystical Shīᶜism, early evident in the poetry of Shāh Ismāᶜīl, distinguished the régime from its western, northern, and eastern Sunnī neighbours and rivals and affected content and context of the visual arts. Architecture under this first Ṣafawid shāh is little known: the two principal monuments are the 928-9/1521-2 Masdjid-i ᶜAlī and the 918/1513 tomb of Hārūn-i Wilāyat, both in Iṣfahān's bazaar area and both reflecting in their names the strident adherence to ᶜAlī characteristic of Ismāᶜīl's reign. The tomb is justly celebrated for its portal, decorated in faience mosaic closer in style to the ornamentation of 9th/15th century Turcoman architecture of western Persia than to that of the

Tīmūrid east. Ismāʿīl's exposure to Turcoman styles is also evident in a painting attributed to the painter Sulṭān Muḥammad, *Sleeping Rustam defended from a lion by his horse Rakhsh* (reproduced in S.C. Welch, *A King's Book of Kings*, fig. 10), that most probably belonged to a *Shāh-nāma* begun and never completed for the first Ṣafawid ruler. The heir apparent, Ṭahmāsp Mīrzā, appointed governor of Harāt in 922/1516, returned to Tabrīz in 928/1522 at the age of nine, accompanied by the pre-eminent Tīmūrid painter, Bihzād, who was promptly appointed head of the royal *kitāb-khāna* (library and workshop). The convergence of the Turcoman and Tīmūrid artistic traditions during the first half of the 10th/16th century is the essential element in the development of mature Ṣafawid court styles in architecture and the arts.

Ṭahmāsp I. Too young to rule effectively in 930/1524, the young shāh turned his attention to the arts of the precious book and initiated the production of the greatest *Shāh-nāma* in Persian history. The *Shāh Ṭahmāsp Shāh-nāma* was a sumptuous creation, with 258 paintings, superb calligraphy and stunning illumination. The collaborative endeavour of dozens of different artists, it was successively under the direction of some Persia's foremost talents, like Āḳā Mīrak and Sulṭān Muḥammad, and its paintings delineate the evolution of Ṣafawid court style of Turcoman and Tīmūrid modes. Containing no colophon giving either the date of completion or the name of the scribe or scribes, the book occupied the talents of the royal atelier for some twenty years, and was complete when Dūst Muḥammad wrote his *Account of past and present painters* in 953/1546. As one of the important contributors to the *Shāh-nāma*, this painter, calligrapher, and chronicler of the arts knew it well and specifically singled out for great praise the painting of *The court of Gayūmarth* by Sulṭān Muḥammad (reproduced in Welch, *op. cit.*, 89). Other great projects of the shāh's patronage include the 946-50/1539-43 *Khamsa* of Niẓāmī now in the British Library. In keeping with the Tīmūrid princely tradition, the shāh's brothers Bahrām and Sām were also keenly interested in this most exclusive of court arts. The depiction of murals in illustrations of architectural interiors, as well as some surviving examples in extant buildings, indicate that wall painting was also an important activity for painters, and this tradition continued for the rest of the Ṣafawid era. In 955/1548 the shāh removed the seat of government from Tabrīz to Ḳazwīn. He came increasingly to favour orthodoxy, and his passion for the arts of the secular book waned, though a 959/1552 Ḳurʾān, almost certainly created for Ṭahmāsp, indicates that calligraphers and illuminators of the highest ability were still employed in the royal *kitāb-khāna* (reproduced in T. Falk (ed.), *Treasures of Islam*, 100-1). Many of his artists left the court in search of other patronage: some went to work for princes in provincial posts, like the shāh's gifted nephew Ibrāhīm (the patron of the great 963-72/1556-65 *Haft awrang* of Djāmī now in the Freer Gallery), while others, like Mīr Sayyid ʿAlī, moved further east to Mughal India, where they were instrumental in shaping classic Mughal court painting.

ʿAbbās I. Following a decade of instability after Ṭahmāsp I's death in 1576, ʿAbbās I brought great energy to his 42-year reign. Like his predecessors, he initiated a great *Shāh-nāma* project that re-established a large and productive royal atelier, and he took an active interest in the arts of the book. He particularly favoured the painters Ṣādiḳī Bek and Riḍā ʿAbbāsī [*q.v.*], supported the rival calligraphers ʿAlī Riḍā Tabrīzī and Mīr ʿImād, and even mediated disputes within the royal *kitābkhāna*. The dispersal of artistic talent during Shāh Ṭahmāsp's reign and the broader diffusion of wealth from ʿAbbās's economic reforms increased the numbers of patrons from the lesser aristocracy, official and military classes, professionals, and merchants. Many of these new patrons appear to have bought, rather than commissioned, works of art, so that the production of less expensive single-page drawings and paintings flourished. Virtuoso demonstrations more than collaborative endeavours, they took their subject matter from a variety of sources: images drawn from contemporary and mundane society that are often humorous or even sharply satirical (Pl. XLV); elegant courtiers, sometimes identified by name; wistful lovers and Riḍā's fashion-plate youths (Pl. XLVI), often accompanied by mystical verses, who presumably correspond to the divine beloved. Ṣafawid metalwork was also frequently adorned with mystical poetry that indicates how deeply and thoroughly Ṣūfism suffused the culture (Pl. XLVII).

But the shāh also recognised the importance of the arts in promoting the economic well-being of Persia. Some carpet manufacturing under royal patronage was profitably directed at commissions from European nobility (Pl. XLVIII), and the role of textiles in commerce, always significant in Islam's past, seems to have been especially enhanced. Ṣafawid silk textiles demonstrated diversity and virtuosity in technique, and they depended to a remarkable extent upon figural decoration; some royal painters worked as textile designers, and silk cloths were decorated with scenes of Ṣafawid victories over inveterate enemies like the Uzbeks, as well as with visiting Europeans, youthful lovers, and the beauties of gardens and nature (Pl. XLIX). Likewise, he encouraged ceramic production, and, in addition to more traditional lustre wares, Persian potters imitated Chinese blue-and-white ceramics for sale to European merchants in the China trade as well as to satisfy the substantial demand in Persia (Pl. L). Persian manuscripts and single-page works of art were even bought by merchants for sale outside Persia.

Foreign contacts and international trade were vital elements in ʿAbbās's strategy for his state, and, apart from the European and Indian diplomats and merchants who came to Persia, there were European scholars, missionaries, and independent travellers whose interests generally extended more broadly. They remained an important feature of Persian cultural and social life throughout the 11th/17th century, and their published reports not only stimulated contemporary interest in Persia but also serve as major sources of information for modern scholarship. Their attention was particular drawn to the city of Iṣfahān [*q.v.*], which ʿAbbās chose as his centre of government in 1006/1598 and where he undertook one of the greatest building programs in Islamic history. Blessed with year-round water from the Zayandeh River, the city appeared to visitors like a green forest accentuated by brilliant tiled domes. To the south across the river the shāh established the community of New Djulfā [*q.v.* in Suppl.] for Christian Armenians who provided most of the multilingual merchants involved in Persia's international commerce, and their richly decorated extant churches are a striking synthesis of 17th-century Persian and European art and archtitecture.

In order to promote safe commercial travel within Persia, ʿAbbās ordered the construction of dozens of *khāns* [*q.v.*] or caravanserais. Most of them also served as or were connected with bazaars, and they are

among the most impressive examples of Ṣafawid architecture. The Ḳaysariyya bazaar in Iṣfahān is the best preserved and connected the city's old *dj̲āmiʿ* with ʿAbbās's new city centre, a large rectangular *maydān*, 2 km to the southwest (Pl. LI). It provided not only shops for manufacture and commerce but also access to immediately adjacent mosques, like the 1065/1654 Masdj̲id-i Ḥakīm, that served merchants and their customers. The Ḳaysariyya's entrance occupies the north end of the new *maydān*; 500 m distant at the south end is the entrance to the Masdj̲id-i Imām, a brilliant construction on the classic four-īwān plan completed in 1637. Both buildings dominate their respective sides and suggest the preoccupation with large size, showy opulence, glistening surfaces, and dramatic effects that are major components of the Ṣafawid aesthetic: the *maydān* itself was an open area for military parades, commerce, music, acrobatics, and other kinds of entertainment. Less dominant are the adjoining buildings—the single-domed S̲h̲ayk̲h̲ Luṭf Allāh mosque on the east side and, opposite it across the *maydān*, the ʿĀlī Ḳāpū or High Gate entrance to the s̲h̲āh's gardens and Čihil Sutūn palace that extend to the west. While the S̲h̲ayk̲h̲ Luṭf Allāh mosque's dome is decorated in traditional faience mosaic, the decorative programme of the Masdj̲id-i Imām is laid out in large glazed tiles, a technique demanding precise knowledge of the reaction of clays and glazes to firing, especially where the tiles were curved to cover the surface of domes and *minars*. Extensive use of this type of tile decoration must have required the employment of gifted potters and painters, and may partly account for the apparent decline in the sophistication of more traditional ceramics in the Ṣafawid period. Both mosques were provided with splendid inscriptions designed by ʿAlī Riḍā Tabrīzī that cite passages from both Ḳurʾān and *Ḥadīt̲h̲* underscoring and supporting the Ṣafawids' descent from ʿAlī and their special role as protectors of S̲h̲īʿī Islam in Persia. To the same end, ʿAbbās also made lavish gifts of carpets and ceramics to the dynastic shrine of S̲h̲ayk̲h̲ Ṣafī in Ardabīl.

The second level of the ʿĀlī Ḳāpū is dominated by its projecting *ṭālār*, a colonnaded verandah more usually associated with far more private dwellings, where it would provide an open and sheltered vista toward an enclosed garden, pool, or courtyard that served as the physical centre of domestic space. In the s̲h̲āh's palace, however, the *ṭālār* is no longer intimate but opens instead on to the *maydān*, as if that vast space were itself an inner court, enclosed by the arcades on all four sides and subject to the patriarch's focussed glance and discipline. The king could also ritually present himself to those assembled in the *maydān* below. It is an architectural simile for the increased power of the central administration and of the s̲h̲āh as both autocrat and head of the Ṣafawiyya Ṣūfī order. To the west, running roughly parallel to the *maydān*, was the *čahār bāg̲h̲*, an avenue and watercourse lined by the mansions and gardens of the wealthy and supplied by an elaborate hydraulic system with water from the river. While this part of Iṣfahān must have been a veritable garden city for the rich, its natural imagery does not seem to have permeated the imagery of painting, for the garden, which had served as the setting for many earlier illustrated scenes from Persian literature became a relatively infrequent backdrop in paintings by Iṣfahān's artists.

Later Ṣafawid art and architecture. In the century after S̲h̲āh ʿAbbās I, ceramics and sumptuous textiles continued to be important sources of revenue and were admired items of luxury trade in Europe and India. Traditional literary themes in the arts of the book were in part supplanted by often incisive depictions of actual, ordinary, and even outlandish individuals, of exotic persons from other lands, of implicit and occasionally fairly explicit eroticism, of carefully-observed nature (Pl. LII), and of actual events and formal portraits. Although the European technology of printing was ignored and traditional calligraphy continued to flourish in the hands of masters like Muḥammad Riḍā (Pl. LIII), the impact of European prints and the influence of European modes of representation increased, notably in the work of Muḥammad Zamān (Pl. LIV), and traditional styles began to take on a more international guise, while European travel accounts accorded Iṣfahān a reputation rivalling that of Istanbul, Dihlī, and Āgrā. Although there were no subsequent urban projects as grandiose as the *maydān*, architecture and the arts evinced similar aesthetic and cultural concerns. ʿAbbās II undertook major building and restoration programs at the Shrine of the Imām Riḍā in Mas̲h̲had [*q.v.*], and during the reign of Sultan Ḥusayn I an impressive *madrasa* and adjoining *k̲h̲ān* were built on the *čahār bāg̲h̲* in design and style making obeisance to the Masdj̲id-i Imām.

Bibliography: J. Sourdel-Thomine's article IṢFAHĀN. 2. Monuments. provides a list of publications essential to the study of Ṣafawid architecture. D.N. Wilber devotes part of his book, *Persian gardens and garden pavilions*, 1962, to the study of Ṣafawid gardens and pavilions. R. Holod (ed.), *Studies on Isfahan*, in *Iranian Studies, Journal of the Society for Iranian Studies*, vii, includes essential articles on architecture, urban planning, painting, metalwork, and ceramics by a number of scholars. Pioneering studies on all aspects of Ṣafawid art and architecture are to be found in *A Survey of Persian art*, 1939. A. Welch, *Shah ʿAbbas and the arts of Isfahan*, Asia Society, 1973, presents an overview of later Ṣafawid arts. The same author's *Artists for the Shah: late sixteenth century painting at the imperial court of Iran*, New Haven 1976, examines manuscript illustration during the reigns of Ṭahmāsp I, Ismāʿīl II, Muḥammad K̲h̲udābanda and ʿAbbās I. S.C. Welch and M.B. Dickson, *The Houghton Shahnameh*, Cambridge, Mass. 1981, is a magisterial study of the origins and development of early Ṣafawid painting and includes a translation of Ṣādiḳī Bek's treatise on painting, *Ḳānūn al-Ṣuwār*. Other major publications by S.C. Welch on early Ṣafawid painting are *A King's Book of Kings: the Shāhnāmeh of Shah Tahmasp*, Metropolitan Museum, New York 1972; *Persian painting: five royal Safavid manuscripts of the 16th century*, New York 1976; and *Wonders of the age*, Cambridge, Mass. 1979. T. Falk (ed.), *Treasures of Islam*, includes discussions of arts of the book by A. Welch, S.C. Welch, and Massumeh Farhad. I. Stchoukine, *Les peintures des manuscrits Safavis de 1502-1587*, Paris 1959, and *Les peintures des manuscrits de Shah ʿAbbas à la fin des Safavis*, Paris 1964, are basic sources for painting. A major primary source for arts of the book is Ḳāḍī Aḥmad, *Calligraphers and painters*, Washington 1959. One of the few studies of a calligrapher is M. Bayānī, *Mīr ʿImād*, Tehran 1951. The same author's *K̲h̲ūs̲h̲-niwīsān*, Tehran 1966, contains invaluable information about the works and careers of Ṣafawid calligraphers. (A. WELCH)

VI. Numismatics.

The Ṣafawid coinage was introduced following the victories of S̲h̲āh Ismāʿīl I over the Aḳ Ḳoyunlu Turkmen in 907-8/1502, and continued without break

until the deposition of Shāh ʿAbbās III by Nādir Shāh in 1148/1736. All the rulers, except for the ephemeral Sulṭān Ḥamza who administered the state in 994/1586, struck coinage in their own names, and one even struck it in two, first in that of Ṣafī II and then, after his re-enthronement, as Sulaymān. After Nādir Shāh's death in 1160/1747 coins were also occasionally issued in the names of Ṣafawid pretenders who claimed paternal, maternal or even entirely fictive royal descent until the death of the last claimant in 1200/1786. The examination of these coins, however, properly forms part of the later monetary history of Persia.

During the period of Ṣafawid rule, the Persian currency system was based on the *tūmān*, a unit of account whose value was fixed at the currently-established weight of 10,000 silver dīnārs. The weight of the *tūmān* was customarily expressed as a fixed number of *mithkāls* or *nukhūds* of refined silver which could then be converted into coin with the value of 10,000 dīnārs. One *mithkāl*, weighing approximately 4.60 gr, was equal to 24 *nukhūds* which each weighed about 0.192 gr.

Table 1 shows the extent of the Ṣafawid silver coinage, giving the name of the ruler, the weight(s) of the *tūmān* in *nukhūds* during his period of rule, and the names of the various silver coins, their individual value in dīnārs and their theoretical weight in grammes. It should be noted that weight standards were not always uniform and that local variations existed, particularly in the Caspian region and the eastern provinces. The heaviest coin was usually the most popular and most commonly struck. Under Ismāʿīl I the principal coin was the *shāhī* valued at 50 dīnārs, 200 per *tūmān*. Then under Ṭahmāsb I came the double *shāhī*, or 100 dīnārs, 100 per *tūmān*, which during the rule of Muḥammad Khudābanda was renamed the *muḥammadī*. ʿAbbās I introduced the four *shāhī*, 200 dīnārs, 50 per *tūmān*, which he named the *ʿabbāsī*. The *ʿabbāsī* remained the normal Persian denomination for the remainder of the dynasty and for a time afterwards, except for a brief period between 1123 and 1129 under Shāh Sulṭān Ḥusayn when it was supplanted by the oblong-shaped five *shāhī* (the *ḥusaynī*?). It should be noted that coins valued above five *shāhīs* were produced especially for the ruler to distribute during the Nawrūz [*q.v.*] celebrations, and these usually quickly found their way to the jewellers for conversion into personal ornaments.

Table 2 summarises the Ṣafawid gold coinage. Gold played a much smaller rôle in the Persian currency system than did silver or copper. Indeed, in the century before the accession of Shāh Ismāʿīl I the Tīmūrids had struck no gold at all in their Persian mints. The Aḳ Ḳoyunlu, who succeeded the Tīmūrids in the west, introduced the striking of the gold *ashrafī* in Tabrīz during the last quarter of the 9th/15th century as a trade coin. In its weight, *ca.* 3.45 gr, dumpy fabric and epigraphy, it was copied so exactly on the Burdji Mamlūk *ashrafī* popularised by al-Ashraf Barsbāy that the name of the ruler in the legends often has to be read in order to distinguish one currency from another. The earliest gold coin of Ismāʿīl I was a copy of the Aḳ Ḳoyunlu/Burdji Mamlūk *ashrafī* in both weight and design, but it was not long before the Persian artistic tradition reasserted itself as evidence of Ismāʿīl's determination to stage a Persian religious and cultural revival. Quite exceptionally in Islam, the Ṣafawids struck both their gold and silver coins from the same dies, and as none of them bore any mark of denomination it would have been easy for counterfeiters to gold-plate silver and pass it off on the unwary had gold been in regular circulation. Contemporary travellers to Persia recorded that local gold was very rarely seen and little used in commerce.

Although all the gold coins were popularly called *ashrafī*, there were actually several different varieties to which this name was given, which were distinguished from one another by their weights rather than by their designs or legends. Ismāʿīl used two standards for his gold coinage—one based on the weight of the traditional Islamic *mithkāl* or coinage dīnār of 24 *nukhūds* (approximately 4.60 gr), and the other, the true *ashrafī*, with its origin in the weight of the Venetian gold ducat, weighing 18 *nukhūds* (approximately 3.45 gr). The latter was theoretically exchangeable at par with European ducats, the Mamlūk *ashrafī* and the Ottoman *sulṭānī*. Halves and quarters were struck in both standards, and the latter became popular in eastern Persia where its use was linked to the quarter *ashrafīs* issued by the Mughal rulers in the Badakhshān region of Afghānistān.

Under the Ṣafawids all gold coins were treated as a commodity with no fixed price against the silver *tūmān*. Their purchasing power fluctuated according to supply and demand, type of commodity, season of the year and the perceived reliability of the original issuing agent. Traders always preferred Venetian ducats, and generally held the Ṣafawid coinage in low esteem. In the 11th/17th century, local gold virtually vanished from the Middle East and Persia. Because both regions preferred silver to gold, the price of silver was relatively higher throughout these areas than it was in Europe, where gold was favoured. This gave European traders a perfect opportunity to import inexpensive silver from the New World which they sold locally for gold at great profit to themselves. In time, so much gold was siphoned out of Persia that it was said that the only gold coins to be struck by Ṣafī I, ʿAbbās II and Sulaymān were those that the rulers presented to their courtiers at the Nawrūz celebrations. Thus the custom arose of striking gold at the weight of the popular silver denominations, the *ʿabbāsī*, *muḥammadī* and *shāhī*, and giving them a nominal value in dīnārs ten times that of their silver originals. These rare pieces, as well as the magnificent gold ten-*mithkāls* and ten-*ashrafīs* modelled on the multiple ducats of Venice and the Holy Roman Empire, were *pièces de plaisir*, and were usually incorporated into jewellery as a sign of royal favour.

Copper coinage played a central rôle in the local economy of Ṣafawid Persia. While gold and silver were struck under royal license, copper *fulūs* were issued by the provincial governors. To avoid infringing upon the royal prerogative, the coins they struck did not bear the governors' names, but included easily-recognised figures of objects, often animals, birds or even humans on one face and the name of the mint and year of striking on the other. This made the *fulūs* easy to identify, which was important because it was the custom to recall the copper coinage not only annually but whenever the incumbent was replaced by a new appointee. The coinage was then recalled, restruck and sold to the people at a price which was said to yield a 50% profit on the value of the issue. To make this system feasible, only locally-struck copper coin was permitted to circulate, and only coins of the current governor and year were accepted at full value. *Fulūs* were occasionally given denominational names; for example *yek* or *dō dīnār* were valued at one or two dīnārs, *ḳaz* or *ḳazbak* at five dīnārs and *tanga* at ten dīnārs. Because the lifespan of copper was so short, very little care was taken in its manufacture, and

relatively few pieces have survived to find a place in museum coin cabinets.

As on other Islamic coinages, the coin legends used by the Ṣafawids fall into two main categories: the religious texts which are found on the obverse and the political on the reverse. The obverse for all rulers except Shāh Ismāʿīl II contains the Shīʿī profession of faith, *lā ilāh illā Allāh, Muḥammad rasūl* (or *nabī*) *Allāh,*

TABLE 2
ṢAFAWID GOLD COINAGE
Summary of weight standards and denominations

Ruler and years	*Mithkāl* or dīnār (24 *nukhūd*) 1	½	¼(10)	*Ashrafī* or ducat (18 *nukhūd*) 1	½	¼(10)	2000 dīnārs, gold ᶜAbbāsī	1000 dīnārs, gold Muḥammadī	500 dīnārs, gold Shāhī	Uncertain value	Remarks
Ismāᶜīl I 906-30	4.60	2.30	1.15	3.45	1.73	0.86					gold plentiful, both standards in use
Ṭahmāsb I 930-84	4.60	2.30	1.15	3.45	?	0.86		29 *nukhūd* 5.56			gold plentiful, both standards in use
Ismāᶜīl II 984-5	4.60	?	?								coinage rare, *mithkāl* standard only
Muḥammad Khudābanda 985-95	4.60	2.30	?								gold plentiful, *mithkāl* standard only
ᶜAbbās I 995-1003	4.60	2.30	1.15				48 *nukhūd* 9.20 gr				gold plentiful, *mithkāl* standard only
1003-37							40 *nukhūd* 7.68 gr	20 *nukhūd* 3.84 gr	10 *nukhūd* 1.92 gr		gold scarce; gold struck at weight of silver coinage
Ṣafī I 1038-52								20 *nukhūd* 3.84 gr			gold rare; gold struck at weight of silver coinage
ᶜAbbās II 1052-77					1.73					14 *nukhūd* 2.68 gr	gold rare, no fixed standard
Ṣafī II/ Sulaymān 1077-1105			46.00	3.45			38 *nukhūd* 7.29 gr		9.5 *nukhūd* 1.82 gr		gold rare, mixed standards
Ḥusayn 1105-35				3.45			28 *nukhūd* 5.37 gr.				gold scarce, ducat standard revived
1133-5										15 *nukhūd* 2.88 gr	emergency coinage
Ṭahmāsb II 1135-44				3.45		34.50	28 *nukhūd* 5.37 gr.		7 *nukhūd* 1.24 gr		gold plentiful, ducat standard in use
ᶜAbbās III 1144-8				3.45			28 *nukhūd* 5.37 gr				gold plentiful, ducat standard in use

ᶜAlī walī Allāh with or without the names of the Twelve Imāms: *ᶜAlī, Ḥasan, Ḥusayn, ᶜAlī, Muḥammad, Djaᶜfar, Mūsā, ᶜAlī, Muḥammad, ᶜAlī, Ḥasan* and *Muḥammad*. The names of the Twelve Imāms were first employed by the Ilkhān ruler Öldjeytü between 709 and 716 on his two Shīᶜī coin types, and they then reappeared 200 years later when Shāh Ismāᶜīl made Twelver Shīᶜism the state faith of Persia. During his brief reign, Shāh Ismāᶜīl II used a poetic distich in place of the *kalima* in order to prevent the holy words from falling into the hands of unbelievers. The religious legends were usually inscribed in *naskhī* script.

The reverse legends usually contain the name of the ruler, the mint names and the years of striking. The ruler's name usually lacks his patronymic, the exceptions being Ismāᶜīl II and Muḥammad Khudābanda, who give that of their father *b. Ṭahmāsb*. Their titles are of two kinds, those that define the ruler's relationship to the people he ruled and those that define his relationship to the Shīᶜī faith. The former are in Arabic, usually inscribed in *naskhī* script, and are more or less elaborate depending on the number of words which could be fitted on a die, e.g. *al-Sulṭān al-ᶜĀdil, al-Kāmil, al-Hādī, al-Wālī, al-Ghāzī fī Sabīl Allāh Abu 'l-Muẓaffar, Shāh.... Bahādur Khān, al-Ṣafawī al-Ḥusaynī, khallada Allāh taᶜālā mulkahu wa-sulṭānahu*. This form was used by Ismāᶜīl I, Ṭahmāsb I, Ismāᶜīl II, Muḥammad Khudābanda, ᶜAbbās I and Ḥusayn. Ḥusayn also used *al-Sulṭān b. al-Sulṭān al-Khāḳān b. al-Khāḳān*. *Al-Ṣafawī al-Ḥusaynī* refers to Shaykh Ṣafī al-

Dīn Ardabīlī [*q.v.*], the ancestor of the dynasty, who claimed descent from the third Imām Ḥusayn b. ʿAlī. This ancestral claim parallels that of the contemporary Ḥasanī Sharīfs of Morocco, who were then using *al-Ḥasanī* among their own titles. Perhaps both dynasties emphasised their illustrious descent in order to embarrass the Ottomans, who had no claim to such prestigious ancestry.

The legends which proclaim the ruler's Shīʿī allegiance are in Persian. The better known of these are *Ghulām-i Imām Mahdī ʿalayhi al-salām* and *Ghulām-i ʿAlī b. Abī Ṭālib ʿalayhi al-salām* used by Ṭahmāsb I and Muḥammad Khudābanda; *Banda-yi Shāh-i Wilāyāt* used by ʿAbbās I, ʿAbbās II, Ṣafī II-Sulaymān and Ḥusayn, and *Ghulām-i Shāh-i Dīn* used by Ṭahmāsb II. Poetical distichs in Persian incorporating the name of the ruler within their texts were employed by ʿAbbās I, Ṣafī I, ʿAbbās II, Ṣafī II-Sulaymān, Ḥusayn, Ṭahmāsb II and ʿAbbās III. At the end of Ṣafawid power, when Ṭahmāsb Ḳulī Khān, the later Nādir Shāh [*q.v.*], controlled Ṭahmāsb II and ʿAbbās III, anonymous distichs were also inscribed in the name of the eighth Imam, ʿAlī b. Mūsā al-Riḍā. Such distichs were also used by the Zands and early Ḳādjārs, who avoided placing their own names on the coinage while a Ṣafawid pretender still existed. These secular legends are usualy inscribed in *nastaʿlīḳ*, the script in which poetry was usually written.

State control over the monetary system was exercised by the *Muʿayyir al-Mamālik*, the State Assayer, who reported directly to the ruler. Under him were the local chief assayers and *ḍarrābī bashī*, masters of the mint, who were jointly responsible for ensuring that the gold and silver were of the right alloy and that the manufacture of the blank flans and their striking into coin proceeded according to the regulations in force. The management of the mint was farmed out to local concessionaires who were responsible for collecting and remitting the seignorage, *wādjibī*, charged for refining metal, manufacturing gold and silver thread for weaving carpets and luxury cloth, and for striking coins. The raw metal was delivered to the mints in the form of bullion and foreign or obsolete coins. Seignorage varied widely from 2% to 20% of the metal value based on what local commercial and political circumstances could bear.

Under the Ṣafawids, the main state mints were located in Iṣfahān and Tabrīz, whenever the latter was not under Ottoman control. Other main urban centres that witnessed more or less continual minting activity were Hamadhān, Kāshān, Ḳazwīn, Shīrāz and Yazd, as well as those in the main shrine towns of Ardābil and Mashhad. The ports of Rasht in the north and Ḥuwayzā in the south were chiefly concerned with restriking foreign coin as it entered the Ṣafawid dominions, while the almost continuous wars were financed by the *Urdū* (army) mint as well as those located in the north-western fortress towns of Eriwān, Gandja, Nakhčiwān, Shamākhī and Tiflīs, whenever these were not held by the Ottomans. Besides these towns, both Ismāʿīl I and Ṭahmāsb I operated many local mints which varied greatly in their importance and in their production of coin. Initially they served to reinforce the ruler's authority throughout the country and to spread the observance of the Twelver Shīʿī doctrines to areas where they may have been only lightly observed before the Ṣafawid conquests. However, like the Ottomans, the Ṣafawids found that a large number of small and remote mints gave only a marginal return to the state treasury and were often wide open to local manipulation and malpractice. Thus during the economic hardships and inflation of the 11th/17th century most of them were closed down unless a locally powerful governor could maintain their existence either as a matter of local prestige or to meet exceptional local needs.

Although Ṣafawid coins have survived in large numbers, no systematic effort has been made to study them within their political and economic contexts. They are usually treated, quite correctly, as the first section of the modern coinage of the Shāhs of Persia. The standard works on the Ṣafawid coinage need to be updated because of the many discoveries that have been made since they were published.

(R. Darley-Doran)

ṢAFDĀR DJANG, Mīrzā Muhammad Muḳīm Ṣafdār Djang ("the Lion in War") (1708-54) the second *Nawwāb* or ruler of the North Indian post-Mughal successor state of Awadh [*q.v.*] (Eng. Oudh) from 1739 until his death fifteen years later. Nephew, son-in-law, and successor to Saʿādat Khān Burhān al-Mulk, and like him an immigrant to India from Nīshāpūr, he expanded his territory in the Gangetic valley while retaining as much influence as possible within the declining Mughal Empire. This was an era of political fragmentation, regional state formation, and massive cultural revival that together help form modern South Asian identity, but the post-Mughal aristocracy still sought to restore the Empire, and Ṣafdār Djang was very prominent in the struggle.

The Niẓām of Ḥaydarābād, ruler of a larger successor state in the south, and *Wazīr* or deputy to the Mughal Emperor, wrote on his deathbed in 1748 to Ṣafdār Djang, "You are now the most promising of our current youth. Take that office [Imperial *Wazīr*] upon yourself, and exert yourself in recovering the affairs of the Empire." Ṣafdār Djang fought in a civil war in and around Dihlī in 1753 over the control of imperial offices, by then virtually powerless but invested with residual authority throughout India. This civil war marks the final breakaway of Awadh from the imperial system in India.

Although his reign marks the emergence of Awadh as an autonomous successor state in the mid-Gangetic plains, his tomb, a splendid example of late Mughal architecture, stands in what is now New Delhi.

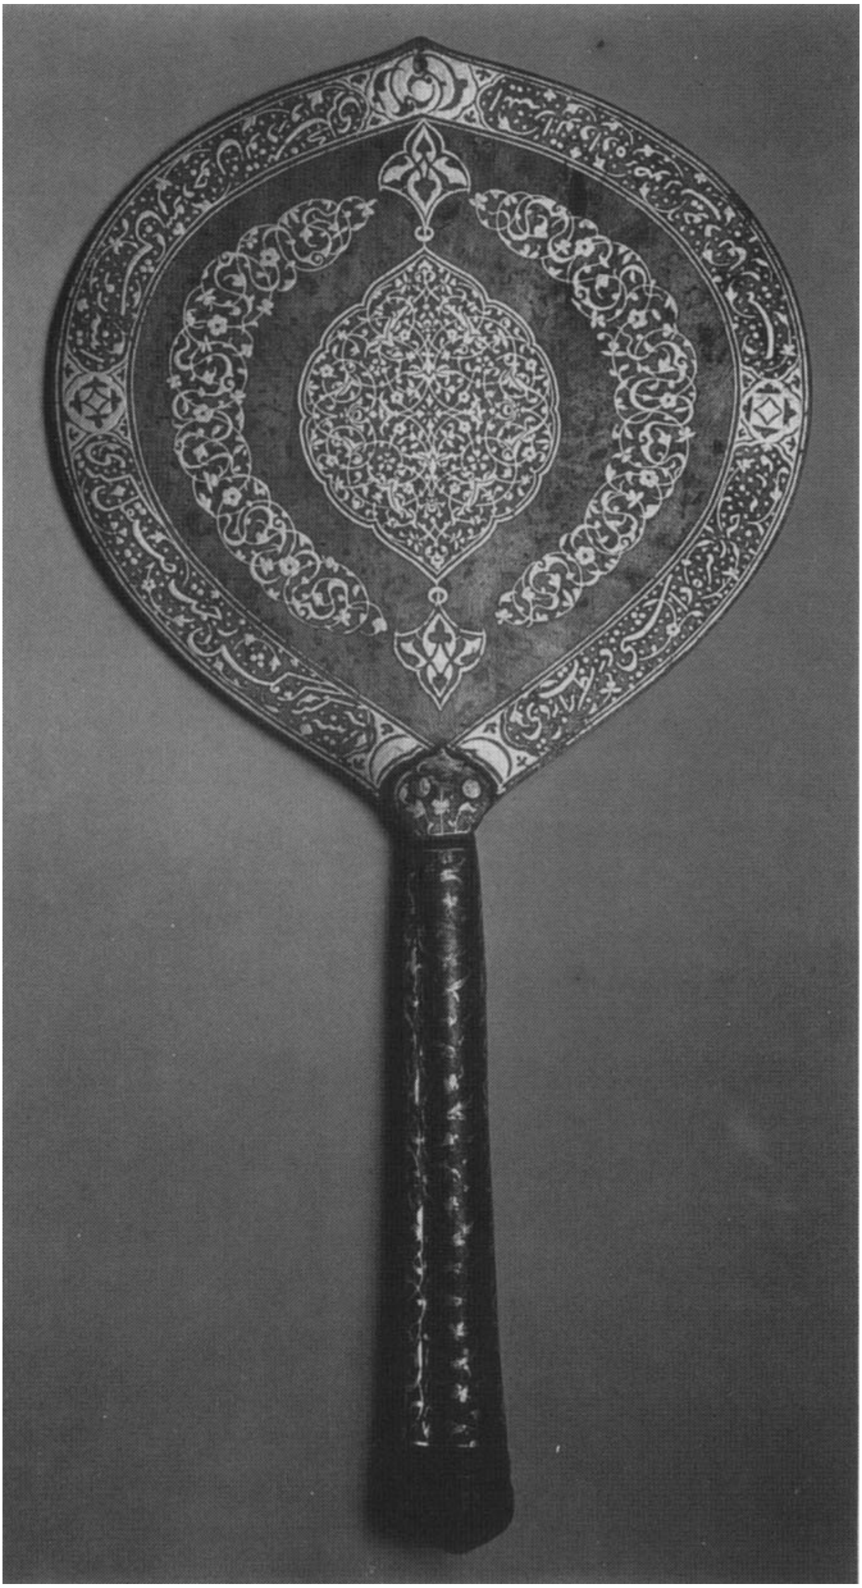
ṢAFF (A.), pl. *ṣufūf*, literally "rank, row or line, company of men standing in a rank, row or line" (Lane, 1693 col. 3), a term with various usages.

1. In religious practice. Here, *ṣaff* is used for the lines of worshippers assembled in the mosque or elsewhere for the prescribed worship; see on this, ṢALĀT.



2. In military organisation. In the traditional formation of armies on the march or on the battlefield (*taʿbiya*), there was a classic five-fold division of a centre, its left and right wings, a vanguard and a

rearguard (whence the term *khamīs* for an army). In actual battle, such as the engagements of the Arabs with the imperial Sāsānid army in ʿIrāḳ in the 630s, the Arabs drew themselves up into *ṣufūf* or ranks. The Prophet is said to have straightened, with an arrow held in his hand, the *ṣufūf* of the Muslims before the battle of Badr [*q.v.*] in 2/624 (Ibn Hishām, *Sīra*, 443-4, tr. Guillaume, 300; al-Ṭabarī, i, 1319, tr. M.V. McDonald and W.M. Watt, *The History of al-Ṭabarī. VII. The foundations of the community*, Albany 1987, 53-4), and the Ḳurʾānic verse LXI, 4, "God loves those who fight in His way in ranks, as though they were a building well-compacted" was adduced in support of the *ṣaff* formation. Only in the later Umayyad period does the use come in of troops concentrated into small, compact blocks (*karādīs*, sing. *kardūs*, *kurdūs*), but the *ṣaff* formation continued after this as a standard deployment.

See further, ḤARB. ii. The Caliphate, and the *Bibl.* there, to which may be added C.E. Bosworth, *Armies of the Prophet*, in B. Lewis (ed.), *The world of Islam. Faith, people, culture*, London 1976, 202-4.

(C.E. BOSWORTH)

3. In North African social organisation. Here, *ṣaff* denotes in certain parts of the Maghrib, chiefly Algeria, Southern Tunisia and Libya, a league, alliance, faction or party. In Morocco, the term *leff* [*q.v.*] is used with the same meaning throughout. As such *ṣaff* is vocalised with a *ḍamma* instead of *fatḥa* (cf. Dozy, *Suppl.*, i, 834). French spellings vary from *çof* and *çoff* to *sof* and *soff* (pl. *sfouf*).

The term refers to a major form of rural sedentary and transhumant Berber and nomadic Arab political organisation, viz. a diffuse system of two (or more) mutually opposing or rivalling leagues, often of uncertain origin, dividing villages or desert towns *ḳṣūr* (sing, *ḳṣar*), clans and families, or comprising whole tribes. Parallels have been looked for in classical Greece (R. Montagne), archaic Rome (E. Masqueray), Albania and Corsica (J. Despois, *L'Afrique du Nord*, Paris 1949, 145) and in mediaeval Italy (e.g. Guelphs and Ghibellines). As a rule, neighbouring tribal units belonged to opposite alliances but a neighbour-but-one belonged to one's own alliance. The obligation of mutual assistance between league members was strict and might include cash, provisions, arms, volunteer labour, fighting, shelter and providing for a family whose head was killed in feud or battle. The stronger the solidarity of a given league, the less would an opposing neighbour feel tempted to attack or trespass on his neighbour lest he activate the entire league. Causes of conflict were never lacking at every tribal level, the most common being land, water, trees, grazing, pastures, livestock, harvests, women, honour or a personal vendetta.

In Greater Kabylia, where the *ṣaff* phenomenon was first observed by Europeans (Devaux, Hanoteau and Letourneux, Masqueray, see *Bibl.*), the basic political unit was the village. Divided into two moieties, its cohesion was due to its political organs: the village assembly (*djamāʿa*), its executive officer (*amīn*) and the customary law (*ḳānūn*). Its complex *ṣaff*-system, despite its dualistic and antagonistic character, managed, by some "strange and obscure ponderation" (P. Bourdieu, *Sociologie de l'Algérie*, Paris 1970², 20) to maintain an overall equilibrium. Until the end of the 18th century, the whole of Greater Kabylia was divided in two great leagues named the "upper" and the "lower" leagues (*soff ufella, soff bū ʿadda*). These were territorial, not personal alliances, and their disposition on the ground resembled that of a chequerboard—a pattern already apparent in the *ṣaff* map given by Devaux, 40, and later encountered in Morocco (Montagne 1930). By the end of the 19th century, this system was "overlaid" by four major alliances: Ait Iraten (comprising 12 tribes), Zwāwa (10 tribes), Ait Illilten (6 tribes) and Ait Djennād (7 tribes).

Further south, the Berber-speaking Shāwiya of the Awrās massif [*q.v.*] who lived in villages and hamlets like the Kabyles but were more dispersed and largely semi-nomadic, also retained, though more sketchily, their political organisation and *ṣaff* spirit; almost all groups rallied round the two great tribes, Awlād Dāwūd and Awlād ʿAbdī, and participated in their mutual quarrels. Of a more personal type were the *ṣaffs* of several Arab "feudal" families in the Constantinois, such as the clans of Bū ʿUkkāz and Ben Gāna.

Still further south, in the Ibāḍī confederation of the Mzāb [*q.v.*], despite the unity of its heterodox creed and religious leadership (*ḥalḳat al-ʿazzāba*), each of the seven walled settlements (*ḳṣūr*) had its own secular assembly (*djamāʿat al-ʿawāmm*), often conflicting interests and *ṣaffs* both within the *ḳṣar* and between the *ḳṣūr*. Here, too, causes for friction and conflict, sometimes sanguinary, were not lacking: first comes water shortage (after Ghardāya, the capital, had dammed off the wādī Mīzāb for her own use, creating endless disputes with the towns Mlīka and al-ʿAṭf). Ghardāya itself, in times of crisis, split in two hostile camps: Eastern (*ṣaff sharḳī*), led by Awlād b. Sulaymān and allied with the *ḳṣar* Bni Isgen, and Western (*ṣaff gharbī*), led by Awlād ʿAmmī ʿĪsā and in league with Mlīka. Even its Jewish quarter (*mallāḥ* [*q.v.*]) became infected by the *ṣaff* spirit; in 1893 it split in two parties, Sullam and Balouka, when the latter erected a separate synagogue. Other towns and oases in the High Plains and northern fringes of the Sahara so divided were Wargla (Wardjlān), where in addition to neighbourhood rivalries there was fierce enmity between it and nearby Ngusa since the end of the 14th century, when the latter concluded a defence pact with the nomadic Arab tribe of Saʿīd ʿUtba (Hilāl), posing as defenders of the Sunna against the largely Ibāḍī Warglīs (Lethielleux, *Ouargla*, Paris 1983, 173), and Laghouat (al-Aghwāṭ), where the two rivalling quarters—each with its own mosque and market—used to fight each other, but always outside the town, and on an appointed day. They, too, had their Arab nomad helpers, the Larbaa (*al-Arbaʿa*) confederation.

As a case *sui generis* can be seen the important maraboutic tribe of *Awlād Sīdī Shaykh* based on their *zāwiya* El Abiod, where Sharāḳa and Gharāba quarrelled over transfer of *baraka* and control of their alms, raiding in the process each other's flocks and involving in their rivalry the Turkish and Moroccan authorities. In 1838, Sī Ḥamza, leader of the Sharāḳa, rallied round the *amīr* ʿAbd al-Ḳādir [*q.v.*], but when their relations soured, Sī Shaykh, leader of the Gharāba, became ʿAbd al-Ḳādir's staunchest supporter. With the latter's defeat, Sī Shaykh was interned in Morocco, while Sī Ḥamza rose from underdog to victor: he was appointed *khalīfa* over the Sahara by the French. Even the oasis group of Tawāt [*q.v.*] (Touat) used to be divided into two opposing factions, the Yaḥmad and Sufyān. Though reconciled today, they still celebrate their annual *ziyāra* separately. The same goes for their "capital", the oasis of Tamentīt, divided in two opposing factions, the Mrabṭin and Dāreb (K. Suter, *Étude sur le Touat*, in *Rev. Geogr. alpine*, 1952/7, 449-50).

Tunisia, too, had its share in *ṣaff* formations. Traditionally, there existed two rivalling leagues in the south, with ramifications in the north, in Eastern

Algeria and Tripolitania, named Shaddād and Yūsuf. The suggestion that these names reflect the opposition between Berbers and Arabs has been refuted by A. Martel (see *Bibl.*). Possibly they go back to the rivalries between the Hilāl and Sulaym [*q.vv.*], who invaded the Maghrib in the 11th century and occupied there two distinct domains: the former, that of the West or Black Tents, the latter, that of the East or White Tents, with the partition line running along the meridian of Tripoli. Yet in the 13th century, the latter were encouraged by the Ḥafṣids to expand into Tunisia and push the Banū Riyāḥ (Hilāl) into the Constantinois and the Zāb, where the Ben Gāna, Tuggurt, Larbaʿa and Ḥanānsha leaned on the *ṣaff* Yūsuf, while the Bū ʿUkkāẓ, Ṭrūd, Shaʿānba, Tamāsīn and al-Wād (El Oued) were supported by the *ṣaff* Shaddād. In the east, the same leagues divided politically a number of tribes in the Fazzān and Greater Syrte (Martel, Cauneille, see *Bibl.*). Major issues on which they adopted opposite stances were: the Ottoman conquest, rule of the pashas, the "national" beys, the revolt of ʿAlī Pasha against his uncle Ḥusayn, founder of the Ḥusaynid dynasty, and the ensuing troubles (1729-56), which divided the tribes of the High and Low Steppes, as well as towns and villages in the coastal plain (*Sāḥil*), into two *ṣaffs*, the "Ḥusayniyya" and Bāshiyya (Despois, see *Bibl.*). In the south, the former were supported by *ṣaff* Yūsuf, the latter by Shaddād.

Ṣaff/leff dynamics, as illustrated above, form one possible perspective on the structure and functioning of tribal society in North Africa and one way of explaining, how order, stability and cohesion are maintained in a stateless society, where central authority is lacking or ineffective. Another perspective and explanation is provided by the so-called segmentary theory, which uses the concept of "nesting" and "balanced opposition" of tribal segments at the same level of segmentation along the genealogical tree. This theory, to which the names of E. Durkheim, E.E. Evans-Pritchard, E. Gellner and D.M. Hart are chiefly attached, and which seems to dominate the field of social anthropology in North Africa today, falls outside the scope of this article.

al-**SAFFĀḤ** [see abu 'l-ʿabbās].

ṢAFFĀRIDS, a dynasty of mediaeval eastern Persia which ruled 247-393/861-1003 in the province of Sidjistān or Sīstān [*q.v.*], the region which now straddles the border between Iran and Afghānistān.

The dynasty derived its name from the profession of coppersmith (*ṣaffār, rūygar*) of Yaʿḳūb b. al-Layth, founder of the dynasty. Sīstān, on the far eastern periphery of the caliphal lands, had begun to slip away from direct ʿAbbāsid rule at the end of the 8th century, when Khurāsān and Sīstān were caught up in the great Khāridjite rebellion, led by Ḥamza b. Ādharak (d. 213/828 [*q.v.*]), which took advantage of such factors as resentment against caliphal tax exactions. Thereafter, the *khuṭba* was maintained in the capital of Sīstān, Zarandj or Zarang, for the ʿAbbāsids; the caliphal governors of Khurāsān in Nīshāpūr, the Ṭāhirids [*q.v.*], re-established the position in Khurāsān after Ḥamza's death, but were rarely able to collect revenue outside Zarang itself, and the surrounding countryside of Sīstān remained dominated by the Khāridjites. In this period of waning caliphal power in Sīstān, the orthodox elements in the towns there and in the town of Bust [*q.v.*] to the east, which depended administratively on Sīstān, were thrown back on their own resources. Hence they organised bodies of anti-Khāridjite vigilantes, *muṭaṭawwiʿa* [*q.v.*], "volunteer fighters for the faith", a term which seems to have been largely co-terminous with that of the *ʿayyārūn* [*q.v.*], rowdy and bellicose urban elements, a feature of many of the eastern Persian and Transoxanian towns at this time (see C.E. Bosworth, *The Ghaznavids*, 167-71).

Yaʿḳūb b. al-Layth was one of four brothers, of plebeian origin, who arose out of one of these anti-Khāridjite *ʿayyār* bands. Displaying immediately leadership qualities, he was soon able to set aside the *ʿayyār* chiefs Ṣāliḥ b. al-Naḍr and Dirham b. Naṣr and assume power over Sīstān for himself (247/861). He then extended his authority eastwards into al-Rukhkhadj and Zamīndāwar [*q.vv.*] (in the east of modern Afghānistān), killing the local ruler there, the Zunbīl, in 251/865, and then penetrating into Zābulistān [*q.v.*], the district around Ghazna and Gardīz [*q.vv.*], and the Kābul-Bāmiyān region, where ruled the Kābul-Shāhs. He drew an extensive booty and slaves from these areas, and probably in some part paved the way for the gradual Islamisation in the next century of these fringes of the Indian cultural and religious world. The Ṭāhirid city of Harāt was attacked in 257/870-1, and Yaʿḳūb's operations in the Bādhghīs [*q.v.*] region also led to the submission of substantial numbers of the local Khāridjites, some of whom entered the Ṣaffārid service and formed a special contingent within the army, the so-called *Djaysh al-Shurāt*.

Yaʿḳūb now turned his attention to the much richer and more attractive lands to the west of Sīstān, and this of course meant more clashes with the representatives of caliphal power in such provinces as Khurāsān, Kirmān, Fārs and Khūzistān. Kirmān was invaded in the early 250s/late 860s, so that the caliph was compelled to acknowledge Yaʿḳūb as governor there; and raids were made southwards into Makrān, the southern part of what is now Balūčistān, and westwards from Kirmān into Fārs, an especially rich province the loss of whose revenues was a serious blow to the ʿAbbāsids. In 259/873 Yaʿḳūb invaded Khurāsān, entered Nīshāpūr without striking a blow and ended the rule there of the Ṭāhirid governors, afterwards pushing into the Caspian region against the local Iranian princes there but without achieving any permanent successes there. The caliph could not ignore the overthrow of his Ṭāhirid nominees, and al-Muʿtamid denounced publicly the unlawfulness of Yaʿḳūb's annexations. Yaʿḳūb's riposte was to march from Khūzistān into ʿIrāḳ, but near Dayr al-ʿĀḳūl [*q.v.*] on the Tigris, only 50 miles from Baghdād, he

Genealogical table of the Ṣaffārids

(a) The Laythids or "first line"

al-Layth
- 1. Yaʿḳūb
- 2. ʿAmr
  - Muḥammad
    - 3. Ṭāhir
    - Yaʿḳūb
      - 7. ʿAmr
    - Bānū = Muḥammad b. Khalaf, see (b)
- ʿAlī
  - 4. al-Layth
  - 5. al-Muʿaddal
  - 6. Muḥammad

(b) The Khalafids or "second line"

al-Layth
- Khalaf
  - Muḥammad = Bānū bt. Muḥammad b. ʿAmr, see (a)
    - 8. Abū Djaʿfar Aḥmad
      - 9. Khalaf

was defeated by caliphal forces (9 Radjab 262/8 April 876). Even so, he recovered Khūzistān and retained control of Fārs till his death three years later; Fārs remained thus, subtracted from ʿAbbāsid control and under the rule of the Ṣaffārids or of their commanders, until the time of the fifth Ṣaffārid *amīr*, Muḥammad b. ʿAlī b. al-Layth (298/910-11), when it was briefly recovered by the ʿAbbāsids, only to pass irrevocably from their hands into those of the Būyids or Buwayhids [*q.v.*] a quarter of a century later; we possess today more coins minted by the early Ṣaffārids in Fārs than from any other part of their empire.

Yaʿḳūb's brother ʿAmr [*q.v.*] succeeded to the command of the army, after a short trial of strength with his other brother ʿAlī, when the founder of Ṣaffārid fortunes died at Djundīshābūr in Shawwāl 265/June 879. Whilst tenaciously holding on to the Ṣaffārid conquests in Fārs and Khūzistān, ʿAmr in general adopted a somewhat more conciliatory policy towards the caliphate, at various times seeking formal investiture with the governorships of his various provinces; one effect of this new attitude was that the Regent al-Muwaffaḳ [*q.v.*] was now better able to concentrate on the suppression of the Zandj [*q.v.*] rebellion in Lower ʿIrāḳ and southern Khūzistān. Enjoying as he did—if only intermittently—some degree of caliphal approval, ʿAmr embarked on a protracted struggle to establish his authority in Khurāsān which, after Yaʿḳūb's capture of Nīshāpūr, had reverted to being controlled by various adventurers, former commanders of the Ṭāhirids (some of whom claimed to be aiming at restoring the Ṭāhirids, but all were in the long run forwarding their own personal interests), such as Aḥmad b. ʿAbd Allāh al-Khudjistānī [see KHUDJISTĀN] and Rāfiʿ b. Harthama [*q.v.*]. ʿAmr also continued his brother's policy of raiding into eastern Afghānistān towards the Indian borders at some point before 283/896, when rich presents of idols captured by him reached the caliph in Baghdād. Rāfiʿ was not finally subdued until 283/896, when ʿAmr was able to send his head to al-Muʿtaḍid. His prestige was now at its apogee, and the caliph invested him with all his existing territories, including now Khurāsān and Rayy. But ʿAmr's overweening pride now led him to claim, since he was legitimate governor of Khurāsān, suzerainty also in Transoxania, over the local dynasty there of the Sāmānids [*q.v.*], a pretension to which al-Muʿtaḍid assented. ʿAmr marched into Ṭukhāristān to assert these rights, but was defeated by Ismāʿīl b. Aḥmad (Rabīʿ I or II 287/March-May 900), who eventually sent him captive to Baghdād, where he was killed just after al-Muʿtaḍid's own death in 289/902.

With ʿAmr's capture, the vast military empire which the two brothers had built up began to shrink somewhat. Khurāsān passed to the Sāmānids, and became an integral part of their dominions for nearly a century. But ʿAmr's successors and their Turkish commander Sebük-eri managed to hold on to Fārs and Kirmān, as well as the heartland of Sīstān itself, for another decade or so; suzerainty was exercised over the local rulers in Makrān, the Maʿdānids [see MAKRĀN], and for a while, it seems, across the Gulf of Oman in ʿUmān. The Ṣaffārid amirate was thus still far from negligible. ʿAmr was succeeded in Zarang by his grandson Ṭāhir b. Muḥammad b. ʿAmr, who ruled in effect jointly with his brother Yaʿḳūb, but there was a faction in Sīstān which favoured the claims of the sons of ʿAlī b. al-Layth, partly because ʿAlī had been Yaʿḳūb b. al-Laysh's original choice as successor but had been elbowed aside by ʿAmr (see above). Al-Layth b. ʿAlī prevailed militarily in 296/909, but had to face the continuing insubordination of Sebük-eri, who controlled Fārs and who in 297/910 defeated and dispossessed from Sīstān al-Layth. The latter's

brother Muḥammad was hailed as *amīr* in Zarang (298/910), but at this point the caliph al-Muḳtadir invested the Sāmānid Aḥmad b. Ismāʿīl with the governorship of Sīstān and instructed him to end the rule of the Ṣaffārids for good. A Sāmānid invasion followed, with Zarang captured in Radjab 298/March 911, and Muḥammad and his brother al-Muʿaddal, who had also briefly held power in Zarang, were both captured and deported to Baghdād.

This marks the end of the first line of the Ṣaffārids, what might be termed the Laythids, sc. descendants of al-Layth, father of the four brothers. Yaʿḳūb and ʿAmr had been backed by a professional army of the type increasingly the norm in the central and eastern Islamic lands at this time. There was a nucleus of slave *ghulāms* [*q.v.*], comprising essentially Turks from the Central Asian steppes and Indians, plus troops of many other nations attracted by the prospects of plunder under the capable leadership of the two Ṣaffārid brothers. As a result of their conquests, the brothers amassed a full treasury, from which tribute was sent only intermittently, in the intervals of calm relations, to Baghdād. In fact, Yaʿḳūb especially was contemptuous of the ʿAbbāsids and of the aristocratic Arab political and social tradition which they and their governors like the Ṭāhirids represented and which had hitherto prevailed in the caliphal lands. As a self-made man of unpretentious background, he was concerned above all to promote his own family's interests and to cut loose his native province Sīstān from financial and other dependence on the ʿAbbāsids and their rapacious governors. Yaʿḳūb and ʿAmr therefore represent a new trend in the history of the Islamic lands at this time: a conscious repudiation of the "caliphal fiction" whereby all provincial rulers theoretically derived their authority from an act of delegation by the head of Sunnī Islam, and in this wise the constituting of their military empire marks a definite step in the decline of direct caliphal political authority and the corresponding rise of autonomous and later *de facto* independent provincial dynasties. It might also be noted that there formed round them, in later decades, a popular tradition in Sīstān which regarded them as upholders of the province's interests against predatory outsiders, a feeling that was to be a distinct factor in the failure of the Sāmānids permanently to establish their authority within Sīstān and the return of a parallel branch of the family to power (see below).

The twelve or thirteen years 298-311/911-23 form an interim during which the Sāmānids led two expeditions into Sīstān and during which what might be described as patriotic, perhaps even proto-nationalistic, reactions against them by the people of Sīstān took place. In the course of rebellion against the Sāmānids, a child great-grandson of ʿAmr b. al-Layth, Abū Ḥafṣ ʿAmr, was briefly raised to the throne (299-300/912-13) as a figure-head, but real power rested in the hands of several local commanders, such as Muḥammad b. Hurmuz, called Mawlā Ṣandalī, Kathīr b. Aḥmad and Aḥmad b. Ḳudām.

Disturbed conditions in Sīstān also allowed the local *ʿayyārs* to play a significant role during these years, and it was the *ʿayyārs* of Zarang who in 311/923 brought to power Abū Djaʿfar Aḥmad b. Muḥammad b. Khalaf, whose grandfather al-Layth (not identical with the al-Layth who was father of Yaʿḳūb and ʿAmr) had been a distant kinsman and associate of the two original Ṣaffārid brothers and whose father's wife had been a grand-daughter of ʿAmr's. Abū Djaʿfar thus inaugurates the second and last line of the Ṣaffārids, which may conveniently be styled the Khalafids, and he ruled for some 40 years (311-52/923-63). Abū Djaʿfar soon extended Ṣaffārid authority to Bust and into al-Rukhkhadj, and made Sīstān once more a force in the politics of the eastern Islamic world, with its *amīr* enjoying the prestige of an equal with that of the Sāmanids and without, it appears (e.g. on the evidence of coins) any sign of subordination to Bukhārā.

There seems to have been a growth of factionalism and internal opposition during the later part of Abū Djaʿfar's reign, leading to his murder by one of his Turkish *ghulāms* in Rabīʿ I 352/March 963. He was succeeded by his son Abū Aḥmad Khalaf (352-93/963-1003), last and more famous of the *amīrs* of this second line. Khalaf at first ruled in close partnership with a commander of Sīstān, Abu 'l-Ḥusayn Ṭāhir b. Muḥammad, who had Ṣaffārid blood in his veins on his mother's side, making Ṭāhir his regent when he departed for the pilgrimage. The not unpredictable result of this arrangement was that, when Khalaf returned to Sīstān in 358/969, Ṭāhir was unwilling to relinquish power and Khalaf had to secure military help from the Sāmānids to assert his claims, when Ṭāhir conveniently died in 359/970 and Khalaf could re-enter Zarang as *amīr*. The struggle was nevertheless carried on by Ṭāhir's son Ḥusayn, who in turn secured Sāmānid aid, this time against Khalaf. A period of civil warfare followed, with Ḥusayn generally supported by the Sāmānids and with Khalaf, so the sources imply, consequently refusing to send any tribute to Bukhārā. Only after 373/983, when Ḥusayn had been defeated and then died, was Khalaf's power firmly established, so that he was able to send expeditions into Kirmān to collect taxation there.

Meanwhile, a new power had arisen in eastern Afghānistān, that of Sebüktigin [*q.v.*] in Ghazna, the founder of Ghaznawid [*q.v.*] power there, who had in 367/977-8 occupied Bust and who in the 990s was asserting his power in Khurāsān also against the decaying Sāmānid authority. Khalaf tried to incite the Ḳarakhānids of Transoxania [see ILEK KHĀNS] against Sebüktigin and his son Maḥmūd, but once Maḥmūd was firmly on the throne in Ghazna (388/998), unrest and revolt within Sīstān allowed the Ghaznawid *amīr* to intervene there, and Khalaf was finally deposed in 393/1003, dying in captivity at Gardīz a few years later.

With Khalaf the Ṣaffārids end. Later in the 5th/11th century, a new line of local rulers emerges in Sīstān, under Saldjūḳ suzerainty, but these maliks of Nīmrūz, as they are often termed in the sources, had no demonstrable connection with the Ṣaffārids; for these maliks, see SĪSTĀN.

Although the careers of Yaʿḳūb and ʿAmr were filled with furious military activity, allowing little time for the arts of peace, the succeeding Khalafids had a distinctly significant part in the culture of their time. In fact, Yaʿḳūb, as a supremely successful commander, had already had his own circle of court panegyrists, one of whom, the secretary Muḥammad b. Waṣīf [*q.v.*], has a significance in the renaissance of New Persian literature by his having composed verses for the *amīr* in the only language he could understand, sc. Persian, rather than in the incomprehensible Arabic. Abū Djaʿfar Aḥmad assembled around himself a scintillating array of scholars who enjoyed his patronage, including the philosopher and logician Abū Sulaymān Muḥammad (d. *ca.* 375/985 [see ABŪ SULAYMĀN AL-MANṬIḲĪ], and he was the *mamdūḥ* of the Sāmānid poet Rūdakī [*q.v.*]. Khalaf's court in Zarang was visited by writers like Badīʿ al-Zamān al-

Hamadhānī [*q.v.*]; and the *amīr* secured lasting fame for himself by commissioning a 100-volume Ḳurʾān commentary, a summation of all previous knowledge on the Holy Book, the manuscript of which, however, did not survive the Mongol devastations of the cities of Khurāsān and their libraries.

AL-ṢĀFFĀT (A.), the title of sūra XXXVII of the Ḳurʾān, and a word used three times in the text including at XXXVII, 1, where it is generally understood by the early *tafsīr* authorities to mean "(angels) standing in ranks" (and translated as "Celles qui sont en rangs" [R. Blachère], "Those who range themselves in ranks" [A. Yusuf Ali], and "Die in Reih und Glied stehen" [R. Paret]). The meaning is derived from the verb *ṣaffa* referring to camels (or military units) lined up in a row (for sacrifice, as in Ḳurʾān, XXII, 36, using the broken plural *ṣawāff*). The sense of the terse oath phrase *wa 'l-ṣāffāt*[i] *ṣaff*[an] in XXXVII, 1, has been clarified through association with other Ḳurʾānic passages. The masculine plural form of the same word, *al-ṣāffūn*, is used in XXXVII, 165, to denote beings who "declare the glory of God", that being understood to be the function of angels as in II, 30, XXXIX, 75, XL, 7, XLI, 38 and XLII, 5; angels explicitly "stand in ranks", *ṣaff*[an], in LXXVIII, 38 and LXXXIX, 22.

In XXIV, 41, and LXVII, 19, however, the word *ṣāffāt* is frequently glossed as "outspread wings" of birds; this meaning derives from the contrast drawn in LXVII, 19, in which birds fly up above with "outspread wings", *al-ṭayr fawḳahum ṣāffāt*, and then "fold them in (when resting)" or "beat them (against their sides)", *yaḳbiḍna*; this is a more doubtful sense of the word, depending perhaps on an image of outstretched wings as being "in a line". Regardless, as a result, the passage in XXXVII, 1, is sometimes understood as a reference to birds rather than angels.

In interpreting these verses, a parallel is often drawn to Muslims standing in rows in the *ṣalāt*, the idea of being in rows linked thereby to images of the universe as worshipping God.

(A. Rippin)

ṢAFĪ (pl. *ṣafāyā*), **ṢAWĀFĪ** (A.), two terms of mediaeval Islamic finance and land tenure. The first denotes special items consisting of immoveable property selected from booty by the leader [see FAYʾ and GHANĪMA], while the second is the term for land which the Imām selects from the conquered territories for the treasury with the consent of those who had a share in the booty (al-Māwardī, *al-Aḥkām al-sulṭāniyya*, Cairo 1966, 192). In pre-Islamic Arabia the leader was also entitled to one-fourth (*rubʿ*) or one-fifth (*khums*) of the booty in addition to the *ṣafī*. The custom of *khums* was upheld by the prophet and given Ḳurʾānic sanction in sūra XLI. There was general agreement under the Rāshidūn caliphs that the caliph likewise might retain one-fifth of the booty. In the case of landed property, it became *ṣawāfī*, in effect crown land. In Sunnī theory, the right of the Prophet to select for himself moveable property from war booty terminated with his death, but in Shīʿī theory it passed to the Imāms.

In pre-Islamic Persia, crown lands were extensive; and the possessions of the Sāsānid royal household (*ōstān*) were scattered over the country. Their administration was under a special department called *dīwān ī ōstāndārīh* (A. Perekhanian, *Iran society and law*, in *Cambr. hist. Iran*, iii (2), 669). The accounts of the income from crown lands were kept in a separate register apart from the land tax. Prior to the reforms of the 6th century A.D., the Sāsānid land tax was assessed as a proportion of the crop, and varied from one-third to one-sixth of the crop, depending upon the amount of irrigation and the productivity of the land (A. Christensen, *L'Iran sous les Sassanides*, Copenhagen 1936, 118-119). Some crown lands were assigned to the royal family, as for example the crown district of Kaskar, which Khusraw Parwīz assigned to his cousin Narsah about the year A.D. 624; and some were granted as payments to supporters of the régime, such as the land grants made to the Banū Lakhm at Ḥīra to secure the desert frontier. Some royal property survived the Islamic conquest in the hands of those who had come to terms with the Muslims and some, in the confusion which followed the conquest, was appropriated by local *dahāḳīn* (M.G. Morony, *Landholding in seventh century Iraq*, in A.L. Udovitch (ed.), *The Islamic Middle East, 700-1900*, Princeton 1981, 148 ff.).

The legal theories developed by the *fuḳahāʾ* with regard to crown land, communal land and booty were based on the treatment of Sāsānid crown land, abandoned land and waste land in the Sawād [*q.v.*] after the Islamic conquest, and on the varying interpretations of incidents at the time of the conquest interpreted in terms of their own concept of communal ownership and the responsibilities of the caliph as Imām. M.G. Morony has drawn attention to a tendency on the part of both Islamic and Western scholars to describe the land settlement ascribed to ʿUmar I in terms of a conscious policy based on theories that only emerged later in the fully-developed Islamic law (*op. cit.*, 154. See also W. Schmucker, *Untersuchungen zu einigen wichtigen bodenrechtlichen Konsequenzen der islamischen Eroberungsbewegung*, Bonn 1972, 25-6 and *passim*).

It is difficult to disentangle the course of events during and after the conquest from the often-conflicting traditions, in particular since many of the statements about what ʿUthmān did were elicited

during the second civil war (Morony, 161). The measures adopted to deal with the administrative and other problems which arose were often of an *ad hoc* nature. It is generally accepted that ʿUmar I, after the defeat of the Sāsānids at the battle of Djalūla (16/637), confiscated all lands belonging to the Persian royal house, property belonging to fire-temples, post-houses, and mills, drained marshes and swamps in Mesopotamia, exempted them from the *fay*ʾ and declared them to be *sawāfī al-ustān* and, according to tradition, ordered four-fifths to be allotted to the army one-fifth to be reserved for the caliph for the community (*ibid.*, 155).

Al-Balādhurī states that ʿUmar established the peasants (*ahl al-sawād*) in their lands, levied *djizya* on their heads and *ṭasḳ* on their lands (*Futūḥ*, 273; Morony, 159). This presumably refers to the practice in the Sawād generally, including those districts made into *ṣawāfī*. According to Ḳudāma's account, the *ṭasḳ* was levied in the *ṣawāfī al-ustān* at the rate of half the crop. It is not clear from Ḳudāma's account whether the Sawād, including the *ṣawāfī*, was originally assessed by measurement (*misāḥa*) or by *muḳāsama* [*q.vv.*], that is, by a proportion of the crop, or in some districts by *misāḥa* and in others by *muḳāsama*. He states that ʿUmar sent ʿUmar b. Ḥunayth to measure the Sawād (after the conquest) and that he imposed 10 dirhams *per djarīb* on vines and trees, 5 dirhams on date palms, 6 dirhams on green sugar cane, 4 dirhams on wheat, and 2 dirhams on barley (or according to other traditions he assessed them at a higher rate). He then measured the cultivated land and all land to which water could be brought, so that it could be cultivated, and imposed on all this by way of tax one *ḳafīz* (of its produce) and one dirham. This was changed later by the *Imām*, taking into account the quantity of the crops and the expenses incurred in the transport of the grain and fruits to the market (*Taxation in Islam*, ii, *Qudāma b. Jaʿfar's Kitāb al-Kharāj, part seven*, tr. with introd. and notes by A. Ben Shemesh, Leiden 1965, 39, Arabic text, 121; Abū Yūsuf, *Le livre de l'impôt foncier*, tr. E. Fagnan, Paris 1921, 58 ff.). It seems probable that some at least of the land to which Ḳudāma refers, in particular that "to which water could be brought so that it could be cultivated", was or became *ṣawāfī*.

The revenue (*kharādj*) from the territory of the Sawād which was made into *ṣawāfī* by ʿUmar is variously recorded. According to a tradition quoted by Yaḥyā b. Ādam, it was 7,000,000 dirhams (*Taxation in Islam*, i, *Yaḥyā ben Ādam's Kitāb al-kharāj*, ed. and tr. with introd. and notes by A. Ben Shemesh, Leiden 1967, 53). Abū Yūsuf quotes the same tradition; he also records that some of the elders of al-Madīna states that ʿUmar made *ḳaṭīʿa* grants from this land (Fagnan, 87, *Taxation in Islam*, iii, *Abū Yūsuf's Kitāb al-kharāj*, tr. with introd. by A. Ben Shemesh, Leiden 1969, 75). Ḳudāma similarly gives the figure of 7,000,000 dirhams (*Taxation in Islam*, ii, 35-6). Abū Yūsuf also quotes another tradition which gives the revenue of the *ṣawāfī al-ustān* as 4,000,000 dirhams (text, 86, tr., 75). Al-Māwardī, on the other hand, states that the revenue was 9,000,000 dirhams and that it was to be expended on the general interests of the Muslims. Contrary to the tradition quoted by Abū Yūsuf, he asserts that no *ḳaṭīʿa* grants were made on it (*al-Aḥkām al-sulṭāniyya*, Cairo 1966, 192-3).

Under ʿUthmān changes began to occur in the theory of *ṣawāfī*. Gradually the concept emerged that property held by the Commander of the Faithful for the Islamic community was at his disposal, and the distinction between *fay*ʾ land and *ṣawāfī* became blurred. ʿUthmān made land grants (*ḳaṭāʾiʿ*) from *ṣawāfī* to tribal leaders at Kūfa. Among these were the grants to Djarīr b. ʿAbd Allāh al-Badjalī on the banks of the Euphrates, to Ashʿath b. Ḳays al-Kindī at Tīzanābādh near Ḳādisiyya, to Saʿd b. Mālik at the village of Hurmuzān and to ʿAbd Allāh b. Masʿūd in al-Nahrayn (Morony, 158; Balādhurī, *Futūḥ*, 273-4; al-Ṭabarī, i, 2376). In the last two cases, one-third and one-fourth of the produce was taken by way of rent (Abū Yūsuf, tr., 93), which suggests that by this time some or most of the *ṣawāfī* were assessed by *muḳāsama*. The village of Tīzanābādh, later called al-Ashʿath, remained in the family of al-Ashʿath b. Ḳays at least until 74/693 (Morony, 173, 118 n.), which is evidence that some *ḳaṭīʿa* grants had by this time become hereditary.

ʿUthmān also made *ḳaṭīʿa* grants of undeveloped land round Baṣra. One such was the grant of the swampy ground called Shaṭṭ ʿUthmān across from Ubulla to ʿUthmān b. Abi 'l-ʿĀṣ al-Thaḳafī in order to drain and reclaim it and to compensate him for the land the caliph had bought from him in Medina (*ibid.*, 158; al-Balādhurī, *Futūḥ*, 351). Ḳudāma and al-Māwardī interpret ʿUthmān's actions in granting *ḳaṭāʾiʿ* as based on a belief that it was more beneficial for the Muslims that the *ṣawāfī* should be cultivated than left without cultivation and that he therefore granted them to whom he saw fit for the purpose of cultivation and so that the share (i.e. the rent or tax) due on them might be paid to the Muslims (*Taxation in Islam*, ii, 36; *al-Aḥkām al-sulṭāniyya*, 193). That revenue from *ṣawāfī* was said to have increased under ʿUthmān to 50,000,000 dirhams (al-Māwardī, 192-3) is supporting evidence for Ḳudāma's interpretation. At the same time it would seem, ʿUthmān's actions were also designed to reward his own followers. Morony considers that the result of ʿUmar's policy was to establish the nucleus of a Muslim Arab landed aristocracy in the Sawād, the property they held consisting of the same village estates that had been held by Sāsānid nobles from the crown before the conquest (*Landholding in seventh century Iraq*, 158). These grants to ʿUthmān's supporters served, however, to alienate others of the Muslim community who disputed the conversion of the land round Kūfa into *ṣawāfī*, maintaining that it was *fay*ʾ land, the revenue of which belonged to them. It was this dissatisfaction that was one of the causes of Kūfan support for the revolt which brought ʿUthmān's caliphate to an end in 35/656 (*ibid.*).

In the reign of Muʿāwiya (41-60/661-80) there was a further increase in crown lands both in ʿIrāḳ and in the Ḥidjāz (Morony, 174; Schmucker, 135-6, 142). ʿAbd Allāh b. Darrādj, whom Muʿāwiya had put in charge of the *kharādj* of Kūfa in 41/661, is said to have identified former Sāsānid crown lands on the basis of a supposed register of Sāsānid crown lands recovered from Ḥulwān where Yazdagird III is alleged to have left it, and to have cut down the reeds and built dams and thus reclaimed them from the swamps (*baṭāʾiḥ*) (al-Balādhurī, *Futūḥ*, 290, 295; al-Yaʿḳūbī, *Taʾrīkh*, ii, 258). A good deal of former Sāsānid crown land had apparently been lost to the swamps below Kaskar in A.D. 628, and it was there that Ibn Darrādj began to reclaim land (Morony, 160). Grants, some of them very large, from this reclaimed land in Lower ʿIrāḳ were made to relatives and supporters of the Umayyads (*ibid.*, 161). In the revolt led by Ibn al-Ashʿath against al-Ḥadjdjādj in 82/701, the register of *ṣawāfī* land was burnt after the battle of Dayr al-Djamādjim and many *ṣawāfī* lands were seized by neighbouring landlords and others (Abū Yūsuf, tr.

Fagnan, 86-7; al-Māwardī, 193). However, the revolt was crushed, Wāsiṭ was founded and more land was reclaimed from the swamps of Lower ʿIrāḳ and turned over to the partisans of the Umayyads (Morony, 162). Further increases of *ṣawāfī* land occurred under ʿAbd al-Malik and Walīd I [see KHĀLIṢA], but ʿUmar II (99-101/717-20) forbade any further appropriations of state lands to individuals (H.A.R. Gibb, *The fiscal rescript of ʿUmar II*, in *Arabica*, ii [1955], 10).

Under the ʿAbbāsids it seems to have been tacitly assumed that the leader of the community, whether he was the caliph or a local ruler, might appropriate to himself extensive districts [see further KHĀLIṢA]. There was in any case a great increase in crown land in the ʿAbbāsid period. Increasingly from the reign of al-Mutawakkil (232-47/847-61), fiscal assignments were made on the land, and grants of land, including presumably *ṣawāfī*, were made to the troops and military officers and other officials of the caliph's administration. According to Miskawayh, al-Muḳtadir, after he was restored to the caliphate in 317/929, distributed largesse to the army, and when the available cash was exhausted he sold land to them and made it a condition in the documents of sale that the buyers should pay tax to the public treasury on what they had purchased at the rate levied on *ḳaṭīʿa* grants, which paid *ʿus͟hr*. Thus the difference between what was paid on estates in *ustān* land (i.e. *ṣawāfī* land, the rent or tax of which might be as much as half the produce) and land given as *ḳaṭāʾiʿ* (which paid *ʿus͟hr*) was contracted to the purchasers as a gift. These contracts made by ʿAlī b. ʿAbbās, whom al-Muḳtadir had appointed as his agent in the matter, were attested and the estates (*al-ḍiyāʿ wa ʾl-amlāk*) were sold to the army for very low prices. T͟hābit b. Sinān relates that one day in the year 317/919-20 he was present in the office of the *wazīr* Ibn Muḳla [*q.v.*], who was "entirely occupied with the signing of sales of estates (*al-ḍiyāʿ*) to the troops and the assignation to them of the difference between the assessments as a gift. The officials in the bureaux were also kept at work hunting out the assessments of the lands which were being sold" (*Eclipse of the ʿAbbasid caliphate*, ed. and tr. Amedroz and Margoliouth, Arabic text, i, 200, iv, tr. 225). From this, it would seem that *ṣawāfī* land in ʿIrāḳ (whatever its origins) still paid a higher rate of taxation in the early 4th/10th century than land which had been granted as *ḳaṭāʾiʿ*.

In the early ʿAbbāsid period, Sunnī *fuḳahāʾ* belonging to the various schools assembled the traditions and legal prescriptions concerning the classification and taxation of land. Their theory concerning *ṣawāfī* was based primarily on ʿUmar's actions or supposed actions in the settlement of the Sawād. There are differences in matters of detail between them as a result of the different and sometimes contrary nature of the traditions, but the general consensus is that *ṣawafī* land derived from the principle which permitted the Imām to reserve one-fifth of the conquered land for the public treasury in the interests of the Muslims and that grants of *ṣawāfī* land did not carry full rights of ownership. In practice, there were frequent deviations from the theory of the early legal scholars. Nevertheless, later scholars maintained the theories put forward by their predecessors. There are, however, exceptions. Abū Bakr Aḥmad b. ʿAbd Allāh al-Kindī al-Samdī al-Nazwī (d. 557/1161-2) gives in the *Muṣannaf* different versions of the origin of *ṣawāfī*. One is to the effect that *ṣawāfī* were possessions that had been owned by people who had abandoned their lands because they had been treated iniquitously by unjust rulers. For this reason, al-Nazwī claims that legal scholars considered the *ṣawāfī* unlawful (*ḥarām*). Kister points out that this opinion reflects later perceptions (see his *Land, property and jihad*, in *JESHO*, xxxiv [1991], 308 ff.).

The S͟hīʿī theory of *ṣawāfī* differs from the Sunnī one and might cover both moveable or immoveable property. It is confused with *ṣafī* (see above). Whereas in Sunnī theory only one-fifth of the land of former kings was *ṣawāfī*, all the lands of former kings were considered to belong automatically to the S͟hīʿī Imām. They were regarded as part of the *anfāl*, which consisted of lands which were abandoned by their owners without fighting, dead lands, lands on mountain tops, plantations, mines and lands of former kings (*ḳaṭāʾiʿ al-mulūk*). *Anfāl* lands belonged to the imām, who could alienate them as he saw fit (Hossein Modarressi Tabatabaʾi, *Kharaj in Islamic law*, London 1983, 8 ff. See also A.K.S. Lambton, *State and government in medieval Islam*, Oxford 1981, 247, and KHĀLIṢA, at IV, 974).

(ANN K.S. LAMBTON)

ṢAFĪ, the by-name of FAKHR AL-DĪN ʿALĪ b. Ḥusayn Wāʿiẓ KĀSHIFĪ (b. 21 D͟jumādā I 867/11 February 1463, d. 939/1532-3), author, preacher and prominent Naḳs͟hbandī Ṣūfī, and son of the famous Kamāl al-Dīn Ḥusayn Wāʿiẓ [see KĀSHIFĪ].

Born in Sabzawār, he was brought up and educated in Harāt. His mother was the sister of D͟jāmī [*q.v.*]. Among his early teachers were D͟jāmī and Raḍiyy al-Dīn ʿAbd al-G͟hafūr Lārī. He was early attracted by Naḳs͟hbandī ideas, and travelled to Samarḳand in 889/1484 and again in 893/1487-8 to study with K͟hʷād͟ja ʿUbayd Allāh Aḥrār [*q.v.* in Suppl.], chief of the Naḳs͟hbandī order. In 904/1498-9 he married the daughter of K͟hʷād͟ja Muḥammad Akbar b. Saʿd al-Dīn Kās͟hg͟harī. After the death of his father in 910/1504-5, Fak͟hr al-Dīn ʿAlī succeeded him as leading preacher in Harāt. In 938-9/1531-2 he was confined for a year in Harāt when the city was besieged by the Özbegs. When the siege was broken by the forces of S͟hāh Ṭahmāsp in 939/1532-3, he took refuge with Sayf al-Mulūk S͟hāh Muḥammad Sulṭān, the *s͟hār* of G͟hard͟jistān [*q.v.*], but in the same year that area was attacked and he returned to Harāt, where he soon died and was buried in the city. Some have suggested that he became a S͟hīʿī later in life, but nothing definite in this regard can be stated. His works are: (1) *Ras͟haḥāt-i ʿayn al-ḥayāt*, completed in 909/1503-4 (ed. ʿA.A. Muʿīniyān, 2 vols., Tehran 2536/1977-8); (2)

Laṭā'if al-ṭawā'if (ed. A. Gulčīn Maʿānī, Tehran 1367/1988-9); (3) *Ḥirz al-amānī min fitan al-zamān* (Lucknow 1290/1873); (4) *Kas͟hf al-asrār*, also called *Tuḥfa-yi k͟hānī* (Bodleian cat. 2749; Ivanow, cat. ASB [Curzon Coll.] 648); (5) a *mat͟hnawī* entitled *Maḥmūd wa Ayāz* (Ḥād͟jd͟jī K͟halīfa, iv, col. 445); (6) *Anīs al-ʿārifīn* (Ismāʿīl Pas͟ha Bag͟hdādlī, *Hadiyyat al-ʿārifīn*, ed. Bilge and İnal, Istanbul 1951-5, i, col. 743).

(W.L. HANAWAY)

ṢAFĪ AL-DĪN ARDABĪLĪ, S͟hayk͟h Abu 'l-Fatḥ Isḥāḳ, son of Amīn al-Dīn D͟jibrā'īl and Dawlatī, born 650/1252-3, died 12 Muḥarram 735/12 September 1334 at Ardabīl [*q.v.*], eponymous founder of the Ṣafawid Order of Ṣūfīs and hence of the Ṣafawid dynasty, rulers of Persia 907-1148/1501-1736 [see ṢAFAWIDS].

Traditional hagiographical accounts depict Ṣafī al-Dīn as being destined for future greatness from infancy. As a boy, he spent his time in religious exercises, experienced visions involving angelic beings, and was visited by the *abdāl* and *awtād* [*q.vv.*]. As he grew up, he could find no *murs͟hid* (spiritual director) at Ardabīl capable of satisfying his religious needs. When he was twenty years old (670/1271-2), he travelled to S͟hīrāz to meet S͟hayk͟h Nad͟jīb al-Dīn Buzg͟hūs͟h, who had been recommended to him as a *murs͟hid*. On his journey south, he continued to seek a spiritual director in the various towns through which he passed, but still without success, and, on his arrival at S͟hīrāz, he learned that S͟hayk͟h Nad͟jīb al-Dīn had just died. He was then advised that the only person capable of analysing his mystical state (*ḥāl wa aḥwāl*), his visions (*wāḳiʿāt*), and his spiritual stations (*maḳāmāt*) was a certain S͟hayk͟h Zāhid Gīlānī. Ṣafī al-Dīn eventually found S͟hayk͟h Zāhid at the village of Ḥilya Kirān on the Caspian in 675/1276-7, and at once realized that the S͟hayk͟h, then sixty years of age, was the *murs͟hid* he had been seeking.

S͟hayk͟h Zāhid treated Ṣafī al-Dīn with extraordinary favour. He gave his daughter Bībī Fāṭima in marriage to Ṣafī al-Dīn, and his son Ḥād͟jd͟jī S͟hams al-Dīn Muḥammad married Ṣafī al-Dīn's daughter. Ṣafī al-Dīn had three sons by Bībī Fāṭima: Muḥyī al-Dīn (died 724/1223-4); Ṣadr al-Milla wa 'l-Dīn, who succeeded him as head of the Ṣafawid order; and Abū Saʿīd. Before his death in Rad͟jab 700/March 1301, S͟hayk͟h Zāhid designated Ṣafī al-Dīn to succeed him as head of the Zāhidiyya order. This caused great resentment among some of S͟hayk͟h Zāhid's followers, and especially on the part of his elder son, D͟jamāl al-Dīn ʿAlī, and his family. S͟hayk͟h Zāhid's younger son, Ḥād͟jd͟jī S͟hams al-Dīn Muḥammad, who was in any case Ṣafī al-Dīn's son-in-law, was placated by grants of land and other property. There is evidence that Ṣafī al-Dīn connived at the expropriation by his son-in-law of certain *waḳfs* controlled by D͟jamāl-Dīn's son, Badr al-Dīn D͟jamālān; the Mongol Īl-K͟hān Abū Saʿīd [*q.v.*] intervened in 720/1320 to restore the rights of Badr al-Dīn (V. Minorsky, *A Mongol decree of 720/1320 to the family of S͟hayk͟h Zāhid*, in *BSOAS*, xvi/3 [1954], 519-20). On the other hand, S͟hayk͟h Zāhid's descendants were not immune from the usurpations of Mongol *amīrs*.

Under Ṣafī al-Dīn's leadership, the Zāhidiyya order, under its new name Ṣafawiyya, was transformed from a Ṣūfī order of purely local significance into a religious movement, based on Ardabīl, whose religious propaganda (*daʿwa*) was disseminated throughout Persia, Syria and Asia Minor, and even as far away as Ceylon (H.R. Roemer, *The Safawid period*, in *Camb. Hist. Iran*, vi, 192). Even during his lifetime, Ṣafī al-Dīn wielded considerable political influence, and his designation of his son Ṣadr al-Dīn Mūsā to succeed him makes it clear that he was determined to keep this political power within the Ṣafawid family. After his death, his mausoleum at Ardabīl became an important place of pilgrimage (for an inventory of the contents of the shrine compiled in 1172/1758-9 by its *mutawallī* Sayyid Muḥammad Ḳāsim Beg Ṣafawī, see *Gand͟jīna-yi S͟hayk͟h Ṣafī*, Tabrīz 1348 S͟h./1969. See also M.E. Weaver, *The conservation of the shrine of Sheikh Safi at Ardabil, Second preliminary study, July-August 1971*, UNESCO, Paris 1971). Though he may be regarded as the founder of the Ṣafawid dynasty, which promulgated Ithnā ʿAs͟harī S͟hīʿism as the official religion of the state, Ṣafī al-Dīn himself was nominally a Sunnī of the S͟hāfiʿī *mad͟hhab*. However, given the syncretist religious climate of the period of Mongol rule in Persia, too much emphasis should not be placed on this.

Bibliography (in addition to sources referred to in the text): Darwīs͟h Tawakkulī b. Ismāʿīl Ibn Bazzāz, *Ṣafwat al-ṣafā*, written about 759/1357-8, some twenty-four years after the death of Ṣafī al-Dīn. It is a mainly hagiographical work. Because the whole question of Ṣafawid genealogy is extremely complex, and because later copies of the *Ṣafwat al-ṣafā* were tampered with during the reigns of S͟hāh Ismāʿīl I and S͟hāh Ṭahmāsp [*q.vv.*] to produce an "official version" of the origin of the Ṣafawids, the two copies of this ms. which antedate the establishment of the Ṣafawid state in 907/1501 are of particular importance: ms. Leiden 2639 (dated 890/1485), and Ayasofya 3099, dated 896/1491 (lith. text ed. Aḥmad al-Tibrīzī, Bombay 1329/1911). Study of these earlier mss. has led scholars to challenge the claim of the Ṣafawid family to *siyādat* and to descent from the Seventh It͟hnā ʿAs͟harī Imām, Mūsā al-Kāẓim [*q.v.*]; see Sayyid Aḥmad Tabrīzī (Kasrawī) [*q.v.*], *Niz͟hād wa tabār-i Ṣafawiyya*, in *Āyanda*, ii (1927-8), 357-65; *Ṣafawiyya sayyid nabūda and*, in *ibid.*, 489-97; and *Bāz ham Ṣafawiyya*, in *ibid.*, 801-12 (a later publication, *S͟hayk͟h Ṣafī wa tabāras͟h*, [1]Tehran 1323 S͟h./1944, [2]Tehran 1342 S͟h./1963, is a rewritten and expanded version of these articles); Zeki Velidi Togan, *Sur l'origine des Safavides*, in *Mélanges Louis Massignon*, Damascus 1957, 345-57; M. (F. BABINGER-[R.M. SAVORY])

ṢAFĪ AL-DĪN ʿABD AL-ʿAZĪZ B. SARĀYĀ AL-**ḤILLĪ** al-Ṭā'ī al-Sinbisī, Abu 'l-Maḥāsin (b. 5 Rabīʿ II 677/26 August 1278 [according to al-Ṣafadī, *Wāfī*,

xviii, 482, 6-7, and most other sources] or Djumādā II, 678/Oct.-Nov. 1279 [according to al-Birzālī (d. 739/1339; *q.v.*) who claims to have received this information from al-Ḥillī himself, see Ḥuwwar, 20], d. probably 749/1348), the most famous Arab poet of the 8th century A.H.

In spite of his fame, information about his life is rather scarce; even the year of his death is variously given (see Bosworth, *Underworld,* i, 138, n. 26). Born in al-Ḥilla [*q.v.*], a centre of Shīʿī learning, and a Shīʿī himself (see below), he left his native town in 701/1301-2 (see introd. to poems *Dīwān,* 70 and 94) to betake himself to the court of the Turkmen Artuḳids [*q.v.*] of Mārdīn. The reasons for this move were, on the one hand, the atmosphere of factionalism and vendetta in al-Ḥilla; he himself had taken revenge for one of his uncles, who had been murdered, and thus was in fear for his own life (al-Ṣafadī, *Wāfī,* xviii, 485 l. 1, mentions, from autopsy, the scars that Ṣafī al-Dīn had retained from the fight; see also Ṣafī al-Dīn's introd. to the *Dīwān,* 4, tr. Bosworth, *Underworld,* i, 137, and the ten poems devoted to the affair [*wāḳiʿa*] of his uncle in *Dīwān,* 9-18, 36-38, the introd. to the poem *Dīwān,* 11, dating the revenge to the same year 701/1301-2 in which he went to Mārdīn). On the other hand, the Artuḳid principality of Mārdīn, under Īlkhānid suzerainty, was a flourishing and relatively peaceful place. Ṣafī al-Dīn, who had already won some fame as a poet, was warmly received by al-Malik al-Manṣūr Nadjm al-Dīn Ghāzī (reigned 693-712/1294-1312) and most likely composed the *Durar al-nuḥūr fī madāʾiḥ al-Malik al-Manṣūr* (see below) to introduce himself to the prince. Henceforth, he considered Mārdīn his home town. He became a *nadīm* and court poet of al-Malik al-Manṣūr as well as of his son and successor (after the ephemeral ʿImād al-Dīn ʿAlī) al-Malik al-Ṣāliḥ Shams al-Dīn Ṣāliḥ (reigned 712-65/1312-64; the correct name is Ṣāliḥ rather than Maḥmūd given here vol. I, 663; see *Dīwān,* 5, where the name occurs as a *ḳarīna* in rhymed prose). However, his main source of income was trade. As a merchant he travelled widely, which also meant that a fair number of his praise poems were mailed to their addressees rather than recited in person. His travels also afforded him opportunities to present poems to other rulers and notables, thus the Ayyūbid lord of Ḥamāt (under Mamlūk suzerainty) and well-known historian and geographer al-Malik al-Muʾayyad Abu 'l-Fidāʾ Ismāʿīl (reigned 710-32/1310-31, see ABU 'L-FIDĀʾ; cf. *Dīwān,* 142-8) and his son and successor al-Malik al-Afḍal Muḥammad (reigned 732-42/1331-41, cf. *Dīwān,* 148-61, and al-Ṣafadī, *Aʿyān,* ii, 444). His most important sojourn outside Mārdīn, however, was his stay at the court of the Mamlūk sultan al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*] in Cairo, following his pilgrimage in 723/1322 (see *Dīwān,* 62, l. 3, and for the date see 114, l. 10; al-Ṣafadī, *Aʿyān,* ii, 87, 21, and *Wāfī,* xviii, 482, ll. 7-8, dates his stay in Cairo "*ca.* 726/1326", but thinks that he may have visited Cairo twice). He was introduced to the sultan by the sultan's confidential secretary ʿAlāʾ al-Dīn Ibn al-Athīr (d. 730/1329), and he also met with important scholars, such as the *sīra* writer and poet Ibn Sayyid al-Nās (d. 734/1334 [*q.v.*]) and the grammarian Abū Ḥayyān al-Gharnāṭī (d. 745/1344 [*q.v.*]) (see al-Ṣafadī, *Aʿyān,* ii, 87, l. 23; *Wāfī,* xviii, 482, l. 9; Ibn Ḥadjar, *Durar,* ii, 370, l. 2). After some well-received panegyrics, the sultan suggested that Ṣafī al-Dīn collect his poetry into a thematically arranged diwan (see *Dīwān,* 5, for the story, and 62-9 for the poems). This is the existing *dīwān.* In 731/1331 al-Ṣafadī met Ṣafī al-Dīn near Aleppo, when the latter was petitioning the governor of Syria Sayf al-Dīn Tängiz, who was hunting in the area, to apprehend a thief who had stolen from him in Mārdīn. On that occasion al-Ṣafadī received a comprehensive *idjāza* from Ṣafī al-Dīn for all his past and future work and all works that he was permitted to transmit. In 747/1346-7 al-Fīrūzābādī (d. 817/1415 [*q.v.*]), then still a young man of seventeen, met Ṣafī al-Dīn in Baghdād, when the latter was about seventy years old; he says that it was hard to believe that this man had composed the poetry he was known for (quoted by al-Shushtarī, *Madjālis al-muʾminīn,* Tehran 1299/1881-2, 471).

As a man from al-Ḥilla, Ṣafī al-Dīn could hardly be anything but Shīʿī, and al-Ṣafadī says so explicitly, adding that being a Shīʿī was nothing "heretical" (*bidʿī*) in al-Ḥilla (*Aʿyān,* ii, 87, ll. 10-11). Ibn Ḥadjar felt that some of his poetry smelled of *rafḍ* (*Durar,* ii, 369, penult.), in the sense of an outright rejection and vituperation of the first caliphs, although al-Ḥillī himself—and Ibn Ḥadjar is aware of that—had expressed his esteem for the first caliphs, and the Companions in general, in his poetry (see e.g. *Dīwān,* 59, two poems). He could hardly have done otherwise in the strongly Sunnī world in which he moved.

Ṣafī al-Dīn's literary output includes the following works that are extant:

1. The *Dīwān.* Collected at the suggestion of al-Nāṣir b. Ḳalāwūn, probably in 723/1322 (see above), and arranged according to genres, this *Dīwān* is expressly called a selection. Moreover, poetry composed after completion of the *Dīwān* would *eo ipso* not be included; however, the *Dīwān* does contain a few poems referring to later events (see ʿAllūsh, 113-14, and Salīm, 38-9). Whether these were inserted by the poet himself or by later copyists is unclear. This means that a fair part of Ṣafī al-Dīn's total poetic production is not included in the *Dīwān;* the selections offered by al-Ṣafadī, both in the *Aʿyān* and the *Wāfī,* contain indeed a substantial number of items not to be found in the *Dīwān.* The same is true, though to a lesser extent, for the selections made by al-Kutubī. Brockelmann (II, 160, S II, 199-200) lists a number of poems that have been transmitted outside the *Dīwān;* no indication is given whether or not they are contained in the existing text.

The arrangement of the *Dīwān* is as follows (note that the chapter headings are composed in *sadjʿ* which accounts for some tautologies):

ch. 1: self-glorification, heroic songs, and incitation to assume leadership (*fī 'l-fakhr wa 'l-ḥamāsa wa 'l-taḥrīḍ ʿalā 'l-riʾāsa*);
ch. 2: encomium, praise, gratitude, and congratulation (*fī 'l-madḥ wa 'l-thanāʾ wa 'l-shukr wa 'l-hanāʾ*);
ch. 3: hunting poems and various descriptions (*fī 'l-ṭardiyyāt wa-anwāʿ al-ṣifāt*);
ch. 4: friendship poems and introductory poems in correspondences (*fī 'l-ikhwāniyyāt wa-ṣudūr al-murāsalāt*);
ch. 5: elegies on the great and condolences for friends (*fī marāthī 'l-aʿyān wa-taʿāzī 'l-ikhwān*);
ch. 6: flirtatious and elegiac love poetry and elegant amorous verse (*fī 'l-ghazal wa 'l-nasīb wa-ẓarāʾif al-tashbīb*);
ch. 7: wine poems and select flower poems (*fī 'l-khamriyyāt wa 'l-nubadh al-zahriyyāt*);
ch. 8: complaint, reproof, calling in a promise and the answer (*fī 'l-shakwā wa 'l-ʿitāb wa-taḳāḍī 'l-waʿd wa 'l-djawāb*);
ch. 9: poems announcing presents, apologies, entreaties, and poems asking for forgiveness (*fī 'l-hadāyā wa 'l-iʿtidhār wa 'l-istiʿṭāf wa 'l-istighfār*);
ch. 10: tours-de-force, riddles, and mnemonic verse

(*fī 'l-ʿawīṣ wa 'l-alghāz wa 'l-taḳyīd li 'l-īdjāz*);
ch. 11: jocular verse, satirical poems, and obscene poems (*fī 'l-mulaḥ wa 'l-ahādjī wa 'l-iḥmāḍ fī 'l-tanādjī*);
ch. 12: wise sayings, poems of renunciation, and remarkable odds and ends (*fī 'l-ādāb wa 'l-zuhdiyyāt wa-nawādir mukhtalifāt*).

Al-Ḥillī clearly runs the whole gamut of existing genres and, in so doing, revives certain genres that had not been cultivated much for some time, such as the *khamriyya* [*q.v.*] and the *ṭardiyya* [*q.v.*]. Others, such as *madḥ* and *hidjāʾ*, are comparatively under-represented, and for a reason: when al-Ḥillī embarked on his poetic career, he had the noble intention of not writing any panegyrics nor lampoons. Shunning the encomiastic genre was something he could not keep up, although it is remarkable that a number of poems addressed to the Artuḳids are an expression of gratitude rather than pure princely praise. As for the lampoons, he insists that he never wrote any for his own sake; the examples included in the pertinent chapter of the *Dīwān* are, so it is alleged, all ghost-written for friends. Unexpectedly, he includes even mnemonic verse in his *dīwān*, mainly containing lists of technical terms and the like in such diverse fields as music, rhyme theory, metrics, administration, ornithology, chess, and medicine.

The *Dīwān* contains only poems in the *fuṣḥā* language, except for two instances of a *khardja zadjaliyya* attached to a *muwashshaḥ* (*Dīwān*, 321, 323); for al-Ḥillī's other dialect poetry see no. 4 below. He uses the full range of possible forms: *ḳaṣīda, ḳiṭʿa* (particularly also very short poems of an epigrammatic character as well as of the kind called "poetic snapshots" by G. von Grunebaum), *muwashshaḥ* [*q.v.*] (in *Dīwān*, 144, he calls himself enamoured with this form), *musammaṭ* [*q.v.*] (in particular *mukhammas*, including *takhmīsāt* of existing poems), and *dūbayt* (see RUBĀʿĪ).

Some conspicuous poems deserve special mention: (a) *al-Kāfiya al-badīʿiyya fi 'l-madāʾiḥ al-nabawiyya*, a poem in praise of the Prophet modeled on the *Burda* [*q.v.*] of al-Būṣīrī [*q.v.* in Suppl.], thus a *mīmiyya* in the metre *basīṭ*, 145 lines long, each line containing one, in some cases two or three, figures of speech, 151 altogether (*Dīwān*, 496-511). The names of the figures are explicitly given between the lines. The story of the poem's genesis is mentioned in a short prose introduction: how the poet intended to write a book on rhetorical figures, but was prevented from doing so by falling gravely ill; how in a dream he received a message from the Prophet enjoining him to praise the latter and promising speedy recovery; and how he combined his original intention with his new task by composing the *badīʿiyya*. It proved to be the starting-point of a new genre of poetry. For al-Ḥillī's own commentary see below no. 2.—(b) *al-Ḳaṣīda al-sāsāniyya*, a poem of 75 lines in the *ṭawīl* metre, written in the argot of the tramps, who called themselves the Banū Sāsān [*q.v.*] (*Dīwān*, 444-8). The poem was ghost-written for a friend who for some unspecified reason wanted to be accepted in the circles of the tramps. It is preceded by a *maḳāma*-like introduction. For a critical edition, translation, and study of the poem see C.E. Bosworth, *Underworld*, i, 132-49 (study); ii, 291-345 (tr. and comm.); 41-84 (ed., Arabic pagination). The above title of the poem does not occur in the *Dīwān*, where the argot is called *lughat al-ghurabāʾ* ("language of the homeless"). Whether al-Ḥillī knew the work of his predecessors in the art of the argot *ḳaṣīda*, al-Aḥnaf al-ʿUkbarī and Abū Dulaf al-Khazradjī, is not clear (see *ibid.*, i, 141-2); but given his wide-ranging literary interests, it stands to reason that he was aware of this poetic mini-genre. Comprehension of the poem is made possible by interlinear glosses in some of the manuscripts (see *ibid.*, i, 143).—(c) The *gharīb* poem, 15 lines in the *khafīf* metre (*Dīwān*, 443-4), answering a criticism that his poetry, though good, suffered from a lack of rare (*gharīb*) vocabulary. Al-Ḥillī first gives four lines of cacophonous archaic words, then enters into a declaration of the unsuitability of such language for his own sophisticated age (cf. also I. Goldziher, *Abhandlungen zur arabischen Philologie*, Leiden 1896-99, i, 171-2; Bosworth, *Underworld*, i, 139-40).—(d) The Candle Cycle, a series of six poems of varying length, five in *kāmil*, one in *sarīʿ*, welcoming and describing the candles, when they were brought in and lit in the evening *madjlis* at the court of al-Malik al-Ṣāliḥ (*Dīwān*, 121-4). The first is said to have been improvised, with a promise to continue in the same way during the following nights.—(e) The Bacchic Cycle, a series of seven *khamriyya*s addressed to al-Malik al-Ṣāliḥ, one for each day of the week, each seven lines long and rhyming with the name of the day, in various metres (*Dīwān*, 363-6).

For metrical peculiarities, one should mention a poem in a "long metre" (*wazn ṭawīl*) which, in the introduction, is said to have been used, if incorrectly, by earlier poets (*Dīwān*, 147). It seems to be a *munsariḥ* with a long syllable added at the beginning and end of each hemistich. Two further poems are characterised as being in Persian metres (*al-awzān al-aʿdjamiyya*); one is in the standard form of the *khafīf musaddas makhbūn maḥdhūf* (*Dīwān*, 293), the other in one of the most common Persian metres, the *muḍāriʿ muthamman akhrab makfūf maḥdhūf* (*Dīwān*, 307-8). A knowledge of Persian is not attested for al-Ḥillī, but it is not unlikely (cf. also his knowledge of the Persian musical terms *tarāna, awāza, awāzgasht*, and *sarband*, in *ʿĀṭil*, 26, ll. 8-9).

2. *al-Natāʾidj al-ilāhiyya fī sharḥ al-Kāfiya al-badīʿiyya*, al-Ḥillī's own commentary on his *badīʿiyya*. In the introduction he gives a short overview of the history of "the science of *badīʿ*", and in an appendix at the end he lists the seventy *badīʿ* works that he read and used for his poem and commentary, adding that he owned copies of most of them.

3. *Durar al-nuḥūr fī madāʾiḥ* [var. *imtidāḥ*] *al-Malik al-Manṣūr*, also known as *al-Ḳaṣāʾid al-Artuḳiyyāt*, and referred to by the poet himself as *al-Maḥbūkāt* (*Dīwān*, 70, l. 2); the last title is actually a generic designation, more precisely *al-maḥbūkāt al-ṭarafayn* "those with two opposite ornamental seams" referring to their technical peculiarity as described below. This is a series of 29 odes, each of 29 lines (the version printed in the editions of the *Dīwān* has lacunae; the full text in ed. Cairo 1283/[1866] and in *Madjmūʿ muzdawidjāt*, 95-134, which also contain the *sadjʿ* introduction missing from the *Dīwān* version). Each poem is characterised by a letter of the alphabet that serves (a) as the rhyme letter and (b) as the first letter of each line; the letters include *lām-alif* (preceding *yāʾ*), but there is no *maḳṣūra*. In the introduction, Ṣafī al-Dīn claims invention of this technique, but ʿAllūsh, 120-1, points out two earlier examples and one might add that the exact same organisational principle is used by Ibn al-ʿArabī (d. 638/1240 [*q.v.*]) in a series of ten-line poems in his *Dīwān* (Būlāḳ 1271/1855), 219-32. However, al-Ḥillī's work became the model for a mini-genre of poetry termed *rawḍa* "garden" (see ʿAllūsh, 121-2, for a list of later specimens).

4. *al-Kitāb al-ʿāṭil al-ḥālī wa 'l-murakhkhaṣ al-ghālī*, the first poetics of Arabic dialect poetry. It deals with the

four genres of *zadjal* [*q.v.*], *mawāliyā* [*q.v.*], *kān wa-kān* [*q.v.*], and *ḳūmā* [*q.v.*]. The work is important not only as a—normative—description of the generic, prosodic, and linguistic properties of these types of popular poetry, but also as an anthology that has preserved much that would otherwise be lost. Ritter and Hoenerbach have exploited it for the contribution it makes to our knowledge of the work of the *zadjal* poets Ibn Ḳuzmān (d. 555/1160 [*q.v.*]) and Mudghalīs (d. after 577/1181-2) (see *Bibl.*). In addition, Ṣafī al-Dīn also includes a goodly amount of his own production. He explicitly says that in his *Dīwān* he collected only his *muʿrab* poetry, i.e. *shiʿr* (in the narrow sense), *muwashshah*, and *dūbayt*, whereas his *malḥūn* poetry is relegated to the present work (*ʿĀṭil*, 6). In a way, then, the *ʿĀṭil* is an extension of his *Dīwān*.

5. *al-Durr al-nafīs fī adjnās al-tadjnīs*, a treatise on one of the poet's favourite figures of speech, the paronomasia. Quoted in his *Dīwān* for a newly-invented type of *tadjnīs* used in the poem in question (*Dīwān*, 423-4), it is preserved in a defective ms in Cairo, Dār al-Kutub, 73 *madjāmīʿ m* (five pages; see Ḥuwwar, 73).

6. *al-Aghlāṭī*, an antibarbarus, preserved in ms. Escorial 123 (63 folios, see Ḥuwwar, 64).

7. There are five *Rasāʾil* printed in the *Dīwān*: (a) *Risālat al-Dār fī muḥāwarāt al-fār* (*Dīwān*, 484-91). This is a *maḳāma*-like story which, in an amusing style, addresses a complaint to al-Malik al-Ṣāliḥ. The narrator is al-Ḥillī's house in Mārdīn which describes to its neighbour, the citadel of the Artuḳid sultan, how the mice in the house complain to each other about the hard times on which the owner of the house has fallen, due to a large overdue loan given by him to a high governmental official.—(b) *al-Risāla al-muhmala* (*Dīwān*, 511-13). Addressed to al-Nāṣir b. Ḳalāwūn in 723/1323, it contains a complaint against the vizier Karīm al-Dīn [see IBN AL-SADĪD, KARĪM AL-DĪN]. As indicated by the title, the *risāla* is entirely composed of words with undotted letters.—(c) *al-Risāla al-tawʾamiyya* (*Dīwān*, 513-15). Written in 700/1300-1 in Mārdīn, it grew out of a discussion in the *madjlis* of al-Malik al-Manṣūr about a poem by al-Ḥarīrī [*q.v.*] which displayed a technique that al-Ḥillī then imitates throughout the *risāla*, to wit: the text consists entirely of pairs of words that are identical in their *rasm* but different in their diacritics and/or vowels. The members of the *madjlis* opined that none of their contemporaries would be able to imitate al-Ḥarīrī's tour-de-force. Ṣafī al-Dīn took up this challenge and produced a showcase of his talents, not least with the intention of gaining a secretarial position at the Artuḳid court. The date given seems to suggest that his stay in Mārdīn had an exploratory character and antedated his definitive move there. According to the author's introduction, the *risāla* is meant to inform al-Malik al-Manṣūr about the events in al-Ḥilla that forced the poet to flee.—(d) *Ḥall al-manẓūm* (*Dīwān*, 515-17). This is actually a report about a literary challenge, in which the author is asked to form a *risāla* out of all the letters, without addition or repetition, of the first seven lines of the *Muʿallaḳa* of Imraʾ al-Ḳays and then to reassemble them in a poem of the same metre and rhyme. Which, of course he does.—(e) An answer to the condolences sent by al-Malik al-Ḳāhir, lord of Arzan [Erzurum], to al-Malik al-Ṣāliḥ, lord of Mardin, on the occasion of the death of the latter's brother al-Malik Nāṣir al-Dīn (*Dīwān*, 517-18).—A fair number of *rasāʾil* must have been lost, as witnessed by the collection of short poems in the *Dīwān* that are said to have served as proems (*ṣudūr*) to the author's epistles (see above).

8. *al-Mathālith wa 'l-mathānī fī 'l-maʿālī wa 'l-maʿānī*, a selection of fragments of two or three lines from the *Dīwān* made at the behest of al-Malik al-Afḍal of Ḥamāt and arranged by topic in twenty chapters. The ms. preserved in Paris, BN 1553, was read before the author in 743/1342-3 (53 folios, see Ḥuwwar, 74-5; for a list of chapters which closely resembles that of the *Dīwān*, but adds to it, see Muḥammad Kurd ʿAlī, in *RAAD*, iv [1924], 210-20, here 214).

9. *al-Mīzān fī ʿilm al-adwār wa 'l-awzān*, a treatise on rhythmical cycles and metres in music, preserved in ms. Maʿhad al-Makhṭūṭāt 46 *mūsīḳī* (43 folios, see Ḥuwwar, 75).

10. *Fāʾida fī tawallud al-anghām baʿḍihā ʿan baʿḍ wa-tartībihā ʿala 'l-burūdj*, "an astrologico-musical treatise dealing with the connection of the notes of the musical scale with the heavenly bodies" (H.G. Farmer, *The sources of Arabian music*, Leiden 1965, no. 279).

11. *ʿIddat abḥur al-shiʿr*, a short treatise on prosody, see Brockelmann, II, 160, no. 11.

12. *Kitāb fī 'l-Awzān al-mustaḥdatha ka 'l-dūbayt*, see Brockelmann, S II, 200, no. 21.

As a poet, al-Ḥillī has enjoyed a rather uneven reputation. For his contemporaries he was "*the* poet of our time" (*shāʿiru ʿaṣrinā ʿala 'l-iṭlāḳ*, *al-Ṣafadī*, *Wāfī*, xviii, 482, l. 1) and for some even unrivalled among all poets, ancient and modern (*lam yanẓim-i 'l-shiʿra aḥad^{un} mithluhu lā fī 'l-mutaḳaddimīna wa-lā fī 'l-mutakhkhirīna muṭlaḳ^{an}*, Shams al-Dīn ʿAbd al-Laṭīf [d. 731/1330, see al-Ṣafadī, *Aʿyān*, ii, 117-19], *apud* al-Ṣafadī, *Wāfī*, xviii, 482, ll. 10-12). His popularity in Arab lands has remained undiminished through the centuries (see personal note by Muḥammad Kurd ʿAlī, in *RAAD*, iv [1924], 212, bottom). Western evaluations have, at least in part, been less friendly. M. Hartmann (*Strophengedicht*, 79) und O. Rescher (*Beitraege*, 2) offer devastating judgements, but those are more or less foregone conclusions based on the preconception that as an epigone al-Ḥillī could not produce but empty chatter, made hardly more palatable by excessive wordplay. R. Nicholson is certainly more appreciative, stressing that "he combined subtlety of fancy with remarkable ease and sweetness of versification" (*Literary history*, 449), only to continue that "many of his pieces, however, are *jeux d'esprit*." More recently, W. Hoenerbach, in the introduction to his edition of *al-ʿĀṭil al-ḥālī*, has drawn attention to a *kān wa-kān* poem describing an erotic adventure where al-Ḥillī proves himself a master of lighthearted narrative poetry. A thorough literary study of al-Ḥillī's poetic works has yet to be undertaken, but the following preliminary characterisations can be made: (1) He was very conscious of being the heir to a long poetic tradition, and one of his goals, in this situation, was to cultivate each and every genre that existed, or ever had existed, in Arabic poetry, no matter whether this genre was defined by content, form, or language register. Typical in this respect is the remark he makes at the beginning of the *kān wa-kān* section in *al-ʿĀṭil al-ḥālī* (149, l. 4): "Among the things I composed in it [sc. *kān wa-kān*], so that my poetic output not be devoid of it ..." (*li-allā yakhluwa naẓmī minhu...*). As already mentioned above, this pursuit of completeness resulted in the resuscitation of certain genres that had fallen by the wayside (e.g. *khamriyya* and *ṭardiyya*) and also, where morally questionable poems like invectives were involved, in the use of the remarkable expedient that all these poems were ghost-written for friends.—(2) Likewise a reaction to the burden, or stimulus, of the tradition was his express use of intertextuality in the form of *takhmīsāt* [see MUSAMMAṬ], especially of poems from the

Ḥamāsa of Abū Tammām [*q.v.*] (see *Dīwān*, 15-16, 22-6, 41-2), but also e.g. of the famous *nūniyya* of Ibn Zaydūn [*q.v.*] (see *Dīwān*, 349-53); or in the form of cento-like compositions (see *Dīwān*, 34-5, for a poem whose first hemistichs are taken from al-Ṭughrāʾī [*q.v.*], while the second hemistichs are borrowed from al-Mutanabbī [*q.v.*]). Less radical cases of "incorporation" (*taḍmīn*) are also to be found, and so are "counter-poems" (*muʿāraḍa*) and "answer-poems" (*idjāba*).—(3) The poetic productions just listed belong to an aspect of al-Ḥillī's art that might be called word games. This was an important, though perhaps to the contemporary Western mind somewhat unpoetic, activity in the *madjālis* of the *udabāʾ*. The characteristic terms, which one finds *passim* in the introductions to poems in the *Dīwān*, are *iḳtirāḥ* and *luzūm*. The first means the "suggestion" or the "challenge" that the members of a *madjlis* put to the poet, the second refers to any handicap that the *madjlis*, or the poet himself, may impose on the poet; it is, thus, more general than the rhyme scheme normally designated by this term (see LUZŪM MĀ LĀ YALZAM), of which there is also a number of examples in the *Dīwān*. Al-Ḥillī is so much in control of all aspects of the language that he masters the strangest impositions with staggering facility.—(4) Alongside these cerebral exercises, there is also poetry for the "heart". Ṣafī al-Dīn stresses several times that he aims at an accessible, easily comprehensible poetic language (even in his *Badīʿiyya*, see *Sharḥ*, 55). His *gharīb* poem (see above) is programmatic in this respect. Its beautiful last line reads: *innamā hādhihi 'l-kulūbu ḥadīdᵘⁿ/wa-ladhīdhu 'l-alfāẓi maghnāṭīsu* which translates as: "These hearts [of ours] are iron and sweet words [their] magnet". Given his mostly pleasant and easy language, this line could serve as a motto for al-Ḥillī's poetry. Ibn Iyās (d. *ca.* 930/1524 [*q.v.*]) corroborates this by saying that double entendre (*tawriya*) was not al-Ḥillī's forte, since in his versification he preferred simple poetry (*wa-kāna yarḍā fī naẓmihi bi 'l-shiʿri 'l-sādhidj*, see *Badāʾiʿ al-zuhūr*, i/1, 526).

Bibliography: Works. (1) *Dīwān*, Damascus 1297/[1879]-1300/[1883] (*editio princeps*, used here for quotation, containing also the chapter on obscene poetry, suppressed in the two Beirut editions); the later editions Beirut 1893, al-Nadjaf 1956, and Beirut 1961 are mere reprints, the second Beirut edition with numerous omissions. All are uncritical and rather faulty. The claim on the title page of the al-Nadjaf edition that it is based on several mss. is untrue. A critical edition, including the poems preserved outside the *Dīwān*, has been prepared by Muḥammad Ibrāhīm Ḥuwwar (not seen; published?), see Ḥuwwar, 8.—(2) *Sharḥ al-Kāfiya al-badīʿiyya*, ed. Nasīb Nashāwī, Damascus 1402/1982.—(3) *Durar al-nuḥūr fī madāʾiḥ* [var. *imtidāḥ*] *al-Malik al-Manṣūr*, Cairo 1283/[1866]; also printed in *Dīwān*, 521-60 (with lacunae); and in *Madjmūʿ muzdawidjāt ... maʿa kaṣāʾid ẓarīfa ... minha 'l-Artukiyyāt*, ed. Ḥasan Aḥmad al-Ṭūkhī, lith. Cairo 1299/[1882], 95-134.—(4) *al-Kitāb al-ʿāṭil al-ḥālī wa-'l-murakhkhaṣ al-ghālī*, ed. W. Hoenerbach, *Die vulgärarabische Poetik al-Kitāb al-ʿāṭil al-ḥālī wal-muraḫḫaṣ al-ġālī des Ṣafīyaddīn Ḥillī*, Wiesbaden 1956 (used here for quotation); ed. ṢAFĪ AL-DĪN AL-URMAWĪ, ʿAbd al-Muʾmin b. Yūsuf b. Fākhir al-Urmawī al-Baghdādī (Ṣūfī al-Dīn in some Ottoman sources), renowned musician and writer on the theory of music, was born *ca.* 613/1216, probably in Urmiya. He died in Baghdād on 28 Ṣafar 693/28 January 1294, at the age of *ca.* 80 (Ibn al-Fuwaṭī, *al-Ḥawādith al-djāmiʿa*, 480).

The sources are silent about the ethnic origin of his family. He may have been of Persian descent (Ḳuṭb al-Dīn Shīrāzī [*q.v.*] calls him *afḍal-i Īrān*). In his youth, Ṣafī al-Dīn went to Baghdād. Well-educated in Arabic language, literature, history and penmanship, he made a name for himself as an excellent calligrapher and was appointed copyist at the new library built by the caliph al-Mustaʿṣim. Both Yāḳūt al-Mustaʿṣimī [*q.v.*] and Shams al-Dīn Aḥmad al-Suhrawardī (d. 741/1340) figure among his disciples in the art of calligraphy. After the fall of the caliphate, the governor of ʿIrāḳ, ʿAlāʾ al-Dīn ʿAṭā-Malik Djuwaynī [*q.v.*], and his brother, the *ṣāḥib-i dīwān* Shams al-Dīn Muḥammad Djuwaynī [*q.v.*], placed him in charge of the chancery (*dīwān al-inshāʾ*) of Baghdād. The honorific titles of *al-ṣadr al-kabīr*, *al-ʿālim al-fāḍil*, and *al-ʿallāma*, given to him in 676/1277 by the renowned littérateur and philologist Ibn al-Ṣayḳal (d. 701/1302), indicate his high literary and social status. He had also studied Shāfiʿī law and comparative law (*khilāf al-fiḳh*) at the Mustanṣiriyya *madrasa* (opened 631/1234). This qualified him to assume a post in al-Mustaʿṣim's juridical administration and, after 656/1258, to head the supervision of the foundations (*naẓariyyat al-waḳf*) in ʿIrāḳ until 665/1267, when Naṣīr al-Dīn al-Ṭūsī [*q.v.*] took over.

Only in the later days of al-Mustaʿṣim's reign did al-Urmawī become known as a musician and excellent lute player and accepted as a member of the private circle of boon companions, thanks to one of his music students, the caliph's favoured songstress Luḥāẓ. His additional salary of 5,000 dīnārs (= 60,000 dirhams at

that time) from this activity allowed him to lead a luxurious life. It also helped him to survive the fall of Baghdād, namely, by generously accommodating one of Hülegü's officers who, in return, introduced him to the new ruler. Hülegü was impressed by his art and erudition, and doubled his income, if we can rely on the autobiographical data given by al-Urmawī to the historian ʿIzz al-Dīn al-Irbilī (d. 726/1326) when they met at Tabrīz in 689/1290. His musical career, however, seems to have been supported mainly by the Djuwaynī family, especially by Shams al-Dīn Muḥammad and his son Sharaf al-Dīn Hārūn (put to death in 685/1286). After the demise of his patrons, he fell into oblivion and poverty. Placed under arrest on account of a debt of 300 dīnārs, he died in the Shāfiʿī *Madrasat al-khall* in Baghdād. Two of his sons became secretaries in the capital. One was called Kamāl al-Dīn Aḥmad; the other, ʿIzz al-Dīn ʿAlī, died in 671/1272 and was buried in the *ribāṭ* of Ibn al-Sukrān (d. 667/1269), near Baghdād (see Ibn al-Fuwaṭī, *Madjmaʿ al-ādāb, sub* letters *ʿayn* and *kāf*). Another son, Djalāl al-Dīn Muḥammad, was a man of letters and in 676/1299 attended Ibn al-Ṣayḳal's interpretation of his *al-Maḳāmāt al-Zayniyya* in the Mustanṣiriyya (see G. ʿAwwād and Ḥ. ʿA. Maḥfūẓ, in *Madj. Kull. Ādāb, Baghdād*, iv [1963], 261).

As a composer, al-Urmawī cultivated the vocal forms of *ṣawt, ḳawl* and *nawba*. That the *ṣawt* was, in his days, a song of only a "few parts" (*ḳalīl al-adjzāʾ*), is explained by Mubārakshāh in his commentary on al-Urmawī's *Kitāb al-Adwār*. This is confirmed by two examples of *ṣawt* compositions that al-Urmawī has recorded in musical notation at the end of the *K. al-Adwār*, using letters for the pitch and numbers for the length of the notes. *Ḳawl* songs were more sophisticated compositions, as shown by a piece by al-Urmawī set down in a score by Ḳuṭb al-Dīn Shīrāzī at the end of the music chapter of his *Durrat al-tādj*. A *ḳawl* could also be one of the three (or four) parts of the vocal "suite" (*nawba* [*q.v.*]), a musical genre favoured in al-Urmawī's time. Ṣafī al-Dīn is reported to have composed no less than 130 pieces in the *nawba* form. Most of them were still known to the noted musician Kutayla (*fl.* 730/1330) who performed them at the courts of Mārdīn and Cairo. Al-Urmawī's students of the first and the second generation, among them Djamāl al-Dīn al-Wāsiṭī (born 661/1263) and Niẓām al-Dīn b. al-Ḥakīm (d. *ca.* 760/1358), disseminated his works in Persia, ʿIrāḳ, Syria and Egypt. Some of his song texts are transmitted with indications of the mode and the musical metre by Ibn Faḍl Allāh al-ʿUmarī [*q.v.*].

In the anonymous Persian *Kanz al-tuḥaf* (8th/14th cent.), al-Urmawī is credited with the invention of two stringed instruments, the *nuzha* and the *mughnī* (see H.G. Farmer, *Studies in oriental musical instruments*, First Series, London 1931). It is puzzling, however, that the musician and music theorist ʿAbd al-Ḳādir b. Ghaybī Marāghī [*q.v.*], who had a high regard for al-Urmawī and wrote a commentary on his *K. al-Adwār*, did not mention this when describing the *mughnī* in his own works.

Al-Urmawī owes his lasting fame to his two books on music theory, the *K. al-Adwār* and *al-Risāla al-Sharafiyya fi 'l-nisab al-taʾlīfiyya*. The former was written while he still worked in the library of al-Mustaʿṣim. The caliph was well-known for his addiction to music. Thus we can assume that this field was sufficiently represented in his library to provide al-Urmawī with the necessary source material. The earliest known manuscript of the *K. al-Adwār* was finished in 633/1236 (ms. Nuruosmaniye 3653), when the author was *ca.* 20 years old. Its ductus closely resembles Yāḳūt al-Mustaʿṣimī's handwriting, so it may well be a holograph. The *K. al-Adwār* is the first extant work on scientific music theory after the writings on music of Ibn Sīnā [*q.v.*]. It contains valuable information on the practice and theory of music in the Perso-ʿIrāḳī area, such as the factual establishment of the five-stringed lute (still an exception in Ibn Sīnā's time), the final stage in the division of the octave into 17 steps, the complete nomenclature and definition of the scales constituting the system of the twelve *maḳāms* (called *shudūd*) and the six *āwāz* modes (see O. Wright, below), precise depictions of contemporary musical metres, and the use of letters and numbers for the notation of melodies. All this occurs in the *K. al-Adwār* for the first time, making it a historical source of greatest value. By its conciseness it became the most popular and influential book on music for centuries. No other Arabic (Persian or Turkish) music treatise was so often copied, commented upon and translated into Oriental (and Western) languages. The *K. al-Adwār* was conceived as a compendium (*mukhtaṣar*) of the standard musical knowledge. However, owing both to its apparent uniqueness and to the fact that not a single authority or written source is quoted, the book was regarded as an original work with innovative contributions of its author, especially with regard to the division of the octave. Considering the youth of the author and the purely descriptive style of the book, which does not reveal any personal contribution, the original part of Ṣafī al-Dīn cannot be ascertained and may have been less than assumed. An analysis of the extant manuscripts, many of them transmitted anonymously, and of the differing redactions of the text, might help to clarify this question. The *K. al-Adwār* was translated several times into Persian. In addition to some anonymous translations, one was made in 746/1345 by ʿImād al-Dīn Yaḥyā b. Aḥmad Kāshānī for the ruler Abū Isḥāḳ Īndjū (see Munzawī, no. 40736). An enlarged version of the text was translated in 1296/1879 by Mīrzā Muḥammad Ismāʿīl b. Muḥammad Djaʿfar Iṣfahānī, and dedicated to Mīrzā Āḳā Khān Nūrī, the *ṣadr-i aʿẓam* of Nāṣir al-Dīn Shāh (printed, see below, cf. Munzawī, no. 40737). A Turkish translation was made by a certain Aḥmed-oghlu Shükrüllāh (9th/15th cent.), and incorporated, as chapters 1-15, into his compilation called *Risāla min ʿamal al-adwār* (see Raʾūf Yektā, in *MTM*, ii/4 [1331/1913], 137; M. Bardakçı, in *Tarih ve toplum*, xiii [1990], 350-4). Several commentaries were composed during the 8th/14th century and at the beginning of the 9th/15th. The first of them, *Khulāṣat al-afkār fī maʿrifat al-Adwār*, was written in Persian on behalf of Sultan Uways [*q.v.*] by Shihāb al-Dīn ʿAbd Allāh al-Ṣayrafī (Munzawī, no. 40754). A most important Arabic commentary was composed in 777/1375 by a certain Mubārakshāh and dedicated to Shāh Shudjāʿ (French tr., see below; H.G. Farmer's identification of the author with ʿAlī b. Muḥammad al-Djurdjānī is not convincing). A Persian commentary was written in 798/1396 by Luṭf Allāh b. Muḥammad b. Maḥmūd Samarḳandī on behalf of a certain Amīrzāda Saydī (see Munzawī, nos. 40793-94). Another Persian commentary was written by ʿAbd al-Ḳādir b. Ghaybī Marāghī, supplemented by a lengthy *khātima*, called *Zawāʾid al-fawāʾid* (printed, see below). A passage from the *K. al-Adwār* was translated into French by F. Pétis de la Croix (d. 1713) on the request of Joseph Sauveur (d. 1716) who gave a first account of al-Urmawī's division of the octave (*Système général des intervalles de sons*, in *Mémoires de l'Acad. Royale* [Paris

1701], 328-30). A more complete French translation, based on the anonymous ms. Paris B.N. ar. 2865, was made by A.M.-F. Herbin (d. 1806) on behalf of G.-A. Villoteau. He printed part of it in his *De l'État actuel de l'art musical en Égypte* (in *Description de l'Égypte, État moderne*, xiv, Paris 1826, 47-110). The interpretations of both Villoteau and Fétis (*Histoire générale de la musique*, ii, Paris 1869, esp. 55), who erroneously detected one-third-tones in the scales described by al-Urmawī, were inferior to that of Sauveur, and even more so to the correct description already given by J.-B. De La Borde (*Essai sur la musique ancienne et moderne*, i, Paris 1780, 163-6). Al-Urmawī's division of the octave was much appreciated by European scholars from the late 19th century onwards.

Ṣafī al-Dīn's second book, *al-Risāla al-Sharafiyya*, was written around 665/1267. It is dedicated to his student and later patron, Sharaf al-Dīn Djuwaynī. In the scientific, literary and artistic circle of the Djuwaynī family, al-Urmawī was in contact with Naṣīr al-Dīn al-Ṭūsī. The eminent scholar (who left a short treatise on the proportions of musical intervals perceivable in the pulse) may have stimulated al-Urmawī's interest in Greek science. In fact, the *Sharafiyya*, though treating basically the same subject matter as the *K. al-Adwār*, is more indebted to Greek theory than the latter. It is also possible that al-Urmawī was inspired to write his second book after becoming acquainted with the *K. al-Mūsīḳī al-kabīr* of al-Fārābī [*q.v.*], in which ample use is made of Greek source material, and which he might not have known when he wrote the *K. al-Adwār*. In contrast to his first book, the teachings of his great predecessor al-Fārābī are quoted and discussed here. *Al-Risāla al-Sharafiyya*, although being the more extensive work, was, on the whole, less popular than the *K. al-Adwār*. In Ḳuṭb al-Dīn Shīrāzī's *Durrat al-tādj* and in the works of ʿAbd al-Ḳādir Marāghī, however, it was extensively used (partly criticised by Shīrāzī, but defended by Marāghī). The latter even refers to the *Durrat al-tādj* as a commentary on the *Sharafiyya* (see *Maḳāṣid al-alḥān*, Tehran 1344/1957, 58).

The supposed title *Fī ʿulūm al-ʿarūḍ wa 'l-ḳawāfī wa 'l-badīʿ* in ms. Oxford, Bodleian, Clark 21/1 (fols. 1-71, copied 758/1357, see *Cat.*, ii, 201-4, no. 247) is not the title of another book written by al-Urmawī (Brockelmann, S I, 907, no. 3, follows Farmer), but the subtitle of the *Miʿyār al-nuẓẓār fī ʿulūm al-ashʿār* by the philologist ʿIzz al-Dīn ʿAbd al-Wahhāb b. Ibrāhīm al-Zandjānī (Brockelmann, S I, 498, no. IV).

SAFĪD KŪH (P.), in Pashto Spīn Ghar ("The White Mountain"), the name of a mountain range falling mainly in eastern Afghānistān. According to Bābur, it derives its name from its perpetual covering of snow; from its northern slopes, nine rivers run down to the Kābul River (*Bābur-nāma*, tr. Beveridge, 209, cf. Appx. E, pp. xvii-xxiii).

The Safīd Kūh, with its outliers, runs from a point to the east of Ghazna [*q.v.*] in a northeasterly and then easterly direction almost to Attock [see ATAK] on the Indus (approx. between longs. 68° 40′ E. and 72° E.), in general separating the Kābul and Lōgar River valleys on its north and west from the Kurram River valley and the Afrīdī area of Tīrāh on its south. Its highest peak is Sikārām (4,761 m/15,620 ft.). The Khyber Pass [see KHAYBAR] lies at its northeastern tip, and on its northern and eastern spurs are the passes between Kābul and Djalālābād which the British forces involved in Afghānistān during 1841-2 had to negotiate. The middle part of the range forms the present political boundary between the Nangrahār [*q.v.*] province of Afghānistān and the Khurram [*q.v.*] Tribal Area of Pākistān.

SAFĪD RŪD (P.) "White River", a river system of northwestern Persia draining the southeastern part of Ādharbaydjān and what was, in mediaeval Islamic times, the region of Daylam [*q.v.*]. The geographers of the 4th/10th century already called it the Sabīd/Sapīdh Rūdh, and Ḥamd Allāh Mustawfī (8th/14th century) clearly applies it to the whole system.

In more recent times, however, the name tends to be restricted to that part of the system after it has been formed from the confluence at Mardjil of its two great

affluents, the Ḳīzīl Üzen [*q.v.*] coming in from the left and the S̲h̲āh Rūd from the right. This stretch forces its way through a gap between the Alburz Mts. in the east and the Tālis̲h̲ Mts. to the north-west, and runs down to the Caspian Sea. Thus although its affluents are quite lengthy, the Safīd Rūd itself runs now for only some 110 km/60 miles. When it reaches the coastal plain of Gīlān [*q.v.*], the river divides into numerous channels, whose courses are continuously shifting, and flows out through the delta which the river's alluvia have pushed out into the Caspian. Parts of this delta region are thickly wooded, with a humid and unhealthy climate; here also, rice is cultivated. The gap beween the mountains through which the Safīd Rūd flows provides a means of communication from Gīlān to the plateau of the Persian interior, and at the present time carries the Ras̲h̲t-Ḳazwīn-Tehran road.

SAFĪNA (A. pls. *sufun, safāʾin, safīn*), a word used in Arabic from pre-Islamic times onwards for ship. Seamanship and navigation are in general dealt with in MILĀḤA, and the present article, after dealing with the question of knowledge of the sea and ships in Arabia at the time of the birth of Islam, not covered in MILĀḤA, will be confined to a consideration of sea and river craft.

1. In the pre-modern period.

(a) *Pre-Islamic and early Islamic aspects*.

The most general word for "ship" in early Arabic usage was *markab* "conveyance", used, however, in the first place for travel by land, with such specific meanings as "riding-beast", "conveyance drawn by animals". *Safīna* "ship" occurs only sparingly in the Ḳurʾān (three times, in connection with the boat used by Moses and al-K̲h̲iḍr and with Noah's Ark), and was early noted, e.g. by Guidi and Fraenkel, as a probable loan word from Syriac (with Hebrew and Akkadian forms), ultimately from the common Semitic root *s-p-n* "to cover in", cf. Akkad. *sapīnatu*, Hebr. *sᵉpīnah*, "ship", as in Jonah, i, 5; it probably entered Arabic via Syriac at an early date, since it occurs in pre-Islamic poetry (see S. Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, Leiden 1886, 216-17; A. Jeffery, *The foreign vocabulary of the Qurʾān*, Baroda 1938, 171-2). Much more frequent in the Ḳurʾān is *fulk*, used *inter alia* of Noah's Ark and the ship from which Jonah was thrown, again clearly a loan word, but of less certain origin than *safīna*; Vollers suggested one from Greek *epholkion* "a dinghy towed after a boat", but also found in *The Periplus of the Erythraean Sea* to denote a larger vessel used in Red Sea waters (see Jeffery, *op. cit.*, 229-30).

The absence of a genuine Arabic word for "ship" is not surprising, given the Arabian peninsula's total lack of navigable rivers or lakes; the region thus contrasts sharply with the Nile valley of Egypt and with Mesopotamia, where traffic on its rivers early gave rise to a highly-developed vocabulary in Akkadian relating to ships and navigation (see A. Salonen, *Die Wasserfahrzeuge in Babylonien nach sumerisch-akkadischen Quellen* ..., Studia orientalia, Societas orientalia fennica, viii/4, Helsinki 1939), with a linguistic legacy which was handed down to Islamic times (see below).

The Arabian peninsula is, on the other hand, surrounded by seas on three sides, hence some of its inhabitants at least must have had some acquaintanceship with the sea and ships, even if the Arabs of the Ḥid̲j̲āz and Nad̲j̲d preferred travel by land, so that the original direction of Arab-Islamic expansion was northwards to Palestine, Syria and ʿIrāḳ rather than e.g. across the Bāb al-Mandab towards Ethiopia and the Horn of Africa. The use of ships was certainly familiar to the populations of the southern shores of the Persian Gulf, but the sailors involved were probably from the mixed Persian-Arab element of these coastlands; see further on this, G.F. Hourani, *Arab seafaring in the Indian Ocean in ancient and early medieval times*, Princeton 1951, ch. I, and MILĀḤA. 1.

A consideration of the sea in the Ḳurʾān and of Muḥammad's possible knowledge of it was undertaken by W. Barthold in a brief but suggestive article, *Der Koran und das Meer*, in *ZDMG*, lxxxiii (1929), 37-43. He asked, with justice, how the Holy Book could contain such vivid pictures of the sea and its storms. "This question", he says, "is of particular interest, because descriptions of the sea are in general foreign to Arab poetry, particularly pre-Islamic. Muḥammad's biography does not credit him with any sea voyages, not even with a journey along the coast". Nor does it make him visit any of the seaports of the time like D̲j̲udda [*q.v.*], S̲h̲uʿayba or G̲h̲azza [*q.v.*]. Nöldeke went so far as to assume (*Isl.*, v [1914], 163, n. 3), where he was dealing with the trade of the Ḳuray̲s̲h̲ with Abyssinia, that Muḥammad "may possibly himself have been there on one occasion, as sūras X, 23, XXIX, 65, XXIV, 40, sound as if he had personally experienced the terrors of seafaring". Fraenkel (*op. cit.*, 211) deduced from the Ḳurʾān, "that the early Arabs well appreciated that their land was washed by the sea on three sides. Seafaring was of great importance, at least among the commercial circles to which Muḥammad belonged", otherwise, he thought, Muḥammad would not have spoken in no less than 40 passages of the grace of God, who puts the sea at the service of mankind. Fraenkel even talked of "regular traffic" with Abyssinia, which is indicated among other things (e.g. Abyssinian slave-girls in Arabia at this time) by two traditions, according to one of which the wood of a ship stranded at S̲h̲uʿayba was used for building the Kaʿba (al-Ṭabarī, i, 1135), and, according to the other, the first *muhād̲j̲irūn* sailed on two merchant ships which were going to Abyssinia (al-Ṭabarī, i, 1182). But in the case of the stranded ship, it is definitely said to have been Byzantine, and in the second passage there is nothing to indicate that the ships were Arab (Lammens, *La Mecque à la veille de l'Hégire*, Beirut 1924, 380, thought that they were foreign). Everything indicates that it is much more probable that this connection between Arabia and the opposite coast was maintained by the Abyssinians, a suggestion made also by Barthold, *op. cit.*, 43, for quite different reasons. Lammens (*La Mecque*, 385) even spoke—not, however, without encountering contradiction—of an Abyssinian dominion of the seas and found in the Meccan chronicles no mention of an Arab ship trading with the kingdom of Aksum (idem, *Le berceau de l'Islam*, i, Rome 1914, 15). On the other hand, he had to acknowledge that the many references in the Ḳurʾān and *Sīra* to navigation suggest an intimate acquaintance with the sea. But no compatriot of Muḥammad or any Bedouin of the Tihāma is ever mentioned as a sailor; this is left to the foreigners on the Red Sea coast (idem, *La Mecque*, 379).

Among the references to sailing in the early poetry, that in l. 102 of ʿAmr b. Kult̲h̲ūm's *Muʿallaḳa* is specially remarkable. He boasts of his Tag̲h̲libīs that they cover the surface of the sea with their ships. While Goldziher (*Das Schiff der Wüste*, in *ZDMG*, xliv [1890], 165-7), who held Fraenkel's point of view, said that this line is undoubtedly of great importance, Nöldeke, *Fünf Moʿallaqāt*, i, 49, was inclined to the

view that "the Ta<u>gh</u>lib used sometimes to sail the Euphrates in boats" and that "there can be no question of seafaring in the proper sense". He takes *baḥr* here to mean the broad waters of the Euphrates. The whole context shows that we have here to deal simply with a poet's boasting (cf. also G. Jacob, *Altarabische Beduinenleben*², 149), which would have all the more effect as this kind of activity on water was quite unknown to other tribes and, indeed, they had a certain fear of it (see below). Apart from this isolated line, Goldziher, *op. cit.*, pointed out that, in the old poetry, the sea and various elements in navigation are frequently used in similes; the caravan on the march, for example, is frequently compared with ships sailing on the sea. These images, which are usually quite colourless, may, however, have originated on the coast and have wandered inland as clichés, without it being necessary to assume that the poet using them was personally acquainted with the sea. One recalls the stereotyped nature of the *nasīb* [*q.v.*].

Now, as the occasional references to navigation must have some basis in fact, and on the other hand, we know nothing of any enterprises by sea on any large scale, it is natural to assume that "the Arabs before Muḥammad never got beyond coastal traffic along the Red Sea and the Persian Gulf", as Wüstenfeld supposed in *NGW Gött.* (1880), 134. Lammens, *La Mecque*, 381, thought that there can only have been fishing on a very small scale not far from the shore and the occasional plundering of stranded ships (see above).With regard to the "foreign imports", which were already found at this date in Arabia, Jacob thought, *op. cit.*, 149, that "in any case foreign ships (especially Ethiopian and Indian) came to Arab ports more often than vice-versa". Imports are indicated by numerous foreign wares, while, as G.W. Freytag, *Einleitung in das Studium der Arabischen Sprache*, Bonn 1861, 276 ff., emphasised Arabia had few products likely to be exported by ship to foreign lands.

These remarks, however, hold primarily for the Ḥi<u>dj</u>āz and adjoining lands and cannot be applied without question to the whole of Arabia. For this region, in particular, there were certain factors unfavourable for the development of shipping. The story of the stranded ship (see above) clearly shows the lack of wood in the neighbourhood of Mecca. There are no good or large harbours on the coast; certain old anchorages like Leukekome, al-<u>Dj</u>ār [*q.v.*] and <u>Sh</u>uʿayba later became quite deserted [see ḤI<u>DJ</u>ĀZ]. The Red Sea itself was dreaded on account of its storms and reefs, particularly in the north (see BAḤR AL-ḲULZUM, and A. Mez, *Die Renaissance des Islâms*, Heidelberg 1922, 476, Eng. tr. 509). Arabia had, moreover, no navigable rivers which might have formed a training-ground for seafaring.

It is no wonder, then, if the true Badawī had a natural horror of the sea which for long prevented him from entrusting himself to the water. This attitude must have hampered the beginnings of Islamic seafaring, and can still be traced even to-day (see L. Brunot, *La mer dans les traditions ... à Rabat et Salé*, Paris 1920, 1, 3; W.G. Palgrave, *Narrative of a year's journey ...*, London 1865, i, 430, quotes "the most un-English words of the Ḥejazee camel-driver": "He who twice embarks on sea is a very infidel"). This dread finds expression in the Ḳurʾān, where we have references to "waves mountains high", "darkness on the wide deep sea, covered by the towering waves above which are clouds of darkness piled upon one another" etc. (sūras XI, 44, XXIV, 40, also X, 23, XI, 45, XXXI, 31; cf. also the humorous poem in Nöldeke, *Delectus*, 62). Perhaps it is for this reason that the Meccans left navigation to foreigners (see above); in addition, there was the contempt felt for certain trades (see Goldziher, in *Globus*, lxvi [1894], 203-5). As the Azdīs in ʿUmān were sailors and fishermen, they were scorned by the Tamīm as "sailors" (see Wellhausen, *Skizzen und Vorarbeiten*, vi, 25). We have also references to Nabataean and occasionally also to Jewish sailors (see Lyall, *The Dīwāns of ʿAbīd b. al-Abraṣ ...*, Leiden-London 1913, pp. viii, 5, 6).

It is therefore not surprising that in later times, when the value of shipping in peace and war was finally recognised, sayings were put into the mouth of the Prophet definitely permitting trade by sea and praising the merits of the martyr of the sea (see Wensinck, *Handbook*, s.v. *Barter* and *Martyr*(s); also Lammens, *Le berceau de l'Islam*, 15-16). But it was a long time before this view prevailed. Even at the time when Muḥammad was cutting the Ḳuray<u>sh</u> off from their markets in the north, they preferred a great detour through the desert to taking the sea route (Lammens, *La Mecque*, 381). The first caliphs were still against any enterprise at sea. ʿUmar was greatly impressed by a series of misfortunes in the Mediterranean and Red Sea (al-Ṭabarī, i, 2595, 2820; he is said to have forbidden sailing [or only for worldly purposes?], see Goldziher, *Das Schiff der Wüste*, *loc. cit.*). He even went so far as to punish the chief of the Ba<u>dj</u>īla tribe ʿArfa<u>dj</u>a b. Har<u>th</u>ama al-Bāriḳī, whom he had ordered to invade ʿUmān, because he had done it by sea, even although he had been successful (Ibn <u>Kh</u>aldūn, *ʿIbar*, i, 211). Yet within five years of Muḥammad's death (15/637) an Arab fleet from ʿUmān reached Tānah near Bombay and another expedition went to the Gulf of Daybul (al-Balā<u>dh</u>urī, *Futūḥ*, 431-2). But it was Muʿāwiya who was the founder of the Arab navy. The creation of a fleet became more and more urgent during his wars against the Byzantines, in which the harbours of the Levant coasts and Egypt were often threatened. On this question, he had during his governorship to meet the resistance of the caliphs, but ʿU<u>th</u>mān finally consented. Alexandria, in particular, provided ships and sailors. It was not till a later date that Muʿāwiya is said to have established naval bases on the Palestine coast also (al-Balā<u>dh</u>urī, 117). In spite of their dread of the sea, "the Arabs made the change from the desert and the camel to the sea and ship with astonishing rapidity" (so Wellhausen, in *NGW Gött.* [1901], 418). Bold and daring admirals soon arose among them, notably Busr b. Abī Arṭāt and Abu 'l-Aʿwar al-Sulamī [*q.vv.*].

We possess only very exiguous information on the actual vessels used in early times round the coasts of Arabia. These were probably simple craft, made of planks bound together with cords of palm fibre (such seems the most probably meaning of *<u>dh</u>āt alwāḥ wa-dusur* in Ḳurʾān, LIV, 13, a description of Noah's Ark): one of the *awāʾil* [*q.v.*] which the *udabāʾ* enumerated was that the Umayyad governor al-Ḥa<u>dj</u><u>dj</u>ā<u>dj</u> b. Yūsuf [*q.v.*] was the first to have had constructed ships of timber with the planks nailed and caulked (al-<u>Dj</u>āḥiẓ, *Ḥayawān*, ed. A.S. Hārūn, Cairo n.d., i, 82-3). The so-called "sewn [with cord of fibre]" ships are mentioned at later dates, up to the 9th/15th century, as a feature of Indian Ocean ship building; a travellers' tale doubtless invented to explain the prevalence of this construction practice posited the existence of magnetic mountains or islands in the Red Sea or in Indian waters which drew the nails out of ships and caused them to sink [see MA<u>GH</u>NĀṬĪS. 1, at vol. V, 1168a].

(H. KINDERMANN-[C.E. BOSWORTH])

(b) *The Mediterranean.*

In Mediterranean waters, the Arab ships used against the Byzantines were crewed by the Greco-Semitic population of the Levantine and Egyptian coastlands and carried a fighting force, initially of the Arab *muḳātila* and then, at a later period, of professional soldiers, whose task was to hurl projectiles at the enemy, engage in hand-to-hand fighting when required and to disembark for land operations. Amongst various types of ship mentioned is the *shawna/shīnī/shīniyya/shānī*, pl. *shawānī*, a vessel of the galley type, i.e. with a crew of oarsmen, whose use is mentioned in the Arabic chronicles up to Mamlūk times; Ibn Ḥawḳal and al-Muḳaddasī (4th/10th century) apply it to the corresponding Byzantine vessels, of the *dromon* or war galley type (see H. Kindermann, *"Schiff" im Arabischen. Untersuchung über Vorkommen und Bedeutung der Termini*, Zwickau i. Sa. 1934, 53-4; Darwīsh al-Nukhaylī, *al-Sufun al-islāmiyya ʿalā ḥurūf al-muʿdjam*, Cairo 1974, 83-5; MILĀḤA. 1, at vol. VII, 44b). Another term, *khalī/khaliyya*, pl. *khalāyā*, is defined as a large ship; an attempt to see in this word the origin of Old Span. *galea/galera*, i.e. galley, was rightly dismissed by Kindermann, *op. cit.*, 25, as implausible. Frequently mentioned in accounts of the naval warfare between the Muslims and the Franks during Crusading and Mamlūk times is the large galley called *ghurāb*; thus the expedition launched from Būlāḳ by the Mamlūk sultan al-Malik al-Ẓāhir Čaḳmaḳ against the Knights Hospitaller in Rhodes in 844/1440 comprised fifteen *ghurābs* conveying a large force of royal *mamlūks* and volunteers (Ibn Taghrībirdī, *Nudjūm*, and al-Maḳrīzī, *Sulūk*, cited in C.E. Bosworth, *Arab attacks on Rhodes in the pre-Ottoman period*, forthcoming). The name *ghurāb* may derive, in the surmise of K. Vollers, from Span. *caraba* < Latin *carabus* < Grk. *karabos/karabion*, see Kindermann, 68-71, and al-Nukhaylī, 104-12 (in archaic Anglo-Indian usage, it yielded the term *grab*, a type of ship often mentioned, in the Indian Ocean context, from the arrival of the Portuguese to the 18th century, see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*², London 1903, 391-2). (For information on the constituting and deployment of Muslim navies in the Mediterranean, see BAḤRIYYA. 1. The navy of the Arabs up to 1250, in Suppl., and 2. The navy of the Mamlūks.)

With the appearance of the Turks as a factor in naval warfare around the shores of Asia Minor and in the Aegean and eastern Mediterranean seas during the 9th/15th century, a new phase of ship construction began, based on the principal Ottoman dockyards at Gallipoli and at Ḳāsim Pasha near Ghalaṭa [*q.v.* in Suppl.] in Istanbul [see TERSĀNE]. Until well into the 11th/17th century there persisted a general distinction between the heavy "round ships" used as merchantmen and the long galleys used as men-of-war, although the distinction was never absolute. But during the 9th/15th century significant advances in naval technology were made both in the Mediterranean and along the Atlantic seaboard of Europe. The clumsy, single-masted "cog" (Ital. *cocca*, Tkish. *köke*, see H. and R. Kahane and A. Tietze, *The lingua franca in the Levant. Turkish nautical terms of Italian and Greek origin*, Urbana, Ill. 1958, 171-3, no. 202), with a single square sail, gave way to three-masted vessels with more than one square sail on the mainmast and a lateen sail on the mizzen. These ships were far more manoeuvrable, and formed the basis of the world-wide naval ventures of the Portuguese and Spanish, and later, the English and Dutch. In the Mediterranean, both the Venetians and the Ottomans experimented with large round ships for use as warships; a galleon ordered by Mehemmed the Conqueror [*q.v.*], weighing 3,000 tons (*fūči* < Grk. *boutsi*, see Kahane and Tietze, 496-8, no. 752) and built in imitation of Italian and Spanish vessels, sank on launching; the mounting of heavy artillery on the upper decks posed obvious problems of stability.

But the armed long ship or galley (Tkish. *ḳadïrgha* < Grk. *katergon*, see Kahane and Tietze, 523-6, no. 785) remained the main, and at times, the only type of warship in the Ottoman fleets. This had the advantage of being swift and manoeuvrable, of having a shallow draught so that it could operate close inshore, and, since it had oars, could travel on calm days when the galleon which relied purely on sail was becalmed. However, the superior size and armament of the galleon made it more effective than the galley as a fighting ship, and this was seen in the Indian Ocean during the 10th/16th century when the Portuguese, with their carracks, could not be dislodged from Hurmuz and Goa by the Ottoman fleet's galleys. Within the Mediterranean, the galley fleets of both the Turks and the Christians had to operate in the comparatively storm-free spring and summer months, especially as such ships, with their cannon as well as their oarsmen and fighting troops, carried large crews in relationship to their size, hence could not operate for too long away from base.

The Venetians made an innovation in naval technology with their use of the galleass in their fleet at Lepanto [see AYNABAKHTĪ] in 979/1571; this ship tried to combine the advantages of the galleon, with the ability to fire cannon broadsides, and of the galley, with its hull and rigging. The Ottomans started building them (Tkish. *mawna*) in the next year, but it was not until the later 11th/17th century that the Ottomans began to employ galleons on a large scale. See in general, İ.H. Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâtı*, Ankara 1948; C.H. Imber, *The navy of Süleyman the Magnificent*, in *Archivum Ottomanicum*, vi (1980), 211-82, with a useful glossary of naval and administrative terms at 277-82; and BAḤRIYYA. 3. The Ottoman navy.

(c) *The Mesopotamian-Khūzistān river systems.*

Here, nautical traditions went back to ancient times (see Salonen, *op. cit.*). Some terminology from Sumerian and Akkadian was carried over into the Arabic vocabulary of sea and river navigation and of irrigation constructions and practices of Umayyad and ʿAbbāsid times (see Bosworth, ... *Some remarks on the terminology of irrigation practices and hydraulic constructions in the Eastern Arab and Iranian worlds in the third-fifth centuries A.H.*, in *Jnal. of Islamic Studies*, ii [1991], 78-85). Likewise, there must have been some continuity in the designing and building of boats suitable for use on the Euphrates, Tigris, Kārūn and their tributaries; this was certainly the case with the raft floated on inflatable goatskins called *kelek* [*q.v.*] (< Akk. *kalakku*, ultimately from Sumerian), and probably also with the similar raft of early ʿAbbāsid times, the *ṭawf*, although the etymology of this is obscure (see Bosworth, *op. cit.*, 84-5).

The historical and *adab* sources of the ʿAbbāsid period are replete with references to the various types of craft which conveyed both passengers and freight on these rivers, which were exceptionally favourable for navigation, especially as the slightly higher level of the Euphrates, compared with the Tigris, meant that the transverse canals from the former to the latter could be used for speedy transport eastwards. The Euphrates was navigable up to Samosata [see SUMAYSĀṬ], hence could be used for goods traffic be-

tween ʿIrāḳ and the Djazīra and northern Syria, whilst down the Tigris to Baghdād came goods from Armenia and Kurdistān. Amongst the large ships used especially for freight are mentioned the *kurkūr*, pl. *karākīr* (probably from Grk. *kerkouros*, Latin *cercurus*), known to the pre-Islamic poets who frequented the Lakhmid court at Ḥīra, including al-Nābigha al-Dhubyānī [*q.v.*], who speaks of the *kurkūrs* of the Nabaṭ on the Euphrates (Fraenkel, 217; Kindermann, 79-81; al-Nukhaylī, 120-5).

The types of craft for both passengers and goods were very numerous. The Baghdād parasite of the early 5th/11th century, Abu 'l-Ḳāsim [*q.v.*], recites in his *Ḥikāya* a list of nineteen of these, including the *kārib, zabzab, sumayrī, ḥarrāḳa, ṭayyāra* and *marākib ʿammāliyya* (*ʿammāla*) "freight craft" (ed. A. Mez, *Abulkâsim, ein bagdâder Sittenbild*, Heidelberg 1902, 107). As in the last example, some names are clearly descriptive, e.g. *ṭayyāra* "flyer", a kind of skiff. *Ḥarrāḳa* "fire ship" presumably denoted in origin a warship from which fire could be hurled at the enemy, but was soon used for passenger-carrying craft in Mesopotamia and also on the Nile (Kindermann, 72-3; al-Nukhaylī, 32-7); the caliph al-Amīn had five luxury *ḥarrāḳāt* built as pleasure boats on the Tigris, each in the shape of a lion, elephant, eagle, serpent and horse (al-Ṭabarī, iii, 951-2). *Sumayriyyāt* are mentioned as troop-carrying craft in the historical accounts of the Zandj rebellion in the later 3rd/9th century, being used by both the caliphal forces and the rebels, whilst in 315/927 the general Muʾnis al-Muẓaffar [*q.v.*] sent 500 troops from Baghdād downstream in *sumayriyyāt* in order to prevent the Carmathians [see KARMAṬĪ] from crossing the Euphrates (Kindermann, 42-3).

Often mentioned as used by the caliphs and great men of state is the swift vessel called *zaww* (< Pers. *zūd* "speedy" or, more probably, Kindermann thought, from a Chinese word for "vessel", 36-7), which could be a luxuriously-appointed gondola. *Zawrak*, pl. *zawāriḳ* (a word of Persian origin?) denoted in the ʿIrāḳī context a skiff or dinghy, for local traffic (al-Iṣṭakhrī saw innumerable *zawraḳs* in the waterways around Baṣra); but what were obviously much larger, sea-going *zawraḳs* are recorded in the Mediterranean, including in fighting against the Crusaders off the Palestine coast and for transporting troops from Egypt for a further attack on Rhodes in 848/1444 (Kindermann, 37-8; al-Nukhaylī, 59-62; Ibn Taghrībirdī, cited in Bosworth, *Arab attacks on Rhodes in the pre-Ottoman period*). See for Mesopotamian river traffic in general, Mez, *Renaissance*, 455, Eng. tr. 485 ff.

(d) *The Arabian Sea and Indian Ocean shores.*

The characteristic features of the mediaeval Arabic ocean-going ships have been given by Hourani as, first, the sewing-together of the planks rather than nailing (see above) and, second, the fore-and-aft set of the sails. Ibn Djubayr observed large barques or *djalbas* (< Port.-Span. *gelba/gelva*, with another form *gallevat* which yielded Eng. "jolly-boat", cf. *Hobson-Jobson*, 361-3; in modern times, "jolly-boat" has been borrowed back into Arabic, since H. Ritter noted, in *Isl.*, ix [1919], 137, that the lifeboat of a steamer on the Tigris was called a *djālibōṭ*) being built at ʿAydhāb [*q.v.*] on the Red Sea coast which were stitched together with coir, i.e. coconut palm fibres (*kinbār*) (*Riḥla*, ed. Wright and de Goeje, 70). Only from the 9th/15th century did nailed construction begin to be used on the Malabar coast of South India, possibly in imitation of the Portuguese warships (Hourani, *Arab seafaring in the Indian Ocean*, 87 ff.).

A list of Arabic terms for ships used round the South Arabian coasts from later mediaeval times has been given by R.B. Serjeant in his *The Portuguese off the South Arabian coast. Ḥaḍramī chronicles*, Oxford 1963, repr. Beirut 1974, 132-7, Appx. II *Arabic terms for shipping*. Here are to be found terms used elsewhere in the Islamic world, such as *ghurāb* or grab; the *djal(a)ba*, pl. *djilāb*; and the *barsha*, according to Kindermann, 4-5, a long, covered boat, but also applied to large warships, as with the Ottoman *barčas* (< Ital. *bargia, barza*, see Kahane and Tietze, 98-9, n. 80) (cf. Imber, *The navy of Süleyman the Magnificent*, 212-13). Connected by observers of the early modern period with the Gulf of Oman and Indian waters was the *baghla*, lit. "mule", a large sailing ship (< Span.-Port. *bajel, baxel*, etc., yielding Anglo-Indian "buggalow" and possibly "budgerow", see *Hobson-Jobson*, 120, 123). Most characteristic, of course, of these waters, for western observers, was the dhow, which Kindermann, 26-7, noted under *dāw* or *dāwa*, suggesting a Persian or ultimately Indian etymology; see for the dhow, below, section 2. In modern times.

Bibliography: Given in the article. The works of Kindermann and al-Nukhaylī list the types of ship alphabetically. See also Suʿād Māhir, *al-Baḥriyya fī Miṣr al-islāmiyya wa-āthāruhā al-bāḳiya*, Cairo n.d. [1967], 147-238. (C.E. BOSWORTH)

2. In modern times.

See for this, MILĀḤA. 4. In modern times, to the *Bibl.* of which should be added H. Ritter, *Mesopotamische Studien. I. Arabische Flussfahrzeuge auf Euphrat und Tigris*, in *Isl.*, ix (1919), 121-43. (ED.)

Finally, it should be noted that in astronomy, *Safīna* represents Argus, one of the eastern constellations made up of 45 stars, the brightest of which is *Suhayl* or Canopus. On the other hand, *Safīnat Nūḥ* denotes the Great Bear. (G. OMAN)

SAFĪR (A., "ambassador", "messenger").

1. In Shīʿism.

Here, this is a term used to refer to the deputies of the twelfth imām during the Lesser Occultation (260-329/874-941) [see GHAYBA]; there were four such deputies.

The doctrine that the hidden imām is represented by a deputy appears to have taken shape in the circles of the Nawbakht family [*q.v.*], whose members played a prominent role in the ʿAbbāsid court in the early 4th/10th century. According to a recent study, it was Ibn Rawḥ (Rūḥ) al-Nawbakhtī [*q.v.*], regarded by the Twelver Shīʿīs as the third *safīr*, who first claimed to be such a deputy; the first and second *safīrs* were given this title posthumously in order to establish that the office of *sifāra* had come into being immediately following the occultation of the imām (V. Klemm, *Die vier sufarāʾ*, 140-1). The term *safīr* as referring to these deputies is first attested in the *K. al-Ghayba* of Muḥammad b. Ibrāhīm al-Nuʿmānī (d. *ca.* 345/956 or 360/971), though neither their names nor their number is given. The four are listed in Ibn Bābawayh's [*q.v.*] *Ikmāl al-dīn* (408-9); and the most detailed accounts of their activities are found in the *K. al-Ghayba* of Abū Djaʿfar al-Ṭūsī (d. 460/1067). These accounts are largely dependent on two works now lost, the *Akhbār Abī ʿAmr wa Abī Djaʿfar al-ʿAmriyyayn* of Abū Naṣr Hibat Allāh b. Aḥmad b. Muḥammad, known as Ibn Barniyya al-Kātib (*fl.* second half of 4th/10th century), and the *Akhbār al-wukalāʾ al-arbaʿa* of Aḥmad b. ʿAlī b. al-ʿAbbās b. Nūḥ al-Sīrāfī (d. *ca.* 413/1022).

The function of the *safīrs* as described in Twelver Shīʿī texts was to act as senior agents (*wakīls*) of the twelfth imām and to oversee the affairs of the com-

munity by coordinating the work of all other *wakīls* in the ʿAbbāsid empire, collecting the dues owed the imām and his family and transmitting his orders and responsa. According to Ibn Bābawayh and al-Ṭūsī (who are followed by later authors), the four *safīrs* were:

a. Abū ʿAmr ʿUthmān b. Saʿīd al-ʿAmrī of the Banū Asad (d. before 267/880). When he was only eleven years old he already served the tenth imām ʿAlī al-Hādī (d. 254/868) [see al-ʿAskarī]; later he became a confidant of his son al-Ḥasan al-ʿAskarī [*q.v.*]. Abū ʿAmr traded in butter, and was therefore known as al-Sammān. His profession enabled him to conceal in butter receptacles the money collected from the Shīʿīs and to transport it secretly to the imām. Before al-ʿAskarī died he appointed Abū ʿAmr as *safīr*, an appointment subsequently confirmed by the twelfth imām from his place of hiding.

b. Abū Djaʿfar Muḥammad b. ʿUthmān al-ʿAmrī (d. Djumādā I 304/916 or 305/917), son of the first *safīr*. He is said to have spent a total of some fifty years in the service of the tenth, eleventh and twelfth imāms.

c. Abu 'l-Ḳāsim al-Ḥusayn b. Rawḥ al-Nawbakhtī (d. 18 Shaʿbān 326/20 June 938), author of a *K. al-Taʾdīb* and a close associate of the vizier family of Banu 'l-Furāt. Following the end of the second vizierate of ʿAlī b. Muḥammad b. al-Furāt in 306/918 [see ibn al-furāt], Ibn Rawḥ was forced for reasons unknown to go into hiding; there he remained until Ibn al-Furāt's brief reinstallation in 311/923. During that time he appointed ʿAlī b. Muḥammad al-Shalmaghānī [*q.v.*] as his deputy, but then accused him of heresy. For five years (312-7/924-9) Ibn Rawḥ was imprisoned by the caliph al-Muḳtadir [*q.v.*], either for financial misconduct or because of his suspected links with the Ḳarmaṭīs. He was released by Muʾnis al-Muẓaffar [*q.v.*].

d. Abu 'l-Ḥasan ʿAlī b. Muḥammad al-Simmarī (traditionally read al-Samarrī) (d. mid-Shaʿbān 329/mid-May 941). Like his three predecessors, he lived and was buried in Baghdād. His period in office was brief; a few days before his death he received a message from the twelfth imām announcing the onset of the Greater Occultation.

While the *safīrs* are regarded as inferior to the imāms, they are reported by most authorities to have been accorded some of the imāms' special powers, such as the ability to foretell future events and to perform miracles; this latter ability is said to have been conferred on them by the twelfth imām to serve as proof that they were his representatives (al-Ṭūsī, *K. al-Ghayba*, 256; cf. M.A. Amir-Moezzi, *Le guide divin dans le shīʿisme originel*, Verdier 1992, 271-5). The Banū Nawbakht, in contrast, argued like the Muʿtazila that the *safīrs* could not perform miracles (al-Shaykh al-Mufīd, *Awāʾil al-maḳālāt*, ed. Faḍl Allāh al-Zandjānī, Tabriz 1371, 41).

In addition to the genuine *safīrs*, Shīʿī authors mention various pretenders who claimed the title for themselves. Among them are Aḥmad b. Hilāl al-Karkhī, Muḥammad b. Nuṣayr (the eponymous founder of the Nuṣayriyya) and al-Shalmaghānī (E. Kohlberg, *Barāʾa in Shīʿī doctrine*, in *JSAI*, vii [1986], 139-75, at 166-7).

Two further terms are used synonymously with *safīr*: (1) *bāb* (gate) [*q.v.*], a word which in the pre-*ghayba* period referred *inter alia* to the personal attendant of the imām (Ibn Shahrāshūb, *Manāḳib āl Abī Ṭālib*, Nadjaf 1375-6/1956, iii, 232, 311, 340, 400, 438, 476, 487, 506, 525); (2) *nāʾib* (lieutenant) or *nāʾib khāṣṣ*. The latter in particular was used by authors in the Ṣafawid period in contrast to the *nāʾib ʿāmm* (the jurist) (N. Calder, *Zakāt in Imāmī Shīʿī jurisprudence, from the tenth to the sixteenth century A.D.*, in *BSOAS*, xliv [1981], 468-80, at 479-80).

(E. Kohlberg)

2. In diplomacy.

Here, *safīr*, pl. *sufarāʾ*, initially meaning envoy as well as mediator and conciliator, becomes ambassador or diplomatic agent (Turkish *sefīr*, but *elči* [*q.v.*] is more commonly used; Persian *safīr*).

(a) In the central and eastern Arab lands. Diplomacy by means of emissaries existed from the early days of Islam. The Prophet employed envoys in dealing with the towns of Ḥidjāz and Nadjd, dispatched messengers to Byzantium, Persia, Egypt and Ethiopia to invite them to join Islam, and received missions sent to him. Such diplomatic intercourse for military, political, and religious purposes continued under the Rāshidūn caliphs and the Umayyads, most prominently in negotiating war and truce with the Byzantines. Diplomacy became more organised with the stabilisation of the Islamic empire under the ʿAbbāsids, who exchanged envoys with heads of other states near and far, in order to discuss issues of war, peace and international alliances, to deliver good-will messages and, invariably, to spy. A famous instance

of these contacts (whose authenticity, however, is in some doubt) was the exchange of embassies between Charlemagne and Hārūn al-Rashīd, in which the former reportedly sought a coalition with the latter against Byzantium [see IFRANDJ]. Another line of dialogue developed through envoys between the caliph in Baghdād and provincial governors who had become autonomous, such as the Ayyūbids, and between the caliph and Islamic states not under his sovereignty, such as the Fāṭimids and Umayyads of Spain. With practice came the criteria for choosing state emissaries (prudence, courage, charm and, of course, dependability were prerequisite), patterns for conducting missions and modes of entertaining foreign envoys, as well as an elaborate diplomatic vocabulary. Al-Ḳalḳashandī's [*q.v.*] 9th/15th-century multi-volume manual for scribes in the Mamluk chancery, the *Ṣubḥ al-aʿshā*, is an impressive mirror of these sophisticated diplomatic standards.

The spread of European commerce brought European consuls to the Levant and North Africa from the 7th/13th century [see CONSUL], men who discharged a variety of diplomatic functions. In the 10th/16th century, as the Arab lands came under Ottoman rule, the region's locus of international diplomacy shifted to Istanbul [see ELČI]. Only Morocco, remaining an independent sultanate, continued to conduct international relations independently through correspondence and the occasional dispatch of emissaries. Until the late 18th century (when the Ottomans began setting up resident embassies abroad), official contacts with non-Muslim states took place mostly in the region itself, through foreign consuls and messengers. Muslim envoys were sent out quite infrequently, and then only on brief missions, often with limited objectives.

The establishment of new Arab states following the First World War marked a new stage in the region's diplomatic history. During the interwar period, relations among these states gradually assumed a formal nature, an emphatic sign—one among many—of their new status. This was so especially in the 1930s, with the attainment of greater or full independence from foreign control; the April 1936 Saudi-Iraqi Treaty of Friendship and its Saudi-Egyptian counterpart in May, both formalising diplomatic relations between the parties, were typical instances of this trend. Simultaneously, with the gradual departure of European powers from the region, their domination gave way to mutual diplomatic representation—as specified e.g. by the 1930 Anglo-Iraqi treaty and the 1936 Anglo-Egyptian treaty, both providing for a replacement of British High Commissioners by an exchange of ambassadors. Modern diplomatic protocol, terminology, and ranks, having been adopted by the Ottomans during the 19th century, were now readily applied. *Safīr* became the technical equivalent of ambassador (fem. *safīra*, ambassadress or an ambassador's wife), and came to be used for other functions in construct titles such as *safīr mufawwaḍ* (ambassador plenipotentiary), *safīr fawḳa 'l-ʿāda* (ambassador extraordinary), etc. More ranks and functions are represented by additional terms: *mabʿūth* (or *mandūb*), for envoy or minister, *mustashār* for counsellor, *sikratīr* for secretary, *mulḥaḳ* for attaché, and *ḳāʾim bi-aʿmāl* for chargé d'affaires.

(b) In Muslim Spain. In the Arabic sources of al-Andalus, we also find some words derived from the root *s-f-r*, meaning "to travel on mission on behalf of..."/"to be a negotiator, a mediator" (stem I) (as in al-Maḳḳarī, i, 645-6); "to make somebody travel", "to send somebody as an ambassador" (stem II); "to be sent on mission/embassy" (stem V); *safīr* (pl. *sufarāʾ*) "ambassador" (as in Ibn Ḳuzmān, 38/4/4; *Vocabulista*: "mediator", "nunciator"); *sifāra* (pl. *-āt*) "the charge of mediator", "embassy", "post or functions of ambassador". The usage of the words derived from the root *s-f-r* alternates—in a proportion and distribution not yet elucidated—with the words derived from the roots *r-s-l* ("to send a messenger", etc.) and *w-f-d* ("to go somewhere on behalf of somebody", etc.).

These words, and their contexts, throughout the history of al-Andalus, exhibit the fact that connections between individuals and groups were established by a "messenger", and that relations were engaged and accepted by all the Andalusī states; that means that more or less intensive and institutionalised diplomatic activities were established by an "ambassador" with the charge, the post, or rather the functions of representing the interests of a power, sporadical or continually, circumstantial or more specifically.

Although precise analysis on this aspect has not yet been done, we cannot deduce from the sources that the *sifāra* was an institutionalised charge, like a *wilāya* or *khuṭṭa*, but most probably was an "activity", in the sense that a person was *safīr* only while carrying out his mission. There is no indication in the sources on al-Andalus of the existence of permanent embassies.

Embassies were frequently assigned to those who knew another language in addition to Arabic, such as the *dhimmiyyūn*: the *naṣārā* (Christians of al-Andalus) and the Jews. Amongst the *naṣārā* were the Andalusian bishop sent by the caliph of Cordova ʿAbd al-Raḥmān III al-Nāṣir to Ramiro I of Leon (Ibn Ḥayyān, *Muḳtabas*, v, 350), and the bishop Recemundo, known as Rabīʿ b. Zayd [*q.v.*], sent by al-Nāṣir to Germany in 955-6. The Christians of al-Andalus [see MOZARABS] were also sent by the Christian kings of the North to the Islamic territories and, on some occasion, were alternate ambassadors, such as the *ḳūmis* Sisnando Davídiz, who was initially the messenger of al-Muʿtaḍid of Seville to the court of Leon and then became the ambassador of the Christian kings to the *mulūk al-ṭawāʾif*, for example to the *amīr* ʿAbd Allāh (*The Tibyān*, 226, n. 241).

Amongst the Jews were Ibn Shālib al-Yahūdī, ambassador of Alphonso VI of Castile to al-Muʿtamid of Seville [*q.v.*], who killed al-Yahūdī (it was a permanent risk for ambassadors); Ibrāhīm b. al-Fakhkhār al-Yahūdī, well-known poet in the Arabic language, was the ambassador of Castile to the Almohad court. Other Jews were also sent by the Andalusian kings, such as the powerful Cordovan Jew Ḥasdāy b. Shaprūṭ, who was the outstanding vizier of the caliph ʿAbd al-Raḥmān III al-Nāṣir, and was entrusted with missions to Barcelona (940), Leon (in 941 and 955) and Navarre. He was also assigned the task of receiving the Byzantine Constantine VIII's ambassadors in Cordova (944) and the Saxon emperor Otto I's ambassadors (956).

Some outstanding Muslim personalities in al-Andalus, renowned for their culture and eloquence, were also designated as ambassadors, such as the Cor-

dovan poet al-Ghazāl, sent by the *amīr* ʿAbd al-Raḥmān II to the Vikings (*madjūs*), and to Constantinople; and the Granada vizier and polygraph Ibn al-Khaṭīb [*q.v.*], who went on three or four diplomatic missions to the Marīnids [*q.v.*] of Fās. Other personnalities renowned for their religious prestige were also sent on missions. For example, the two Ibn al-ʿArabīs were entrusted with obtaining the recognition of the Almoravid *amīr* Yūsuf b. Tāshufīn by the ʿAbbāsid court. Merchants sometimes played the role of ambassadors, such as the Granadan al-Bunyūlī, charged by the Naṣrid sultan to get help from the Mamlūk sultan al-Ẓāhir, in 845/1441.

It is useful to classify the Andalusian embassies according to their destination, whether within al-Andalus or outside it. The destinations of the external embassies are to be classified as either to *Dār al-Islām* (the other Muslim territories) or to *Dār al-ḥarb* (non-Muslim territories). The internal embassies were exchanged either amongst the different administrations or between the administration and the subjects, or vice-versa, such as those sent by the Almohad court in Marrākush to every part of its empire. The external embassies, well-known but not yet analysed, excepting those of the Umayyad period (Lévi-Provençal; el-Hajji), show that permanent relations between al-Andalus and the rest of the Muslim world existed as, for example, with the ʿAbbāsids, Egypt and finally with the Turks, but especially with the Maghrib. There are many references to missions which were sent from al-Andalus to the Christian north of the Iberian Peninsula, to the *Ifrandja* and other European parts, and especially to Byzantium.

Andalusian sources point out the luxury and ostentation of the receptions given by some Andalusian sovereigns for foreign ambassadors, with the purpose of political propaganda (Granja, *Embajada*).

(M.J. Viguera)

3. In Muslim India.

Elaborate rules were laid down in mediaeval India regarding the qualifications and protocol duties of ambassadors. Fakhr-i Mudabbir quotes the following *ḥadīth* of the Prophet as the guiding principle: "When you send an ambassador to me, he should be of good reputation, handsome and of good voice." (*Ādāb al-ḥarb wa ʾl-shadjāʿa*, ed. A.S. Khʷānsarī, Tehran 1346/1967, 142). The Dihlī Sultans received envoys in such awful atmosphere of dignity and grandeur that, according to Djūzdjānī, many of them fainted in the *darbār* (*Ṭabaḳāt-i Nāṣirī*, Calcutta 1864, 316-19; Baranī, *Tārīkh-i Fīrūz-Shāhī*, Calcutta 1862, 30-3). Envoys were sent for different purposes—diplomatic, religious, economic, cultural etc.—and Abu ʾl-Faḍl refers to the spiritual and temporal objectives of ambassadorial functions (*Akbar-nāma*, tr. Beveridge, ii, 262).

Envoys to and from the caliph. Envoys were sent to secure letters of investiture (*manshūr*) from the ʿAbbāsid caliphs. Iltutmish sent Ikhtiyār al-Mulk Rashīd al-Dīn Abū Bakr Ḥabash to Baghdād, and twice Raḍiyy al-Dīn Ḥasan al-Ṣaghānī [*q.v.*] came to Iltutmish as envoy of the caliphs. When the caliph granted investiture to Iltutmish, legalising the status of the Dihlī Sultanate, he celebrated the occasion with great éclat. On another occasion, the caliph sent an envoy, Ḳāḍī Djalāl Urūs, with a copy of the *Safīnat al-khulafāʾ*, allegedly containing an autographic inscription of the caliph al-Maʾmūn. With the fall of Baghdad, contact with caliphal authority there came to an end, but after many enquiries, Muḥammad b. Tughluḳ established contact with the fainéant ʿAbbāsids in Egypt. In 744/1343 he sent Ḥādjdjī Radjab Burḳuʿī to the caliph requesting a *manshūr*. When Ḥādjdjī Saʿīd Ṣarṣarī, Sayyid Ziyād, Mubashshir Khalwātī and Muḥammad Ṣūfī brought the investiture, the sultan went out barefoot to receive them. The caliph later sent Shaykh al-Shuyūkh Rukn al-Dīn and Makhdūm-zāda Ghiyāth al-Dīn Muḥammad as his envoy to the sultan. As the Makhdūm-zāda was the grandson of the caliph al-Mustanṣir biʾllāh, he was lodged at the palace of ʿAlāʾ al-Dīn Khaldjī and 400,000 dīnārs were sent for washing his head (Ibn Baṭṭūṭa, iii, 261-2, tr. Gibb, iii, 680-1). In 754/1353 Shaykh Shihāb al-Dīn Aḥmad Samīt brought an investiture patent for Fīrūz Shāh Tughluḳ, and a new one arrived in 766/1364. The sultan sent to the caliph details of his benefactions, religious endowments and public works through Maḥmūd Shams Kurd Ḳāḍī Nadjm al-Dīn Ḳurashī and Khʷādja Kāfūr Khalwatī, and Maḥmūd then brought back mandates from the caliph (*Sīrat-i Fīrūz-Shāhī*, ms. Bankipur). At a later date, the Mughals did not recognise the Ottomans as caliphs, but in 1785 Tīpū Sulṭān [*q.v.*] sent his envoys to Istanbul to obtain an investiture from the Sultan-caliph.

The Mongol period. Both Čingiz Khān and his rival the Khʷārazm-Shāh sent their envoys to Iltutmish seeking his support. In 1246 when a Mongol commander attacked India, Shaykh Bahāʾ al-Dīn Zakariyyā of Multan, was sent to negotiate peace. Two years after the fall of Baghdād, in 658/1260, emissaries from the Mongols visited India and were accorded a royal reception by sultan Nāṣir al-Dīn Maḥmūd (*Ṭabaḳāt-i Nāṣirī*, 317-18).

Envoys to and from the Il-Khān. Arghun, Ghazan and Muḥammad Öldjeytü Khudābanda sent their envoys to the Dihlī court, and the great vizier Rashīd al-Dīn Faḍl Allāh [*q.v.*] came as an envoy to ʿAlāʾ al-Dīn Khaldjī (Nizami, *Rashid al-Din Fazl Allah and India*, in *Proceedings of the Colloquium on Rashid-Al-Din Fadl Allah*, Tehran 1971, 36-53). Rashīd al-Dīn came again as an envoy to the court of Mubārak Khaldjī (*Āʾīn-i Akbarī*, ed. Sir Sayyid Aḥmad Khān,

ii, 200), and Muḥammad b. Tug͟hluḳ sent and received envoys from Sultan Abū Saʿīd.

Envoys to and from neighbouring countries. According to Baranī, ambassadors from distant lands came to the court of Balban. During the time of Muḥammad b. Tug͟hluḳ envoys came from ʿIrāḳ, Syria, China and K͟hʷārazm, and the Chinese ambassador, Tursi, came with a large retinue; in return, Muḥammad b. Tug͟hluḳ sent the Amīr Maḥmūd Harawī as his envoy to China.

Envoys to the Ottomans. Muḥammad S͟hāh Bahmanī III of the Deccan (867-87/1463-82) was the first Indian ruler to exchange envoys with the Ottomans, and Meḥemmed II Fātiḥ sent Mawlānā Afḍāl al-Dīn-og͟hlu Meḥmed Čelebi as his envoy. Maḥmūd S͟hāh Bahmanī (887-924/1482-1518) sent Mullā Niʿmat Allāh to Bāyezīd II as his emissary. The Muẓaffarids of Gud͟jarāt exchanged several embassies with Selīm I (918-26/1512-20), and Bahādur S͟hāh sent envoys to Istanbul seeking Ottoman help against the Mug͟hal Humāyūn. The Mug͟hals considered the Ottomans as their rivals and did not like to exchange envoys with them. Nevertheless, Turkish records say that Sīdī ʿAlī Reʾīs, the Ottoman admiral, carried a letter from Humāyūn to Süleymān the Magnificent in which Humāyūn addressed the Sultan as "the K͟halīfa of the highest qualities." The Ottoman documents used the terms *Hind elčisi* or *elčiye-i Hind* to denote Mug͟hal ambassadors, but no details are available in the Indian chronicles about these Mug͟hal envoys. The envoys of the Ottoman governor of Yemen were, however, treated with scant respect by Akbar (N.R. Faruqi, *Mughal-Ottoman relations*, Delhi 1989, 20 ff.).

Envoys to and from the Uzbeks. Akbar was afraid of Uzbek power and treated them with suspicion. However, in 979/1571 ʿAbd Allāh K͟hān Uzbek, ruler of Transoxiana, sent an embassy to Akbar.

Envoys to and from Tīmūrid and Ṣafawid Persia. The sultans of Golkonda, Bid͟jāpur and Aḥmadnagar sent ambassadors to the court of S͟hāh Taḥmāsp I, whilst in 847/1443 S͟hāh Ruk͟h's ambassador ʿAbd al-Razzāḳ had been received by the Hindu ruler of Vijayanagar, King Devendra.

Humāyūn, who was beholden to the Ṣafawids for help, developed contact with them, and during the time of Akbar, many ambassadors came and went to Persia. In 1004/1596 the Emperor sent Mirza Ḍiyāʾ al-Dīn Kāsī and Abū Nāṣir Kāfī to S͟hāh ʿAbbās, and according to Iskandar Beg Muns͟hī, they were received with honour (tr. R.M. Savory, *History of Shah Abbas the Great*, Boulder, Col. 1978, ii, 705-6). Abu 'l-Faḍl's account of the reception of these envoys is silly and pedantic (*Akbar-nama*, tr. iii, 1112).

Several envoys were sent by S͟hāh ʿAbbās to D͟jahāngīr. In 1020/1611 Yādgār ʿAlī Tālis͟h came to mourn Akbar's death and to congratulate D͟jahāngīr on his accession. When Yādgār ʿAlī returned to Persia, D͟jahāngīr's envoy K͟hān ʿAlam accompanied him. In 1024/1615 a second Persian embassy headed by Muṣṭafā Beg came to D͟jahāngīr's court with huge presents, including European hounds which D͟jahāngīr had asked for. In the following year Muḥammad Riḍā Beg came to D͟jahāngīr to obtain monetary aid aginst Ottoman Turkey and to bring about an amicable settlement between D͟jahāngīr and the Shīʿī states of the Deccan. For envoys to and from S͟hāh D͟jahān, see Saksena, *History of Shahjahan*, Allahabad 1973, 210-32.

Queen Elizabeth's envoy to Akbar. Elizabeth of England sent an envoy to Akbar in 1583 with a letter which was "the earliest communication between the government of India and England" (V.A. Smith, *Akbar the Great Moghul*, Oxford 1919, 229).

Akbar's envoys to Europe. Akbar desired to send envoys to Philip II of Spain recommending universal peace and harmony; a diplomatic mission, consisting of Sayyid Muẓaffar, ʿAbd Allāh K͟hān and Father Monserrate was dispatched to Lisbon, but was unable to reach there.

Jesuit missions at Akbar's court. Akbar's interest in religious debates led to the arrival of several Jesuit Missions at Akbar's court in 1580 and after, and in return Akbar sent ʿAbd Allāh as his envoy to Portuguese Goa (see E. Maclagan, *The Jesuits and the Great Mogul*, London 1932).

British envoys at D͟jahāngīr's court. D͟jahāngīr welcomed William Hawkins and Sir Thomas Roe, but refused to conclude a commercial treaty with England. Hawkins was, however, persuaded to remain at the court as the resident ambassador.

Envoys of the Deccan states and provincial Indian states. Three types of envoys have been identified in regard to the Deccan of the 10th/16th century: (a) *ad hoc* envoys, called *rasūls*, who were sent to offer congratulations or condolences; (b) the *ḥād͟jib-i muḳīm*, literally, attaché; originally assigned to the army of friendly powers; and (c) *wakīls* or permanent ambassadors accredited to certain foreign powers (H.K. Sherwani, *History of the Qutb Shahi dynasty*, Delhi 1974, 218-19). Provincial kingdoms like D͟jawnpūr, Bengal, Mālwā and Gud͟jarāt sent envoys within India with the limited objectives of winning support in their conflicts with the adjoining states, but it is only regarding the Deccan that one finds contact with outside powers. In Gud͟jarāt, the ambassadors were mainly concerned with the activities of the Portuguese.

Envoys to the West during the 18th and 19th centuries: Tīpū Sulṭān of Mysore sent his envoys to France and Turkey; Louis XVI received his envoy with honour, but refused to enter into any alliance against the British. One of the last Mug͟hal Emperors, Akbar S͟hāh II, sent Rad͟ja Rām Mohan Roy to London in 1827 to plead his case for an increase in his *pīs͟hkas͟h* or pension.

ṢĀFĪT͟HA, a place in western Syria, situated in the D͟jabal Bahrāʾ region. This last becomes lower as it falls southwards, with a large gap commanded to the north by Ṣāfīt͟ha and Ḥiṣn al-Akrād [*q.v.*] and to the south by ʿAkkār and ʿIrḳa [*q.vv.*]. The mountains of the ʿAlawīs fall southwards into the Ṣāfīt͟ha depression.

Ṣāfīt͟ha was the 'Αργυρόκαστρων of Byzantine authors, Castrum Album or Chastel Blanc of the

Latin ones, and is the main place in the district, with its fortress called in Arabic texts Burdj Ṣāfītha; this last lies to the east of the present village and dominates the foothills of the Djabal Nuṣayrī to the north. It commands two valleys at a point midway between Ḥiṣn al-Akrād and Ṭarṭūs and also a large gap, to the south of the Djabal Bahrāʾ, by means of which Ḥimṣ [*q.v.*] is connected with Ṭarābulus al-Shām. From Antiquity, the castle of Ṣāfītha commanded the route connecting Ḥamāt [*q.v.*] and Ṭarṭūs on the coast, i.e. the passage from central Syria to the Mediterranean. Situated on a basalt peak at an altitude of over 400 m/1,312 feet, it protected the lands to the north in mediaeval times from the Nizārī Ismāʿīlīs. The region around Ṣāfītha was a fertile one, with olives grown there from classical times, and with vines, figs and white mulberry trees for silk worms grown there in mediaeval times.

The fortress of the mediaeval Christian town of Ṣāfītha was a strong rectangular donjon with rounded angles, originally protected by double defensive walls. The Order of the Temple was responsible for its construction, upkeep and manning. From 526/1132 onwards, the Franks built fortresses in the Djabal Anṣāriyya against the Ismāʿīlīs, who paid them a tribute in gold pieces and wheat. The Templars' aim was to control the gap between Ḥimṣ and Ṭarābulus in the hinterland of the Knights Hospitallers' territory. The plan of the castle resembled that of Markab [*q.v.*] in being elliptical, originally with a double wall, but later with a single wall with rectangular salients, as at Ṭarṭūs and ʿAthlīth [*q.v.*], and with a moat 15 m/49 feet deep and 13 m/42 feet wide. The stones were dovetailed together and linked by iron crampons sealed with lead. Some modifications to it were made by Louis IX (St. Louis) when he was staying in Syria (Ṣafar 548-Ṣafar 652/May 1252-end of April 1254), including an even more complex entry with a portcullis and four successive gates. The first protective wall, in the shape of an irregular polygon, had a glacis before it. The actual keep had its own water supply, kept in a vast subterranean cistern hewn out of the rock and replenished by rainfall brought through conduits, and could thus withstand a certain period of siege, and there was also an external cistern (*birka*) where mounts and other beasts could drink. The chapel of St. Michael within the castle resembled the Romanesque churches of the South of France of the late 12th century, and, like all similarly-placed chapels of the Templars and Hospitallers, was devoid of ornamentation. In the thickness of the walls, a staircase led to the Great Hall (*palatium*) and the armoury. The keep itself was 28 m/90 feet high and had two floors, reached by a staircase on the west side. Down below was a subterranean prison. The region, and Syria in general, was always liable to earthquakes, and the fortress of Ṣāfītha was damaged in 565/1170, 597/1201 and the following year, only the chapel of the fortress being unscathed. Communication between the strong points of the Franks was by means of smoke signals by day and fire ones by night, but the Crusaders learnt the use of carrier pigeons from the Muslims, and Jacques de Vitry, the envoy of Pope Honorius III, announced his arrival at Ṣāfītha in 614/1215 by this means. The garrison of the castle comprised over 700 knights and their squires, divided into 50-man sections, in addition to large numbers of artisans, such as blacksmiths and armourers, and also the prisoners. There were stores of supplies and provisions, and in times of threatened attack, the local villagers would seek refuge there also.

Of later history, it is recorded that in 1270/1854, a petty chieftain, Ismāʿīl Bey, seized Ṣāfītha and proclaimed himself *mushīr* [*q.v.*] or governor acting as an "Old Man of the Mountain", which provoked a revolt of the Muslims of the region; four years later, he was murdered by a relative. After this, Ṣāfītha was integrated into the Ottoman empire.

The present-day village is situated on the site of the mediaeval fortress. In the early 19th century, the *kaḍāʾ* of Ṣāfītha was one of the constituents, with al-Markab, Tell Kalākh, ʿUmrāniya and Ṭarṭūs, of the *sandjak* of Ṭarṭūs. In 1916 it had 2,500 inhabitants, including 1,500 Nuṣayrīs [see NUṢAYRIYYA] and 850 Syrian Orthodox. In 1920 the administrative district of Ṣāfītha comprised 202 villages, with 41,500 people, including 20,000 Nuṣayrīs, 10,000 Muslims, 6,500 Greek Orthodox, 4,500 Maronites, 300 Greek Catholics and 200 Protestants. In this same year the *kaḍāʾ* of Ṣāfītha, with the town as its chef-lieu, was detached from the *sandjak* of Ṭarābulus al-Shām, and then made part of the State of the ʿAlawīs established in 1922 as part of the federation of Syria. In 1945 the *kaḍāʾ* became part of the *muḥāfaẓa* of the ʿAlawīs. After 1954, the local population, essentially peasant cultivators, supported the Parti Populaire Syrien. Local activities include carpet weaving and the cultivation of cotton and tobacco. The village now surrounds the castle and its dominating donjon, and its houses are essentially built from stones taken from the castle's enceinte. The chapel of St. Michael in the donjon is still used by the Greek Orthodox members of the population. In the 1960s Ṣāfītha became a tourist centre, for skiing in winter and with an open-air bathing pool.

ṢAFIYYA bt. Ḥuyayy b. Akhṭab, Muḥammad's eleventh wife, was born in Medina and belonged to the Jewish tribe of the Banu 'l-Naḍīr [see al-Naḍīr]; her mother Barra bt. Samawʾal, the sister of Rifāʿa b. Samawʾal, was of the Banū Ḳurayẓa [*q.v.*]. Her father and her uncle Abū Yāsir were among the Prophet's most bitter enemies. When their tribe was expelled from Medina in 4 A.H., Ḥuyayy b. Akhṭab was one of those who settled in Khaybar [*q.v.*], together with Kināna b. al-Rabīʿ, to whom Ṣafiyya was married at the end of 6 or early in 7 A.H.; her age at this time was about 17. There is a tradition that she had formerly been the wife of Sallām b. Mashkam, who had divorced her.

When Khaybar fell, in Ṣafar 7/June-July 628, Ṣafiyya was captured, together with two of her cousins. In the division of the spoils she had been assigned, or actually given, to Diḥya b. Khalīfa al-Kalbī, but when Muḥammad saw her he was struck by her beauty, and threw his mantle over her as a sign that he had chosen her for himself. He redeemed her from Diḥya against seven head of cattle, and gave her the option of embracing Islam. Her husband was condemned to a cruel death by Muḥammad for having refused to give up the treasure of the Banu 'l-Naḍīr. The nuptials were celebrated with haste and with a modest wedding feast, either in Khaybar itself or on the way back to Medina. Ṣafiyya's dowry [see mahr] consisted of her emancipation. Her position as a wife, which was questioned, was established by the veil or *ḥidjāb* [*q.v.*] being imposed on her and her receiving a portion of Muḥammad's booty.

In Medina, Ṣafiyya received a cold welcome; ʿĀʾisha [*q.v.*] and Muḥammad's other wives showed their jealousy with slights upon her Jewish origin. She gave the Prophet's daughter Fāṭima [*q.v.*] gold from her earrings, which may indicate that the two were allies in the politics of Muḥammad's harem. Doubts about Ṣafiyya's commitment to Islam and the suspicion that she would avenge her slain kin are recurring themes in the numerous biographies of her composed through the centuries. In these stories, the Prophet (or ʿUmar) admonishes the doubters and re-affirms the quality of her Islam, despite her being a Jewish convert. During Muḥammad's last illness, Ṣafiyya expressed her devotion to him, and was criticised by the other wives.

Ṣafiyya's marriage to the Prophet was predicted in a dream while she was still married to Kināna, and her husband beat her for desiring another man. The miracle and her suffering for Islam and the Prophet, as well as her reputation for crying won her a place in Ṣūfī works. She appears in all the major books of *ḥadīth*s and indices of transmitters, although she related relatively few traditions compared to ʿĀʾisha and Umm Salama [*q.v.*]. A number of events in her life serve as legal and customary precedents.

In 35/656, Ṣafiyya sided with ʿUthmān [*q.v.*]; while he was besieged in his house she made an unsuccessful attempt to reach him, and she used to bring him food and water by means of a plank placed between her dwelling and his. When ʿĀʾisha asked her to be present at ʿUthmān's last interview with ʿAlī, Ṭalḥa and al-Zubayr, which took place in her house, Ṣafiyya went, and tried to defend the unfortunate caliph.

She died in 50/670 or 52/672, during Muʿāwiya's caliphate, leaving a fortune of 100,000 dirhams in land and goods, one-third of which she bequeathed to her sister's son, who still followed the Jewish faith. Her dwelling in Medina was bought by Muʿāwiya for 180,000 dirhams.

(V. Vacca-[Ruth Roded])

ṢAFİYYE WĀLİDE SULṬĀN (Cecilia Baffo), Ottoman queen mother, born in Venice in 1550, died in 1014/1605.

The daughter of the Italian Baffo, governor of Corfu, when she was fourteen years old, while travelling between Venice and Corfu on the Adriatic Sea, she was captured by Ottoman pirates. On account of her beauty, she was taken to the palace of prince Murād, grandson of Süleymān and governor of the *sandjak* of Manisa. In the Manisa palace, she became a Muslim, learned Turkish and was trained in palace manners. In 972/1565, she was presented to Murād. She gave birth in 973/1566 to prince Meḥemmed, who became the first great grandchild of Süleymān and was named by him, and subsequently to the princesses ʿĀʾis̲h̲e and Fāṭima. In 974/1566, after Süleymān's death, Murād's father took over the throne as Selīm II and Murād became the *welī ʿahd*. In 982/1574, following Selīm's death, Murād succeeded as Murād III. Ṣafiyye was now 25 years old and had already become the head *k̲h̲āṣṣekī* [*q.v.*]. During Murād's reign, she gained growing influence in the palace, taking great care that the relations between Venice and the Ottomans were amicable. She was 33 years old when her mother-in-law, Nūr Bānū Wālide Sulṭān [*q.v.*] died (991/1583), and Ṣafiyye became the first lady of the Ottoman Empire. Since she was constantly in conflict with her mother-in-law and with Süleymān's daughter Mihrimāh and her sisters-in-law Ismik̲h̲ān and Gewherk̲h̲ān, it was only after the deaths of these women that Ṣafiyye became very powerful. Murād III remained very much in love with her until his death in 1003/1595, when he was succeeded by Meḥemmed III. Ṣafiyye thus became queen mother at the age of 45, and exercised an extensive influence on the politics of the Empire. In 1012/1603 her son Meḥemmed III died, and her grandson Aḥmed I took over the throne. Repulsing his grandmother's influence on the Palace and on Ottoman politics, on S̲h̲aʿbān 1012/February 1604, 19 days after he was enthroned, he sent Ṣafiyye away from the Ṭopkapï Palace to the old Palace in Bāyezīd; she died a year later in Ḏjumādā II 1014/November 1605.

Ṣafiyye was the fifth of the queen mothers in the Ottoman palace. Her intelligence, beauty and the power which she exercised over the Empire became legendary, although it was alleged that she had managed to make herself a great fortune through bribery. She had started to build the *Yeñi Ḏjāmiʿ* in Istanbul, but died before its completion.

(ÇIĞDEM BALIM)

ṢAFḲA (A), a term of Islamic law meaning literally, "striking hands together". The parallel root *ś-f/p-ḳ* (and in other places, more correctly, *s-f/p-ḳ*) is found in Biblical Hebrew, cf. Isa. ii. 6 "they strike hands with foreigners". *Ṣafḳa* is a non-Ḳurʾānic word, but *taṣdiya* is found in sūra VIII, 35, with a comparable meaning.

Technically, *ṣafḳa* has come to mean the ratification of a commercial contract, a formal, symbolic act for concluding a contract which has been disregarded in practice by Islamic law. Striking hands together, although associated with sale (*bayʿ*), should be designated *ṣafḳ* rather than *bayʿ*, as stated by Schacht in art. BAYʿ. The concept of *ṣafḳa* remained unique in its usage since, unlike *bayʿ*, it contains the meaning of a bargain that is achieved swiftly and profitably. Evidently, striking the hands together can only be used as an expression of acceptance once an offer (*īḏjāb*) is presented. Acceptance (*ḳabūl*), can according to most schools, excluding the S̲h̲āfiʿī, be delayed until the end of the meeting of the two parties (*maḏjlis al-ʿaḳd*). The S̲h̲āfiʿīs, who require immediate acceptance, have made a provision that the two parties can cancel the contract providing they are still physically at the place where the deal was negotiated (*k̲h̲iyār al-maḏjlis*); but once they leave, the deal is final. It is imperative to add that the expression of will, under these conditions, can be in any form, whether by striking the hands together or verbal affirmation, providing it conveys the clear intention.

(MAWIL IZZI DIEN)

ṢAFWĀN B. ṢAFWĀN AL-**ANṢĀRĪ**, Arab poet of the 2nd-3rd centuries A.H. known for his ideological poetry in support of the Muʿtazila [*q.v.*]. Al-Ḏjāḥiẓ [*q.v.*] is the only source for the few bits of information on his life and the sparse samples from his poetry that we have. The biographical snippets show him in Multān at the court of the governor of Sind, Dāwūd b. Yazīd al-Muhallabī, who held this office from 184/800-205/820 [see MUHALLABIDS, toward the end]. In all of them he is al-Ḏjāḥiẓ's authority on elephants, quoting poetry by the elephant expert Hārūn b. Mūsā al-Azdī *mawlāhum*; describing what kind of ruses this man used in fighting against war elephants; and indicating how the Indians trained these animals (*Ḥayawān*, vii, 76 [read, with Pellat, *zuwwār* for *ruwāt*], 77, 114-15). As for Ṣafwān's poetry the surviving pieces show strong support for Wāṣil b. ʿAṭāʾ, founder of the Muʿtazila (d. 131/748-9 [*q.v.*]), and other leaders of the movement and equally strong animosity against the poet Bas̲h̲s̲h̲ār b. Burd (d. 167 or 168/784-5 [*q.v.*]), after the latter had broken away from Wāṣil's circle. Since some of the lines in praise of Wāṣil seem to speak of a contemporary, Ṣafwān must have been of a ripe old age, when he joined the Multān governor, unless, of course, one assumes two different Ṣafwāns. However, in addition to his name, his apparent interest in natural history, which comes through in both the early poetry and the later reports, would be an argument for the identity of the two personages.

His most famous poem is the glorification of earth, a counter-poem against Bas̲h̲s̲h̲ār's apotheosis of fire, which also includes a pro-Muʿtazilī *fak̲h̲r* and a *hiḏjāʾ* against Bas̲h̲s̲h̲ār and his sect, the somewhat shadowy extremist Kāmiliyya S̲h̲īʿa (*Bayān*, i, 27-30; 33 lines, *ṭawīl*, rhyme -Cdi). Shortened versions of this poem, clearly quoted from al-Ḏjāḥiẓ, appear also in al-Bag̲h̲dādī (d. 429/1037 [*q.v.*]), *al-Farḳ bayn al-firaḳ*, 39-42, in the section on the Kāmiliyya (20 lines), and in Abu 'l-Ḥasan ʿAlī b. Yūsuf al-Ḥakīm (8th/14th century), *al-Dawḥa al-mus̲h̲tabika*, 25-27, where it is quoted for the enumeration of minerals and ores it contains (13 lines). Of similar content is a shorter poem (*Bayān*, i, 32, 9 lines, *ṭawīl*, rhyme -Cdu). The earth-fire controversy has been seen as an early Muʿtazilī-S̲h̲īʿī polemics (Nyberg in *EI*[1], s.v. AL-MUʿTAZILA) as well as a S̲h̲uʿūbī attack by Bas̲h̲s̲h̲ār, defending the Zoroastrian holiness of fire, with a counter-attack upholding the claims of the earth. The context(s) in which this polemics became meaningful is none too clear. Another poem defending Wāṣil against Bas̲h̲s̲h̲ār's *hiḏjāʾ* also mentions the missionaries that Wāṣil sent out (*Bayān*, i, 25-6; 22 lines, *ṭawīl*, rhyme -3ri); this was interpreted by Nyberg, *loc. cit.*, as indicating the existence of a pro-Abbasid network of propagandists, but was probably not more than a religious undertaking [see AL-MUʿTAZILA, here vii, 783b-784a, and van Ess, ii, 386-7].

The remaining fragments are: two lines on the

date-palm (*Ḥayawān*, vii, 78; *mutaḳārib*, rhyme -2lu); one line characterising Wāṣil (*Bayān*, i, 22; *basīṭ*, rhyme -āḳi); one line in praise of Wāṣil's *zuhd* (*Bayān*, i, 27; *ṭawīl*, rhyme -3ʿuh); and two lines of *hidjāʾ* against Bashshār and his brothers, addressed to his mother (*Bayān*, i, 31, *basīṭ*, rhyme -Cdi).

(W.P. HEINRICHS)

ṢAFWĀN B. IDRĪS b. Ibrāhīm b. ʿAbd al-Raḥmān b. ʿĪsā b. Idrīs al-Tudjībī al-Mursī al-Kātib, Abū Baḥr (560-98/1164-1201), poet and scholar of Muslim Spain.

He was born in Murcia when the town was ruled by Ibn Mardanīsh (d. 567/1172), but the major part of his life witnessed Almohad times (see the studies of Gaspar Remiro and Guichard about the history of Murcia under Almohad rule). He belonged to an important family of the town, the Banū Idrīs, some of whom were judges. Ṣafwān gives information on them in his *Zād al-musāfir* (152-7). He studied with his father and his relative, the *ḳāḍī* Abu 'l-Ḳāsim b. Idrīs, as well as with Abū Bakr b. Mughāwir, Abu 'l-Ḥasan Ibn al-Ḳāsim, Abū Ridjāl b. Ghalbūn, Abū ʿAbd Allāh b. Ḥumayd, Abu 'l-ʿAbbās b. Maḍāʾ (who taught him Muslim's *Ṣaḥīḥ*), Abu 'l-Ḳāsim Ibn Ḥubaysh, Ibn Bashkuwāl (who gave him the *idjāza*), Abu 'l-Walīd b. Rushd, Abū Muḥammad b. ʿUbayd Allāh al-Ḥadjarī, Abū Muḥammad b. Ḥawṭ Allāh and Ibn ʿAyshūn. Ṣafwān b. Idrīs was one of the most important poets and *udabāʾ* of his time. His biographers record at length praises about him. He wrote: (1) *Badāhat al-mutaḥaffiz wa-ʿudjālat al-mustawfiz*, a compilation of his prose and poetry; (2) *Kitāb al-Riḥla*; (3) *Zād al-musāfir wa-ghurrat muḥayyā 'l-adab al-sāfir*, a biographical compilation of Andalusian poets of the 6th/12th century, which supplements the works of Ibn Khāḳān (d. 529/1134) and Ibn al-Imām (d. *ca.* 550/1155). It was edited by ʿAbd al-Ḳādir Maḥdād, Beirut 1358/1939, repr. Beirut 1970. Ibn al-Abbār [*q.v.*] emulated it in his *Tuḥfat al-ḳādim*. It is one of the sources of Ibn Saʿīd al-Maghribī's *Rāyāt al-mubarrizīn*, which also includes a section devoted to Ṣafwān (see E. García Gómez, *El libro de las banderas de los campeones de Ibn Saʿīd al-Magribī*, Barcelona 1978, 138, 159, 195, 196, 239, 248, 253, and 243-4); (4) *Rasāʾil*, some of which have been preserved, like the letter he wrote congratulating the judge Abu 'l-Ḳāsim b. Baḳī (*Nafḥ al-ṭīb*, v, 68-9), another on *taghāyur mudun al-Andalus* sent to the *amīr* ʿAbd al-Raḥmān b. Yūsuf b. ʿAbd al-Muʾmin b. ʿAlī (*Nafḥ al-ṭīb*, ii, 170-5; tr. F. de la Granja, *Geografía lírica de Andalucía musulmana*, *Historia de Andalucía*, Madrid 1981, v, 85-7), another entitled *Ṭirād al-djiyād fi 'l-maydān wa-tanāzuʿ al-ladhdhāt wa 'l-ikhwān/al-akhdān fī taḳdīm Mursiya ʿalā ghayri-hā min al-buldān*; and (5) *Dīwān*. Some of his verses are recorded by his biographers. He is especially remembered for the elegies (*marāthī*) which he wrote in commemoration of al-Ḥusayn b. ʿAlī and the descendants of the Prophet (*taʾbīn al-Ḥusayn wa-bukāʾ ahl al-bayt*). In connection with this production, the sources record a story according to which Ṣafwān is said to have travelled to Marrākush, where he tried to earn money by praising the rulers in his poems in order to pay for the trousseau of his daughter who had reached marriageable age. None of his attempts was successful. Disappointed, he decided to write panegyrics of the Prophet and his family. It was then that the Almohad al-Manṣūr Yaʿḳūb b. Yūsuf b. ʿAbd al-Muʾmin saw the Prophet in a dream interceding on Ṣafwān's behalf, and from then onwards Ṣafwān was never to have again financial problems. Ṣafwān corresponded with the poet Muḥammad b. Idrīs b. Mardj al-Kuḥl (d. 634/1236) (*Nafḥ al-ṭīb*, v, 57-9). The most noted of Ṣafwān's pupils was Abu 'l-Rabīʿ b. Sālim al-Kalāʿī. Ṣafwān died young, aged 38, and his father recited the funeral prayer over him.

(MARIBEL FIERRO)

ṢAFWĀN B. AL-MUʿAṬṬAL (the *fatḥa* of the *ṭ* is confirmed in Ibn Durayd, *Ishtiḳāḳ*, ed. Hārūn, 310; occasionally wrongly al-Muʿaṭṭil), from the tribe of Sulaym, was a Companion of the Prophet Muḥammad. His year of birth does not seem to be recorded, and he is mentioned as having died a martyr's death during the Arabs' conquest of Armīniya in 17/638 (cf. Ṭabarī, i, 2506) or 19/640 (cf. Ibn Ḥadjar, *Iṣāba*, iii, 441). Other reports have it that he met his death at a much later date in the year 59/679 (cf. Khalīfa, *Taʾrīkh*, ed. A.Ḍ. al-ʿUmarī, 226-7) or

60/680 in Shimshāṭ in the Djazīra (cf. Ibn al-Djawzī, *Muntaẓam*, iv, 282), where his grave was venerated.
